PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetlands Inventory Data
Source: Oregon Geospatial Enterprise Office
Telephone: 503-378-2166

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Parametrix, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

CERTIFICATION

The technical material and data contained in this document were prepared under the supervision and direction of the undersigned. We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the *all appropriate inquiries* in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

Parametrix was retained by the Oregon State Department of Transportation to perform a Phase I Environmental Site Assessment (ESA) on three contiguous commercial properties located south of N Marine Drive, Hayden Island, and the Columbia River; west of commercial development and Interstate 5 (I-5); north of the Vanport Wetlands; and to the east of N Force Avenue in Portland, Oregon (Figure 1). The Phase I ESA focused on partial areas of the properties that may be acquired as part of the Interstate Bridge Replacement (IBR) Program. The subject property consists of the parcels identified as IBR-1N1E04-00100, IBR-2N1E33-00200, and IBR-2N1E33-00202. Based on the findings of this investigation, Parametrix reached the following conclusions:

1. The subject property includes three separate Multnomah County Tax Lots—1N1E04-00100, 2N1E33-00200, and 2N1E33-00202—and currently includes one commercial building known as the Portland Expo Center and associated parking lots. No buildings are located within the partial areas of the properties that may be acquired as part of the IBR Program. Areas of acquisition include the northeastern corner, a portion of the eastern side of the property along the boundary, and a section in the southeastern corner of the property.
2. Based on review of historical data, the subject property has been developed since at least 1935. No specific recognized environmental conditions (RECs) were identified on the subject property during the historical photograph review, including the partial areas of the properties that may be acquired as part of the IBR Program. However, the historical use of the properties to the adjacent north, northeast, and southwest as industrial properties and known associated soil, sediment, and groundwater contamination are considered a REC for the subject property.
3. Based on the age of the oldest portion of the building on the subject property (constructed sometime prior to 1935), there is potential for lead-based paint or asbestos-containing materials to have been used at the subject property. However, none of the buildings are located within the partial areas of the properties that may be acquired as part of the IBR Program.
4. No evidence of significant use or storage of hazardous substances and/or petroleum products was noted on or near the subject property as observed from the public right-of-way. No evidence of distressed vegetation, spills or releases, dry wells, or other indications of environmental concern was identified during the site reconnaissance completed from the right-of-way.
5. The subject property is listed as the Expo Center site or as the Delta Park Exit Construction site on regulatory databases. According to the ECSI listing, the past activity of the area around the site has not been evaluated as part of the Department of Environmental Quality (DEQ) Cleanup program. The unresolved listing of the subject property on the ECSI database is considered a REC for the subject property. In addition, two underground storage tanks (USTs) listed for the site have been decommissioned, both of which have received No Further Action (NFA) determinations form the DEQ. The exact location of the Delta Park former LUST and residual contamination is not precisely known. However, based on the proper decommissioning of the USTs, residual contaminants below cleanup levels, and regulatory

status (NFA determination), both of the LUST files are considered a historical REC for the subject property.

6. A review of regulatory information indicated that the properties to the adjacent north and northeast of the subject property (Diversified Marine site and Pier 99 site) are listed as a Superfund sites (archived and current) and on multiple regulatory databases that indicate the release and storage of hazardous materials on the sites. Prior investigations have included site characterization with subsurface soil, groundwater, and sediment sampling and remedial actions such as removal of soils, debris, and other infrastructure on the sites. The known contamination on the sites and their proximity to the area of acquisition are RECs for the subject property.
7. An on-site reconnaissance and interview were not conducted with a property representative to identify any potential environmental conditions and address information data gaps during the Phase I ESA process. The lack of a property owner or representative interview and the lack of a full on-site reconnaissance represent data gaps in accordance with Standard E1527-21. However, the information obtained for the Phase I ESA, including regulatory database and historical documentation, was deemed sufficient.

Based upon the conclusions of this investigation of the subject property, Parametrix offers the following recommendation:

1. Subsurface sampling is recommended in the partial acquisition areas on the northeastern and eastern boundaries of the subject property to document the nature and extent of the potential on-site contamination, which may be impacted by future subsurface work during the future IBR construction project. The results of the investigation should be used to evaluate excavation worker health and safety requirements and/or excavation material disposal options.

1. INTRODUCTION

Parametrix was retained by the Oregon Department of Transportation (ODOT) to perform a Phase I Environmental Site Assessment (ESA) on three contiguous commercial properties located south of N Marine Drive, Hayden Island, and the Columbia River; west of commercial development and Interstate 5 (I-5); north of the Vanport Wetlands; and to the east of N Force Avenue in Portland, Oregon (herein referred to as the subject property) (Figure 1). The subject property is located in Multnomah County, Oregon, and is comprised of three parcels included in the Interstate Bridge Replacement (IBR) Program. The property identifiers, tax lot IDs, and street addresses for each of the three parcels are listed below, and the configuration of the properties is shown in Figure 2.

- IBR-1N1E04-00100 1N1E04-00100 2060 WI/N Marine Drive
- IBR-2N1E33-00200 2N1E33-00200 2060 N Marine Drive
- IBR-2N1E33-00202 2N1E33-00202 10799 WI/N Expo Road

It is our understanding that the ODOT may pursue acquisition of a portion of the parcels making up the subject property as part of the IBR Program. The proposed acquisition areas are shown on Figure 2. The Phase I ESA focused primarily on the partial areas of each parcel that may be acquired as part of the IBR Program and assessed the potential for recognized environmental conditions on the acquisition areas from the larger property and adjacent or nearby properties.

This Phase I ESA includes a review of available documentation pertaining to the subject property, a site reconnaissance, and a review of pertinent public agency documents. The ESA consists of two distinct tasks: (1) a review of documents and of oral information and (2) a site examination. Conclusions and recommendations within this report are based solely on observed evidence and data collected during the performance of this assessment.

1.1 Purpose

The Phase I ESA was conducted in general accordance with American Society for Testing Materials (ASTM) Standard E1527-21, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, which defines the generally accepted industry practices and procedures currently applicable at the time and place of this study (ASTM 2021). The Phase I ESA is intended to permit the user to satisfy the requirements to qualify for the bona fide prospective purchaser limitation under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), and as such constitutes “all appropriate inquiries in the previous ownership and uses of the property consistent with good commercial or customary practice” as defined at 42 U.S.C. §9601 (35)(B).

The purpose of this Phase I ESA is to identify recognized environmental conditions (RECs) on or near the subject property. The term recognized environmental conditions is defined in ASTM Standard E1527-21 as:

> "…(1) the presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* due to a *release* to the *environment*; (2) the likely presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* due to a *release* or likely *release* to the *environment*; or (3) the presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* under conditions that pose a *material threat* of a future *release* to the *environment*."

In accordance with ASTM Standard E1527-21, some RECs may be further defined as historical recognized environmental conditions (HRECs) or controlled recognized environmental conditions (CRECs).

An HREC is defined as:

> "…*a past release of any hazardous substances* or *petroleum* products that has occurred in connection with the *property* and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the *property* to any required controls."

A CREC is defined as:

> "…a *recognized environmental condition* resulting from a past *release of hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority, with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls."

This Phase I ESA endeavors to identify all RECs, HRECs, and/or CRECs at the subject property.

1.2 Significant Assumptions

This assessment was conducted in accordance with generally accepted industry practices and procedures within the scope of work authorized at the time and place of this study. Parametrix observations are limited to those areas to which it had access on the subject property.

Phase I ESA methodology included viewing accessible areas of the subject property from public right-of-way, as on-site access was not available. In addition, an interview was not able to be conducted with a property representative to identify any potential environmental conditions during the Phase I ESA process. Unless otherwise stated, no other exceptions to the guidelines presented in ASTM E1527-21 were made during completion of this Phase I ESA.

1.3 Limitations

The findings, conclusions, and recommendations presented in this report are based on site conditions and the best available information known or made available by regulators, other consultants, or other sources at the time of the investigation. Parametrix conducted a diligent search and investigation in compliance with prevailing standards of the profession; however, certain adverse conditions may exist at the site not detected at the time of the investigation.

The services provided under this contract, as described in this report, include professional opinions and judgments based on data collected. These services have been provided according to generally accepted engineering practices. The opinions and conclusions contained in this report are typically based on information obtained from the following:

- Observations and measurements made by Parametrix field staff.
- Contacts and discussions with regulatory agencies and others.
- Review of available hazardous substance or solid waste lists.
- Opinions and judgments of Parametrix based on the information available.

In the professional judgment of Parametrix, the services performed pursuant to the scope of services are an adequate basis to collect data for a preliminary evaluation of the site and upon which to draw the conclusions stated in this report.

2. SUBJECT PROPERTY DESCRIPTION

2.1 Location

The subject property includes three contiguous commercial properties located west of I-5; south of Hayden Island and the Columbia River; and east of North Force Avenue in Portland, Oregon. The Phase I ESA focused on the subject property, which consists of partial areas of the three parcels that may be acquired as part of the IBR Program, as detailed in Table 1 below. The site location is shown on Figure 1, the Site Vicinity Map. The boundary of the subject property is shown on Figure 2.

2.2 Site and Vicinity Characteristics

Characteristics of the subject property, including the partial areas of the parcels that may be acquired as part of the IBR Program, are summarized in Table 1.

Table 1. Subject Property Characteristics

IBR ID	Address	Owner	Total Area (acres)	Potential Acquisition Area (square feet)	Current Use (determined through visual observations)
IBR-1N1E04-00100	2060 WI/N Marine Dr	Metro	10.81	0	Parking lot associated with the Portland Expo Center
IBR-2N1E33-00200	2060 N Marine Dr	Metro	38.02	244,768	The Portland Expo Center and associated paved parking areas
IBR-2N1E33-00202	10799 WI/N Expo Rd	The Port of Portland	0.73	21,145	Vacant, vegetated land

The subject property is bounded to the north by N Marine Drive, Hayden Island, and the Columbia River; to the east by I-5; to the south by the Vanport wetlands (convention center); and to the west by N Force Avenue (see Figure 2).

2.3 Physical Setting

The subject property is located in the Portland Basin, which marks the northern terminus of the Willamette Lowland in Oregon (DNR n.d.). The northern portion of the basin is known for its low topographic relief, with the subject property at an elevation of approximately 29 feet above mean sea level. The Portland Basin is bound by the Cascade Range to the east and the Coast Range to the west.

Geologic processes in the Portland Basin consist of volcanism, sedimentation, and cataclysmic flood deposits in both fluvial and marine depositional environments. The subject property lies on what is mapped as “Alluvium (Holocene) – Stratified clay, silt, sand, and gravel deposited along rivers and streams. Locally includes organic-rich mud in valley bottoms and poorly sorted alluvial fan deposits

along valley margins" (Wells et al. 2020). Surface soils at the subject property are mapped as silty loam in Environmental Data Resources (EDR). Beneath the subject property is fill used to construct the levee along North Portland Harbor — Columbia River. Under the fill of the levee is expected to be overbank deposits from the Columbia River and remaining geologic units that comprise the Portland Basin. Local bedrock is the Columbia River Basalt (Apex 2014).

The subject property is located directly south of North Portland Harbor. North Portland Harbor is the name given to the Portland Harbor of the Columbia River that runs between Hayden Island and North Portland. The topography in the vicinity of the subject property is a consistent slope, rising with distance from the Columbia River. The anticipated groundwater gradient is to the north toward the Columbia River. Groundwater at the subject property is controlled by the river stage. During a 2013 investigation, groundwater was encountered at approximately 20 feet below ground surface (Apex 2014). The subject property is approximately located at Columbia River Mile 106.

2.4 Current Use of the Subject Property

The subject property includes multiple commercial buildings and warehouses. The proposed acquisition area includes the eastern portion of the parcel identified as IBR-2N1E33-00200 and IBR-2N1E33-00202 (see Figure 2).

The subject property is an approximately 49.56-acre parcel that is a mix of both commercial and vacant properties. The current site uses predominantly relate to the Portland Expo Center and associated events. North of the subject property, in-water uses along North Portland Harbor include moorage of marine vessels, house boats, and pleasure crafts (Apex 2014).

2.5 Descriptions of Improvements on the Subject Property

The subject property includes commercial buildings, warehouses, and asphalt parking lots. Power, water, and gas are supplied to the buildings by local utilities and municipalities. Hardscaping such as sidewalks and an asphalt parking lot border the subject property in all directions.

No buildings or other significant structures are located on the partial areas of the parcels that may be acquired as part of the IBR Program. However, what appears to be a section of covered parking is located on the partial area, in the southeastern corner of the property, that may be acquired.

2.6 Environmental Liens

An environmental lien is defined by ASTM as a charge, security, or encumbrance upon title to a property to secure the payment of a cost, damage, obligation, or duty arising out of response actions, cleanup, or other remediation of hazardous substances or petroleum products. No evidence of environmental liens against the subject property was identified during the course of this Phase I ESA.

3. RECORDS REVIEW

The purpose of the records review task was to gather environmental data on the subject property prior to the site examination. The information review consisted of two subtasks: a review of various lists and files published by federal and State of Oregon agencies; and a compilation of historical uses of the site and site vicinity, to determine if past operations pose an environmental risk to the subject property. Information for agency file review is based, in part, on a report provided by EDR. The EDR report is included in Appendix A.

The Environmental Data Resources (EDR) report is a summary of state and federal database searches for sites of possible environmental concern. The information review enabled Parametrix personnel to characterize the types of activities performed at the site, identify data gaps prior to the site examination, and facilitate recognition of discrepancies between reported and observed data. Data gaps identified during the document review were addressed by interviewing knowledgeable personnel, observations during the site examination, or by additional detailed investigation.

It should be noted that this information is reported as Parametrix received it from EDR, which in turn reports information as it is provided in various government databases. It is not possible for either Parametrix or EDR to verify the accuracy or completeness of information contained in these databases. However, the use of and reliance on this information is a generally accepted practice in the conduct of environmental due diligence. The following sections present information from the document review.

3.1 Standard Environmental Record Sources

The following section summarizes information collected from records maintained by the U.S. Environmental Protection Agency (EPA) and the Oregon Department of Environmental Quality (DEQ). The information includes details on sites identified in regulatory databases within recommended ASTM search distances. A complete listing of the databases reviewed is included in the EDR Radius Map™ Report (Appendix A).

3.1.1 Review of Oregon Department of Environmental Quality (DEQ) Databases

The following sections summarize the most relevant information obtained from the EDR Radius Map™ Report (EDR 2023a) regarding sites identified within the ASTM E1527-21 search radii from the following databases. Additional information regarding these sites was reviewed on DEQ's Environmental Cleanup Site Information Database (DEQ n.d.a) and Leaking Underground Storage Tank Cleanup Site Database (DEQ n.d.b) to supplement data gaps in the EDR report. A complete listing of the databases reviewed is included in the EDR report. Relevant database listings from DEQ include:

- DEQ Underground Storage Tank (UST) List
- DEQ Leaking Underground Storage Tank (LUST) List

- DEQ Environmental Cleanup Site Information (ECSI) List
- Spill Database (SPILLS)
- Solid Waste Facilities/Landfills (SWF/LF) List
- DEQ Confirmed Release List (CRL)
- DEQ Brownfields List
- DEQ Drycleaners List
- DEQ Engineering or Institutional Controls

3.1.1.1 DEQ Underground Storage Tank List

The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data was obtained from the DEQ UST List.

Information contained in the EDR report indicates that the IBR-2N1E33-00200 parcel of the subject property is listed as a UST site. One additional UST site is located within 0.5 miles of the subject property:

- The Expo Center site (2060 N Marine Drive) is located on the subject property and is listed in the ECSI, LUST, UST, AST, SPILLS, and HSIS databases. Two USTs listed for the site have been decommissioned, and the LUST listing has a cleanup completed date of April 5, 1996. Additionally, a No Further Action (NFA) letter dated August 13, 1996, was issued to the site by DEQ. Additional information regarding the subject property regulatory status is included in Section 4.
- The Vanport Plant/Ross Island Sand & Gravel Vanport Plant site (1835 N Marine Drive) is located 684 feet north-northeast of the subject property and is listed on the UST and LUST databases. One UST is listed for the property and has a status of decommissioned. The LUST listing has a cleanup completed status dated September 11, 2017. Additionally, an NFA letter dated December 18, 2017, was issued to the site for LUST #26-17-0101. Based on the regulatory status of the site (NFA determination) and the decommissioning of the tank, this site is not a REC for the subject property.

3.1.1.2 DEQ Leaking Underground Storage Tank List

The LUST Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data was obtained from the DEQ LUST Database List.

Nine LUST sites were identified within 0.5 miles of the subject property. Three LUST sites are located in proximity to the subject property (approximately within 0.25 miles) are discussed below:

- The Delta Park Exit Construction site (Delta Park Exit, West Side of I-5) is mapped as being located at the subject property and is listed on the LUST database. The LUST listing has a cleanup completed status dated December 24, 1990. According to the NFA letter from DEQ (included in Appendix E), diesel contamination was discovered when underground storage

tanks were decommissioned. The concentrations of contamination did not exceed the cleanup levels for the site. No groundwater was encountered in the excavation. The indication that contamination has been left in place at levels below cleanup standards for 1990 and the lack of information on the exact location of the former tanks and contamination constitutes a data gap. However, based on the proper decommissioning of the UST, residual contaminants below cleanup levels, and regulatory status (NFA determination), the issue is considered a historical REC for the subject property.

- The Expo Center site (2060 N Marine Drive) is located on the subject property and is listed in the ECSI, LUST, UST, AST, SPILLS, and HSIS databases. Two USTs listed for the site have been decommissioned, and the LUST listing has a cleanup completed date of April 5, 1996. Additionally, an NFA letter dated August 13, 1996, was issued to the site by DEQ and is included in Appendix E. Additional information is included in Section 4.
- The Vanport Plant/Ross Island Sand & Gravel Vanport Plant site (1835 N Marine Drive) is located 684 feet north-northeast of the subject property and is listed on the UST and LUST databases. The site is discussed above in Section 3.1.1.1. Based on the regulatory status of the site (NFA determination) and the decommissioning of the tank, this site is not a REC for the subject property.

Based on DEQ information indicating site closure activities have been completed or other supplemental information, none of the identified sites above appear to represent a REC to the subject property. In addition, the remaining LUST sites identified in the EDR report appear to be at sufficient distances from the subject property and/or cleanup activities have been completed so that they do not appear to represent a REC to the subject property.

3.1.1.3 DEQ Environmental Cleanup Site Information List

The ECSI identifies and tracks known or potentially contaminated sites within Oregon and is the state's equivalent to the Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS). The CRL is a subset of the ECSI and includes sites that have known releases of hazardous substances. The Voluntary Cleanup Program (VCP) database is a list of sites that have been entered into the DEQ VCP and are undergoing cleanup. Eighteen ECSI sites are listed within 1 mile of the subject property. The subject property is identified on the ECSI database. Additionally, three adjacent properties are also listed on the ECSI database (Diversified Marine site, 1610 North Pier 99 site, and the Harbor Oil Inc site):

- The Expo Center site (2060 N Marine Drive) is located at the subject property and is listed in the ECSI, LUST, UST, AST, SPILLS, and HSIS databases. According to the ECSI listing, the area around the site has been extensively investigated, and the past activity has not been evaluated as part of the DEQ VCP. As part of the Columbia Slough Area-Wide Discovery Project, this site was noted due to the presence of soil borings found in the Oregon Water Resources Department well log database. These wells appear to be related to the property to the adjacent west of the Expo Center. The unresolved listing of the subject property on the ECSI database is considered a REC for the subject property. Additional information is included in Section 4.

- The Diversified Marine site (1801 N Marine Drive) is located 650 feet north-northeast of the subject property and is listed on the ECSI, CDL, SPILLS, HAZMAT, HSIS, SEMS-ARCHIVE, RCRA-VSQG, AST, and SWF/LF databases. Historical and present-day activities at the site have included tugboat and barge building, repair, sandblasting, painting, bilge removal, and boat/equipment refueling since at least 1990. The site has received numerous pollution complaints. A Preliminary Assessment was completed by Ecology and Environment (2009), and the results indicated that the site is contributing to copper, lead, and zinc contamination in the river. On-site activities have contaminated soils and nearby river sediments with contaminants related to boat building, maintenance, repair, and refueling; toxic metals; paint chips containing toxic metals; petroleum constituents; and other organic contaminants such as phthalates, pentachlorophenol, chlorinated solvents, and polychlorinated biphenyls (PCBs). An Abbreviated Preliminary Assessment was completed by the EPA in 2009. The EPA also performed a site investigation in 2009 on the adjacent east property (see below, 1610 North Pier 99 S) and downstream samples indicate releases are likely to have occurred from the Diversified Marine property; however, no samples were collected in locations that would be suspected as release points for the Diversified Marine site. A No Further Remedial Action Planned (NFRAP) under federal programming was designated in 2010. However, a site investigation to characterize the site has been recommended under state supervision. Based on the location of the site adjacent to the subject property, this site is considered a REC for the subject property.
- The 1610 North Pier 99 S site (also known as Pier 99—Portland, Schooner Creek Boat, and Pier West LLC) is located 897 feet northeast of the subject property and is listed on the ECSI, CRL, VCP, SEMS CERCLIS, ICIS, RCRA-VSQG, and RGA HWS databases. Soil, sediment, and groundwater at the site have been found to be contaminated with petroleum hydrocarbons and metals due to releases and improper handling of hazardous substances related to boat repair, maintenance, and related activities at the site. Additionally, the EPA's data indicates that site soils are contaminated with polycyclic aromatic hydrocarbons (PAHs), PCBs, dichlorodiphenyltrichloroethane (DDT), phthalates, and tributyltin at concentrations that represent a potential risk to on-site workers, the adjoining residents, on-site plants and wildlife, and nearby aquatic life. Sediments in the site's boat dock area are contaminated with metals, PAHs, and DDT at concentrations that represent potential toxic and bioaccumulative threats to aquatic life. Extensive remedial actions have included the removal of a gravel filter and stormwater pipe on the site, debris and sand blast grit removal, bank stabilization and reinforcement, and soil removal.

  The site is further discussed in Section 4. The known contamination adjacent to the subject property is considered a REC to the subject property.
- The Bulk Transportation Facility site (11619 N Force Ave) is located approximately 0.32 miles west-northwest (adjacent west) of the subject property and is listed on the ECSI and SPILLS databases. This site was added to ECSI based on documented evidence of elevated concentrations of chlorinated solvents, metals, and petroleum constituents in the site's soils and shallow groundwater. The property was developed in the 1940s as an on-site fertilizer yard that received manure produced at nearby stockyards. Prior investigations in the late 1980s/early 1990s found metals, TPH, and VOC contamination generally below human health

risk-based concentrations in soils and groundwater (except for trichloroethylene/tetrachloroethene, which is found in groundwater area wide) but elevated from background concentrations. Sources of the elevated soils are unknown, and the true nature and extent of contamination has not been adequately determined. Bulk transportation uses the site as a satellite trucking terminal. Liquids, gases, chemicals, and hazardous material are unloaded from rail cars and trucked to their final destination. Other services include product mixing, liquid bulk storage, tank containers, and warehousing. Based on the distance from the subject property and partial acquisition area, this site is not considered a REC for the subject property.

- The Harbor Oil Inc. site (also known as Chempro of Oregon Inc. and American Recyclers LLC) (11535 N Force Ave) is located approximately 0.35 miles west of the subject property at 11353 N Force Street. The site is listed on the Delisted NPL, SEMS, US ENG CONTROLS, ECSI, SWF/LF, AST, VCP, SPILLS, OR HAZMAT, RCRA NonGen/NLR, TRIS, ROD, PRP, PADS, FTTS, HIST FTTS, ECHO, AIRS, HSIS, MANIFEST, and NPDES databases. The 4.2-acre Harbor Oil Inc. site is located in an industrial area adjacent to Force Lake. Past site operations included a tank truck cleaning business. In 1974, a fire and a large oil spill contaminated soil, sediment and groundwater with metals, petroleum hydrocarbons, pesticides, and PCBs. Another fire in 1979 destroyed the facility and ruptured five 20,000-gallon aboveground used oil tanks. According to the EPA, site investigations have determined that contamination does not pose an unacceptable risk to human health or the environment, and therefore, no further action is required. EPA deleted the site from the NPL database in 2014. EPA will only require cleanup to take place at the site if new information emerges. American Petroleum Environmental Services is the current site operator; it recycles used oil at the site (EPA 2021). Based on the distance from the subject property and area of acquisition for the IBR Program, this site is not considered a REC for the subject property.
- The Peninsula Terminal RR site (11707 N Force Avenue) is located approximately 0.39 miles west-southwest (adjacent west) of the subject property and is listed on the INST CONTROL, ECSI, CRL, and VCP databases. An NFA determination for the site is based on industrial soil cleanup standards and is contingent on site zoning/use remaining industrial, as documented in the deed restriction attached to the site. Based on distance from the subject property and partial acquisition area, this site is not a REC to the subject property.

The remaining 13 ECSI, CRL, and VCP sites are located at sufficient distances and/or cleanup activities have been completed so that they do not appear to represent RECs to the subject property, including the partial areas of the parcels that may be acquired as part of the IBR Program.

