Portland, Oregon

CERTIFICATION

The technical material and data contained in this document were prepared under the supervision and direction of the undersigned. We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the *all appropriate inquiries* in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

Parametrix was retained by Oregon Department of Transportation (ODOT) to perform a Phase I Environmental Site Assessment (ESA) on the property located at 1940 N. Victory Blvd. in Portland, Oregon. The Phase I ESA focused on partial areas of the property that may be acquired as part of the Interstate Bridge Replacement (IBR) Program. The subject property consists of the parcel known as IBR-1N1E04-00400. Based on the findings of this investigation, Parametrix reached the following conclusions:

1. The subject property includes one Multnomah County tax lot: 1N1E04-00400. The 360-acre property currently includes a vehicle racetrack, parking lots, an office/race announcer building, viewing stands, portions of Heron Lakes Golf Club golf course, and remnants of a former network of sloughs, wetlands, and Force Lake. No buildings are located within the partial areas of the property that may be acquired as part of the IBR Program.
2. Based on the historical review, the subject property was undeveloped land and farm properties until 1948, when a few dozen remaining buildings are visible two months after the Vanport Flood that destroyed the city of Vanport. Between 1948 and 1960, the remaining Vanport buildings were removed, and the subject and area properties returned to undeveloped and farm use. By 1970, the subject property was being used for auto racing, and the property was operated as East Delta Park by the City of Portland, including a golf course. The only visible improvements to the subject property are structures (such as a building and grandstands) and hardscaping associated with the raceway. The subject property remained in similar use for the next 50 years, as the adjacent area to the north was developed for industrial and commercial uses. No recognized environmental conditions (RECs) were identified on the subject property, including the partial areas of the properties that may be acquired as part of the IBR Program, during the historical aerial review.
3. Based on the age of the buildings and structures, there is potential for lead-based paint or asbestos-containing materials to have been used in construction of the buildings. However, none of the buildings are located within the partial areas of the properties that may be acquired as part of the IBR Program.

[redacted]

5. A review of regulatory information indicated that several nearby sites were identified in the regulatory record databases. However, based on regulatory status and/or distance from the subject property, none of the sites identified appear to present a REC to the subject property.

[redacted]

interview and the lack of a full on-site reconnaissance represent data gaps in accordance with ASTM Standard E1527-21. However, the information obtained for the Phase I ESA, including regulatory database and historical documentation, was deemed sufficient to draw conclusions of potential environmental concerns associated with the partial areas of the properties that may be acquired as part of the IBR Program.

Based upon the conclusions of this investigation of the subject property, Parametrix offers the following recommendation.

1. No further assessment of environmental conditions on the subject property, including the partial areas of the properties that may be acquired as part of the IBR Program, is recommended.

1. INTRODUCTION

Parametrix was retained by Oregon Department of Transportation (ODOT) to perform a Phase I Environmental Site Assessment (ESA) on the property located at 1940 N. Victory Blvd. in Portland, Oregon. The large (360-acre) property is located generally to the west of N. Expo Road, south of Force Lake and Vanport Wetlands, north of the Columbia Slough, and east of Heron Lakes Golf Club parking lot in Multnomah County (Figure 1). The Phase I ESA focused on partial areas of the property that may be acquired as part of the Interstate Bridge Replacement (IBR) Program. The subject property consists of the parcel known as IBR 1N1E04-00400. The property identifier, tax lot ID, and street address for the parcel is listed below, and the configuration of the property is shown in Figure 2.

- R314518 1N1E04-00400 1940 N. Victory Blvd.

It is our understanding that ODOT is interested in acquiring a portion of the parcel making up the subject property. The proposed acquisition areas are shown on Figure 2. The Phase I ESA focused primarily on the partial areas of the property that may be acquired as part of the IBR Program and assessed the potential for recognized environmental conditions on the acquisition areas from the larger property and adjacent or nearby properties.

This Phase I ESA includes a review of available documentation pertaining to the subject property, a site reconnaissance, and a review of pertinent public agency documents. The ESA consists of two distinct tasks: (1) a review of documents and of oral information, and (2) a site examination. Conclusions and recommendations within this report are based solely on observed evidence and data collected during the performance of this assessment.

1.1 Significant Assumptions

This assessment was conducted in accordance with generally accepted industry practices and procedures within the scope of work authorized at the time and place of this study. Parametrix observations are limited to those areas it had access to on the subject property.

Phase I ESA methodology included viewing accessible areas of the subject property from the public right-of-way, as full access to the property was not available. An interview was not able to be conducted with a property representative to identify any potential environmental conditions during the Phase I ESA process. Except as stated, no other exceptions to the guidelines presented in ASTM E1527-21 were made during completion of this Phase I ESA.

1.2 Purpose

The Phase I ESA was conducted in general accordance with ASTM Standard E1527-21, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, which defines the generally accepted industry practices and procedures currently applicable at the time and place of this study (ASTM 2021). The Phase I ESA is intended to permit the user to satisfy the

requirements to qualify for the bona fide prospective purchaser limitation under the Comprehensive Environmental Response, Compensation, and Liability Act and, as such, constitutes "all appropriate inquiries in the previous ownership and uses of the property consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601 (35)(B).

The purpose of this Phase I ESA is to identify recognized environmental conditions (RECs) on or near the subject property. The term recognized environmental conditions is defined in ASTM Standard E1527-21 as:

> "…(1) the presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* due to a *release* to the *environment*; (2) the likely presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* due to a *release* or likely *release* to the *environment*; or (3) the presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* under conditions that pose a *material threat* of a future *release* to the *environment*."

In accordance with ASTM Standard E1527-21, some RECs may be further defined as historical recognized environmental conditions (HRECs) or controlled recognized environmental conditions (CRECs).

An HREC is defined as:

> "…*a past release of any hazardous substances* or *petroleum* products that has occurred in connection with the *property* and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the *property* to any required controls."

A CREC is defined as:

> "…a *recognized environmental condition* resulting from a past *release of hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority, with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls."

This Phase I ESA endeavors to identify all RECs, HRECs, and/or CRECs at the subject property.

1.3 Limitations

The findings, conclusions, and recommendations presented in this report are based on site conditions and the best available information known or made available by regulators, other consultants, or other sources at the time of the investigation. Parametrix conducted a diligent search and investigation in compliance with prevailing standards of the profession; however, certain adverse conditions may exist at the site not detected at the time of the investigation.

The services provided under this contract, as described in this report, include professional opinions and judgments based on data collected. These services have been provided according to generally accepted engineering practices. The opinions and conclusions contained in this report are typically based on information obtained from the following:

- Observations and measurements made by Parametrix field staff.
- Contacts and discussions with regulatory agencies and others.
- Review of available hazardous substance or solid waste lists.
- Opinions and judgments of Parametrix based on the information available.

In the professional judgment of Parametrix, the services performed pursuant to the scope of services are an adequate basis to collect data for a preliminary evaluation of the site and upon which to draw the conclusions stated in this report.

2. SUBJECT PROPERTY DESCRIPTION

2.1 Location

The subject property is one property tax lot, generally to the west of N. Expo Road, south and east of a part of a golf course (Heron Lakes Golf Club) and Vanport Wetlands, and north of the Columbia Slough waterway in Portland, Oregon (Figure 1). The Phase I ESA focused on partial areas of the property that may be acquired as part of the Interstate Bridge Replacement (IBR) Program. The subject property is located in Multnomah County, Oregon, and consists of one property included in the IBR Program, as detailed in the table below. The site location is shown on Figure 1, the Site Vicinity Map. The boundary of the subject property and the area of proposed partial acquisition is shown on Figure 2.

2.2 Site and Vicinity Characteristics

Characteristics of the subject property, including the partial areas of the property that may be acquired as part of the IBR Program, are summarized in Table 1.

Table 1. Subject Property Characteristics

IBR ID	Tax Lot ID	Address	Owner	Total Area (acres)	Potential Acquisition Area (square feet)	Current Use (determined through visual observations)
1N1E04-00400	1N1E04-00400	1940 N. Victory Blvd.	City of Portland	359.94	5,556	Golf course, vehicle racetrack, and natural areas

The subject property is bounded to the north by the Vanport Wetland and Heron Lakes Golf Club golf course, to the east by N. Expo Road, to the south by the Columbia Slough waterway, and to the west by Heron Lakes Golf Club golf course (see Figure 2).

2.3 Physical Setting

The subject property is located in the Portland Basin, which marks the northern terminus of the Willamette Lowland in Oregon . The northern portion of the basin is known for its low topographic relief, with the subject property at an elevation of approximately 20 feet above mean sea level. The Portland Basin is bound by the Cascade Range to the east and the Coast Range to the west.

Geologic processes in the Portland Basin consist of volcanism, sedimentation, and cataclysmic flood deposits in both fluvial and marine depositional environments. The subject property lies on what is

mapped as coarse-grained Missoula flood deposits, cobbly, sandy gravel deposited by the Missoula floods (Wells et al. 2020). Surface soils consist of clay and sand.

The topography in the vicinity of the subject property is a consistent slope, rising with distance from the Columbia River. The anticipated groundwater gradient is to the north toward the Columbia River. Information reviewed as part of this Phase I ESA suggests that depth to groundwater was documented at 18 feet below ground surface. The subject property includes several surface water features, including sloughs and ponds.

2.4 Current Use of the Property

The subject property is predominantly used as a vehicle racetrack and associated structures and hardscapes (e.g., parking lots). Much of the northern portion of the subject property is part of a golf course complex (Heron Lakes). There are small, isolated waterbodies on the subject property, such as Mud Slough. The proposed acquisition area includes two relatively small undeveloped areas along N. Expo Road (see Figure 2).

2.5 Descriptions of Improvements on the Subject Property

The subject property includes an approximately 1.9-mile racetrack, a 1,231-square-foot office and announcer building, hardscaped vehicle staging and parking areas, and spectator viewing stands. Power, water, and sewer are supplied by local utilities and municipalities. A portion of the Heron Lakes golf course occupies approximately a third of the subject property, primarily in the northern portion.

No buildings or other significant structures are located on the partial areas of the properties that may be acquired as part of the IBR Program.

2.6 Environmental Liens

An environmental lien is defined by ASTM as a charge, security, or encumbrance upon title to a property to secure the payment of a cost, damage, obligation, or duty arising out of response actions, cleanup, or other remediation of hazardous substances or petroleum products. No evidence of environmental liens against the subject property was identified during the course of this Phase I ESA.

3. RECORDS REVIEW

The purpose of the records review task was to gather environmental data on the subject property prior to the site examination. The information review consisted of two subtasks: a review of various lists and files published by federal and State of Oregon agencies; and a compilation of historical uses of the site and site vicinity, to determine if past operations pose an environmental risk to the subject property. Information for agency file review is based, in part, on a report provided by Environmental Data Resources (EDR). The EDR report is included in Appendix A.

The EDR report is a summary of state and federal database searches for sites of possible environmental concern. The information review enabled Parametrix personnel to characterize the types of activities performed at the site, identify data gaps prior to the site examination, and facilitate recognition of discrepancies between reported and observed data. Data gaps identified during the document review were addressed by interviewing knowledgeable personnel, observations during the site examination, or by additional detailed investigation.

It should be noted that this information is reported as Parametrix received it from EDR, which in turn reports information as it is provided in various government databases. It is not possible for either Parametrix or EDR to verify the accuracy or completeness of information contained in these databases. However, the use of and reliance on this information is a generally accepted practice in the conduct of environmental due diligence. The following sections present information from the document review.

3.1 Standard Environmental Record Sources

The following section summarizes information collected from records maintained by the U.S. Environmental Protection Agency (EPA) and the Oregon Department of Environmental Quality (DEQ). The information includes details on sites identified in regulatory databases within recommended ASTM search distances. A complete listing of the databases reviewed is included in the EDR Radius Map™ Report (Appendix A).

3.1.1 Review of Oregon Department of Environmental Quality Databases

The following sections summarize the most relevant information obtained from the EDR Radius Map™ Report regarding sites identified within the ASTM E1527-21 search radii from the following databases (EDR 2023a). Additional information regarding these sites was reviewed on the DEQ Environmental Cleanup Site Information Database website (DEQ n.d.a) and the DEQ Leaking Underground Storage Tank Cleanup Site Database (DEQ n.d.b) to supplement data gaps in the EDR report. A complete listing of the databases reviewed is included in the EDR report. Relevant database listings from DEQ include:

- DEQ Underground Storage Tank (UST) List

- DEQ Leaking Underground Storage Tank (LUST) List
- DEQ Environmental Cleanup Site Information (ECSI) List
- Spill Database (SPILLS)
- Solid Waste Facilities/Landfills (SWF/LF) List
- DEQ Confirmed Release List (CRL)
- DEQ Brownfields List
- DEQ Engineering or Institutional Controls
- Spill Data List

3.1.1.1 DEQ Underground Storage Tank List

The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data was obtained from the DEQ UST List.

Information contained in the EDR report indicates that the subject property is not listed as a UST site. One UST site was identified within 0.25 miles of the subject property:

- The East Delta Park site (10910 N. Denver Ave.) is located across Interstate 5 (I-5), approximately 0.1 miles northeast of the east subject property (Note: The EDR mapping icon places the site within the subject property, which is a mapping error). According to DEQ records, two gasoline USTs and one diesel UST were removed. The site is not listed on the DEQ LUST database.

Unless otherwise noted, the presence of USTs near the site does not, in itself, constitute a REC. UST sites that have had known releases are discussed in Section 3.1.1.2 below.

3.1.1.2 DEQ Leaking Underground Storage Tank List

The LUST Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data was obtained from the DEQ LUST Database List.

Information contained in the EDR report indicates that the subject property is not listed as a LUST site. Four LUST sites were identified in the EDR report within 0.5 miles from the subject property:

- N & S Oil LLC/Delta Park Chevron (9950 N. Whitaker Road) is located approximately 0.3 miles southeast of the subject property. According to DEQ records, petroleum releases were reported in 1993 and 1994, impacting soil and groundwater. Following remediation, DEQ issued the site a no further action (NFA) determination on November 15, 2007. Based on regulatory status and distance, this site does not appear to be a REC to the subject property.
- The Heating Oil Tank site (10850 N. Denver Ave.) is located approximately 0.3 miles east of the subject property. According to DEQ records, a petroleum release to soil was reported in 2001.

Subsequently, a Generic Remedy cleanup was performed. DEQ issued a closure letter on August 16, 2001. Based on regulatory status and distance, this site does not appear to be a REC to the subject property.

- The Star-Oilco site (12301 N. Force Ave.) is located approximately 0.3 miles north of the subject property at the intersection of N. Force Ave. and Marine Drive (Note: The EDR mapping icon places the site within the subject property, which appears to be a mapping error). According to DEQ records, LUST releases were reported to DEQ in 1990 and 1997, impacting groundwater and soil. On April 13, 1998, DEQ issued an NFA letter for the 1997 LUST release. No groundwater was encountered in the remedial excavations.

  On July 17, 1992, the DEQ Northwest Region issued an interoffice memorandum to the DEQ site file stating that the 1990 release was not from a UST; therefore, the LUST report was being closed administratively and the site had been added to the ECSI database (Note: the site is DEQ ECSI Site ID 1091 and is not listed in the EDR as an ECSI site). According to the ECSI database, the site is a low priority site that remains open with DEQ due to petroleum, polychlorinated biphenyl (PCB), ethylbenzene, toluene, total xylene, and other contamination of groundwater and the potential impact to surface water, presumably the Columbia River approximately 250 feet north of the site. Based on groundwater gradient and distance, this site does not appear to be a REC to the subject property.
- The GI Joe's site (1140 NW Hayden Meadows Drive) is located approximately 0.4 miles southeast of the subject property. According to DEQ records, a petroleum release to groundwater was reported in 2011. Following a remedial investigation, DEQ issued an NFA letter on February 17, 2012. Based on regulatory status and distance, this site does not appear to be a REC to the subject property.

Based on DEQ information indicating site closure activities have been completed or other information, such as distance, none of the identified sites discussed above appear to represent a REC to the subject property, including the partial areas of the properties that may be acquired as part of the IBR Program.

3.1.1.3 DEQ Environmental Cleanup Site Information List

The ECSI List identifies and tracks known or potentially contaminated sites within Oregon and is the state's equivalent to Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS). The CRL is a subset of the ECSI List and includes sites that have known releases of hazardous substances. The Voluntary Cleanup Program (VCP) database is a list of sites that have been entered into the DEQ voluntary cleanup program and are undergoing cleanup.

Information contained in the EDR report indicates that the subject property is not identified on the ECSI, CRL or VCP databases.

Multiple ECSI and CRL sites were identified within 1 mile of the subject property. One ESCI site (not identified on the EDR report) is located within 0.5 miles of the subject property:

- The Star-Oilco site (12301 N. Force Ave.) is located approximately 0.3 miles north of the subject property at the intersection of N. Force Ave. and Marine Drive. This is an open ESCI site; see Section 3.1.1.2 above for details. Based on groundwater gradient and distance, this site does not appear to be a REC to the subject property, including the partial areas of the property that may be acquired as part of the IBR Program.

The remaining EDR-listed ECSI, CRL, and VCP sites are located at sufficient distances and/or cleanup activities have been completed so that they do not appear to represent RECs to the subject property, including the partial areas of the property that may be acquired as part of the IBR Program.

3.1.1.4 DEQ Brownfields List

The Brownfields database lists sites of real property where expansion or redevelopment is complicated by actual or perceived environmental contamination. No DEQ Brownfields sites were identified within 1 mile of the subject property.

3.1.1.5 Solid Waste Facilities/Landfills

The Solid Waste Facilities/Landfills (SWF/LF) records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data were obtained from DEQ's Solid Waste Facilities List.

The subject property is not listed as a SWF/LF site. No SWF/LF sites were identified within 0.5 miles of the subject property.

3.1.1.6 SPILLS Database

The database provides a comprehensive list of reported spills. The subject property is not listed as a SPILLS site.

3.1.1.7 DEQ Engineering/Institutional Controls

DEQ maintains two databases for sites with implemented engineering controls and/or institutional controls. No sites with engineering or institutional controls were identified within 1 mile of the subject property.

3.1.2 Environmental Protection Agency Database Review

The EPA administers several programs designed to protect the environment and monitor the generation, storage, treatment, and disposal of hazardous substances. The following sections summarize the most relevant information obtained from the EDR report regarding sites identified within ASTM E1527-21 search radii from the following databases. A complete listing of the databases reviewed is included in the EDR report.

- National Priorities List (NPL)

- Superfund Enterprise Management System (SEMS) List
- Resource Conservation and Recovery Act (RCRA) Corrective Action Report (CORRACTS) List
- Resource Conservation and Recovery Information System (RCRIS) List
- Emergency Response Notification System (ERNS) List
- U.S. Brownfields List

3.1.2.1 National Priorities List

The NPL identifies priority hazardous waste sites for remedial actions under the EPA Superfund program. The EDR report indicates that the subject property is not listed as an NPL site. No NPL sites were identified within 1 mile of the subject property, and no de-listed NPL sites were identified within 0.5 miles of the subject property.

3.1.2.2 Superfund Enterprise Management System List

The EPA publishes a list of sites that may potentially pose a threat to the environment or the health of the general public. This list is known as the SEMS list (formerly the CERCLIS list). Information contained in the EDR report indicates the subject property is not listed as a SEMS site.

One SEMS site was identified approximately 0.7 miles northwest and down-gradient of the subject property. This site, American Recyclers, LLC (11535 N. Force Ave.), is also listed in the Delisted NPL, US Engineered Controls, ECSI, SWF/LF, AST, VCP, Spills, OR HazMat, RCRA NONGEN/NLR, TRIS, ROD, PRP, PADS, FTTS, HIST FITTS, ECHO, AIRS, HSIS, Manifest, and NPDES databases. Based on regulatory status, distance and gradient from the subject property, this site is not considered a REC to the subject property.

The EPA also publishes the SEMS-NFRAP list, which are SEMS sites that have been designated “no further remedial action planned” (NFRAP) and have been removed from the SEMS list. Information contained in the EDR report indicated that no SEMS-NFRAP sites are located within 1 mile of the subject property.

One site, the Columbia Slough (bounding the subject property to the south) is listed in the SEMS-ARCHIVE AOCONCERN database.

- The Columbia Slough is an ongoing, long-term hazardous waste remediation site. Decades of direct discharges and upland pollutant runoff have contaminated the Columbia Slough’s sediments. Source control is one of the primary remediation actions used to clean up the Columbia Slough. Due to interconnected hydrology, DEQ considers the entire network of waterways near the Columbia Slough as potential sources of pollution. According to DEQ, the waterbodies on the subject property, such as Mud Slough, have not been assessed for pollutants and, therefore, are not currently considered known sources of hazardous pollutants. The Columbia Slough is not a confirmed source of contamination to the subject property, and the Columbia Slough is greater than 0.25 miles down gradient from the

proposed areas of acquisition. The Columbia Slough issues do not appear to be a REC to the areas that may be acquired as part of the IBR Program.

3.1.2.3 Corrective Action Report Review

The CORRACTS report identifies hazardous waste handlers with corrective action activity. Information contained in the EDR report indicates the subject property is not listed as a CORRACTS site. No CORRACTS sites are listed within 1 mile of the subject property.

3.1.2.4 Resource Conservation and Recovery Information System List

The RCRIS list includes selective information on sites that generate, transport, store, treat, and/or dispose of hazardous waste as defined by the RCRA. Information contained in the EDR report indicates that the subject property and adjacent properties are not listed as RCRA generators.

The EPA also regulates the management of hazardous waste at transportation, storage, and disposal (TSD) facilities. Information contained in the EDR report indicates the subject property is not listed as a RCRIS-TSD site. No RCRIS-TSD sites were identified within 0.5 miles of the subject property.

3.1.2.5 Emergency Response Notification System List

The ERNS is a national database containing information from spill reports made to federal authorities. Information contained in the EDR report indicates the subject property is not listed as an ERNS site.

3.1.2.6 U.S. Brownfields List

The EPA's U.S. Brownfields list identifies Brownfields properties addressed by Cooperative Agreement Recipients and Brownfields properties addressed by Targeted Brownfields Assessments. The EDR report indicates the subject property is not listed as a U.S. Brownfields site. No U.S. Brownfield sites were identified within 0.5 miles of the subject property.

3.1.3 Other Databases

The following sections include other databases identified in the EDR report that may be relevant to assessing potential environmental liability or environmental issues at the subject property.

3.1.3.1 EDR Proprietary Databases

EDR has conducted research on the occurrence of historical business practices that may constitute a REC to properties. The database was developed from data found in historical city directories and contains information on over 100,000 former gas stations, manufactured gas plants, and dry cleaners. Due to the nature of these businesses, the sites have the potential for soil and groundwater contamination to have occurred.

EDR Historical Auto Stations

Historical auto stations are identified on a proprietary database maintained by EDR. Information contained in the EDR report indicates the subject property is not listed as a historical auto station and no historical auto stations are listed within 0.125 miles of the subject property.

EDR Manufactured Gas List

Former manufactured gas plant (coal gas) sites are identified on the Manufactured Gas database. Information contained in the EDR report indicates the subject property is not listed as a manufactured gas plant site and no manufactured gas plants are listed within 1 mile of the subject property.

EDR Historical Dry Cleaners

Historical cleaners are identified on a proprietary database maintained by EDR. Information contained in the EDR report indicates that there are no historical cleaner sites within 0.125 miles of the subject property.

3.1.4 Orphan Site List

Orphan sites are sites for which mapping information is not detailed adequately to plot the location of the site, or for which there is no known responsible party or the responsible party is unwilling or unable to pay for cleanup. The orphan site list and available mapping information were reviewed by Parametrix. The Columbia Slough is the only orphan site located near the subject property; see the Columbia Slough site narrative in Section 3.1.2.2 above.

3.1.5 Vapor Encroachment

ASTM Standard E1527-21 defines vapor migration as “the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface.” The recognition of vapor migration as a possible REC may require incorporation of new types of controls and restrictions to address this contamination pathway.

The subject property and adjacent sites were reviewed in an effort to determine if vapor migration has, or has the potential to have, occurred at the site and/or from adjacent properties.

No properties were identified in the near vicinity which have confirmed releases of volatile contaminants in soil or groundwater which have not been sufficiently addressed or would otherwise present a potential impact to the subject property.

3.2 Historical Use Information

The objective of the historical use information review is to develop a history of the previous uses of the subject property and surrounding area that helps to identify the likelihood of past uses having led to RECs in connection with the subject property. Parametrix researched the historical land use,

occupancy, and ownership of the subject property and adjacent properties to evaluate historical uses that are known to be associated with RECs. Historical records reviewed include Sanborn Fire Insurance Maps (EDR 2023b) and aerial photographs (EDR 2023c).

3.2.1 Sanborn Maps™ Fire Insurance Map Review

Parametrix requested Sanborn Fire Insurance maps from EDR in an effort to help identify past land uses. However, according to EDR, the subject property and area are "unmapped property." A copy of the Certified Sanborn Map Report, which confirms the unmapped status, is included in Appendix B.

3.2.2 Historical Aerial Photograph Review

Historical aerial photographs of the subject property area were obtained from EDR in the EDR Aerial Photo Decade Package. Aerial photographs for the years 1935, 1948, 1951, 1955, 1960, 1970, 1975, 1981, 1990, 1994, 2000, 2006, 2011, 2014, 2017, and 2020 were examined. Copies of the aerial photographs are included in Appendix C. Observations are listed below.

1935	The majority of the subject property and surrounding properties appear to be undeveloped, agricultural land. Small, isolated waterways are visible. Highway 99 (currently I-5) is visible to the east. Stockyards are visible to the north. The Columbia Slough is visible to the south.
1948	In the aerial photograph, dated July 24, 1948, a few dozen buildings are visible, some appear to be off of their foundations. Most of the subject property and the area to the east are covered in water, as a result of the Vanport Flood of May 30, 1948, which displaced approximately 40,000 residents of what had been a quickly constructed city that housed wartime shipbuilders. Highway 99 (currently I-5) is visible to the east. Two remnants of the wetlands system are visible. Stockyards are visible to the north. The Columbia Slough is visible to the south.
1951–1955	No buildings are visible on subject property. Streets, foundations, and driveways are visible on empty lots of the subject property. Farm fields are visible to the north. Highway 99 (currently I-5) is visible to the east. Commercial/industrial development is visible north of the subject property. Two small, isolated waterways and the south portion of Force Lake are visible on the subject property. Stockyards are visible to the north. The Columbia Slough is visible to the south.
1960	The subject property looks similar to the previous aerial photographs, including isolated waterways. The subject property and the areas to the west and east look similar to the previous aerial photograph. I-5 is visible to the east. Stockyards and some industrial buildings are visible to the north. The Columbia Slough is visible to the south.

1970–1975	The subject property is largely undeveloped, with the exception of Portland Raceway (currently Portland International Raceway) and a portion of Heron Lakes Golf Club golf course on the northwest portion of the subject property. A portion of what is now called Heron Lakes Golf Club golf course is on the west side of the subject property. Structures are visible in the raceway parking lot at the southeast corner of the subject property. Two small, isolated waterways are visible. Industrial development to the north has increased. I-5 is visible to the east. Stockyards are visible to the north. The Columbia Slough is visible to the south.
1981	The subject property appears similar to the previous aerial photographs. The stockyards in the previous aerial photographs have been replaced by commercial and industrial development.
1990–1994	The subject property is largely undeveloped, with the exception of Portland International Raceway and a portion of Lakes Golf Club golf course. Structures are visible in the raceway parking lot at the southeast corner of the subject property. Portland Expo Center is visible to the north on the former stockyard property. I-5 is visible to the east. Two small, isolated waterways are visible. A lot with large vehicles are visible across I-5, southeast of the subject property. The Columbia Slough is visible to the south.
2000	Structures are visible in the raceway parking lot at the southeast corner of the subject property. I-5 is visible to the east. Two small, isolated waterways are visible. The Columbia Slough is visible to the south.
2006	The subject and area properties appear similar to the previous photograph, with the exception of the Vanport Wetlands (constructed wetlands) adjacent to the north of the eastern side of the subject property.
2011–2020	The subject and area properties appear similar to the previous photograph.

