Incident Narrative: STATE HAZMAT TEAM 6 FROM PFB CALLED BY PORTLAND DVD TO 1801 N MARINE DR. SUSPECTS HAD DUMPED DRUG LAB WASTE AND SUPPLIES IN A PARKING AREA NEAR A ROADWAY. THE SUSPECTS HAD BEEN ABOARD A NEARBY 60 FOOT YACHT AND THERE WAS A STRONG CHEMICAL SMELL COMING FROM THE BOAT. THE TEAM ARRIVED AND CONFERRED WITH DVD OFFICER IN CHARE SGT HENDRICKS DETERMINING HOT ZONE AND NEEDED SETUP. THERE WERE THREE BACKPACKS AND A DUFFEL BAG IN THE PARKING LOT. UNKNOWN NUMBER OF SAMPLES TO BE TAKEN. TWO DVD OFFICERS WERE SUITED UP IN LEVEL B WITH SCBA- ALL PERSONNEL WORE LIFE PRESERVERS DUE TO THE PROXIMITY TO THE COLUMBIA RIVER. THE TWO OFFICERS WERE: DORIS PAISLEY (#BPSST UNK) AND BILL SHAW (#28923). SHAW SUITED UP AND WENT WITH HENDRICKS DOWN THE DOCK TO "CLEAR" THE YACHT OF ANY POTENTIAL TWO-LEGGED THREATS. SHAW FOUND ONE CONTAINER OF LIQUID AND TOOK A SAMPLE FROM IT FOR EVIDENCE. FB 17 WAS CALLED TO THE SCENE TO EVALUATE MOVING THE YACHT TO A SAFER LOCATION FOR EVIDENCE TAKING, BUT THAT PROVED UNNECESSARY. PAISLEY AND SHAW TOOK A TOTAL OF 12 SAMPLES FROM THE BACKPACKS AND DUFFL BAG. THEY ENTERED THE HOT ZONE AT 1559 HOURS AND EXITED AT APPROX 1702 HOURS FOR DECON. HM TEAM SET UP EVIDENCE COLLECTION TABLE AND MATERIALS FOR DVD - PROVIDE DECON.

Updated By: Not reported
Updated Date: 12/17/2002
Decode for NarcdID: Contamination
NARR Comments: The City of Portland discontinued sewer service to Redi-Strip 8/84 because of violations of discharge limits to the City system. The owner of the business (Jim Davis) installed a wastewater treatment vault 10/84, and reconnected to the city system without prior authorization. The city renewed the permit, then revoked it 12/84. City inspectors replugged the sewer. Inspectors noted 3/85 that the plug had again been removed and that the company had been operating as before. The city again plugged the sewer. DEQ made a 4/85 compliance inspection for hazardous waste, in response to numerous complaints. Samples of various materials were taken to characterize the waste. A sample of sludge from the adjacent property contained lead with an EP Tox concentration of 170 mg/L and chromium with 7.1 mg/L. This material had moved from Redi-Strip's property. A sample of an accumulation of dried sludge on the ground adjacent to barrels of waste contained lead with an EP Tox concentration of 25 mg/l. A five-day notice was issued by DEQ 12/85. Jim Davis left the operation in 1986 and was assessed a $2,500 judgement for unauthorized disposal of hazardous waste. Fourteen inches of topsoil were allegedly removed from one area of the facility.

NARR Comments: Soil and groundwater at the site have been contaminated by surface releases. Surface releases also entered the stormwater system via a local drain. The site storm drains discharge to the Multnomah County Drainage District Ditch which goes eventually to the Columbia Slough. The sediments in the ditch have been contaminated with metals, cyanide, and petroleum.

Updated Date: 06/06/2011
Decode for NarcdID: Remedial Action
NARR Comments: (LSK 10/17/97) Site reevaluated as part of review of all sites within the Columbia Slough Study Area. The site has a history of discharging excessive quantities of zinc, chromium and lead to the City of Portland sewer system and then discharging wastewaters to site soils and ditches that drained to the Slough when the City discontinued sewer service to the site. Sediment sampling in the Slough in general has shown high levels of lead and chromium. (4/28/99 DAB/SRP) Phase I of the RI has been completed. DEQ did not approve the workplan for Phase II of the RI. (5/1/00 DAB/SRP) Following Mr. Sullivan's refusal

AMERICAN METAL CLEANING INC (Continued) **S103303303**

to perform additional work, DEQ issued an enforcement order (April 2000) for a remedial investigation and feasibility study. Mr. Sullivan has agreed to perform the RI/FS. (9/27/00 DAB/SRP) The RI proposal and RI workplan have been approved by DEQ. Field work was completed in July 2000. (4/6/01 DAB/SRP) A draft remedial investigation report was submitted in January 2001. (11/25/01 RKW/SRP) In October 2001, storm drain was cleaned out and additional samples were collected from groundwater monitoring wells. (11/4/02 RKW/SRP) Sediment contaminated with lead, zinc, chromium, and cyanide was removed from storm drain ditch downstream of the site. Confirmation samples collected following sediment removal indicate that lead, chromium, zinc, cyanide, and petroleum contamination remains in ditch sediments. The Multnomah County Drainage District controls the ditch and has plans to widen it for flood mitigation in 2004. They are aware of contamination and plan to remove a large quantity of sediment. Redi-Strip will collect additional samples after ditch widening. (9/26/03 RKW/SRP) Sediment samples from the ditch were collected in fall 2005. Results show diesel and oil up to 36,600 mg/kg, chromium up to 115 mg/kg, cyanide up to 3 mg/kg, lead up to 212 mg/kg, and zinc up to 794 mg/kg. Due to the large volume of sediment that must be removed and associated cost, the work will be delayed until summer 2006. (11/23/05 RKW/SRP) Ditch cleanout delayed.

Decode for NarcdID: Remedial Action
NARR Comments: (Bob Schwarz, Mar. 11, 2014) Anderson Portland Properties purchased the site in 1975. Tenants since that time have included a roofing equipment and supplies company, Trojan Manufacturing, Power-Serv, Pro-Trucks, Armack, Olson s Mobile Tractor Service, and Motors & Controls Company. The site is currently owned by Webster Family, LLC and the current tenant is Potter Webster Company. The site currently is used for truck and trailer repair and service. Soil, groudnwater and stormwater were tested between 2007 and 2013. DEQ determined that contaminant concentrations do not exceed acceptable risk levels. A No Further Action determination was issued for the site on March 6, 2014. A copy of the NFA letter and the staff report in support of this decision are attached.

Updated Date: 08/03/2004
Decode for NarcdID: Contamination
NARR Comments: Site is suspected of petroleum releases to the subsurface. As part of Columbia Slough Area-wide Discovery Project this site was noted due to the presence of soil borings found in Water Resources Department well log database. Site runoff or subsurface contamination could reach part of Columbia Slough via stormwater piping system. (8/3/04 CWH/SAP) Site cleanup was completed under DEQ's UST program.

Updated By: KDANA
Updated Date: 09/08/2011
Decode for NarcdID: Contamination
NARR Comments: (09/07/2011 KPD/ICP) The site was added to ECSI in May 2004 as part of the Columbia Slough Area-wide Discovery Project when well logs for five monitoring wells were noted in the Oregon Water Resources Department well log database. Subsequent sampling of the monitoring wells in October 2010 found gasoline, diesel, and chlorinated solvents (PCE and its degradation products) in MW-1, in the northwest corner of the site. Only low levels of PCE (around 2 ppb) were noted in the other wells.

Decode for NarcdID: Remedial Action
NARR Comments: (09/07/2011 KPD/ICP) The principals of BCB Properties signed an Independent Cleanup Agreement with DEQ in November 2010 to conduct an investigation of the site prior to selling the property. However, a sale went through in May 2011, and neither the seller nor the new buyer expressed an interest in continuing the investigation.

EXPO CENTER (Continued) **U000432847**

NARR Comments: Area around site has been extensively investigated and the past activity has not been evaluated as part of DEQ Cleanup program. As part of Columbia Slough Area-wide Discovery Project this site was noted due to the presense of soil borings found in Water Resources Department well log database. Site runoff or subsurface contamination could reach part of Columbia Slough or location wetlands via stormwater drainage system.

NARR Comments: Historically, the Property was undeveloped marshland until approximately 1940. Between approximately 1940 and 1946, the Property was filled for development as a horse racing facility. On May 1, 2019, DEQ recieved a request to enter into a Prospective Purchaser Agreement. The prospective purchaser will develop the site for industrial use, including up to six industrial buildings with associated improvements. Substantial public benefits may include, but are not limited to, the following: The generation of resources and

VERIZON WIRELESS (Continued) **S104900043**

funding to complete remedial actions at theProperty consistent with the DEQ NFA for DEQ LUST File No. 26-04-1266. The generation of substantial funding to DEQ s Columbia Slough Cleanup Fund to further assess sediment impacts from industrial sources along the Columbia Slough, or the performance by Respondent of an equivalent baseline assessment. Additional job creation in connection with redevelopment and reuse of the property.

NARR Comments: In 2004 an underground storage tank and contaminated soil was removed from the site. Some residual contaminated soil was identified below a stable and could not be removed. Based on the site s industrial zoning and extent of contamination, DEQ concluded that the contamination remaining on the property did not present an unacceptable risk. The site received a conditional No Further Action from DEQ Leaking Underground Storage Tank Program. (DEQ LUST File No. 26-04-1266) Information contained in the property deed indicates that the southern boundary of the site extends to the centerline of the Columbia Slough. Industrial and urban developments along the Columbia Slough have resulted in accumulation of various contaminants in slough sediment, some of which bioaccumulate and have been detected in fish tissue. In March 2019 a Phase II Environmental Site Assessment was performed on the upland. The Phase II ESA consisted of collecting soil and groundwatersamples from 18 direct-push borings. Boring were advanced to depths ranging from 3 to 10 feet bgs. Representative soil and shallow groundwater samples were analyzed for RCRA 8 metals, PAHS, VOCs, PCBs, GRO, DRO and ORO. With exception of arsenic, all other chemical constituents were either not detected above the laboratory reporting limit or were detected at concentrations below industrial and construction worker risk based concentrations. On May 1, 2019, DEQ recieved a request to enter into a Prospective Purchaser Agreement. The prospective purchaser will develop the site for industrial use, including up to six industrial buildings with associated improvements. As a part of the Prospective Purchaser Agreement, the applicant agrees to perform the following: Conduct additional investigation and if needed, cleanup related to the former underground storage tank Perform a Columbia Slough Upland Source Control Evaluation. All stormwater system modifications or improvements shall be in accordance with the City of Portland Stormwater Manual as applicable. Abandon production water well or upgrade well to modern standards Perform pesticide sampling in upland soils Prepare an Environmental Media Management Plan for future

VERIZON WIRELESS (Continued) **S104900043**

construction activities Perform baseline sediment assessment of Columbia Slough sediments near the Portland Meadows facility or provide an equivalent contribution to the Columbia Slough Cleanup Fund. [9/14/2020 PPA/SAM] Prologis entered into a Prospective Purchaser Agreement with DEQ in August 2019. Environmental Medial Management Plan approved by DEQ in June 2020. Construction occuring summer 2020.

