Hazardous Waste Summary:

Waste Code: D001
Waste Description: Ignitable Waste

Waste Code: D002
Waste Description: Corrosive Waste

Waste Code: D007
Waste Description: Chromium

Waste Code: D009
Waste Description: Mercury

Waste Code: D018
Waste Description: Benzene

Waste Code: D029
Waste Description: 1,1-Dichloroethylene

Waste Code: F002
Waste Description: The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

GRAPHIC PACKAGING INTERNATIONAL (Continued) **1000221544**

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Nature of Business:	Paper Bag and Coated and Treated Paper Manufacturing
NAICS Code:	322220
Maximum Daily Amount Code:	20
Maximum Daily Amount Code Range:	1,000-4,999
Maximum Daily Amount Units:	gal
Is Solid State:	No
Is Liquid State:	No
Is Gaseous State:	Yes
Is Combustible Dust:	No
Is Fire Hazard:	No
Is Sudden Release of Pressure Hazard:	No
Is Reactive Hazard:	No
Is Immediate Hazard:	No
Is Delayed Hazard:	No
Is Corrosive to Metal:	No
Is Flammable:	Yes
Is Gas Under Pressure:	Yes
Is Physical HNOC:	No
Is Emission of Gas With Water:	No
Is Organic Peroxide:	No
Is Oxidizer:	No
Is Pyrophoric liquid or solid:	No
Is Pyrophoric Gas:	No
Is Self-Heating:	No
Is Self-Reacting:	No
Is Acute Toxicity:	No
Is Aspiration Hazard:	No
Is Carcinogenicity:	No
Is Germ Cell Mutagenicity:	No
Is Health HNOC:	No
Is Reproductive Toxicity:	No
Is Respiratory or Skin Sensitization:	No
Is Serious Eye Damage or Eye Irritation:	Yes
Is Simple Asphyxiate:	Yes
Is Skin Corrosion or Irritation:	Yes
Is Specific Target Organ Toxicity:	No

Environmental Interest/Information System:
The National Compliance Database (NCDB) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA).
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The Toxic Release Inventory System (TRIS) is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.
The Department of Labor, Occupational Safety and Health Administration information system consists of inspection case detail for approximately 100,000 OSHA inspections conducted annually. The FRS dataset includes facilities that had inspections within the last 7 years within the mining, oil and gas, utilities, and manufacturing sectors.
The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

GRAPHIC PACKAGING INTERNATIONAL (Continued) **1000221544**

The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

NARR ID: 5733412
NARR Code: Contamination
Created By: Not reported
Created Date: 12/17/2002
Updated By: Not reported
Updated Date: 12/17/2002
Decode for NarcdID: Contamination
NARR Comments: (4/29/97 GMW/SAS) Throughout this facility's history, many hazardous-material releases have been documented from spills and wastewater discharges, USTs, above-ground tanks, and an underground pipeline. See the project file for more detail on these releases. Although most releases have involved alcohols and related solvents, the main contaminants of concern are chlorinated solvents, BTEX, and metals. Chlorinated solvents above drinking-water standards were detected in deep wells on-site in the late 1980s and early 1990s. All of the UST issues other than the <quot>gasoline tank area<quot> have been referred from the UST Section to Site Assessment.

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: Soil, surface water, and groundwater contamination could threaten the Oregon Slough portion of the Columbia River. James River uses three on-site wells (screened in the deeper, semi-confined aquifer) for industrial water supply; until about 1989, these wells supplied drinking water for site employees.

Updated Date: 12/17/2002
Decode for NarcdID: Remedial Action
NARR Comments: (4/29/97 GMW/SAS) James River has characterized soil and groundwater contamination associated with the three major UST areas across the site, and excavated and aerated soils from leaking USTs in the late 1980s. DEQ's UST Section issued an NFA letter for the gasoline UST area in 1996, but has referred all other UST issues to Site Assessment, since the remaining USTs did not contain motor fuels or waste oils. Site Assessment recommends a remedial investigation (RI) covering the entire facility, to determine the extent, magnitude, and sources of chlorinated solvents, BTEX, and metals in shallow soil and groundwater. The RI should also attempt to find the source(s) of chlorinated solvents in deep groundwater beneath the site. Further action at the site is a medium priority. The site should be added to the Site Response Waiting List, and to the Confirmed Release List & Inventory. (3/8/99 MTP/SAS) Findings of Federal Preliminary Assessment support medium ranking of site.

Decode for NarcdID: Contamination
NARR Comments: Site is suspected of petroleum releases to the subsurface. As part of Columbia Slough Area-wide Discovery (CSD) Project this site was noted due to the presense of soil borings found in Water Resources Department well log database. Site runoff or subsurface contamination could reach part of Columbia Slough via stormwater piping system. Site has received cleanup of USTs via DEQ UST program (26-92-0348) cited as ending in 1997. However, CSD project found investigation on the site initiated in 2000, in areas away from the main building, to the west.

CANOE BAY - CONTAMINATED SEDIMENT (Continued) **S105807718**

Start Date: 10/28/2008
End Date: Not reported
Min Concentration: .00
Max Concentration: 146.00
Sample Comment: 146 ppm zinc in Canoe Bay sediments at CB06SD. 118 ppm at CB10SD. 116 ppm at CB05SD. 111 ppm in Canoe Bay sediment composite (two cores) at 0-7 feet (1/14/02). Nearby Columbia River sediments had 30.2- to 53.9 ppm.

Decode for NarcdID: Contamination
NARR Comments: Sediments: Sediments directly beneath a Schooner Creek Boat Works dock and adjacent to the shoreline are contaminated with PCBs, PAHs, phthalates, PCP, phenols, DDTs, chlordane, metals (arsenic, cadmium, copper, selenium, zinc), and relatively low concentrations of diesel fuel and oil. The source and full vertical and horizontal extent of sediment contamination have not been defined. Upland Areas: A sample of residual paint dust collected at the boat repair facility contained PAHs, di-n-butyl phthalate, chloroform, methylene chloride, light aromatic hydrocarbons, and TCLP-extractable barium, cadmium, and lead. Paint dust residues have been observed on graveled surfaces at Schooner Creek Boat Works, and other boat repair wastes have been observed on Canoe Bay's steep southwest embankment at the boat works. Stained soils and stressed vegetation have also been documented at the boat works site. Chemical residues (30 - 60 sq ft area) and stressed vegetation were also observed on the southern portion of the lot west of the boat works, prior to Schooner Creek Boat Works occupying the site. Most of the western lot is now used for automobile storage, although a portion is used for boat storage. DEQ photographed small areas of stressed vegetation along Schooner Creek Boat Works' north fence line during an April 2001 multi-media inspection. (5/15/04 JLS/VCP) Waste materials, (e.g. broken glass, electrical casings) that apparently resulted from historical dumping by unknown parties are present along the shoreline. Waste material remaining at this time appear to be present primarily on land owned by the Oregon Division of State Lands. A private and City outfall discharge stormwater to Canoe Bay in the vicinity of the ramp to the docks. (9/9/09, smf) Samplings from an October 2008 EPA Site Insection detected elevated concentrations of metals (especially cadmium) in Canoe Bay sediments in the southern half of the bay. Elevated concentrations of TBT were detected in sediments at the boat dock, as well as in surface soils at the Schooner Creek Boatworks stormwater outfall just westr of the boat dock. Elevated concentrations of several metals were detected in surface soils along the southwest side of Canoe Bay, and in stormwater discharging from outfalls on the northeast and south sides of the bay.