Based on the historical review, the subject property was undeveloped land and farm properties until 1948, when a few dozen remaining buildings are visible two months after the Vanport Flood that destroyed the city of Vanport. Stockyards and Highway 99 are visible to the north and east, respectively, beginning in 1935. Between 1948 and 1960, the remaining Vanport buildings were removed, and the subject property and area properties returned to undeveloped and farm use. By 1970, the subject property is being used for auto racing, and the property is operated as East Delta Park by the City of Portland, including a golf course. The only visible improvements to the subject property are buildings, structures (such as grandstands) and hardscaping associated with the raceway. The subject property remains in similar use for the next 50 years, as the adjacent area to the north is developed for industrial and commercial uses. No RECs were identified on the subject property, including the partial areas of the properties that may be acquired as part of the IBR Program, during the historical aerial review.

3.2.3 Local Agency Records

Information from local agencies was reviewed for environmental significance as described in the following sections.

3.2.3.1 City of Portland

A review of permits for environmental significance (i.e., septic tank, stormwater, dry wells, and/or USTs or aboveground storage tanks [ASTs]) was completed. No issued permits of environmental significance were identified.

3.2.3.2 Multnomah County

Based on information from the Multnomah County Tax Assessor's Office, the subject property consists of tax lot 1N1E04-00400. The subject property is approximately 360 acres in size and is owned by the City of Portland.

3.3 Additional Environmental Information

The following sections provide a summary of additional environmental information obtained for the site.

3.3.1 Asbestos

The manufacture of most asbestos-containing materials (ACM) was banned by the EPA by 1979. Prior to this, asbestos was a common constituent of numerous building materials, including floor and ceiling tiles, caulking, pipe insulation, roofing materials, and exterior siding.

Based on the age of the buildings and structures (before 1979), there is potential for ACM to have been used in the construction of the buildings. However, none of the buildings and structures are located within the partial areas of the properties that may be acquired as part of the IBR Program.

3.3.2 Lead-Based Paint

Before 1977, paint commonly contained lead, which is considered to cause human health problems if ingested. Based on the age of the buildings and structures (before 1977), there is potential for lead-based paint (LBP) to have been used in the construction of the buildings. However, none of the buildings and structures are located within the partial areas of the properties that may be acquired as part of the IBR Program.

3.3.3 Polychlorinated Biphenyls

Transformers can potentially contain PCBs. Based on the age of the buildings (built before 1979), there is some potential for PCBs to have been used in the construction of the buildings (primarily used

in lighting and electrical equipment). However, none of the buildings are located within the partial areas of the properties that may be acquired as part of the IBR Program.

3.3.4 Radon

Radon is a naturally occurring radioactive gas formed by the decay of uranium in some rocks and soil. The adverse health effects associated with radon gas depends upon various factors, such as the concentration of the gas, and exposure duration. The potential concentration of radon gas within a building depends on subsurface soil conditions, the integrity of the building's foundation, the existence of a basement or crawl space (primary areas of concern), and the building's ventilation.

Multnomah County ZIP code 97217 is located in the Federal EPA Radon Zone 2. The Zone 2 indoor average radon level is greater than 2 pCi/L but less than 4 pCi/L. Based on this limited information, radon likely does not represent an environmental concern at the property.

4. FILE REVIEW

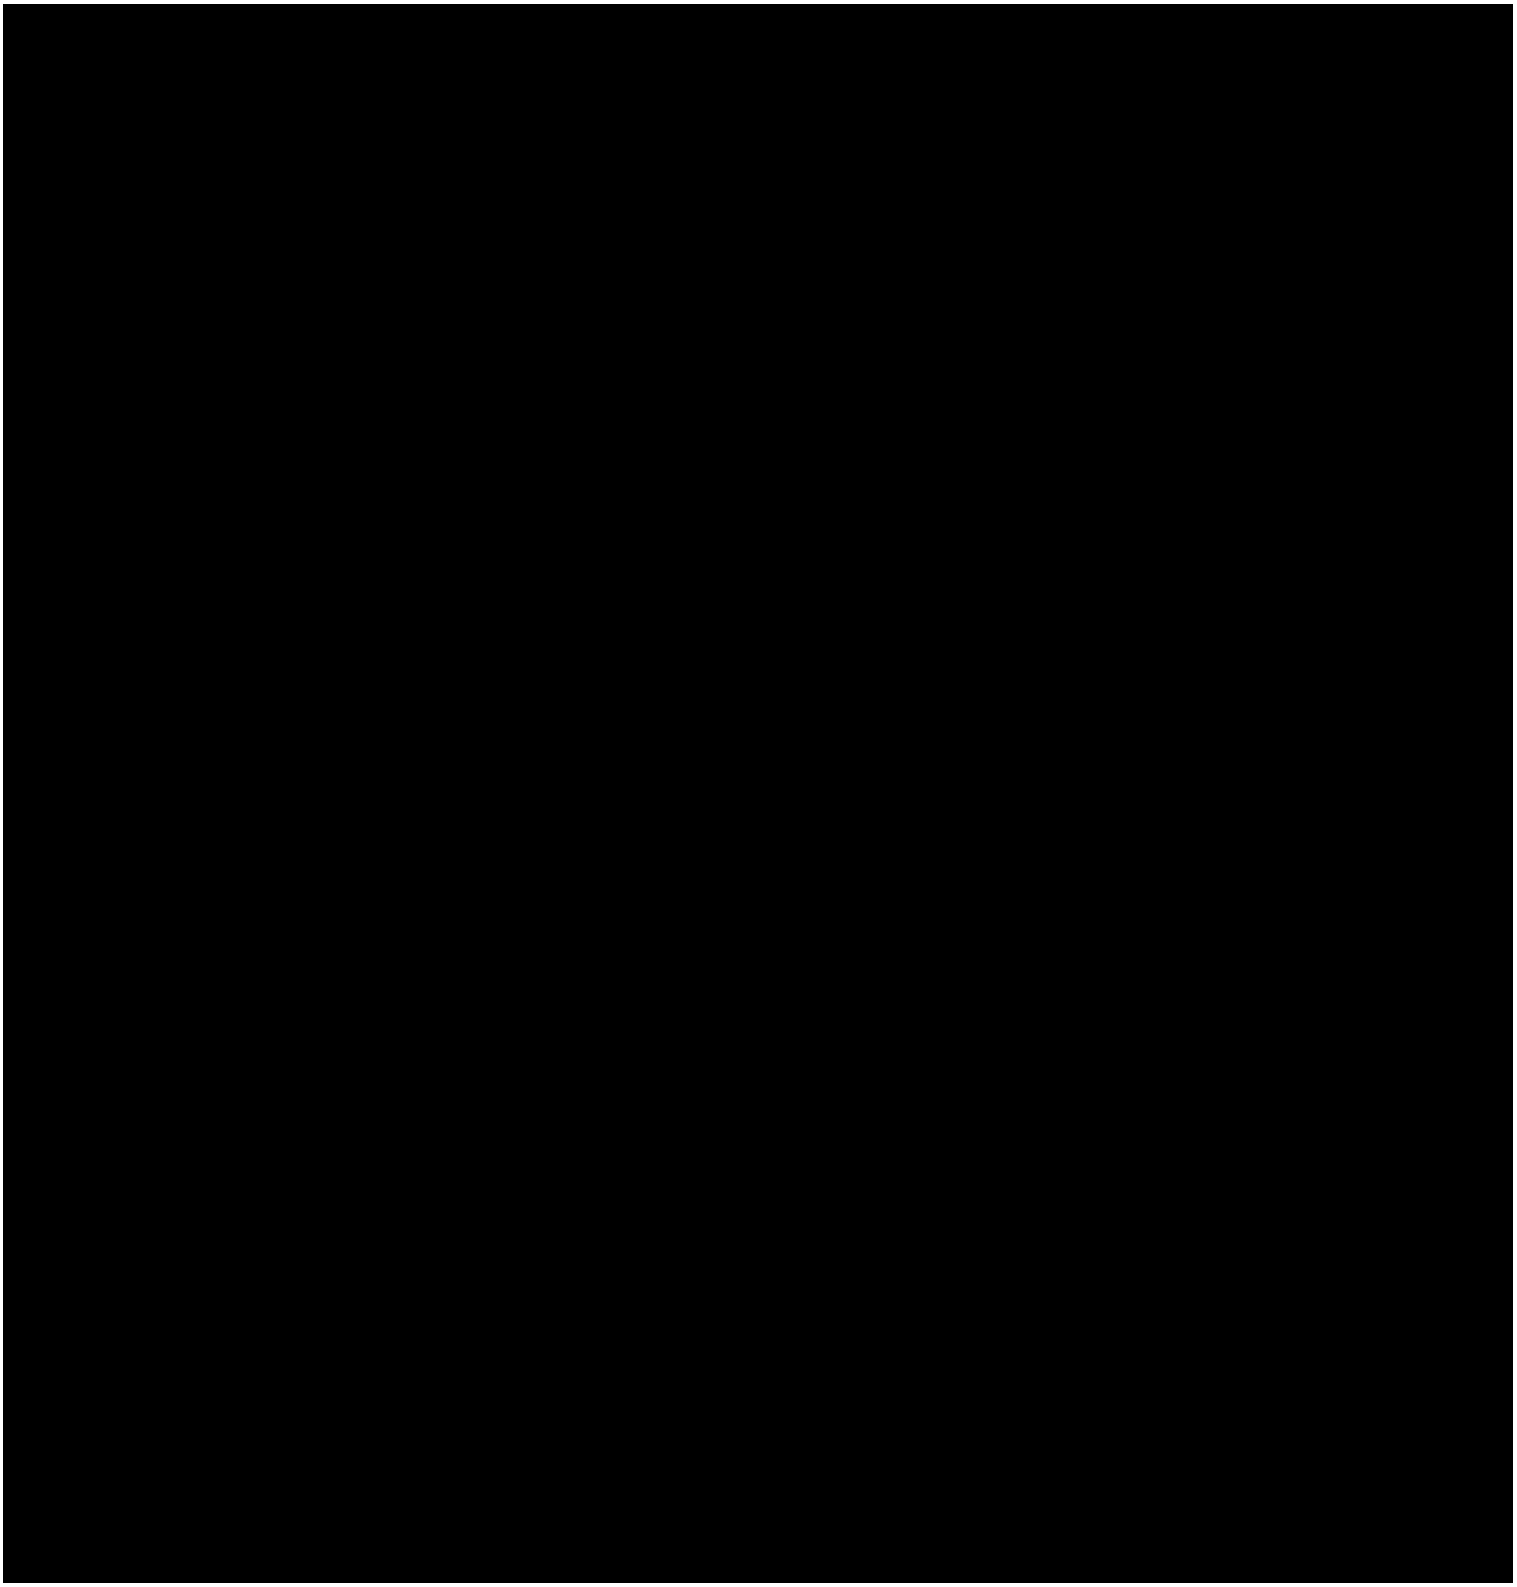
In accordance with ASTM Standard E1527-21, inquiries and review of previous investigations for the subject property and a review of regulatory files for the subject property or adjacent properties may be conducted to further evaluate environmental conditions on the property or adjacent properties and to fill in data gaps where applicable. Previous investigations and file reviews are summarized below.

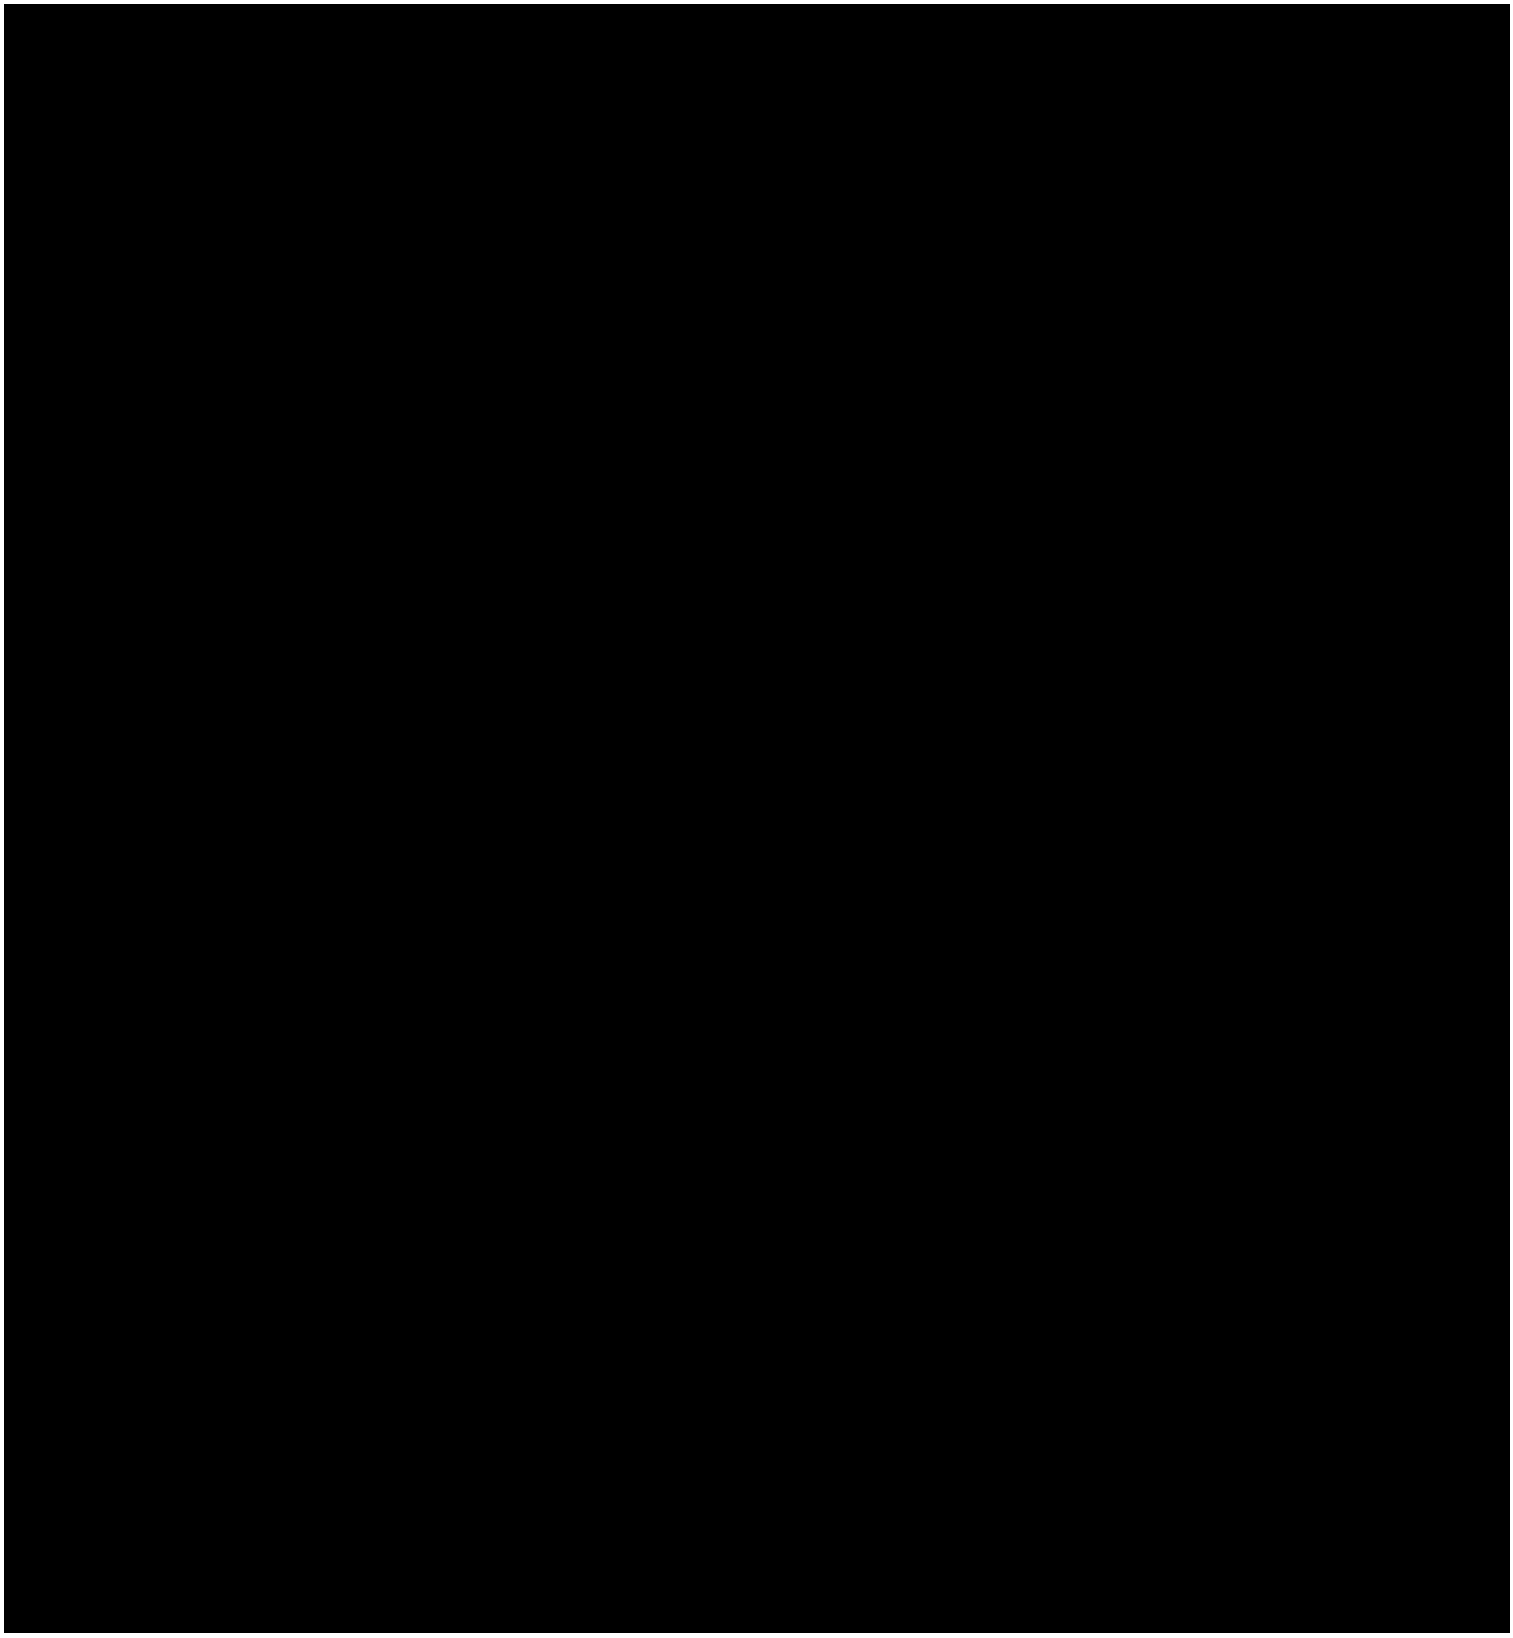
4.1 Previous Investigations

Based on regulatory information from DEQ, the subject property is not listed on any regulatory databases. No previous investigations of the subject property were identified during the course of this Phase I ESA.

4.2 Adjacent and Nearby Properties File Review

Adjacent and nearby properties were listed on environmental databases, as described in Section 3. Sufficient site-specific information was available through review of the EDR report, as well as online DEQ files, to develop an opinion on the potential for these properties to have affected the subject property. Therefore, a specific file review (physical review at DEQ) was not required, beyond those completed during the course of this Phase I ESA. Specific information on the nature of release, types of contaminants, media impacted, and the potential to have affected the subject property or otherwise caused environmental concern is provided in Section 3.





6. INTERVIEWS

An interview was not able to be conducted with a property representative to identify any potential environmental conditions and to address information data gaps during the Phase I ESA process. The lack of a property owner or representative interview represents a data gap in accordance with ASTM Standard E1527-21.

7. CONCLUSIONS

Based on the findings of this investigation, Parametrix reached the following conclusions:

1. The subject property includes one Multnomah County tax lot: 1N1E04-00400. The 360-acre property currently includes a vehicle racetrack, parking lots, an office/race announcer building, viewing stands, portions of Heron Lakes Golf Club golf course, and remnants of a former network of sloughs, wetlands, and Force Lake. No buildings are located within the partial areas of the property that may be acquired as part of the IBR Program.
2. Based on the historical review, the subject property was undeveloped land and farm properties until 1948, when a few dozen remaining buildings are visible two months after the Vanport Flood that destroyed the city of Vanport. Between 1948 and 1960, the remaining Vanport buildings were removed and the subject property and area properties returned to undeveloped and farm use. By 1970, the subject property was being used for auto racing, and the property was operated as East Delta Park by the City of Portland, including a golf course. The only visible improvements to the subject property are structures (such as a building and grandstands) and hardscaping associated with the raceway. The subject property remained in similar use for the next 50 years, as the adjacent area to the north was developed for industrial and commercial uses. No RECs were identified on the subject property, including the partial areas of the properties that may be acquired as part of the IBR Program, during the historical aerial review.
3. Based on the age of the buildings and structures, there is potential for LBP or ACM to have been used in construction of the buildings. However, none of the buildings are located within the partial areas of the properties that may be acquired as part of the IBR Program.

[redacted]

5. A review of regulatory information indicated that several nearby sites were identified in the regulatory record databases. However, based on regulatory status and/or distance from the subject property, none of the sites identified appear to present a REC to the subject property.

[redacted]

8. RECOMMENDATION

Based upon the conclusions of this investigation of the subject property, Parametrix offers the following recommendation.

1. No further assessment of environmental conditions on the subject property, including the partial areas of the properties that may be acquired as part of the IBR Program, is recommended.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal Delisted NPL sites

Delisted NPL: The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may deleted from the NPL where no further response is appropriate.

A review of the Delisted NPL list, as provided by EDR, and dated 06/22/2023 has revealed that there

is 1 Delisted NPL site within approximately 1 mile of the target property.

Site ID:: 1000442				

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 06/22/2023 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Lists of state and tribal leaking storage tanks

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the Department of Environmental Quality's LUST Database List.

A review of the LUST list, as provided by EDR, and dated 01/11/2023 has revealed that there are 4 LUST sites within approximately 0.5 miles of the target property.

Lists of state and tribal registered storage tanks

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Quality's UST List on Disk.

A review of the UST list, as provided by EDR, and dated 01/11/2023 has revealed that there is 1 UST site within approximately 0.25 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Other Ascertainable Records

ROD: Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid the cleanup.

A review of the ROD list, as provided by EDR, and dated 06/22/2023 has revealed that there is 1 ROD site within approximately 1 mile of the target property.

NARR Comments: Site is suspected of petroleum releases to the subsurface. As part of Columbia Slough Area-wide Discovery (CSD) Project this site was noted due to the presense of soil borings found in Water Resources Department well log database. Site runoff or subsurface contamination could reach part of Columbia Slough via stormwater piping system. Site has received cleanup of USTs via DEQ UST program (26-92-0348) cited as ending in 1997. However, CSD project found investigation on the site initiated in 2000, in areas away from the main building, to the west.

NARR Comments: Investigation initiated from three complaints during the summer of 1987. The complainants alleged that they could smell <quot>strong chemical odors.<quot> The odor was traced to Container Care. DEQ investigated and determined the odors were from open containers at Container Care. The facility was ordered to clean the containers. Soils were also sampled.

Sub Alias Name: DIOCTYL PHTHALATE
Substance Alias ID: 316661
Sub Alias Name: PHTHALIC ACID, BIS(2-ETHYLHEXYL) ESTER
Sampling Result ID: 349684
Feature Id: 0
Hazard Release Id: 387360
Medium: 703
Substance Abbrev.: 0
Unit Code: 8
Observation: True
Owner Operator: False
Lab Data: True
Sample Depth: 0-6 inches
Start Date: 10/30/2008
End Date: Not reported
Min Concentration: Not reported
Max Concentration: 11000.00
Sample Comment: 11000 ppb bis-(2-ethylhexyl)phthalate in upland surface soils at UP01SS. 6400 ppb in upland soils at OP02SS. 5100 ppb in upland waste storage area soils at WS02SS. 210 ppb at WS01SS. 93 ppb in background upland soils at BK01SS.

Narrative:

NARR ID: 5743043
NARR Code: Contamination
Created By: JWAGGY
Created Date: 03/02/2003
Updated By: SFORTUN
Updated Date: 09/11/2009
Decode for NarcdID: Contamination
NARR Comments: (2/24/03 SMF/SAP) DEQ received four pollution complaints, (between 1991 - 1999) alleging that ongoing activities at the Former Schooner Creek Boat Works site were contaminating the Columbia River and nearby properties. Two other pollution complaints, received in May 1990 and March 1999, described oil sheens and petroleum odors from unknown sources on the Columbia River near the Former Schooner Creek Boat Works. Although the release characteristics were similar to those described in pollution complaints against the boat works site, there is no information to indicate that the source(s) of these petroleum releases were ever determined. A number of other potential sources are found in the immediate vicinity of the Former Schooner Creek Boat Works site. See DEQ January 24, 2003, Strategy Recommendation for specific pollution complaint history. (8/11/03 AC/C&ER) Site tested for VOCs, petroleum hydrocarbons and metals. Diesel, oil and lead were detected at concentrations above background. Sediment and groundwater have not been tested. (9/10/09;smf) EPA completed an SI of the site in August 2009. Site soils and Columbia River (North Portland Harbor / Oregon Slough) sediments were sampled and analyzed for metals, SVOCs, organo-chlorine pesticides, PCBs, and tributyltin in October 2008. EPA's data indicates that site soils are contaminated with metals, PAHs, PCBs, DDT, phthalates, and tributyltin at concentrations that represent a potential risk to on-site workers, to the adjoining residents, to on-site plants and wildlife, and to nearby aquatic life. Sediments in the site's boat dock area are contaminated with metals, PAHs, and DDT at concentrations that represent potential toxic and bioaccumulative threats to aquatic life.

Updated Date: 07/23/2003
Decode for NarcdID: General Site Description
NARR Comments: The subject site is an approximate 1 acre parcel in North Portland, along the western edge of the Interstate Highway (I-5) bridge over North Portland Harbor. The site has been the location of boat building, repair, and machine shop activities since about 1937. Schooner Creek Boat Works, a boat building and repair business, began operating at the site in 1989, but relocated its operations about 1 mile northwest, to the north shore of Hayden Island, In July 2000. However, it continued to lease the site through December 2001. DEQ s Northwest Region (NWR) Hazardous Waste program first referred the site to Site Assessment in April 2002 for investigation of a pollution complaint. Mermaid Marine had recently begun leasing the site, but became involved in an extensive cleanup of wastes and debris that Schooner Creek Boat Works allegedly left behind when they vacated the site.