NARR Comments: Between 1940 and 1946 a horse racing complex was constructed at the Portland Meadows site. Additional structures related to this use were added over time. Currently the area south of N. Schmeer Road is used for trailer storage and sand, gravel and concrete recycling and stockpiling.

NARR Comments: Site is suspected of petroleum releases to the subsurface. As part of Columbia Slough Area-wide Discovery Project this site was noted due to the presence of soil borings found in Water Resources Department well log database. Site runoff or subsurface contamination could reach part of Columbia Slough via stormwater piping system.

NARR Comments: Investigation initiated from three complaints during the summer of 1987. The complainants alleged that they could smell <quot>strong chemical odors.<quot> The odor was traced to Container Care. DEQ investigated and determined the odors were from open containers at Container Care. The facility was ordered to clean the containers. Soils were also sampled.

NARR Code: Contamination
Created By: Not reported
Created Date: 12/17/2002
Updated By: GWISTAR
Updated Date: 06/23/2003
Decode for NarcdID: Contamination
NARR Comments: (9/8/92 DJH/SAS) A number of businesses have operated at the site since the 1950s; these have included a boat storage facility, a manufacturer of concrete blocks, and an auto body shop. 75-100 drums, containing what were said to be chemicals used to manufacture industrial floor cleaning compounds, were stored in a shed at the site from 1983 to 1984. Materials in these drums were tested and found to have pH values ranging from 1 to 14. These drums were apparently purchased and removed by Apollo Chemical Company in 1984. From 1984 to 1985, Auric Enterprises salvaged and recovered metals at the site through open burning and smelting. Transformers were present on-site during this time; some of these are known to have contained at least low levels of PCBs. The lead and aluminum smelters at Auric apparently used oil from the transformers as fuel. In early 1991, 35 on-site soil samples and 15 sediment samples from nearby wetlands and drainage canals were taken. PCBs were detected in two of the soil samples (at 12,000 and 72 ppb). No metals were found in soil or sediment samples at concentrations significantly above background. (10/27/97 LSK) On June 9, 1995, PEMCO excavated approximately 5 cubic yards of soil from the northeast edge of the paved area and approximately 0.25 cubic yard of soil buildup on the concrete where PCBs had been detected during a previous investigation. Three soil samples were collected by PEMCO from the bottom of the excavation and a sample was taken from stockpiled material. The stockpile material was also analyzed for petroleum hydrocarbons and priority metals (TCLP). One sample from the excavation had 0.24 ppm PCBs, and the stockpile sample had 0.13 ppm PCBs. (5/14/03 RGS/VCP) The site is currently vacant. Soil samples were collected in July 2000 by Creekside Environmental. Samples in the vicinity of the soil excavation were analyzed for PCBs at three depth intervals (0-6<quot>, 8-10<quot> and 12-16<quot> below ground surface). PCBs were below laboratory detection limits in these samples. Petroleum hydrocarbons were detected in the former burn pit area and in a surficial oil-stained area (believed to be a diesel/lube oil release from a backhoe parked at the site.

NARR Comments: Drainage channels are located on the north, east and south sides of the site; these run to the Columbia Slough. There is wetlands frontage along the drainage canals. Groundwater beneath the site is shallow, and is almost certainly in hydraulic connection with the Columbia River and/or Columbia Slough. Less than 60 persons use groundwater within 4 miles of the site for drinking purposes.

NARR Comments: (9/8/92 DJH/SAS) Site Assessment recommends that the owners of the property remove remaining soil contamination at the site. This can either be done through DEQ's Voluntary Cleanup Program, or perhaps with oversight from Site Assessment. Site Assessment further recommends that the site be proposed for the Confirmed Release List and Inventory. (10/27/97 LSK/SAS) Site re-evaluated as part of review

AURIC ENTERPRISES (Continued) **1008175145**

of all sites within the Columbia Slough Study Area. Based on new information (see Contamination Information), the site recommendation has been changed from a medium to a low for further investigation. (4/21/00 RGS/VCP) The property owner entered the Independent Cleanup Program (ICP) in February 2000. DEQ denied the request for a NFA and provided the owner with a list of site data gaps. (11/21/01 RGS/VCP) In July 2000, soil samples were collected to address data gaps identified in DEQ's April 11, 2000 data-gaps memo. PCBs were not detected in potential source areas, while metals were in general detected at concentrations near background. Arsenic, cadmium, chromium, lead, and mercury appear slightly elevated in selected samples; however, concentrations are less than EPA Region 9 PRGs for residential properties, with the exception of arsenic (concentrations appear near regional background values). The property owner placed further investigation/cleanup on hold for financial reasons in January 2001.

Updated By: JWAGGY
Updated Date: 07/30/2007
Decode for NarcdID: Contamination
NARR Comments: (5/29/01 MDK/SRP) Waste oil purified and recycled in a process involving screening, filtering, and heating. Oil trucks cleaned on-site generating wastewater with approximately 5% trichloroethylene (TCE). TCE was vaporized, condensed, and reused. Waste TCE, waste oil sludge stored in drums and tanks. Surface runoff may have contributed to a major fish kill in Force Lake in March 1974. Runoff collection system installed since then, consisting of an oil/water separator. Suspect past operating practices and frequent spills as potential problems. A major fire in 1979 destroyed the facility and was reported to have caused oil and other contaminants to pour across the site and into the wetlands west and south of the site, however, records for this are mostly anecdotal. The TCE used to clean out tank trucks has been found in low concentrations in surface water at the southwest (lowest) end of the site, and has entered the environment. Comprehensive sampling in 1990 showed high levels of oil in site soils and low levels of chlorinated VOCs in deep groundwater (100 ft. depth), although these same VOCs appear to be widespread in groundwater in the immediate site vicinity. Off-site sampling in 1994 showed significant oil contamination in shallow wetland soils, and this contamination is likely to have originated from past releases at the site. Sampling by EPA's contractor in 2000 on behalf of EPA Region 10 has confirmed the presence and extent of contamination originating from past site operations. (12/27/06 MDK/CU&ER) Site added to NPL in 2001. Efforts by EPA to negotiate a cleanup order is on-going (2001 - 2006).

NARR Comments: (1/27/10 MDK/CU&ER) Site investigation activities were conducted in 2007 and 2008. Draft HHRA and ERA reports were submitted to EPA and then provided to DEQ and stakeholders. Draft Remedial Investigation Report submitted. DEQ provided comments on the HHRA and ERA in November 2009, and then comments on the VG responses to the consolidated EPA comments on January 14, 2010. Risk Assessment have been revised in accordance with US EPA comments, and US EPA has responded to DEQ, Portland BES, and other stakeholder comments. Draft risk assessments are expected to be finalized in accordance with US EPA comments early 2012 and proposed plan Spring 2012.

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: The site is located within 100 feet of Force Lake to the southwest and the Columbia River 1000 feet to the north. A drainage system of buried tiles drains the lake through the adjacent wetland marsh, west and south where it is pumped into the Columbia Slough. The wetlands associated with Force Lake support great blue heron nesting areas, and the City of Portland considers this wetlands area, as well as the lake, to be a sensitive environment. Site is now largely paved and the berm on the western edge of the property leveled off in 2011 dring site modifications

Decode for NarcdID: Remedial Action
NARR Comments: (5/29/01 MDK/SRP) There is no evidence that historical releases from the Harbor Oil site were followed by any remedial actions, and recent sampling shows that significant hydrocarbon contamination remains on-site and in the wetlands area. The primary issue of concern at this site is the effect from past releases on ecologically sensitive wetlands associated with Force Lake. An RP notice letter was sent in January 2000 requesting committment to perform an RI/FS and pay DEQ oversight. The RP did not commit to RI/FS and payment of oversight, and site was referred to EPA for further site assessment. Field work for the EPA Site Inspection was conducted July 31 - August 4, 2000. A summary report was released November 2000. EPA determined that the site qualified for listing on the NPL. (6/30/03 MDK/C&ER) The draft PA/SI was released on February 2, 2003. October 2001 letter from Gov. Kitzhaber supports proposed NPL listing. (6/5/14 GMW/SAS) EPA proposed the site for the NPL in 2002. The site was listed on the NPL in 2003, and subsequent investigation and risk assessment work has been conducted under EPA oversight. In June 2014, following a notice in the Federal Register and soliciting public comment, EPA delisted Harbor Oil from the NPL.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: [June 2014] EPA declared the property a Superfund (NPL) site in 2003 at the request of DEQ, which wanted EPA to use Superfund law to bring responsible parties to the table. Harbor Oil ceased operating in 1999. In 2012, EPA s project manager for the site indicated that EPA believed the property posed no unacceptable risk to people or wildlife, despite its Superfund designation.

 On June 5, 2014, EPA removed Harbor Oil from the NPL.

Unit of Measure: Gallons
Release Date: 07/24/2009
Description: Received notice from Hazmat that an oil recycling facility had a fire involving one of their oil tanks. Fire was out and the fire dept was concerned about oil and FF foam reaching a waterway. Hazmat team requested on scene DEQ presence. Contacted Ray Hoy.
Lat/Long: 45.6062 / -122.6938
Source: Industrial Plant
Media: Non-saturated soil, rock, etc.
Responsible Company: Oil Re-Refining Company, Inc.
Responsible Address: 4150 N Suttle Rd
Responsible City,St,Zip: Portland, OR 97217-7717
Unknown Quantity Released: Not reported
Maximum Potential Quantity: Not reported
Quantity Recovered: Not reported

Name: Not reported
Address: 11535 N FORCE AVE
City,State,Zip: PORTLAND, OR 97217
Facility ID: 2020-0339
Incident Status: Referred/Closed
Material: Unknown
Quantity: Unknown
Unit of Measure: UNK
Release Date: 02/06/2020
Description: Received an NRC report of an unknown substance released into the air. Reporting party lives in Jantzen Beach area and believes the source is American Petroleum. RP also described a toxic odor. Address for the business was obtained by OERS from the internet. BET 2/7/20, Reporting party complained of petroleum odors from the American Petroleum recycling facility south of the residence across Columbia on Force Ave. Reporting Party said he smelled the odor all day and this happens a lot.