NARR Comments: Canoe Bay is a 7.6-acre rectangular embayment of the Columbia River along the central north side of Hayden Island. The river is located to the northeast; Hayden Island Mobile Home Community is on the east side of the bay; Schooner Creek Boat Works, an automobile storage lot and paved boat storage area, and North Hayden Island Drive are along the southwestern edge of the bay. Schooner Creek Boat Works operates from a concrete tilt-up building constructed in 1989. A small scrub-shrub palustrine wetlands area is immediately northwest of the bay. A Burlington Northern Santa Fe Railroad right-of-way and tressel are about 675 feet northwest of the bay. Jantzen Beach Shopping Center is between 1,506 and 3,761 feet southeast of the bay. Interstate Highway 5 and the I-5 Interstate Bridge over the Columbia River are located about 4,210 feet southeast of the bay.

CANOE BAY - CONTAMINATED SEDIMENT (Continued) **S105807718**

Created Date: 12/17/2002
Updated By: JSUTTER
Updated Date: 11/21/2011
Decode for NarcdID: Project Issues Summary
NARR Comments: Contaminants were discovered in Canoe Bay sediments beneath a Schooner Creek Boat Works dock when preparing for maintenance dredging of the bay sediments. Levels of PCBs, DDTs, PAHs, and metals (arsenic, cadmium, copper, selenium, and zinc) in sediment samples exceed DEQ's Level II Ecological Risk Assessment Baseline Screening Levels for freshwater sediments. The contamination could represent a significant threat to T&E salmonids in the bay, migratory waterfowl and songbirds that visit the bay, wildlife in nearby wetlands, as well as a potential threat to people and wildlife who consume impacted fish. The sources and full vertical and horizontal extent of contamination have not been defined. A previous boat works operation at the site is known to have left behind chemical residues and stressed vegetation. However, since Schooner Creek Boat Works began operating along the southern end of the bay in 1999, DEQ has received at least 74 Pollution Complaints from nearby residents about its operations. An April 2001 DEQ site inspection confirmed some of the complaint allegations; DEQ documented evidence of stressed vegetation and boat works wastes migrating to Canoe Bay. Paint dust from the boat works was analyzed and found to contain leachable metals, phthalates, light aromatic hydrocarbons, chlorinated hydrocarbons, and relatively high concentrations of PAHs. DEQ files also contain similar complaints about activities at Schooner Creek Boat Works' previous operating location along N Marine Dr. There is no record of Pollution Complaints against the site's previous boat builder (Heisley Marine). Aerial photos and material identified along the shoreline suggest that historical dumping of waste materials may have taken place in the past, resulting in an accumlation of materials in a shoreline area on property owned by the State.

Updated By: Not reported
Updated Date: 12/17/2002
Decode for NarcdID: Land Use (Current/Reasonably Likely)
NARR Comments: Land on the southeast side of Canoe Bay is zoned for low-density residential use, while land on the southwest side of the bay is zoned for industrial use. The entire bay and its shoreline lie within a City of Portland Environmental Conservation Overlay Zone. A small scrub-shrub palustrine wetland sits just west of the bay, and most of the Columbia River's south shoreline downstream from the site is tidal riverine wetlands. Metro has mapped land west of the BNSF Railroad right-of-way as important riparian corridor and wildlife habitat of concern.

Decode for NarcdID: Manner of Release
NARR Comments: Undefined at this time. Recent boat manufacturing and repair activities by Schooner Creek Boat Works could be a source but significant efforts have been completed by the facility to manage stormwater and current stormwater discharge is meeting permit benchmarks. A city storm drain also discharges to the bay near the Boat Works' stormwater outfall and may be contributing road-related contamination. A previous yacht builder at the site (Heisley Marine) is known to have left behind chemical residues and stressed vegetation prior to Schooner Creek Boat Works' arrival at the site. The detections of DDTs and chlordane in sediments suggest that deposits of riverborne sediments could also be a source, as could be an outfall from the Columbia Blvd. Sewage Treatment Plant to the Columbia River, located about 500 to 700 feet northeast of (downstream from) the bay. Part of the bay also appears to have been backfilled since the 1970s, possibly with Columbia River dredgings, so the bay's backfill may also have contained contaminants. Historical dumping of wastes over the shoreline appears to have resulted in an accumulation of waste materials that appears to have resulted in elevated PCBs and metals on the shoreline. Contaminants associated with the shoreline waste materials appear to have resulted in a localized area of contaminated sediment.

NARR Comments: Freshwater bay sediments, and possibly surface water; stormwater and stormwater sediments; surface soils along the bay. Paint dust residues have been documented in gravel at the Schooner Creek Boat Works site. Stressed vegetation was documented along the boat works' fence line. Chemical residues and stressed vegetation were observed on Inland Sea Maritime Group's other lot prior to their acquisition of the site.

NARR Comments: A site screening was completed in September 2002. An Expanded Preliminary Assessment of the Schooner Creek Boat Works site is recommended. Further samplings of sediment and upland soils are needed to define the full extent and character of local contaminants. Site owner, Inland Sea Maritime Group, completed sediment and shoreline sampling at the site which is documented in a January 2004 report. (9/8/09, smf) Ecology and Environment, Inc. conducted a federal Site Inspection of Canoe Bay for EPA during October 2008, issuing its report in August 2009. E&E sampled and analyzed: sediments from Canoe Bay and nearby in the Columbia River; stormwater and stormwater sediments from stormwater outfalls emptying into Canoe Bay; and uplands surface soils from along the southwest edge of Canoe Bay.

NARR Comments: Canoe Bay provides seasonal habitat for migratory waterfowl and migratory songbirds, which feed in and around the bay. The bay has been defined as Critical Habitat for Snake R. spring/summer chinook (Threatened species), Snake River fall chinook (Threatened species), and Snake River sockeye salmon (Endangered species) [58 FR 68543, 12/28/93]. A small wetlands area is also located immediately upland from the bay's west shoreline. Metro considers much of Hayden Island west of the BNSF Railroad right-of-way important riparian corridor and wildlife habitat of concern, The City of Portland has a community water supply well less than 1,000 feet SSE of the site.