Created By: JWAGGY
Created Date: 03/02/2003
Updated By: SFORTUN
Updated Date: 09/11/2009
Decode for NarcdID: Hazardous Substance/Waste Types
NARR Comments: Existing information suggests that site soils and nearby Columbia River Sediments may be contaminated with copper oxide, paint thinner, and heavier petroleum constituents such as polynuclear aromatic hydrocarbons (PAHs). Considering the types of activities conducted at the site, and the length of time that these activities were conducted, other potential site contaminants might include: Organotins, other potential toxic metals (such as arsenic, lead, cadmium, chromium, mercury, and zinc), volatile organic contaminants (VOCs), semi-volatile organic contaminants (SVOCs), and possibly polychlorinated biphenyls (PCBs). (9/11/09; smf) A 2008/2009 EPA SI found that site soils are contaminated with metals, PAHs, phthalates, PCBs, DDT, and tributyltin at concentrations that represent potential risks to on-site workers, adjoining residents, on-site plants and wildlife, and nearby aquatic life. Sediments in the site's boat dock area are contaminated with metals, PAHs, and DDT at concentrations that represent potential toxic and bioaccumulative risks to aquatic life.

NARR Comments: (Also known as 1601 N Marine Dr.; formerly 1523 N Marine Dr.) Located on the south shore of Oregon Slough (the Columbia River, North Portland Harbor), south of Hayden Island, beneath and west of the southbound lane of Interstate Highway 5. Site addresses: 1) 1610 N Pier 99 Street, Portland, OR, 97217 (which the Post Office doesn't recognize, hence no 4 digit tail code); 2) 1601 N Marine Drive, Portland, OR 97217-7801; 3) 1523 N Marine Drive, Portland, OR 97217-7801 (neither address 2 nor 3 is recognized by the Tax Office, but are recognized as separate addresses by the US Post Office). The 1601 address appears on a small building immediately west of the site of concern.

Decode for NarcdID: Project Activity Status
NARR Comments: (9/10/09;smf) EPA completed an SI of the site in August 2009. Site soils and Columbia River (North Portland Harbor / Oregon Slough) sediments were sampled and analyzed for metals, SVOCs, organo-chlorine pesticides, PCBs, and tributyltin in October 2008. EPA's data indicates that site soils are contaminated with metals, PAHs, PCBs, DDT, phthalates, and tributyltin at concentrations that represent a potential risk to on-site workers, to the adjoining residents, to on-site plants and wildlife, and to nearby aquatic life. Sediments in the site's boat dock area are contaminated with metals, PAHs, and DDT at concentrations that represent potential toxic and bioaccumulative threats to aquatic life.

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: The site is located in a narrow, isolated strip of industrial properties on the south bank of North Portland Harbor, along North Marine Drive. The area between North Portland Harbor on the north, I-5 on the east, Columbia Slough on the south, and a Burlington Northern Santa Fe Railroad right-of-way on the west comprises Peninsula Drainage District #1. The entire site lies within the Columbia River s 100-year flow zone, so flood waters could mobilize any surface contamination at the site. The nearest residence evidently shares the same tax lot as the site. North Portland Harbor and I-5 should limit potential exposures for most upland residences, except for potential exposures at the on-site residence. There are approximately 200 houseboats moored along the north shore of the North Portland Harbor, within .5 mile of the site. It is unclear if site contaminants would significantly affect residents at the nearby houseboats. The Multnomah County Fairgrounds and Exposition Center lied southwest of the site, directly across North Marine Drive. East Delta Park, a municipal park, lies about .25 mile south-southeast of the site. The Portland International Raceway lies about .5 mile south-southwest of the site. Heron Lakes Golf Club, a municipal golf course, lies about .25 mile southwest of the site. In addition, Jantzen Beach Supercenter shopping center lies directly across North Portland Harbor from the site. In August 2001, Metro hired a consultant to advance five pushprobe soil borings 100 to 200 feet south of the site. These borings encountered groundwater at 7 to 16 feet below ground surface (bgs), suggesting that any potential contaminants at the boat yard site could represent a threat to nearby drinking water wells, and that potential shallow groundwater contamination could represent a threat to aquatic life in North Portland Harbor. Wetlands areas directly to the south of the site attract populations of sensitive wildlife species to the area. A major heronry is also located about 1 mile from the site. Site contaminants could represent a threat to sensitive wildlife and plant species within the drainage district. Along the 1610 North Pier 99 Street site, the Columbia River provides migratory and rearing habitat for twelve sensitive anadromous fish species.

Updated Date: 05/19/2020
Decode for NarcdID: Remedial Action
NARR Comments: (2/24/03 SMF/SAP) The site has a lengthy operational history, and DEQ has received multiple complaints alleging releases or improper handling of hazardous substances at the site. A high priority is assigned for conducting an Expanded Preliminary Assessment (XPA) of the site. Site soils, groundwater, and nearby Columbia River sediments should be sampled for toxic metals, VOCs, SVOCs, and PCBs to determine if past activities may have significantly contaminated the site and surrounding environment. (8/21/03 AC/C&ER) A preliminary investigation confirms the presence of petroleum hydrocarbons and metals in site soils. Site sediment must still be evaluated. [10/21/13 SA/SAM] A Site inspection Report was prepared in 2009. Sample results for the sediment samples collected from below the Pier 99 docks indicated the presence of one TAL metal at a significant concentration with respect to background concentration. No organotins, pesticides/PCBs, SVOCs were detected at significant concentrations with respect to background concentrations. Site soils contained sources of CERCLA hazardous substances. EPA completed an EE/CA on June 13, 2013. The site was divided up into 4 operable units: - Operable Unit 1 Bank Area - Operable Unit 2 Eastern Solid Waste Storage Area (Eastern Unimproved Area) - Operable Unit 3 Gravel Filter Area and Upland Boat Maintenance Repair Area - Operable Unit 4 Former Crane Area Based on the results of this EE/CA, the recommended removal actions for the Site are OU3 Gravel Filter Removal and stormwater Pipe Removal and OU1 Bank Stabilization(which included some debris removal and sand blast grit removal). The OU 2 elevated area coresponded with the OU3 discharge area and is addressed in this action. An OU 4 data gap investigation indicate that removal is not needed for the former crane area soil or groundwater at the site. Onsite work by EPA started Sept 1, 2013. For more details, visit http://www.epaosc.org/site/site_profile.aspx?site_id=8650 By 10/10/2013 all initial removal and restoration activities at the Pier 99 site were completed. [6/26/14 SA/SAM] Additonal removal at two locations(REX-16 and RAC-2) will occur in June 2014. EPA will perform a one-year monitoring and maintenance review. [10/22/14 SA/SAM]Additional removal was completed at the burn area on June 30 and July 2, 2014. As much as 3.5 feet of ashy soil was removed along a 15 foot length at the base of the slope. Because a significant portion of the bank was exposed during the excavation, EPA agreed that further excavation could jeopardize the stability of the bank, and excavation could be stopped. The area at the toe of the slope was reinforced with Envirlok vegetated sand bags installed at approximately a 1:1 slope. The two foot soil cover requirement was met at the toe of the bank, but could not be met further up the bank on the steep slope. Up the slope only 18-20inches of soil cover was placed. The EPA will require Post-Removal Site Controls, including monthly inspections, prohibit any activity that damages or disturbs the integrity of the cover and restoring the integrity of the cover if it is jeopardized in any way. [5/19/20 SA/SAM] The 2015 Monitoring report(year 2), indicated bank conditions were stable; grass covered the bank and no ground distrubances occured. 2016 and 2020 monitoring reports demonstrated the bank continues to be covered with grass.

1610 NORTH PIER 99 ST. (Continued) **S106655861**

Based on review of the previous removal action and project files, the DEQ Cleanup program is concerned that sediment adjacent to the North Pier 99 site has not been adequately characterized and may be contaminated above levels of concern to human health and the environment. In particular, there is no data for Columbia River sediments between the bank and the area sampled near the docks.

Decode for NarcdID: Health Threats
NARR Comments: The nearest residence evidently shares the same tax lot as the site. North Portland Harbor and I-5 should limit potential exposures for most upland residences, except for potential exposures at the on-site residence. There are approximately 200 houseboats moored along the north shore of the North Portland Harbor, within 0.5 mile of the site. Nearly 80% of these are located either directly across the harbor, or downstream from the boat works site. The Multnomah County Fairgrounds and Exposition Center lies southwest of the site, directly across North Marine Drive. East Delta Park, a municipal park, lies about 0.25 mile south-southeast of the site. The Portland International Raceway lies about .5 mile south-southwest of the site. Heron Lakes Golf Club, a municipal golf course, lies about 0.25 mile southwest of the site. In addition, the Jantzen Beach Supercenter (shopping center) lies directly across North Portland Harbor from the site. In August 2001, Metro hired a consultant to advance five pushprobe soil borings 100 to 200 feet south of the site. These borings encountered groundwater at 7 to 16 feet below ground surface (bgs), suggesting that any potential contaminants at the boat yard site could represent a threat to nearby drinking water wells, and that potential shallow groundwater contamination could represent a threat to aquatic life in North Portland Harbor. City records indicate that the on-site residence is serviced by the Portland municipal water supply. The city also has supplemental supply wells along the Columbia River south shore, 6 to 11 miles east of the site, as well as four supplemental supply wells on Hayden Island. Two of the Hayden Island wells lie about 1,200 feet north of the site, directly across North Portland Harbor. The nearest municipal water supply wells lie across North Portland Harbor, a 1,000-foot-wide, 20 30 foot deep channel of the Columbia River, and may be about 225 250 feet deep, so it remains unclear if site contaminants represent a significant threat to the city drinking water supply. OWRD also has records of three community or group-domestic wells, one public water supply well, and five domestic wells within 1.25 miles of the site.

Updated Date: 01/13/2010
Decode for NarcdID: Contamination
NARR Comments: Stormwater quality data collected twice since June 2002 indicate that the facility meets DEQ’s stormwater benchmark values, although concentrations of copper and zinc in site stormwater exceeded the National Recommended Water Quality Criteria’s respective Freshwater Critical Maximum Concentrations, DEQ’s respective Freshwater Acute Toxicity Criteria, and DEQ’s Level II Ecological Risk Assessment Screening Benchmark Values for freshwater aquatic life. Between 1990 and 2001, DEQ received nine Pollution Complaints and six Spill Reports associated with potential hazardous substance releases at the Diversified Marine facility, or petroleum sheens present on the river directly adjacent to the facility. Five of the Pollution Complaints and one of the Spill Reports involved fugitive dust emissions associated with sandblasting operations at the site. There is concern that sandblasting of boat hulls at the site could have released paint chips and toxic metals at concentrations that could represent a threat to the river s aquatic life, or otherwise accumulated in the river s sediments. Two other Spill Reports and another Pollution Complaint involved petroleum sheens of unknown origin on North Portland Harbor adjacent to the site. One additional 1998 Spill Report and simultaneous Pollution Complaint were associated with a petroleum release at the site that drained across N Marine Drive onto state highway property located 200 yards from the site. Diversified Marine s record of Pollution Complaints and Spill Reports suggests that on-site activities could have contaminated site soils and nearby Columbia River sediments with any of a variety of boat building, maintenance, and repair related contaminants, including toxic metals

DIVERSIFIED MARINE, INC. (Continued) **S108659504**

and paint chips containing toxic metals such as copper oxide, organotins, lead, cadmium, chromium, mercury, and zinc; petroleum constituents such as BTEX (benzene, toluene, ethylbenzene, toluene) and polynuclear aromatic hydrocarbons (PAHs); and other potential organic contaminants such as, phthalates, pentachlorophenol, chlorinated solvents, and possibly polychlorinated biphenyls (PCBs). (1/13/10 CWH/CU) The march 2009 Preliminary Assessment produced by Ecology and Environment for EPA Region 10 noted that, based on comparison to immediate upstream sediments, that the sediment sample (CR05SD) collected just downstream/adjacent to DMI <quot>indicates that DMI is contributing to copper, lead, and zinc contamination in the river.<quot> DEQ feels it is important to note that with the exception of copper, none of the detected metals, while elevated locally, exceed DEQ freshwater sediment SLVs. It is also important to note that the CR05SD sample was collected at a location that was not near where DMI stormwater runoff or working areas might be expected to be impacted.Similarly, PAH sediment data for CR05SD shows locally elevated concentrations of PAHs, but none above DEQ SLVs. PCBs were non-detect for CR05SD, but detection limits (41-45 ppb) were above DEQ SLVs. To summarize - the CR05SD sediment sample collected on behalf of EPA in October 2008 does indicate releases are likely to have occurred from the DMI site, but there were no samples collected in locations that would be suspected as release points.

Decode for NarcdID: General Site Description
NARR Comments: The subject site is an approximate 0.8 acre parcel in North Portland, on the south shore of North Portland Harbor, about 500 feet west of the Interstate Highway 5 (I-5) bridge over North Portland Harbor. Work is performed within an onshore building, on vessels moored at the site, and in a 200-ton floating dry dock at the site. North Marine Drive and North Pier 99 Street are located along the site s southern boundary. A paved parking lot for the Multnomah County Fairgrounds and Exposition Center lies directly across North Marine Drive, 100 to 300 feet south and southwest of the site. Hayden Island is across North Portland Harbor, about 1,000 feet north of the site.

NARR Comments: Although DEQ has records of known and suspected hazardous substance releases at the site, there is no indication that environmental sampling has ever been conducted at the site. Because of an abundance of nearby receptors (nearby wetlands, community drinking water wells, Critical Habitat for Threatened and Endangered fish), a high priority has been assigned to conducting an expanded Preliminary Assessment of the site.

NARR Comments: Fugitive dust emissions associated with sandblasting of boat hulls at the site could have released paint chips and toxic metals at concentrations that could represent a threat to the river s aquatic life, or otherwise accumulated in the river s sediments. Petroleum sheens of unknown origin have been reported on North Portland Harbor adjacent to the site. A historic petroleum release at the site was also reported to have drained across N Marine Drive onto state highway property located 200 yards from the site. Since Diversified Marine site activities include machine shop activities, bilge removal, and boat and equipment refueling activities, it may not be unreasonable to suspect that some of the petroleum contamination observed in the river channel could have originated from on-site activities. Such releases could represent a threat to the river s aquatic life, or otherwise have accumulated in river sediments.

NARR Comments: There is concern that site activities may have contributed contaminants to on-site soils and shallow groundwater, as well as in Columbia River surface water and sediments. Soil contaminants could represent a health threat for on-site workers or utility trench workers. North Portland Harbor (the Columbia River; Oregon Slough) forms the site's northern boundary; the entire site lies within the river's 100-year flood zone. The Columbia River is migratory and rearing habitat for eleven varieties of Threatened or Endangered salmonids. The Columbia Slough lies about 1 mile south of the site. The area between North Portland Harbor on the north, I-5 on the east, Columbia Slough on the south, and a Burlington Northern Santa Fe Railroad right-of-way on the west comprises Peninsula Drainage District No. 1. Most of the drainage district is publicly owned wetlands. Wetlands areas directly south of the site attract populations of sensitive wildlife species to the area. Metro has designated much of Peninsula Drainage District No. 1 as important wetlands or wildlife Habitats of Concern, or regionally significant riparian corridors. Migratory waterfowl and songbirds have been observed within the drainage district, as well as a variety of other sensitive and Threatened and Endangered wildlife species. Sensitive and Threatened plant species may also be present within the wetlands. Site contaminants could represent a threat to sensitive plant and wildlife species within the wetlands. The nearest residence is located on a tax lot at the site's eastern boundary. Other residences are located across I-5, about 0.3 mile east-southeast of the site, and across North Portland Harbor, about 0.4 mile northeast and 0.5 mile north-northwest of the site. Oregon Water Resources Department (OWRD) has records for three community or group-domestic wells, one Public Water Supply well, and five domestic wells within 1.25 mile of the site. The nearest is a 261 foot well installed at Kernan Village in 1958 to supply drinking water for a store, service station, apartment building, and trailer park. The well is believed to be located about 600- to 900 feet south-southwest of the site. Kernan Village no longer exists; its well may now be located either within the current I-5 / North Marine Drive cloverleaf interchange, or within the county fairgrounds paved parking area. It seems unlikely that the well is still being used or even still exists, although OWRD has no record to indicate that the well was formally decommissioned. The City of Portland has supplemental Municipal Supply Wells along the Columbia River south shore, 6- to 11 miles east of the site, as well as four supplemental supply wells on Hayden Island. Two of the Hayden Island wells lie about 1,200 feet north of the site, directly across North Portland Harbor. These wells lie across North Portland

DIVERSIFIED MARINE, INC. (Continued) **S108659504**

Harbor, a 1,000 foot wide, 20- to 30 foot deep branch of the Columbia River, and may be about 225- to 250 feet deep. Several nearby public facilities draw substantial numbers of people to the area. The Multnomah County Fairgrounds and Exposition Center lie southwest of the site, directly across North Marine Drive. East Delta (municipal) Park lies about 0.25 mile south-southeast of the site, across I-5. The Portland International Raceway lies about 0.5 mile south-southwest of the site. Heron Lakes (public) Golf Club lies about 0.25 mile southwest of the site. Jantzen Beach Supercenter shopping center lies directly across North Portland Harbor from the site.

NARR Comments: (10/19/04 AC/ER&CU) Site status on hold. Responsible party (RP) unwilling to join the Voluntary Cleanup Program or perform an Expanded Preliminary Assessment (XPA). Principle concern is that potential site contaminants in sediments could pose a threat to Columbia River ecological receptors. Insufficient evidence to require sediment sampling in the Columbia River. Project on hold pending available orphan funds or willing responsible party. [3/20/15 SA/SAM] An Abbriviated Preliminary Assessment was finalized by EPA through its contractor E&E on May 14, 2009. EPA also performed a SI in 2009 at a neighboring property(ECSI#3526 1610 N Pier 99) downstream samples indicates releases are likely to have occurred from the DMI site, but there were no samples collected in locations that would be suspected as release points for this facility. No Further Remedial Action Planned under Federal program was designated in 2010. A Site Investigation is recommended under state supervision.

Incident Id: 010336
Incident Narrative: STATE HAZMAT TEAM 6 FROM PFB CALLED BY PORTLAND DVD TO 1801 N MARINE DR. SUSPECTS HAD DUMPED DRUG LAB WASTE AND SUPPLIES IN A PARKING AREA NEAR A ROADWAY. THE SUSPECTS HAD BEEN ABOARD A NEARBY 60 FOOT YACHT AND THERE WAS A STRONG CHEMICAL SMELL COMING FROM THE BOAT. THE TEAM ARRIVED AND CONFERRED WITH DVD OFFICER IN CHARE SGT HENDRICKS DETERMINING HOT ZONE AND NEEDED SETUP. THERE WERE THREE BACKPACKS AND A DUFFEL BAG IN THE PARKING LOT. UNKNOWN NUMBER OF SAMPLES TO BE TAKEN. TWO DVD OFFICERS WERE SUITED UP IN LEVEL B WITH SCBA- ALL PERSONNEL WORE LIFE PRESERVERS DUE TO THE PROXIMITY TO THE COLUMBIA RIVER. THE TWO OFFICERS WERE: DORIS PAISLEY (#BPSST UNK) AND BILL SHAW (#28923). SHAW SUITED UP AND WENT WITH HENDRICKS DOWN THE DOCK TO "CLEAR" THE YACHT OF ANY POTENTIAL TWO-LEGGED THREATS. SHAW FOUND ONE CONTAINER OF LIQUID AND TOOK A SAMPLE FROM IT FOR EVIDENCE. FB 17 WAS CALLED TO THE SCENE TO EVALUATE MOVING THE YACHT TO A SAFER LOCATION FOR EVIDENCE TAKING, BUT THAT PROVED UNNECESSARY. PAISLEY AND SHAW TOOK A TOTAL OF 12 SAMPLES FROM THE BACKPACKS AND DUFFL BAG. THEY ENTERED THE HOT ZONE AT 1559 HOURS AND EXITED AT APPROX 1702 HOURS FOR DECON. HM TEAM SET UP EVIDENCE COLLECTION TABLE AND MATERIALS FOR DVD - PROVIDE DECON.

Narrative:

NARR ID: 5740694
NARR Code: Contamination
Created By: Not reported
Created Date: 12/17/2002
Updated By: SFORTUN
Updated Date: 04/03/2012
Decode for NarcdID: Contamination
NARR Comments: (3/22/01 MTP/SAS) The property owner, Mr. Bud Hoffman, decommissioned two 10,000-gallon underground storage tanks (USTs) on October 18th and 19th, 1999. Mr. Hoffman indicated the tanks had contained diesel; in previously submitted information, Mr. Hoffman had indicated the tanks contained gasoline and diesel. At the time of removal, the DEQ NWR UST Section was preparing a notice of noncompliance (NON) for failure to upgrade or remove the tanks, which was subsequently issued on February 23, 1999. DEQ UST staff observed stained soil that appeared to be related to overfills, limited to near the surface. Soil sample results submitted to DEQ showed non-detects for each of three samples collected below the tanks. Because it could not be determined if a release from the UST had occurred, DEQ UST Section closed the file. On October 3, 2000, DEQ Hazardous Waste (HW) and UST staff conducted a site visit. The paint operation was observed to generate lacquer thinner used to clean the paint guns at a rate of about 2 drums every 6 months. Lead batteries were observed throughout the facility. A wash pad area associated with the painting business is located outside the building. Collected water apparently was treated and reused on-site; sludge from the sump and pad was shipped off-site as non-hazardous waste about twice a year. The waste profile was based on 1997 data that showed cadmium (24 parts per million [ppm]) and lead (33 ppm). Lab results for a sludge sample collected by DEQ are pending. On the opposite side of the building was an elevated asphalt area to accommodate masking of trucks prior to painting. A lower area contains an 8’ x 10’ pit that had been cemented over to a sump approximately 2’x 3’. Prior to capping of the pit the water was pumped to a dry well about 20 feet away. The

HOFFMAN PROPERTY (Continued) **S111247462**

drywell appeared to be 20 feet deep. As a result of the HW inspection, a Notice of Noncompliance (NON) was issued on October 11, 2000 for failure to conduct hazardous waste determinations and failure to properly clean up a spill. Mr. Hoffman stores dumpsters on the property as part of a sanitary service; attempts to reclaim glass, metals, and plastic had resulted in a buildup of these materials. The east side of the site is an area overgrown with blackberries where standing water was observed. The water had an organic odor and a sheen. Mr. Hoffman indicated a water pipe had broken as a result of freezing. Two five-gallon buckets were overturned in the standing water. Oil was stored in rusty drums. Enamel and latex paint were observed to be stored on pallets. Stormwater runoff with a sheen, which appeared to originate from the Interstate Street overpass, was observed to fall onto the ground and then flow to a City of Portland drain line. As part of the Tri-Met Interstate MAX line construction, soil samples were collected along the alignment in the easement running along the west side of the site. In a report dated 2/14/01, it was reported that diesel (543 ppm) and total petroleum hydrocarbons (TPH; 1,190 ppm) were detected in surface soil collected just north of the former UST excavation site. A number of volatile organic compounds (VOCs), including trimethylbenzene, were detected at up to 1,940 parts per billion (ppb) in subsurface soil collected at 17 feet below ground surface just south of the former UST location. TPH as gas (20 ppm), oil (74.3 ppm) and diesel (111 ppm) were also detected in this sample. Elevated levels of a number of metals (e.g., lead 1,110 ppm) were detected from the 5-to-7 foot sample interval in a boring collected along the western easement. PCBs were not detected in any of the four surface soil samples analyzed. (4/3/12, smf) An Integrated Assessment conducted for EPA by E&E in June 2011 detected concentrations of metals, TPH, SVOCs, and pesticides in surface soils, wash pad sludges, drainage ditch sediments, Columbia Slough sediments, subsurface soils, and site groundwater that represent a potential threat to on-site workers, potential groundwater consumers, terrestrial wildlife, and/or aquatic life in the Columbia Slough. Several of the contaminants detected at elevated concentrations in upland environmental media were also detected at somewhat elevated concentrations in nearby Columbia Slough sediments, suggesting that site contaminants may be contributing to sediment contamination in the Columbia Slough. E&E also catalogued and catagorized the contents of approximately 700 containers of miscellaneous wastes or hazardous substances found at various locations across the site. EPA issued the site a NFRAP decision in February 2011 contingent upon the successful removal and disposal of containerized hazardous substances from the site. However, further evaluation and cleanup are needed at the state level to assure that human health and the environment are adequately protected.

NARR Comments: (2/13/01 ACV/VCS) Site part of acquisition for Interstate Light Rail. Tri-Met directed investigation (January 2001) found TPH and lead in site soils. Tri-Met plans to properly manage contamination during construction activities. Residual contamination referred to Site Assessment Program. (3/22/01 MTP/SAS) Based on a review of existing information it appears that there has been a release of petroleum at the site consistent with surface discharges, possibly related to the former USTs. The source of groundwater contamination is not clear, but the compounds detected suggest a gasoline impact. The dry well and former collection pit are a likely source of petroleum and possibly metals contamination to soil and shallow groundwater, and could be impacting or may have historically impacted the Columbia Slough. DEQ SAS recommends a site investigation to assess the nature and extent of contamination in the on-site dry well system and to determine if there is currently, or has been a historic pathway to the Columbia Slough. In addition, the extent of petroleum contamination in the vicinity of the former UST should be determined. DEQ SAS further recommends groundwater sampling to determine if there is an on-site groundwater contaminant source. Because a release has been demonstrated, the site should be added to the Confirmed Release List (CRL). Because further site investigation is required, the site should also be added to the Inventory of hazardous substance sites. DEQ SAS has determined that further work should be conducted under a high priority. (6/1/09 CWH/SA) Site Federal Screening (update) completed. Site recommended to EPA Region 10 for Federal Site Inspection. Primary areas of concern for DEQ: Prior investigation in 2000 and 2001 by Tri-Met, during preparation work for the light rail line, detected elevated concentrations of several metals in surface soils. The Tri-Met work also measured concentrations of metals and semi-volatile, volatile and petroleum hydrocarbons in groundwater. The sources, and full extent and nature of the detected contaminants has not been resolved. The extent of contamination in the drainage ditch along the east side of the site that has received petroleum and metals contaminated discharge from the Harrah s truck washing pad. The extent of any impacts to subsurface soils or groundwater from the underground injection control (UIC) device, also referred to as a drywell, located at the northwest corner of the site s single building. Since the site borders the Columbia Slough, a water-quality limited stream that supports migration and rearing of several species of endangered salmonid species, additional work is needed to evaluate any existing upland sources of contamination and to measures sediments along the shoreline of the Slough to determine if there has

HOFFMAN PROPERTY (Continued) **S111247462**

been any impact from the site. (4/3/11, smf) E&E completed a detailed investigation of the site in 2011, and issued an Integrated Assessment Report to EPA in February 2012. While EPA's Removal Program is continuing to work with the site owner to safely remove and dispose of containerized hazardous substances from the site, EPA's CERCLA Program issued the site a NFRAP decision in February 2012. Further evaluation and cleanup will be needed at the state level, however, to assure that human health and the environment are protected.

NARR Comments: Possible impacts to the Columbia Slough through overland runoff, and/or shallow groundwater discharge. Shallow groundwater may have been impacted by petroleum associated with the former USTs at the site, and likely discharges into the Columbia Slough. Possible connections between the existing dry well and shallow groundwater and/or the Columbia Slough is a significant concern. Direct exposure of site utility workers to contaminated surface and subsurface soil is likely. Economically disadvantaged residential properties are located south of North Columbia Drive, greater than 2000 feet from the site. There are 10 industrial use wells listed in Oregon Water Resource Department's well log database for Section 9. One well in Section 9 with no indicated use and no specific location was installed at a depth of 217 feet and could possibly be a potable water supply well. Groundwater discharge to the Columbia may be of concern.