3.1.1.4 SPILLS Database

This database provides a comprehensive list of reported spills. Four SPILLS sites were identified in proximity to the subject property:

- The Expo Center site (2060 N Marine Drive) is located at the subject property and is listed in the ECSI, LUST, UST, AST, SPILLS, and HSIS databases. A release was reported on February 10, 2016, of an asphalt company truck carrying flats of 5-gallon buckets of a concrete sealer being involved in an accident and losing 10 buckets to the pavement on N Marine Drive. Based on

the nature of this incident and presumed cleanup efforts, this site is not a REC to the subject property.

- The Diversified Marine site (1801 N Marine Drive) is located to the adjacent north of the subject property and is listed on the ECSI, CDL, SPILLS, HAZMAT, HSIS, SEMS-ARCHIVE, RCRA-VSQG, AST, and SWF/LF databases. A release was reported on March 2, 2016, of an unknown rainbow sheen on the Columbia River from an unknown source. The sheen measured approximately 25 yards wide by 100 yards long. The incident status is currently listed as "closed." This site is discussed in further detail in Section 3.1.1.3.
- The Bulk Transportation site (11619 N Force Ave) is located to the adjacent west of the subject property and is listed on the ECSI, SPILLS, and MANIFEST databases. A release was reported on October 19, 2015. The reporting party was at Bulk Transportation for a job interview and stepped in a substance on the way out. The reporting party was told by an employee that this substance was chicken fat, but the sole of their shoe later turned white in color. There were no markings to indicate what the chemical may have been. The spill was located on the northeast side of the equipment yard, near the office, and was approximately 6 inches deep and 20 feet long. There was absorbent on the ground near the spill. An additional release was reported on September 13, 2005. Bulk Transportation spilled 10 gallons of a product called CCA, which contains arsenic acid to asphalt. Bulk Transportation applied absorbent materials and boomed off the area. Based on the distance from the subject property, this site is not considered a REC to the subject property.
- The Harbor Oil Inc. site (also known as Chempro of Oregon Inc. and American Recyclers LLC) (11535 N Force Ave) is located to the adjacent west of the subject property and is listed on the SPILLS database among many others (see Section 3.1.1.3). A release was reported on February 6, 2020, of an unknown substance released into the air. The reporting party lives in Jantzen Beach and believes the source is American Petroleum. The reporting party also described a toxic odor. No further information is listed about this incident. An additional release was reported on July 24, 2009, of a notice from Hazmat that an oil recycling facility had a fire involving one of their oil tanks. The fire was out, and the fire department was concerned about oil and firefighting foam reaching a waterway. The Hazmat team requested on scene DEQ presence. No further information is listed about this incident. This site is discussed in further detail in Section 3.1.1.3.

3.1.1.5 Solid Waste Facilities/Landfills

The SWF/LF records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data were obtained from Oregon's Solid Waste Facilities List.

The subject property is not listed as a SWF/LF site. Two additional SWF/LF sites were reported within 0.5 miles of the subject property (discussed further in Section 3.1.1.3):

- The Diversified Marine site (1801 N Marine Drive) is located 650 feet north-northeast of the subject property and is listed on the ECSI, CDL, SPILLS, HAZMAT, HSIS, SEMS-ARCHIVE, RCRA-VSQG, AST, and SWF/LF databases. The date the landfill opened is listed as October 10, 2022, and the permit number is 1729. Based on a review of regulatory status, investigation and

cleanup actions conducted, and/or distance from the subject property, this site appears to represent a REC to the subject property.

- The Harbor Oil Inc. site (also known as Chempro of Oregon Inc. and American Recyclers LLC) (11535 N Force Ave) is located approximately 0.35 miles west of the subject property at 11353 N Force Street. The site is listed on the Delisted NPL, SEMS, US ENG CONTROLS, ECSI, SWF/LF, AST, VCP, SPILLS, OR HAZMAT, RCRA NonGen/NLR, TRIS, ROD, PRP, PADS, FTTS, HIST FTTS, ECHO, AIRS, HSIS, MANIFEST, and NPDES databases. The date the landfill opened is listed as March 13, 2017, and the permit number is 1591. Based on a review of regulatory status, investigation and cleanup actions conducted, and/or distance from the subject property, this site is not considered a REC to the subject property.

3.1.1.6 DEQ Brownfields List

The Brownfields database lists sites of real property where expansion or redevelopment is complicated by actual or perceived environmental contamination. No DEQ Brownfields sites were identified within 1 mile of the subject property.

3.1.1.7 DEQ Drycleaner List

The drycleaner database is a listing of former or current drycleaners in Oregon. No DEQ drycleaner sites were identified within 0.125 miles of the subject property.

3.1.1.8 DEQ Engineering/Institutional Controls

DEQ maintains two databases for sites with implemented engineering controls and/or institutional controls. One site with engineering or institutional controls were identified within 1 mile of the subject property:

- The Peninsula Terminal RR site (11707 N Force Avenue) is located approximately 0.39 miles west-southwest of the subject property and is listed on the INST CONTROL, ECSI, CRL, and VCP databases. An NFA determination for the site is based on industrial soil cleanup standards and is contingent on site zoning/use remaining industrial, as documented in the deed restriction attached to the site. This site is not considered a REC to the subject property.

3.1.2 Environmental Protection Agency Database Review

The EPA administers several programs designed to protect the environment and monitor the generation, storage, treatment, and disposal of hazardous substances. The following sections summarize the most relevant information obtained from the EDR report regarding sites identified within ASTM E1527-21 search radii from the following databases. A complete listing of the databases reviewed is included in the EDR report.

- National Priorities List (NPL)
- Superfund Enterprise Management System (SEMS) List
- RCRA Corrective Action Report (CORRACTS) List

- Resource Conservation and Recovery Information System (RCRIS) List
- Emergency Response Notification System (ERNS) List
- U.S. Brownfields List

3.1.2.1 NPL

The NPL identifies priority hazardous waste sites for remedial actions under the EPA Superfund program. The EDR report indicates that the subject property is not listed as an NPL site. No active NPL sites were identified within 1 mile of the subject property. One site on the Delisted NPL database (Harbor Oil Inc. site) is located approximately 0.35 miles west of the subject property and is discussed in Section 3.1.1.2 below.

3.1.2.2 SEMS List

The EPA publishes a list of sites that may potentially pose a threat to the environment or the health of the general public. This list is known as the SEMS list (formerly the CERCLIS list). Information contained in the EDR report indicates the subject property is not listed as a SEMS site. One SEMS site was identified within 1 mile of the subject property:

- The Harbor Oil Inc. site (also known as Chempro of Oregon Inc. and American Recyclers LLC) is located approximately 0.35 miles west of the subject property at 11353 N Force Street. The site is listed on the Delisted NPL, SEMS, US ENG CONTROLS, ECSI, SWF/LF, AST, VCP, SPILLS, OR HAZMAT, RCRA NonGen/NLR, TRIS, ROD, PRP, PADS, FTTS, HIST FTTS, ECHO, AIRS, HSIS, MANIFEST, and NPDES databases. The 4.2-acre Harbor Oil Inc. site is located in an industrial area adjacent to Force Lake. Past site operations included a tank truck cleaning business. In 1974, a fire and a large oil spill contaminated soil, sediment and groundwater with metals, petroleum hydrocarbons, pesticides, and PCBs. Another fire in 1979 destroyed the facility and ruptured five 20,000-gallon aboveground used oil tanks. According to the EPA, site investigations have determined that contamination does not pose an unacceptable risk to human health or the environment and, therefore, no further action is required. The EPA deleted the site from the NPL database in 2014. The EPA will only require cleanup to take place at the site if new information emerges. American Petroleum Environmental Services is the current site operator; it recycles used oil at the site (EPA 2021). Based on the distance from the subject property (to the adjacent east), this site is not a potential REC for the subject property.

The EPA also publishes the SEMS-NFRAP list, which are SEMS sites that have been designated NFRAP and have been removed from the SEMS list. Information contained in the EDR report indicated that the subject property is not listed as a SEMS-NFRAP site. One SEMS-NFRAP site was identified within 1 mile of the subject property:

- The Diversified Marine site (1801 N Marine Drive) is located adjacent to the subject property. The site is listed in the ECSI, CDL, SPILLS, HAZMAT, HSIS, SEMS-ARCHIVE, RCRA-VSQG, AST, and SWF/LF databases. The site is further explained in Section 3.1.1.3. Based on the proximity to the subject property, this site is a REC for the subject property.

- The Columbia Slough water way site extends approximately 31 miles from Fairview Lake on the east side of the site to the Willamette River on the west side of the site. Industrial, agricultural, and urban development along the Columbia Slough have resulted in the accumulation of a variety of contaminants in slough sediments, including PCBs and pesticides that bioaccumulate in fish (to the extent that resident fish in the slough are harmful to eat). In 2005, DEQ issued a Record of Decision establishing a program to clean up sediments at individual release sites, implement source control measures throughout the watershed to prevent further releases, and monitor conditions over the long term to ensure ongoing improvement. The subject property is within the watershed of the Columbia Slough; however, no surface water from the Columbia Slough water way is located on the subject property. Based on the lack of surface water on the subject property that would be connected to the Columbia Slough site, the cleanup area is not a REC for the subject property.

3.1.2.3 CORRACTS Review

The CORRACTS report identifies hazardous waste handlers with corrective action activity. Information contained in the EDR report indicates the subject property is not listed as a CORRACTS site. No CORRACTS sites are listed within 1 mile of the subject property.

3.1.2.4 Resource Conservation and Recovery Information System List

The RCRIS list includes selective information on sites which generate, transport, store, treat, and/or dispose of hazardous waste as defined by the RCRA. Information contained in the EDR report indicates that two adjacent properties are listed as RCRA-Very Small Quantity Generator sites (Diversified Marine and Pier 99 sites). These sites are further discussed in Section 4.

The EPA also regulates the management of hazardous waste at Transportation, Storage, and Disposal (TSD) facilities. Information contained in the EDR report indicates the subject property is not listed as an RCRIS-TSD site. No RCRIS-TSD sites were identified within 0.5 miles of the subject property.

3.1.2.5 ERNS List

The ERNS is a national database containing information from spill reports made to federal authorities. Information contained in the EDR report indicates the subject property is not listed as an ERNS site.

3.1.2.6 U.S. Brownfields List

The EPA's U.S. Brownfields list identifies Brownfields properties addressed by Cooperative Agreement Recipients and Brownfields properties addressed by Targeted Brownfields Assessments. The EDR report indicates the subject property is not listed as a U.S. Brownfields site. No U.S. Brownfield sites were identified within 0.5 miles of the subject property.

3.1.3 Other Databases

The following sections include other databases identified in the EDR report that may be relevant to assessing potential environmental liability or environmental issues at the subject property.

3.1.3.1 EDR Proprietary Databases

EDR has conducted research on the occurrence of historical business practices that may constitute a REC to properties. The database was developed from data found in historical city directories and contains information on over 100,000 former gas stations, manufactured gas plants, and dry cleaners. Due to the nature of these businesses, the sites have the potential for soil and groundwater contamination to have occurred.

EDR Historical Auto Stations

Historical auto stations are identified on a proprietary database maintained by EDR. Information contained in the EDR report indicates the subject property is not listed as a historical auto station, and no historical auto stations are listed within 0.125 miles of the subject property.

EDR Manufactured Gas List

Former manufactured gas plant (coal gas) sites are identified on the Manufactured Gas database. Information contained in the EDR report indicates the subject property is not listed as a manufactured gas plant site, and no manufactured gas plants are listed within 1 mile of the subject property.

EDR Historical Dry Cleaners

Historical cleaners are identified on a proprietary database maintained by EDR. Information contained in the EDR report indicates that there are no historical cleaner sites within 0.125 miles of the subject property.

3.1.4 Orphan Site List

Orphan sites are sites for which mapping information is not detailed adequately to plot the location of the site or for which there is no known responsible party or the responsible party is unwilling or unable to pay for cleanup. The orphan site list and available mapping information were reviewed by Parametrix. Five orphan sites were identified by EDR in the vicinity of the subject property. The five orphan sites identified are located at sufficient distances and/or cleanup activities have been completed so that they do not represent RECs to the subject property.

3.1.5 Vapor Encroachment

ASTM Standard E1527-21 defines vapor migration as “the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface.” The recognition of vapor migration as a possible REC may require incorporation of new types of controls and restrictions to address this contamination pathway.

The subject property and adjacent sites were reviewed in an effort to determine whether vapor migration has, or has the potential to have, occurred at the site from adjacent properties. Based on the information reviewed, the subject property is not identified as a potential vapor intrusion site.

No properties were identified in the near vicinity that have confirmed releases of volatile contaminants in soil or groundwater that have not been sufficiently addressed or would otherwise present a potential impact to the subject property.

3.2 Historical Use Information

The objective of the historical use information review is to develop a history of the previous uses of the subject property and surrounding area that helps to identify the likelihood of past uses having led to RECs in connection with the subject property. Parametrix researched the historical land use, occupancy, and ownership of the subject property and adjacent properties to evaluate historical uses that are known to be associated with RECs. Historical records reviewed include Sanborn Fire Insurance Maps (EDR 2023b) and aerial photographs (EDR 2023c).

3.2.1 Certified Sanborn Maps™ Fire Insurance Map Review

Parametrix requested Sanborn Fire Insurance maps from EDR in an effort to help identify past land uses. Sanborn Fire Insurance map from the years 1924, 1950, 1952, and 1969 were examined. A copy of the Certified Sanborn Map Report is included in Appendix B.

1924–1969 No discernable features are mapped for the years listed above. In the 1969 Sanborn map, the words “Park, No Exposure” are written across the subject property.

3.2.2 Historical Aerial Photograph Review

Historical aerial photographs of the subject property area were obtained from EDR in the EDR Aerial Photo Decade Package. Aerial photographs for the years 1935, 1948, 1951, 1955, 1960, 1970, 1975, 1981, 1994, 2000, 2006, 2011, 2014, 2017, and 2020 were examined. Copies of the aerial photographs are included in Appendix C. Observations are listed below.

1935 The quality of the aerial photograph is low, but the subject property appears to be occupied by a large warehouse building on the western portion of the property. The eastern portion of the subject property appears to be agricultural land. One small building is visible to the east of the eastern boundary of the property. North Portland Harbor is visible to the northeast of the subject property. The Steel Bridge (I-5 Bridge) is visible to the east of the subject property. Adjacent properties to the west appear to be partially developed with small buildings. A roadway is visible to the adjacent north, and the area to the south appears to be undeveloped vegetated and agricultural land. Hayden Island is visible across North Portland Harbor, to the north of the subject property.

1948 The southeastern portion of the subject property appears to be covered with water (lake or pond). Watercrafts and storage containers are visible within the waterbody and to the north of it, on the eastern portion of the subject property. The large warehouse building on the subject property remains similar to the 1935 aerial photograph.

1951–1960 The eastern portion of the subject property is agricultural land, and the waterbody that was visible in the 1948 photograph is no longer visible. Two small buildings are visible on the eastern boundary of the subject property. Activity likely associated with the Ross Island Sand & Gravel company to the adjacent north is visible by the 1955 aerial photograph. In the 1960 aerial photograph, several small buildings are visible in the southeastern corner of the subject property (area of partial acquisition). Development of I-5 to the east of the subject property is depicted by 1960. Properties to the adjacent west and south of the warehouse building are developed with commercial buildings. Some development is visible on Hayden Island to the north, and additional docks/floating structures and houses are visible along the Hayden Island southern coast.

1970–1990 By the 1981 aerial photograph, approximately half of the building on the subject property has been demolished. The remining portion of the building appears to house commercial/industrial businesses. Additional commercial development is visible to the west and south of the warehouse building. The eastern side of the subject property (area of acquisition) appears to be a parking lot by the 1975 aerial photograph. Northeast of the subject property, storage of equipment and/or boats are visible. Commercial and industrial development is visible east and west of the subject property. Additional docks/floating structures and houses are visible east of the I-5 bridge along the Portland side of North Portland Harbor and along the southern coast of Hayden Island. An additional structure is visible south of the pre-existing building by the 1990 aerial photograph.

1994–2020 By the 2000 aerial photograph, construction is underway at the site. The additional structure referenced above has been demolished, and a new building has been constructed south of it. Construction is complete by the 2006 aerial photograph, with the addition of a new structure in the middle of the building complex. The building on the subject property has remained the same since approximately 2006. Commercial development continues throughout the 1990s and 2000s east of the subject property.

Based on the historical review, the subject property has been developed since at least 1935. No specific RECs associated with the subject property use were identified. However, the historical use of the adjacent properties to the north as boat maintenance and repair shops and associated contamination discussed further in Section 4 are considered a REC for the subject property.

3.2.3 Local Agency Records

Information from local agencies was reviewed for environmental significance as described in the following sections.

3.2.3.1 City of Portland

A review of permits for environmental significance (i.e., septic tank, stormwater, dry wells, and/or USTs or aboveground storage tanks [ASTs]) was completed. No UST or AST permit records were recorded online with the Portland Maps records for the subject property.

3.2.3.2 Multnomah County

Based on information from the Multnomah County Tax Assessor's Office, the subject property consists of the following tax lots:

- IBR-1N1E04-00100 1N1E04-00100 2060 WI/N Marine Drive
- IBR-2N1E33-00200 2N1E33-00200 2060 N Marine Drive
- IBR-2N1E33-00202 2N1E33-00202 10799 WI/N Expo Road

3.2.3.3 Oregon Water Resources Department

According to the Oregon Water Resources Department, several data collection/exploratory geotechnical borings have been completed on the subject property, including portions on the eastern boundary and northeastern corner (areas of acquisition). These borings were closed and filled with bentonite immediately after completion. It is not known whether samples were collected for the purposes of contaminant investigation.

3.3 Additional Environmental Information

The following sections provide a summary of additional environmental information obtained for the site.

3.3.1 Asbestos

The manufacture of most asbestos-containing materials (ACM) was banned by the EPA by 1979. Prior to this, asbestos was a common constituent of numerous building materials, including floor and ceiling tiles, caulking, pipe insulation, roofing materials, and exterior siding.

Based on the age of the oldest portion of the building on the subject property (constructed sometime prior to 1935), there is potential for ACM to have been used in the construction of these buildings. However, none of the buildings are located within the partial areas of the parcels that may be acquired as part of the IBR Program.

3.3.2 Lead-Based Paint

Before 1977, paint commonly contained lead, which is considered to cause human health problems if ingested. Based on the age of the oldest portion of the building on the subject property (constructed sometime prior to 1935), there is potential for lead-based paint (LBP) to have been used in the

construction of the buildings. However, none of the buildings are located within the partial areas of the parcels that may be acquired as part of the IBR Program.

3.3.3 Polychlorinated Biphenyls

Transformers can potentially contain PCBs. Based on the age of the oldest portion of the building on the subject property (constructed sometime prior to 1935), there is potential for PCBs to have been used at the subject property.

3.3.4 Radon

Radon is a naturally occurring radioactive gas formed by the decay of uranium in some rocks and soil. The adverse health effects associated with radon gas depends upon various factors, such as the concentration of the gas, and exposure duration. The potential concentration of radon gas within a building depends on subsurface soil conditions, the integrity of the building's foundation, the existence of a basement or crawl space (primary areas of concern), and the building's ventilation.

Multnomah county ZIP code 97129 is located in the Federal EPA Radon Zone 2. The Zone 2 indoor average radon level is predicted to be from 2 to 4 pCi/L, reported as a moderate risk of radon elevation. The EPA Action Level for radon is 4 pCi/L. Based on this limited information, radon likely does not represent an environmental concern at the property.

4. FILE REVIEW

In accordance with ASTM Standard E1527-21, inquiries and review of previous investigations for the subject property, and a review of regulatory files for the subject property or adjacent properties may be conducted to further evaluate environmental conditions on the property or adjacent properties, and to fill in data gaps where applicable. Previous investigations and file reviews are summarized below.

4.1 Previous Investigations

As discussed in Section 3.1.1.3, the Expo Center site (2060 N Marine Drive) is located at the subject property and is listed in the ECSI, LUST, UST, AST, SPILLS, and HSIS databases. According to the ECSI listing, the area around the site has been extensively investigated, and the past activity has not been evaluated as part of the DEQ Cleanup program. As part of the Columbia Slough Area-Wide Discovery Project, this site was noted due to the presence of soil borings found in the Oregon Water Resources Department well log database. These wells appear to be related to the property to the adjacent west of the Expo Center. The unresolved listing of the subject property on the ECSI database is considered a REC for the subject property.

Two USTs listed for the listing have been decommissioned. The LUST listing has a cleanup completed date of April 5, 1996. Additionally, an NFA letter dated August 13, 1996, was issued to the site by DEQ. According to the NFA letter, one 1,000-gallon gasoline tank was removed and transported to Schnitzer Steel Products in Portland, Oregon. Approximately 300 cubic yards of petroleum-impacted soils were treated on-site by aeration. After treatment was complete, confirmatory sampling by Oregon Method-Hydrocarbon Identification did not detect petroleum contamination. These soils were disposed of on-site with the DEQ's approval. No groundwater was encountered in the excavation. Based on the closure of the LUST listing and formerly contaminated soils left on-site, this site represents an HREC to the subject property.

The Delta Park Exit Construction site (Delta Park Exit, west side of I-5) is mapped as being located at the subject property and is listed on the LUST database. The LUST listing has a cleanup completed status dated December 24, 1990. According to the NFA letter from DEQ (included in Appendix E), diesel contamination was discovered when USTs were decommissioned. The concentrations of contamination did not exceed the cleanup levels for the site. No groundwater was encountered in the excavation. The indication that contamination has been left in place at levels below cleanup standards for 1990 and the lack of information on the exact location of the tanks and contamination constitutes a data gap. However, based on the proper decommissioning of the UST, residual contaminants below cleanup levels, and regulatory status (NFA determination), the issue is considered a historical REC for the subject property.

4.2 Adjacent and Nearby Properties File Review

The property to the adjacent north is known as the Diversified Marine site (1801 N Marine Drive) and is listed on the ECSI, CDL, SPILLS, HAZMAT, HSIS, SEMS-ARCHIVE, RCRA-VSQG, AST, and SWF/LF databases. Historical and present-day activities at the site have included tugboat and barge building, repair, sandblasting, painting, bilge removal, and boat/equipment refueling since at least 1990. The site has received numerous pollution complaints. A Preliminary Assessment was completed in 2009 by Ecology and Environment, and the results indicated that the site is contributing to copper, lead, and zinc contamination in the river. On-site activities have contaminated soils and nearby river sediments with contaminants related to boat building, maintenance, repair, and refueling; toxic metals; paint chips containing toxic metals; petroleum constituents; and other organic contaminants such as phthalates, pentachlorophenol, chlorinated solvents, and PCBs. A site investigation to characterize the site has been recommended under state supervision. Based on the location of the site and the proximity to the acquisition area of the subject property (north-northeast corner of the subject property) and documented contamination, this site is considered a REC for the subject property.

The site to the adjacent northeast is known as 1610 North Pier 99 S (also known as Pier 99—Portland, Schooner Creek Boat, and Pier West LLC) and is listed on the ECSI, CRL, VCP, SEMS (CERCLIS), ICIS, RCRA-VSQG, and RGA HWS databases. The site is located to the adjacent northeast of the northeast corner of the subject property, an area of acquisition on the subject property. Soil, sediment, and groundwater at the site have been found to be contaminated with petroleum hydrocarbons and metals due to releases and improper handling of hazardous substances related to boat repair, maintenance, and related activities at the site.

Schooner Creek Boat Works (owned by Milton Brown), a boat building and repair business, operated on the subject property from 1989 until 2000. DEQ's Northwest Region Hazardous Waste program first referred the site for investigation in 2002 for pollution complaints. Mermaid Marine had recently begun leasing the site but became involved in extensive cleanup of wastes and debris allegedly left behind by Schooner Creek Boat Works when it vacated the site.

A preliminary investigation was conducted in 2003 confirming the presence of petroleum hydrocarbons and metals in the soils at the site. A site inspection report was completed by Ecology and Environment, Inc. in 2009 consisting of additional surface soil sampling and sediment sampling. The site was deemed to be a source of CERCLA hazardous substances including organotins, pesticides, PCBs, semi-VOCs, and metals detected at significant concentrations with respect to background concentrations (Ecology and Environment 2009). Based on analytical sample results, contamination appeared to be migrating from site sources to sediment targets, including areas where threatened and endangered species are known to be present. Sample results for the sediment samples collected from below the Pier 99 docks indicated the presence of one Target Analyte List metal at a significant concentration with respect to background concentration.