NARR Comments: Site Assessment recommends a high-priority further investigation to determine the full nature and extent of Canoe Bay sediment contamination near SCBW's dock. Because hazardous substances have been released at the site, and concentrations of these substances in sediment are above threshold risk values for aquatic life, it is further recommended that the site be proposed for addition to DEQ's

CANOE BAY - CONTAMINATED SEDIMENT (Continued) **S105807718**

Confirmed Release List and Inventory. (12/6/02 JMA/VCP) Received Intent to Participate in DEQ's Voluntary Cleanup Program in December 2002. Sediment sampling work plan submitted March 2003. DEQ approved with comments provided May 2003. Response to comments submitted June 2003. DEQ acknowledgement provided July 2003. Sediment sampling conducted October 2003. (3/1/04 JLS/CU&ER) Sediment sampling report submitted January 2004. Meeting/site visit held February 2004. (5/17/04 JLS/VCP) DEQ comments on report provided March 2004. Revised report submitted April 2004. DEQ approval with clarification provided May 2004. (11/12/04 JLS/CU&LW) DEQ coordinating with City of Portland, Division of State Lands (DSL) and ISMG on next steps. (11/7/05 JLS/CU&LW) DEQ preparing memo documenting issues and priorities November 2005. (6/23/09 SAM/SAS)EPA completed a preliminary assessment-March 7,2008- and determined additional site investigation is warranted. (11/22/10 SAM/SAS) In late August 2010, after completing a Site Investigation, EPA determined that the site was a low priority for additional federal action and referred the site back to DEQ for state follow-up. [6/8/11] DEQ prioritized shoreline debris pile cleanup and outfall soil cleanup as primary actions warranted at the site. [6/11/12] In Fall, 2011, ISMG/SCBW proposed conducting shoreline stabilization to maintain stability for upland infrastructure and incorporate capping of the debris pile and immediately adjacent contamination. Additional shoreline data was collected in February 2012 to help assess shoreline options and a feasibility study was drafted in May 2012. FS completed in June 2012. Staff report on proposed shoreline stablization action issued for public comment in July 2012. ROD issued August 2012. Consent Judgement covering DEQ oversight of remedial action and settlement for contamination in Canoe Bay issued for public comment in September 2012. Negotiations with City of Portland for development permit to cover action in the environmental zone adjacent to Canoe Bay completed in Spring 2013. Consent Judgment with DEQ finalized in July 2013. Remedial Design workplan and associated reports submitted in November 2012. Revised documents, based on DEQ comment and modifications to address City permitting requirements, submitted June 2013. Shoreline stabilization and capping, and habitat improvement work completed August through November 2013. Project completion report submitted February 2014 and approved March 6, 2014. O&M to establish vegetation on the bank in progress. Certificate of Completion and NFA letter issued May 2014. (JLS 5/19/14) Annual monitoring reports submitted 2015, 2016, and 2017. (10/9/19 KJD/VCP) A sediment sampling event was performed in 2019 to evaluate the effectiveness of the remedy. Overall, the shoreline stabilization and capping components appear to have been effective in reducing contaminated material entering the bay.

NARR Comments: [Oct. 2019] In May 2014, DEQ made a conditional no further action determination for the site, with the NFA conditioned on maintenance of the engineered cap placed along the shoreline covering the debris pile area and the stormwater outfall discharge area. EPA followed up in February 2015 with its own determination of <quot>no further remedial action planned<quot> at the site. A sediment sampling event was performed in 2019 to evaluate the effectiveness of the remedy. Overall, the shoreline stabilization and capping components appear to have been effective in reducing contaminated material entering the bay.

Group Description: Surface Barriers
Type Code: E
Type Description: Engineering
Comments: Envirolok and sand cap placed over debris pile area on the shoreline. Envirolok placed in stormwater outfall discharge area. Establishing vegetation first year and maintaining thereafter.

Updated By: KDAUGHE
Updated Date: 03/13/2024
Decode for NarcdID: Contamination
NARR Comments: 12411 N Portland RD/3625 N Suttle Rd. (7/26/94 LSK) The City of Portland has built a portion of the North Marine Drive extension across the site, a former lumber and cedar shake mill. Studies conducted by the City revealed arsenic, barium, and chromium within the right-of-way, which is now paved. No sampling has occurred on portions of the site that are not affected by the North Marine Drive project. (8/16/02 MTP/VCP) In 1996, GeoEngineers conducted a site investigation to assess TPH and metal contamination at the site. They subsequently removed about 323 tons of soil from the site. Confirmation sampling showed that most TPH concentrations in excess of 500 ppm in soil had been removed. In 1999, Roger N Smith Associates (RNSA) conducted a Site Investigation to better assess site contamination and confirm that the 1996 soil removal was effective. A total of 10 direct-push borings were advanced. Eight soil and five groundwater samples were analyzed. TPH was detected in two of eight samples analyzed (567 ppm, 891 ppm). The samples with TPH detections were collected outside the 1996 soil removal area. Arsenic concentrations were found to be above EPA Region 9 PRGs, but within the range of naturally occurring concentrations.

Decode for NarcdID: Remedial Action
NARR Comments: The area sampled during the City of Portland's investigation is now covered by the N Marine Drive extension. This would inhibit the movement of arsenic and chromium towards either surface water through runoff or groundwater through leaching. It also minimizes the risk of direct contact with contaminated soils. The arsenic and chromium in soil now covered by the N Marine Drive extension appear to be elevated above background levels. However, due to the impervious cover and the lack of targets, they do not appear to pose a risk to the environment or public health. Further development of the site,

LACAMAS LABORATORIES (Continued) **S106655856**

especially any activity that disturbs site soils, should be accompanied by additional sampling for inorganics, since the entire site was not evaluated as part of the NMDP. The uncovered portion of the site is considered a low priority for further action by DEQ. (8/16/02 MTP/VCP) Lacamas Laboratories entered the VCP on September 27, 2001, for review of an ICP report. DEQ completed the review and determined further evaluation and/or investigation was needed to assess the risk from residual contamination at the site. DEQ met with Lacamas Laboratories and Coles Environmental Consulting (CEC) to discuss the environmental concerns. CEC addressed DEQ concerns by providing a qualitative risk assessment. DEQ accepted the assessment and determined that residual TPH contamination at the site did not pose a significant risk to human health or the environment. The Oregonian (Associated Press article), 5/9/05: Three people were injured in an early-morning explosion Monday [May 9] at the Lacamas Laboratories Inc. chemical plant near the Columbia River in north Portland. The Coast Guard and DEQ were assisting fire crews to evaluate potential contamination. City of Portland Bureau of Environmental Services officials were concentrating late this morning on preventing chemical-containing wastewater and fire suppression water from entering the city s stormwater system, which empties into the Columbia Slough. Chemicals reportedly involved include hydrochloric acid, benzene, heptane, methyl ethyl acetate and hydroxybenzopriazole hydrate. DEQ will continue to monitor the situation and has fielded numerous news media requests for information.