Updated By: JWAGGY
Updated Date: 07/30/2007
Decode for NarcdID: Contamination
NARR Comments: (5/29/01 MDK/SRP) Waste oil purified and recycled in a process involving screening, filtering, and heating. Oil trucks cleaned on-site generating wastewater with approximately 5% trichloroethylene (TCE). TCE was vaporized, condensed, and reused. Waste TCE, waste oil sludge stored in drums and tanks. Surface runoff may have contributed to a major fish kill in Force Lake in March 1974. Runoff collection system installed since then, consisting of an oil/water separator. Suspect past operating practices and frequent spills as potential problems. A major fire in 1979 destroyed the facility and was reported to have caused oil and other contaminants to pour across the site and into the wetlands west and south of the site, however, records for this are mostly anecdotal. The TCE used to clean out tank trucks has been found in low concentrations in surface water at the southwest (lowest) end of the site, and has entered the environment. Comprehensive sampling in 1990 showed high levels of oil in site soils and low levels of chlorinated VOCs in deep groundwater (100 ft. depth), although these same VOCs appear to be widespread in groundwater in the immediate site vicinity. Off-site sampling in 1994 showed significant oil contamination in shallow wetland soils, and this contamination is likely to have originated from past releases at the site. Sampling by EPA's contractor in 2000 on behalf of EPA Region 10 has confirmed the presence and extent of contamination originating from past site operations. (12/27/06 MDK/CU&ER) Site added to NPL in 2001. Efforts by EPA to negotiate a cleanup order is on-going (2001 - 2006).

NARR Comments: (1/27/10 MDK/CU&ER) Site investigation activities were conducted in 2007 and 2008. Draft HHRA and ERA reports were submitted to EPA and then provided to DEQ and stakeholders. Draft Remedial Investigation Report submitted. DEQ provided comments on the HHRA and ERA in November 2009, and then comments on the VG responses to the consolidated EPA comments on January 14, 2010. Risk Assessment have been revised in accordance with US EPA comments, and US EPA has responded to DEQ, Portland BES, and other stakeholder comments. Draft risk assessments are expected to be finalized in accordance with US EPA comments early 2012 and proposed plan Spring 2012.

NARR Comments: The site is located within 100 feet of Force Lake to the southwest

AMERICAN RECYCLERS, LLC (Continued) **1000302670**

and the Columbia River 1000 feet to the north. A drainage system of buried tiles drains the lake through the adjacent wetland marsh, west and south where it is pumped into the Columbia Slough. The wetlands associated with Force Lake support great blue heron nesting areas, and the City of Portland considers this wetlands area, as well as the lake, to be a sensitive environment. Site is now largely paved and the berm on the western edge of the property leveled off in 2011 dring site modifications

NARR Comments: (5/29/01 MDK/SRP) There is no evidence that historical releases from the Harbor Oil site were followed by any remedial actions, and recent sampling shows that significant hydrocarbon contamination remains on-site and in the wetlands area. The primary issue of concern at this site is the effect from past releases on ecologically sensitive wetlands associated with Force Lake. An RP notice letter was sent in January 2000 requesting committment to perform an RI/FS and pay DEQ oversight. The RP did not commit to RI/FS and payment of oversight, and site was referred to EPA for further site assessment. Field work for the EPA Site Inspection was conducted July 31 - August 4, 2000. A summary report was released November 2000. EPA determined that the site qualified for listing on the NPL. (6/30/03 MDK/C&ER) The draft PA/SI was released on February 2, 2003. October 2001 letter from Gov. Kitzhaber supports proposed NPL listing. (6/5/14 GMW/SAS) EPA proposed the site for the NPL in 2002. The site was listed on the NPL in 2003, and subsequent investigation and risk assessment work has been conducted under EPA oversight. In June 2014, following a notice in the Federal Register and soliciting public comment, EPA delisted Harbor Oil from the NPL.

NARR Comments: [June 2014] EPA declared the property a Superfund (NPL) site in 2003 at the request of DEQ, which wanted EPA to use Superfund law to bring responsible parties to the table. Harbor Oil ceased operating in 1999. In 2012, EPA s project manager for the site indicated that EPA

AMERICAN RECYCLERS, LLC (Continued) **1000302670**

believed the property posed no unacceptable risk to people or wildlife, despite its Superfund designation.

 On June 5, 2014, EPA removed Harbor Oil from the NPL.

Hazardous Waste Summary:

AMERICAN RECYCLERS, LLC (Continued) **1000302670**

Waste Code: D007
Waste Description: Chromium

Waste Code: D008
Waste Description: Lead

Waste Code: D018
Waste Description: Benzene

Waste Code: D039
Waste Description: Tetrachloroethylene

Waste Code: D040
Waste Description: Trichlorethylene

Waste Code: F001
Waste Description: The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichlorethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F002
Waste Description: The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

AMERICAN RECYCLERS, LLC (Continued) **1000302670**

Waste Code: K001
Waste Description: Bottom Sediment Sludge From The Treatment Of Wastewaters From Wood Preserving Processes That Use Creosote And/Or Pentachlorophenol.

Waste Code: K049
Waste Description: Slop Oil Emulsion Solids From The Petroleum Refining Industry.

Waste Code: K051
Waste Description: Api Separator Sludge From The Petroleum Refining Industry.

Waste Code: K052
Waste Description: Tank Bottoms (Leaded) From The Petroleum Refining Industry.

Waste Code: NONE
Waste Description: Not Defined

Waste Code: P030
Waste Description: Cyanides (Soluble Cyanide Salts), Not Otherwise Specified

Waste Code: U019
Waste Description: Benzene (I,T)

Waste Code: U051
Waste Description: Creosote

Waste Code: U061
aste Description: Benzene, 1,1'-(2,2,2-Trichloroethylidene)Bis[4-Chloro- (Or) Ddt

Waste Code: U112
Waste Description: Acetic Acid, Ethyl Ester (I) (Or) Ethyl Acetate (I)

Waste Code: U117
Waste Description: Ethane, 1,1'-Oxybis-(I) (Or) Ethyl Ether (I)

Waste Code: U159
Waste Description: 2-Butanone (I,T) (Or) Methyl Ethyl Ketone (Mek) (I,T)

Waste Code: U226
Waste Description: Ethane, 1,1,1-Trichloro- (Or) Methyl Chloroform

Waste Code: U228
Waste Description: Ethene, Trichloro- (Or) Trichloroethylene

Waste Code: U239
Waste Description: Benzene, Dimethyl- (I,T) (Or) Xylene (I)

Waste Code: U242

Created By: Not reported
Created Date: 12/17/2002
Updated By: GWISTAR
Updated Date: 08/25/2003
Decode for NarcdID: Contamination
NARR Comments: The late Mr. Haney was known to use PCB-containing oils to fuel his lead smelter. Therefore, dioxins & furans (incomplete combustion products of PCBs) could have been formed at the site. Until a 1985 cleanup, the site contained several drums of oil contaminated with PCBs at up to 60,000 mg/kg. Before the 1985 removal, asphalt north of the stock barn was contaminated with PCBs at up to 7,400 mg/kg. In May 1988, Ecology & Environment conducted a sampling site assessment for EPA, and found significant levels of PCBs in soil and sediments from storm drain sumps and in the eastern settling pond. These samples also showed elevated levels of arsenic, lead, and mercury. (7/2/03 MDK/C&ER) Cyanide has been detected in pond fill, sediment, and in soil beneath the ponds and oil/water separator.

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: Sumps on the facility drain to the ponds. These ponds are a possible source of soil and groundwater contamination. Storm drains on-site have contaminated sediments. The site is within two blocks of residential areas, so that human direct contact with soil and sediments is a potential risk. (8/19/97 LSK/SAS) The primary pathways of concern are contact with contaminated soil, sediment and surface water. The site is within 500 ft. of the Lower Slough and south of Delta Park.

Decode for NarcdID: Remedial Action
NARR Comments: (5/24/95 GMW/SAS) In 1985, the property owner conducted a site evaluation, and hired Riedel Environmental Services to clean up the site. The cleanup consisted of: 1) the removal of about 5,000 gallons of surplus paints within the buildings; 2) removal of transformers and drummed PCB liquids; and 3) excavation and removal of PCB-contaminated asphalt and soil (11 cubic yards) from two areas just north of the <quot>stock barn<quot> building. E&E's 1988 site assessment was in part designed to assess the adequacy of the 1985 removal. E&E's report stated that it appeared as though the site had been cleaned up; however, their sample results showed high levels of PCBs and several metals remained in sump sediments, pond sediments, and in a few areas of soil. According to the property owner, Charles Tindall, no assessment work has occurred since 1988, because EPA Region 10 issued a no further action letter for the property. Site Assessment recommends that the owner conduct further site characterization and remedial action, preferably under the guidance of the Voluntary Cleanup Program. The site is a medium priority, because the site's proximity to residential neighborhoods and West Delta Park raises the potential for human exposure to contaminated soil and sediments. Analyses for dioxins and furans should accompany any additional sampling at the site. (8/19/97 LSK/SAS) Site re-evaluated as part of review of all sites within the Columbia Slough Study Area, and given a high priority for further evaluation.

PMT (Continued) **S110048288**

(7/15/98 MDK/SRP) RI proposal submitted 7/6/98 per Consent Order; under review. (11/4/98 MDK/SRP) Revised RI proposal submitted 3rd quarter 1998; under review. (4/8/99 MDK/SRP) The RI proposal was accepted in January 1999 and the draft RI phase I workplan was due to DEQ on February 8, 1999. The workplan was not submitted and a Notice of Noncompliance (NON) was sent on April 8, 1999. (1/3/00 MDK/SRP) A Phase I RI workplan was submitted on April 9, 1999 and resubmitted on September 10, 1999. Phase I RI work was completed in September and October 1999. A Phase I Report is to be submitted by January 10, 2000. (4/13/2000 MDK/SRP) DEQ reviewed the Phase I report in a letter dated March 17, 2000, requested the RP prepare and submit a Phase II workplan considering IRAMs for contaminated pond sediments and on-site soil stockpile. The Phase I report was not approved and no revision was requested. A Phase II workplan is to be submitted by May 16, 2000. (9/20/00 MDK/SRP) The Phase II work was split into land water use (LWU) determination and Eco Level I, and an RI/RA workplan. The LWU and Eco Level I were submitted on August 31, 2000 and are under review. A RI/RA workplan is to be submitted September 22, 2000. (5/29/01 MDK/SRP) A revised RI work plan was submitted on May 3, 2001, and is under review. A Columbia Slough sediment sampling work plan was submitted on May 25, 2001, and is also under review. (11/16/01 MDK/SRP) Initial review of the two work plans indicates theat DEQ's comments and request for Scope of Work have not been fully addressed. DEQ expects to issue comments on the work plans in December 2001 and will pursue completion of both the upland and slough portions of the investigation. (5/8/02 MDK/SRP) The third revisions to the RI Work Plan and the Slough Sediment Sampling Work Plan were submitted on April 26, 2002, and are under review. (7/2/03 MDK/C&ER) DEQ conducted a complete file and data review in December 2002, and January 2003. A summary of data needs was issued on April 11, 2003, and discussed at a project meeting on April 14, 2003. RP committed to submittal of work plans for an IRM to fill the ponds and conduct the remaining RI work, and a slough sediment investigation. The work plans were submitted on June 4, 2003. DEQ has reviewed initial IRM data and plans and responded by email approving the proposed IRM with conditions. (8/26/04 MDK/C&ER): Additional investigations were conducted in summer 2003. DEQ review of remaining on site and slough investigation plans is underway. (6/16/05 MDK/CU&ER)Site status and data review will be completed in 3rd quarter 2005 to determine next steps for this site. (12/28/06 MDK/CU&ER) Site visit made on August 31, 2006 to discuss steps to complete site investigation and address upland areas of soil contamination. A Columbia Slough Sediment investigation workplan was submitted to DEQ, reviewed and approved on January 25, 2006. Work was conducted in August 2006 and a preliminary report of data provided in December 2006. The sediment data was reviewed by DEQ and a follow-up sediment sampling scope agreed between DEQ and Pacific Meat in December 2006. The follow-up sampling should occur in first quarter 2007. The pond and transformer area IRAM workplan was approved on February 13, 2006. Work began March 1, 2006 with a test stabilization, then sampling for leach testing. Leach test results exceeded criteria. Pacific Meat requested on September 28, 2006, to abandon the stabilization approach and pursue filling the ponds in-place, capping and installing groundwater monitoring wells. Additional work for a filling/capping approach is required to meet Portland BES requirements for work in a conservation zone and for stormwater management. Pacific Meat is currently working to meet

PMT (Continued) **S110048288**

those requirements before moving forward with the pond/transformer area IRAM. No dates have been offered by Pacific Meat for conducting the follow-up sediment sampling or moving forward with the pond and transformer area IRAM. (1/28/10 MDK/CU&ER) Remedial Investigation Site Summary dated 12/3/07, HH & ERA dated Feb 2008, and FFS dated 4/4/08 submitted. DEQ did not approve the documents due to extensive revisions that would be required, causing further delay on this project, but accepted them as containing sufficient information to move forward with Staff Report development. Proposed final site remedy public comment period held in August 2008 and ROD issued in Sept 2008. New AOC for upland portion of site issued on 3/23/09. RDRA Work Plan expected to be approved in Feb 2010 with immediate implementation of final remedy; most of 2009 spent obtaining all necessary permits for remedial action. Consent Judgment for settlement of liability for slough was filed in 2009 covering contribution to cleanup of site contamination in Slough. (01/10/11 EKM/CU&ER) A DEQ-approved RDRA implementation began February 2010. Site excavation/relocation activities to address impacted soils are complete. The cap design for impacted soils placed in the former settling pond area is expected to be finished by Spring 2011. Stormwater control measures incomplete and pending. Remedial action will be verified with groundwater monitoring on a semi-annual basis. (04.23.14 EKM) Cap installation is complete. Groundwater monitoring has been conducted for four events with no adverse effects observed. Stormwater control measures, including sampling at Outfall 1 and cleanout of the line is complete. The ROD also stipulates institutional controls for the site, including a cap monitoring and maintenance and contaminated media management. As of December 2012, plans for these controls have been submitted to DEQ for review. To ensure performance institutional controls, the property owner will record a DEQ-approved Easement and Equitable Servitudes with the property deed. The E&ES will reference the DEQ-approved monitoring plans and development restrictions at the site.

NARR Comments: The site originally operated as Pacific Meat Company, a meat rendering operation. During 1978 to 1981, the site was occupied by Peter O. Haney and used for such activities as secondary lead smelting, precious metals recovery, transformer salvaging and storage, and surplus paint and oil storage. The site contains two

PMT (Continued) **S110048288**

unlined ponds adjacent to the Columbia Slough, which the rendering plant had used as settling ponds.

NARR Comments: The property owner entered into an agreement in the form of a Consent Judgment with DEQ in 2008 to resolve liability associated with their site s contribution to sediment contamination in the Columbia Slough. DEQ implemented a remedial action consisting of the application of carbon-based amendments within the Columbia Slough along the length of the property in 2016 using settlement funds.

 DEQ issued an Order of Consent to complete cleanup in the upland portion of the site in 2009, which succeeded a 1998 Order to complete a remedial investigation (RI) and feasibility study (FS). Implementation of the DEQ-approved remedial design commenced February 2010. The remedy as documented in the 2008 Record of Decision for the upland portion of the site includes consolidation and capping impacted soils with unacceptable risk. Cap installation was completed in the summer of 2011 and monitoring of remedy performance has been performed. Additional measures have been implemented including sampling stormwater at outfalls and cleanout, in accordance of the selected remedy. The ROD also stipulates institutional controls for the site, including a cap monitoring and maintenance and contaminated media management. Draft plans for these controls have been submitted to DEQ. However, discussions are ongoing whether to modify the cap surface cover to incorporate current site operations, which would require re-design plans for DEQ approval. Prior to project completion the property owner will record a DEQ-approved Easement and Equitable Servitudes with the property deed. The E&ES will reference the DEQ-approved monitoring plans and development restrictions at the site.

Decode for NarcdID: Contamination
NARR Comments: Site discovered from Columbia Slough Area-wide Site Discovery Project. Past industrial use as a sawmill and some indication that wood treating was performed. [Current NAICS description with city business license is <quot>sawmills and wood preservation<quot>]. Aerial photos also indicate possible vegetation stress in areas in back of site. (11/12/09, smf) No data to indicate that site ios contaminated. However past industrial operations such as the Kenton Mill and the National Tank & Pipe Co.'s pipe dipping operations could have contaminated site soils. Hazardous substances releaased on the neighboring Dinea (Arclin) property (ECSI #161) could also have migrated onto the site. A 1974 aerial photo suggests that wastes may have been buried at the northern end of the site at the same time that wastes were being buried at the neighboring Dynea (Arclin) site. Site stormwater is directed to an on-site swale where it presumably infiltrates to groundwater. Contaminants could be present in swale sediments and/or underlying shallow groundwater.

Decode for NarcdID: General Site Description
NARR Comments: The subject site is comprised of two adjoining tax lots totaling 12.48 acres (Tax Lot 500 of Township 1 North / Range 1 East Section 9A [T1S/R1E-S9A], 12.34 acres; and Tax Lot 200 of T1N/R1E-S9AC, 0.14 acres). The combined tax lots form an elongated, somewhat irregularly-shaped, north-south oriented rectangle. The majority of the southern half of the site is either paved or covered by buildings, while the northern half is generally unpaved and vegetated (see Figure 4). A densely vegetated riparian area occupies most of the northern one-fourth of the site. A stormwater swale is located within the riparian area. The site is partially fenced. Fencing is present along the full length of the site s eastern and southern property lines. A railroad siding and a 450-foot long section of fencing define much of the western property line between the site and the adjoining Dynea/Arclin Overlays facility. Vehicle access is possible either from N Columbia Boulevard, at a gate at the central southern end of the site, or from N Denver Avenue, at a gate near the northeast corner of the site.

Decode for NarcdID: Hazardous Substance/Waste Types
NARR Comments: DEQ has reviewed no data to indicate that environmental media at the Blasen & Blasen Lumber Corp. site have been contaminated. However, based on the site s long history of industrial use, and the potential nature of historic and on-going site operations, future environmental investigations might be expected to encounter hazardous substance contamination in site soils, groundwater, and/or stormwater sediments. Potential site contaminants include petroleum (lubricants, diesel fuel, gasoline), petroleum and coal tars, PAHs, BTEX, toxic metals, organic solvents. Hazardous substances released at the

BLASEN & BLASEN LUMBER CORP (Continued) **1000641909**

adjoining Dynea (Arclin) site might also have migrated onto the site: phenols, formaldehyde, alcohols, iron, manganese, lead, diesel fuel, gasoline, and oil range hydrocarbons, PAHs, BTEX, chlorinated pesticides (DDT and its degradation products), PCBs, and methane.

Updated Date: 11/13/2009
Decode for NarcdID: Project Issues Summary
NARR Comments: DEQ has no data to indicate that contaminants are present at the site. However, based on the site's long history of industrial use, contamination may be present. The southern half of the site is capped by buildings and pavement, while the northern 1/4 of the site is dense riparian area. Direct, prolonged, and repeated on-site worker exposures to soil contaminants appears unlikely to occur. However, utility trench workers or construction workers might encounter subsurface contamination. Site stormwater is directed to a swale in a riparian area at the north end of the site, where it is believed to infiltrate, and likely discharges to Columbia Slough with site groundwater. Any contaminants in site stormwater or groundwater might contribute to the slough's existing sediment contamination.

NARR Comments: Unknown. There is reason for concern that site subsurface soils and groundwater may have been contaminated. Site stormwater and stormwater sediments could also be contaminated. Sediments in Columbia Slough are known to be contaminated. Discharges of potentially-contaminated groundwater and/or stormwater from the site could contribute to slough sediment contamination.

NARR Comments: Site groundwater and stormwater likely discharge to Columbia Slough. Columbia Slough is important habitat for resident warmwater fish and migratory waterfowl. Individuals are known to angle for fish in the slough, although Oregon Health Division has issued an advisory cautioning against consuming fish caught from the slough. The slough is also used for recreational canoeing and kayaking, and has wetlands and threatened and endangered salmonid habitat downstream from the site. The southern half of the site is capped with buildings and pavement which limit direct contact exposures to any potential subsurface contamination. The dense riparian growth on the northern 1/4 of the site probably also limits direct contact exposures to site soils. However, future utility trenchworkers or construction workers might encounter subsurface contaminants.

Decode for NarcdID: Health Threats
NARR Comments: There are no known hazardous substance threats at the site. However, the site's stormwater, subsurface soils, and groundwater could be contaminated. On-site workers are unlikely to experience prolonged or repeated exposures to site soils as the southern 1/2 of the site is capped with buildings and pavement. The northern 1/4 of the site is dense riparian vegetation, which discourages direct contact with soils in that area. Future utility trench workers and/or construction workers could be exposed to contaminants if present in subsurface soils. Fish, wildlife, and recreational users of the slough could be exposed to contaminants if present in site groundwater or stormwater.

NARR Comments: Blasen & Blasen Lumber Corp. has operated at the site since 1978. Bobby H. Bigger Wood Turnings has also operated at the site since about 2003. Blasen & Blasen is a custom processor of specialized softwood products. The site has a sawmill and planning mill, and on-site steam drying kilns. Site operations include kiln drying, planning, resawing, edge gluing, finger jointing, and wood turning.

BLASEN & BLASEN LUMBER CORP (Continued) **1000641909**

Products include cornices, door surrounds, molding, wainscoting, stairs, stair parts, louvers, wood columns, logs, and sap. Bobby H. Bigger Wood Turning produces custom lathe-turned wood products, such as balusters and columns. Historic site operations appear to have included the manufacture of plywood, wooden tanks, wooden pipes, and other wood products. The site was first developed for National Tank & Pipe Co. in 1906. National Tank & Pipe Co. manufactured wooden tanks and wooden pipe from staves. M&M Wood Working began concurrently operating at the site in about 1925. M&M Wood Working manufactured doors and related building supplies, then later began manufacturing plywood. Simpson Timber Co. bought the site in 1956 and continued the previously-established plywood and tank manufacturing operations. Simpson Timber Co. subdivided its property in 1976, and sold the site to Blasen & Blasen.

NARR Comments: Further investigation is needed to determine if the site's stormwater, stormwater sediments, or groundwater are contaminated, as stormwater and groundwater likely discharge to Columbia Slough. Further investigation is also needed to determine if subsurface soils may be contaminated, and could represent a risk to site groundwater or future utiklity trench workers and construction workers.

Narrative:
NARR ID: 5729931
NARR Code: Contamination
Created By: Not reported
Created Date: 12/17/2002
Updated By: GWISTAR
Updated Date: 05/13/2013
Decode for NarcdID: Contamination
NARR Comments: (GMW 4/25/96) The facility used part of the site to landfill solid wastes until about 1972, and removed the landfill in 1988. Documented spills, some of which reached the Columbia Slough and may have caused soil and groundwater contamination, involved wastewaters and other liquids containing formaldehyde, phenol, sodium hydroxide, triethylamine, and alcohols. There was a release of methanol in 1983 from an underground pipeline on-site, and there are no records of any follow-up investigation. It is possible that chlorinated solvent releases occurred, since the facility has a history of using these compounds for degreasing, and low levels of TCE have been detected in wells on-site. (12/5/02 CWH) Suspected burial of drums of unknown contents underneath Tech Center. Discovery of soils contaminated with TPH and DDT/DDD/DDE along rail spur. (A. Coates, Sept. 2008) The Columbia Slough has received contaminants from spills at this facility.

NARR Comments: Many spills have occurred at this site, with 10 documented between 1976 and 1990. In addition, the facility formerly used a lagoon to store wastewater, and this could have been a source of subsurface contamination. Simpson also used several portions of the property to landfill solid wastes, and disposed of manganese dioxide (a by-product of permanganate treatment of resins) to the ground. (12/5/02) Updated evaluation found 22 spills between 1973 and 1998. In addition, data provided showed locations of landfills, DDT contamination at rail spur, and a wooden pipe with petroleum hydrocarbon contamination.

NARR Comments: (GMW 4/25/96) According to Simpson Timber Co., despite all the documented spills and releases of hazardous materials at this facility, the company has not conducted any subsurface investigations. Many of the materials reported to be released become

DYNEA OVERLAYS, INC. (Continued) **S103841493**

inert in the environment or biodegrade rapidly, leaving little or no residual impact. However, due to the size of the facility, the number of years it has been operating, and the wide range of chemicals that have been used, it is possible that areas of significant contamination exist at the site. Past practices have affected the Columbia Slough, and any source areas of contamination could cause ongoing migration of contaminants to the Slough. Site Assessment recommends a PA at this site to summarize historical operating practices and spills, focus on areas of potential contamination, evaluate pathways of concern, and perhaps sample several of the facility's industrial supply wells (7 on record). This site warrants a medium priority. (2/5/02 CWH/SAS) Additional spill and site contamination data, including verification of landfills, has raised this site's priority for further investigation to high. (12/16/02 JMA/VCP) Received Intent to Participate in DEQ's Voluntary Cleanup Program (VCP) in December 2002; facility placed on VCP waiting list. Facility completed XPA investgations in 2008.

NARR Comments: This site has a long history of activity within DEQ's WQ and AQ programs (and their predecessor agencies), beginning in the early 1960s. Early complaints involved smoke and noise, while later regulatory involvement focused on the facility's many spills and wastewater/solid waste treatment issues.

Incident Narrative: RESPONDED TO ABOVE ADDRESS AT REQUEST OF RESPONSIBLE PARTY. EMPLOYEE HAD USED ABSORBANT PADS TO WIPE UP SOME PHENOL FROM LEAKING FLEX TUBE FROM RXR CAN. EXCISE FROM PAIL CONTAINING STRONG POTASSIUM PERMANGENATE. EXPLOSIVE REACTION OCCURRED BURSTING 5 GALLONS CONTAINER AND INJURING EMPLOYEE. THIS HAPPENED BETWEEN 1200 AND 1300 HRS ACCORDING TO EMPLOYEES, MEANWHILE A SEPARATE 55 GALLON DRUM WITH APPROXIMATELY 16 # POTASSIUM AND 2O # WATER, ALSO CONTAMINATED WITH PHENOL, APPEARED TO BE REACTING. EMPLOYEES ATTEMPTED TO COOL CONTAINER. INITIAL TEMPERATURE REACHED 120 DEGREES FARENHEIT AND BY THE TIME HM 16 ARRIVED AT 2000 HRS , TEMPS HAD DROPPED TO 88 DEGREES. HM 16 CONSULTEDD WITH SUPPLIER OF POTASSIUM PERMANGENATE, CARUS CHEMICAL COMPANY AND WAS TOLD THAT FURTHER DILUTION AND COLLING OF CONTAINER WOULD BRING SOLUTION TO A SAFE LEVEL. HM 16 COOLED TO 72 DEGREES FARENHEIT AND BROUGHT PH TO APPROXIMATELY 9 AND RELEASED FACILITY TO REIDEL ENVIRONMENTAL FOR FURTHER CLEANUP.

Incident Narrative: Maintenance personnel were adjusting the burners in the ?Phenolic Treater?. A malfunction occurred which sent flames from a natural gas burner the wrong direction which ignited residual Phenol and Formaldehyde in some large ducting. The release of those burning chemicals was in the form of smoke only. No solid or liquid products were released for the area.