The EPA completed an investigation at the site in 2013, resulting in the division of the site into four operable units: Operable Unit 1 Bank Area, Operable Unit 2 Eastern Solid Waste Storage Area (Eastern Unimproved Area), Operable Unit 3 Gravel Filter Area and Upland Boat Maintenance Repair Area, and Operable Unit 4 Former Crane Area. EPA data indicates that site soils are contaminated with PAHs, PCBs, DDT, phthalates, and tributyltin at concentrations that represent a potential risk to on-site

workers, adjoining residents, on-site plants and wildlife, and nearby aquatic life. Sediments in the site's boat dock area are contaminated with metals, PAHs, and DDT at concentrations that represent potential toxic and bioaccumulative threats to aquatic life. Extensive remedial actions and subsequent monitoring have been completed at the site since 2013. Remedial actions have included the removal of a gravel filter and stormwater pipe on the site, debris and sand blast grit removal, bank stabilization and reinforcement, and soil removal (Apex 2014). As an EPA requirement, a monitoring and maintenance program was implemented. Erosion controls were put in place along the northern boundary of the site (bank side), and long-term monitoring of the site was completed as part of the Post Removal Site Controls. The 2015 monitoring report indicated bank conditions were stable; grass covered the bank and no ground disturbances occurred. Monitoring reports from 2016 and 2020 demonstrated the bank continues to be covered with grass. According to the Pier 99-Portland site for EPA's District 10, activities at this site have concluded and no further updates are available.

Based on the known contamination on-site and the proximity of the site to the area of acquisition on the subject property the site is considered a REC for the subject property.

5. SITE EXAMINATION

Parametrix conducted a site examination of the subject property from public right-of-way on September 26, 2023. The site examination consisted of observing the areas immediately surrounding the subject property, providing observations of the general environmental conditions on the subject property, and visually assessing the subject property and adjacent properties for evidence of hazardous materials. The site examination focused on partial areas of the parcels that may be acquired as part of the IBR Program. Photographs of the subject property taken during the site walk are included in Appendix D.

5.1 Subject Property

The subject property includes the Portland Expo Center and associated asphalt parking lots. Hardscaping such as sidewalks and an asphalt parking lot border the building in all directions. The partial areas of the parcels that may be acquired as part of the IBR Program are largely limited to paved and landscaped areas.

All observations were taken from the public right-of-way. No evidence of USTs, ASTs, or other indications of environmental significance were observed on the exterior portions of the property. In addition, no evidence of significant storage or spills of hazardous substances and/or petroleum products was observed on the subject property. No evidence of staining, adverse odors, or other indications of potential releases was observed. In general, no RECs or other adverse environmental conditions were identified associated with the subject property. Table 2 summarizes the observed conditions.

Table 2. Subject Property Observed Conditions

IBR ID	Address	Area	Current Use (determined through visual observation)	Site Examination Observations
IBR-1N1E04-00100	2060 WI/N Marine Dr	10.81 acres	The Portland Expo Center and associated asphalt parking lots	Large building and associated asphalt parking lots.
IBR-2N1E33-00200	2060 N Marine Dr	38.02 acres	The Portland Expo Center and associated asphalt parking lots	Expo Center building and associated asphalt parking lots.
IBR-2N1E33-00202	10799 WI/N Expo Rd	0.73 acres	Undeveloped, vegetated land	Signs indicating this area is a protected wetland.

5.2 Adjacent Properties

The vicinity of the subject property is significantly developed with industrial properties to the west and I-5 to the east. Adjacent properties were examined from public areas for the presence of environmental conditions which have the potential to impact the subject property.

The subject property is bounded to the north by North Portland Harbor—Columbia River, to the east by the I-5 bridge, to the west by commercial/industrial development, and to the south by the Vanport Wetlands (Figure 2). No evidence of significant staining or stressed vegetation was noted on the ground surface on accessible properties adjacent to the site.

6. INTERVIEWS

An interview was not able to be conducted with a property representative to identify any potential environmental conditions and to address information data gaps during the Phase I ESA process. The lack of a property owner or representative interview represents a data gap in accordance with ASTM Standard E1527-21.

7. CONCLUSIONS

Based on the findings of this investigation, Parametrix concluded the following:

1. The subject property includes three separate Multnomah County Tax Lots—1N1E04-00100, 2N1E33-00200 and 2N1E33-00202—and currently includes one commercial building known as the Portland Expo Center and associated parking lots. No buildings are located within the partial areas of the properties that may be acquired as part of the IBR Program. Areas of acquisition include the northeastern corner, a portion of the eastern side of the property along the boundary, and a section in the southeastern corner of the property.
2. Based on review of historical data, the subject property has been developed since at least 1935. No specific RECs were identified on the subject property during the historical photograph review, including the partial areas of the properties that may be acquired as part of the IBR Program. However, the historical use of the properties to the adjacent north, northeast and southwest as industrial properties and known associated soil, sediment, and groundwater contamination are considered a REC for the subject property.
3. Based on the age of the oldest portion of the building on the subject property (constructed sometime prior to 1935), there is potential for LBP or ACM to have been used at the subject property. However, none of the buildings are located within the partial areas of the properties that may be acquired as part of the IBR Program.
4. No evidence of significant use or storage of hazardous substances and/or petroleum products was noted on or near the subject property as observed from the public right-of-way. No evidence of distressed vegetation, spills or releases, dry wells, or other indications of environmental concern was identified during the site reconnaissance completed from the right-of-way.
5. The subject property is listed as the Expo Center site or as the Delta Park Exit Construction site on regulatory databases. According to the ECSI listing, the past activity of the area around the site has not been evaluated as part of the DEQ Cleanup program. The unresolved listing of the subject property on the ECSI database is considered a REC for the subject property. In addition, two USTs listed for the site have been decommissioned, both of which have received NFA determinations form the DEQ. The exact location of the Delta Park former LUST and residual contamination is not precisely known. However, based on the proper decommissioning of the USTs, residual contaminants below cleanup levels, and regulatory status (NFA determination), both of the LUST files are considered a historical REC for the subject property.
6. A review of regulatory information indicated that the properties to the adjacent north and northeast of the subject property (Diversified Marine site and Pier 99 site) are listed as a Superfund sites (archived and current) and on multiple regulatory databases that indicate the release and storage of hazardous materials on the sites. Prior investigations have included site characterization with subsurface soil, groundwater, and sediment sampling and remedial actions such as removal of soils, debris, and other infrastructure on the sites. The known

contamination on the sites and their proximity to the area of acquisition are RECs for the subject property.

7. An on-site reconnaissance and interview were not conducted with a property representative to identify any potential environmental conditions and to address information data gaps during the Phase I ESA process. The lack of a property owner or representative interview and the lack of a full on-site reconnaissance represent data gaps in accordance with ASTM Standard E1527-21. However, the information obtained for the Phase I ESA, including regulatory database and historical documentation, was deemed sufficient.

8. RECOMMENDATION

Based upon the conclusions of this investigation of the subject property, Parametrix offers the following recommendation.

1. Subsurface sampling is recommended in the partial acquisition areas on the northeastern and eastern boundaries of the subject property to document the nature and extent of the potential on-site contamination, which may be impacted by future subsurface work during the future IBR construction project. The results of the investigation should be used to evaluate excavation worker health and safety requirements and/or excavation material disposal options.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal Delisted NPL sites

Delisted NPL: The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may deleted from the NPL where no further response is appropriate.

A review of the Delisted NPL list, as provided by EDR, and dated 06/22/2023 has revealed that there is 1 Delisted NPL site within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Lists of Federal sites subject to CERCLA removals and CERCLA orders

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 06/22/2023 has revealed that there are 2 SEMS sites within approximately 0.5 miles of the target property.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 06/22/2023 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

EPA Id: ORN001002703

Lists of Federal RCRA generators

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 03/06/2023 has revealed that there are 2 RCRA-VSQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Lists of state and tribal landfills and solid waste disposal facilities

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Department of Environmental Quality's Closure & Regular Solid Waste Active Disposal Permits database.

A review of the SWF/LF list, as provided by EDR, and dated 01/13/2023 has revealed that there are 2 SWF/LF sites within approximately 0.5 miles of the target property.

NARR Comments: Stormwater quality data collected twice since June 2002 indicate that the facility meets DEQ’s stormwater benchmark values, although concentrations of copper and zinc in site stormwater exceeded the National Recommended Water Quality Criteria’s respective Freshwater Critical Maximum Concentrations, DEQ’s respective Freshwater Acute Toxicity Criteria, and DEQ’s Level II Ecological Risk Assessment Screening Benchmark Values for freshwater aquatic life. Between 1990 and 2001, DEQ received nine Pollution Complaints and six Spill Reports associated with potential hazardous substance releases at the Diversified Marine facility, or petroleum sheens present on the river

DIVERSIFIED MARINE, INC. (Continued) **S108659504**

directly adjacent to the facility. Five of the Pollution Complaints and one of the Spill Reports involved fugitive dust emissions associated with sandblasting operations at the site. There is concern that sandblasting of boat hulls at the site could have released paint chips and toxic metals at concentrations that could represent a threat to the river s aquatic life, or otherwise accumulated in the river s sediments. Two other Spill Reports and another Pollution Complaint involved petroleum sheens of unknown origin on North Portland Harbor adjacent to the site. One additional 1998 Spill Report and simultaneous Pollution Complaint were associated with a petroleum release at the site that drained across N Marine Drive onto state highway property located 200 yards from the site. Diversified Marine s record of Pollution Complaints and Spill Reports suggests that on-site activities could have contaminated site soils and nearby Columbia River sediments with any of a variety of boat building, maintenance, and repair related contaminants, including toxic metals and paint chips containing toxic metals such as copper oxide, organotins, lead, cadmium, chromium, mercury, and zinc; petroleum constituents such as BTEX (benzene, toluene, ethylbenzene, toluene) and polynuclear aromatic hydrocarbons (PAHs); and other potential organic contaminants such as, phthalates, pentachlorophenol, chlorinated solvents, and possibly polychlorinated biphenyls (PCBs). (1/13/10 CWH/CU) The march 2009 Preliminary Assessment produced by Ecology and Environment for EPA Region 10 noted that, based on comparison to immediate upstream sediments, that the sediment sample (CR05SD) collected just downstream/adjacent to DMI <quot>indicates that DMI is contributing to copper, lead, and zinc contamination in the river.<quot> DEQ feels it is important to note that with the exception of copper, none of the detected metals, while elevated locally, exceed DEQ freshwater sediment SLVs. It is also important to note that the CR05SD sample was collected at a location that was not near where DMI stormwater runoff or working areas might be expected to be impacted.Similarly, PAH sediment data for CR05SD shows locally elevated concentrations of PAHs, but none above DEQ SLVs. PCBs were non-detect for CR05SD, but detection limits (41-45 ppb) were above DEQ SLVs. To summarize - the CR05SD sediment sample collected on behalf of EPA in October 2008 does indicate releases are likely to have occurred from the DMI site, but there were no samples collected in locations that would be suspected as release points.

Decode for NarcdID: General Site Description
NARR Comments: The subject site is an approximate 0.8 acre parcel in North Portland, on the south shore of North Portland Harbor, about 500 feet west of the Interstate Highway 5 (I-5) bridge over North Portland Harbor. Work is performed within an onshore building, on vessels moored at the site, and in a 200-ton floating dry dock at the site. North Marine Drive and North Pier 99 Street are located along the site s southern boundary. A paved parking lot for the Multnomah County Fairgrounds and Exposition Center lies directly across North Marine Drive, 100 to 300 feet south and southwest of the site. Hayden Island is across North Portland Harbor, about 1,000 feet north of the site.

Decode for NarcdID: Project Issues Summary
NARR Comments: Although DEQ has records of known and suspected hazardous substance releases at the site, there is no indication that environmental sampling has ever been conducted at the site. Because of an abundance of nearby receptors (nearby wetlands, community drinking water wells, Critical Habitat for Threatened and Endangered fish), a high priority has been assigned to conducting an expanded Preliminary Assessment of the site.

NARR Comments: Street address has also been listed as 1801 - 1809 N Pier 99 Street, in tax records. The site is bounded on the north by North Portland Harbor (also called Oregon Slough; a channel of the Columbia River located south of Hayden Island), and on the east by the Former Schooner Creek Boat Works site (ECSI #3526). Hayden Island lies about 1,000 feet north of the site. The Interstate Highway 5 bridge over North Portland Harbor is located about 500 feet east of the site.

Decode for NarcdID: Manner of Release
NARR Comments: Fugitive dust emissions associated with sandblasting of boat hulls at the site could have released paint chips and toxic metals at concentrations that could represent a threat to the river s aquatic life, or otherwise accumulated in the river s sediments. Petroleum sheens of unknown origin have been reported on North Portland Harbor adjacent to the site. A historic petroleum release at the site was also reported to have drained across N Marine Drive onto state highway property located 200 yards from the site. Since Diversified Marine site activities include machine shop activities, bilge removal, and boat and equipment refueling activities, it may not be unreasonable to suspect that some of the petroleum contamination observed in the river channel could have originated from on-site activities. Such releases could represent a threat to the river s aquatic life, or otherwise have accumulated in river sediments.

NARR Comments: A Federal Screening of the site was completed on July 3, 2003. The Strategy Recommendation for that screening recommended that a high priority be assigned to conducting an Expanded Preliminary Assessment (XPA) of the site. There was insufficient information at that time to propose that the site be recommended for addition the DEQ's confirmed Release List (CRL) or Inventory of sites requiring further investigation or cleanup.

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: There is concern that site activities may have contributed contaminants to on-site soils and shallow groundwater, as well as in Columbia River surface water and sediments. Soil contaminants could represent a health threat for on-site workers or utility trench workers. North Portland Harbor (the Columbia River; Oregon Slough) forms the site's northern boundary; the entire site lies within the river's 100-year flood zone. The Columbia River is migratory and rearing habitat for eleven varieties of Threatened or Endangered salmonids. The Columbia Slough lies about 1 mile south of the site. The area between North Portland Harbor on the north, I-5 on the east, Columbia Slough on the south, and a Burlington Northern Santa Fe Railroad right-of-way on the west comprises Peninsula Drainage District No. 1. Most of the drainage district is publicly owned wetlands. Wetlands areas directly south of the site attract populations of sensitive wildlife species to the area. Metro has designated much of Peninsula Drainage District No. 1 as important wetlands or wildlife Habitats of Concern, or regionally significant riparian corridors. Migratory waterfowl and songbirds have been observed within the drainage district, as well as a variety of other sensitive and Threatened and Endangered wildlife species. Sensitive and Threatened plant species may also be present within the wetlands. Site contaminants could represent a threat to sensitive plant and wildlife species within the wetlands. The nearest residence is located on a tax lot at the site's eastern boundary. Other residences are located across I-5, about 0.3 mile east-southeast of the site, and across North Portland Harbor, about 0.4 mile northeast and 0.5

DIVERSIFIED MARINE, INC. (Continued) **S108659504**

mile north-northwest of the site. Oregon Water Resources Department (OWRD) has records for three community or group-domestic wells, one Public Water Supply well, and five domestic wells within 1.25 mile of the site. The nearest is a 261 foot well installed at Kernan Village in 1958 to supply drinking water for a store, service station, apartment building, and trailer park. The well is believed to be located about 600- to 900 feet south-southwest of the site. Kernan Village no longer exists; its well may now be located either within the current I-5 / North Marine Drive cloverleaf interchange, or within the county fairgrounds paved parking area. It seems unlikely that the well is still being used or even still exists, although OWRD has no record to indicate that the well was formally decommissioned. The City of Portland has supplemental Municipal Supply Wells along the Columbia River south shore, 6- to 11 miles east of the site, as well as four supplemental supply wells on Hayden Island. Two of the Hayden Island wells lie about 1,200 feet north of the site, directly across North Portland Harbor. These wells lie across North Portland Harbor, a 1,000 foot wide, 20- to 30 foot deep branch of the Columbia River, and may be about 225- to 250 feet deep. Several nearby public facilities draw substantial numbers of people to the area. The Multnomah County Fairgrounds and Exposition Center lie southwest of the site, directly across North Marine Drive. East Delta (municipal) Park lies about 0.25 mile south-southeast of the site, across I-5. The Portland International Raceway lies about 0.5 mile south-southwest of the site. Heron Lakes (public) Golf Club lies about 0.25 mile southwest of the site. Jantzen Beach Supercenter shopping center lies directly across North Portland Harbor from the site.

Decode for NarcdID: Remedial Action
NARR Comments: (10/19/04 AC/ER&CU) Site status on hold. Responsible party (RP) unwilling to join the Voluntary Cleanup Program or perform an Expanded Preliminary Assessment (XPA). Principle concern is that potential site contaminants in sediments could pose a threat to Columbia River ecological receptors. Insufficient evidence to require sediment sampling in the Columbia River. Project on hold pending available orphan funds or willing responsible party. [3/20/15 SA/SAM] An Abbriviated Preliminary Assessment was finalized by EPA through its contractor E&E on May 14, 2009. EPA also performed a SI in 2009 at a neighboring property(ECSI#3526 1610 N Pier 99) downstream samples indicates releases are likely to have occurred from the DMI site, but there were no samples collected in locations that would be suspected as release points for this facility. No Further Remedial Action Planned under Federal program was designated in 2010. A Site Investigation is recommended under state supervision.

NARR Comments: Also known as Portmarco, Inc., and Whitecap Cove, Inc. (both active entities, same president, same secretary, same business address, same mailing address) (different registered agent for Whitecap Cove). The company has conducted tug boat and barge building, repair, sandblasting, painting, machine shop, bilge removal, and boat and equipment refueling activities at the site since at least 1990 - possibly as early as 1986. Between 1990 and 2001, DEQ received five Pollution Complaints and one Spill Report about the facility's sandblasting and painting operations, and releases of paint chips to the river. Additional complaints have been received for petroleum flowing southward, off-site from the site, and for petroleum sheens on the river from unknown sources near the facility.

Incident Narrative: STATE HAZMAT TEAM 6 FROM PFB CALLED BY PORTLAND DVD TO 1801 N MARINE DR. SUSPECTS HAD DUMPED DRUG LAB WASTE AND SUPPLIES IN A PARKING AREA NEAR A ROADWAY. THE SUSPECTS HAD BEEN ABOARD A NEARBY 60 FOOT YACHT AND THERE WAS A STRONG CHEMICAL SMELL COMING FROM THE BOAT. THE TEAM ARRIVED AND CONFERRED WITH DVD OFFICER IN CHARE SGT HENDRICKS DETERMINING HOT ZONE AND NEEDED SETUP. THERE WERE THREE BACKPACKS AND A DUFFEL BAG IN THE PARKING LOT. UNKNOWN NUMBER OF SAMPLES TO BE TAKEN. TWO DVD OFFICERS WERE SUITED UP IN LEVEL B WITH SCBA- ALL PERSONNEL WORE LIFE PRESERVERS DUE TO THE PROXIMITY TO THE COLUMBIA RIVER. THE TWO OFFICERS WERE: DORIS PAISLEY (#BPSST UNK) AND BILL SHAW (#28923). SHAW SUITED UP AND WENT WITH HENDRICKS DOWN THE DOCK TO "CLEAR" THE YACHT OF ANY POTENTIAL TWO-LEGGED THREATS. SHAW FOUND ONE CONTAINER OF LIQUID AND TOOK A SAMPLE FROM IT FOR EVIDENCE. FB 17 WAS CALLED TO THE SCENE TO EVALUATE MOVING THE YACHT TO A SAFER LOCATION FOR EVIDENCE TAKING, BUT THAT PROVED UNNECESSARY. PAISLEY AND SHAW TOOK A TOTAL OF 12 SAMPLES FROM THE BACKPACKS AND DUFFL BAG. THEY ENTERED THE HOT ZONE AT 1559 HOURS AND EXITED AT APPROX 1702 HOURS FOR DECON. HM TEAM SET UP EVIDENCE COLLECTION TABLE AND MATERIALS FOR DVD - PROVIDE DECON.

Updated By: SFORTUN
Updated Date: 09/11/2009
Decode for NarcdID: Contamination
NARR Comments: (2/24/03 SMF/SAP) DEQ received four pollution complaints, (between 1991 - 1999) alleging that ongoing activities at the Former Schooner Creek Boat Works site were contaminating the Columbia River and nearby properties. Two other pollution complaints, received in May 1990 and March 1999, described oil sheens and petroleum odors from unknown sources on the Columbia River near the Former Schooner Creek Boat Works. Although the release characteristics were similar to those described in pollution complaints against the boat works site, there is no information to indicate that the source(s) of these petroleum releases were ever determined. A number of other potential sources are found in the immediate vicinity of the Former Schooner Creek Boat Works site. See DEQ January 24, 2003, Strategy Recommendation for specific pollution complaint history. (8/11/03 AC/C&ER) Site tested for VOCs, petroleum hydrocarbons and metals. Diesel, oil and lead were detected at concentrations above background. Sediment and groundwater have not been tested. (9/10/09;smf) EPA completed an SI of the site in August 2009. Site soils and Columbia River (North Portland Harbor / Oregon Slough) sediments were sampled and analyzed for metals, SVOCs, organo-chlorine pesticides, PCBs, and tributyltin in October 2008. EPA's data indicates that site soils are contaminated with metals, PAHs, PCBs, DDT, phthalates, and tributyltin at concentrations that represent a potential risk to on-site workers, to the adjoining residents, to on-site plants and wildlife, and to nearby aquatic life. Sediments in the site's boat dock area are contaminated with metals, PAHs, and DDT at concentrations that represent potential toxic and bioaccumulative threats to aquatic life.

Decode for NarcdID: General Site Description
NARR Comments: The subject site is an approximate 1 acre parcel in North Portland, along the western edge of the Interstate Highway (I-5) bridge over North Portland Harbor. The site has been the location of boat building, repair, and machine shop activities since about 1937. Schooner Creek Boat Works, a boat building and repair business, began operating at the site in 1989, but relocated its operations about 1 mile northwest, to the north shore of Hayden Island, In July 2000. However, it continued to lease the site through December 2001. DEQ s Northwest Region (NWR) Hazardous Waste program first referred the site to Site Assessment in April 2002 for investigation of a pollution complaint. Mermaid Marine had recently begun leasing the site, but became involved in an extensive cleanup of wastes and debris that Schooner Creek Boat Works allegedly left behind when they vacated the site.

Updated Date: 09/11/2009
Decode for NarcdID: Hazardous Substance/Waste Types
NARR Comments: Existing information suggests that site soils and nearby Columbia River Sediments may be contaminated with copper oxide, paint thinner, and heavier petroleum constituents such as polynuclear aromatic hydrocarbons (PAHs). Considering the types of activities conducted at the site, and the length of time that these activities were conducted, other potential site contaminants might include: Organotins, other potential toxic metals (such as arsenic, lead, cadmium, chromium, mercury, and zinc), volatile organic contaminants (VOCs), semi-volatile organic contaminants (SVOCs), and possibly polychlorinated biphenyls (PCBs). (9/11/09; smf) A 2008/2009 EPA SI found that site soils are contaminated with metals, PAHs, phthalates, PCBs, DDT, and tributyltin at concentrations that represent potential risks to on-site workers, adjoining residents, on-site plants and wildlife, and nearby aquatic life. Sediments in the site's boat dock area are contaminated with metals, PAHs, and DDT at concentrations that represent potential toxic and bioaccumulative risks to aquatic life.

Updated Date: 11/27/2013
Decode for NarcdID: Pathways & Other Hazards
NARR Comments: The site is located in a narrow, isolated strip of industrial properties on the south bank of North Portland Harbor, along North Marine Drive. The area between North Portland Harbor on the north, I-5 on the east, Columbia Slough on the south, and a Burlington Northern Santa Fe Railroad right-of-way on the west comprises Peninsula Drainage District #1. The entire site lies within the Columbia River s 100-year flow zone, so flood waters could mobilize any surface contamination at the site. The nearest residence evidently shares the same tax lot as the site. North Portland Harbor and I-5 should limit potential exposures for most upland residences, except for potential exposures at the on-site residence. There are approximately 200 houseboats moored along the north shore of the North Portland Harbor, within .5 mile of the site. It is unclear if site contaminants would significantly affect residents at the nearby houseboats. The Multnomah County Fairgrounds and Exposition Center lied southwest of the site, directly across North Marine Drive. East Delta Park, a municipal park, lies about .25 mile south-southeast of the site. The Portland International Raceway lies about .5 mile south-southwest of the site. Heron Lakes Golf Club, a municipal golf course, lies about .25 mile southwest of the site. In addition, Jantzen Beach Supercenter shopping center lies directly across North Portland Harbor from the site. In August 2001, Metro hired a consultant to advance five pushprobe soil borings 100 to 200 feet south of the site. These borings encountered groundwater at 7 to 16 feet below ground surface (bgs), suggesting that any potential contaminants at the boat yard site could represent a threat to nearby drinking water wells, and that potential shallow groundwater contamination could represent a threat to aquatic life in North Portland Harbor. Wetlands areas directly to the south of the site attract populations of sensitive wildlife species to the area. A major heronry is also located about 1 mile from the site. Site contaminants could represent a threat to sensitive wildlife and plant species within the drainage district. Along the 1610 North Pier 99 Street site, the Columbia River provides migratory and rearing habitat for twelve sensitive anadromous fish species.