Created By: Not reported
Created Date: 12/17/2002
Updated By: Not reported
Updated Date: 12/17/2002
Decode for NarcdID: Contamination
NARR Comments: (7/7/98 MAF/SRS) In 1968, Ager Petroleum transported sludge from a used oil recycling process to the Morrison Oil site. This sludge was stockpiled until 1976, at which time it was used to fill topographic lows in the area of the present day retention pond. Three underground storage tanks (two gasoline, one waste oil) were removed from the site in 1989, along with 50 cubic yards of associated contaminated soil. Two USTs remain on-site. Groundwater has been impacted and the site remains open in Northwest Region's UST program. Environmental investigations have shown site soils to be contaminated with TPH, VOCs/SVOCs, PCBs, and lead. Groundwater at the site is contaminated with TPH and VOCs. Releases to the nearby Oregon Slough are thought to have occurred.

Updated By: PSEIDEL
Updated Date: 02/10/2017
Decode for NarcdID: Remedial Action
NARR Comments: 12/10/2017: (PRS) Between 2010 and 2013 and remedial investigation and risk assessment was completed for tax lots 700 and 800. The site was adequately characterized and risks were found to be below acceptable levels for potentially complete pathways on tax lot 800, excluding the lead-contaminated soil stockpile. In 2016, all lead-contaminated soil was removed from the site and properly disposed in a solid waste landfill. Underlying soil within three feet of ground surface was sampled and found to be below acceptable levels. A Certificate of Completion and no further action

MORRISON, GLEN (Continued) **1000362907**

determination is currently proposed for tax lot 800. Tax lot 700 remains to be addressed. (6/04/08 BLR/SRS) A Notice of Non-compliance (NON) has been issued for the on-site soil pile. Originally, approximately 7,500 cubic yards of lead contaminated soil was excavated and placed in a pile onsite. A Consent Order was signed in September 1996 for the treatment and management of this soil. DEQ approved the work plan submitted by the responsible party (RP) in May 1997. Approximately 1,500 cubic yards of soil exceeding 5 ppm TCLP lead has been treated and disposed at a licensed solid waste landfill. In May 2006, the RP completed additional characterization of the soil pile and determined that most of the soil remaining in the pile still exceeds 5 ppm TCLP lead. The RP is treating portions of the pile that contain unacceptable concentrations of lead with FESI-Bond phosphate chelating agent to bind leachable lead in order to stabilize the lead in soil for disposal at an approved landfill. Approximately 6,000 cubic yards of soil remains in the pile and it is estimated 4,000 to 5,000 cubic yards will need to be treated.

Updated By: PSEIDEL
Updated Date: 05/03/2017
Decode for NarcdID: Current Site Summary Statement
NARR Comments: 5/3/2017: A no further action determination and Certificate of Completion have been issued for lot 800. No significant risks remain on-site, and the site is protective under current land use. The former on-site water well on lot 800 has been properly decommissioned in accordance with an approved workplan. Residual contamination does remain on lot 700. 12/10/2017: (PRS) Between 2010 and 2013 and remedial investigation and risk assessment was completed for tax lots 700 and 800. The site was adequately characterized and risks were found to be below acceptable levels for potentially complete pathways on tax lot 800, excluding the lead-contaminated soil stockpile. In 2016, all lead-contaminated soil was removed from the site and properly disposed in a solid waste landfill. Underlying soil within three feet of ground surface was sampled and found to be below acceptable levels. A Certificate of Completion and no further action determination is currently proposed for tax lot 800. (6/04/08 BLR/SRS) Approximately 6,000 cubic yards of lead-impacted soil remains onsite. In May 2006, additional samples from the soil pile indicated an estimated 4,000 to 5,000 cubic yards of this soil contains lead at greater than 5 ppm TCLP lead. At 6,000 cubic yards, the volume is approximately equal to 7,350 tons of material. The

MORRISON, GLEN (Continued) **1000362907**

responsible party is treating the contaminated soil with Forrester Environmental FESI-Bond phosphate chelating agent to bind leachable lead (resulting in TCLP-lead concentrations in treated soil of less than the 5.0 ppm toxicity characteristics standard). It is assumed that the FESI-Bond material would be applied at a 1% by weight application rate (i.e., 1 ton of FESI-Bond liquid applied to treat 100 tons of lead-impacted soil). Additional soil treatment is scheduled for the summer of 2008. Following treatment, the stabilized soil will be disposed at a licensed solid waste landfill.

HAYDEN ISLAND DUMPING AREA (Continued) **1006868932**

Decode for NarcdID: Remedial Action
NARR Comments: (11/92 LSK) Washwater containing oil waste (< 1% PCP) from McCormick & Baxter (ECSI #74) spread on Union Pacific RR land from approximately 1957 to 1977; DEQ was unable to identify specific areas where the disposal occurred. EPA determined that no further federal action was needed at the site in 1984; DEQ recommends no further state action as well.

NARR Comments:	(4th Quarter 93/1st Quarter 94 MK/VCS) City of Portland road extension project, using Federal Highway Administration (FHWA) funds, planned for an industrial area along North Marine Drive that includes 3 contaminated sites (see ECSI sites #80, #165, and #1200). The extension will allow the development of 4,000 acres of industrial land in the Port of Portland and is projected to result in the employment of 30,000 people. (This may be the last industrial development area within the city limits.) The road extension is a $26 million project with 85% federal funding.

Decode for NarcdID: Remedial Action
NARR Comments: (4th Quarter 93/1st Quarter 94 MHK/VCS) City requested DEQ project oversight on 8/31/91 and planned cleanup only to the extent necessary to build the road. (They have not requested cleanup oversight or approval from DEQ.) DEQ was asked to evaluated whether the planned construction activities would exacerbate existing conditions and whether DEQ would require any future cleanup action following the construction. After detailed reviews of the investigations conducted on the 3 contaminated properties were completed, DEQ stated in a 4/24/92 letter that highway construction should not exacerbate existing contamination, but there was insufficient information to determine the need for future cleanup in the areas of the right-of-way on any of the 3 properties. On 12/7/93, DEQ, the City, and the Port of Portland signed an agreement allowing road construction to proceed and providing for future closure and removal of a portion of the road if it is determined that cleanup is necessary at the time. Construction started 1/94 and is proceeding. The City is proceeding with an independent soil removal at the Morrison Oil right-of-way. DEQ SAS is performing a PA for the entire Morrison Oil facility and DEQ SRS is taking enforcement action against Rhone-Poulenc for performance of a facility-wide investigation. (7/31/00 GMW/SAS) This site has been inactive at DEQ for about six years, and the city has long since completed its N Marine Dr. extension. A PA should be conducted to review any contaminant and receptor concerns that may remain along the extension right-of-way, and to provide updates on remedial activities at nearby sites.