Hazardous Waste Summary:

Waste Code: D007
Waste Description: Chromium

Waste Code: D008
Waste Description: Lead

Waste Code: D018
Waste Description: Benzene

Waste Code: D039
Waste Description: Tetrachloroethylene

Waste Code: D040
Waste Description: Trichlorethylene

Waste Code: F001
Waste Description: The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichlorethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F002
Waste Description: The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl

AMERICAN RECYCLERS, LLC (Continued) **1000302670**

Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: K001
Waste Description: Bottom Sediment Sludge From The Treatment Of Wastewaters From Wood Preserving Processes That Use Creosote And/Or Pentachlorophenol.

Waste Code: K049
Waste Description: Slop Oil Emulsion Solids From The Petroleum Refining Industry.

Waste Code: K051
Waste Description: Api Separator Sludge From The Petroleum Refining Industry.

Waste Code: K052
Waste Description: Tank Bottoms (Leaded) From The Petroleum Refining Industry.

Waste Code: NONE
Waste Description: Not Defined

Waste Code: P030
Waste Description: Cyanides (Soluble Cyanide Salts), Not Otherwise Specified

Waste Code: U019
Waste Description: Benzene (I,T)

Waste Code: U051
Waste Description: Creosote

Waste Code: U061
aste Description: Benzene, 1,1'-(2,2,2-Trichloroethylidene)Bis[4-Chloro- (Or) Ddt

Waste Code: U112
Waste Description: Acetic Acid, Ethyl Ester (I) (Or) Ethyl Acetate (I)

Waste Code: U117
Waste Description: Ethane, 1,1'-Oxybis-(I) (Or) Ethyl Ether (I)

Waste Code: U159
Waste Description: 2-Butanone (I,T) (Or) Methyl Ethyl Ketone (Mek) (I,T)

Waste Code: U226
Waste Description: Ethane, 1,1,1-Trichloro- (Or) Methyl Chloroform

Waste Code: U228
Waste Description: Ethene, Trichloro- (Or) Trichloroethylene

Waste Code: U239
Waste Description: Benzene, Dimethyl- (I,T) (Or) Xylene (I)

Waste Code: U242
Waste Description: Not Defined

Updated Date: 05/22/2013
Decode for NarcdID: Remedial Action
NARR Comments: [5/22/13 SAM/SA] Prior investigations in the late 1980s/early 1990s found metals, TPH and VOC contamination generally below human health risk based concentrations in site soils and groundwater(except for TCE/PCE which is found in groundwater area wide), but elevated from background concentrations. Sources of the elevated soils are unknown and the true nature and extent of contamination has not been adequately determined. Several spills have occurred on site since 1994 with no record of cleanup provided to DEQ. DEQ Site Assessment recommends the following activities be performed at the site to help clarify site risk and priority for further action. Based on the results of a DEQ site assessment prioritization scoring, the priority for further action is medium. Soils o Prior characterization of waste disposal piles (potential dump area found elevated concentrations of metals. SVOCs were never analyzed, even though PID readings were elevated. SVOCs and metals should be examined further in the waste disposal pile area. o Characterize the full magnitude, nature, and extent of contamination in subsurface soils in the backfilled retention pond. Prior work showed elevated concentrations of petroleum constituents. o Determine if spills were adequately cleaned up; particularly the 1994 diesel spill, 1997 unknown solvent spill and 2005 CCA spill. o Characterize areas where any historic Harbor Oil releases that may have migrated to the site, particularly if a change of land use is considered. Stormwater drainage for the site should be mapped to determine where runoff is directed after entry to the vegetated strip in center of the parking area s southern boundary. If stormwater is directed towards wetlands, additional sediment characterization and source control evaluation may be needed. Groundwater- the southern extent of PCE/TCE groundwater contamination present on the adjacent northern properties (Stockyards Commerce Center #5695) should be defined in the Bulk Transport area.

Decode for NarcdID: Health Threats
NARR Comments: Contaminants in site soils groundwater could represent a potential threat to aquatic life in the Columbia River, wildlife and aquatic life in nearby wetlands, and/or other users of groundwater and surface water in the immediate vicinity of the site. Water quality in the Columbia River is already impaired. The Columbia River is used for recreational and commercial fishing, as well as other recreational purposes. It also provides Critical Habitat for threatened and endangered fish species. The river and nearby wetlands also provide important habitat for other sensitive species such as protected migratory bird species, sensitive amphibian, reptile, and plant species, and food resources for sensitive aquatic and terrestrial species.

NARR Comments: [5/22/13 SAM/SA] The property was developed in the 1940 s as an on-site fertilizer yard that received manure produced at the nearby stockyards. J.W. Fertilizer, a commercial fertilizer and soil additive facility was operating on the eastern portion of the site during the 1970 s until 1990. Since about 1995, Bulk Transportation / DTI a chemical transport company uses the site as a satellite trucking terminal. Liquids, gases, chemicals, and hazardous materials are unloaded from rail cars and trucked to their final destination. Other services include product mixing, liquid bulk storage, tank containers, and warehousing. The western portion of the site is an undeveloped 6acre wetland

Decode for NarcdID: Contamination
NARR Comments: This unregulated landfill was located in a seasonal lake basin and probably operated between 1950 and 1970, when it was covered by a 7 to 8-foot layer of clean fill. An ARCO facility that opened in 1971 at the eastern edge of the former landfill initiated an investigation in 1989 that showed gasoline contamination in groundwater. Borings also revealed a layer of landfill debris beneath clean fill. DEQ's LUST program (file #26-89-0149) requested a Corrective Action Plan from ARCO, leading to pump-and-treat remediation that began operating 8/90. Groundwater samples from eight monitoring wells contained dissolved metals, which are most likely a result of leachate percolating through unknown solid wastes in the unsaturated zone. Because of system fouling from these metals, the treatment program was shut down in May 1991.

Decode for NarcdID: Remedial Action
NARR Comments: In June 1993, ARCO concluded that it was not possible to remediate benzene in groundwater without first removing dissolved metals. ARCO maintained that it had no responsibility for the metals. The LUST section may continue to require regular monitoring as a part of <quot>conditional closure.<quot> Potential pathways of exposure appear limited to groundwater and surface water. Because more information is needed about the landfill and its levels of contamination, Site Assessment recommends that affected property owners characterize contamination in and below the former landfill. Otherwise, a PA should be completed to investigate the site's history and to evaluate potential exposure pathways, under a low priority. Confined space methane testing was performed by PBS for the Hayden's Corner property. The only significant methane was found at two bathroom floor drains where the likely source was sewer gas. Three soil gas samples were collected from borings around the former ARCO site as part of the investigation of the Hayden's Corner property (ECSI #5711). Methane at 2% was found near the former waste oil but this could have been from residual petroleum contamination. Other samples showed only trace methane.

NARR Comments: [April 2017] This unregulated landfill was located in a seasonal lake basin and probably operated between 1950 and 1970, when it was covered by a 7 to 8-foot layer of clean fill. An ARCO facility that opened in 1971 at the eastern edge of the former landfill initiated an investigation in 1989 that showed gasoline contamination in groundwater. High concentrations of metals were also found. Borings revealed a layer of landfill debris beneath clean fill. The Hayden's Corner property (former ARCO site) was split off from the greater landfill site with a separate ECSI number (#5711). Another site was investigated in the Hayden Island Landfill area in 2016/17 (1445 and 1463 N. Hayden Island Drive). These properties' recent use was commercial, and not expected to lead to contamination. Groundwater below the properties is contaminated with TPH and metals, particularly arsenic, barium, lead, silver, and mercury.

Updated Date: 08/20/2012
Decode for NarcdID: Remedial Action
NARR Comments: Methane and other atmospheric gases were measured in confined spaces inside the site buildings using a handheld meter in May 2011. Methane at levels from 1.5 to 5.5% was detected at the drains of two restrooms. This could be related to sewer gas from leaking drain traps. Little or no methane was detected in any other confined space locations within the buildings. In May 2012 three borings were arrayed around the property and one included the location of a former leaking waste oil tank from the prior gas station. Borings were sampled for methane using a handheld meter as well as summa canister sampling. VOCs samples were also collected using a summa. The maximum methane detection was around 2% in one hole (near the former waste oil tank) and near zero in other holes. Various VOCs (largely associated with petroleum) were found at generally low concentrations. No VOCs were found at concentrations greater than commercial risk-based concentrations. In July 2012 a plumber was hired by site owner to inspect and correct any problems with the bathroom drains/traps. No Further Action determination in August 2012. The determination applies only to the immediate Hayden's Corner site and not to the greater Hayden Island Landfill (ECSI #1559).

NARR Comments: An ARCO service station that operated on the property starting in 1971 initiated an investigation in 1989 that showed gasoline contamination in groundwater. Borings also revealed a layer of landfill debris beneath clean fill. The property is apparently located within the footprint of the former Hayden Island Landfill, an unregulated landfill that was located in a seasonal lake basin and

HAYDEN'S CORNER (Continued) **S111766412**

probably operated between 1950 and 1970, when it was covered by a 7 to 8-foot layer of clean fill. DEQ's LUST program (file #26-89-0149) requested a Corrective Action Plan from ARCO, leading to pump-and-treat remediation that began operating 8/90. Groundwater samples from eight monitoring wells contained dissolved metals, which are most likely a result of landfill leachate percolating through unknown solid wastes in the unsaturated zone. Because of system fouling from these metals, the treatment program was shut down in May 1991. The ARCO station recieved a No Further Action determination in 1998 with the exception that the determination did not apply to other contaminants found at the site related to the greater Hayden Island Landfill.

Decode for NarcdID: Contamination
NARR Comments: (11/20/90 MM) This site includes multiple businesses. Low levels of hazardous substances were identified in soils and groundwater on-site during an environmental audit for a proposed transfer station. One business on-site has free petroleum product floating on groundwater and high concentrations of dissolved volatile organics in groundwater. DEQ's UST program is working with Oregon Waste Systems, Inc. and the truck-stop operator to remediate petroleum problems on-site. The other contaminants present at the site need to be evaluated to determine the need for further assessment or corrective action.

NARR Comments: Gasoline, diesel, 1,2-dichlorobenzene, 1,1-dichloroethane, PCBs, vinyl chloride, methyl isobutyl ketone, perchloroethene, total xylenes. (11/14/97 LSK) Soil contamination was associated with primarily 5 areas of the site: Rod's Truck Repair, The Merit Truck Stop, areas adjacent to the Peninsula Terminal Railroad, Harbor Oil and Star Oil. At Rod's Truck Repair and Merit Truck Stop, BTEX contamination likely from leaking USTs. There is some floating product in shallow groundwater beneath the Merit Truck Stop site. Petroleum hydrocarbons were found in shallow soils at Star Oil (100 to 2,000 ppm) and Farmers (200 to 5,000 ppm). Harbor Oil is described in a separate file (ECSI#24).