Updated Date: 05/19/2020
Decode for NarcdID: Remedial Action
NARR Comments: (2/24/03 SMF/SAP) The site has a lengthy operational history, and DEQ has received multiple complaints alleging releases or improper handling of hazardous substances at the site. A high priority is assigned for conducting an Expanded Preliminary Assessment (XPA) of the site. Site soils, groundwater, and nearby Columbia River sediments should be sampled for toxic metals, VOCs, SVOCs, and PCBs to determine if past activities may have significantly contaminated the site and surrounding environment. (8/21/03 AC/C&ER) A preliminary investigation confirms the presence of petroleum hydrocarbons and

1610 NORTH PIER 99 ST. (Continued) **S106655861**

metals in site soils. Site sediment must still be evaluated. [10/21/13 SA/SAM] A Site inspection Report was prepared in 2009. Sample results for the sediment samples collected from below the Pier 99 docks indicated the presence of one TAL metal at a significant concentration with respect to background concentration. No organotins, pesticides/PCBs, SVOCs were detected at significant concentrations with respect to background concentrations. Site soils contained sources of CERCLA hazardous substances. EPA completed an EE/CA on June 13, 2013. The site was divided up into 4 operable units: - Operable Unit 1 Bank Area - Operable Unit 2 Eastern Solid Waste Storage Area (Eastern Unimproved Area) - Operable Unit 3 Gravel Filter Area and Upland Boat Maintenance Repair Area - Operable Unit 4 Former Crane Area Based on the results of this EE/CA, the recommended removal actions for the Site are OU3 Gravel Filter Removal and stormwater Pipe Removal and OU1 Bank Stabilization(which included some debris removal and sand blast grit removal). The OU 2 elevated area coresponded with the OU3 discharge area and is addressed in this action. An OU 4 data gap investigation indicate that removal is not needed for the former crane area soil or groundwater at the site. Onsite work by EPA started Sept 1, 2013. For more details, visit http://www.epaosc.org/site/site_profile.aspx?site_id=8650 By 10/10/2013 all initial removal and restoration activities at the Pier 99 site were completed. [6/26/14 SA/SAM] Additonal removal at two locations(REX-16 and RAC-2) will occur in June 2014. EPA will perform a one-year monitoring and maintenance review. [10/22/14 SA/SAM]Additional removal was completed at the burn area on June 30 and July 2, 2014. As much as 3.5 feet of ashy soil was removed along a 15 foot length at the base of the slope. Because a significant portion of the bank was exposed during the excavation, EPA agreed that further excavation could jeopardize the stability of the bank, and excavation could be stopped. The area at the toe of the slope was reinforced with Envirlok vegetated sand bags installed at approximately a 1:1 slope. The two foot soil cover requirement was met at the toe of the bank, but could not be met further up the bank on the steep slope. Up the slope only 18-20inches of soil cover was placed. The EPA will require Post-Removal Site Controls, including monthly inspections, prohibit any activity that damages or disturbs the integrity of the cover and restoring the integrity of the cover if it is jeopardized in any way. [5/19/20 SA/SAM] The 2015 Monitoring report(year 2), indicated bank conditions were stable; grass covered the bank and no ground distrubances occured. 2016 and 2020 monitoring reports demonstrated the bank continues to be covered with grass. Based on review of the previous removal action and project files, the DEQ Cleanup program is concerned that sediment adjacent to the North Pier 99 site has not been adequately characterized and may be contaminated above levels of concern to human health and the environment. In particular, there is no data for Columbia River sediments between the bank and the area sampled near the docks.

1610 NORTH PIER 99 ST. (Continued) **S106655861**

North Portland Harbor and I-5 should limit potential exposures for most upland residences, except for potential exposures at the on-site residence. There are approximately 200 houseboats moored along the north shore of the North Portland Harbor, within 0.5 mile of the site. Nearly 80% of these are located either directly across the harbor, or downstream from the boat works site. The Multnomah County Fairgrounds and Exposition Center lies southwest of the site, directly across North Marine Drive. East Delta Park, a municipal park, lies about 0.25 mile south-southeast of the site. The Portland International Raceway lies about .5 mile south-southwest of the site. Heron Lakes Golf Club, a municipal golf course, lies about 0.25 mile southwest of the site. In addition, the Jantzen Beach Supercenter (shopping center) lies directly across North Portland Harbor from the site. In August 2001, Metro hired a consultant to advance five pushprobe soil borings 100 to 200 feet south of the site. These borings encountered groundwater at 7 to 16 feet below ground surface (bgs), suggesting that any potential contaminants at the boat yard site could represent a threat to nearby drinking water wells, and that potential shallow groundwater contamination could represent a threat to aquatic life in North Portland Harbor. City records indicate that the on-site residence is serviced by the Portland municipal water supply. The city also has supplemental supply wells along the Columbia River south shore, 6 to 11 miles east of the site, as well as four supplemental supply wells on Hayden Island. Two of the Hayden Island wells lie about 1,200 feet north of the site, directly across North Portland Harbor. The nearest municipal water supply wells lie across North Portland Harbor, a 1,000-foot-wide, 20 30 foot deep channel of the Columbia River, and may be about 225 250 feet deep, so it remains unclear if site contaminants represent a significant threat to the city drinking water supply. OWRD also has records of three community or group-domestic wells, one public water supply well, and five domestic wells within 1.25 miles of the site.

Decode for NarcdID: Contamination
NARR Comments: Area around site has been extensively investigated and the past activity has not been evaluated as part of DEQ Cleanup program. As part of Columbia Slough Area-wide Discovery Project this site was noted due to the presense of soil borings found in Water Resources Department well log database. Site runoff or subsurface contamination could reach part of Columbia Slough or location wetlands via stormwater drainage system.

Updated Date: 05/22/2013
Decode for NarcdID: Remedial Action
NARR Comments: [5/22/13 SAM/SA] Prior investigations in the late 1980s/early 1990s found metals, TPH and VOC contamination generally below human health risk based concentrations in site soils and groundwater(except for TCE/PCE which is found in groundwater area wide), but elevated from background concentrations. Sources of the elevated soils are unknown and the true nature and extent of contamination has not been adequately determined. Several spills have occurred on site since 1994 with no record of cleanup provided to DEQ. DEQ Site Assessment recommends the following activities be performed at the site to help clarify site risk and priority for further action. Based on the results of a DEQ site assessment prioritization scoring, the priority for further action is medium. Soils o Prior characterization of waste disposal piles (potential dump area found elevated concentrations of metals. SVOCs were never analyzed, even though PID readings were elevated. SVOCs and metals should be examined further in the waste disposal pile area. o Characterize the full magnitude, nature, and extent of contamination in subsurface soils in the backfilled retention pond. Prior work showed elevated concentrations of petroleum constituents. o Determine if spills were adequately cleaned up; particularly the 1994 diesel spill, 1997 unknown solvent spill and 2005 CCA spill. o Characterize areas where any historic Harbor Oil releases that may have migrated to the site, particularly if a change of land use is considered. Stormwater drainage for the site should be mapped to determine where runoff is directed after entry to the vegetated strip in center of the parking area s southern boundary. If stormwater is directed towards wetlands, additional sediment characterization and source control evaluation may be needed. Groundwater- the southern extent of PCE/TCE groundwater contamination present on the adjacent northern properties (Stockyards Commerce Center #5695) should be defined in the Bulk Transport area.

NARR Comments: Contaminants in site soils groundwater could represent a potential threat to aquatic life in the Columbia River, wildlife and aquatic life in nearby wetlands, and/or other users of groundwater and surface water in the immediate vicinity of the site. Water quality in the Columbia River is already impaired. The Columbia River is used for recreational and commercial fishing, as well as other recreational purposes. It also provides Critical Habitat for threatened and endangered fish species. The river and nearby wetlands also provide important habitat for other sensitive species such as protected migratory bird species, sensitive amphibian, reptile, and plant species, and food resources for sensitive aquatic and terrestrial species.

NARR Comments: [5/22/13 SAM/SA] The property was developed in the 1940 s as an on-site fertilizer yard that received manure produced at the nearby stockyards. J.W. Fertilizer, a commercial fertilizer and soil additive facility was operating on the eastern portion of the site during the 1970 s until 1990. Since about 1995, Bulk Transportation / DTI a chemical transport company uses the site as a satellite trucking terminal. Liquids, gases, chemicals, and hazardous materials are unloaded from rail cars and trucked to their final destination. Other services include product mixing, liquid bulk storage, tank containers, and warehousing. The western portion of the site is an undeveloped 6acre wetland

BULK TRANSPORTATION (Continued) **S102081444**

Address: 11619 N. FORCE AVE.
City,State,Zip: PORTLAND, OR 97217
Facility ID: 2015-2335
Incident Status: Closed
Material: Wastewater (Non-Sewage)
Quantity: Unknown
Unit of Measure: Gallons
Release Date: 10/19/2015
Description: A private citizen reported a chemical spill at a business. Reporting party was at Bulk Transportation for a job interview this morning and stepped in a substance on his way out. He was told by an employee that this substance was chicken fat but the sole of his shoe later turned white in color. There were no markings to indicate what the chemical may have been. The spill is located on the north east site of the equipment yard, near the office and was approximately 6inches deep and 20feet long. There was absorbent on the ground near the spill.

Updated By: JWAGGY
Updated Date: 07/30/2007
Decode for NarcdID: Contamination
NARR Comments: (5/29/01 MDK/SRP) Waste oil purified and recycled in a process involving screening, filtering, and heating. Oil trucks cleaned on-site generating wastewater with approximately 5% trichloroethylene (TCE). TCE was vaporized, condensed, and reused. Waste TCE, waste oil sludge stored in drums and tanks. Surface runoff may have contributed to a major fish kill in Force Lake in March 1974. Runoff collection system installed since then, consisting of an oil/water separator. Suspect past operating practices and frequent spills as potential problems. A major fire in 1979 destroyed the facility and was reported to have caused oil and other contaminants to pour across the site and into the wetlands west and south of the site, however, records for this are mostly anecdotal. The TCE used to clean out tank trucks has been found in low concentrations in surface water at the southwest (lowest) end of the site, and has entered the environment. Comprehensive sampling in 1990 showed high levels of oil in site soils and low levels of chlorinated VOCs in deep groundwater (100 ft. depth), although these same VOCs appear to be widespread in groundwater in the immediate site vicinity. Off-site sampling in 1994 showed significant oil contamination in shallow wetland soils, and this contamination is likely to have originated from past releases at the site. Sampling by EPA's contractor in 2000 on behalf of EPA Region 10 has confirmed the presence and extent of contamination originating from past site operations. (12/27/06 MDK/CU&ER) Site added to NPL in 2001. Efforts by EPA to negotiate a cleanup order is on-going (2001 - 2006).

NARR Comments: (1/27/10 MDK/CU&ER) Site investigation activities were conducted in 2007 and 2008. Draft HHRA and ERA reports were submitted to EPA and then provided to DEQ and stakeholders. Draft Remedial Investigation Report submitted. DEQ provided comments on the HHRA and ERA in November 2009, and then comments on the VG responses to the consolidated EPA comments on January 14, 2010. Risk Assessment have been revised in accordance with US EPA comments, and US EPA has responded to DEQ, Portland BES, and other stakeholder comments. Draft risk assessments are expected to be finalized in accordance with US EPA comments early 2012 and proposed plan Spring 2012.

NARR Comments: The site is located within 100 feet of Force Lake to the southwest and the Columbia River 1000 feet to the north. A drainage system of buried tiles drains the lake through the adjacent wetland marsh, west and south where it is pumped into the Columbia Slough. The wetlands associated with Force Lake support great blue heron nesting areas, and the City of Portland considers this wetlands area, as well as the lake, to be a sensitive environment. Site is now largely paved and

NARR Comments: (5/29/01 MDK/SRP) There is no evidence that historical releases from the Harbor Oil site were followed by any remedial actions, and recent sampling shows that significant hydrocarbon contamination remains on-site and in the wetlands area. The primary issue of concern at this site is the effect from past releases on ecologically sensitive wetlands associated with Force Lake. An RP notice letter was sent in January 2000 requesting committment to perform an RI/FS and pay DEQ oversight. The RP did not commit to RI/FS and payment of oversight, and site was referred to EPA for further site assessment. Field work for the EPA Site Inspection was conducted July 31 - August 4, 2000. A summary report was released November 2000. EPA determined that the site qualified for listing on the NPL. (6/30/03 MDK/C&ER) The draft PA/SI was released on February 2, 2003. October 2001 letter from Gov. Kitzhaber supports proposed NPL listing. (6/5/14 GMW/SAS) EPA proposed the site for the NPL in 2002. The site was listed on the NPL in 2003, and subsequent investigation and risk assessment work has been conducted under EPA oversight. In June 2014, following a notice in the Federal Register and soliciting public comment, EPA delisted Harbor Oil from the NPL.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: [June 2014] EPA declared the property a Superfund (NPL) site in 2003 at the request of DEQ, which wanted EPA to use Superfund law to bring responsible parties to the table. Harbor Oil ceased operating in 1999. In 2012, EPA s project manager for the site indicated that EPA believed the property posed no unacceptable risk to people or wildlife, despite its Superfund designation.

 On June 5, 2014, EPA removed Harbor Oil from the NPL.

Hazardous Waste Summary:

Waste Code: D007

Waste Description: Chromium

AMERICAN RECYCLERS, LLC (Continued) **1000302670**

Waste Code: D008
Waste Description: Lead

Waste Code: D018
Waste Description: Benzene

Waste Code: D039
Waste Description: Tetrachloroethylene

Waste Code: D040
Waste Description: Trichlorethylene

Waste Code: F001
Waste Description: The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichlorethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F002
Waste Description: The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: K001
Waste Description: Bottom Sediment Sludge From The Treatment Of Wastewaters From Wood Preserving Processes That Use Creosote And/Or Pentachlorophenol.

AMERICAN RECYCLERS, LLC (Continued) **1000302670**

Waste Code: K049
Waste Description: Slop Oil Emulsion Solids From The Petroleum Refining Industry.

Waste Code: K051
Waste Description: Api Separator Sludge From The Petroleum Refining Industry.

Waste Code: K052
Waste Description: Tank Bottoms (Leaded) From The Petroleum Refining Industry.

Waste Code: NONE
Waste Description: Not Defined

Waste Code: P030
Waste Description: Cyanides (Soluble Cyanide Salts), Not Otherwise Specified

Waste Code: U019
Waste Description: Benzene (I,T)

Waste Code: U051
Waste Description: Creosote

Waste Code: U061
aste Description: Benzene, 1,1'-(2,2,2-Trichloroethylidene)Bis[4-Chloro- (Or) Ddt

Waste Code: U112
Waste Description: Acetic Acid, Ethyl Ester (I) (Or) Ethyl Acetate (I)

Waste Code: U117
Waste Description: Ethane, 1,1'-Oxybis-(I) (Or) Ethyl Ether (I)

Waste Code: U159
Waste Description: 2-Butanone (I,T) (Or) Methyl Ethyl Ketone (Mek) (I,T)

Waste Code: U226
Waste Description: Ethane, 1,1,1-Trichloro- (Or) Methyl Chloroform

Waste Code: U228
Waste Description: Ethene, Trichloro- (Or) Trichloroethylene

Waste Code: U239
Waste Description: Benzene, Dimethyl- (I,T) (Or) Xylene (I)

Waste Code: U242
Waste Description: Not Defined

NARR Comments: [12/23/2004, BP] As a part of complaint investigation, DEQ has collected three hand-augured soil samples to a depth of 4 feet near the reported spill area. A field visit and lab analyses indicate surface soil contamination with heavy oil-range hydrocarbons at uo to 7,810 ppm at a depth of 1 foot below ground surface, decreasing to 247 ppm at a depth of 4 feet.

NARR Comments: [12/23/2004, BP] The neighboring Oregon Waste Management has two off-site monitoring wells on the Marina property as a part of their

WHITE MARINE SERVICES, INC. (Continued) **S102521499**

remedial system. The access to these wells has been, and still is, in litigation. A contractor with Waste Management first observed and reported the spilled drum.

Updated By: Not reported
Updated Date: 12/17/2002
Decode for NarcdID: Contamination
NARR Comments: (11/20/90 MM) This site includes multiple businesses. Low levels of hazardous substances were identified in soils and groundwater on-site during an environmental audit for a proposed transfer station. One business on-site has free petroleum product floating on groundwater and high concentrations of dissolved volatile organics in groundwater. DEQ's UST program is working with Oregon Waste Systems, Inc. and the truck-stop operator to remediate petroleum problems on-site. The other contaminants present at the site need to be evaluated to determine the need for further assessment or corrective action.

NARR ID: 5731436

NARR Comments: Gasoline, diesel, 1,2-dichlorobenzene, 1,1-dichloroethane, PCBs, vinyl chloride, methyl isobutyl ketone, perchloroethene, total xylenes. (11/14/97 LSK) Soil contamination was associated with primarily 5 areas of the site: Rod's Truck Repair, The Merit Truck Stop, areas adjacent to the Peninsula Terminal Railroad, Harbor Oil and Star Oil. At Rod's Truck Repair and Merit Truck Stop, BTEX contamination likely from leaking USTs. There is some floating product in shallow groundwater beneath the Merit Truck Stop site. Petroleum hydrocarbons were found in shallow soils at Star Oil (100 to 2,000 ppm) and Farmers (200 to 5,000 ppm). Harbor Oil is described in a separate file (ECSI#24).

NARR Comments: (11/20/90 MM) Site is located in a light industrial area, and

OREGON WASTE SYSTEMS - PROPOSED TRANSFER STATION (Continued) **S103303248**

consists of a stockyard, two truck service stations, a card-lock station, a restaurant, railroad tracks and engine barns, and wetlands. Other than workers, the population immediately around the site is low. Land to the south is vacant, to the east and west is industrial. Nearest dense population is one mile south and north across the Slough. The site is on flat land and in the floodplain of the Columbia River. Soils are fine-grained alluvium intermixed with fill consisting of crushed rock, and clayey silt - gravel. Threat or potential threat to surface water - sediments from storm sewer outfalls that enter the Columbia River contained methyl isobutyl ketone (MIBK), 1,2-, 1,3-, and 1,4-dichlorobenzene, Cr, Cd, Zn, Pb, Cu, and Ni above background levels. Depth to groundwater varies from ground surface to 15 feet across the site; its uses are unknown. (11/14/97 LSK) The site is located within 1,000 ft. of Force Lake to the southeast and is adjacent to the Oregon Slough to the north. The wetlands associated with Force Lake support great blue heron nesting areas, and the City of Portland considers this wetlands area, as well as the lake, a sensitive environment. Stormwater runoff from some of the site is carried north towards the Oregon Slough by storm drains that run beneath Marine Dr. Some runoff flows south towards Force Lake and area wetlands. Force Lake drains via the North Ditch, which is part of Peninsula Drainage District No. 1. Water in the ditch is routed to the District's main pumping station southwest of the site, where it is pumped into the Columbia Slough. Shallow groundwater north of the railroad flows radially outward in all directions, and south of the railroad flows to Force Lake and the wetlands area. Deep and intermediate groundwater flow is both to the northwest towards the Oregon Slough and Columbia River and to the south away from the river, depending upon the season and river level changes.

NARR ID: 5733859
NARR Code: Contamination
Created By: Not reported
Created Date: 12/17/2002
Updated By: GWISTAR
Updated Date: 06/27/2003
Decode for NarcdID: Contamination
NARR Comments: (10/9/1996 DJH/VCS) Site owner Peninsula Terminal Company contacted DEQ in October 1993 regarding their intent to participate in the Voluntary Cleanup Program, and signed a Letter Agreement with DEQ in March 1994 requesting that DEQ review an investigative report prepared for the site by Braun Intertec. There appear to have been a number of small releases of chemicals during off-loading activities at the site. An underground storage tank formerly located near the Locomotive House, and possibly used to store waste oil, was later removed (exact date unknown). Waste oil in the past has been released from the Locomotive House via a drain line.

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: The site is located in an industrial area of north Portland. However, wetlands and a golf course are located a short distance south of the site. Shallow groundwater beneath the site contains low levels of chlorinated solvents, the source of which appears to be off-site. Shallow groundwater is not known to be used for drinking. Access to

PENINSULA TERMINAL RR (Continued) **S105042448**

the site is restricted.

Updated By: Not reported
Updated Date: 12/17/2002
Decode for NarcdID: Remedial Action
NARR Comments: (10/9/1996 DJH/VCS) Site owner signed Letter Agreement with DEQ's Voluntary Cleanup Program to review investigation and cleanup documents in March 1994. File review memo requesting additional soil and groundwater sampling at the site was completed in June 1994. DEQ-requested soil and groundwater sampling was completed at the site in August 1995. Based on the results of this work, additional sampling was completed in the transloading area in 1996. Contaminants detected in site soil were below industrial cleanup standards presented in OAR 340-122-045, and no significant impacts to groundwater were observed. DEQ therefore determined on 10/9/96 that no further action was required for the site under an industrial cleanup scenario.

Decode for NarcdID: Health Threats
NARR Comments: Volatile and semi-volatile compounds released to soil at the site, but at concentrations below DEQ soil cleanup levels (OAR 340-122-045) for industrial sites. As long as the site remains in industrial use, soil contamination should pose no significant exposure risks to humans.

Decode for NarcdID: Site History
NARR Comments: The site has been used since at least the early 1900s as a train car switching yard, and for the offloading of materials including coal, cattle, and chemicals. The site is currently used mainly as a switching yard and for some offloading of chemical materials such as plastics, petroleum products, and solvents.

NARR Comments: (12/5/2001 DGA/SRS) Dry-cleaning facilities have operated at the site since the mid-1970s. A preliminary environmental assessment in November 1994 identified four floor drains within the facility, three of which yielded a positive reading on a photoionization detector. In August 1995, four Geoprobe borings were advanced at the site to see if PCE had been released to the soil or groundwater. PCE was detected in soil gas (up to 75 ppm) and groundwater (up to 780 ug/L) in all four boreholes. It appears that PCE may have been released down the floor drains at the site, leaking into the soil through cracks in the sanitary sewer lines. Tidal fluctuations in the shallow groundwater may have spread the contaminants across the site. Hayden Island Cleaners applied to DEQ's Dry Cleaner Program in January 1997, and was accepted in February 1997.

NARR Comments: The City of Portland owns four deep production wells on Hayden Island, two of which are within 600 feet of the site. Since 1988, Bull Run water has been provided for residents and businesses on Hayden and Tomahawk Islands, and the wells are currently designated for backup fire suppression only. Three of the four wells are contaminated with low levels of TCE and PCE; however, the contamination is thought to be unrelated to Hayden Island Cleaners. Because of the site's proximity to the Columbia River, surface water was another potential pathway of concern. But the contamination does not appear to have reached either the river or the deeper aquifer.

NARR Comments: (12/5/2001 DGA/SRS) DEQ retained Jacobs Engineering to conduct an expanded Preliminary Assessment (XPA) at the site in August 1997. As part of the XPA, three monitoring wells were installed, and soil and

HAYDEN ISLAND CLEANERS (Continued) **S104329423**

groundwater samples collected. PCE was detected in soil samples (up to 267 ug/kg) and groundwater samples (up to 1,230 ug/L) from all three wells. The XPA report was completed in June 1998. DEQ retained Ecology & Environment (E&E) to follow up with a focused Site Investigation in August 1998. Additional groundwater monitoring wells were installed at the site and on adjacent properties. In addition, a pumping test was conducted at the secondary municipal wells (backup fire suppression wells) to determine if there was any connection between the shallow and deep aquifers. No connection was established. The Site Investigation report was completed in March 1999. In May 1999, DEQ injected Hydrogen Releasing Compound (HRC) into the shallow groundwater to accelerate the natural biodegradation of the PCE. Monitoring over the next couple of years showed that the HRC was successful in stimulating degradation of the PCE. DEQ formally notified the site owners and operators in December 2001 that no further cleanup of the site was necessary.

Decode for NarcdID: Remedial Action
NARR Comments: [4/8/13 SA/SAM] Site Investigations and some cleanup has occured on site since approximately 1988; generally focusing on underground storage tank removal and remediation. DEQ Site Assessment recommends the following activities be performed at the site to help clarify site risk and priority for further action. Contaminated soil remained under the Rod s Truck Stop building with issuance of underground storage tank program NFA in 1993. A review of the archived UST file and possible investigation should be completed to determine the risk of contaminated soils for vapor intrusion for petroleum. PCE/TCE samples were collected from shallow groundwater in 1991. Confirmation of PCE/TCE concentrations is recommended to ensure vapor intrusion occupational risk based concentrations are currently met. Potential sources of PCE/TCE in shallow groundwater include remaining soils at Rod s Truck Service and potential spills from Peninsula Railroad Terminal to the south of the Stockyard property. Current site stormwater drainage should be diagramed and determine discharge points for the property. Columbia Slough Sediments- sediment sampling near current and historic stormwater outfalls should be tested for metals, PCBs, PAHs and VOCs. Sediment results should be compared to the average Lower Columbia River concentrations to determine if the sediments are either near average conditions or significantly above average Lower Columbia River sediment conditions. If sediment concentrations are above average, a source control evaluation may need to be performed.