NARR Comments: RP moving aggressively to remove free product from ground and define extent of plume. 10/20/93 - RP is continuing independent cleanup. (10/25/93 GMW/SAS) Further action letter sent. (11/10/97 LSK) Site re-evaluated as part of review of all sites within the Columbia Slough Study Area. PAE recommended, under medium priority. (4/13/99 ACV/VCP) RP entered the Voluntary Cleanup Program in January 1999 to obtain DEQ review of existing file information. RP has conducted independent groundwater investigation and product recovery. DEQ file memo expected in April 1999. (1/7/00 ACV/VCP) VCP coordinated review of all UST and cleanup issues in 1999, and issued an NFA for environmental issues (with UST concurrence) in January 2000.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Created By: Not reported
Created Date: 12/17/2002
Updated By: Not reported
Updated Date: 12/17/2002
Decode for NarcdID: Contamination
NARR Comments: The City of Portland investigated the site as part of its plans to build an extension to North Marine Drive. The portion south of the proposed road has not been characterized. Based on aerial photographs reviewed, salvage activities occurred primarily on the southern portion of the site. For additional information, see VCS project files for the North Marine Drive project (ECSI #1170).

Updated Date: 12/17/2002
Decode for NarcdID: Remedial Action
NARR Comments: (9/19/94 LSK) Site Assessment recommends DEQ review and evaluation of further data that the City of Portland will collect during ongoing excavation activities associated with the N Marine Dr. extension. Site Assessment also recommends further evaluation of possible PCB contamination in soils on other parts of the property. This further action is a low priority for DEQ followup. (2/8/96 GMW) Because the City of Portland has excvated and removed soils with documented contamination along the Marine Dr. right-of-way, and because DEQ cannot confirm that contamination exists on the southern portion of the property, the site should not be added to the Confirmed Release List at this time. (11/10/97 LSK) Site reevaluated as part of review of all sites within the Columbia Slough Study Area. Located to the northeast of Smith Lake. Only the Oregon Slough has potential to be impacted by any remaining contaminants at the site. DEQ never received confirmation sampling for areas of soil removed or

NARR Comments: (6/25/92 MJM) Appears to be an elevated concentration of lead in soil at the site. VCS recommends proposal for the Confirmed Release List and a low priority PA to be performed in conjunction with Lamm Property Site Two (ECSI #1200). (7/26/94 LSK/SAS) A PAE was completed for the site on 7/26/94. NFA was recommended because: 1) The available site history information did not indicate that hazardous materials were stored, transferred, used or produced on the site; 2) There is no documentation that any significant releases have occurred due to site activities in the past; 3) The TPH and lead findings are low and may be the result of minor drippage or releases from trucks parked on the site between 1984 and 1989; 4) The pesticide levels are not extremely high and are probably the result of wind blown contamination from the Rhone Poulenc site. See the Strategy Recommendation for more information.

Updated By: MPUGH
Updated Date: 08/21/2012
Decode for NarcdID: Contamination
NARR Comments: (12/9/97 DAB/SRP) Samples collected in soil, surface water, groundwater, and sediments at the site have shown a variety of metals, volatile organics, and semivolatile organics. The sources of contamination are assumed to be activities that have occurred on-site which include or included the following: used oil recycling, petroleum solvent recycling, wastewater management using an oil/water separator that overflowed at least once, extraction of oil from old automobile tires, and landfilling of aluminum dross and foundry sands on-site adjacent to wetland areas. Petroleum-related contamination has dissapated and is generally found at low levels with the excpetion of isolated occurrence of free oil in two site wells. The primary drivers for ecological risk are lead and zinc in sediment and panhandle soil. Isolated elevated concentrations of PCBs, PAHs and volatile organic compounds are present around the operational site area but there are no current exposure pathways. MTPugh 8/21/12 Upon review of 1200COLS stormwater permit records for the Triggco property, and later confirmed by Triggco through their site investigation, the source of the chromium appears to be steel slag placement on their property for a parking lot surface. Based on the information, the requirement for ORRCO/FPI/Merit to remove the previously identified chromium hotspot will not be required under terms of the Consent Order. Triggco has entered into an Agreement with DEQ to complete additional risk assessment on the chromium in soil and determine whether it presents a significant risk to human health or the environment.

NARR Comments: Since completion of the wetland remedy in SEpt. 2013, monitoring has shown that elevated levels of fluoride persist in sediment porewater, and thought to be attributable to aluminum dross placed in the panhandle as fill in the 1980s. Additonal evaluation of the potential source of fluoride, and whether there are upgradient operational sources, is needed.

NARR Comments: 10/13/22 DEQ issued a Certification of Completion for the order on consent on October 12, 2022. DEQ held a public comment period to announce its proposal to issue the Certification. No comments were received. Going forward the Certification of Completion and Easement and Equitable Servitudes are the governing documents for operation and maintenance and addressing contamination if encountered during intrusive site work. 1/27/21 Proposal: The Oregon Department of Environmental Quality is preparing to certify that all actions required under a cleanup agreement, officially called a Consent Order, with DEQ have been satisfactorily completed. DEQ is proposing to issue a Certificate of Completion and No Further Action determination. Comments are due March 2, 2021. Highlights: On Sept. 18, 2012, Oil Re-Refining Company, Fuel Processors, Inc. and Merit USA, Inc., collectively referred to as Merit Oil, entered into a cleanup agreement in the form of a Consent Order with DEQ. Under terms of the Consent Order, Merit Oil agreed to remove soil and sediment containing hotspot levels of lead, chromium and/or zinc; implement engineering and institutional controls for remaining hazardous substances at concentrations above acceptable risk levels; and perform post-cleanup monitoring in accordance with DEQ s cleanup plan, known as a Record of Decision, dated June 2011. Work completed by Merit Oil includes: Removing sediment hotspots from wetland areas of the facility, capping remaining sediment with contaminants above risk-based concentrations with clean soil and restoring the wetland area with native plants; Excavating hotspot fill from the panhandle upland area of the site; Disposing of soil and sediment off-site that exceeds hotspot levels; Consolidating non-hotspot sediment within the upland panhandle area; Benching the bank of the panhandle area that borders the wetlands and capping the bank with clean fill; Capping the panhandle area with asphalt to minimize infiltration of rainfall through contaminated fill; Re-engineering the bank between the facility and the adjacent Triggco property to mitigate erosion and overland transport of contaminated fill to the wetland; Installing a stormwater management system; Removing residual petroleum from monitoring wells FP-3 and FP-7 periodically; and Monitoring and reporting surface water and groundwater conditions. Ongoing requirements include periodic monitoring per a DEQ-approved sampling plan and implementation of engineering controls. Engineering controls include maintenance of the asphalt cap and bank and wetland soil caps, and implementation of a DEQ-approved contaminated media