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: (11/20/90 MM) Site is located in a light industrial area, and consists of a stockyard, two truck service stations, a card-lock station, a restaurant, railroad tracks and engine barns, and wetlands. Other than workers, the population immediately around the site is low. Land to the south is vacant, to the east and west is industrial. Nearest dense population is one mile south and north across the Slough. The site is on flat land and in the floodplain of the Columbia River. Soils are fine-grained alluvium intermixed with fill consisting of crushed rock, and clayey silt - gravel. Threat or potential threat to surface water - sediments from storm sewer outfalls that enter the Columbia River contained methyl isobutyl ketone (MIBK), 1,2-, 1,3-, and 1,4-dichlorobenzene, Cr, Cd, Zn, Pb, Cu, and Ni above background levels. Depth to groundwater varies from ground surface to 15 feet across the site; its uses are unknown. (11/14/97 LSK) The site is located within 1,000 ft. of Force Lake to the southeast and is adjacent to the Oregon Slough to the north. The wetlands associated with Force Lake support great blue heron nesting areas, and the City of Portland considers this wetlands area, as well as the lake, a sensitive environment. Stormwater runoff from some of the site is carried north towards the Oregon Slough by storm drains that run beneath Marine Dr. Some runoff flows south towards Force Lake and area wetlands. Force Lake drains via the North Ditch, which is part of Peninsula Drainage District No. 1. Water in the ditch is routed to the District's main pumping station southwest of the site, where it is pumped into the Columbia Slough. Shallow groundwater north of the railroad flows radially outward in all directions, and south of the railroad flows to Force Lake and the wetlands area. Deep and intermediate groundwater flow is both to the northwest towards the Oregon Slough and Columbia River and to the south away from the river, depending upon the season and river level changes.

NARR Comments: (10/9/1996 DJH/VCS) Site owner Peninsula Terminal Company contacted DEQ in October 1993 regarding their intent to participate in the Voluntary Cleanup Program, and signed a Letter Agreement with DEQ in March 1994 requesting that DEQ review an investigative report prepared for the site by Braun Intertec. There appear to have been a number of small releases of chemicals during off-loading activities at the site. An underground storage tank formerly located near the Locomotive House, and possibly used to store waste oil, was later removed (exact date unknown). Waste oil in the past has been released from the Locomotive House via a drain line.

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: The site is located in an industrial area of north Portland. However, wetlands and a golf course are located a short distance south of the site. Shallow groundwater beneath the site contains low levels of chlorinated solvents, the source of which appears to be off-site. Shallow groundwater is not known to be used for drinking. Access to the site is restricted.

Decode for NarcdID: Remedial Action
NARR Comments: (10/9/1996 DJH/VCS) Site owner signed Letter Agreement with DEQ's Voluntary Cleanup Program to review investigation and cleanup documents in March 1994. File review memo requesting additional soil and groundwater sampling at the site was completed in June 1994. DEQ-requested soil and groundwater sampling was completed at the site in August 1995. Based on the results of this work, additional sampling was completed in the transloading area in 1996. Contaminants detected in site soil were below industrial cleanup standards presented in OAR 340-122-045, and no significant impacts to groundwater were observed. DEQ therefore determined on 10/9/96 that no further action was required for the site under an industrial cleanup scenario.

Decode for NarcdID: Health Threats
NARR Comments: Volatile and semi-volatile compounds released to soil at the site, but at concentrations below DEQ soil cleanup levels (OAR 340-122-045) for industrial sites. As long as the site remains in industrial use, soil contamination should pose no significant exposure risks to humans.

NARR Comments: The site has been used since at least the early 1900s as a train car switching yard, and for the offloading of materials including coal, cattle, and chemicals. The site is currently used mainly as a switching yard and for some offloading of chemical materials such as plastics, petroleum products, and solvents.

Created By: Not reported
Created Date: 12/17/2002
Updated By: SFORTUN
Updated Date: 04/03/2012
Decode for NarcdID: Contamination
NARR Comments: (3/22/01 MTP/SAS) The property owner, Mr. Bud Hoffman, decommissioned two 10,000-gallon underground storage tanks (USTs) on October 18th and 19th, 1999. Mr. Hoffman indicated the tanks had contained diesel; in previously submitted information, Mr. Hoffman had indicated the tanks contained gasoline and diesel. At the time of removal, the DEQ NWR UST Section was preparing a notice of noncompliance (NON) for failure to upgrade or remove the tanks, which was subsequently issued on February 23, 1999. DEQ UST staff observed stained soil that appeared to be related to overfills, limited to near the surface. Soil sample results submitted to DEQ showed non-detects for each of three samples collected below the tanks. Because it could not be determined if a release from the UST had occurred, DEQ UST Section closed the file. On October 3, 2000, DEQ Hazardous Waste (HW) and UST staff conducted a site visit. The paint operation was observed to generate lacquer thinner used to clean the paint guns at a rate of about 2 drums every 6 months. Lead batteries were observed throughout the facility. A wash pad area associated with the painting business is located outside the building. Collected water apparently was treated and reused on-site; sludge from the sump and pad was shipped off-site as non-hazardous waste about twice a year. The waste profile was based on 1997 data that showed cadmium (24 parts per million [ppm]) and lead (33 ppm). Lab results for a sludge sample collected by DEQ are pending. On the opposite side of the building was an elevated asphalt area to accommodate masking of trucks prior to painting. A lower area contains an 8’ x 10’ pit that had been cemented over to a sump approximately 2’x 3’. Prior to capping of the pit the water was pumped to a dry well about 20 feet away. The drywell appeared to be 20 feet deep. As a result of the HW inspection, a Notice of Noncompliance (NON) was issued on October 11, 2000 for failure to conduct hazardous waste determinations and failure to properly clean up a spill. Mr. Hoffman stores dumpsters on the property as part of a sanitary service; attempts to reclaim glass, metals, and plastic had resulted in a buildup of these materials. The east side of the site is an area overgrown with blackberries where standing water was observed. The water had an organic odor and a sheen. Mr. Hoffman indicated a water pipe had broken as a result of freezing. Two five-gallon buckets were overturned in the standing water. Oil was stored in rusty drums. Enamel and latex paint were observed to be stored on pallets. Stormwater runoff with a sheen, which appeared to originate from the Interstate Street overpass, was observed to fall onto the ground and then flow to a City of Portland drain line. As part of the Tri-Met Interstate MAX line construction, soil samples were collected along the alignment in the easement running along the west side of the site. In a report dated 2/14/01, it was reported that diesel (543 ppm) and total petroleum hydrocarabons (TPH; 1,190 ppm) were detected

HOFFMAN PROPERTY (Continued) **S111247462**

in surface soil collected just north of the former UST excavation site. A number of volatile organic compounds (VOCs), including trimethylbenzene, were detected at up to 1,940 parts per billion (ppb) in subsurface soil collected at 17 feet below ground surface just south of the former UST location. TPH as gas (20 ppm), oil (74.3 ppm) and diesel (111 ppm) were also detected in this sample. Elevated levels of a number of metals (e.g., lead 1,110 ppm) were detected from the 5-to-7 foot sample interval in a boring collected along the western easement. PCBs were not detected in any of the four surface soil samples analyzed. (4/3/12, smf) An Integrated Assessment conducted for EPA by E&E in June 2011 detected concentrations of metals, TPH, SVOCs, and pesticides in surface soils, wash pad sludges, drainage ditch sediments, Columbia Slough sediments, subsurface soils, and site groundwater that represent a potential threat to on-site workers, potential groundwater consumers, terrestrial wildlife, and/or aquatic life in the Columbia Slough. Several of the contaminants detected at elevated concentrations in upland environmental media were also detected at somewhat elevated concentrations in nearby Columbia Slough sediments, suggesting that site contaminants may be contributing to sediment contamination in the Columbia Slough. E&E also catalogued and catagorized the contents of approximately 700 containers of miscellaneous wastes or hazardous substances found at various locations across the site. EPA issued the site a NFRAP decision in February 2011 contingent upon the successful removal and disposal of containerized hazardous substances from the site. However, further evaluation and cleanup are needed at the state level to assure that human health and the environment are adequately protected.

Assessment Program. (3/22/01 MTP/SAS) Based on a review of existing information it appears that there has been a release of petroleum at the site consistent with surface discharges, possibly related to the former USTs. The source of groundwater contamination is not clear, but the compounds detected suggest a gasoline impact. The dry well and former collection pit are a likely source of petroleum and possibly metals contamination to soil and shallow groundwater, and could be impacting or may have historically impacted the Columbia Slough. DEQ SAS recommends a site investigation to assess the nature and extent of contamination in the on-site dry well system and to determine if there is currently, or has been a historic pathway to the Columbia Slough. In addition, the extent of petroleum contamination in the vicinity of the former UST should be determined. DEQ SAS further recommends groundwater sampling to determine if there is an on-site groundwater contaminant source. Because a release has been demonstrated, the site should be added to the Confirmed Release List (CRL). Because further site investigation is required, the site should also be added to the Inventory of hazardous substance sites. DEQ SAS has determined that further work should be conducted under a high priority. (6/1/09 CWH/SA) Site Federal Screening (update) completed. Site recommended to EPA Region 10 for Federal Site Inspection. Primary areas of concern for DEQ: Prior investigation in 2000 and 2001 by Tri-Met, during preparation work for the light rail line, detected elevated concentrations of several metals in surface soils. The Tri-Met work also measured concentrations of metals and semi-volatile, volatile and petroleum hydrocarbons in groundwater. The sources, and full extent and nature of the detected contaminants has not been resolved. The extent of contamination in the drainage ditch along the east side of the site that has received petroleum and metals contaminated discharge from the Harrah s truck washing pad. The extent of any impacts to subsurface soils or groundwater from the underground injection control (UIC) device, also referred to as a drywell, located at the northwest corner of the site s single building. Since the site borders the Columbia Slough, a water-quality limited stream that supports migration and rearing of several species of endangered salmonid species, additional work is needed to evaluate any existing upland sources of contamination and to measures sediments along the shoreline of the Slough to determine if there has been any impact from the site. (4/3/11, smf) E&E completed a detailed investigation of the site in 2011, and issued an Integrated Assessment Report to EPA in February 2012. While EPA’s Removal Program is continuing to work with the site owner to safely remove and dispose of containerized hazardous substances from the site, EPA’s CERCLA Program issued the site a NFRAP decision in February 2012. Further evaluation and cleanup will be needed at the state level, however, to assure that human health and the environment are protected.