Decode for NarcdID: Health Threats
NARR Comments: Contaminants in site groundwater and stormwater could represent a potential threat to on-site workers, aquatic life in the Columbia River, wildlife and aquatic life in nearby wetlands, and/or other users of groundwater and surface water in the immediate vicinity of the site. Water quality in the Columbia River is already impaired. The Columbia River is used for recreational and commercial fishing, as well as other recreational purposes. It also provides Critical Habitat for threatened and endangered fish species. The river and nearby wetlands also provide important habitat for other sensitive

STOCKYARDS COMMERCE CENTER (Continued) **S111766402**

species such as protected migratory bird species, sensitive amphibian, reptile, and plant species, and food resources for sensitive aquatic and terrestrial species.

NARR Comments: [4/8/13 SA/SAM] The site was originally developed in 1908 with the construction of a small hotel and a livestock Exchange Building. The Portland Union Stockyards was built in about 1910. The stockyards ceased operations in 1980. Site buildings also included Merit USA (Texaco) Truck Stop (built in about 1952), which included two fueling stations, truck scales, and a cafT. Rod s Truck Repair, a commercial gas station and repair shop began operating in the 1980 s. The stockyards were demolished in 1996 and redeveloped in approximately 1997 to its current configuration as light industry and warehousing.

Decode for NarcdID: Contamination
NARR Comments: Site is suspected of petroleum releases to the subsurface. As part of Columbia Slough Area-wide Discovery (CSD) Project this site was noted due to the presense of soil borings found in Water Resources Department well log database. Site runoff or subsurface contamination could reach part of Columbia Slough via stormwater piping system.

PLAID PANTRY #209 (Continued) **U004015189**

Site has received cleanup of USTs via DEQ UST program (26-92-0348) cited as ending in 1997. However, CSD project found investigation on the site initiated in 2000, in areas away from the main building, to the west.

NARR Comments: The site is just north of the center of Hayden Island in the Columbia River. The topography is flat and the elevation is approximately 20 feet above of sea level. The main channel of the Columbia River is just over 500 feet north of the site. Subsurface material encountered below asphalt and base gravel was medium-grained sand. At depths as little as 5 feet below ground surface (bgs) fill material consisting of paper, glass, wood, brick, plastic and metal, was encountered and found at depths up to 18 feet bgs.

NARR Comments: (November 2016 RKW) Phase II investigation including sampling of soil and shallow groundwter. Minor diesel and oil contamination was found in soil on the 1445 lot. Groundwater below the site contains widespread petroleum, metals (arsenic, barium, cadmium, lead, silver, and mercury), minor VOCs and PAHs. Follow-up investigation for methane (landfill gas) was undertaken in January 2017 using handheld Landtec instrument. Samples from two boring on each property and from interior confined spaces in the 1463 building. No significant levels of methane were detected. NFAs for both properties were dated April 4, 2017.

NARR Comments: This site, the location of a former US Bank branch (since demolished) is situated on top of the abandoned Hayden Island Landfill (ECSI #1559). The site is currently owned by Umatilla, Inc. Belmar Properties, the owners of an adjacent property, are proposing to purchase the site. Belmar has applied to DEQ's Voluntary Cleanup Program to obtain a No Further Action determination for the site. These properties recent landuse was commercial and not expected to lead to contamination. Groundwater below the properties is contaminated with TPH and metals, particularly arsenic, barium, lead, silver, and mercury. Groundwater contaminatinon is thought to be associated with the former landfill.

NARR Comments: Methane and other atmospheric gases were measured in confined spaces inside the site buildings using a handheld meter in May 2011. Methane at levels from 1.5 to 5.5% was detected at the drains of two restrooms. This could be related to sewer gas from leaking drain traps. Little or no methane was detected in any other confined space locations within the buildings. In May 2012 three borings were arrayed around the property and one included the location of a former leaking waste oil tank from the prior gas station. Borings were sampled for methane using a handheld meter as well as summa canister sampling. VOCs samples were also collected using a summa. The maximum methane detection was around 2% in one hole (near the former waste oil tank) and near zero in other holes. Various VOCs (largely associated with petroleum) were found at generally low concentrations. No VOCs were found at concentrations greater than commercial risk-based concentrations. In July 2012 a plumber was hired by site owner to inspect and correct any problems with the bathroom drains/traps. No Further Action determination in August 2012. The determination applies only to the immediate Hayden's Corner site and not to the greater Hayden Island Landfill (ECSI #1559).

NARR Comments: An ARCO service station that operated on the property starting in 1971 initiated an investigation in 1989 that showed gasoline contamination in groundwater. Borings also revealed a layer of landfill debris beneath clean fill. The property is apparently located within the footprint of the former Hayden Island Landfill, an unregulated landfill that was located in a seasonal lake basin and probably operated between 1950 and 1970, when it was covered by a 7 to 8-foot layer of clean fill. DEQ's LUST program (file #26-89-0149) requested a Corrective Action Plan from ARCO, leading to pump-and-treat remediation that began operating 8/90. Groundwater samples from eight monitoring wells contained dissolved metals, which are most likely a result of landfill leachate percolating through unknown solid wastes in the unsaturated zone. Because of system fouling from these metals, the treatment program was shut down in May 1991. The ARCO station recieved a No Further Action determination in 1998 with the exception that the determination did not apply to other contaminants found at the site related to the greater Hayden Island Landfill.

NARR Comments: This unregulated landfill was located in a seasonal lake basin and probably operated between 1950 and 1970, when it was covered by a 7 to 8-foot layer of clean fill. An ARCO facility that opened in 1971 at the eastern edge of the former landfill initiated an investigation in 1989 that showed gasoline contamination in groundwater. Borings also revealed a layer of landfill debris beneath clean fill. DEQ's LUST program (file #26-89-0149) requested a Corrective Action Plan from ARCO, leading to pump-and-treat remediation that began operating 8/90. Groundwater samples from eight monitoring wells contained dissolved metals, which are most likely a result of leachate percolating through unknown solid wastes in the unsaturated zone. Because of system fouling from these metals, the treatment program was shut down in May 1991.

HAYDEN ISLAND LANDFILL (Continued) **S103842510**

NARR Comments: In June 1993, ARCO concluded that it was not possible to remediate benzene in groundwater without first removing dissolved metals. ARCO maintained that it had no responsibility for the metals. The LUST section may continue to require regular monitoring as a part of <quot>conditional closure.<quot> Potential pathways of exposure appear limited to groundwater and surface water. Because more information is needed about the landfill and its levels of contamination, Site Assessment recommends that affected property owners characterize contamination in and below the former landfill. Otherwise, a PA should be completed to investigate the site's history and to evaluate potential exposure pathways, under a low priority. Confined space methane testing was performed by PBS for the Hayden's Corner property. The only significant methane was found at two bathroom floor drains where the likely source was sewer gas. Three soil gas samples were collected from borings around the former ARCO site as part of the investigation of the Hayden's Corner property (ECSI #5711). Methane at 2% was found near the former waste oil but this could have been from residual petroleum contamination. Other samples showed only trace methane.

NARR Comments: [April 2017] This unregulated landfill was located in a seasonal lake basin and probably operated between 1950 and 1970, when it was covered by a 7 to 8-foot layer of clean fill. An ARCO facility that opened in 1971 at the eastern edge of the former landfill initiated an investigation in 1989 that showed gasoline contamination in groundwater. High concentrations of metals were also found. Borings revealed a layer of landfill debris beneath clean fill. The Hayden's Corner property (former ARCO site) was split off from the greater landfill site with a separate ECSI number (#5711). Another site was investigated in the Hayden Island Landfill area in 2016/17 (1445 and 1463 N. Hayden Island Drive). These properties' recent use was commercial, and not expected to lead to contamination. Groundwater below the properties is contaminated with TPH and metals, particularly arsenic, barium, lead, silver, and mercury.

NARR Comments:	[1/6/15 SA/SAM] See ECSI#127 for site history-The following text is from ECSI #127: James River characterized soil and groundwater contamination associated with the three major UST areas across the site, and excavated and aerated soils from leaking USTs in the late 1980s. DEQ's UST Section issued an NFA letter for the gasoline UST

FLINT GROUP NORTH AMERICA CORP (Continued) **S108659827**

area in 1996, but referred all other UST issues to Site Assessment in 1997, since the remaining USTs did not contain motor fuels or waste oils. Site Assessment recommended a remedial investigation (RI) covering the entire facility(including this property), to determine the extent, magnitude, and sources of chlorinated solvents, BTEX, and metals in shallow soil and groundwater.

NARR Comments: RP moving aggressively to remove free product from ground and define extent of plume. 10/20/93 - RP is continuing independent cleanup. (10/25/93 GMW/SAS) Further action letter sent. (11/10/97 LSK) Site re-evaluated as part of review of all sites within the Columbia Slough Study Area. PAE recommended, under medium priority. (4/13/99 ACV/VCP) RP entered the Voluntary Cleanup Program in January 1999 to obtain DEQ review of existing file information. RP has conducted independent groundwater investigation and product recovery. DEQ file memo expected in April 1999. (1/7/00 ACV/VCP) VCP coordinated review of all UST and cleanup issues in 1999, and issued an NFA for environmental issues (with UST concurrence) in January 2000.

Environmental Interest/Information System:
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Updated By: Not reported
Updated Date: 12/17/2002
Decode for NarcdID: Contamination
NARR Comments: (4/29/97 GMW/SAS) Throughout this facility's history, many hazardous-material releases have been documented from spills and wastewater discharges, USTs, above-ground tanks, and an underground pipeline. See the project file for more detail on these releases. Although most releases have involved alcohols and related solvents, the main contaminants of concern are chlorinated solvents, BTEX, and metals. Chlorinated solvents above drinking-water standards were detected in deep wells on-site in the late 1980s and early 1990s. All of the UST issues other than the <quot>gasoline tank area<quot> have been referred from the UST Section to Site Assessment.

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: Soil, surface water, and groundwater contamination could threaten the Oregon Slough portion of the Columbia River. James River uses three on-site wells (screened in the deeper, semi-confined aquifer) for industrial water supply; until about 1989, these wells supplied drinking water for site employees.

Updated By: Not reported
Updated Date: 12/17/2002
Decode for NarcdID: Remedial Action
NARR Comments: (4/29/97 GMW/SAS) James River has characterized soil and groundwater contamination associated with the three major UST areas across the site, and excavated and aerated soils from leaking USTs in the late 1980s. DEQ's UST Section issued an NFA letter for the gasoline UST area in 1996, but has referred all other UST issues to Site Assessment, since the remaining USTs did not contain motor fuels or waste oils. Site Assessment recommends a remedial investigation (RI) covering the entire facility, to determine the extent, magnitude, and

JAMES RIVER CORP. - NORTH PORTLAND (Continued) **S108660100**

sources of chlorinated solvents, BTEX, and metals in shallow soil and groundwater. The RI should also attempt to find the source(s) of chlorinated solvents in deep groundwater beneath the site. Further action at the site is a medium priority. The site should be added to the Site Response Waiting List, and to the Confirmed Release List & Inventory. (3/8/99 MTP/SAS) Findings of Federal Preliminary Assessment support medium ranking of site.

Environmental Interest/Information System:
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 06/22/2023

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 03/26/2023

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Local Land Records

LIENS 2: CERCLA Lien Information

A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners
EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

NY MANIFEST: Facility and Manifest Data

Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

Date of Government Version: 01/01/2019
Date Data Arrived at EDR: 10/29/2021
Date Made Active in Reports: 01/19/2022

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

GROUP 02
GROUP 02
PORTLAND, OR 97217

TARGET PROPERTY COORDINATES

Latitude (North):	45.605713 - 45° 36' 20.57''
Longitude (West):	122.686023 - 122° 41' 9.68''
Universal Tranverse Mercator:	Zone 10
UTM X (Meters):	524484.8
UTM Y (Meters):	5050071.5
Elevation:	29 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	14878142 PORTLAND, OR
Version Date:	2020

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

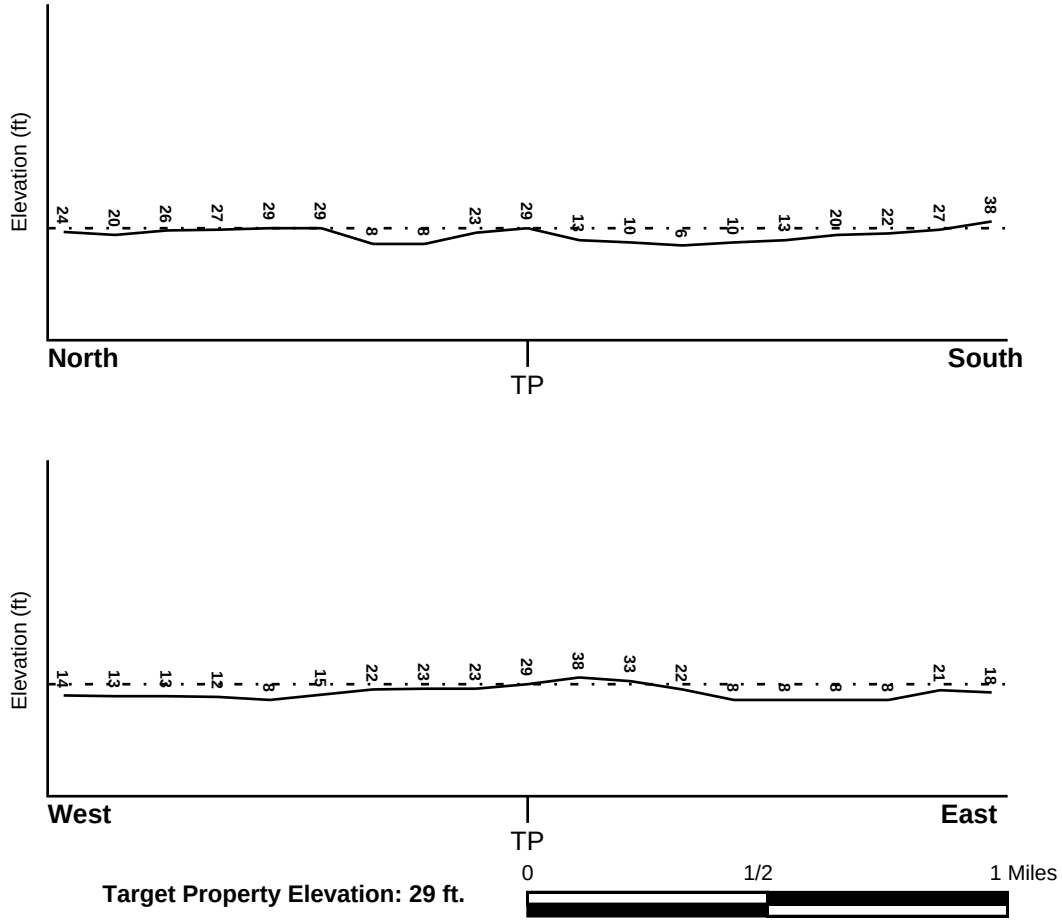
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 29 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
53011C0481D	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
4101830080F	FEMA FIRM Flood data
53011C0477D	FEMA FIRM Flood data
4101830085F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
PORTLAND	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Sauvie

Soil Surface Texture: silt loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Poorly drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 5 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity	
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	micro m/sec	Soil Reaction (pH)
1	0 inches	14 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 42 Min: 14	Max: 6.5 Min: 5.6
2	14 inches	38 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 42 Min: 14	Max: 6.5 Min: 5.6
3	38 inches	59 inches	very fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 42 Min: 14	Max: 6.5 Min: 5.6

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 2

Soil Component Name: Water

Soil Surface Texture: silt loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Parametrix, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

DEPARTMENT OF
ENVIRONMENTAL
QUALITY

NORTHWEST REGION

MICHAEL MCBRIDE
MULTNOMAH CO FACILITIES MGMT
2505 SE 11TH AVE 3RD FL
PORTLAND OR 97202

Re: Multnomah Co. Expo Center #2
File No. 26-92-0139

Dear Mr. McBride:

The Department of Environmental Quality has completed our review of the information submitted to date regarding the underground storage tank (UST) decommissioning and cleanup conducted at 2060 North Marine Drive, Portland, Oregon. The Department has determined that the site appears to be cleaned up in accordance with OAR 340-122-201 through -360, and that no further action is required at this time.

This determination is a result of our evaluation and judgement based on the regulations and facts as we now understand them, including:

1. One 1,000 gallon gasoline UST was removed and transported to Schnitzer Steel Products in Portland, Oregon.

2. Approximately 300 cubic yards of petroleum-impacted soils were treated on site by aeration. After treatment was complete, confirmatory sampling by Oregon Method-Hydrocarbon Identification (TPH-HCID) did not detect petroleum contamination. These soils were disposed of on site with the Department's approval.

3. After petroleum contaminated soil was removed, all soils remaining in the excavation tested non-detect by TPH-HCID.

4. Groundwater was not encountered in the excavation.

The Department's determination will not be applicable if new or undisclosed facts show that the cleanup does not comply with the referenced rules. The Department's determination also does not apply to any conditions at the site other than the release of the petroleum product specifically addressed in your report. We recommend that a copy of all information be maintained with the permanent facility records.

John A. Kitzhaber
Governor

Re: UST-Multnomah County
Delta Park Exit Construction
File No. 26-90-346

Dear Sir(s):

The Department of Environmental Quality has completed its review of the information submitted concerning the diesel cleanup conducted at the Delta Park Exit in Portland, Oregon. The Department has determined the cleanup appears to have met the requirements of the Oregon Administrative Rules (OAR) 340-122-205 through 340-122-360 and that no further action is required at this time.

This determination is a result of our evaluation and judgement based on the regulations and facts as we now understand them, including:

1. Diesel contamination was discovered when underground storage tanks were discovered and decommissioned. The concentrations of contamination did not exceed the 500 part per million cleanup level established for the site.

2. No groundwater was encountered in the excavation.

The Department's determination will not be applicable if new or undisclosed facts show that the cleanup does not comply with the referenced rules. The Department's determination also does not apply to any conditions at the site other than the release of the petroleum product specifically addressed in the report. We recommend that a copy of this information be kept with the permanent facility records.

Please note that pursuant to OAR 340-122-360(2), a copy of your report must be retained until ten (10) years after the first transfer of the property.

Your efforts to comply with the regulations to ensure that your facility has been adequately cleaned up has been appreciated.

Should you have any questions, please feel free to contact Andree Pollock at (503) 229-6923.

Sincerely,

Andree Pollock

EXECUTIVE SUMMARY

Parametrix was retained by the Oregon Department of Transportation to perform a Phase I Environmental Site Assessment (ESA) on the properties located at 10850 N. Denver Avenue, an undeveloped parcel located on N. Denver Avenue near the intersection with NE Martin Luther King Jr. Boulevard and an undeveloped parcel at 125-233 N. Hayden Meadows Drive in Portland, Oregon. The Phase I ESA focused on partial areas of the properties that may be acquired as part of the Interstate Bridge Replacement (IBR) Program. The subject property consists of the parcels known as IBR-1N1E03-00300, IBR-1N1E03-00400, and IBR-1N1E03CA-00100. Based on the findings of this investigation, Parametrix reached the following conclusions:

1. The subject property includes three Multnomah County Tax Lots: 1N1E03-00300, 1N1E03-00400, and 1N1E03CA-00100. The total subject property is approximately 88.5 acres in area and is currently occupied by the City of Portland's Delta Park – Owens Sports Complex, which includes athletic fields, an administration building, a recreation building, and a maintenance facility and two separate undeveloped parcels. No buildings are located within the partial areas of the subject property that may be acquired as part of the IBR Program.
2. Based on a historical review, the subject property was farmland until World War II, when the city of Vanport was constructed, occupying most of the property. In the 1948 aerial photograph, a few dozen buildings are visible, following the Vanport Flood that destroyed Vanport. In 1951, empty streets and vacant city blocks occupied the subject property, with farmland visible to the southeast and north. The City of Portland Parks Department acquired most of the subject property and began developing it for athletic and recreational uses between 1960 and 1970. By 1970, baseball and athletic fields were located on a portion of the subject property, and adjacent property to the north was developed for commercial/industrial use. By 1990, nearby properties to the southeast were developed for commercial/industrial use. By 1994, adjacent areas to the north, east, and southeast were developed for industrial and commercial uses. No significant land use changes were identified between 1994 and 2020. The historical review did not identify current recognized environmental conditions (RECs) on the subject property, including the partial areas of the property that may be acquired as part of the IBR Program.
3. Based on the age of the buildings and structures, there is a low potential for lead-based paint, polychlorinated biphenyls, and/or asbestos-containing materials to have been used in construction of the buildings and structures. However, no buildings and structures are located within the partial areas of the properties that may be acquired as part of the IBR Program.

[redacted].

5. A review of regulatory information identified that the subject property is listed on the DEQ NPDES, UIC, UST, and LUST databases. Three regulated underground storage tanks (USTs) were

removed from the subject property (no dates were provided in the DEQ database). The LUST was decommissioned, and a Generic Remedy Cleanup risk-assessment was performed. DEQ issued a closure letter in 2001. Based on the regulatory status, the LUST appears to be a historical recognized environmental condition (HREC) and does not pose a current REC to the subject property. A pocket of petroleum-contaminated soil (PCS) was left in situ. However, the location of the PCS does not appear to be near the partial areas of the subject property that may be acquired as part of the IBR Program.

6. A review of regulatory information indicated that several nearby sites were identified in the regulatory record databases. However, based on regulatory status and/or distance from the subject property, none of the sites identified appear to present a REC to the subject property, including the partial areas of the subject property that may be acquired as part of the IBR Program.

[redacted]

Based upon the conclusions of this investigation of the subject property, Parametrix offers the following recommendation.

1. No further assessment of environmental conditions on the subject property, including the partial areas of the properties that may be acquired as part of the IBR Program, is recommended.

1. INTRODUCTION

Parametrix was retained by the Oregon Department of Transportation (ODOT) to perform a Phase I Environmental Site Assessment (ESA) on the property located at 10850 N. Denver Avenue, a parcel on N. Denver Avenue, and the property located at 125-233 N. Hayden Meadows Drive in Portland, Oregon. The large (88.5-acre) property is roughly triangle shaped and located generally to the east of Interstate 5 (I-5), southwest of NE Martin Luther King, Jr. Boulevard, and northwest of Hayden Meadows Square shopping center in Multnomah County (Figure 1). The Phase I ESA focused on partial areas of the subject property that may be acquired as part of the Interstate Bridge Replacement (IBR) Program. The subject property consists of the parcels known as IBR -1N1E03-00300, IBR-1N1E03-00400, and IBR-1N1E03CA-00100. The property identifiers, tax lot IDs, and street addresses for the parcels are listed below, and the configuration of the properties is shown in Figure 2.

- R314323 1N1E03-00300 10850 N. Denver Avenue
- R636207 1N1E03-00400 Vacant parcel on N. Denver Avenue
- R314328 1N1E03CA-00100 125-233 N. Hayden Meadows Drive

It is our understanding that ODOT is interested in acquiring portions of the parcels making up the subject property. The proposed acquisition areas are shown on Figure 2. The Phase I ESA focused primarily on the partial areas of the property that may be acquired as part of the IBR Program and assessed the potential for recognized environmental conditions on the acquisition areas from the larger property and adjacent and nearby properties.

This Phase I ESA includes a review of available documentation pertaining to the subject property, a site reconnaissance, and a review of pertinent public agency documents. The ESA consists of two distinct tasks: (1) a review of documents and of oral information, and (2) a site examination. Conclusions and recommendations within this report are based solely on observed evidence and data collected during the performance of this assessment.

1.1 Significant Assumptions

This assessment was conducted in accordance with generally accepted industry practices and procedures within the scope of work authorized at the time and place of this study. Parametrix observations are limited to those areas to which it had access on the subject property.

Phase I ESA methodology included viewing accessible areas of the subject property from the public right-of-way, as full access to the property was not available. An interview was not able to be conducted with property representatives to identify any potential environmental conditions during the Phase I ESA process. Except as stated, no other exceptions to the guidelines presented in ASTM E1527-21 were made during completion of this Phase I ESA.

1.2 Purpose

The Phase I ESA was conducted in general accordance with ASTM Standard E1527-21, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, which defines the generally accepted industry practices and procedures currently applicable at the time and place of this study (ASTM 2021). The Phase I ESA is intended to permit the user to satisfy the requirements to qualify for the bona fide prospective purchaser limitation under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), and as such constitutes "all appropriate inquiries in the previous ownership and uses of the property consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601 (35)(B).

The purpose of this Phase I ESA is to identify recognized environmental conditions (RECs) on or near the subject property. The term *recognized environmental conditions* is defined in ASTM Standard E1527-21 as:

> "…(1) the presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* due to a *release* to the *environment*; (2) the likely presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* due to a *release* or likely *release* to the *environment*; or (3) the presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* under conditions that pose a *material threat* of a future *release* to the *environment*."

In accordance with ASTM Standard E1527-21, some RECs may be further defined as historical recognized environmental conditions (HRECs) or controlled recognized environmental conditions (CRECs).

An HREC is defined as:

> "…*a past release of any hazardous substances* or *petroleum* products that has occurred in connection with the *property* and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the *property* to any required controls."

A CREC is defined as:

> "…a *recognized environmental condition* resulting from a past *release of hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority, with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls."

This Phase I ESA endeavors to identify all RECs, HRECs, and/or CRECs at the subject property.