FUEL PROCESSORS INC (Continued) **1001424376**

management plan. DEQ ensures that these requirements will remain in place by including them in the property deed through a document called Easement and Equitable Servitudes, which will be recorded with Multnomah County. DEQ reviewed the requirements of the Consent Order and the corresponding actions, and has made a preliminary determination that all obligations of the agreement have been satisfactorily performed, and that a Certification of Completion should be issued. These actions also warrant issuance of a No Further Action determination, conditioned upon conformance with the Easement and Equitable Servitudes. The Certification of Completion confirms Merit Oil s release from liability for potential claims by the State of Oregon under ORS 465.200 to 465.545 and 465.990 regarding existing hazardous substance releases at or from the property. How to comment: Send comments to DEQ Project Manager, Mark Pugh at 700 NE Multnomah St., Portland, OR 97232 or pugh.mark@deq.state.or.us. Find more information: Visit DEQ s Environmental Cleanup Site Information database at: DEQ ECSI Database If you do not have web access and want to review the project file, contact the DEQ project manager at 503 229-5587. Environmental Cleanup Site Information (ECSI) ID: 673 The next step: DEQ will consider all public comments received by the date and time stated above before issuing the Certification of Completion and conditional No Further Action determination. Upon issuance of these documents DEQ will make copies available by posting on the Environmental Cleanup Site Information database linked above. Alternative formats: DEQ can provide documents in an alternate format or in a language other than English upon request. Call DEQ at 800-452-4011 or email deqinfo@deq.state.or.us.

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: Groundwater discharge into sediment porewater and surface water appears to be a complete pathway. Direct contact with soil could present unacceptble risk. Virtually all impacted soil at the site is capped with asphalt or beneath the building and operational footprint, and thus the direct contact pathways are not complete. The site is located adjacnet to a wetland, that is connected to Smith-Bybee Lake during periods of high water table conditons. The Smith and Bybee Lakes area of north Portland is an important wildlife habitat. Both lakes discharge to the Columbia Slough. The Oregon Slough is about a quarter-mile north of the site.

Decode for NarcdID: Remedial Action
NARR Comments: (4/28/99 DAB/SRP) A remedial investigation at the site is in progress as required by a court order issued to Mr. Briggs and Fuel Processors, Inc. The site was referred to the Site Response Program in 1995. The first phase of remedial investigation has been

FUEL PROCESSORS INC (Continued) **1001424376**

completed. The workplan for the second phase has been completed. Implementation of the workplan has been postponed. (4/19/00 DAB/SRP) Site was referred to EPA for further investigation. (11/20/01 DAB/SRP) EPA has completed the investigation and is evaluating the results. (10/25/04, MTP) Following several years of negotiation, and settlement of a number of hazardous waste and water quality violations, DEQ issued an Order for Merit Oil to complete the RI/FS at the site. Merit has submitted a preliminary risk evaluation and RI proposal, and DEQ is currently reviewing the document. (3/14/05) Coles environmental Consulting is currently preparing a submittal containing results of a preliminary groundwater evaluation, including a well rehabiliation and initial round of groundwater sampling. DEQ conducted a site visit on Feb 14 to review potential ecological exposure pathways. (7/26/05, MTP) Coles Environmental Consulting, on behalf of Merit Oil, has completed the well rehabilitation and reported the findings in a RI Quarterly Progress Report #2 for the Period January-March 2005, dated 3/28/2005. A monitoring well installation plan dated 5/26/05 has been approved by DEQ. The well installation is scheduled to be completed by mid-September. The RI Work is scheduled to be submitted to DEQ by November 15, 2005. 8/21/06, MTP Two rounds of groundwater sampling have been completed. DEQ has provided comments on a draft RI work plan. The final work plan is due October 15, 2006. DEQ has approved the wetland and panhandle area soil sampling for implementation in the remainder of the <quot>dry<quot> season (i.e.,. September 2006). Additional groundwater and soil sampling (as needed) will be implemented following completion of the RI work plan. 6/3/08 MTPugh Although significant site work has been conducted, DEQ believes additional sampling may be needed in the site's upland area to supplement historical data, much of which is over 10 years old. For failing to complete an RI work plan, DEQ issued a Warning Letter in May 2008. Merit Oil submitted a risk assessment document that is currently under review. A sampling plan for completing the wetland soil sampling has been finalized and sampling will be conducted in fall 2008. 9/17/08 Mark Pugh DEQ has completed a data gap evaluation for a portion of the Merit Oil/Merit USA/Fuel Processors (Merit) site. The evaluation focused on soil data in the upland portion of the site. The purpose of the evaluation was to determine if the available data indicate potential hotspots of contamination in soil were present that required further characterization for completion of the Remedial Investigation/Feasibility Study (RI/FS). An evaluation of groundwater and surface water hotspots was not conducted and will need to be documented in the pending RI and FS reports. Based on the results of the data gap evaluation DEQ will not require additional soil sampling in the majority of the upland area at this time given the current site use, with the exception of the former waste water pond area as discussed below. This finding is an important step in the overall remedial investigation framework and DEQ believes the memorandum provides justifiable rationale for deferring additional investigation in the site upland process area until site conditions change. DEQ determined that quantitative risk assessment with the existing data has a large degree of uncertainty given the temporal span of sample collection and analysis and elevated detection limits for laboratory analysis performed during some investigations. Completion of a risk assessment representative of current conditions would require additional data collection. As noted in the memorandum, there are no monitoring wells beneath the operational site area and significant

FUEL PROCESSORS INC (Continued) **1001424376**

soil contamination in this area that has likely impacted underlying groundwater. In addition, well FP-3 has not been included in recent sampling events due to the presence of free-phase oil in the well. To address these data gaps DEQ is directing Merit to restart groundwater monitoring in the site upland on a semi-annual basis to monitor existing or potential future contaminant releases and migration. The sampling should include FP-3 to determine the current nature and magnitude of groundwater source area contaminants. In summary, while residual soil contamination is present above human health risk-based screening criteria, DEQ has determined that soil contamination does not constitute a hotspot(s) of contamination, and that remedial action and a quantitative risk assessment for soil in the site upland is not necessary unless site contamination or land use conditions change. 8/19/09 MTP In early 2009 approximately 2 feet of light non-aqueous phase liquid (LNAPL) was detected in FP-7 during routine monitoring. Additional investigation was conducted in early August to assess the extent of LNAPL. Approximately 12 borings were advanced and no indications of LNAPL was observed in any of the borings. The RI Report was completed in July 2009. A feasibility study (FS) is currently being conducted to develop and evaluate remedial alternatives to address unacceptable risk at the site. The primary risk is to ecological receptors such as birds from landfilled material in the southern panhandle containing elevated levels of metals such as lead and zinc. 8/1/10 DEQ has received a revised FS and additional information, and will approve a selected remedy of partial sediment removal and capping with clean imported fill in the wetland, consolidation of sediment into the panhandle area, with subsequent capping with asphalt in the upland area. 7/13/11 DEQ has completed a Record of Decision and selected the following remedy. The selected remedial alternative includes the following elements: Removal of sediment hot spots from wetland areas of the facility and capping remaining sediments with contaminants above risk-based concentrations with clean soil and revegetating the wetland area; Excavation of hot spot fill from the panhandle upland area of the site; Off-site disposal of soil and sediment that exceeds upland hotspot levels; Consolidation of non-hotspot sediment within the upland panhandle area; Benching the bank of the panhandle area that borders the wetlands and capping the bank with clean fill; Capping the panhandle area with asphalt to minimize infiltration of rainfall through contaminated fill; Re-engineering the bank between the facility and the adjacent Triggco property to mitigate erosion and overland transport of contaminated fill to the wetland through Triggco s stormwater collection system; Periodic removal of LNAPL from FP-3 and FP-7; Surface water and groundwater monitoring; Installation of a stormwater management system, and Institutional controls memorialized in an Easement and Equitable Servitudes (E&ES). MTPugh 3/20/14 The remedial action was completed in September 2013 and summarized in a Construction Completion Report dated MArch 13, 2014. Post-remedy monitoring is ongoing.