NARR Comments: [5/22/13 SAM/SA] Prior investigations in the late 1980s/early 1990s found metals, TPH and VOC contamination generally below human health risk based concentrations in site soils and groundwater(except for TCE/PCE which is found in groundwater area wide), but elevated from background concentrations. Sources of the elevated soils are unknown and the true nature and extent of contamination has not been adequately determined. Several spills have occurred on site since 1994 with no record of cleanup provided to DEQ. DEQ Site Assessment recommends the following activities be performed at the site to help clarify site risk and priority for further action. Based on the results of a DEQ site assessment prioritization scoring, the priority for further action is medium. Soils o Prior characterization of waste disposal piles (potential dump area found elevated concentrations of metals. SVOCs were never analyzed, even though PID readings were elevated. SVOCs and metals should be examined further in the waste disposal pile area. o Characterize the full magnitude, nature, and extent of contamination in subsurface soils in the backfilled retention pond. Prior work showed elevated concentrations of petroleum constituents. o Determine if spills were adequately cleaned up; particularly the 1994 diesel spill, 1997 unknown solvent spill and 2005 CCA spill. o Characterize areas where any historic Harbor Oil releases that may have migrated to the site, particularly if a change of land use is considered. Stormwater drainage for the site should be mapped to determine where runoff is directed after entry to the vegetated strip in center of the parking area s southern boundary. If stormwater is directed towards wetlands, additional sediment characterization and source control evaluation may be needed. Groundwater- the southern extent of PCE/TCE groundwater contamination present on the adjacent northern properties (Stockyards Commerce Center #5695) should be defined in the Bulk Transport area.

NARR Comments: Contaminants in site soils groundwater could represent a potential threat to aquatic life in the Columbia River, wildlife and aquatic life in nearby wetlands, and/or other users of groundwater and surface water in the immediate vicinity of the site. Water quality in the Columbia River is already impaired. The Columbia River is used for recreational and commercial fishing, as well as other recreational purposes. It also provides Critical Habitat for threatened and endangered fish species. The river and nearby wetlands also provide important habitat for other sensitive species such as protected migratory bird species, sensitive amphibian, reptile, and plant species, and food resources for sensitive aquatic and terrestrial species.

NARR Comments: [5/22/13 SAM/SA] The property was developed in the 1940 s as an on-site fertilizer yard that received manure produced at the nearby stockyards. J.W. Fertilizer, a commercial fertilizer and soil additive facility was operating on the eastern portion of the site during the 1970 s until 1990. Since about 1995, Bulk Transportation / DTI a chemical transport company uses the site as a satellite trucking terminal. Liquids, gases, chemicals, and hazardous materials are unloaded from rail cars and trucked to their final destination. Other services include product mixing, liquid bulk storage, tank containers, and warehousing. The western portion of the site is an undeveloped 6acre wetland

NARR Comments: Area around site has been extensively investigated and the past activity has not been evaluated as part of DEQ Cleanup program. As part of Columbia Slough Area-wide Discovery Project this site was noted due to the presense of soil borings found in Water Resources Department well log database. Site runoff or subsurface contamination could reach part of Columbia Slough or location wetlands via stormwater drainage system.

NARR Comments: The site was not connected to municipal stormsewers and municipal sanitary sewers until about 1971. It is unclear how wastewaters were disposed prior to 1971. The City of Portland has records of at least eight drywells at the site. At least seven were constructed between 1971 and 1986. It is not known if older drywells may also have been present at the site. Two of the site's stormwater catchbasins were plumbed to a pipeline that discharged directly to the slough in 1983. It is unclear if any of the site's other catchbasins also drain to the Columbia Slough. The site's historic cannery operations likely generated large volumes of wastewater. It is not known whether the cannery wastewaters were discharged to drywells, or piped directly to Columbia Slough.

NARR Comments: The site is an irregularly-shaped, 9.78 acre tract comprised of two adjoining tax lots: Tax Lot 400 of Township 1 North / Range 1 East Section 9A [T1S/R1E-S9A], and Tax Lot 100 of T1N/R1E-S9AC, Willamette Meridian. The entire site is capped with buildings and asphalt paving, and is completely fenced. Vehicle access is possible at gates near each corner of the site: from N Columbia Boulevard, at the southwest corner of the site; from beneath N Denver Avenue and an elevated Tri-Met Light Rail track, at the southeast corner of the site, from another Familian Northwest / Ferguson Enterprises owned property; from N Denver Avenue, at the northeast corner of the site; and from the neighboring Blasen & Blasen sawmill, near the northwest

FERGUSON ENTERPRISES INC #3001 (Continued) **S111249497**

corner of the site. Except for sunken loading ramps at either end of the Tax Lot 100 building, and a sunken, outdoor loading area near the northern end of Tax Lot 300, southwest of the Oregon Lumber Company warehouse, the main body of the site is flat and relatively level, with elevations ranging between about 41- and 44 feet above mean sea level [MSL]. A northwestern projection of the property, west of the Oregon Lumber Company warehouse, slopes downward toward the Columbia Slough, with elevations ranging between about 36- and 22 feet MSL.

Decode for NarcdID: Project Issues Summary
NARR Comments: The site has a long industrial history dating back to about 1912, although the site was not connected to municipal stormsewers and sanitary sewers until about 1971. The site is known to have had a number of drywells, and at least one pipeline that discharged directly to Columbia Slough. Several of the site's historic industrial operations, such as Montag Stove and Furnace Works, and Loomis Chemical Company, appear likely to have handled hazardous substances. it is not known if hazardous substance releases occurred at the site. The site's historic cannery operations likely generated large volumes of wastewater. it is not known how cannery watewaters were disposed. It is not known how past industrial operations were heated. Petroleum could have been used as a heating source. Near the site, Columbia Slough sediments are contaminated with elevated concentrations of a variety of hazardous substances. Many are similar to hazardous substances that may have been handled on-site. A subsurface investigation is needed to determine if the site's subsurface soils and/or groundwater may be contaminated. Further investigation of the site's stormwater catchbasins is needed to determine if the catchbasing may contain contaminated sediments, or may release stormwater to the site's subsurface soils and groundwater. Additional investigation is needed to determine if the site may still have drainage pipelines that discharge directly to the slough, and if drywells are still present at the site. Potential groundwater contamination would likely discharge to Columbia Slough. Potential subsurface soil contamination could represent a threat to groundwater, to future utility trench workers, or to future construction workers.

NARR Comments: The Familian NW-2121 N Columbia site is located in a heavy industrial area of North Portland s Kenton neighborhood, along the north side of N Columbia Boulevard, + mile west of Interstate Highway 5 [I-5] (see Figures 1 through 3). A Union Pacific Railroad [UPRR] right-of-way lies between the site s southern boundary and N Columbia Boulevard. N Denver Avenue, a viaduct, lies along the site s eastern property line. The Columbia Slough forms the western third of the site s northern boundary, while Trillium Lumber Company, a dimensional hardwood milling operation owned by Trillium Lumber Company, and warehousing owned by Oregon Lumber Company, lie along the eastern two-thirds of the site s northern boundary. The site is bordered on the west by a sawmill operated by Blasen & Blasen Lumber Corporation (ECSI #4140). Pendleton Woolen Mills is located south of the site, across N Columbia Boulevard.

NARR Comments: DEQ has no information to indicate that hazardous substances have been released at the site. However, due to the site's long history of industrial use, and the types of hazardous substances likely handled on site, hazardous substance releases are a possibility. The site has operated since about 1912, but was not connected municipal sanitary and stormsewers until about 1971. DEQ has no information about disposal of site wastewaters and stormwater prior to 1971. Wastes could have been discharged to on-site drywells or piped directly to the Columbia Slough. At least eight drywells were constructed at the site between 1971 and 1986. Two of the site's stormwater catchbasins were piped directly to the slough in 1983. Historic site operations could have directly discharged hazardous substances to the Columbia Slough via pipeline. Wastes might also have been discharged to drywells which could have contaminated site groundwater, which likely discharges to the slough. Site soils could have been contaminated through historic hazardous substance releases to soils. It is not known if hazardous substances may currently be present in the site's

FERGUSON ENTERPRISES INC #3001 (Continued) **S111249497**

stormwater runoff, or whether the site's stormwater catchbasins may leak stormwater to subsurface soils.

NARR Comments: Oreon Water Resources Department [OWRD] has records for a hollow stem auger boring at the site in 1998, and construction of a City of Portland Bureau of Environmental Services [BES] monitoring well at the southeast corner of the site in 2000, but no information is available about potential remedial actions at the site. The 1998 hollow stem auger boring was evidently associated with a soil penetration study associated with the construction of building footings. The BES monitoring well was probably installed as part of a Tri-Met Light Rail construction project along N Denver Avenue.

Decode for NarcdID: Water Use (Current/Reasonably Likely)
NARR Comments: The nearest documented drinking water well is located at East Delta Park, about 3/4 mile northeast of the site. At least four industrial use wells are located on the adjacent Blasen & Blasen sawmill site to the west. At least one more industrial well is located at Dynea Overlays, on the west edge of the Blasen & Blasen sawmill. A well in Kenton Municipal Park is located about 1,400 feet to the southwest and upgradient from the site, is likely used for lawn irrigation.

Decode for NarcdID: Site History
NARR Comments: Site industrial operations are believed to have begun in 1912. California Packing Corporation, and later Oregon Packing Company, operated a cannery on the western half of the site through at least 1930. Montag Stove & Furnace Works operated on the southeastern quarter of the site through at least 1955. Kenton Station, a Union Pacific Railroad Company station, evidently operated somewhere on the site between about 1935 and 1940. By 1950, the stove and furnace works operations had expanded onto the western half of the site. The stove and furnace works operations included foundry, smelting, chipping, grinding, painting, and electroplating operations on the

FERGUSON ENTERPRISES INC #3001 (Continued) **S111249497**

southeastern portion of the site, and sheetmetal work, metal cleaning, and painting operations on the western portion of the site. Loomis Chemical Company operated at the southeast corner of the site from about 1970 to 1978. DEQ has no details about Loomis Chemical's on-site operations. However, after relocating to a new facility 1/2 mile east of the subject site (955 N Columbia Blvd; PC Development, Inc.; ECSI #143) in 1979, Loomis Chemical stored, repackaged, and distributed inorganic acids, caustics, cyanides, formaldehyde, MEK, and xylene. Loomis Chemical is believed to have been responsible for contaminating soils and groundwater at its new site (955 N Columbia Blvd.) with trichloroethylene. Familian Northwest was operating a plumbing supply distribution facility on the western half of the site by at least 1971. Sometime after 1978, it expanded its operations onto the eastern half of the site. In 2003, Familian Northwest merged with Ferguson Enterprises to become Ferguson Enterprises, Inc. The entire site is currently operated as a Ferguson Enterprises plumbing supply distribution center.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: Columbia Slough sediments in the immediate vicinity of the site contain elevated concentrations of a large variety of hazardous substances. It is not known if the site has contributed, or continues to contribute, to the slough's sediment contamination. The site has a long industrial history that likely included handling of hazardous substances. ALthough DEQ is aware of no hazardous substance releases at the site, furhter investigation is needed to determine whether site soils and groundwater have been contaminated. Although site industrial operations began in about 1912, the site was not connected to municipal sanitary sewers and stormsewers until about 1971. As many as eight drywells and a stormwater pipeline to Columbia Slough appear to have been added to the site after 1971. There is no indication of how site wastewaters and stormwater were disposed prior to 1971. Further investigation is needed to determine: if drywells and drainage pipelines to the slough are still present at the site; if the site's subsurface soils and groundwater may be contaminated with hazardous substances; if the site's current stormwater catchbasins may contain hazardous substance contaminated sediments; and if the site's stormwater catchbasins may be leaking to subsurface soils. Subsurface soil contamination could represent a potential threat groundwater quality, to future utility trench workers, or to future construction workers.

NARR Comments: RP moving aggressively to remove free product from ground and define extent of plume. 10/20/93 - RP is continuing independent cleanup. (10/25/93 GMW/SAS) Further action letter sent. (11/10/97 LSK) Site re-evaluated as part of review of all sites within the Columbia Slough Study Area. PAE recommended, under medium priority. (4/13/99 ACV/VCP) RP entered the Voluntary Cleanup Program in January 1999 to obtain DEQ review of existing file information. RP has conducted independent groundwater investigation and product recovery. DEQ file memo expected in April 1999. (1/7/00 ACV/VCP) VCP coordinated review of all UST and cleanup issues in 1999, and issued an NFA for environmental issues (with UST concurrence) in January 2000.

Environmental Interest/Information System:
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

mperature of The Hazardous Substance Code: 4
perature Description: Not reported
perature of The Hazardous Substance Code: Not reported
ays Hazardous Substance On Site During Year: 365
The Substance Protected A Trade Secret: False
ription Of The Max Qnty Code: 500-999
ription Of The Avg Qnty Code: 200-499
Most Hazardous Ingridient: ETHYLENE GLYCOL
ted Nations/north America 4 Digit Class Number: 3082
azard Rank: 2
Ingredient: Not reported
ubstance Pure: False
bstance Mix: True
irst Hazardous Class Code For Chemical: Acute Health Hazard
nd Hazardous Class Code For Chemical: Not reported
Hazardous Class Code For Chemical: Not reported
azard Class 1 Of The Chemical: 6.3
rd Class 2 Of The Chemical: Not reported
rd Class 3 Of The Chemical: Not reported

Additional Chemical:

hemical Is A Toxic 313 Chemical: N
Pesticide Registration Number: Not reported
ontains 112R: N
ontains EHS: N
ertilizer: N
esticide: N
ontains 313: Y

NARR Comments: Stormwater evaluation work plan submitted September 7, 2012. DEQ comments provided 9/28/12. Response to comments and revised work plan submitted October 25, 2012. DEQ approval with comment provided November 16, 2012. Interim stormwater sampling report submitted March 2014. PCBs, metals, and PAHs exceeded stormwater screening levels. Follow-up sampling of stormwater solids and soil surrounding catch basins was conducted in April 2014. Elevated concentrations of PCBs were detected in storm solids and soil surrounding the impacted catch basin. Additional sampling conducted in June 2014 identified elevated concentrations of PCBs in solids collected adjacent to the northern portion of the main stormwater line running through the center of the facility. Additional samples collected in August 2014 to identify sources of the PCBs indicated caulk present in joints of a concrete pad present on the site prior to Ferguson's operations contained percent concentrations of PCBs. Adjacent samples of the concrete and soil/gravel samples collected at several locations in the northern portion of the facility also contained PCBs at elevated concentrations. Ferguson conducted a thorough sweeping of the paved portions of the facility following sampling, covered the cement pad, and restricted worker access to this area. Additional characterization of the extent of contamination was conducted in September and a removal action plan developed and approved by DEQ in January 2015 and EPA in April 2015. Removal conducted April - August 2015. Chlordane identified at elevated concentrations in some areas and additional sampling and removal of impacted material conducted Fall 2015. Removal reports for both chlordane and PCB contaminated soil were submitted in April and August 2016, respectively. DEQ approved the reports in September 2016. Stormwater drainage system redesigned Fall 2015/Winter 2016. Report on stormwater system improvements submitted Nov 2016 and approved. Stormwater source control evaluation report submitted July 2017 and approved. Consent Judgment providing liability release for site contribution to contamination in Slough sediment prepared for public review in July 2017. Consent Judgment filed with Court September 2017. No Further Action for Stormwater Source Control proposed August 2017. Public comment period held in September. No comments received. No Further Action for Stormwater Source Control issued October 3, 2017.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: [Jan. 2016] Site stormwater discharges to a portion of the Slough with contaminated sediments warranting cleanup. Some stormwater enters a line that is shared with City street discharge and discharge from the Pacific Meat (ECSI #145) facilty. The company completed a stormwater source control evaluation to assess the site's contributing to contamination encountered at the outfall.

 PCBs in stormwater lead to discovery of elevated PCBs in caulking in joints of a historical concrete pad on site. Removal of pad and impacted soil conducted in 2015. Stormwater drainage system improvements completed 2015/16. Company agreed to settle liability for the site's contribution to contaminated sediment in the Slough by paying into DEQ's settlement account. A Consent Judgment was filed with the court in September 2017. DEQ issued a No Further Action determination for Stormwater Source Control at the site on October 3, 2017, following a public comment period in September.

Updated Date: 05/31/2019
Decode for NarcdID: General Site Description
NARR Comments: Historically, the Property was undeveloped marshland until approximately 1940. Between approximately 1940 and 1946, the Property was filled for development as a horse racing facility. On May 1, 2019, DEQ recieved a request to enter into a Prospective Purchaser Agreement. The prospective purchaser will develop the site for industrial use, including up to six industrial buildings with associated improvements. Substantial public benefits may include, but are not limited to, the following: The generation of resources and funding to complete remedial actions at theProperty consistent with the DEQ NFA for DEQ LUST File No. 26-04-1266. The generation of substantial funding to DEQ s Columbia Slough Cleanup Fund to further assess sediment impacts from industrial sources along the Columbia Slough, or the performance by Respondent of an equivalent baseline assessment. Additional job creation in connection with redevelopment and reuse of the property.

NARR Comments: In 2004 an underground storage tank and contaminated soil was removed from the site. Some residual contaminated soil was identified below a stable and could not be removed. Based on the site s industrial zoning and extent of contamination, DEQ concluded that the contamination remaining on the property did not present an unacceptable risk. The site received a conditional No Further Action from DEQ Leaking Underground Storage Tank Program. (DEQ LUST File No. 26-04-1266) Information contained in the property deed indicates that the southern boundary of the site extends to the centerline of the Columbia Slough. Industrial and urban developments along the Columbia Slough have resulted in accumulation of various contaminants in slough sediment, some of which bioaccumulate and have been detected in fish tissue. In March 2019 a Phase II Environmental Site Assessment was performed on the upland. The Phase II ESA consisted of collecting soil and groundwatersamples from 18 direct-push borings. Boring were advanced to depths ranging from 3 to 10 feet bgs. Representative soil and shallow groundwater samples were analyzed for RCRA 8 metals, PAHS, VOCs, PCBs, GRO, DRO and ORO. With exception of arsenic, all other chemical constituents were either not detected above the laboratory reporting limit or were detected at concentrations below industrial and construction worker risk based concentrations. On May 1, 2019, DEQ recieved a request to enter into a Prospective Purchaser Agreement. The prospective purchaser will

VERIZON WIRELESS (Continued) **S104900043**

develop the site for industrial use, including up to six industrial buildings with associated improvements. As a part of the Prospective Purchaser Agreement, the applicant agrees to perform the following: Conduct additional investigation and if needed, cleanup related to the former underground storage tank Perform a Columbia Slough Upland Source Control Evaluation. All stormwater system modifications or improvements shall be in accordance with the City of Portland Stormwater Manual as applicable. Abandon production water well or upgrade well to modern standards Perform pesticide sampling in upland soils Prepare an Environmental Media Management Plan for future construction activities Perform baseline sediment assessment of Columbia Slough sediments near the Portland Meadows facility or provide an equivalent contribution to the Columbia Slough Cleanup Fund. [9/14/2020 PPA/SAM] Prologis entered into a Prospective Purchaser Agreement with DEQ in August 2019. Environmental Medial Management Plan approved by DEQ in June 2020. Construction occuring summer 2020.

NARR Comments: Between 1940 and 1946 a horse racing complex was constructed at the Portland Meadows site. Additional structures related to this use were added over time. Currently the area south of N. Schmeer Road is used for trailer storage and sand, gravel and concrete recycling and stockpiling.

NARR ID: 5733859
NARR Code: Contamination
Created By: Not reported
Created Date: 12/17/2002
Updated By: GWISTAR
Updated Date: 06/27/2003
Decode for NarcdID: Contamination
NARR Comments: (10/9/1996 DJH/VCS) Site owner Peninsula Terminal Company contacted DEQ in October 1993 regarding their intent to participate in the Voluntary Cleanup Program, and signed a Letter Agreement with DEQ in March 1994 requesting that DEQ review an investigative report prepared for the site by Braun Intertec. There appear to have been a number of small releases of chemicals during off-loading activities at the site. An underground storage tank formerly located near the Locomotive House, and possibly used to store waste oil, was later removed (exact date unknown). Waste oil in the past has been released from the Locomotive House via a drain line.

NARR ID: 5733860

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: The site is located in an industrial area of north Portland. However, wetlands and a golf course are located a short distance south of the site. Shallow groundwater beneath the site contains low levels of chlorinated solvents, the source of which appears to be off-site. Shallow groundwater is not known to be used for drinking. Access to the site is restricted.

Updated Date: 12/17/2002
Decode for NarcdID: Remedial Action
NARR Comments: (10/9/1996 DJH/VCS) Site owner signed Letter Agreement with DEQ's Voluntary Cleanup Program to review investigation and cleanup documents in March 1994. File review memo requesting additional soil and groundwater sampling at the site was completed in June 1994. DEQ-requested soil and groundwater sampling was completed at the site in August 1995. Based on the results of this work, additional sampling was completed in the transloading area in 1996. Contaminants detected in site soil were below industrial cleanup standards presented in OAR 340-122-045, and no significant impacts to groundwater were observed. DEQ therefore determined on 10/9/96 that no further action was required for the site under an industrial cleanup scenario.

Decode for NarcdID: Health Threats
NARR Comments: Volatile and semi-volatile compounds released to soil at the site, but at concentrations below DEQ soil cleanup levels (OAR 340-122-045) for industrial sites. As long as the site remains in industrial use, soil contamination should pose no significant exposure risks to humans.

Decode for NarcdID: Site History
NARR Comments: The site has been used since at least the early 1900s as a train car switching yard, and for the offloading of materials including coal, cattle, and chemicals. The site is currently used mainly as a switching yard and for some offloading of chemical materials such as plastics, petroleum products, and solvents.

NARR Comments: Site groundwater contains metals (arsenic, lead, barium, cadmium, and chromium). PCE and TCE were detected in groundwater within the site s southern property line these contaminants could be associated with a recognized areawide groundwater contamination plume. Three metals (arsenic, lead, and chromium) were detected in the site s shallow soils at concentrations that appear well above local background concentrations, and could represent a potential threat to groundwater, although the presence of these metals could be attributable to site fill. Low to moderate concentrations of oil have been detected in site soils at several locations, although no PAHs have been detected. There is no indication that residual Bunker C fuel contamination in subsurface soils west of Building 9 was ever removed, or that the contaminated soils in this area were ever analyzed for PAHs or toxic metals. Catch basin sediment collected in 2013 were above occupational risk based concentrations for lead and PCBs.

NARR Comments:	The site is comprised of two adjoining tax lots totaling 14.20 acres, and is partially fenced along its southern and western property lines. Vehicle access is possible both from N Columbia Boulevard and N Denver Avenue. Most of the site is covered either by buildings or asphalt paving, although the northeastern quarter of the site has numerous areas with exposed soil or gravel surfaces. Six buildings are currently located on the southern one-third to one-half of the site s two tax lots. A 75- to 180 foot wide strip of vegetation is present along the strongly sloped southern bank of the Columbia Slough; as much as one-fourth of the eastern tax lot (Tax Lot 200) is unpaved. Site terrain is uneven, with surface elevations ranging from about 48 feet above mean sea level [MSL] west of the site s former Fabrication Shop and north of Building 6, to a surface water level of about 8 feet MSL on the Columbia Slough. South of the site s former Fabrication Shop, the land surface slopes downward to the south-southeast; to the east of the Fabrication Shop, the land surface slopes strongly downward to the east; northwest of the Fabrication Shop, the land surface slopes strongly downward to the north.

Decode for NarcdID: Land Use (Current/Reasonably Likely)
NARR Comments: The site is located within a narrow strip of land between the Columbia Slough and N Columbia Boulevard that is zoned for heavy industry. It appears unlikely that land use at the site will change in the forseeable future. Property use south of N Columbia Boulevard is a mix of general industry, storefront commercial, low to high density residential, and open space. Properties immediately north of Columbia Slough are zoned for general industry and open space. The nearest residences are located 250- to 500 feet south of the subject site. Kenton Park is located 1,000 feet southwest of the site. Portland International Raceway is located across Columbia Slough, 375 feet west-northwest of the site. Portland Meadows horse racing facility also lies across the slough, 1,100 feet east-northeast of the site. The nearest school, Kenton Elementary School, is located 0.50 mile south of the site. Pope John XXIII School is located 0.53 mile to the southwest. Peninsula Elementary School is located 0.71 mile west-southwest of the site. Heron Lakes Golf Club lies along the north bank of Columbia Slough, 1.0 mile west-northwest of the site, on the downstream edge of Portland International Raceway.

NARR Comments: Site contaminanats in soils represent potential human health threats through direct contact, incidental ingestion, or inhalation. They may also represent potential ecological threats to fish and protected migratory waterfowl in Columbia Slough. Site groundwater may discharge to Columbia Slough, so groundwater contaminants could represent a threat to aquatic life, migratory water fowl, or recreational users of the slough. There are also a number of industrial wells within 1/4 mile of the site. Groundwater contaminants could affect industrial water use or represent an exposure threat through direct human contact. In approximately 2011, a 3ft berm was constructed in the northeast quater of the site, prior to this There were no stormwater runoff controls. Much the area lies within the slough's 100-year flood zone. Prior to 2015, Stormwater runoff from the southern portion of the site was directed to a brick lined manhole and to the municipal stormsewer. Stormwater currently infiltrates on site, with a majorty of stormwater directed towards a treatment system and discharge into a DEQ rule authorized UIC.

Decode for NarcdID: Remedial Action
NARR Comments: [9/26/11 SAM/ICP] Bob's entered into a voluntary agreement with DEQ in August 2011 to assess stormwater and source control measures for the property. A draft stormwater source control evaluation work plan was submitted to DEQ on Sept 23, 2011. DEQ is reviewing work plan. [2/27/12 SAM/ICP] Source Control Evaluation work plan approved by DEQ 1/20/12. [10/12/12 SAM/ICP] A dye study indicated stormwater from the SW portion of the facility drains to the city system(outfall 61) and will require a stormwater permit. An infiltration pond near the center of the property and a berm has been constructed the NE corner of the site to control stormwater, prior to DEQ cleanup involvement. [1/16/14 SAM/ICP] Bob's Metals is evaluating stormwater management on site, which will consider infiltration on site. [12/5/14 SAM/ICP] Construction for stormwater improvements began fall of 2014. Stormwater from a majority of the site stormwater will be re-routed to a Wavelonics treatment system before being discharged to a UIC(#14903). [11/6/15 SAM/VCP] Stormwater improvements completed in late 2014. Currently no stormwater discharges off site and the NPDES 1200-COLS permit was terminated December 2014. The current stormwater treatment and Underground Injection Control (UIC) system appear to functioning as designed. [4/7/17 SAM/VCP] DEQ has concluded that the stormwater source control measures have been implemented as summarized in the staff report and documented in the August 2016 Final Source Control Evaluation Report. DEQ s Source Control no further action determination is based on completion of the following actions which are described in more detail in WebDocs: Eliminating off-site discharges of stormwater to the Columbia Slough by decommissioning drainage basins which previously drained to City of Portland Outfall 61 and the eastern swale. Replumbing and grading the site such that stormwater runoff from a majority of the site is

BOB'S METALS, INC. (Continued) **S109493936**

treated via electro-coagulation, settling and clarification before discharge into a DEQ rule authorized Underground Injection Control system. The system and detention area will accommodate up to a 100-year storm event. Closing the former onsite infiltration pond, which included removal of pond sediments, characterization of groundwater, soil and sediments, and backfilling with asphalt. To support a full no further action additonal work is required including: Evaluation of potential upland risk to site workers; including potential sources and exposure pathways for contaminants. An evaluation of releases from historic Basin 4 to the swale east A plan for addressing historical releases of contaminants to the Columbia Slough [10/29/18 VCP/SAM] In 2018, Bob s Metals completed an evaluation of upland exposure pathways including upland site soils and the eastern ravine. An Easement and Equitable Servitude is required to ensure asphalt pavement remains across documented portions of the site to restrict occupational contact with sub-surface soils and guarantee drainage basin 2 stormwater does not discharge to the Columbia Slough. Lead concentrations exceed occupational risk-based concentrations in eastern ravine soils; institutional controls will be implemented as a part of the neighboring Blasen (ECSI#3785) Record of Decision. Bob s Metals may be liable for contributing to contamination in Columbia Slough sediment and has proposed to settle to address potential historical releases. DEQ is considering a $270,000 sediment settlement. DEQ proposes to issue a conditional No Further Action for the site considering the 2016 DEQ Source Control Decision, upland pathway evaluation and institutional controls, and Columbia Slough settlement to address potential historical releases to the Columbia Slough. [1/2/19 SAM/ICP] DEQ issued a conditional No Further Action on 12/11/18. A Consent Judgement was signed by parties 12/20/19 and awaiting confirmation from Multnomah County Court. The first settlement installment ($27,000) was recieved by DEQ on Dec 31, 2018. A Certificate of Completion will be issued once the terms of the Consent Judgement are completed.