1.3 Limitations

The findings, conclusions, and recommendations presented in this report are based on site conditions and the best available information known or made available by regulators, other consultants, or other

sources at the time of the investigation. Parametrix conducted a diligent search and investigation in compliance with prevailing standards of the profession; however, certain adverse conditions may exist at the site not detected at the time of the investigation.

The services provided under this contract, as described in this report, include professional opinions and judgments based on data collected. These services have been provided according to generally accepted engineering practices. The opinions and conclusions contained in this report are typically based on information obtained from the following:

- Observations and measurements made by Parametrix field staff.
- Contacts and discussions with regulatory agencies and others.
- Review of available hazardous substance or solid waste lists.
- Opinions and judgments of Parametrix based on the information available.

In the professional judgment of Parametrix, the services performed pursuant to the scope of services are an adequate basis to collect data for a preliminary evaluation of the site and upon which to draw the conclusions stated in this report.

2. SUBJECT PROPERTY DESCRIPTION

2.1 Location

The subject property is comprised of three property tax lots, located generally to the east of I-5, southwest of NE Martin Luther King, Jr. Blvd., and north of the Hayden Meadows Square shopping center in Portland, Oregon (Figure 1). The Phase I ESA focused on the areas of the subject property that may be acquired as part of the IBR Program.

The subject property is located in Multnomah County, Oregon and consists of three properties included in the IBR Program, as detailed in the table below. The site location is shown on Figure 1, the Site Vicinity Map. The boundary of the subject property and the area of proposed acquisition is shown on Figure 2.

2.2 Site and Vicinity Characteristics

Characteristics of the subject property, including the partial areas of the property that may be acquired as part of the IBR Program, is summarized in Table 1.

Table 1. Subject Property Characteristics

IBR ID	Tax Lot ID	Address	Owner	Total Area (acres)	Potential Acquisition Area (square feet)	Current Use (determined through visual observations)
1N1E03-00300	1N1E03-00300	10850 N. Denver Avenue	City of Portland	85.83	3,122	Athletic fields and associated buildings and hardscaping
1N1E03-00400	1N1E03-00400	N. Denver Avenue	City of Portland	1.45	63,017	Vacant and undeveloped
1N1E0CA-00100	1N1E0CA-00100	125-233 N. Hayden Meadows Drive	Hayden Meadows	1.22	4,581	Vacant and undeveloped

The subject property is bounded to the west by I-5, to the northeast by NE Martin Luther King, Jr. Boulevard, and to the south by Hayden Meadows Square shopping center (see Figure 2).

2.3 Physical Setting

The subject property is located in the Portland Basin, which marks the northern terminus of the Willamette Lowland in Oregon (DNR 2023). The northern portion of the basin is known for its low topographic relief, with the subject property at an elevation of approximately 22 feet above mean sea level. The Portland Basin is bounded by the Cascade Range to the east and the Coast Range to the west.

Geologic processes in the Portland Basin consist of volcanism, sedimentation, and cataclysmic flood deposits in both fluvial and marine depositional environments. The subject property lies on what is mapped as coarse-grained Missoula flood deposits, cobbly, sandy gravel deposited by the Missoula floods (Wells et al. 2020). Surface soils consist of clay (see well log MULT 925, Appendix E, OWRD 2023).

The topography in the vicinity of the subject property is a consistent slope, rising with distance from the Columbia River. The anticipated groundwater gradient is to the north toward the Columbia River. Information reviewed as part of this Phase I ESA suggests that depth to groundwater is approximately 12 feet below ground surface on the subject property. The subject property includes an isolated slough.

2.4 Current Use of the Property

Tax lot 1N1E03 -00300 is predominantly used as a public athletic field complex and associated structures, buildings, and parking lots. The proposed acquisition area on tax lot 1N1E03-00300 is a relatively small undeveloped area near the northwest corner of the property. Tax lots 1N1E03-00400 and 1N1E03CA-00100, including the proposed areas of acquisitions, are vacant, undeveloped land (see Figure 2).

2.5 Descriptions of Improvements on the Subject Property

The subject property is, largely, the City of Portland's East Delta – Owens Sports Complex, which includes an arboretum, athletic fields, volleyball courts, picnic areas, paved paths, vehicle parking areas, a community building, an administration building, and a maintenance facility. Power, water, and sewer are supplied by local utilities and municipalities.

No buildings or other significant structures are located on the partial areas of the property that may be acquired as part of the IBR Program.

2.6 Environmental Liens

An environmental lien is defined by ASTM as a charge, security, or encumbrance upon title to a property to secure the payment of a cost, damage, obligation, or duty arising out of response actions, cleanup, or other remediation of hazardous substances or petroleum products. No evidence of environmental liens against the subject property was identified during the course of this Phase I ESA.

3. RECORDS REVIEW

The purpose of the records review task was to gather environmental data on the subject property prior to the site examination. The information review consisted of two subtasks: a review of various lists and files published by federal and State of Oregon agencies; and a compilation of historical uses of the site and site vicinity, to determine if past operations pose an environmental risk to the subject property. Information for agency file review is based, in part, on a report provided by Environmental Data Resources (EDR). The EDR report is included in Appendix A.

The EDR report is a summary of state and federal database searches for sites of possible environmental concern (EDR 2023a). The information review enabled Parametrix personnel to characterize the types of activities performed at the site, identify data gaps prior to the site examination, and facilitate recognition of discrepancies between reported and observed data. Data gaps identified during the document review were addressed by interviewing knowledgeable personnel, observations during the site examination, or by additional detailed investigation.

It should be noted that this information is reported as Parametrix received it from EDR, which in turn reports information as it is provided in various government databases. It is not possible for either Parametrix or EDR to verify the accuracy or completeness of information contained in these databases. However, the use of and reliance on this information is a generally accepted practice in the conduct of environmental due diligence. The following sections present information from the document review.

3.1 Standard Environmental Record Sources

The following section summarizes information collected from records maintained by the U.S. Environmental Protection Agency (EPA) and the Oregon Department of Environmental Quality (DEQ). The information includes details on sites identified in regulatory databases within recommended ASTM search distances. A complete listing of the databases reviewed is included in the EDR Radius Map™ with GeoCheck ® Report (Appendix A).

3.1.1 Review of Oregon Department of Environmental Quality Databases

The following sections summarize the most relevant information obtained from EDR Radius Map™ with GeoCheck® (EDR) report regarding sites identified within the ASTM E1527-21 search radii from the following databases. Additional information regarding these sites was reviewed on the DEQ Environmental Cleanup Site Information (ECSI) Database website (DEQ n.d.a) and the DEQ LUST Cleanup Site Database (DEQ n.d.b) to supplement data gaps in the EDR report. A complete listing of the databases reviewed is included in the EDR report. Relevant database listings from DEQ include:

- DEQ Underground Storage Tank (UST) List
- DEQ Leaking Underground Storage Tank (LUST) List

- DEQ Environmental Cleanup Site Information (ECSI) List
- Spill Database (SPILLS)
- Solid Waste Facilities (SWF/LF) List
- DEQ Confirmed Release List (CRL)
- DEQ Brownfields List
- DEQ Engineering or Institutional Controls
- Spill Data List
- Solid Waste Facilities (SWF/LF) List

3.1.1.1 DEQ Underground Storage Tank List

The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data was obtained from the DEQ UST List.

The subject property (10910 N. Denver Avenue) is listed on the DEQ UST database.

- According to DEQ records, two gasoline USTs and one diesel UST were removed at the Delta Park – Owens Sports Complex. The date of removal was not provided in the DEQ database.

Three additional USTs sites were identified in the EDR report within 0.25 miles of the subject property. Two of the UST sites are the same property and are detailed together below:

- The Plaid Pantry #209 and Potter Webster Co. site (120 N. Marine Drive) is located approximately 0.2 miles north of the subject property. The site is listed in the UST, LUST, ESCI, and AIRS databases. According to DEQ records, two gasoline USTs and one diesel UST are currently in use at the site.
- The Fruehauf Trailer Services, Inc. site (10498 N. Vancouver Way) is located approximately 0.2 miles east of the subject property. The site is listed in the UST and LUST databases. According to DEQ records, a used oil UST was removed. The date of removal was not provided in the DEQ database.

Unless otherwise noted, the presence of USTs near the subject property does not, in itself, constitute a REC. UST sites which have had known releases are discussed in Section 3.1.1.2 below.

3.1.1.2 DEQ Leaking Underground Storage Tank List

The LUST Incident Reports contain an inventory of reported LUST incidents. The following data was obtained from the DEQ LUST Database List.

Eleven LUST sites, including the subject property, were identified in the EDR report within 0.5 miles from the subject property:

- The Heating Oil Tank site (10850 N. Denver Avenue) is the subject property. According to DEQ records, a petroleum release to soil was reported in 2001. Following tank decommissioning and a Generic Remedy remedial risk assessment, DEQ issued a closure letter on August 16, 2001. A pocket of petroleum-contaminated soil (PCS) remains in situ. Based on regulatory status, this release appears to be a HREC to the subject property.
- N & S Oil LLC/Delta Park Chevron (9950 N. Whitaker Road) is located approximately 100 feet south of the subject property. The site is listed in the UST and LUST databases. According to DEQ records, petroleum releases were reported in 1993 and 1994, impacting soil and groundwater. Following remediation, DEQ issued a no further action (NFA) determination on November 15, 2007. Based on regulatory status, this site does not appear to be a REC to the subject property.
- The Plaid Pantry #209 site (1020 N. Marine Drive) is located approximately 0.2 miles north of the subject property. The site is listed in the ESCI, LUST, UST, and AIRS databases. According to DEQ records, a petroleum release was reported to DEQ in 1992. Following remediation, DEQ issued an NFA determination on January 14, 1997. Based on regulatory status and distance, this site does not appear to be a REC to the subject property.
- The Fruehauf Trailer Services, Inc. site (10498 N. Vancouver Way) is located approximately 0.2 miles east of the subject property. According to DEQ records, a petroleum release was reported to DEQ in 1999. Following remediation, DEQ issued an NFA determination on September 6, 2000. Based on regulatory status and distance, this site does not appear to be a REC to the subject property.
- The Fazio Property (10365 N. Vancouver Way) is located approximately 500 feet northeast of a proposed area of acquisition of the subject property. According to DEQ records, a petroleum release was reported in 1993. Soil and groundwater were impacted. Following remediation, DEQ issues an NFA determination on July 23, 1997. Based on regulatory status and distance, this site does not appear to be a REC to the subject property.
- The Heating Oil Tank site (609 N. Marine Drive) is located approximately 0.3 miles northeast of the subject property. According to DEQ records, a petroleum release was reported to DEQ in 2019. Following remediation, DEQ issued a closure letter on February 5, 2020. Based on regulatory status and distance, this site does not appear to be a REC to the subject property
- The Willig Freight Lines site (720 N. Hayden Meadows Drive) is located approximately 0.3 miles southeast of the subject property. The site is listed on the UST, LUST, and NPDES databases. According to DEQ records, a petroleum release was report to DEQ in 1996. Soil and groundwater were impacted. Following remediation, DEQ issued an NFA determination on December 26, 1996. Based on regulatory status and distance, this site does not appear to be a REC to the subject property.
- The Reddaway site (10510 N. Vancouver Way) is located approximately 0.2 miles from one of the areas of proposed acquisition on the subject property. The site is listed on the RCRA-VSQG, ESCI, LUST, UST, AST, VCP, SPILLS, OR HAZMAT, FINDS, ECHO, HSIS, MANIFEST, NPDES, and UIC databases. According to DEQ records, a petroleum release was reported to DEQ in 1988. The site was transferred from DEQ's UST department to VCP in 2000. Four separate petroleum

releases were identified, impacting soil and groundwater. Following remediation, DEQ issued an NFA determination on January 10, 2000. Based on regulatory status and distance, this site does not appear to be a REC to the subject property.

- The Heating Oil Tank site (425 N. Marine Drive) is located approximately 0.4 miles northeast of the subject property. According to DEQ records, a Risk-based cleanup was completed and DEQ issued a closure letter on August 21, 2020. Based on regulatory status and distance, this site does not appear to be a REC to the subject property.
- The Star-Oilco site (10360 N. Vancouver Way) is located approximately 500 feet northeast of an area of proposed acquisition of the subject property. According to DEQ records, a release was reported in 1991, impacting soil and groundwater. The site is listed in the LUST, UST, MANIFEST, NPDES, and UIC databases. Following remediation, DEQ issued an NFA determination on June 13, 1994. Based on regulatory status and distance, this site does not appear to be a REC to the subject property.
- The GI Joe's site (1140 NW Hayden Meadows Drive) is located approximately 0.5 miles south of the subject property. According to DEQ records, a petroleum release to groundwater was reported in 2011. Following remediation, DEQ issued an NFA determination on February 17, 2012. Based on regulatory status and distance, this site does not appear to be a REC to the subject property.

Based on DEQ information indicating site closure activities have been completed or other information, such as distance, none of the identified sites discussed above appear to represent a REC to the subject property, including the partial areas of the properties that may be acquired as part of the IBR program.

3.1.1.3 DEQ Environmental Cleanup Site Information List

The ECSI identifies and tracks known or potentially contaminated sites within Oregon and is the state's equivalent to CERCLIS. The Confirmed Release List (CRL) is a subset of the ECSI and includes sites which have known releases of hazardous substances. The Voluntary Cleanup Program (VCP) database is a list of sites that have been entered into the DEQ voluntary cleanup program and are undergoing cleanup.

Information contained in the EDR report indicates that the subject property is not identified on the ECSI, CRL or VCP databases.

Twenty-six ECSI and CRL sites were identified within 1 mile of the subject property. Three of the ESCI sites are located within 0.5 miles of the subject property:

- The Plaid Pantry #209 site (1020 N. Marine Drive) is located approximately 0.2 miles north of the subject property. The site is listed in the ESCI, LUST, UST, and AIRS databases. According to DEQ records, a petroleum release was reported to DEQ in 1992. Following remediation, DEQ issued an NFA determination for the LUST on January 14, 1997. The site was added to the ESCI database due to suspected contamination detected in borings that were not associated with

the LUST. Based on distance and gradient, this site does not appear to be a REC to the subject property.

- The Reddaway site (10510 N. Vancouver Way) is located approximately 0.2 miles north one of the areas of proposed acquisition on the subject property. The site is listed on the RCRA-VSQG, ESCI, LUST, UST, AST, VCP, SPILLS, OR HAZMAT, FINDS, ECHO, HSIS, MANIFEST, NPDES, and UIC databases. According to DEQ records, a petroleum release was reported to DEQ in 1988. The site was transferred from DEQ's UST department to their Voluntary Cleanup Program (VCP) in 2000. Four separate petroleum releases were identified, impacting soil and groundwater. Following remediation, DEQ issued an NFA determination on January 10, 2000. Based on regulatory status and distance, this site does not appear to be a REC to the subject property.
- The 1610 North Pier 99 St. site (1610 N. Pier 99 Street) is located approximately 0.2 miles northwest of one of the proposed areas of acquisition on the subject property. The site is included in the ESCI, CRL, VCP, and MANIFEST databases. According to DEQ records, the site is contaminated as a result of many years of boat repair activities. A site evaluation was performed in 2002. Limited removal activities were performed in 2013 and 2014. In 2020, DEQ recommended a site investigation. Based on distance and gradient, this site does not appear to be a REC to the subject property.

The remaining EDR listed ECSI, CRL, and VCP sites are located at sufficient distances, and/or down- or cross-gradient, and/or cleanup activities have been completed so that they do not appear to represent RECs to the subject property, including the partial areas of the property that may be acquired as part of the IBR program.

3.1.1.4 DEQ Brownfields List

The Brownfields database lists sites of real property where expansion or redevelopment is complicated by actual or perceived environmental contamination. One DEQ Brownfields site was identified within 1 mile of the subject property.

The Hayden's Corner site (1321-1337 N. Hayden Island Drive) is located approximately 0.9 miles north of the subject property, on Hayden Island. The site is listed in the ESCI, VCP, and Brownfields databases. According to DEQ records, the site was issued an NFA determination on August 2, 2012. Based on regulatory status and distance, this site does not appear to be a REC to the subject property.

3.1.1.5 Solid Waste Facilities/Landfill

The Solid Waste Facilities/Landfill (SWF/LF) records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data were obtained from DEQ's Solid Waste Facilities List.

The subject property is not listed as a SWF/LF site. No SWF/LF sites were identified within 0.5 miles of the subject property.

3.1.1.6 SPILLS Database

The database provides a comprehensive list of reported spills. The subject property is not listed as a SPILLS site.

3.1.1.7 DEQ Engineering/Institutional Controls

DEQ maintains two databases for sites with implemented engineering controls and/or institutional controls. No sites with engineering or institutional controls were identified within 1 mile of the subject property.

3.1.2 Environmental Protection Agency Database Review

The EPA administers several programs designed to protect the environment and monitor the generation, storage, treatment, and disposal of hazardous substances. The following sections summarize the most relevant information obtained from the EDR report regarding sites identified within ASTM E1527-21 search radii from the following databases. A complete listing of the databases reviewed is included in the EDR report.

- National Priorities List (NPL)
- Superfund Enterprise Management System (SEMS) List
- Resource Conservation and Recovery Act (RCRA) Corrective Action Report (CORRACTS) List
- Resource Conservation and Recovery Information System (RCRIS) List
- Emergency Response Notification System (ERNS) List
- US Brownfields List

3.1.2.1 NPL

The NPL identifies priority hazardous waste sites for remedial actions under the EPA Superfund program. The EDR report indicates that the subject property is not listed as an NPL site. No NPL sites were identified within 1 mile of the subject property, and no de-listed NPL sites were identified within 0.5 miles of the subject property.

3.1.2.2 SEMS List

The EPA publishes a list of sites that may potentially pose a threat to the environment or the health of the general public. This list is known as the SEMS list (formerly the CERCLIS list). Information contained in the EDR report indicates the subject property is not listed as a SEMS site.

One SEMS site was identified approximately 0.7 miles northwest and down-gradient of the subject property.

- The 1610 North Pier 99 St. site (1610 N. Pier 99 Street) is located approximately 0.2 miles northwest of one of the proposed areas of acquisition on the subject property. The site is

included in the ESCI, CRL, VCP, SEMS, PRP, ICIS, and MANIFEST databases. According to DEQ records, the site is contaminated as a result of many years of boat repair activities. A site evaluation was performed in 2002. Limited removal activities were performed in 2013 and 2014. In 2020, DEQ recommended a site investigation. Based on distance and gradient, this site does not appear to be a REC to the subject property.

The EPA also publishes the SEMS-NFRAP list, which are SEMS sites that have been designated "no further remedial action planned" and have been removed from the SEMS list. Information contained in the EDR report indicated that no SEMS-NFRAP sites are located within 1 mile of the subject property.

One site, the Columbia Slough, is listed in the SEMS-ARCHIVE and AOCONCERN databases.

- The Columbia Slough is an ongoing, long term remediation site. Decades of direct discharges and upland pollutant runoff have contaminated the Columbia Slough's sediments. Source control is one of the primary remediation actions used to clean up the Columbia Slough. Due to interconnected hydrology, DEQ considers the entire network of waterways near the Columbia Slough as potential sources of pollution. The Columbia Slough is not a confirmed source of contamination to the subject property and the Columbia Slough is greater than 0.5 miles from the proposed areas of acquisition. The Columbia Slough contamination does not appear to be a REC to the areas that may be acquired as part of the IBR program.

3.1.2.3 CORRACTS Review

The CORRACTS report identifies hazardous waste handlers with corrective action activity. Information contained in the EDR report indicates the subject property is not listed as a CORRACTS site. No CORRACTS sites are listed within 1 mile of the subject property.

3.1.2.4 Resource Conservation and Recovery Information System List

The RCRIS list includes selective information on sites which generate, transport, store, treat, and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Information contained in the EDR report indicates that the subject property and adjacent properties are not listed as RCRA generators.

The EPA also regulates the management of hazardous waste at Transportation, Storage, and Disposal (TSD) facilities. Information contained in the EDR report indicates the subject property is not listed as a RCRIS-TSD site. No RCRIS-TSD sites were identified within 0.5 miles of the subject property.

3.1.2.5 ERNS List

The ERNS is a national database containing information from spill reports made to federal authorities. Information contained in the EDR report indicates the subject property is not listed as an ERNS site.

3.1.2.6 U.S. Brownfields List

The EPA's U.S. Brownfields list identifies Brownfields properties addressed by Cooperative Agreement Recipients and Brownfields properties addressed by Targeted Brownfields Assessments. The EDR report indicates the subject property is not listed as a U.S. Brownfields site. No U.S. Brownfield sites were identified within 0.5 miles of the subject property.

3.1.3 Other Databases

The following sections include other databases identified in the EDR report that may be relevant to assessing potential environmental liability or environmental issues at the subject property.

3.1.3.1 EDR Proprietary Databases

EDR has conducted research on the occurrence of historical business practices that may constitute a REC to properties. The database was developed from data found in historical city directories and contains information on over 100,000 former gas stations, manufactured gas plants, and dry cleaners. Due to the nature of these businesses, the sites have the potential for soil and groundwater contamination to have occurred.

EDR Historical Auto Stations

Historical auto stations are identified on a proprietary database maintained by EDR. Information contained in the EDR report indicates the subject property is not listed as a historical auto station and no historical auto stations are listed within 0.125 miles of the subject property.

EDR Manufactured Gas List

Former manufactured gas plant (coal gas) sites are identified on the Manufactured Gas database. Information contained in the EDR report indicates the subject property is not listed as a manufactured gas plant site and no manufactured gas plants are listed within 1 mile of the subject property.

EDR Historical Dry Cleaners

Historical cleaners are identified on a proprietary database maintained by EDR. Information contained in the EDR report indicates that there are no historical cleaner sites within 0.125 miles of the subject property.

3.1.4 Orphan Site List

Orphan sites are sites for which mapping information is not detailed adequately to plot the location of the site, or for which there is no known responsible party or the responsible party is unwilling or unable to pay for cleanup. The orphan site list and available mapping information were reviewed by Parametrix. No Orphan Sites are located near the subject property.

3.1.5 Vapor Encroachment

ASTM Standard E1527-21 defines vapor migration as “the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface." The recognition of vapor migration as a possible REC may require incorporation of new types of controls and restrictions to address this contamination pathway.

The subject property and adjacent sites were reviewed in an effort to determine if vapor migration has, or has the potential to have, occurred at the site and/or from adjacent properties.

No properties were identified in the near vicinity which have confirmed releases of volatile contaminants in soil or groundwater which have not been sufficiently addressed or would otherwise present a potential impact to the subject property.

3.2 Historical Use Information

The objective of the historical use information review is to develop a history of the previous uses of the subject property and surrounding area that helps to identify the likelihood of past uses having led to RECs in connection with the subject property. Parametrix researched the historical land use, occupancy, and ownership of the subject property and adjacent properties to evaluate historical uses that are known to be associated with RECs. Historical records reviewed include Sanborn Fire Insurance Maps and aerial photographs.

3.2.1 Sanborn Maps™ Fire Insurance Map Review

Parametrix requested Sanborn Fire Insurance maps from EDR in an effort to help identify past land uses. EDR provided one Sanborn Map, dated 1969. However, 1969 Sanborn Map provided does not include the subject property. A copy of the Certified Sanborn Map Report is included in Appendix B.

3.2.2 Historical Aerial Photograph Review

Historical aerial photographs of the subject property area were obtained from EDR in the EDR Aerial Photo Decade Package. Aerial photographs for the years 1936, 1948, 1951, 1955, 1960, 1970, 1975, 1981, 1990, 1994, 2000, 2006, 2011, 2017, and 2020 were examined. Copies of the aerial photographs are included in Appendix C. Observations are listed below.

1936 The majority of the subject property and surrounding properties appear to be agricultural land. A small, isolated waterway is visible on the west side of the subject property. Highway 99W (currently I-5) is visible to the west, defining the western boundary of the subject property. Highway 99E extends from the northwest to the southeast, defining the northeast boundary of the subject property. The Oregon Slough is visible further to the north.

1948	Most of the subject property and the area to the east are covered in water as a result of the Vanport Flood of May 30, 1948, which displaced approximately 40,000 residents of what had been a quickly constructed city that housed wartime shipbuilders. A few dozen residential buildings are visible, appearing to be off of their foundations. Two larger buildings, possibly multifamily residential, appear intact. Highway 99 (currently I-5) is visible to the west.
1951–1955	The two larger buildings visible in the previous photograph are visible, and no smaller buildings are visible on subject property. Streets and empty city blocks are visible on the subject property. Farm fields are visible to the southeast and north. NE Union Court is visible on the subject property, paralleling Highway 99E.
1960	The subject property and the areas to the north and west look similar to the previous photograph. I-5 is visible to the west.
1970	The subject property largely appears similar to the previous photograph with the addition of three baseball diamonds and a football field. A large commercial sized structure and many parked large vehicles are visible on the adjacent property to the north, near the western boundary of the subject property.
1975	The subject property and adjacent properties appear similar to the previous aerial photograph, except that one of the larger buildings previously visible appears to have been razed.
1981	Three larger buildings are visible on the subject property, two buildings replacing the one building visible in the previous photograph (the maintenance facility). The third building is the administration building. The adjacent properties appear similar to the previous aerial photograph. Commercial/industrial development appears to be increasing on properties to the north across Martin Luther King, Jr. Blvd. (Highway 99E).
1990	The subject property largely appears similar to the previous photograph. A fourth baseball diamond and a more athletic fields are visible. Several large commercial/industrial buildings are visible on nearby properties to the southeast. Commercial development has intensified to the northeast of the subject property.
1994	Another building (the recreation building) is visible on the subject property. The adjacent properties appear similar to the previous aerial photograph.
2000	Several additional baseball diamonds and athletic fields are visible on the subject property. Commercial development is visible on the adjacent properties southeast of the subject property. The commercial building visible on the adjacent property to the north in 1970 has been razed.
2006	The subject property and adjacent and area properties appear similar to the previous photograph, with the exception of the redevelopment of the adjacent property to the north.