NARR Comments: Possible impacts to the Columbia Slough through overland runoff, and/or shallow groundwater discharge. Shallow groundwater may have

HOFFMAN PROPERTY (Continued) **S111247462**

been impacted by petroleum associated with the former USTs at the site, and likely discharges into the Columbia Slough. Possible connections between the existing dry well and shallow groundwater and/or the Columbia Slough is a significant concern. Direct exposure of site utility workers to contaminated surface and subsurface soil is likely. Economically disadvantaged residential properties are located south of North Columbia Drive, greater than 2000 feet from the site. There are 10 industrial use wells listed in Oregon Water Resource Department's well log database for Section 9. One well in Section 9 with no indicated use and no specific location was installed at a depth of 217 feet and could possibly be a potable water supply well. Groundwater discharge to the Columbia may be of concern.

Updated Date: 04/08/2013
Decode for NarcdID: Remedial Action
NARR Comments: [4/8/13 SA/SAM] Site Investigations and some cleanup has occured on site since approximately 1988; generally focusing on underground storage tank removal and remediation. DEQ Site Assessment recommends the following activities be performed at the site to help clarify site risk and priority for further action. Contaminated soil remained under the Rod s Truck Stop building with issuance of underground storage tank program NFA in 1993. A review of the archived UST file and possible investigation should be completed to determine the risk of contaminated soils for vapor intrusion for petroleum. PCE/TCE samples were collected from shallow groundwater in 1991. Confirmation of PCE/TCE concentrations is recommended to ensure vapor intrusion occupational risk based concentrations are currently met. Potential sources of PCE/TCE in shallow groundwater include remaining soils at Rod s Truck Service and potential spills from Peninsula Railroad Terminal to the south of the Stockyard property. Current site stormwater drainage should be diagramed and determine discharge points for the property. Columbia Slough Sediments- sediment sampling near current and historic stormwater outfalls should be tested for metals, PCBs, PAHs and VOCs. Sediment results should be compared to the average Lower Columbia River concentrations to determine if the sediments are either near average conditions or significantly above average Lower Columbia River sediment conditions. If sediment concentrations are above average, a source control evaluation may need to be performed.

NARR Comments: Contaminants in site groundwater and stormwater could represent a potential threat to on-site workers, aquatic life in the Columbia River, wildlife and aquatic life in nearby wetlands, and/or other users of groundwater and surface water in the immediate vicinity of the site. Water quality in the Columbia River is already impaired. The Columbia River is used for recreational and commercial fishing, as well as other recreational purposes. It also provides Critical Habitat for threatened and endangered fish species. The river and nearby wetlands also provide important habitat for other sensitive species such as protected migratory bird species, sensitive amphibian, reptile, and plant species, and food resources for sensitive aquatic and terrestrial species.

NARR Comments: [4/8/13 SA/SAM] The site was originally developed in 1908 with the construction of a small hotel and a livestock Exchange Building. The Portland Union Stockyards was built in about 1910. The stockyards ceased operations in 1980. Site buildings also included Merit USA (Texaco) Truck Stop (built in about 1952), which included two fueling stations, truck scales, and a cafT. Rod s Truck Repair, a commercial gas station and repair shop began operating in the 1980 s. The stockyards were demolished in 1996 and redeveloped in approximately 1997 to its current configuration as light industry and warehousing.

NARR Comments: The site is just north of the center of Hayden Island in the Columbia River. The topography is flat and the elevation is approximately 20 feet above of sea level. The main channel of the Columbia River is just over 500 feet north of the site. Subsurface material encountered below asphalt and base gravel was medium-grained sand. At depths as little as 5 feet below ground surface (bgs) fill material consisting of paper, glass, wood, brick, plastic and metal, was encountered and found at depths up to 18 feet bgs.

NARR Comments: (November 2016 RKW) Phase II investigation including sampling of soil and shallow groundwter. Minor diesel and oil contamination was found in soil on the 1445 lot. Groundwater below the site contains widespread petroleum, metals (arsenic, barium, cadmium, lead, silver, and mercury), minor VOCs and PAHs. Follow-up investigation for methane (landfill gas) was undertaken in January 2017 using handheld Landtec instrument. Samples from two boring on each property and from interior confined spaces in the 1463 building. No significant levels of methane were detected. NFAs for both properties were dated April 4, 2017.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: This site, the location of a former US Bank branch (since demolished) is situated on top of the abandoned Hayden Island Landfill (ECSI #1559). The site is currently owned by Umatilla, Inc. Belmar Properties, the owners of an adjacent property, are proposing to purchase the site. Belmar has applied to DEQ's Voluntary Cleanup Program to obtain a No Further Action determination for the site. These properties recent landuse was commercial and not expected to lead to contamination. Groundwater below the properties is contaminated with TPH and metals, particularly arsenic, barium, lead, silver, and mercury. Groundwater contaminatinon is thought to be associated with the former landfill.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

NY MANIFEST: Facility and Manifest Data

Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

Date of Government Version: 01/01/2019
Date Data Arrived at EDR: 10/29/2021
Date Made Active in Reports: 01/19/2022

Longitude (West):	122.677515 - 122° 40' 39.05''
Universal Tranverse Mercator:	Zone 10
UTM X (Meters):	525150.5
UTM Y (Meters):	5049522.5
Elevation:	22 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	14878142 PORTLAND, OR
Version Date:	2020

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

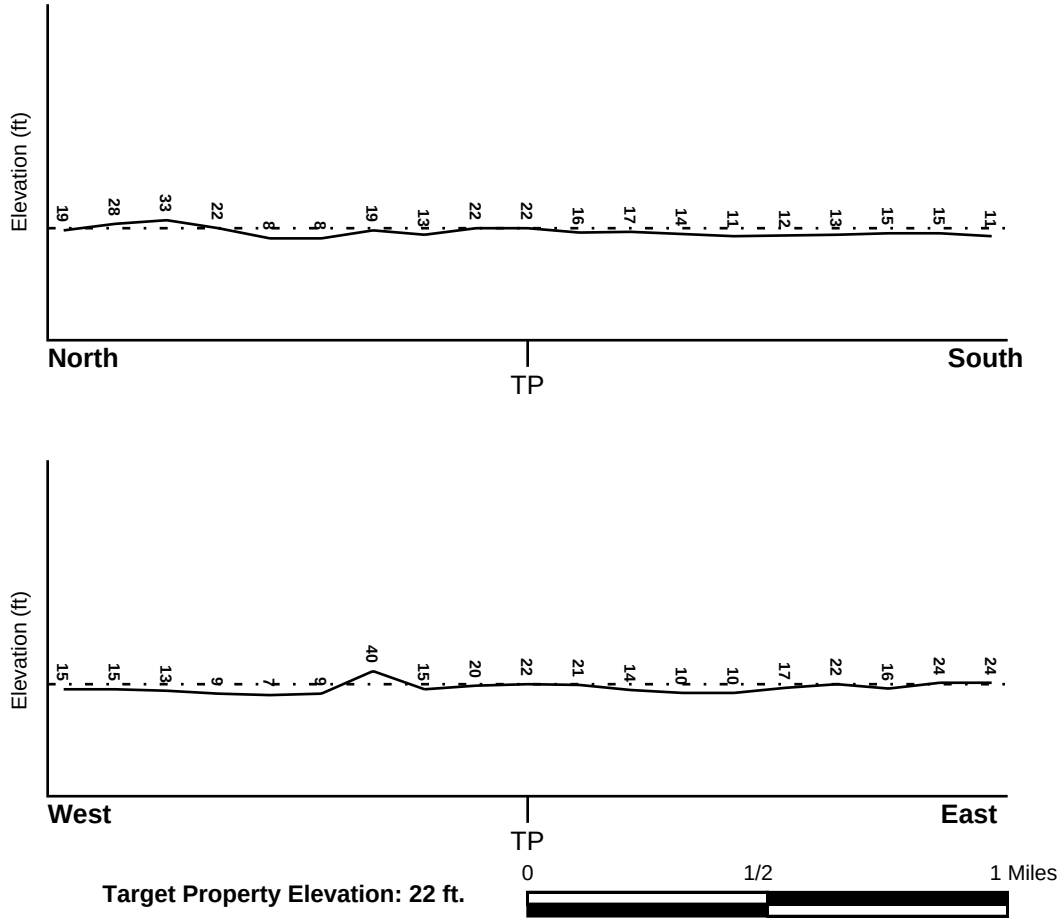
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General North

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
53011C0481D	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
4101830080F	FEMA FIRM Flood data
53011C0477D	FEMA FIRM Flood data
4101830085F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
PORTLAND	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Sauvie

Soil Surface Texture: silt loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Poorly drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 5 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity	Soil Reaction
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	micro m/sec	(pH)
1	0 inches	14 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 42 Min: 14	Max: 6.5 Min: 5.6
2	14 inches	38 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 42 Min: 14	Max: 6.5 Min: 5.6
3	38 inches	59 inches	very fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 42 Min: 14	Max: 6.5 Min: 5.6

Soil Map ID: 2

Soil Component Name: Rafton

Soil Surface Texture: silt loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Very poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 15 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	9 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14 Min: 4	Max: 6.5 Min: 5.6
2	9 inches	40 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14 Min: 4	Max: 6.5 Min: 5.6
3	40 inches	59 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14 Min: 4	Max: 6.5 Min: 5.6

Soil Map ID: 3

Soil Component Name: Water

Soil Surface Texture: silt loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetlands Inventory Data
Source: Oregon Geospatial Enterprise Office
Telephone: 503-378-2166

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Parametrix, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

Parametrix was retained by the Oregon State Department of Transportation (ODOT) to perform a Phase I Environmental Site Assessment (ESA) on two commercial properties which are bounded to the north and east by an empty lot and by industrial properties and to the south and west by NE Martin Luther King Jr. Boulevard (Highway 99E) followed by greenspace and the Delta Park sports complex. The Phase I ESA focused on partial areas of the properties that may be acquired as part of the Interstate Bridge Replacement (IBR) Program. The subject property consists of the parcels identified as IBR-1N1E03-00201 and IBR-1N1E03-00202. Based on the findings of this investigation, Parametrix reached the following conclusions:

1. The subject property includes two Multnomah County tax lots, 1N1E03-00201 and 1N1E03-00202, and currently includes gravel parking lots, shipping container storage, and new truck storage areas. One mobile office is located within the partial areas of the properties that may be acquired as part of the IBR Program.
2. Based on the historical review, the subject property was farmland and undeveloped land until the commercial and industrial development of the subject property beginning in the mid-1970s. The subject property appears to be mostly developed similar to current conditions by 1981. Buildings in the partial areas of the parcels that may be acquired as part of the IBR Program are limited to one mobile office, which could be moved outside the project area. The surrounding area was primarily undeveloped, wooded land, agricultural land, and rural residential properties until the 1960s, when industrial development is visible. No recognized environmental conditions (RECs) were identified on the subject property, including the partial areas of the properties that may be acquired as part of the IBR Program, during the historical Sanborn map and historical aerial photograph review.
3. Based on the lack of buildings at the subject property, there is low potential for lead-based paint, asbestos-containing materials, and/or polychlorinated biphenyls to have been used or be present at the subject property.
4. The southeast area of the subject property (tax lot 1N1E03 -00202) is listed as an underground storage tank (UST) and leaking underground storage tank (LUST) site (Fazio Property site). DEQ issued a No Further Action (NFA) determination in July 1997 after decommissioning of five USTs, excavation of petroleum contaminated soils, and confirmation that remaining petroleum concentrations were less than the risk-based concentrations (RBCs). This issue appears to be a historical REC (HREC) to the subject property. In addition, six LUST sites were located within 0.25 miles of the subject property. Based on the inferred groundwater flow direction, available soil and groundwater data, and/or current regulatory status, these sites do not represent a REC to the subject property.
5. No evidence of significant use or storage of hazardous substances and/or petroleum products was noted on or near the subject property. No evidence of distressed vegetation, spills or releases, dry wells, or other indications of environmental concern was identified during the site reconnaissance.