Environmental Interest/Information System:
The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the

MARKET TRANSPORT LTD (Continued) **1004770051**

Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

NARR Comments: Laboratory testing shows the slag and associated soil generally has elevated levels of chromium and copper above expected naturally occurring concentrations, with most the chromium levels at least ten times DEQ s stormwater source control criteria for potentially erodible soil. The slag also contains hexavalent chromium above risk-based concentrations for human health.

NARR Comments: Direct contact by site workers is the primary exposure pathway of concern at the site. The storm water flow from the parking areas is directed towards an east-west trending drainage ditch located along the southern boundary, where it discharges through a series of 5 outfalls from Triggco property. The drainage flows from west to east towards the wetland adjacent to the Merit Oil property (ECSI #673). Chromium has been detected at elevated levels in the ditch and associated soil. Triggco submitted a risk screening memo for the

TRIGGCO PROPERTY (Continued) **S111331867**

drainage ditch and surrounding soil. DEQ believes the screening resolves concerns regarding existing chromium contamination in the Triggco drainage. This finding is supported by the following facts: We are limiting assessment to terrestrial ecological receptors exposure to surface soil at the population level; The areal extent of the site is small <1 acre; The area where surface soil with chromium above the screening level is limited (SD-6, 9 & C-4 samples); The site population level screening criterion for chromium in soil is 155 mg/kg; DEQ s estimate of exposure concentration in surface soil is 156 mg/kg, nearly identical to the soil screening level of 155 mg/kg; and, Triggco has agreed to complete a source control measure in the site upland to limit additional chromium loading to the drainage. Because soil concentrations are at the screening criterion for protection of terrestrial receptors, completing a source control measure is imperative in order to prevent additional loading and possible recontamination of an area being remediated by Merit Oil. A source control measure would also address human health concerns in the upland from hexavalent chromium, which has been detected well above human health risk criteria for occupational exposure, and in some cases above the criterion for a construction worker.

Updated Date: 04/25/2017
Decode for NarcdID: Remedial Action
NARR Comments: (April 2016) In 2012, ecological risk was adequately assessed and no additional actions were needed to address site contamination with respect to ecological receptors. However, hexavalent chromium exceeded human health risk based concentrations. Actions is needed to address the presence of steel slag and its potential risk to site workers and/or additional loading to the off-site drainage ditch. Soil berm excavation and off-site disposal activities were completed by October 2015. Site re-grading, monitoring well abandonments, and placement of the asphalt cap also were completed in October 2015. Construction of stormwater ponds and swales were initiated in late October 2015. Installation of the stormwater inlets and outfall structure, pond/swale liner, and placement of gravel base rock in the ponds/swales has been completed. MTPugh 4/25/17 In December 2016 TriggCo completed a remedial action under terms of a consent order with DEQ. The work included: 1. Re-grading the surface of the slag/gravel to facilitate stormwater sheet flow to the stormwater treatment bioswale system; 2. Constructing a low-permeability 4 to 6 thick asphalt cap, equipped with dolly pads for parking the trailers, over 4 acres of slag and graveled surfaces; 3. Installing a curb along the southern edge of the cap to capture the sheet flow and direct it into the stormwater treatment facilities; and 4. Installing two shallow pretreatment ponds and two vegetated swales that slope to the center of the southern property lines and discharge through an oil/water separator to the drainage ditch.

NARR Comments: 2/7/21 Triggo completed work required under the consent order, and DEQ issued a Certification of completion in July 2017. The current and future owners must maintain environmental controls at the site as described in the Certification of Completion. In December 2016 TriggCo completed a remedial action under terms of a consent order with DEQ. The work included: 1. Re-grading the surface of the slag/gravel to facilitate stormwater sheet flow to the stormwater treatment bioswale system; 2. Constructing a low-permeability 4 to 6 thick asphalt cap, equipped with dolly pads for parking the trailers, over 4 acres of slag and graveled surfaces; 3. Installing a curb along the southern edge of the cap to capture the sheet flow and direct it into the stormwater treatment facilities; and 4. Installing two shallow pretreatment ponds and two vegetated swales that slope to the center of the southern property lines and discharge through an oil/water separator to the drainage ditch. improved.

 The work was documented in a Remedial Action Completion Report, dated March 23, 2017. TriggCo has satisfactorily completed the investigation and cleanup required under the Consent Order, and DEQ is proposing to issue a Certification of Completion of TriggCo. DEQ is holding a public comment period in May 2017.

Waste Description: The Following Spent Nonhalogenated Solvents: Cresols, Cresylic Acid, And Nitrobenzene; And The Still Bottoms From The Recovery Of These Solvents; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above

BOISE WHITE PAPER LLC (Continued) **1000378977**

Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: P105
Waste Description: Sodium Azide

Waste Code: U001
Waste Description: Acetaldehyde (I) (Or) Ethanal (I)

Waste Code: U037
Waste Description: Benzene, Chloro- (Or) Chlorobenzene

Waste Code: U151
Waste Description: Mercury

Waste Code: U154
Waste Description: Methanol (I) (Or) Methyl Alcohol (I)

Waste Code: U217
Waste Description: Nitric Acid, Thallium(1+) Salt (Or) Thallium(I) Nitrate

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 12/19/2024
Date Data Arrived at EDR: 01/02/2025

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/19/2024

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/20/2024

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

WA UST SEATTLE: Underground Storage Tank (UST) Records ? Residential Listing

Records of Seattle Fire Department (SFD) permits related to decommissioning of a residential heating oil tank, permit code 6103. A record with incomplete tank info indicates that the required follow-up report has not been received by SFD. Please note that SFD records begin in 1996 when state requirement was introduced. Decommissioning of a residential heating oil tank might have occurred prior to 1996, in which SFD will not have a record.