2011–2020 The subject property and adjacent and area properties appear similar to the previous photograph.

Based on the historical review, the subject property was farmland until 1948. (Note: the city of Vanport was, in part, constructed on the subject property during World War II.) In the 1948 aerial photograph, a few dozen buildings are visible, following the Vanport Flood that destroyed Vanport. Highway 99 and Highway 99E are visible to the west and northeast, respectively. In 1951, streets and vacant city blocks are visible on the subject property and farmland is visible to the southeast and north. The City of Portland Parks Department began developing a large part of the subject property between 1960 and 1970. By 1970, baseball and athletic fields are visible on the subject property. NE Union Court is visible paralleling Highway 99E, dividing the subject property; adjacent property to the north were developed for commercial/industrial use. By 1990, nearby properties to the southeast were developed for commercial/industrial use. By 1994, the adjacent properties to the southeast were developed for commercial uses. The subject property remains in similar use; the adjacent areas to the north, east, and southeast were developed for industrial and commercial uses. No significant land use changes were identified between 1994 and 2020. No RECs were identified on the subject property, including the partial areas of the properties that may be acquired as part of the IBR Program, during the historical aerial photograph review.

3.2.3 Local Agency Records

Information from local agencies was reviewed for environmental significance as described in the following sections.

3.2.3.1 City of Portland

A review of permits for environmental significance (i.e., septic tank, stormwater, dry wells, and/or USTs or aboveground storage tanks [ASTs]) was completed. A Bureau of Fire permit for an oil burner was issued in 1962 for the field house at 10850 N. Denver Avenue. The permit indicates that a 1,000-gallon heating oil UST was located on the subject property. According to DEQ records, a petroleum release to soil from a heating oil UST was reported in 2001 at 10850 N. Denver Avenue. This UST appears to be the same UST noted in the 1962 Bureau of Fire permit. Following a remedial risk assessment, DEQ issued a closure letter on August 16, 2001. Based on regulatory status, this release appears to be a HREC to the subject property. No additional permits of environmental significance were identified.

3.2.3.2 Multnomah County

Based on information from the Multnomah County Tax Assessor's Office, the subject property consists of tax lots 1N1E03-00300, 1N1E03-00400, and 1N1E03CA-00100. The subject property is approximately 88.5 acres in size. Two of the tax lots are owned by the City of Portland and one by Hayden Meadows.

3.3 Additional Environmental Information

The following sections provide a summary of additional environmental information obtained for the site.

3.3.1 Asbestos

The manufacture of most asbestos-containing materials (ACM) was banned by the EPA by 1979. Prior to this, asbestos was a common constituent of numerous building materials, including floor and ceiling tiles, caulking, pipe insulation, roofing materials, and exterior siding.

Based on the age of the buildings and structures, there is a low potential for ACM to have been used in the construction of the buildings. However, none of the buildings and structures are located within the partial areas of the subject property that may be acquired as part of the IBR Program.

3.3.2 Lead-Based Paint

Before 1977, paint commonly contained lead which is considered to cause human health problems if ingested. Based on the age of the buildings and structures, there is low potential for lead-based paint (LBP) to have been used in the construction of the buildings and structures. However, none of the buildings and structures are located within the partial areas of the subject property that may be acquired as part of the IBR Program.

3.3.3 Polychlorinated Biphenyls

Transformers can potentially contain polychlorinated biphenyls (PCBs). Based on the age of the buildings, there is low potential for PCBs to have been used in the construction of the buildings (primarily used in lighting and electrical equipment). However, no transformers or buildings are located within the partial areas of the subject property that may be acquired as part of the IBR Program.

3.3.4 Radon

Radon is a naturally occurring radioactive gas formed by the decay of uranium in some rocks and soil. The adverse health effects associated with radon gas depends upon various factors, such as the concentration of the gas, and exposure duration. The potential concentration of radon gas within a building depends on subsurface soil conditions, the integrity of the building's foundation, the existence of a basement or crawl space (primary areas of concern), and the building's ventilation.

Multnomah County ZIP code 97217 is located in the Federal EPA Radon Zone 2. The Zone 2 indoor average radon level is greater than 2 picocuries per liter (pCi/L) but less than 4 pCi/L. Based on this limited information, radon likely does not represent an environmental concern at the property.

4. FILE REVIEW

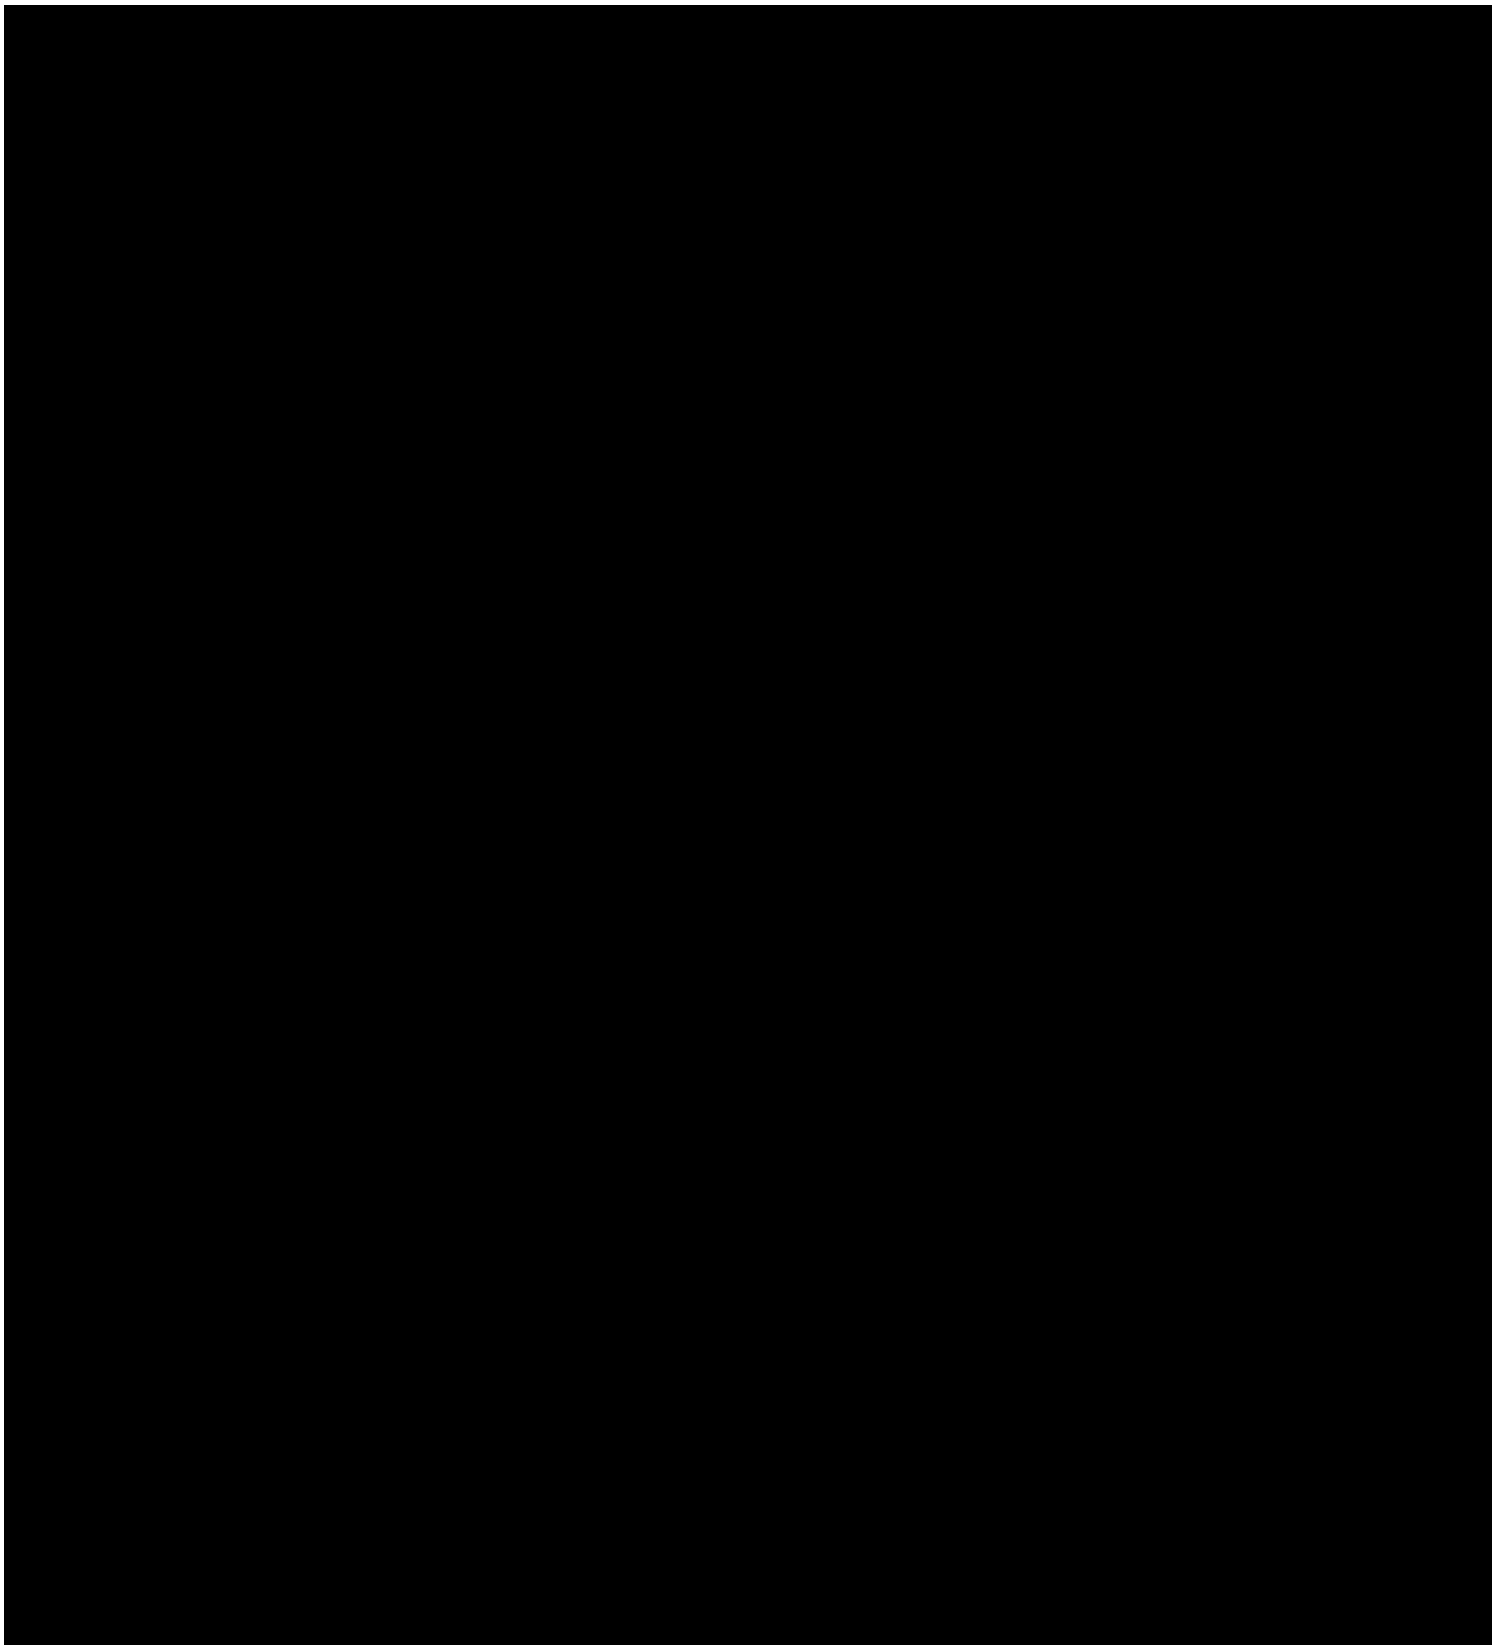
In accordance with ASTM Standard E1527-21, inquiries and review of previous investigations for the subject property, and a review of regulatory files for the subject property or adjacent properties may be conducted to further evaluate environmental conditions on the property or adjacent properties, and to fill in data gaps where applicable. Previous investigations and file reviews are summarized below.

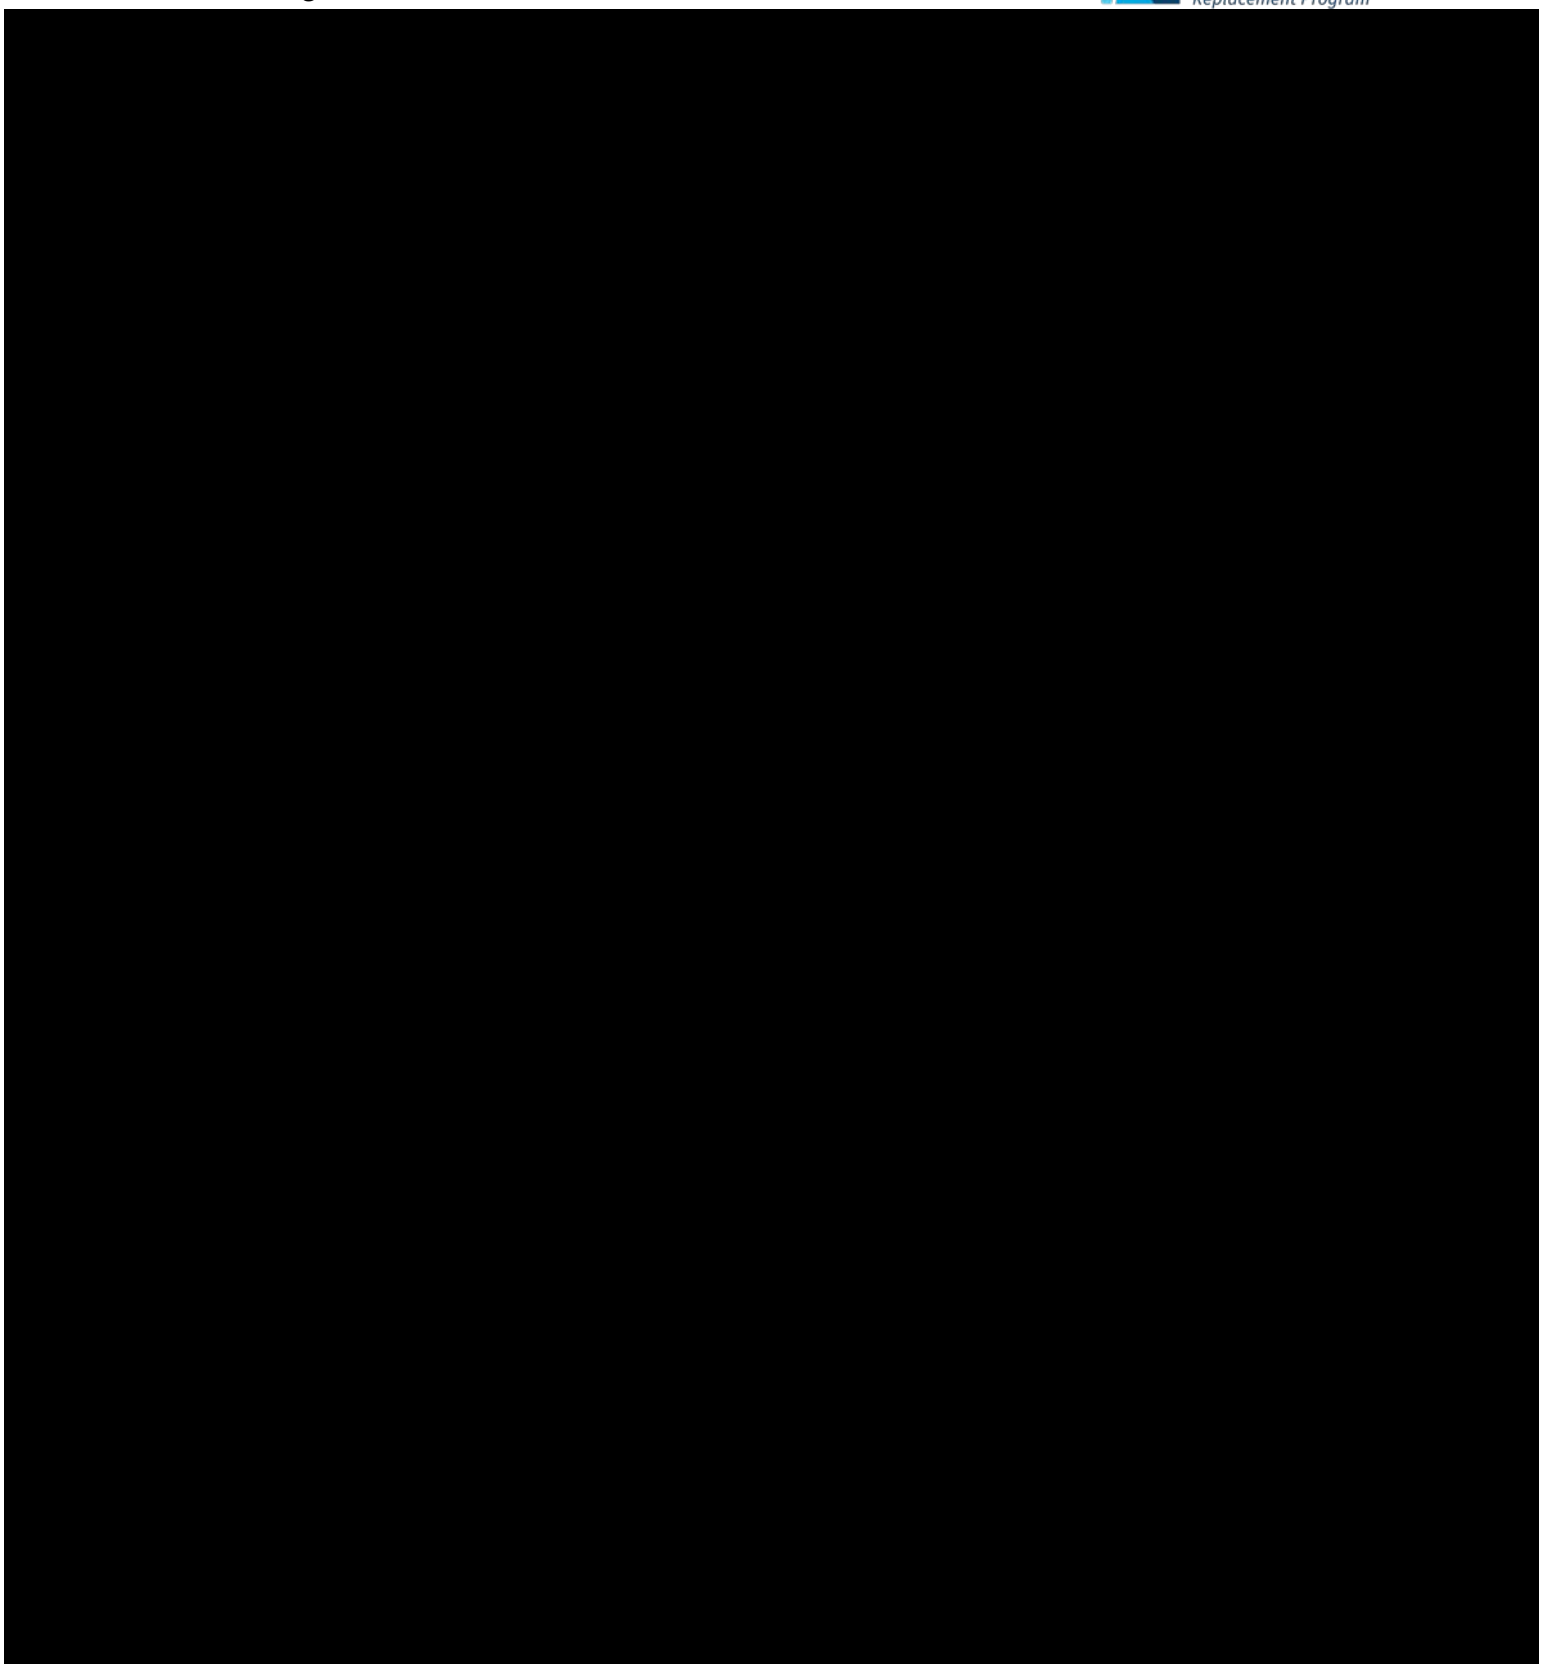
4.1 Previous Investigations

Based on DEQ records, a Generic Remedy Cleanup risk-assessment was performed to assess a heating oil LUST. A pocket of PCS remained in situ (see Section 3.1.1.2 for details). No additional previous environmental investigations of the subject property were identified during the course of this Phase I ESA.

4.2 Adjacent and Nearby Properties File Review

Adjacent and nearby properties were listed on environmental databases, as described in Section 3. Sufficient site-specific information was available through review of the EDR report, as well as online DEQ files, to develop an opinion on the potential for these properties to have affected the subject property. Therefore, a specific file review (physical review at DEQ) was not required, beyond those completed during the course of this Phase I ESA. Specific information on the nature of release, types of contaminants, media impacted, and the potential to have affected the subject property or otherwise caused environmental concern is provided in Section 3.





6. INTERVIEWS

An interview was not able to be conducted with a property representative to identify any potential environmental conditions and to address information data gaps during the Phase I ESA process. The lack of a property owner or representative interview represents a data gap in accordance with ASTM Standard E1527-21.

7. CONCLUSIONS

Based on the findings of this investigation, Parametrix reached the following conclusions:

1. The subject property includes three Multnomah County Tax Lots: 1N1E03-00300, 1N1E03-00400, and 1N1E03CA-00100. The total subject property is approximately 88.5 acres in area and is currently occupied by the City of Portland's Delta Park – Owens Sports Complex, which includes athletic fields, an administration building, a recreation building, and a maintenance facility and two separate undeveloped parcels. No buildings are located within the partial areas of the subject property that may be acquired as part of the IBR Program.
2. Based on a historical review, the subject property was farmland until World War II, when the city of Vanport was constructed, occupying most of the property. In the 1948 aerial photograph, a few dozen buildings are visible, following the Vanport Flood that destroyed Vanport. In 1951, empty streets and vacant city blocks occupied the subject property, with farmland visible to the southeast and north. The City of Portland Parks Department acquired most of the subject property and began developing it for athletic and recreational uses between 1960 and 1970. By 1970, baseball and athletic fields were located on a portion of the subject property, and adjacent property to the north was developed for commercial/industrial use. By 1990, nearby properties to the southeast were developed for commercial/industrial use. By 1994, adjacent areas to the north, east, and southeast were developed for industrial and commercial uses. No significant land use changes were identified between 1994 and 2020. The historical review did not identify current RECs on the subject property, including the partial areas of the property that may be acquired as part of the IBR Program.
3. Based on the age of the buildings and structures, there is a low potential for LBP, PCBs, and/or ACM to have been used in construction of the buildings and structures. However, no buildings and structures are located within the partial areas of the properties that may be acquired as part of the IBR Program.

[redacted]

5. A review of regulatory information identified that the subject property is listed on the DEQ NPDES, UIC, UST, and LUST databases. Three regulated USTs were removed from the subject property (no dates were provided in the DEQ database). The LUST was decommissioned, and a Generic Remedy Cleanup risk-assessment was performed. DEQ issued a closure letter in 2001. Based on the regulatory status, the LUST appears to be an HREC and does not pose a current REC to the subject property. A pocket of PCS was left in situ. However, the location of the PCS does not appear to be near the partial areas of the subject property that may be acquired as part of the IBR Program.

6. A review of regulatory information indicated that several nearby sites were identified in the regulatory record databases. However, based on regulatory status and/or distance from the subject property, none of the sites identified appear to present a REC to the subject property, including the partial areas of the subject property that may be acquired as part of the IBR Program.

8. RECOMMENDATIONS

Based upon the conclusions of this investigation of the subject property, Parametrix offers the following recommendation.

1. No further assessment of environmental conditions on the subject property, including the partial areas of the properties that may be acquired as part of the IBR Program, is recommended.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal Delisted NPL sites

Delisted NPL: The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may deleted from the NPL where no further response is appropriate.