6. An on-site reconnaissance and interview were not conducted with a property representative to identify any potential environmental conditions and to address information data gaps during the Phase I ESA process. The lack of a property owner or representative interview and the lack of a full on-site reconnaissance represent data gaps in accordance with ASTM Standard E1527-21. However, the information obtained for the Phase I ESA, including regulatory database and historical documentation, was deemed sufficient.

Based upon the conclusions of this investigation of the subject property, Parametrix offers the following recommendation.

1. No further assessment of environmental conditions on the subject property, including the partial areas of the parcels that may be acquired as part of the IBR Program, is recommended.

1. INTRODUCTION

Parametrix was retained by the Oregon Department of Transportation (ODOT) to perform a Phase I Environmental Site Assessment (ESA) on two contiguous commercial parcels located generally to the southwest of North Vancouver Way and northwest of North Martin Luther King Jr. Boulevard in Portland, Oregon (herein referred to as the subject property) (Figure 1). The subject property is located in Multnomah County, Oregon, and is comprised of two parcels included in the Interstate Bridge Replacement (IBR) Program. The property identifiers, tax lot IDs, and street addresses for each of the two parcels are listed below, and the configuration of the properties is shown in Figure 2.

- IBR-1N1E03-00201 1N1E03-00201 10725 N. Vancouver Way
- IBR-1N1E03-00202 1N1E03-00202 10615 N. Vancouver Way

It is our understanding that ODOT may pursue acquisition of a portion of the parcels making up the subject property as part of the IBR Program. The proposed acquisition areas are shown on Figure 2. The Phase I ESA focused primarily on the partial areas of each parcel that may be acquired as part of the IBR Program and assessed the potential for recognized environmental conditions on the acquisition areas from the larger property and adjacent or nearby properties.

This Phase I ESA includes a review of available documentation pertaining to the subject property, a site reconnaissance, and a review of pertinent public agency documents. The ESA consists of two distinct tasks: (1) a review of documents and of oral information, and (2) a site examination. Conclusions and recommendations within this report are based solely on observed evidence and data collected during the performance of this assessment.

1.1 Purpose

The Phase I ESA was conducted in general accordance with American Society for Testing Materials (ASTM) Standard E1527-21, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, which defines the generally accepted industry practices and procedures currently applicable at the time and place of this study (ASTM 2021). The Phase I ESA is intended to permit the user to satisfy the requirements to qualify for the bona fide prospective purchaser limitation under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), and as such constitutes "all appropriate inquiries in the previous ownership and uses of the property consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601 (35)(B).

The purpose of this Phase I ESA is to identify recognized environmental conditions (RECs) on or near the subject property. The term recognized environmental conditions is defined in ASTM Standard E1527-21 as:

> "…(1) the presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* due to a *release* to the *environment*; (2) the likely presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* due to a *release* or likely *release* to the *environment*; or (3) the presence of *hazardous*

> *substances* or *petroleum products* in, on, or at the *subject property* under conditions that pose a *material threat* of a future *release* to the *environment*."

In accordance with ASTM Standard E1527-21, some RECs may be further defined as historical recognized environmental conditions (HRECs) or controlled recognized environmental conditions (CRECs).

An HREC is defined as:

> "…*a past release of any hazardous substances* or *petroleum* products that has occurred in connection with the *property* and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the *property* to any required controls."

A CREC is defined as:

> "…a *recognized environmental condition* resulting from a past *release of hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority, with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls."

This Phase I ESA endeavors to identify all RECs, HRECs, and/or CRECs at the subject property.

1.2 Significant Assumptions

This assessment was conducted in accordance with generally accepted industry practices and procedures within the scope of work authorized at the time and place of this study. Parametrix observations are limited to those areas to which it had access on the subject property.

Phase I ESA methodology included viewing accessible areas of the subject property from public right-of-way, as on-site access was not available. In addition, an interview was not able to be conducted with a property representative to identify any potential environmental conditions during the Phase I ESA process. Unless otherwise stated, no other exceptions to the guidelines presented in ASTM E1527-21 were made during completion of this Phase I ESA.

1.3 Limitations

The findings, conclusions, and recommendations presented in this report are based on site conditions and the best available information known or made available by regulators, other consultants, or other sources at the time of the investigation. Parametrix conducted a diligent search and investigation in compliance with prevailing standards of the profession; however, certain adverse conditions may exist at the site not detected at the time of the investigation.

The services provided under this contract, as described in this report, include professional opinions and judgments based on data collected. These services have been provided according to generally accepted engineering practices. The opinions and conclusions contained in this report are typically based on information obtained from the following:

- Observations and measurements made by Parametrix field staff.
- Contacts and discussions with regulatory agencies and others.
- Review of available hazardous substance or solid waste lists.
- Opinions and judgments of Parametrix based on the information available.

In the professional judgment of Parametrix, the services performed pursuant to the scope of services are an adequate basis to collect data for a preliminary evaluation of the site and upon which to draw the conclusions stated in this report.

2. SUBJECT PROPERTY DESCRIPTION

2.1 Location

The subject property includes two contiguous commercial parcels located generally to the southwest of North Vancouver Way and northwest of North Martin Luther King Jr Boulevard in Portland, Oregon. The Phase I ESA focused on the subject property, which consists of partial areas of the two parcels that may be acquired as part of the IBR Program, as detailed in the table below. The site location is shown on Figure 1 the Site Vicinity Map; the boundary of the subject property is shown on Figure 2.

2.2 Site and Vicinity Characteristics

Characteristics of the subject property, including the partial areas of the parcels that may be acquired as part of the IBR Program, are summarized in Table 1.

Table 1. Subject Property Characteristics

IBR ID	Address	Owner	Total Area (acres)	Potential Acquisition Area (square feet)	Current Use (determined through visual observations)
IBR-1N1E03-00201	10725 N. Vancouver Way	The Fazio Tip Vancouver Way Property LLC	3.32	850.004547	Industrial property, truck, and trailer storage
IBR-1N1E03-00202	10615 N. Vancouver Way	Fazio TV LLC	3.33	58213.86321	Industrial property, shipping container and mobile offices storage

The subject property is bounded to the north and east by an empty lot and by industrial properties and to the south and west by NE Martin Luther King Jr. Boulevard (Highway 99E) followed by greenspace and the Delta Park sports complex (see Figure 2).

2.3 Physical Setting

The subject property is located in the Portland Basin, which marks the northern terminus of the Willamette Lowland in Oregon (DNR n.d.). The northern portion of the basin is known for its low topographic relief, with the subject property at an elevation of approximately 22 feet above mean sea level. The Portland Basin is bound by the Cascade Range to the east and the Coast Range to the west.

Geologic processes in the Portland Basin consist of volcanism, sedimentation, and cataclysmic flood deposits in both fluvial and marine depositional environments. The subject property lies on what is

mapped as alluvial deposits, consisting of stratified clay, silt, sand, and gravel deposited along rivers and streams (Wells et al., 2020). Surface soils consist of silt loam.

The subject property is located between the Columbia River and the Columbia Slough. Topography in this area is generally flat, with slight changes of approximately 10 feet (10 to 20 feet above mean sea level). The anticipated groundwater gradient is to the north toward the Columbia River. Depth to groundwater at nearby properties ranged from 7.0 to 12.2 feet below ground surface, as reported on the Oregon Water Resources Department Groundwater Information System (wells MULT 924 and MULT 925; OWRD 2023; Appendix E).

2.4 Current Use of the Subject Property

The subject property includes two fenced areas with a gravel and dirt parking lot. The southern portion is a shipping container and mobile office storage and rental company (United Rentals). The northern portion is used for truck and trailer storage (see Figure 2).

2.5 Descriptions of Improvements on the Subject Property

Improvements on the subject property are limited to a fence with several gates and a gravel/dirt parking lot. No buildings or other significant structures are located on the partial areas of the parcels that may be acquired as part of the IBR Program.

2.6 Environmental Liens

An environmental lien is defined by ASTM as a charge, security, or encumbrance upon title to a property to secure the payment of a cost, damage, obligation, or duty arising out of response actions, cleanup, or other remediation of hazardous substances or petroleum products. No evidence of environmental liens against the subject property was identified during the course of this Phase I ESA.

3. RECORDS REVIEW

The purpose of the records review task was to gather environmental data on the subject property prior to the site examination. The information review consisted of two subtasks: a review of various lists and files published by federal and State of Oregon agencies; and a compilation of historical uses of the site and site vicinity, to determine if past operations pose an environmental risk to the subject property. Information for agency file review is based, in part, on a report provided by Environmental Data Resources (EDR 2023a). The EDR report is included in Appendix A.

The EDR report is a summary of state and federal database searches for sites of possible environmental concern. The information review enabled Parametrix personnel to characterize the types of activities performed at the site, identify data gaps prior to the site examination, and facilitate recognition of discrepancies between reported and observed data. Data gaps identified during the document review were addressed by interviewing knowledgeable personnel, observations during the site examination, or by additional detailed investigation.

It should be noted that this information is reported as Parametrix received it from EDR, which in turn reports information as it is provided in various government databases. It is not possible for either Parametrix or EDR to verify the accuracy or completeness of information contained in these databases. However, the use of and reliance on this information is a generally accepted practice in the conduct of environmental due diligence. The following sections present information from the document review.