Updated Date: 01/21/2009
Decode for NarcdID: Water Use (Current/Reasonably Likely)
NARR Comments: GROUNDWATER: Oregon Water Resources Department [OWRD] and the U.S. Geological Survey [USGS] have records for 22 industrial wells, 5 irrigation wells, 5 domestic-use wells, 2 group domestic wells, and 1 well of unknown use within about one mile of the site. It is not known if other, unregistered wells may also be present, or if all of the recorded wells are still in use. Ten of the wells, all industrial-use wells, are located within about 1/4 mile of the site. All but one are located west or southwest of the site. The nearest domestic-use wells is located at City of Portland s Delta Park, about 3/4 mile north-northeast of the site. The Delta Park well has a Certified Water Right. Water use from a well at Portland Meadows Horse Racing Track, 5/8 mile east-northeast of the site, is unknown. The nearest irrigation wells are located at Kenton Park, 1/4 mile southwest of the site, and at Portland International Raceway, 3/8 mile northwest of the site. SURFACE WATER: Columbia Slough surface water provides important habitat for trout, warmwater gamefish, and migratory waterfowl. The slough is also used for recreational canoeing and kayaking. Individuals are known to use the slough for recreational fishing, although the Oregon Health Division has issued a Fish Consumption Advisory cautioning against consumption of fish caught from the slough because of elevated fish tissue concentrations of PCBs. The lower 3.5- to 5.5 miles of the Columbia Slough also provides important rearing and migration habitat for sensitive salmonid species, including Lower Columbia River [LCR] coho salmon, LCR fall Chinook salmon, and LCR winter steelhead trout. All three fish are federally-listed Threatened Species; coho salmon is a state-listed Endangered Species. The National Marine and Fisheries Service [NMFS] has designated the lower 5.3 miles of the Columbia Slough (1.3 miles downstream from the subject site) as Critical Habitat for LCR Chinook salmon. The lower 4.3 miles (2.3 miles downstream from the site), has also been designated as Critical Habitat for LCR steelhead trout.

Updated Date: 01/21/2009
Decode for NarcdID: Site History
NARR Comments: MDRI Properties, LLC, acquired the site from Familian Northwest, Inc. (since 2003, a division of Ferguson Enterprises, Inc. of Virginia) in August 2007. Robert Weinstein, the President of Bob s Metals, Inc., is also a member of MDRI Properties, LLC. Although Bob s Metals has been in business for at least 20 years, the company has only operated at the site since November 2007. The business previously operated at the site of Zidell Marine Corp. (Zidell Waterfront Property; 3121 SW Moody Ave.; ECSI #689). Buildings 10 and 11, at the southeast corner of the Bob s Metals recycling facility, have been leased to Kleen Blast since late 2007 or early 2008. Familian Northwest, Inc., a plumbing supply distributor, acquired the property from Timberline Forest Products, Ltd. (Timberline of Portland, Inc.) in 1993, and generally used the site for outdoor storage of metal pipe, coated

BOB'S METALS, INC. (Continued) **S109493936**

metal pipe, and PVC pipe. The Fabrication Shop was used for pipe cutting and threading. Building 11 was used for fork lift repairs and as a paint shop. Building 10 was originally constructed in 1981 as a vehicle maintenance shop. Timberline Forest Products acquired the site in 1988 from Nicolai Morgan, the successor of the Nicolai Company. It is not known if, or how long, Timberline may actually have operated at the site. Nicolai Company, previously known as Nicolai Door Manufacturing Co. (1950-1965), and Nicolai Door Co. (1930), operated a planning mill, moulding fabrication shop, and drying kilns at the site from sometime before 1924 until 1986 . Buildings 11 is the historic location of Durable Roofing Manufacturing Co. (prior to 1924), Columbia Cabinet & Fixture Co. (1950), and Standard Pail Co. (1950-64), a pail reconditioning operation. Durable Roofing Manufacturing Co. operated a tar oven in the northwest addition of Building 11. Columbia Cabinet & Fixture Co. had a paint shop within the southern extension of Building 11, and a paint factory within the main portion of Building 11. The northern portion of the property was used for agricultural purposes through at least 1955. A hog farm occupied the northeast quarter of Tax Lot 200 in the 1940 s, while several residential buildings were located along the west central portion of the tax lot. The northern portion of the site was overgrown with dense vegetation in 1966. Aerial photograph suggest that fill may have been added to this portion of the property in 1972-1980.

NARR Comments: The site consists of an old single story wood frame building. Most of the site structures were removed during 1990 - 1992. In 1978-79, the site was occupied by two businesses: Northwest Cast Metal Products, and Universal Silver Company. Both businesses are thought to have been owned and operated by Peter Haney and Harold Matthews. Peter Haney performed both metal smelting and transformer salvaging operations, possibly using oil from the transformers to fuel the smelters, or burning PCB-containing oil during transformer salvaging operations; therefore, dioxins and dibenzofurans (PCB combustion products) may be on-site. From 1983-84, Dental Alloys Exchange, a company that recovered metals from dental works, operated at the site. This company may also have been operated by Haney and Matthews. There are reportedly two inactive fuel USTs (1000 gal each - contents unknown) and a gasoline pump on-site. There may be heavy metals and acids on-site due to salvage and reclaiming activities. Mr. Pringle has indicated that he has documents demonstrating that PCB and chlorinated solvent contaminated soils and rubble were present at the site. He further indicated that a quantity of PCB-contaminated material was sent to the Arlington TSD facility, and that other contaminated soils may have been stockpiled, or dumped, along the Columbia River. [CWH/CU&ER 4/3/08] In October of 2005, Kleinfelder completed a Phase II assessment, funded by the City of Portland's Brownfields Program. The field work, performed in May of 2005, included sampling of near-surface soils (0.5 - 5.5 feet below ground surface) and two deep samples (10' bgs) near a former UST location. Soils were sampled in six areas of the site (see Figure 3 of Kleinfelder report), at 23 points, for a total of 25 samples [NOTE: Two of samples were collected to two separate depths] . There was a detection of 4,830 ppm diesel in one sample and both PCB1242 & 1260 in another sample. For both samples, a deeper soil sample was found to be non-detect. Two separate groundwater grab samples (from boreholes) from two separated locations detected oil-range petroleum hydrocarbons. [10/12/12 SAM/ICP] Multi-incremental sample of surface soils found concentrations of PCBs and metals above occupational risk based concentrations. Concentrations decreased with depth(3ft) generally to below occupational RBCs.

NARR Comments: Northwest Cast Metal Products was known to have buried scrap metal at its North Endicott site (ECSI #1134; also Malarkey Roofing, ECSI #690). There is also evidence that the company discharged hazardous substances (PCBs, toxic metals) to storm sewers at a third site (Pacific Meat Company site, ECSI #145). Similar practices may have occurred at this site (N Calvert Ave.). A frontage road to the north of and parallel to Columbia Blvd., was constructed in about 1991. A small portion of the southern end of the former Northwest Cast Metal Products site was condemned at that time for highway right-of-way. Soil analyses at that time reportedly indicated the presence of PCBs and chlorinated hydrocarbons. Current site owner Eugene Pringle claims that some soils were removed and sent to the Arlington HW Disposal site, while some was simply stockpiled along the Columbia River. The site reportedly also has two 1000-gallon fuel USTs that have been inactive since 1974. The tanks, according to Mr. Pringle, are being decommissioned in place by backfilling with sand.

NARR Comments: Northwest Cast Metal Products and Universal Silver operated in a 1935-era one-story wood-frame building on the west side of N Calvert Avenue, between N Newark Street and Frontage Road. The central 2/3 of this structure was removed between 1990 - 1992. The site had a gasoline dispenser and two fuel USTs near the north end of the block, just south of a structure at the SW intersection of N Calvert and N Newark. This structure was destroyed by a fire in 2001, and has been razed. One small building was also removed at the NW intersection of N Calvert and Frontage Road sometime after 2001 and before 2009. A Champion Oil bulk storage facility lies along the SE portion of N Calvert, and a trucking firm (Blue Line Transport) occupies the NE portion of N Calvert. Two food-processing plants (Happy Crab Seafood

NW CAST/UNIVERSAL SILVER (Continued) **S109843267**

and Doug Bjerke Food Service) lie to the north of Newark Avenue, between the Northwest Cast Metal Products site and the Columbia Slough. The Pacific Meat Company site (another former Northwest Cast Metal Products site) is located less than 200 yards NE of this site (NE of the intersection of Burrage Ave. and Newark St.).

Updated Date: 12/17/2002
Decode for NarcdID: Project Issues Summary
NARR Comments: Current site owner, Eugene Pringle, Jr., claims that laboratory data indicates that PCBs and chlorinated hydrocarbons have been detected at the site. There is no data to indicate that hazardous-substance releases (such as other organic contaminants, toxic metals, dioxins, dibenzofurans) have occurred at this site. However, releases occurred at three other North Portland sites where Peter O. Haney conducted similar operations during the subsequent six years. Cleanups have been conducted at two of those other sites, and a cleanup has also been recommended for the third site. Contamination at the three sites has been attributed both to spills and on-site disposals of hazardous substances. Since operations at the subject site appear to be no different than those at the three contaminated sites, the site should be investigated for potential spills and on-site disposals of PCBs, chlorinated hydrocarbons, other organic solvents, toxic metals, cyanide, heavy petroleum, PAHs, dioxins, and hydrofurans.

NARR Comments: There is currently no data to indicate how releases occurred at this site. Hazardous substance releases that have occurred at other sites where Peter O. Haney conducted similar operations have been attributed to accidental spills, leaking drums, incineration of PCB-containing oils, and disposals to storm sewers. Burial of metal wastes occurred at one of the sites. This site also has an on-site septic system and two inactive, 1000-gallon fuel USTs, which could have been used for hazardous waste disposal.

Decode for NarcdID: Media Contamination
NARR Comments: (4/8/99 MDK/SRP) Results of soil sampling conducted by DEQ in January 1998 indicate release has occurred to site soil and several metals exceed human health exposure, groundwater protection and aquatic criteria. PAHs and PCBs also exceed human health and groundwater protection criteria. Neither groundwater nor deeper soil has been investigated. Contamination in groundwater and Columbia Slough sediments are potential concerns. At nearby sites where Peter O. Haney conducted similar operations, contamination was found in surface soils, subsurface soils, groundwater, settling pond sediments, slough sediments, on asphalt surfaces, and on the inner surface of buildings where burning occurred.

NARR Comments: The site is undeveloped and unpaved and located in an industrial area 1000 feet south of the Columbia Slough. Residential areas exist two blocks south of the site, and domestic wells exist within 0.5 and 1.5 miles of the site. Municipal/community drinking water supply wells are located within 1.5 and 2 miles of the site, although on the opposite side of Columbia Slough. A food processor's industrial well is located within 200 yards of the site. Two food-processing firms are located between the site and the Columbia Slough. Sediment samples in the South Slough show high levels of chromium. (7/3/03 MDK/C&ER) Storm drains along the southern margin of the site drain in storm water from the unpaved site several blocks to discharge into the Slough.

Decode for NarcdID: Remedial Action
NARR Comments: DEQ performed a federal Preliminary Assessment (PA) on the site for EPA in 1987. DEQ recommended that the PA be followed up with a Site Investigation (SI). EPA, however, decided that no further federal action was necessary, and referred the site back to the state. A DEQ PAE was completed 5/8/96, which recommended an XPA for the site. Further investigation is needed to determine the extent of soil PCB and chlorinated hydrocarbon contamination, and if releases of other hazardous substances (such as petroleum, PAHs, other organic contaminants, toxic metals, cyanide, dioxins, or dibenzofurans) occurred at the site. PCB and chlorinated hydrocarbon contaminated soils have reportedly been removed at the site's southern end. (8/19/97/LSK/SAS) Site reevaluated as part of review of all sites within the Columbia Slough Study Area. (7/20/98 MDK/SRP) Site assigned to Site Response in May 1997. During November 1997, large buildings on SE corner of property demolished without permit. DEQ conducted sampling of surface soil in January 1998 under county court order. Soil sampling report expected to be completed in September 1998. (11/4/98 MDK/SRP) Site sampling report completion expected in 4th quarter 1988. (4/8/99 MDK/SRP) DEQ provided a copy of the site investigation report to site owner in January 1999 with notification that a RI/FS is necessary. The site owner has not responded to DEQ attempts to contact during January, February, and March 1999. (11/30/99 MDK/SRP) DEQ is considering enforcement action or possible Orphan Site designation. (5/29/01 MDK/SRP) This site was referred to EPA for further site assessment in January 2000. EPA conducted an initial site visit with sampling on April 5, 2001, and will prepare a work plan for a site inspection with sampling to be conducted during the current fiscal year. (5/6/02 MDK/SRP) EPA visited the site in April 2001 to aid in development of a Site Inspection work plan. EPA learned that Multnomah County had foreclosed on back property taxes earlier in 2001 and therefore referred the site back to DEQ. DEQ met with Multnomah County in April 2002 to discuss additional investigation needs for the site. (7/3/03 MDK/C&ER)Multnomah County is working to obtain brownfields funding to conduct necessary

NW CAST/UNIVERSAL SILVER (Continued) **S109843267**

investigation and cleanup. [CWH/CU&ER 4/3/08] The City of Portland used Brownfields funds to have a Phase II ESA performed. The work was completed by Kleinfelder in October 2005. The field work, performed in May of 2005, included sampling of near-surface soils (0.5 - 5.5 feet below ground surface) and two deep samples (10' bgs) near a former UST location. Soils were sampled in six areas of the site (see Figure 3 of Kleinfelder report), at 23 points, for a total of 25 samples. No additional work was performed. [6/10/10 SAM/SA] A Stormwater Source Control Evaluation(SCE) is being performed on this property to determine if site soils are moving off site and into the city stormwater system. DEQ recieved a draft SCE on 6/8/10 and is reviewing the document. [4/12/12 SAM/ICP] In April 2012 DEQ approved the first phase of the sampling plan which includes soils only. [10/12/12 SAM/ICP] Multi-incremental sample of surface soils found concentrations of PCBs and metals above occupational risk based concentrations. Concentrations decreased with depth(3ft) generally to below occupational RBCs. [11/21/13 SAM/ICP] A streamlined feasibility study is being prepared. [10/24/14] DEQ approved the Record of Decsion in October 2014. No comments were recieved during the September 2014 comment period. The cleanup action will remove one to three feet of soil such that residual concentrations are below levels protective of occupational workers and, to the extent practical, below Columbia Slough sediment screening levels. The excavation area would then be backfilled with clean gravel reducing the potential for remaining site soils to be carried in stormwater to the Columbia Slough. [12/19/16 ICP/SAM] DEQ approved remedial design/remedial work plan on Sept 6, 2016. Soil removal began in September 2016 until end of October 2016. Removal in three of 15 areas were not completed due to early fall rains. Stormwater controls in place until weather improves. [11/29/17 ICP/SAM] Remainder of soil removal, geomembrane installation and backfill completed in September 2017. Final Report pending.

NARR Comments: The site lies within 200 yards of a residential area: property to the south of Columbia Blvd. (southeast, south, southwest, and west of the site) is all residential. The site is not fenced. Two food processors, Happy Crab Seafood and Doug Bjerke Food Service, lie within 200 yards of the site, between the site and the Columbia Slough. A food processor's industrial well lies within 200 yards of the site, although use of that well is unclear at this time. Well logs and Water Rights for nearby domestic, municipal, and community

NW CAST/UNIVERSAL SILVER (Continued) **S109843267**

wells indicate that 5 domestic wells and two municipal/community wells lie between 0.5 and 2.0 miles of the site, but all are located on the other side of the Columbia Slough. (4/8/99 MDK/SRP) A pathway exists from site surface soil to the Slough via site runoff and storm drains.

NARR Comments: The contaminants of interest (COIs) for surface soil, subsurface soil, and groundwater include petroleum hydrocarbons, VOCs, metals, and pesticides. The sources of releases include surface soil impact from historical spills or leaks from the solid waste dumpsters in the northeast portion of the Site, and historical spills/releases of paint and petroleum products near the former water shutoff valve. The elevated levels of arsenic and lead were suspected to have come from historical fill materials. Current exposure to arsenic in surficial soils is limited due to extensive paving and removal of the one area in the northeast potion of the site that was above background screening levels. The groundwater impact that was observed at the water shutoff area at DP-6 was less than RBCs for hydrocarbons and VOCs. Arsenic and lead detections in groundwater exceed RBCs for Ingestion and Inhalation from Tap water but this exposure pathway is incomplete

Decode for NarcdID: General Site Description
NARR Comments: Former Schlesser Company Facility (Site) located at 2501 and 2503 North Columbia Boulevard, Portland. The property consists of Tax Lots 100, 3000, 3201, 3401, and 3500, Multnomah County, Oregon. The Site is located within the Portland Basin, south of the Columbia Slough. Site elevations are approximately 40-feet above mean sea level (MSL), with land sloping to the southeast. The Columbia Slough is the closest surface water body, located approximately 1,100 feet to the north. The estimated groundwater flow direction, based on topographic maps, is to the north-northwest towards the Columbia Slough.

Decode for NarcdID: Remedial Action
NARR Comments: Due to the elevated level of arsenic detected at location HA-3, excavation of soil was performed. The source of the arsenic was likely due to historical spills from the solid waste dumpsters. Four confirmatory soil samples (CS-1 though CS-4) were collected following excavation and arsenic did not exceed 7 mg/kg (background). A total of 11.5 tons of soil were removed for disposal to Hillsboro Landfill.

JDS LIMITED PARTNERSHIP (Continued) **S111255239**

This action consisted of excavation and disposal of VOC-impacted soils from the boring DP-6 location. Seven confirmatory soil samples were collected following excavation; VOCs did not exceed the vapor intrusion RBCs in confirmatory samples. Two soil samples collected adjacent to the building at 4-feet bgs (SW Wall 4 and SE Wall 4) had detections of ethyl benzene and toluene at levels that exceeded only the soil leaching-to-groundwater RBCs. The remaining impacted soil could not be removed due to concern regarding compromising the structural integrity of the building at this location. A limited amount of unsaturated soil, estimated by DEQ as approximately 4 cubic yards, was left in place. A total of 23 tons of soil were removed for disposal to Hillsboro Landfill.

Decode for NarcdID: Site History
NARR Comments: The Site is located in a industrialized portion of north Portland, approximately 1,100 feet south of Columbia Slough (Figures 1 and 2). Historical Site use included the following: 1897 to 1905, undeveloped; 1928 to 1974, residential use; and 1974 to 2008, use by the Schlesser Company. The Schlesser Company had operated a wood products manufacturing facility. The Site was sold to DSM Holding in 2009 and Specialty Metal Fabricators currently operates a sheet metal fabrication business on the subject property.

NARR Comments: (11/20/90 MM) This site includes multiple businesses. Low levels of hazardous substances were identified in soils and groundwater on-site during an environmental audit for a proposed transfer station. One business on-site has free petroleum product floating on groundwater and high concentrations of dissolved volatile organics in groundwater. DEQ's UST program is working with Oregon Waste Systems, Inc. and the truck-stop operator to remediate petroleum problems on-site. The other contaminants present at the site need to be evaluated to determine the need for further assessment or corrective action.

NARR Comments: Gasoline, diesel, 1,2-dichlorobenzene, 1,1-dichloroethane, PCBs, vinyl chloride, methyl isobutyl ketone, perchloroethene, total xylenes. (11/14/97 LSK) Soil contamination was associated with primarily 5 areas of the site: Rod's Truck Repair, The Merit Truck Stop, areas adjacent to the Peninsula Terminal Railroad, Harbor Oil and Star Oil. At Rod's Truck Repair and Merit Truck Stop, BTEX contamination likely from leaking USTs. There is some floating product in shallow groundwater beneath the Merit Truck Stop site. Petroleum hydrocarbons were found in shallow soils at Star Oil (100 to 2,000 ppm) and Farmers (200 to 5,000 ppm). Harbor Oil is described in a separate file (ECSI#24).

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: (11/20/90 MM) Site is located in a light industrial area, and consists of a stockyard, two truck service stations, a card-lock station, a restaurant, railroad tracks and engine barns, and wetlands. Other than workers, the population immediately around the site is low. Land to the south is vacant, to the east and west is industrial. Nearest dense population is one mile south and north across the Slough. The site is on flat land and in the floodplain of the Columbia River. Soils are fine-grained alluvium intermixed with fill consisting of crushed rock, and clayey silt - gravel. Threat or potential threat to surface water - sediments from storm sewer outfalls that enter the Columbia River contained methyl isobutyl ketone (MIBK), 1,2-, 1,3-, and 1,4-dichlorobenzene, Cr, Cd, Zn, Pb, Cu, and Ni above background levels. Depth to groundwater varies from ground surface to 15 feet across the site; its uses are unknown. (11/14/97 LSK) The site is located within 1,000 ft. of Force Lake to the southeast and is adjacent to the Oregon Slough to the north. The wetlands associated with Force Lake support great blue heron nesting areas, and the City of Portland considers this wetlands area, as well as the lake, a sensitive environment. Stormwater runoff from some of the site is carried north towards the Oregon Slough by storm drains that run beneath Marine Dr. Some runoff flows south towards Force Lake and area wetlands. Force Lake drains via the North Ditch, which is part of Peninsula Drainage District No. 1. Water in the ditch is routed to the District's main pumping station southwest of the site, where it is pumped into the Columbia Slough. Shallow groundwater north of the railroad flows radially outward in all directions, and south of the railroad flows to Force Lake and the wetlands area. Deep and intermediate groundwater flow is both to the northwest towards the Oregon Slough and Columbia River and to the south away from the river, depending upon the season and river level changes.

NARR Comments: An April 2006 Groundwater Characterization report presents results from a focused groundwater characterization. Arsenic, chromium and lead were undetected in some samples and detected in others at levels below MCLs and tap water PRGs (chromium and lead) or similar to background levels (arsenic). Metals in sandblast grit are present in fill areas in the northern portion of the site. Soil sampling in the western vegetated area indicated elevated concentrations of some metals, including lead and zinc.

NARR Comments: A 19-acre industrially zoned property located in an area predominated by heavy-industrial uses. The southern section of property is occupied by a large warehouse and the northern half of the property is graded and either paved or graveled. The southern portion of the property is paved. Storm water either infiltrates or is managed in catch basins and pipes. The property is bordered to the north by the Columbia Slough and its riparian area, on the northeast by a ramp to interstate 5, and on the south by Old Columbia Boulevard and the Union Pacific Rail line. The western side of the property is a vegetated low-lying swale area that receives stormwater runoff from the site and surrounding properties.

NARR Comments: Spent sand used for fill on the northern portion of the property contains several metals at concentrations elevated above background. Soil in the western swale has been impacted by metals from stormwater runoff associated with various possible sources. Groundwater characterization included two rounds of sampling in 2006 for five metals (arsenic, barium, cadmium, copper and lead). This groundwater investigation does not indicate that groundwater has been impacted by site operations.

NARR Comments: Remedial Investigation and risk assessment completed in September 2008. A Record of Decision on the selected remedial action was issued in August 2010. The selected remedial action addresses the presence of sandblast grit and metals in contaminated soil at the site and metals exceeding risk-based concentrations for occupational worker direct contact exposure and DEQ Cleanup Program screening values in stormwater (DEQ 2009a). The selected remedial action consists of the following elements: 1) Containment and isolation of contaminants in soil though engineering controls. This control will consist of a two-foot thick gravel cap in the Northern Fill Area. This will require improvements to the existing fill area by adding additional gravel. Alternatively, if the site is redeveloped, the site redevelopment infrastructure may serve as the functional equivalent of the isolation layer. These elements could consist of buildings, work or parking surfaces, or landscaped areas. Implementation of capping may be delayed up to three years to accommodate future development opportunities for the facility. In the interim, institutional controls will be implemented to restrict access to the area. 2) Erosion control on the Columbia Slough bank, consisting of planting willow cuttings (or similar) using standard planting techniques, in an area that is presently partially devoid of

BLASEN FAMILY LLC (Continued) **1006865327**

vegetation. This area is approximately 20 ft x 20 ft in size. 3) Implement stormwater program. Two alternatives are prescribed (see ROD). Under either alternative, Best Management Practices (BMPs) will be implemented to control release of contaminants present in upland portions of the site to the Columbia Slough through storm water runoff or the western swale. The BMPs will be documented in a stormwater management plan and include performance criteria. 4) Institutional Controls: Easement and Equitable Servitudes, Cap Maintenance, Inspection, and Monitoring Plan, Soil Management Plan, stormwater management and monitoring plan and on-going maintenance of stormwater system, documentation of stormwater system BMPs, monthly inspections of access restrictions, and annual stormwater system inspections and documentation. All of these plans would be developed as elements of a single comprehensive monitoring and maintenance plan and would be developed to accommodate then existing conditions (including redevelopment if the site is redeveloped during remedy implementation) and modified within six months, if the site is redeveloped after the remedy is implemented.

NARR Comments: Blasen Family LLC has owned the property since 1994. Formerly a paint/metal coatings plant from 1955 to 1967. Sand Products, Inc. reprocessed new and used sand for abrasive blasting and roof-felt manufacture from approximately 1985 until 2001. Sand was mixed with other inert fill on the northern portion of the property. The northern part of the property was leased by TriMet from 2001 to 2003 and was leased to Forklift Headquarters in 2006. Currently, several structures are located across the property and are used for storage, office space and maintenance activities.

NARR Comments: The Department of Environmental Quality entered into a prospective purchaser agreement with Lawrence B Stone Properties #66, LLC, following public comment in November 2019, for the Blasen Family site at 1601 North Columbia Boulevard. The agreement in the form of a Consent Order became effective January 31, 2020. Subsequently, LB Stone Properties acquired the property and plans to implement cleanup actions identified in DEQ s 2010 Record of Decision (ROD) for the property, in conjunction with redevelopment. The cleanup identified in the ROD requires an engineered cap over landfill containing sandblast grit in the northern portion of the site, erosional controls on the Columbia Slough bank, and upgrading the site stormwater system to prevent stormwater and stormwater sediment above acceptable levels entering the Columbia Slough and adjacent Wester Ravine area. This new property owner in consultation with DEQ is currently preparing plans to install stormwater improvements and construct a cap over the north yard area.

 In 2009, the Blasen Family, LLC, entered into a settlement with DEQ to resolve liabilities associated with historical releases and corresponding impacts to the Columbia Slough (see ECSI No. 1283 and Columbia Slough Sediment Project website: https://www.deq.state.or.us/Webdocs/Forms/Output/FPController.ashx?SourceIdType=11&SourceId=1283). North Columbia, LCC, acquired the Blasen Family site in 2014 and assumed responsibility for implementing the ROD. A cleanup Consent Order was executed in late 2015; however, there were significant delays with implementation.