A review of the Delisted NPL list, as provided by EDR, and dated 06/22/2023 has revealed that there is 1 Delisted NPL site within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Lists of Federal sites subject to CERCLA removals and CERCLA orders

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 06/22/2023 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 06/22/2023 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Lists of Federal RCRA generators

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 03/06/2023 has revealed that there is 1

RCRA-VSQG site within approximately 0.25 miles of the target property.

Decode for NarcdID: Contamination
NARR Comments: Site is suspected of petroleum releases to the subsurface. As part of Columbia Slough Area-wide Discovery (CSD) Project this site was noted due to the presense of soil borings found in Water Resources Department well log database. Site runoff or subsurface contamination could reach part of Columbia Slough via stormwater piping system. Site has received cleanup of USTs via DEQ UST program (26-92-0348) cited as ending in 1997. However, CSD project found investigation on the site initiated in 2000, in areas away from the main building, to the west.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

NARR Comments: RP moving aggressively to remove free product from ground and define extent of plume. 10/20/93 - RP is continuing independent cleanup. (10/25/93 GMW/SAS) Further action letter sent. (11/10/97 LSK) Site re-evaluated as part of review of all sites within the Columbia Slough Study Area. PAE recommended, under medium priority. (4/13/99 ACV/VCP) RP entered the Voluntary Cleanup Program in January 1999 to obtain DEQ review of existing file information. RP has conducted independent groundwater investigation and product recovery. DEQ file memo expected in April 1999. (1/7/00 ACV/VCP) VCP coordinated review of all UST and cleanup issues in 1999, and issued an NFA for environmental issues (with UST concurrence) in January 2000.

Environmental Interest/Information System:
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Updated By: SFORTUN
Updated Date: 09/11/2009
Decode for NarcdID: Contamination
NARR Comments: (2/24/03 SMF/SAP) DEQ received four pollution complaints, (between 1991 - 1999) alleging that ongoing activities at the Former Schooner Creek Boat Works site were contaminating the Columbia River and nearby properties. Two other pollution complaints, received in May 1990 and March 1999, described oil sheens and petroleum odors from unknown sources on the Columbia River near the Former Schooner Creek Boat Works. Although the release characteristics were similar to those described in pollution complaints against the boat works site, there is no information to indicate that the source(s) of these petroleum releases were ever determined. A number of other potential sources are found in the immediate vicinity of the Former Schooner Creek Boat Works site. See DEQ January 24, 2003, Strategy Recommendation for specific pollution complaint history. (8/11/03 AC/C&ER) Site tested for VOCs, petroleum hydrocarbons and metals. Diesel, oil and lead were detected at concentrations above background. Sediment and groundwater have not been tested. (9/10/09;smf) EPA completed an SI of the site in August 2009. Site soils and Columbia River (North Portland Harbor / Oregon Slough) sediments were sampled and analyzed for metals, SVOCs, organo-chlorine pesticides, PCBs, and tributyltin in October 2008. EPA's data indicates that site soils are contaminated with metals, PAHs, PCBs, DDT, phthalates, and tributyltin at concentrations that represent a potential risk to on-site workers, to the adjoining residents, to on-site plants and wildlife, and to nearby aquatic life. Sediments in the site's boat dock area are contaminated with metals, PAHs, and DDT at concentrations that represent potential toxic and bioaccumulative threats to aquatic life.

Decode for NarcdID: General Site Description
NARR Comments: The subject site is an approximate 1 acre parcel in North Portland, along the western edge of the Interstate Highway (I-5) bridge over North Portland Harbor. The site has been the location of boat building, repair, and machine shop activities since about 1937. Schooner Creek Boat Works, a boat building and repair business, began operating at the site in 1989, but relocated its operations about 1 mile northwest, to the north shore of Hayden Island, In July 2000. However, it continued to lease the site through December 2001. DEQ s Northwest Region (NWR) Hazardous Waste program first referred the site to Site Assessment in April 2002 for investigation of a pollution complaint. Mermaid Marine had recently begun leasing the site, but became involved in an extensive cleanup of wastes and debris that Schooner Creek Boat Works allegedly left behind when they vacated the site.

Updated Date: 09/11/2009
Decode for NarcdID: Hazardous Substance/Waste Types
NARR Comments: Existing information suggests that site soils and nearby Columbia River Sediments may be contaminated with copper oxide, paint thinner, and heavier petroleum constituents such as polynuclear aromatic hydrocarbons (PAHs). Considering the types of activities conducted at the site, and the length of time that these activities were conducted, other potential site contaminants might include: Organotins, other potential toxic metals (such as arsenic, lead, cadmium, chromium, mercury, and zinc), volatile organic contaminants (VOCs), semi-volatile organic contaminants (SVOCs), and possibly polychlorinated biphenyls (PCBs). (9/11/09; smf) A 2008/2009 EPA SI found that site soils are contaminated with metals, PAHs, phthalates, PCBs, DDT, and tributyltin at concentrations that represent potential risks to on-site workers, adjoining residents, on-site plants and wildlife, and nearby aquatic life. Sediments in the site's boat dock area are contaminated with metals, PAHs, and DDT at concentrations that represent potential toxic and bioaccumulative risks to aquatic life.

Updated Date: 11/27/2013
Decode for NarcdID: Pathways & Other Hazards
NARR Comments: The site is located in a narrow, isolated strip of industrial properties on the south bank of North Portland Harbor, along North Marine Drive. The area between North Portland Harbor on the north, I-5 on the east, Columbia Slough on the south, and a Burlington Northern Santa Fe Railroad right-of-way on the west comprises Peninsula Drainage District #1. The entire site lies within the Columbia River s 100-year flow zone, so flood waters could mobilize any surface contamination at the site. The nearest residence evidently shares the same tax lot as the site. North Portland Harbor and I-5 should limit potential exposures for most upland residences, except for potential exposures at the on-site residence. There are approximately 200 houseboats moored along the north shore of the North Portland Harbor, within .5 mile of the site. It is unclear if site contaminants would significantly affect residents at the nearby houseboats. The Multnomah County Fairgrounds and Exposition Center lied southwest of the site, directly across North Marine Drive. East Delta Park, a municipal park, lies about .25 mile south-southeast of the site. The Portland International Raceway lies about .5 mile south-southwest of the site. Heron Lakes Golf Club, a municipal golf course, lies about .25 mile southwest of the site. In addition, Jantzen Beach Supercenter shopping center lies directly across North Portland Harbor from the site. In August 2001, Metro hired a consultant to advance five pushprobe soil borings 100 to 200 feet south of the site. These borings encountered groundwater at 7 to 16 feet below ground surface (bgs), suggesting that any potential contaminants at the boat yard site could represent a threat to nearby drinking water wells, and that potential shallow groundwater contamination could represent a threat to aquatic life in North Portland Harbor. Wetlands areas directly to the south of the site attract populations of sensitive wildlife species to the area. A major heronry is also located about 1 mile from the site. Site contaminants could represent a threat to sensitive wildlife and plant species within the drainage district. Along the 1610 North Pier 99 Street site, the Columbia River provides migratory and rearing habitat for twelve sensitive anadromous fish species.

Updated By: SMILLER
Updated Date: 05/19/2020
Decode for NarcdID: Remedial Action
NARR Comments: (2/24/03 SMF/SAP) The site has a lengthy operational history, and DEQ has received multiple complaints alleging releases or improper handling of hazardous substances at the site. A high priority is assigned for conducting an Expanded Preliminary Assessment (XPA) of the site. Site soils, groundwater, and nearby Columbia River sediments should be sampled for toxic metals, VOCs, SVOCs, and PCBs to determine if past activities may have significantly contaminated the site and surrounding environment. (8/21/03 AC/C&ER) A preliminary investigation confirms the presence of petroleum hydrocarbons and

1610 NORTH PIER 99 ST. (Continued) **S106655861**

metals in site soils. Site sediment must still be evaluated. [10/21/13 SA/SAM] A Site inspection Report was prepared in 2009. Sample results for the sediment samples collected from below the Pier 99 docks indicated the presence of one TAL metal at a significant concentration with respect to background concentration. No organotins, pesticides/PCBs, SVOCs were detected at significant concentrations with respect to background concentrations. Site soils contained sources of CERCLA hazardous substances. EPA completed an EE/CA on June 13, 2013. The site was divided up into 4 operable units: - Operable Unit 1 Bank Area - Operable Unit 2 Eastern Solid Waste Storage Area (Eastern Unimproved Area) - Operable Unit 3 Gravel Filter Area and Upland Boat Maintenance Repair Area - Operable Unit 4 Former Crane Area Based on the results of this EE/CA, the recommended removal actions for the Site are OU3 Gravel Filter Removal and stormwater Pipe Removal and OU1 Bank Stabilization(which included some debris removal and sand blast grit removal). The OU 2 elevated area coresponded with the OU3 discharge area and is addressed in this action. An OU 4 data gap investigation indicate that removal is not needed for the former crane area soil or groundwater at the site. Onsite work by EPA started Sept 1, 2013. For more details, visit http://www.epaosc.org/site/site_profile.aspx?site_id=8650 By 10/10/2013 all initial removal and restoration activities at the Pier 99 site were completed. [6/26/14 SA/SAM] Additonal removal at two locations(REX-16 and RAC-2) will occur in June 2014. EPA will perform a one-year monitoring and maintenance review. [10/22/14 SA/SAM]Additional removal was completed at the burn area on June 30 and July 2, 2014. As much as 3.5 feet of ashy soil was removed along a 15 foot length at the base of the slope. Because a significant portion of the bank was exposed during the excavation, EPA agreed that further excavation could jeopardize the stability of the bank, and excavation could be stopped. The area at the toe of the slope was reinforced with Envirlok vegetated sand bags installed at approximately a 1:1 slope. The two foot soil cover requirement was met at the toe of the bank, but could not be met further up the bank on the steep slope. Up the slope only 18-20inches of soil cover was placed. The EPA will require Post-Removal Site Controls, including monthly inspections, prohibit any activity that damages or disturbs the integrity of the cover and restoring the integrity of the cover if it is jeopardized in any way. [5/19/20 SA/SAM] The 2015 Monitoring report(year 2), indicated bank conditions were stable; grass covered the bank and no ground distrubances occured. 2016 and 2020 monitoring reports demonstrated the bank continues to be covered with grass. Based on review of the previous removal action and project files, the DEQ Cleanup program is concerned that sediment adjacent to the North Pier 99 site has not been adequately characterized and may be contaminated above levels of concern to human health and the environment. In particular, there is no data for Columbia River sediments between the bank and the area sampled near the docks.

1610 NORTH PIER 99 ST. (Continued) **S106655861**

North Portland Harbor and I-5 should limit potential exposures for most upland residences, except for potential exposures at the on-site residence. There are approximately 200 houseboats moored along the north shore of the North Portland Harbor, within 0.5 mile of the site. Nearly 80% of these are located either directly across the harbor, or downstream from the boat works site. The Multnomah County Fairgrounds and Exposition Center lies southwest of the site, directly across North Marine Drive. East Delta Park, a municipal park, lies about 0.25 mile south-southeast of the site. The Portland International Raceway lies about .5 mile south-southwest of the site. Heron Lakes Golf Club, a municipal golf course, lies about 0.25 mile southwest of the site. In addition, the Jantzen Beach Supercenter (shopping center) lies directly across North Portland Harbor from the site. In August 2001, Metro hired a consultant to advance five pushprobe soil borings 100 to 200 feet south of the site. These borings encountered groundwater at 7 to 16 feet below ground surface (bgs), suggesting that any potential contaminants at the boat yard site could represent a threat to nearby drinking water wells, and that potential shallow groundwater contamination could represent a threat to aquatic life in North Portland Harbor. City records indicate that the on-site residence is serviced by the Portland municipal water supply. The city also has supplemental supply wells along the Columbia River south shore, 6 to 11 miles east of the site, as well as four supplemental supply wells on Hayden Island. Two of the Hayden Island wells lie about 1,200 feet north of the site, directly across North Portland Harbor. The nearest municipal water supply wells lie across North Portland Harbor, a 1,000-foot-wide, 20 30 foot deep channel of the Columbia River, and may be about 225 250 feet deep, so it remains unclear if site contaminants represent a significant threat to the city drinking water supply. OWRD also has records of three community or group-domestic wells, one public water supply well, and five domestic wells within 1.25 miles of the site.

Environmental Interest/Information System:
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting

MARKET TRANSPORT LTD (Continued) **1004770051**

requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

NARR Comments: (12/5/2001 DGA/SRS) Dry-cleaning facilities have operated at the site since the mid-1970s. A preliminary environmental assessment in November 1994 identified four floor drains within the facility, three of which yielded a positive reading on a photoionization detector. In August 1995, four Geoprobe borings were advanced at the site to see if PCE had been released to the soil or groundwater. PCE was detected in soil gas (up to 75 ppm) and groundwater (up to 780 ug/L) in all four boreholes. It appears that PCE may have been released down the floor drains at the site, leaking into the soil through cracks in the sanitary sewer lines. Tidal fluctuations in the shallow groundwater may have spread the contaminants across the site. Hayden Island Cleaners applied to DEQ's Dry Cleaner Program in January 1997, and was accepted in February 1997.

NARR Comments: The City of Portland owns four deep production wells on Hayden Island, two of which are within 600 feet of the site. Since 1988, Bull Run water has been provided for residents and businesses on Hayden and Tomahawk Islands, and the wells are currently designated for backup fire suppression only. Three of the four wells are contaminated with low levels of TCE and PCE; however, the contamination is thought to be unrelated to Hayden Island Cleaners. Because of the site's proximity to the Columbia River, surface water was another potential pathway of concern. But the contamination does not appear to have reached either the river or the deeper aquifer.

NARR Comments: (12/5/2001 DGA/SRS) DEQ retained Jacobs Engineering to conduct an expanded Preliminary Assessment (XPA) at the site in August 1997. As part of the XPA, three monitoring wells were installed, and soil and groundwater samples collected. PCE was detected in soil samples (up to 267 ug/kg) and groundwater samples (up to 1,230 ug/L) from all three wells. The XPA report was completed in June 1998. DEQ retained Ecology & Environment (E&E) to follow up with a focused Site Investigation in August 1998. Additional groundwater monitoring wells were installed at the site and on adjacent properties. In addition, a pumping test was conducted at the secondary municipal wells (backup fire suppression wells) to determine if there was any connection between the shallow and deep aquifers. No connection was established. The Site Investigation report was completed in March 1999. In May

HAYDEN ISLAND CLEANERS (Continued) **S104329423**

1999, DEQ injected Hydrogen Releasing Compound (HRC) into the shallow groundwater to accelerate the natural biodegradation of the PCE. Monitoring over the next couple of years showed that the HRC was successful in stimulating degradation of the PCE. DEQ formally notified the site owners and operators in December 2001 that no further cleanup of the site was necessary.

NARR Comments: Stormwater quality data collected twice since June 2002 indicate that the facility meets DEQ's stormwater benchmark values, although concentrations of copper and zinc in site stormwater exceeded the National Recommended Water Quality Criteria's respective Freshwater Critical Maximum Concentrations, DEQ's respective Freshwater Acute Toxicity Criteria, and DEQ's Level II Ecological Risk Assessment Screening Benchmark Values for freshwater aquatic life. Between 1990 and 2001, DEQ received nine Pollution Complaints and six Spill Reports associated with potential hazardous substance releases at the Diversified Marine facility, or petroleum sheens present on the river directly adjacent to the facility. Five of the Pollution Complaints and one of the Spill Reports involved fugitive dust emissions associated with sandblasting operations at the site. There is concern

DIVERSIFIED MARINE, INC. (Continued) **S108659504**

that sandblasting of boat hulls at the site could have released paint chips and toxic metals at concentrations that could represent a threat to the river s aquatic life, or otherwise accumulated in the river s sediments. Two other Spill Reports and another Pollution Complaint involved petroleum sheens of unknown origin on North Portland Harbor adjacent to the site. One additional 1998 Spill Report and simultaneous Pollution Complaint were associated with a petroleum release at the site that drained across N Marine Drive onto state highway property located 200 yards from the site. Diversified Marine s record of Pollution Complaints and Spill Reports suggests that on-site activities could have contaminated site soils and nearby Columbia River sediments with any of a variety of boat building, maintenance, and repair related contaminants, including toxic metals and paint chips containing toxic metals such as copper oxide, organotins, lead, cadmium, chromium, mercury, and zinc; petroleum constituents such as BTEX (benzene, toluene, ethylbenzene, toluene) and polynuclear aromatic hydrocarbons (PAHs); and other potential organic contaminants such as, phthalates, pentachlorophenol, chlorinated solvents, and possibly polychlorinated biphenyls (PCBs). (1/13/10 CWH/CU) The march 2009 Preliminary Assessment produced by Ecology and Environment for EPA Region 10 noted that, based on comparison to immediate upstream sediments, that the sediment sample (CR05SD) collected just downstream/adjacent to DMI <quot>indicates that DMI is contributing to copper, lead, and zinc contamination in the river.<quot> DEQ feels it is important to note that with the exception of copper, none of the detected metals, while elevated locally, exceed DEQ freshwater sediment SLVs. It is also important to note that the CR05SD sample was collected at a location that was not near where DMI stormwater runoff or working areas might be expected to be impacted.Similarly, PAH sediment data for CR05SD shows locally elevated concentrations of PAHs, but none above DEQ SLVs. PCBs were non-detect for CR05SD, but detection limits (41-45 ppb) were above DEQ SLVs. To summarize - the CR05SD sediment sample collected on behalf of EPA in October 2008 does indicate releases are likely to have occurred from the DMI site, but there were no samples collected in locations that would be suspected as release points.

Decode for NarcdID: General Site Description
NARR Comments: The subject site is an approximate 0.8 acre parcel in North Portland, on the south shore of North Portland Harbor, about 500 feet west of the Interstate Highway 5 (I-5) bridge over North Portland Harbor. Work is performed within an onshore building, on vessels moored at the site, and in a 200-ton floating dry dock at the site. North Marine Drive and North Pier 99 Street are located along the site s southern boundary. A paved parking lot for the Multnomah County Fairgrounds and Exposition Center lies directly across North Marine Drive, 100 to 300 feet south and southwest of the site. Hayden Island is across North Portland Harbor, about 1,000 feet north of the site.

NARR Comments: Diversified Marine s record of Pollution Complaints and Spill Reports suggests that on-site activities could have contaminated site soils and nearby Columbia River sediments with any of a variety of boat building, maintenance, repair, or refueling related contaminants, including toxic metals and paint chips containing toxic metals such as copper oxide, organotins, lead, cadmium, chromium, mercury, and zinc; petroleum constituents such as BTEX (benzene, toluene, ethylbenzene, toluene) and polynuclear aromatic hydrocarbons (PAHs); and other potential organic contaminants such as, phthalates, pentachlorophenol, chlorinated solvents, and possibly polychlorinated biphenyls (PCBs).

NARR Comments: Although DEQ has records of known and suspected hazardous substance releases at the site, there is no indication that environmental sampling has ever been conducted at the site. Because of an abundance of nearby receptors (nearby wetlands, community drinking water wells, Critical Habitat for Threatened and Endangered fish), a high priority has been assigned to conducting an expanded Preliminary Assessment of the site.

NARR Comments: Street address has also been listed as 1801 - 1809 N Pier 99 Street, in tax records. The site is bounded on the north by North Portland Harbor (also called Oregon Slough; a channel of the Columbia River located south of Hayden Island), and on the east by the Former Schooner Creek Boat Works site (ECSI #3526). Hayden Island lies about 1,000 feet north of the site. The Interstate Highway 5 bridge over North Portland Harbor is located about 500 feet east of the site.

Decode for NarcdID: Manner of Release
NARR Comments: Fugitive dust emissions associated with sandblasting of boat hulls at the site could have released paint chips and toxic metals at concentrations that could represent a threat to the river s aquatic life, or otherwise accumulated in the river s sediments. Petroleum sheens of unknown origin have been reported on North Portland Harbor adjacent to the site. A historic petroleum release at the site was also reported to have drained across N Marine Drive onto state highway property located 200 yards from the site. Since Diversified Marine site activities include machine shop activities, bilge removal, and boat and equipment refueling activities, it may not be unreasonable to suspect that some of the petroleum contamination observed in the river channel could have originated from on-site activities. Such releases could represent a threat to the river s aquatic life, or otherwise have accumulated in river sediments.

NARR Comments: A Federal Screening of the site was completed on July 3, 2003. The Strategy Recommendation for that screening recommended that a high priority be assigned to conducting an Expanded Preliminary Assessment (XPA) of the site. There was insufficient information at that time to propose that the site be recommended for addition the DEQ's confirmed Release List (CRL) or Inventory of sites requiring further investigation or cleanup.

NARR Comments: There is concern that site activities may have contributed contaminants to on-site soils and shallow groundwater, as well as in Columbia River surface water and sediments. Soil contaminants could represent a health threat for on-site workers or utility trench workers. North Portland Harbor (the Columbia River; Oregon Slough) forms the site's northern boundary; the entire site lies within the river's 100-year flood zone. The Columbia River is migratory and rearing habitat for eleven varieties of Threatened or Endangered salmonids. The Columbia Slough lies about 1 mile south of the site. The area between North Portland Harbor on the north, I-5 on the east, Columbia Slough on the south, and a Burlington Northern Santa Fe Railroad right-of-way on the west comprises Peninsula Drainage District No. 1. Most of the drainage district is publicly owned wetlands. Wetlands areas directly south of the site attract populations of sensitive wildlife species to the area. Metro has designated much of Peninsula Drainage District No. 1 as important wetlands or wildlife Habitats of Concern, or regionally significant riparian corridors. Migratory waterfowl and songbirds have been observed within the drainage district, as well as a variety of other sensitive and Threatened and Endangered wildlife species. Sensitive and Threatened plant species may also be present within the wetlands. Site contaminants could represent a threat to sensitive plant and wildlife species within the wetlands. The nearest residence is located on a tax lot at the site's eastern boundary. Other residences are located across I-5, about 0.3 mile east-southeast of the site, and across North Portland Harbor, about 0.4 mile northeast and 0.5 mile north-northwest of the site. Oregon Water Resources Department (OWRD) has records for three community or group-domestic wells, one Public Water Supply well, and five domestic wells within 1.25 mile of the site. The nearest is a 261 foot well installed at Kernan Village

DIVERSIFIED MARINE, INC. (Continued) **S108659504**

in 1958 to supply drinking water for a store, service station, apartment building, and trailer park. The well is believed to be located about 600- to 900 feet south-southwest of the site. Kernan Village no longer exists; its well may now be located either within the current I-5 / North Marine Drive cloverleaf interchange, or within the county fairgrounds paved parking area. It seems unlikely that the well is still being used or even still exists, although OWRD has no record to indicate that the well was formally decommissioned. The City of Portland has supplemental Municipal Supply Wells along the Columbia River south shore, 6- to 11 miles east of the site, as well as four supplemental supply wells on Hayden Island. Two of the Hayden Island wells lie about 1,200 feet north of the site, directly across North Portland Harbor. These wells lie across North Portland Harbor, a 1,000 foot wide, 20- to 30 foot deep branch of the Columbia River, and may be about 225- to 250 feet deep. Several nearby public facilities draw substantial numbers of people to the area. The Multnomah County Fairgrounds and Exposition Center lie southwest of the site, directly across North Marine Drive. East Delta (municipal) Park lies about 0.25 mile south-southeast of the site, across I-5. The Portland International Raceway lies about 0.5 mile south-southwest of the site. Heron Lakes (public) Golf Club lies about 0.25 mile southwest of the site. Jantzen Beach Supercenter shopping center lies directly across North Portland Harbor from the site.

Decode for NarcdID: Remedial Action
NARR Comments: (10/19/04 AC/ER&CU) Site status on hold. Responsible party (RP) unwilling to join the Voluntary Cleanup Program or perform an Expanded Preliminary Assessment (XPA). Principle concern is that potential site contaminants in sediments could pose a threat to Columbia River ecological receptors. Insufficient evidence to require sediment sampling in the Columbia River. Project on hold pending available orphan funds or willing responsible party. [3/20/15 SA/SAM] An Abbriviated Preliminary Assessment was finalized by EPA through its contractor E&E on May 14, 2009. EPA also performed a SI in 2009 at a neighboring property(ECSI#3526 1610 N Pier 99) downstream samples indicates releases are likely to have occurred from the DMI site, but there were no samples collected in locations that would be suspected as release points for this facility. No Further Remedial Action Planned under Federal program was designated in 2010. A Site Investigation is recommended under state supervision.

NARR Comments: Also known as Portmarco, Inc., and Whitecap Cove, Inc. (both active entities, same president, same secretary, same business address, same mailing address) (different registered agent for Whitecap Cove). The company has conducted tug boat and barge building, repair, sandblasting, painting, machine shop, bilge removal, and boat and equipment refueling activities at the site since at least 1990 - possibly as early as 1986. Between 1990 and 2001, DEQ received five Pollution Complaints and one Spill Report about the facility's sandblasting and painting operations, and releases of paint chips to the river. Additional complaints have been received for petroleum flowing southward, off-site from the site, and for petroleum sheens on the river from unknown sources near the facility.