3.1 Standard Environmental Record Sources

The following section summarizes information collected from records maintained by the U.S. Environmental Protection Agency (EPA) and the Oregon Department of Environmental Quality (DEQ). The information includes details on sites identified in regulatory databases within recommended ASTM search distances. A complete listing of the databases reviewed is included in the EDR Radius Map™ Report (EDR 2023a; Appendix A).

3.1.1 Review of Oregon Department of Environmental Quality Databases

The following sections summarize the most relevant information obtained from the EDR Radius Map™ Report regarding sites identified within the ASTM E1527-21 search radii from the following databases. Additional information regarding these sites was reviewed on DEQ's Environmental Cleanup Site Information (ECSI) Database (DEQ n.d.a) and Leaking Underground Storage Tank (LUST) Cleanup Site Database (DEQ n.d.b) to supplement data gaps in the EDR report. A complete listing of the databases reviewed is included in the EDR report. Relevant database listings from DEQ include:

- DEQ Underground Storage Tank (UST) List
- DEQ Leaking Underground Storage Tank (LUST) List

- DEQ Environmental Cleanup Site Information (ECSI) List
- Spill Database (SPILLS)
- Solid Waste Facilities (SWF/LF) List
- DEQ Confirmed Release List (CRL)
- DEQ Brownfields List
- DEQ Drycleaners List
- DEQ Engineering or Institutional Controls

3.1.1.1 Department of Environmental Quality Underground Storage Tank List

The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data was obtained from the DEQ UST List.

Information contained in the EDR report indicates that the southeast area of the subject property (tax lot 1N1E03 -00202) is listed as an UST site (facility ID 11174). Additional information is provided in Section 3.1.1.2.

Six additional UST sites are located within 0.25 miles of the subject property.

- The Fruehauf Trailer Services, Inc. site (10498 N. Vancouver Way; facility ID 11641) is located 0.078 miles northwest of the subject property. EDR notes the UST has been decommissioned.
- The Star/OilCo site (10360 N. Vancouver Way; facility ID 4030) is located 0.130 miles east of the subject property. The site is also listed in the LUST database and is discussed in Section 3.1.1.2.
- The Willig Freight Lines site (720 N. Hayden Meadows Drive; facility ID 4170) is located 0.136 miles south of the subject property. The site is also listed in the LUST database and is discussed in Section 3.1.1.2.
- The current Jubitz Travel Center site (10350 N. Vancouver Way; facility ID 11960) is located 0.160 miles southeast of the subject property. The site has three active USTs and no reported decommissioned USTs listed in the UST database.
- The Jubitz Truck Stop site (10210 N. Vancouver Way; facility ID 11674) is located 0.244 miles southeast of the subject property. The site has seven active USTs and no reported decommissioned USTs. The site is also listed in the LUST database and is discussed in Section 3.1.1.2.
- The Reddaway site (10510 N. Vancouver Way; facility ID 4475) is located 0.170 miles north of the subject property. The site has nine decommissioned USTs and two active USTs listed in the UST database. The site is also listed in the LUST and ECSI databases and is discussed in the following subsections.

Unless otherwise noted, the presence of USTs near the site does not, in itself, constitute a REC. UST sites that have had known releases are discussed in Section 3.1.1.2 below.

3.1.1.2 DEQ Leaking Underground Storage Tank List

The Leaking Underground Storage Tank (LUST) Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data was obtained from the DEQ LUST Database List.

The subject property includes the Fazio Property site (DEQ LUST ID 26-93-0011), located in the southern portion of the subject property. DEQ issued a No Further Action (NFA) determination in July 1997 after decommissioning of five USTs, excavation of petroleum contaminated soils, and confirmation that remaining petroleum concentrations were less than the DEQ risk-based concentrations (RBCs). This issue appears to be a HREC to the subject property.

Twenty-one additional LUST sites were identified within 0.5 miles of the subject property. The following six LUST sites were located within 0.25 miles of the subject property:

- The Fruehauf Trailer Services, Inc. site (10498 N. Vancouver Way; DEQ LUST ID 26-99-1197) is located 0.078 miles northwest of the subject property. DEQ issued an NFA determination in September 2000 after decommissioning of one UST, excavation of contaminated soil, and confirmation that remaining contaminant concentrations were less than the RBCs. Based on the regulatory status of the site, the facility does not represent a potential REC to the subject property.
- The Star/OilCo site (10360 N. Vancouver Way; DEQ LUST ID 26-91-0129) is located 0.130 miles east of the subject property. DEQ issued an NFA determination in June 1994 after decommissioning of three USTs, excavation of contaminated soil, and confirmation that remaining contaminant concentrations were less than the RBCs. Based on the regulatory status of the site, the facility does not represent a potential REC to the subject property.
- The Willig Freight Lines site (720 N. Hayden Meadows Drive; DEQ LUST ID 26-96-0521) is located 0.136 miles south of the subject property. DEQ issued an NFA determination in December 1996 after decommissioning of four USTs and confirmation that contaminant concentrations were less than the RBCs. Based on the regulatory status of the site, the facility does not represent a potential REC to the subject property.
- The former Jubitz Truck Stop site (10210 N. Vancouver Way; DEQ LUST ID 26-95-0235) is located 0.244 miles southeast of the subject property. DEQ issued an NFA determination in August 2003 after decommissioning of 13 USTs and cleanup actions. The NFA determination required that no groundwater well can be installed in the area of the soil or groundwater petroleum release without prior notice to the DEQ. No groundwater may be extracted from the shallow aquifer from the Jubitz property or a portion of the K&B Trucking site that has or had impacted soil and/or groundwater on it. The potential area of groundwater contamination is located south of the subject property; therefore, the facility does not represent a potential REC to the subject property.
- The Jubitz Travel Center site (10210 N. Vancouver Way; DEQ LUST ID 26-16-1530) is located 0.244 miles southeast of the subject property. The diesel fueling facility consisted of five diesel

USTs. During a system upgrade in 2016, diesel-range and heavy oil-range petroleum were detected in the gravel fill surrounding the UST cavity and groundwater. Additional sampling confirmed that petroleum concentrations in adjacent soil and groundwater were less than the RBC and an NFA determination was requested (BB&A Environmental 2017). An NFA letter is not present in reviewed documentation. However, based on the available soil and groundwater data, the facility does not represent a potential REC to the subject property.

- The Reddaway site (10510 N. Vancouver Way; DEQ LUST ID 26-88-0056, ECSI ID 1437) is located 0.170 miles north of the subject property. DEQ issued an NFA determination in January 2000 after removal of seven USTs, decommissioning of two additional USTs, soil excavation and groundwater remediation, and confirmation that contaminant concentrations in groundwater were less than the RBCs. Based on the regulatory status of the site, the facility does not represent a potential REC to the subject property.
- The Plaid Pantry #209 site, former Webster Family Convenience Store/Gas Station site (1020 N. Marine Drive; DEQ LUST ID 26-92-0348, ECSI ID 4134) is located northwest of the subject property. DEQ issued an NFA determination in January 1997 after removal of one UST. Diesel-range petroleum hydrocarbons were present in soil at concentrations less than the selected cleanup requirements (soil matrix level II requirements). However, the site was added to the ECSI database in 2004 due to evidence of investigation soil borings advanced in 2000. Additional investigation was recommended. Based on the inferred groundwater flow direction and regulatory status of the site, the facility does not represent a potential REC to the subject property.

Based on DEQ information indicating site closure activities have been completed or other supplemental information, none of the identified sites discussed above appear to represent a REC to the subject property, including the partial areas of the parcels that may be acquired as part of the IBR Program. In addition, the remaining LUST sites identified in the EDR report appear to be at sufficient distances from the subject property and/or cleanup activities have been completed so that they do not appear to represent a REC to the subject property.

3.1.1.3 DEQ Environmental Cleanup Site Information List

The ECSI identifies and tracks known or potentially contaminated sites within Oregon and is the state's equivalent to CERCLIS. The Confirmed Release List (CRL) is a subset of the ECSI and includes sites which have known releases of hazardous substances. The Voluntary Cleanup Program (VCP) database is a list of sites that have been entered into the DEQ voluntary cleanup program and are undergoing cleanup.

Information contained in the EDR report indicate that the subject property is not identified on the ECSI, CRL, or VCP databases.

Thirty ECSI sites were identified within 1 mile of the subject property. Of the 30 sites, two are located within 0.25 miles of the subject property. The remainder of the sites do not represent potential RECs for the subject property based on distance from the subject property, understood extent of contamination, and/or regulatory status of the site.

- The Reddaway site, a.k.a. Yellow Freight Terminal (10510 N. Vancouver Way; ECSI ID 1437) is located northeast of the subject property. An NFA determination was issued by DEQ for the site dated January 10, 2000. The site is also listed in the UST, LUST, AST, HSIS, NPDES, UIC, and RCRA databases. Four petroleum releases were reported on the site between 1988 and 1995 at an old UST farm, a waste oil sump overflow, an AST line leak and an UST leak. Groundwater was encountered at depths of less than 5 feet and determined to flow at a low gradient to the east. Independent remedial actions and groundwater monitoring have shown that groundwater is not contaminated on the site above regulatory action levels. Some residual soil contamination potentially exists at or below the groundwater table but does not appear to be partitioning to groundwater to a significant degree. Based on the regulatory status of the site, the facility does not represent a potential REC to the subject property.
- The Plaid Pantry #209 site, a.k.a. Webster Family Convenience Store/Gas Station site (1020 N. Marine Drive; DEQ LUST ID 26-92-0348, ECSI ID 4134) is located northwest of the subject property. DEQ issued an NFA determination in January 1997 after removal of one UST. Diesel-range petroleum hydrocarbons were present in soil at concentrations less than the selected cleanup requirements (soil matrix level II requirements). However, the site was added to the ECSI database in 2004 due to evidence of investigation soil borings advanced in 2000. Additional investigation was recommended. Based on the inferred groundwater flow direction and regulatory status of the site, the facility does not represent a potential REC to the subject property.

3.1.1.4 SPILLS Database

This database provides a comprehensive list of reported spills. The subject property is not listed as a SPILLS site.

3.1.1.5 Solid Waste Facilities/Landfill

The Solid Waste Facilities/Landfill (SWF/LF) records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data were obtained from Oregon's Solid Waste Facilities List.

The subject property is not listed as a SWF/LF site. No SWF/LF sites were reported within 0.5 miles of the subject property.

3.1.1.6 DEQ Brownfields List

The Brownfields database lists sites of real property where expansion or redevelopment is complicated by actual or perceived environmental contamination. No DEQ Brownfields sites were identified within 1 mile of the subject property.