Environmental Interest/Information System:
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

Registry ID: 110071402787

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

NARR Comments: [7/16/18 VCP/SAM] Malarkey Oregon Holdings I, LLC purchased the property on July 2, 2018 to re-develop for industrial uses consistent with City of Portland zoning requirements. Under the scope of work Malarkey will: 1. Prepare a Phase II Environmental Site Assessment (ESA) report documenting the results of the investigation for DEQ

YORK PROPERTY SITE STABILIZATION (Continued) **S118673059**

approval. 2. Prepare and implement a Removal Action Plan for DEQ approval to ensure proper management and handling of material on the Property 3. Document site stormwater management to ensure consistency with current local, state and federal guidelines, encouraging on-site infiltration to the extent practicable. 4. Implement the removal actions and prepare a Completion Report documenting the actions taken. 5. If contaminated material is found and will be managed on site, prepare a Contaminated Media Management Plan to manage impacted material and an Easement and Equitable Servitudes to document impacted material left on site as warranted. 6. Contribute to the Columbia Slough Sediment Remediation fund. [4/8/2021 VCP/SAM] Project closeout report recieved 3/17/2021. Specific actions inlcuded: Management of Property soils via off-site disposal. Removal and disposal of solid waste from the Property per applicable guidelines. Characterization, removal, and disposal of chemicals stored at the Property per applicable guidelines. Removal of building structures, decommissioning of septic systems and underground storage tank per applicable guidelines. Surface soil management and leave-in-place surface soil sampling Columbia Slough Sediment Remediation fund contribution Remaining site soils meet applicable occupational and construction worker screening level values. 1-3ft of gravel was placed on top of native soils. Future site redevelopment, including management of site stormwater, will be designed consistent with the City of Portland Stormwater Management Manual. [7/1/2021 PPA/SAM] DEQ reviewed the PPA requirements and the corresponding actions, and made a determination that all obligations listed above have been satisfactorily performed. A Certification of Completion was issued 6/30/2021.

NARR Comments: [7/13/17 VCP/SAM] The Property was developed in 1928 as Pacific Stoneware Company. Operations included steam-powered pottery production, primarily for flower pots and stoneware. These operations included use of petroleum hydrocarbons to heat kilns. In 1960, the Pacific Stoneware Company went bankrupt and the Property was bought by Tektronix Ceramics. Tektronix Ceramics appears to have used the Property for ceramics production. In 1988, the current owner purchased the Property for interior and exterior materials storage and recycling. Multiple nuisance complaints were filed to City of Portland between 2003 and 2008 concerning inadequate storage of materials and unauthorized building occupation. In 2012-2014 City of Portland found elevated PCBs and metals in stormwater catchbasins along the city street.

NARR Comments: (12/5/2001 DGA/SRS) Dry-cleaning facilities have operated at the site since the mid-1970s. A preliminary environmental assessment in November 1994 identified four floor drains within the facility, three

HAYDEN ISLAND CLEANERS (Continued) **S104329423**

of which yielded a positive reading on a photoionization detector. In August 1995, four Geoprobe borings were advanced at the site to see if PCE had been released to the soil or groundwater. PCE was detected in soil gas (up to 75 ppm) and groundwater (up to 780 ug/L) in all four boreholes. It appears that PCE may have been released down the floor drains at the site, leaking into the soil through cracks in the sanitary sewer lines. Tidal fluctuations in the shallow groundwater may have spread the contaminants across the site. Hayden Island Cleaners applied to DEQ's Dry Cleaner Program in January 1997, and was accepted in February 1997.

NARR Comments: The City of Portland owns four deep production wells on Hayden Island, two of which are within 600 feet of the site. Since 1988, Bull Run water has been provided for residents and businesses on Hayden and Tomahawk Islands, and the wells are currently designated for backup fire suppression only. Three of the four wells are contaminated with low levels of TCE and PCE; however, the contamination is thought to be unrelated to Hayden Island Cleaners. Because of the site's proximity to the Columbia River, surface water was another potential pathway of concern. But the contamination does not appear to have reached either the river or the deeper aquifer.

NARR Comments: (12/5/2001 DGA/SRS) DEQ retained Jacobs Engineering to conduct an expanded Preliminary Assessment (XPA) at the site in August 1997. As part of the XPA, three monitoring wells were installed, and soil and groundwater samples collected. PCE was detected in soil samples (up to 267 ug/kg) and groundwater samples (up to 1,230 ug/L) from all three wells. The XPA report was completed in June 1998. DEQ retained Ecology & Environment (E&E) to follow up with a focused Site Investigation in August 1998. Additional groundwater monitoring wells were installed at the site and on adjacent properties. In addition, a pumping test was conducted at the secondary municipal wells (backup fire suppression wells) to determine if there was any connection between the shallow and deep aquifers. No connection was established. The Site Investigation report was completed in March 1999. In May 1999, DEQ injected Hydrogen Releasing Compound (HRC) into the shallow groundwater to accelerate the natural biodegradation of the PCE. Monitoring over the next couple of years showed that the HRC was successful in stimulating degradation of the PCE. DEQ formally notified the site owners and operators in December 2001 that no further cleanup of the site was necessary.

NARR Comments: Early investigations by DEQ and EPA suggested that the property may be contaminated by PCBs from Peter Haney's operations. Sampling in 1988 found low levels of PCBs, and elevated levels of heavy metals, particularly lead (up to 5,039 ppm). (For more information on Mr. Haney's activities, see ECSI #s 96, 145, 999, and 1135.) The Northwest Cast Metal Products - N Endicott Avenue site (ECSI #1134) has been combined with the Malarkey Roofing Company site (ECSI #690).

NARR Comments: The Columbia Slough borders the site to the north. The Kenton neighborhood is across Columbia Blvd. to the south. Industrial properties border the site to the east and west. The site is within the Columbia River floodplain, but is protected by a 20 foot clay dike built and maintained by the US Army Corps of Engineers. Shallow groundwater flow is to the southwest (Slough recharges groundwater).

Updated Date: 02/07/2020
Decode for NarcdID: Remedial Action
NARR Comments: Malarkey entered into a voluntary agreement with DEQ's Site Response Section in August 1988 to remediate the contamination at the site. 2300 cubic yards of contaminated soil were excavated in January 1989, and an additional 700 cubic yards were excavated in November-December 1990. Both soil piles were disposed of at the Hillsboro Landfill, and the excavations were backfilled with clean soil. Confirmation sampling found some scattered elevated levels after the removals. However, taking into account the depth of the elevated levels (at least one foot bgs) and the lack of observed groundwater contamination, DEQ determined that no further action was necessary at the site under the state Environmental Cleanup program. Malarkey's landfilling activities will continue to be monitored under a Solid Waste permit. [3/31/10 SAM/SA] In 2009, DEQ sampled Columbia Slough sediments near outfalls in the lower Slough. The sediment sample collected at Outfall 59, where Malarkey Roofing, Co. stormwater enters the slough, had visual evidence of roofing gravel and the highest level of chromium and nickel found in the lower slough sampling event. Copper was also above screening level values. Work

HERBERT MALARKEY ROOFING CO (Continued) **1000641899**

completed in 1991 did not evaluate the stormwater system and whether historical releases of stormwater from the facility had adversely affected the Slough. In light of this new information, DEQ requests that a stormwater source control evaluation be performed. [11/23/11 SAM/ICP] Malarkey agreed to perform source control evaluation on August 2, 2011. Malarkey will provide a past stormwater/groundwater monitoring summary in Dec 2011. [4/19/2012 SAM/ICP]DEQ approved stormwater sampling plan [5/1/14 SAM/VCP] A source control evaulation work plan is needed and will evaluate effectiveness of stormwater BMPs. BMPs included a stormwater pipe and catch basin cleanout of the site; where approximatley 7.75 tons of material was removed in November 2013. [1/26/18 VCP/SAM] DEQ approved an updated Source Control Work Plan in October 2017. Malarkey is collected stormwater samples fall/winter 17/18. [2/7/20 VCP/SAM] Metals(copper, lead and zinc) concentrations in stormwater continue to be elveated above Columbia Slough sediment screening levels and 1200-z permit benchmarks. Malarkey will install a stormwater treatment system for basins 1, 3 and 5 by June 2021. Stormwater confirmation samples for cleanup work will occur after treatment installation.

NARR Comments: The Herbert Malarkey Roofing Company has been manufacturing roofing materials at the site since 1956. (The site was used as farmland previously). Inert waste materials, including demolition debris and waste products from Malarkey's operations, have been landfilled on the northern portion of the site. In places the landfill is up to 30 feet deep. In 1984, Malarkey purchased adjacent property with two warehouses. One warehouse had been used by Central Brass and Aluminum as a foundry. The other warehouse had been occupied by Peter O. Haney, who ran a transformer salvage and secondary metal smelting operation.

OR SPILLS:
Name: Not reported
Address: 3131 N COLUMBIA BLVD
City,State,Zip: PORTLAND, OR 97217
Facility ID: 2019-0883
Incident Status: Closed
Material: Oil - Lube
Quantity: 2
Unit of Measure: Gallons
Release Date: 04/05/2019
Description: Caller is reporting that 1-2 gallons of motor oil was leaked from a damaged semi. Oil made it to the Columbia Slough and there is a sheen. Caller has placed booms in the slough and says that clean up has been taken care of. Caller would like call from DEQ if someone is going to come out.

NARR Comments: [12/23/2004, BP] The neighboring Oregon Waste Management has two off-site monitoring wells on the Marina property as a part of their remedial system. The access to these wells has been, and still is, in litigation. A contractor with Waste Management first observed and reported the spilled drum.

Decode for NarcdID: Contamination
NARR Comments: In 1986, it was confirmed that three potentially contaminated transformers were being stored on-site. During a DEQ inspection in 1979, several transformers and capacitors were found. The site consisted of a large exterior storage area for electric motors. A 2,000-gallon above-ground storage tank is used for waste oil, and there are signs of minor spillage around the tank. Chevron 350B solvent is used in degreasing operations. Toluene is used as a paint thinner prior to painting rebuilt motors. Approx. 300 gallons of sodium hydroxide are stored in a dip bath. Soil staining typical of NaOH was observed downhill from this tank.

Decode for NarcdID: Remedial Action
NARR Comments: (5/13/92 AGG) Federal Preliminary Assessments I & II completed - NFA recommended. Recommended DEQ action: site is located in an industrialized area of Portland. Very low levels of PCBs have been detected in soils (5 ppm and below). No other source areas were found at the site. NFA recommended (refer to 8/16/89 Environmental Assessment). (7/24/96 MJM/VCS) In June 1996, the City of Portland performed additional analysis of soil and groundwater samples collected from the site. The results were consistent with the 1992 investigation. A letter was issued on 7/24/96 confirming the status of the NFA determination for the site. (10/13/00 MJM/VCP) The City conducted additional removal and cleanup of low level PCB contamination as part of the Columbia Slough Consolidation Conduit (CSCC) construction activities. Documentation of these activities and sample results are located in the CSCC file (ECSI #1818).

NARR Comments: On December 7, 1995, DEQ received a report of a spill of transformer oil at the Goodyear Building. PGE reported vandals drained and gutted six transformers releasing 100 gallons of transformer oil (<7 ppm PCB in oil). (KJD/SAS 5/21/19) Site is also UST Facility No. 4476. A 12,000-gallon underground storage tank (UST), used to store Galaflex GP, was installed in 1961. The Galaflex GP Material Safety Data Sheet (MSDS) classifies Galaflex as a heavy paraffinic distillate solvent extract comprised predominantly of aromatic hydrocarbons in the carbon range of C20 through C50. This range is associated with lube

GOODYEAR TIRE & RUBBER CO (Continued) **1000232045**

oil types of petroleum hydrocarbons. A 8,000-gallon UST, used to store hexane, was installed in 1966. Hexane is a solvent typically used for tire dressing (i.e. making the tires shiny). Both USTs were decommissioned in 1991. Two soil samples were collected from beneath the Galaflex GP UST [approximatley 15 feet below ground surface (bgs)] and analyzed for hydrocarbons identification. The analytical report was unclear if the heavier oil range was tested. The chain of custody indicates samples were also collected from beneath the hexane UST but the anlaytical results were not present in the DEQ UST file.

NARR Comments: Goodyear Tire Factory submitted a Limited Independent Cleanup Action Report to DEQ's Spill Program in July 1996. In July 1997, the Spill Program referred the Goodyear Building property to the Site Assessment (SA) Program, after Spills determined that the cleanup was not complete (3,800 ppm mineral oil remained). SA sent an Information Request letter to Goodyear in September 1997. A response was received in November 1997. Site Assessment recommends the completion of this site screening. (KJD/SAS 5/21/19) SAS completed a site screening for this property. A 12,000-gallon underground storage tank (UST), used to store Galaflex GP, was installed in 1961. The Galaflex GP Material Safety Data Sheet (MSDS) classifies Galaflex as a heavy paraffinic distillate solvent extract comprised predominantly of aromatic hydrocarbons in the carbon range of C20 through C50. This range is associated with lube oil types of petroleum hydrocarbons. A 8,000-gallon UST, used to store hexane, was installed in 1966. Hexane is a solvent typically used for tire dressing (i.e. making the tires shiny). Both USTs were decommissioned in 1991. Two soil samples were collected from beneath the Galaflex GP UST [approximatley 15 feet below ground surface (bgs)] and analyzed for hydrocarbons identification. The analytical report was unclear if the heavier oil range was tested. The chain of custody indicates samples were also collected from beneath the hexane UST but the anlaytical results were not present in the DEQ UST file. Two clusters of electrical transformers were reportedly present on the property adjacent to the warehouse building. The cluster of of six transformers were drained and gutted for salvage by vandals in July 1995. Approximatley 100 gallons of transformer oil containing less than 7 milligrams per liter (mg/l) polychlorinated biphenyls (PCBs) was released. The transformers were located on a 10 foot by 20 foot concrete pad. Twelve hand auger soil borings were advanced to depths up to 13 feet bgs in the vicinity of the concrete pad in February 1996. Twenty-four soil samples were collected from the soil borings and analyzed for total petroleum hydrocarbons (TPH)-418.1. Concentrations of TPH were detected up to 6,000 milligrams per kilograms (mg/kg). A review of aerial photographs indicate the Goodyear facility consisted of three adjacent buildings. The two eastern buildings were removed sometime between 1998 and 2000. A new office building was constructed in the eastern portion of the site. The footprint of the new office building likely covers the location of the former USTs and transformer spill. The site is a low priority for additional assessment or remediation

GOODYEAR TIRE & RUBBER CO (Continued) **1000232045**

of the PCB transformer oil release and assessment of the hexane UST area.

NARR Comments: This site was added to ECSI based on documented evidence of elevated concentrations of chlorinated solvents, metals, and petroleum constituents in the site's shallow groundwater, as well as an elevated concentration of a chlorinated hydrocarbon in stormwater draining to the Columbia River.

NARR Comments: [4/8/13 SA/SAM] Site Investigations and some cleanup has occured on site since approximately 1988; generally focusing on underground storage tank removal and remediation. DEQ Site Assessment recommends the following activities be performed at the site to help clarify site risk and priority for further action. Contaminated soil remained under the Rod s Truck Stop building with issuance of underground storage tank program NFA in 1993. A review of the archived UST file and possible investigation should be completed to determine the risk of contaminated soils for vapor intrusion for petroleum. PCE/TCE samples were collected from shallow groundwater in 1991. Confirmation of PCE/TCE concentrations is recommended to ensure vapor intrusion occupational risk based concentrations are currently met. Potential sources of PCE/TCE in shallow groundwater include remaining soils at Rod s Truck Service and potential spills from Peninsula Railroad Terminal to the south of the Stockyard property. Current site stormwater drainage should be diagramed and determine discharge points for the property. Columbia Slough Sediments- sediment sampling near current and historic stormwater outfalls should be tested for metals, PCBs, PAHs and VOCs. Sediment results should be compared to the average Lower Columbia River concentrations to determine if the sediments are either near average conditions or significantly above average Lower Columbia River sediment conditions. If sediment concentrations are above average, a source control evaluation may need to be performed.

NARR Comments: Contaminants in site groundwater and stormwater could represent a potential threat to on-site workers, aquatic life in the Columbia River, wildlife and aquatic life in nearby wetlands, and/or other users of groundwater and surface water in the immediate vicinity of the site. Water quality in the Columbia River is already impaired. The Columbia River is used for recreational and commercial fishing, as well as other recreational purposes. It also provides Critical Habitat for threatened and endangered fish species. The river and nearby wetlands also provide important habitat for other sensitive species such as protected migratory bird species, sensitive amphibian, reptile, and plant species, and food resources for sensitive aquatic and terrestrial species.

NARR Comments: [4/8/13 SA/SAM] The site was originally developed in 1908 with the construction of a small hotel and a livestock Exchange Building. The Portland Union Stockyards was built in about 1910. The stockyards ceased operations in 1980. Site buildings also included Merit USA (Texaco) Truck Stop (built in about 1952), which included two fueling stations, truck scales, and a cafT. Rod s Truck Repair, a commercial gas station and repair shop began operating in the 1980 s. The stockyards were demolished in 1996 and redeveloped in approximately 1997 to its current configuration as light industry and warehousing.

NARR Comments: (5/7/97 GMW) A well on the former Armour Meat Co. site contained low levels of TCE (up to about 7 ppb) between 1991 and 1995 (this well has since been decommissioned). In addition, DEQ has data from a number of borings and monitoring wells installed along N Columbia Blvd. as part of the City of Portland's environmental investigation for the Columbia Slough Consolidation Conduit (sewer enhancement) project (ECSI #1818). These groundwater data, collected in 1995 and 1996, show TCE levels of up to 27 ppb, as well as occasional low-level hits of PCE, TCA, and toluene. The sources of these contaminants have not been identified.

NARR Comments: (5/7/97 GMW) Site Assessment recommends a discovery project in this area to determine the source(s) of shallow groundwater contamination. Because levels of VOCs have remained generally low, and because shallow groundwater is not known to be used to supply drinking water in this area, further state investigation is considered a low priority. (11/10/97 LSK) Site re-evaluated as part of review of all sites within the Columbia Slough Study Area. This well is located just south of the Lower Slough. Medium for site screening recommended. NARR Comments: (2/13/01 ACV/VCS) Familian NW (formerly Rovang) is a portion of a

HEATING OIL TANK (Continued) **S104889258**

site Tri-Met will acquire for Interstate light-rail construction. Rovang has a history of pipe manufacturing, PCB use, dip tanks, etc. Tri-Met will manage contamination during construction of light rail in 2001-03. Residual contamination issues will be referred to DEQ Site Assessment and the property owner. (5/18/09 SMF) On-site soil samplings conducted by Parsons Brinkerhoff for Tri-Met in January 2001 detected elevated concentrations arsenic, barium, cadmum, chromium, copper, lead, mercury, selenium, and oil at depths ranging from 0- to 20 feet below ground surface. However, Parsons Brinkerhoff's samplings did not specifically target areas of highest potential soil contamination. VOCs, SVOCs, and PCBs were not detected, although analytical detection limits for some of the site's potential contaminants (BTEX, chlorinated solvents, PAHs, PCBs) were as much as 2- to 3 orders of magnitude greater than relevant DEQ soil PRGs. Chlorinated pesticides, another class of potential site contaminants, were not analyzed.

Decode for NarcdID: General Site Description
NARR Comments: The site is comprised of three adjoining tax lots (Tax Lots 100, 200, and 300, of Township 1 North / Range 1 East Section 9 Ad, Willamette Meridian) with a total area of 3.23 acres. The site is partially fenced along its southern and eastern property lines. Vehicle access is possible both from the north (from N Denver Avenue), and from beneath N Denver Avenue (at the site s southwest corner) via Familian NW s distribution facility. Most of the site is capped with asphalt or concrete paving, although narrow strips of exposed soils and gravel are present along the perimeters of the site s two northern tax lots. Site elevations range between about 43- and 48 feet above

HEATING OIL TANK (Continued) **S104889258**

mean sea level [MSL]. The site surface slopes gently downward toward the south and north from an east-west crest on the site s northern-most tax lot (Tax Lot 100). Aerial photos suggest that fill material may have been imported to this part of the site sometime during the 1950 s to eliminate a grade separation and to create driveway access from N Denver Avenue.

Decode for NarcdID: Project Issues Summary
NARR Comments: Soil analyses by Parsons Brinkerhoff in January 2001 detected elevated concentrations of oil and metals in subsurface soils from 0- to 20 feet bgs across much of the site. However, Parsons Brinkerhoff's soil sampling locations were not selected to target areas with the highest potential subsurface contamination. VOCs, SVOCs, and PCBs were not detected, although the analytical detection limits for these classes of potential site contaminants were up to 2- to 3 orders of magnitude greater than relevant DEQ PRGs. Chlorinated pesticides, another class of potential contaminants of concern at the site, were not analyzed. It is not known if site groundwater, present at about 30- to 33 feet bgs, has been contaminated. Plumbing permit file information for the site suggests that, prior to 1975, the site's wastewaters may have been discharged to the subsurface via drywells, or to Columbia Slough via private outfalls, or to a private stormsewer that fed municipal Outfall #61. The site's past operating practices could have contaminated local groundwater and/or the Columbia Slough. Nearly the entire site is capped with asphaltic or concrete paving, and most of the site's stormwater runoff is directed to stormwater catchbasins which are believed to be connected to the municipal stormwater sewer system. The paving should protect site workers from routine contaminant exposures. However, potential future construction workers or utility trench workers could be exposed to contaminants. No engineering drawings of the site's stormwater collection system have been available, so it is not known if the site's catchbasins have impervious liners, or which municipal stormsewer the site's catchbasins may discharge to. Local municipal stormsewers discharge to the Columbia Slough at Outfalls #60 and #61, where elevated concentrations of contaminants have been detected in Columbia Slough sediments. It is not known if the site is currently contributing to slough sediment contamination via potential leaks in the site's subsurface stormsewer piping. Breaks were observed in the site's concrete paving. It is also not known if the site's catchbasins may leaking, and allowing stormwater to infiltrate into

HEATING OIL TANK (Continued) **S104889258**

subsurface soils. Infiltration of stormwater into the subsurface could mobilize the site's subsurface soil contaminants, and represent a potential on-going threat to local groundwater quality.

Decode for NarcdID: Land Use (Current/Reasonably Likely)
NARR Comments: The site is located within a narrow strip of land between the Columbia Slough and N Columbia Boulevard that is zoned for heavy industrial use. However, property use south of N Columbia Boulevard is a mix of general industry use, storefront commercial use, low to high density residential use, and open space. Properties immediately north of the Columbia Slough are zoned for general industrial use and open space. The nearest residences are located about 510 feet south of the subject site. Kenton Park is located about 820 feet southwest of the site. Portland International Raceway is located across Columbia Slough, 800 feet north of the site. Portland Meadows horse racing facility also lies across the slough, 1,450 feet east-northeast of the site. The nearest schools, Kenton Elementary School and De La Salle North Catholic High School, are both located 0.46 mile south of the site. Peninsula Elementary School is located 0.58 mile west-southwest of the site. Heron Lakes Golf Club lies along the north bank of the Columbia Slough, 0.78 mile west-northwest of the site, on the downstream edge of Portland International Raceway. Not reported

NARR Comments: The Familian NW site is located in a heavy industrial area of North Portland s Kenton neighborhood, along the north side of N Columbia Boulevard, just under + mile west of Interstate Highway 5 [I-5]. A Union Pacific Railroad [UPRR] right-of-way lies between the site s southern boundary and N Columbia Boulevard. The Hoffman Property (ECSI #2846), the site of a 2.2 acre truck repair, painting, and salvage facility, lies to the north, between the Familian NW site and the Columbia Slough. Bob s Metals, Inc. (ECSI #5094), a metals salvaging business, and former Familian NW pipe storage facility, is located along the site s eastern boundary. An elevated TriMet light rail line lies above the western edge of the site, while N Denver Avenue, a viaduct, forms the site s western boundary. An associated Familian NW distribution center (Familian NW 2121 N Columbia; ECSI #3860) lies immediately west of N Denver Avenue. The Nicolai Co. site (ECSI #679) lies to the south, just beyond N Columbia Boulevard.

NARR Comments: The site has been in industrial use since at least the 1910's: Industrial buildings were first constructed on the site in 1910. National Wooden Pipe Company is believed to have first operated at the site. Coast Culvert and Flume Company, a sheet metal manufacturer, operated at the site from about 1918 to 1925. In 1925, the company s name was changed to Beall Pipe and Tank Corporation. Beall Pipe and Tank Corporation operated at the site through at least 1943. Rovang, Inc., a sheet metal works and stainless steel valve manufacturer, operated at the site under various names between about 1960 and 1988. Hel-Mar, Inc., a chemical wholesaler, occupied a portion of the site between 1953 and 1964, although DEQ has no information about Hel-Mar s operations. Klix, Inc., another chemical wholesaler, operated on a portion of the site from 1965 to 1967. From 1970 to 1975, Harry W. Jackson Wool Co., a wool broker, used a portion of the facility to warehouse wool and hair. In 1988, Technaflow, Inc., a manufacturer of metal valves and pipe fittings, acquired Rovang s manufacturing operations, and began operating at the site as the Rovalve Division of Technaflow. Multnomah County tax records indicate that Familian Northwest, Inc., a plumbing supply distributor, acquired the property in 1993. Familian Northwest generally used the site for indoor and outdoor storage and distribution of metal pipe, coated metal pipe, and PVC pipe. In July 2003, Familian Northwest, Inc., merged with Ferguson Enterprises, Inc., of Newport News, VA. The company currently operates under the name of Ferguson Enterprises, Inc., a Corporation of Virginia.

NARR Comments: (5/3/1995 KPD/SRS) The Nicolai Company manufactured and treated wooden doors at the site for 60 years. The doors were treated with a 5% solution of pentachlorophenol (PCP). (The rest of the solution was either diesel or kerosene). The dip tank holding the solution was located in the <quot>Warehouse A<quot> building on the northwest corner of the site, which is also where the treated doors were stacked. After operations shut down in 1987, Nicolai hired L.R.

NICOLAI CO. (Continued) **S100497572**

Squier Associates to investigate the property prior to sale. After the contamination was discovered, Nicolai signed a voluntary $5K Letter Agreement with DEQ's Site Response Section (SRS) to investigate and clean up the contamination. Contaminated soils were found underneath Warehouse A; around an outdoor concrete pad where drums of PCP had been stored; in a <quot>waste disposal area<quot> near the Oil Storage Building; and around a concrete sump where tools and equipment had been steam-cleaned. (The sump drained to a storm sewer line, which discharges to the Columbia Slough 1,200 feet north of the site.)

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: The site is located in a busy commercial/industrial area. Businesses surround the site to the north, east, and west; the Kenton neighborhood lies to the south. Soils at the site are alluvial, mostly silts and sands to 24 feet, then grading to gravels by 40 feet. Groundwater is approximately 30 feet deep, and is not used for drinking. The Columbia Slough is approximately a quarter-mile north of the site. Access to the site is only partially restricted by a fence and adjacent buildings.

Decode for NarcdID: Remedial Action
NARR Comments: (10/7/1991 DJH/SAS) A total of 408 cubic yards of contaminated soils were excavated and removed from the site in April 1990 by Century West Engineering. Contaminated soils under the warehouse could not be removed without razing the warehouse, and so were left in place. Groundwater was not investigated under the voluntary agreement. DEQ signed off on the soil cleanup/removal 5/91. Following a Federal Preliminary Assessment, no further action was required under CERCLA. No further state action regarding soils is necessary unless the on-site warehouse is removed and contaminated soils underneath are exposed. If exposed, soil should be removed. (5/3/1995 KPD/SRS) The potential for groundwater contamination should also be investigated. [3/29/2012 SAM/SA] DEQ notified party via letter in March 2012 noting property may have contributed to Columbia Slough sediment contamination via private or public stormwater conveyance. While a COLS 1200 stormwater permit is not required on site, DEQ strongly recommended the owners record and implement stormwater best management practices on site and a monitoring plan to answer future questions regarding site contribution to Columbia Slough sediment contamination.