WA INST CONTROL: Institutional Control Site List

The Environmental Covenants Registry is a list of sites that have implemented institutional controls as part of the remedy. Institutional controls are administrative or legal measures used to prevent activities that may compromise the integrity of a cleanup action. They are meant to prevent exposure to contamination remaining on site. Institutional controls may include environmental covenants (also known as "deed restrictions"), zoning restrictions, public health advisories, or other administrative tools. The most common institutional control is an environmental covenant. Environmental covenants are legal recorded documents that typically limit certain uses of the property, such as: Drilling a water supply well on the property. Disturbing pavement covering contaminated areas. Residential use of the property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

NY MANIFEST: Facility and Manifest Data

Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

Date of Government Version: 12/31/2019

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Version Date:	2020

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

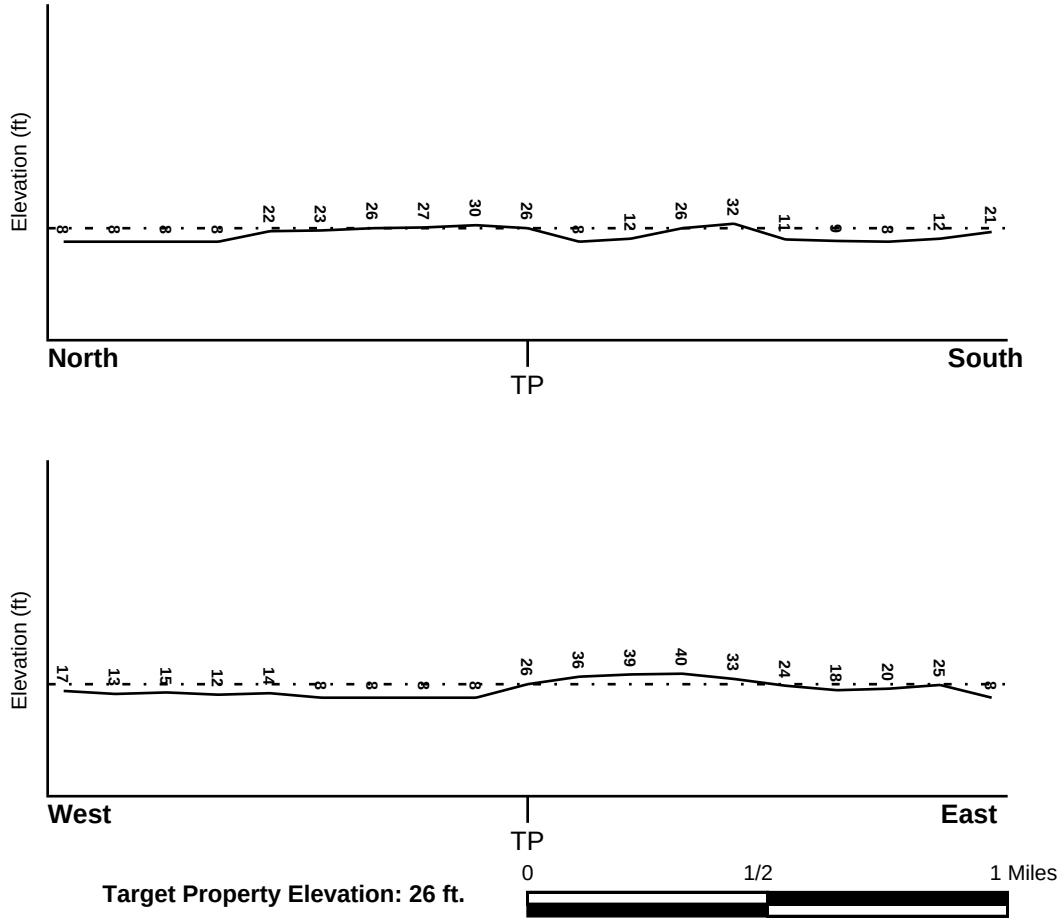
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 26 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
53011C0481D	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
53011C0364D	FEMA FIRM Flood data
53011C0368D	FEMA FIRM Flood data
53011C0477D	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
PORTLAND	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Pilchuck

Soil Surface Texture: sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	11 inches	sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.3 Min: 6.1
2	11 inches	59 inches		Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.3 Min: 6.1

Soil Map ID: 2

Soil Component Name: Water

Soil Surface Texture: sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class:

Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 3

Soil Component Name: Sauvie

Soil Surface Texture: silt loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Poorly drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 5 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	14 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 42 Min: 14	Max: 6.5 Min: 5.6
2	14 inches	38 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 42 Min: 14	Max: 6.5 Min: 5.6
3	38 inches	59 inches	very fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 42 Min: 14	Max: 6.5 Min: 5.6

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetlands Inventory Data
Source: Oregon Geospatial Enterprise Office
Telephone: 503-378-2166

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Data
Source: Department of Water Resources
Telephone: 503-986-0843

OTHER STATE DATABASE INFORMATION

Oil and Gas Well Locations
Source: Department of Geology and Mineral Industries
Telephone: 971-673-1540
A listing of oil and gas well locations in the state.

RADON

State Database: OR Radon
Source: Oregon Health Services
Telephone: 503-731-4272
Radon Levels in Orgeon

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Parametrix, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, LLC. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. This Report is provided on an "AS IS", "AS AVAILABLE" basis. NO WARRANTY EXPRESS OR IMPLIED IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, LLC AND ITS SUBSIDIARIES, AFFILIATES AND THIRD PARTY SUPPLIERS DISCLAIM ALL WARRANTIES, OF ANY KIND OR NATURE, EXPRESS OR IMPLIED, ARISING OUT OF OR RELATED TO THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT, INCLUDING WITHOUT LIMITATION, ANY WARRANTIES REGARDING ACCURACY, QUALITY, CORRECTNESS, COMPLETENESS, COMPREHENSIVENESS, SUITABILITY, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, NON-INFRINGEMENT, MISAPPROPRIATION, OR OTHERWISE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, LLC OR ITS SUBSIDIARIES, AFFILIATES OR THIRD PARTY SUPPLIERS BE LIABLE TO ANYONE FOR ANY DIRECT, INCIDENTAL, INDIRECT, SPECIAL, CONSEQUENTIAL OR OTHER DAMAGES OF ANY TYPE OR KIND (INCLUDING BUT NOT LIMITED TO LOSS OF PROFITS, LOSS OF USE, OR LOSS OF DATA), ARISING OUT OF OR IN ANY WAY CONNECTED WITH THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT.

Any analyses, estimates, ratings, environmental risk levels, or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only an assessment performed by a qualified environmental professional can provide findings, opinions or conclusions regarding the environmental risk or conditions in, on or at any property.