NARR Comments: The dry cleaning solvent PCE as well as chloroform and petroleum solvents appear to have been released from former dry cleaning operations. Soil samples below the machine had not yet been collected as of Sept 2010. (Dec. 2013) High concentrations of perchloroethene (PCE) and chloroform were detected in soil gas below the facility and in indoor air inside the building. Alsco does not use dry cleaning in their facility but the previous owner of the building, Oregon Laundry Services (OLS), apparently operated a dry cleaning machine. It is suspected that dry cleaning solvents were released during OLS operations prior to 1984. High concentrations of PCE were found in soil below the area where a dry cleaning machine once operated and also below a former fuel UST.

NARR Comments: The chlorinated solvents tetrachloroethene (PCE) and chloroform along with a petroleum fuel or solvent with constituents such as benzene, toluene, ethylbenzene, and zylene appear to have been released at the site. Daughter products of PCE such as trichloroethene are also found. Clorinated solvents appear to be related to former dry cleaning operations at the facility.

NARR Comments: (6/8/09 RKW/VCP) ALSCO's consultant is preparing a Phase 1 investigation report and Phase II work plan for initial investigation. ALSCO has reported that they have never used PCE so question being assumed the source of PCE and TCE in soil gas and groundwater at their property border with Macadam Aluminum and Bronze site. (12/7/09 RKW/VCP) Soil gas investigation underway within the Alsco building. According to the Phase 1 investigation the previous

ALSCO INC (Continued) **1001489540**

owner of the facility operated a dry cleaning machine near the SE corner of the building, near the location of the highest soil gas detections at the Macadam facility. (3/15/10 RKW/VCP) Preliminary soil gas results indicate a significant release of dry cleaning solvent is centered on the old dry cleaning machine which was apparently never used by Alsco. A subslab soil gas measurement in this location indicated PCE at a concentration of 5,900,000 ug/m3 and TCE at a concentration of 7,000 ug/m3. This is 2,800X the risk-based concentration (RBC) for PCE and 50X the RBC for TCE. There is also indication of a release of chloroform at the facility. (6/7/10 RKW/VCP) A second round of indoor air samples were collected in April 2010. Results confirmed earlier sample results and indicate an indoor air problem. PCE was found at a higher concentration of 140 ug/m3 in the former dry cleaning room. Chloroform was found at a lower concentration than before in the SE corner office area but found at a higher concentration of 59 ug/m3 in the center of the facility. Alsco will be planning Interim Removal Action Measures (IRAM) to address contamination in soil gas and indoor air at the facility. Measures could include soil removal and/or vapor extraction or other technology such as chemical oxidation. Catch basin sediments were sampled and found to contain copper, nickel, and zinc at concentrations above DEQ screening levels for basin sediment. Petroleum and PAHs were also found. Various BMPs were proposed to correct the problem. Plans are being made to decommission site dry wells. In January 2011 the dry wells were decommissioned by removing the upper rings and filling with cement grout. A fourth dry well was discovered next to DW-3. There was no appreciable sludge to remove or sample in the base of the dry wells. Samples of soil below the bottoms were collected and contained diesel (up to 9400 ppm) and heavy oil (up to 12,300 ppm), PAHs, and metals. VOCs were not found. Lead was found up to 180 ppm but SPLC leaching test showed no leaching. Other contaminants were below RBCs. In February 2011 twenty borings were advanced at the site for collection of soil samples. Four borings were completed as temporary wells and nine were completed as permanent groundwater wells. PCE was found in all soil borings around and below the former dry cleaner room. One sample from 2.5 feet BGS contained PCE at 2,680,000 ppb. PCE was found in all groundwater wells surrounding the site but concentrations were generally low with the highest of 1,360 ug/L just below the very high soil sample result. Planning for a soil vapor extraction system is underway. (12/27/11 RKW-VCP) Two SVE systems were installed and started up in Sept 2011. One system is located inside the former dry cleaner room and another is located above the UST cavity in the southeast corner of the facility. Higher concentration VOC vapors are removed from the dry cleaner room than the UST cavity. The systems were shut down in late October when consultants were changed by Alsco. Systems were restarted in December. (10/18/12 RKW-VCP) Both systems were shut down in late summer 2012. Compliance soil gas and indoor air sampling show that remediation is not complete in the former dry cleaner room and this system will be restarted. The UST cavity system appears to have achieved remediation in this area. (10/31/13 RKW-VCP) After final shutdown in early 2013 another round of soil gas samples is collected and all samples were below RBC for PCE. Public comment period for NFA will run through Nov 2013.

Decode for NarcdID: Health Threats
NARR Comments: Originally, concentrations of PCE and TCE in soil gas at the neighboring site property line and below the Alsco facility suggested that vapor intrusion could threaten workers' health in both buildings. PCE and chloroform in indoor air at the Alsco facility also suggested an indoor air health threat. Remedial actions completed between 2011 and 2013 have eliminated these potential threats.

NARR Comments: The site appears to have been in residential/agriculture use until the early 1970s when the current building was constructed for Oregon Linen Rental. This company used a dry cleaning machine but it was removed some time prior to 1984. Alsco purchased the facility in 1986 and continued industrial laundry operations without dry cleaning.

Updated Date: 01/09/2014
Decode for NarcdID: Current Site Summary Statement
NARR Comments: [Dec. 2013] Soil gas results from 2009-10 indicated a significant release of dry cleaning solvent (PCE) near an old dry cleaning machine that had not been used since about 1984. On-site sampling also showed PCE in soil and shallow groundwater, as well as some metals and petroleum hydrocarbons associated with catch basins and drywells, which were removed in 2011. Two soil-vapor extraction systems operated at the site between 2011 and early 2013; subsequent soil gas sampling indicated that PCE vapors were below acceptable risk levels at all locations sampled. Therefore, DEQ proposed an NFA for the site in Nov. 2013, and finalized it in Dec. 2013.

e Number: 1310732

ALSCO INC (Continued) **1001489540**

lity Id: 019140
ysical State Of The Substance: 1
erage Amount Possessed During The Year Code: 20
ximum Amount Possessed During The Year Code: 20
plicable Unit Of Measure Code: 1
Description Of The Unit Of Measure: POUNDS
ype Code: J
escription: BAG
ype Code: E
Temperature Description: PLASTIC OR NON-METALLIC DRUM
essure of Code: 1
Pressure Description: NORMAL PRESSURE
essure of Code: 1
Pressure Description: NORMAL PRESSURE
Temperature Description: NORMAL TEMPERATURE
mperature of The Hazardous Substance Code: 4
Temperature Description: NORMAL TEMPERATURE
mperature of The Hazardous Substance Code: 4
ays Hazardous Substance On Site During Year: 365
The Substance Protected A Trade Secret: False
otion Of The Max Qnty Code: 1,000-4,999
otion Of The Avg Qnty Code: 1,000-4,999
Most Hazardous Ingridient: SODIUM METASILICATE HYDROXIDE
d Nations/north America 4 Digit Class Number: Not reported
azard Rank: 2
Ingredient: Not reported
ubstance Pure: False
bstance Mix: True
irst Hazardous Class Code For Chemical: Acute Health Hazard
nd Hazardous Class Code For Chemical: Not reported
Hazardous Class Code For Chemical: Not reported
zard Class 1 Of The Chemical: 6.3
rd Class 2 Of The Chemical: Not reported
rd Class 3 Of The Chemical: Not reported

Additional Chemical:

nical Is A Toxic 313 Chemical: Not reported
Pesticide Registration Number: Not reported
ains 112R: Not reported
ains EHS: Not reported
zer: Not reported
cide: Not reported
ains 313: Not reported

NARR Comments: (1/23/03, CWH) Stormwater sampling results show concentrations of copper (Cu) and lead (Pb) above permitted limits several times since 1993. Sampling of solids in property's drainage way indicated that concentrations of Cu, Pb, nickel (Ni) and zinc (Zn) were higher than would be expected from background soils in this area.

NARR Comments: Site Assessment Review Notice sent in November 2000. Site screening recommended. (1/23/03, CWH) Screening completed, and Site Assessment has determined that an Expanded Preliminary Assessment (XPA) is needed, under a high priority. (4/20/05, RKW) Owners entered VCP but have not produced a work plan due to lack of funds and poor business climate. (1/18/06, RKW) Insurance funding secured for environmental work. Work plan for XPA being prepared. Three phases are planned: 1) map storm water lines and potential on-site and off-site sources; 2) sample site soils and storm line sediment; 3) prepare plan for sediment sampling in Columbia Slough. (6/07, RKW) Sediment pipe samples being collected. Few manholes have any sediment to sample. (8/07, RKW) Pipe sediment samples results show high concentrations of metals contamination in manholes next to the site. Copper, lead, nickle, and zinc all exceed source control standards. (2/09, RKW) Soil samples, soil gas samples and groundwater samples have been collected as part of the XPA. Surface soil samples in the vicinity of the foundary building and baghouse contained high concentrations of copper, lead, nickel, and zinc, similar to concentrations in parent casting sands. Chlorinated solvents PCE and TCE were found in soil gas and groundwater at elevated concentrations, particularly along the site boundary with the ALSCO industrial laundry facility. This offsite facility is a suspected source. Another suspected source area is the foundary paint shop at the south part of the building. (6/09, RKW) Sediment cleanout of the storm water pipe system between the Macadam facility and Columbia Blvd was successfully completed in April 09. A piece of jet tooling was trapped in a lateral to the main pipe and had to be abandoned but this should not block the main line. The facility water supply well was properly abandoned with mills knife perforation. With the potential for the well to act as a conduit for groundwater contamination it was seen as a liability. Addtional shallow soil sampling was performed on the east side of the facility and relatively high concentrations of copper, lead, nickel, and zinc were found. Further characterization in this area is planned. It was discovered that in the past, the plant exhaust fans discharged indoor air particulates directly to the east side of the building. Additional investigation of potential indoor vapor intrusion is pending new VI guidance release and investigation by the neighboring ALSCO facility. (1/10, RKW) In fall 2009 soil (415 tons) with high metals concentrations was removed from the east side of the Macadam plant building. Soil covered a 5,000 ft2 area and was estimated to be up 250 cubic yards in volume. The site drainage system was found to be clogged with metals-laden sediment. At the time of soil excavation the site drainage system was cleaned out and largely replaced. (4/10, RKW) Results from soil gas sampling at the adjacent Alsco site (ECSI #5009) suggest that a significant PCE release occurred at this site in the past. High PCE/TCE in soil gas on the west side of the Macadam site is likely related to the Alsco site. Another PCE source appears to be the Macadam paint shop. (7/13, RKW) Previous soil gas sampling indicated widespread PCE vapor impacts below the foundry building. Indoor and outdoor air vapor monitoring was performed at the site in November 2011 to evaluate the

MACADAM ALUMINUM & BRONZE CO. (Continued) **S108661063**

risks to workers in the foundry building from the documented subsurface VOC releases. PCE was detected at a maximum concentration of 2ug/m3 in indoor air and the maximum TCE concentration was 0.013 ug/m3. Concentrations are below current RBCs. Stormwater conditions at the site have improved over the years with upgrades to the system but stormwater sampling at the Macadam site has demonstrated recurring exceedance of NPDES 1200-COLS permit benchmarks for zinc. The source of the zinc appears to be the Macadam zinc-anodized roofing materials. No exceedances for other permit benchmarks were detected during the monitoring performed in late 2011 and early 2012 In July 2013 DEQ proposes to issue a No Further Action determination based on results of site investigation and cleanup activities performed at the Macadam Aluminum and Bronze site. Locally interested parties are notified of DEQs proposed NFA and a comment period will run for 30 days. ODOT requested the completion of Contaminated Media Management Plan (dated Jan 30, 2014) for the project since it's property was impacted by contaminants from Macadam. (RKW 8/14) The site monitoring wells have been decommissioned and the site stormwater permit canceled as stormwater discharge associated with industrial activity will no longer occur. Apparently the ALSCO industrial laundry facility next door will purchase the site to expand its operations.

NARR Comments: (2007) Aquatic species exposure to copper, lead, nickel, and zinc. High concentrations were found in the manholes of stormwater pipes adjacent to the site. This strongly suggests that sediments have been traveling down the pipes and into the Columbia Slough where metals concentrations are also high. (2014) To address this threat, about 415 tons of surface and shallow subsurface soil, stormwater drainage piping sediment, and associated debris were excavated, containerized, and transported off-site for disposal.

Environmental Interest/Information System:
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Updated By: Not reported
Updated Date: 12/17/2002
Decode for NarcdID: Contamination
NARR Comments: The City of Portland discontinued sewer service to Redi-Strip 8/84 because of violations of discharge limits to the City system. The owner of the business (Jim Davis) installed a wastewater treatment vault 10/84, and reconnected to the city system without prior authorization. The city renewed the permit, then revoked it 12/84. City inspectors replugged the sewer. Inspectors noted 3/85 that the plug had again been removed and that the company had been operating as before. The city again plugged the sewer. DEQ made a 4/85 compliance inspection for hazardous waste, in response to numerous complaints. Samples of various materials were taken to characterize the waste. A sample of sludge from the adjacent property contained lead with an EP Tox concentration of 170 mg/L and chromium with 7.1 mg/L. This material had moved from Redi-Strip's property. A sample of an accumulation of dried sludge on the ground adjacent to barrels of waste contained lead with an EP Tox concentration of 25 mg/l. A five-day notice was issued by DEQ 12/85. Jim Davis left the operation in 1986 and was assessed a $2,500 judgement for unauthorized disposal of hazardous waste. Fourteen inches of topsoil were allegedly removed from one area of the facility.

NARR Comments: Soil and groundwater at the site have been contaminated by surface releases. Surface releases also entered the stormwater system via a local drain. The site storm drains discharge to the Multnomah County Drainage District Ditch which goes eventually to the Columbia Slough. The sediments in the ditch have been contaminated with metals, cyanide, and petroleum.

Updated By: RWILLIA
Updated Date: 06/06/2011
Decode for NarcdID: Remedial Action
NARR Comments: (LSK 10/17/97) Site reevaluated as part of review of all sites within the Columbia Slough Study Area. The site has a history of discharging excessive quantities of zinc, chromium and lead to the City of Portland sewer system and then discharging wastewaters to site soils and ditches that drained to the Slough when the City discontinued sewer service to the site. Sediment sampling in the Slough in general has shown high levels of lead and chromium. (4/28/99 DAB/SRP) Phase I of the RI has been completed. DEQ did not approve the workplan for Phase II of the RI. (5/1/00 DAB/SRP) Following Mr. Sullivan's refusal to perform additional work, DEQ issued an enforcement order (April 2000) for a remedial investigation and feasibility study. Mr. Sullivan has agreed to perform the RI/FS. (9/27/00 DAB/SRP) The RI proposal and RI workplan have been approved by DEQ. Field work was completed in July 2000. (4/6/01 DAB/SRP) A draft remedial investigation report was submitted in January 2001. (11/25/01 RKW/SRP) In October 2001, storm drain was cleaned out and additional samples were collected from groundwater monitoring wells. (11/4/02 RKW/SRP) Sediment contaminated with lead, zinc, chromium, and cyanide was removed from storm drain ditch downstream of the site. Confirmation samples collected following sediment removal indicate that lead, chromium, zinc, cyanide, and petroleum contamination remains in ditch sediments. The Multnomah County Drainage District controls the ditch and has plans to widen it for flood mitigation in 2004. They are aware of contamination and plan to remove a large quantity of sediment. Redi-Strip will collect additional samples after ditch widening. (9/26/03 RKW/SRP) Sediment samples from the ditch were collected in fall 2005. Results show diesel and oil up to 36,600 mg/kg, chromium up to 115 mg/kg, cyanide up to 3 mg/kg, lead up to 212 mg/kg, and zinc up to 794 mg/kg. Due to the large volume of sediment that must be removed and associated cost, the work will be delayed until summer 2006. (11/23/05 RKW/SRP) Ditch cleanout delayed.

NARR Comments: (Bob Schwarz, Mar. 11, 2014) Anderson Portland Properties purchased the site in 1975. Tenants since that time have included a roofing equipment and supplies company, Trojan Manufacturing, Power-Serv, Pro-Trucks, Armack, Olson s Mobile Tractor Service, and Motors & Controls Company. The site is currently owned by Webster Family, LLC and the current tenant is Potter Webster Company. The site currently is used for truck and trailer repair and service. Soil, groudnwater and stormwater were tested between 2007 and 2013. DEQ determined that contaminant concentrations do not exceed acceptable risk levels. A No Further Action determination was issued for the site on March 6, 2014. A copy of the NFA letter and the staff report in support of this decision are attached.

Decode for NarcdID: General Site Description
NARR Comments: The 4.03-acre Airgas Norpac site is a flat, completely paved property located in an industrially zoned area in North Portland, Oregon. There are three large buildings on the property and several small utility/service buildings. The Airgas property is surrounded by other industrial businesses to it’s north and east (primarily Mitchell Brothers to north and Malarkey Roofing to north and east) and another industrial property (Hartman Steel) is located directly west. The south side of the site is bordered by Frontage Road, a service road, and then by a railroad grade. Most overland flow is directed to catch basins on the property that are connected to the City of Portland’s stormwater system. Most stormwater from this area directly discharges

AIRGAS USA LLC (Continued) **S107845294**

to the Columbia Slough via the storm piping. Plumbing records indicate that some buildings on the property had drains connected to drywells or seepage pits. It is not clear whether all of these devices have been disconnected and replumbed. The Columbia Slough is located approximately 1,250 feet to the north of the site. The Columbia Slough is a tidally influenced water body that serves as a local recreational source (fishing, small craft boating) and is listed as migration and rearing habitat for several species of Federal and State-listed threatened and endangered fish species (Fall and Summer Chinook and Coho salmon; Winter Steelhead).

NARR Comments: (8/12/05, CWH/SAP) Site was once a Union Carbide run acetylene gas plant. A byproduct of the acetylene manufacturing process, where water is mixed with calcium carbide, is a high pH calcium hydroxide sludge. This facility from approximately 1944 through the late 1950's had three large lagoons that held the calcium hydroxide byproduct (see Fig. 4). DEQ has found at several other sites in Oregon that the calcium hydroxide byproduct from the acetylene manufacturing process can contain high levels of petroleum hydrocarbons, including PAHs,

AIRGAS USA LLC (Continued) **S107845294**

and in some cases, high concentrations of metals. The western-most of the three lagoons was cleaned out and detention berms were removed in the early 1990s. There are no records indicating that the other two lagoons, which existed in the middle of the property, had ever been cleaned out. DEQ believes that historically, during wet season months in particular, these lagoons could have overflowed and delivered entrained solids to the Columbia Slough. Figure 5 a U.S. Army Corps of Engineers aerial photograph from 1967, upon close examination, shows a fairly high discharge of some type of lightly colored substance into the Slough. There is no verification that the substance discharging into the Slough is from the Linde Division operation (now Airgas property). Plumbing records indicate that the property and some of the buildings have historically been served by drywells or seepage pits. One record from City of Portland files (Permit No. 11434, 3/17/89) showed that the <quot>welding gas shop<quot> had a 26 feet deep seepage pit located nearby. Two permits from January of 1972 indicate several cesspools located on the property. The plumbing records do indicate that several drainages were connected to the City's storm system in the early 1990's. However, these historic subsurface injection/distribution systems may have served as a conduit for site contamination to enter subsurface soils and groundwater.

NARR Comments: Stormwater pathway to surface waters: On the Airgas site the north-south trending drainage ditch at the northernmost end of the property line between Airgas and Malarkey drains ultimately to Malarkey Outfall 01 (per their Storm Water Pollution Control Plan). All of Malarkey's outfalls are connected to the City storm sewer line which discharges to the Slough at City of Portland Outfall 59 (see map online at DEQ web site - (http://www.deq.state.or.us/nwr/Columbia_Slough/CS_Discovery_Projects_map5.pdf). In the early and middle 1990s, sediment samples from the Columbia Slough were sampled and analyzed for numerous contaminants. Figure 6 fo Site Assessment report shows the locations of samples collected in the noted period in the stretch of the Slough near the Airgas property. DEQ has evaluated the data for the samples shown. Sediment sampling results for several metals are shown in Table 1 (see Site Photos). The table shows that sediment samples in the Columbia Slough, in the stretch adjacent to the Airgas

AIRGAS USA LLC (Continued) **S107845294**

and Malarkey Roofing sites, contain concentrations of several metals above DEQ-established the baseline <quot>ambient<quot> concentrations for those metals. DEQ has observed some similar trends for a couple of polynuclear aromatic hydrocarbons (PAHs). Figure 7 further illustrates a locally high concentration of metals, relative to up- and downstream sediments in the Slough near the outfall that serves Airgas and Malarkey Roofing. Subsurface soil to indoor and outdoor air: There is a one-story office building on the property that is located over the former westernmost lagoon. Potential petroleum products in the subsurface of the site, in the area of the other two lagoons, presents an inhalation threat to site workers via volatilization to indoor and outdoor air. Direct contact: Since there are stormwater collection systems on the property and along the service road located to the south, there is a potential threat of direct contact exposure for utilitiy workers to subsurface soils and groundwater. Since the site is paved, the threat of direct contact exposure to site workers is considered to be low.

NARR Comments: (9/13/05, CWH/SA) State screening by DEQ NWR Site Assessment completed in September 2005. (4/11/11 CWH/CU) Airgas Nor Pac, Inc. took several measures between October 2005 and late 2010 to address environmental concerns on the site. Actions included: a. Soil and groundwater evaluation that established that prior industrial site use for acetylene gas manufacturing had not contaminated site soils or groundwater at concentrations thast posed a risk to site workers or local beneficial use of groundwater. b. Decommissioned existing underground injection controls (UICs, a.k.a. drywells) that were not rule-authorized. c. In conjunction with UIC decommissioning, upgraded site stormwater capture and treatment system to meet City of Portland code. Stormwater from site is now captured and discharged to City of Portland stormsewer line. On April 11, 2011 DEQ determined that site investigation results, UIC decommissioning and stormwater upgrades completed on the site were sufficient to demonstrate that past industrial use did not present an unacceptable risk to human health and the environment and issued a no further action (NFA) determination for the site.

Decode for NarcdID: Water Use (Current/Reasonably Likely)
NARR Comments: Based on the results of the beneficial water use evaluation (MFA, 2008), shallow groundwater is not used as a drinking-water source and local beneficial use of deeper groundwater (in Troutdale formation) is industrial only. The Site and surrounding area are predominantly supplied with potable water by the City of Portland (COP) municipal water system, and the COP likely will continue to provide potable

AIRGAS USA LLC (Continued) **S107845294**

water to the Site and the region in the future. The only current and reasonably likely future beneficial use of shallow groundwater in the area is discharge to the Columbia Slough. However groundwater gradients measured near and on the site based on water levels in wells that are screened within the shallow sand and gravel aquifer approximately 25-40 feet below ground surface show a very flat gradient or a gradient that is to the south, away from the Columbia Slough. No surface water rights were identified in the area near the Airgas-Norpac site (MFA, 2008). All stormwater from the Site discharges to the COP s stormwater system, and ultimately, after treatment through City-managed wetlands (Ramsey Lake), to the Columbia Slough. Current surface water uses of the Columbia Slough include aesthetic quality, recreation, transportation, wetland areas, fishing and hunting, fish and wildlife habitat, and groundwater recharge. It is not anticipated that surface water uses will change in the future.

NARR Comments: This site operated as an acetylene gas generation facility from the late 1930's until it was dismantled in the mid 1970's. Records indicate that over most of its operation the acetylene plant was operated by Union Carbide. Since acetylene gas generation has ceased at the site, it has largely served as a bottled gas storage and distribution facility. In 1989 two leaking underground storage tanks (USTs) were removed and needed cleanup was completed at the site through DEQ's UST Cleanup Program. Refer to UST records UST #26-89-0053 and #26-89-0193.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 06/22/2023

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 03/26/2023

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

HIST FTTS INSP: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing
A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

NY MANIFEST: Facility and Manifest Data

Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

Date of Government Version: 01/01/2019

UTM X (Meters):	524521.6
UTM Y (Meters):	5049232.5
Elevation:	20 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	14878142 PORTLAND, OR
Version Date:	2020

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

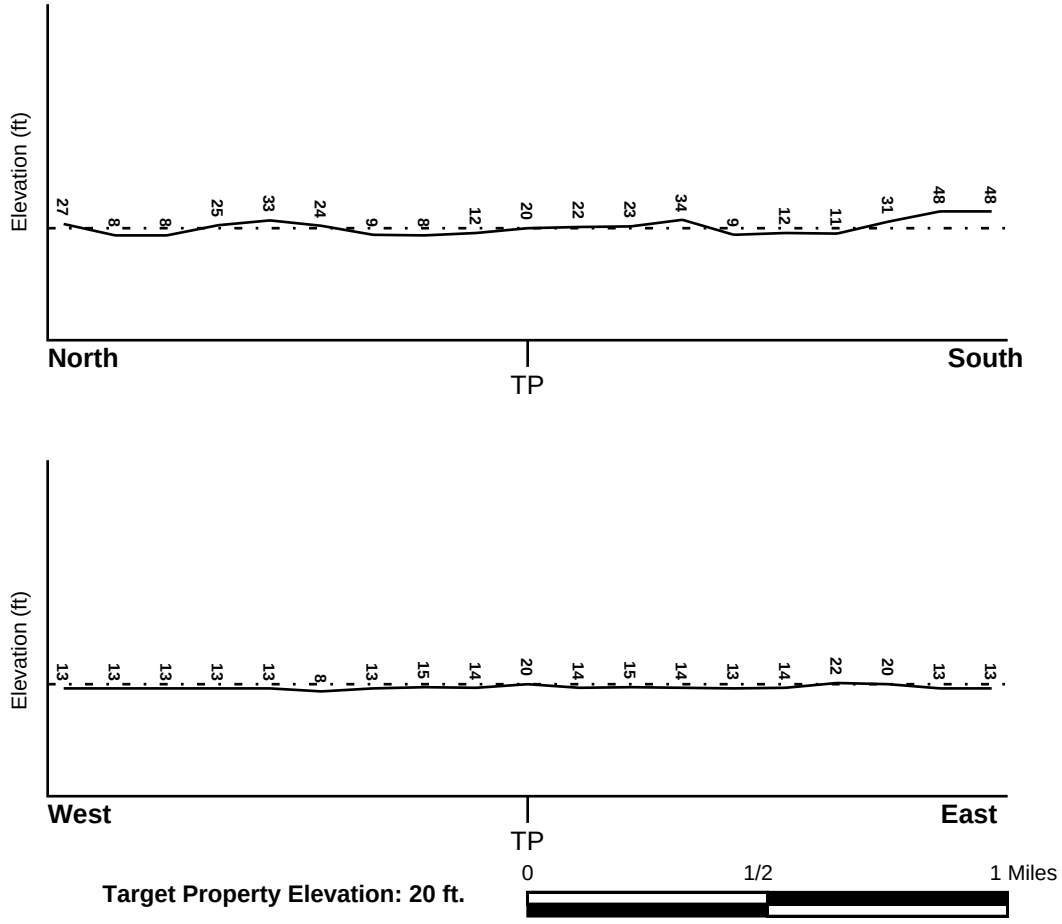
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General North

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
53011C0481D	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
4101830080F	FEMA FIRM Flood data
53011C0477D	FEMA FIRM Flood data
4101830085F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
PORTLAND	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Sauvie

Soil Surface Texture: silt loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Poorly drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 5 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity	Soil Reaction
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	micro m/sec	(pH)
1	0 inches	14 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 42 Min: 14	Max: 6.5 Min: 5.6
2	14 inches	38 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 42 Min: 14	Max: 6.5 Min: 5.6
3	38 inches	59 inches	very fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 42 Min: 14	Max: 6.5 Min: 5.6

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 2