3.1.1.7 DEQ Dry Cleaner List

The dry cleaner database is a listing of former or current dry cleaners in Oregon. No DEQ dry cleaner sites were identified within 0.125 miles of the subject property.

3.1.1.8 DEQ Engineering/Institutional Controls

DEQ maintains two databases for sites with implemented engineering controls and/or institutional controls. No sites with engineering or institutional controls were identified within 1 mile of the subject property.

3.1.2 Environmental Protection Agency Database Review

The EPA administers several programs designed to protect the environment and monitor the generation, storage, treatment, and disposal of hazardous substances. The following sections summarize the most relevant information obtained from the EDR report regarding sites identified within ASTM E1527-21 search radii from the following databases. A complete listing of the databases reviewed is included in the EDR report.

- National Priorities List (NPL)
- Superfund Enterprise Management System (SEMS) List
- Resource Conservation and Recovery Act (RCRA) Corrective Action Report (CORRACTS) List
- Resource Conservation and Recovery Information System (RCRIS) List
- Emergency Response Notification System (ERNS) List
- U.S .Brownfields List

3.1.2.1 National Priorities List

The National Priorities List (NPL) identifies priority hazardous waste sites for remedial actions under the EPA Superfund program. The EDR report indicates that the subject property is not listed as an NPL site. No NPL sites were identified within 1 mile of the subject property.

3.1.2.2 Superfund Enterprise Management System List

The EPA publishes a list of sites that may potentially pose a threat to the environment or the health of the general public. This list is known as the SEMS list (formerly the CERCLIS list). Information contained in the EDR report indicates the subject property is not listed as a SEMS site. No SEMS sites were identified within 1 mile of the subject property.

The EPA also publishes the SEMS- No Further Remedial Action Planned (NFRAP) list, which are SEMS sites that have been designated “no further remedial action planned” and have been removed from the SEMS list. Information contained in the EDR report indicated that the subject property is not listed as a SEMS-NFRAP site. Two SEMS-NFRAP sites (Columbia Slough and Redi-Strip of Oregon) were identified within 0.5 miles of the subject property. Based on their distance and gradient from the subject property, neither site is anticipated to impact the subject property and are not considered a REC to the subject property.

3.1.2.3 Corrective Action Report Review

The CORRACTS report identifies hazardous waste handlers with corrective action activity. Information contained in the EDR report indicates the subject property is not listed as a CORRACTS site. No CORRACTS sites are listed within 1 mile of the subject property.

3.1.2.4 Resource Conservation and Recovery Information System List

The RCRIS list includes selective information on sites which generate, transport, store, treat, and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Information contained in the EDR report indicates the subject property is not listed as a RCRA site.

Three RCRIS very small quantity generator (VSQG) sites are listed within 0.25 miles of the subject property. An additional five RCRIS Non-Generator of Hazardous Waste (RCRA NonGen/NLR) sites are listed within 0.25 miles of the subject property. VSQG sites within 0.25 miles include:

- The Wabash National Trailer Centers site, a.k.a. Fruehauf Trailer Services (10498 N. Vancouver Way) is located adjacent to the subject property, north of North Vancouver Way. This site handles lead, tetrachlorethylene, and spent nonhalogenated solvents. One violation was issued and resolved in 2003 related to used oil. An earlier violation was reported in 1998 and was resolved.
- The Tec Equipment site (10360 N. Vancouver Way) is located east of the subject property and is listed as a generator of hazardous waste. An inspection in 1992 identified a hazardous waste violation of container use and management that was resolved in 1996.
- The Reddaway site (10510 N. Vancouver Way; ECSI ID 1437) is located northeast of the subject property and is listed as a generator of hazardous waste. An inspection in 1995 identified a hazardous waste violation of container use and management and another inspection in 1996 identified another violation related to Contingency Plan and Emergency Procedures. Both issues were later resolved. This site is also discussed under the ECSI listing #1437 in Section 3.1.1.3 of this report.

Based on distance or regulatory status, none of these sites none of these sites represent RECs to the subject property.

The EPA also regulates the management of hazardous waste at Transportation, Storage, and Disposal (TSD) facilities. Information contained in the EDR report indicates the subject property is not listed as a RCRIS-TSD site. No RCRIS-TSD sites were identified within 0.5 miles of the subject property.

3.1.2.5 Emergency Response Notification System List

The ERNS is a national database containing information from spill reports made to federal authorities. Information contained in the EDR report indicates the subject property is not listed as an ERNS site.

3.1.2.6 Brownfields List

The EPA's U.S. Brownfields list identifies Brownfields properties addressed by Cooperative Agreement Recipients and Brownfields properties addressed by Targeted Brownfields Assessments. The EDR report indicates the subject property is not listed as a U.S. Brownfields site. No U.S. Brownfield sites were identified within 0.5 miles of the subject property.

3.1.3 Other Databases

The following sections include other databases identified in the EDR report that may be relevant to assessing potential environmental liability or environmental issues at the subject property.

3.1.3.1 EDR Proprietary Databases

EDR has conducted research on the occurrence of historical business practices that may constitute a REC to properties. The database was developed from data found in historical city directories and contains information on over 100,000 former gas stations, manufactured gas plants, and dry cleaners. Due to the nature of these businesses, the sites have the potential for soil and groundwater contamination to have occurred.

EDR Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. The listings reviewed include, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, and/or service station.

Unless otherwise noted, the mere presence of historical auto stations near a site does not, in itself, constitute a REC.

Information contained in the EDR report indicates the subject property is listed as a historical auto station (Richerts AD & C Par, 10365 N. Vancouver Way). The site has had no reported releases of hazardous substances.

EDR Manufactured Gas List

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800s to 1950s to produce a gas that could be distributed and used as fuel. Many of the by-products of the gas production, such as coal tar (oily waste containing volatile and nonvolatile chemicals), sludges, oils, and other compounds, are potentially hazardous to human health and the environment. The by-products from this process were frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

No manufactured gas sites are listed within 1 mile of the subject property.

EDR Historical Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry-cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to, dry cleaners, cleaners, laundries, laundromats, cleaning/laundry businesses, wash and/or dry businesses.

Information contained in the EDR report indicates that the subject property is not listed as a historical cleaner. One historical cleaner (Alberta Cleaners, 10351 N. Union Ave.) is listed within 0.125 miles of the subject property. The location of the site appears to have been mis-plotted in the EDR report and may have been located more than 0.25 miles northwest of the subject property. The site has had no reported releases of hazardous substances.

Unless otherwise noted, the mere presence of a historical dry cleaner near a site does not, in itself, constitute a REC. The identified sites do not appear to represent a REC to the subject property.

3.1.4 Orphan Site List

Orphan sites are sites for which mapping information is not detailed adequately to plot the location of the site, or for which there is no known responsible party, or the responsible party is unwilling or unable to pay for cleanup. The orphan site list and available mapping information were reviewed by Parametrix. One orphan site was identified by EDR in the vicinity of the subject property. The orphan site is located at a sufficient distance so that it does not appear to represent a REC to the subject property.

3.1.5 Vapor Encroachment

ASTM Standard E1527-21 defines vapor migration as "the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface." The recognition of vapor migration as a possible REC may require incorporation of new types of controls and restrictions to address this contamination pathway.

The subject property and adjacent sites were reviewed in an effort to determine if vapor migration has, or has the potential to have, occurred at the site, from adjacent properties. Based on the information reviewed, though one parcel of the subject property has been identified as a LUST site with a confirmed release to the soil, based on the cleanup of the LUST, the location of the release relative to buildings on the subject property, the depth of the release, and the composition of the release, it is unlikely to present a vapor intrusion issue to indoor air.

No properties were identified in the near vicinity which have confirmed releases of volatile contaminants in soil or groundwater which have not been sufficiently addressed or would otherwise present a potential impact to the subject property. Information related to the subject property and adjacent properties LUSTs are discussed in Section 3.1.1.2 and suggests that there is no current potential for vapor intrusion impacts to the subject property.

3.2 Historical Use Information

The objective of the historical use information review is to develop a history of the previous uses of the subject property and surrounding area that helps to identify the likelihood of past uses having led to RECs in connection with the subject property. Parametrix researched the historical land use, occupancy, and ownership of the subject property and adjacent properties to evaluate historical uses that are known to be associated with RECs. Historical records reviewed include Sanborn Fire Insurance Maps (EDR 2023b) and aerial photographs (EDR 2023c).

3.2.1 Certified Sanborn Maps™ Fire Insurance Map Review

Fire insurance maps in the EDR Certified Sanborn Map Report showing the vicinity of the subject property were requested to establish historical business operations at the subject property and adjacent properties. This report (Appendix B) certifies that the complete holdings of the Sanborn Library, LLC collection were searched based on client-supplied target property information and fire insurance maps covering the target property were not found.

3.2.2 Historical Aerial Photograph Review

Historical aerial photographs of the subject property area were obtained from EDR in the EDR Aerial Photo Decade Package. Aerial photographs for the years 1935, 1948, 1951, 1955, 1960, 1970, 1975, 1981, 1990, 1994, 2000, 2006, 2011, 2014, 2017 and 2020 were examined. Copies of the aerial photographs are included in Appendix C. Observations are listed below.

1935	One road (current Highway 99E/NE Martin Luther King Boulevard) is present. The subject property and adjacent areas are cultivated farmland.
1948	This image was taken after the VanPort flood that inundated the area and caused significant damage to buildings. Most of the subject property is inundated with floodwaters but appears otherwise unchanged. Several buildings, potentially transported by floodwater, are present south of current Highway 99E. An oval track is present to the south.
1951	The subject property remains cultivated farmland. The current North Vancouver Way has been constructed to the southeast of the subject property and an entrance ramp to current Highway 99E is present adjacent to the subject property. Disturbed soil suggests that North Vancouver Way is currently being extended to the northwest. The adjacent properties otherwise remain farmland.
1955	Current North Vancouver Way has been completed and the subject property is now unused. Grass and trees are now present. Adjacent properties north of North Vancouver Way or south of Highway 99E are fallow or are cultivated farmland.
1960	Little to no change is evident on the subject property or surrounding properties.

1970	Little to no change is evident on the subject property. Several buildings with multiple trailer trucks are present east and southeast of the subject property. Other properties north of North Vancouver Way remain cultivated farmland. Areas south of Highway 99E are now baseball fields, tracks, and soccer fields.
1975	Trailer trucks are present in the southern parcel of the subject property. On the adjacent parcel east of the subject property, the current buildings are now present; the remainder of the parcels northwest of the subject property appear to be parking. The current buildings associated with 1020 N. Marine Drive (Plaid Pantry #207) are also present. Little to no change is present in areas north of N. Vancouver Way or south of Highway 99E.
1981	Trailer trucks and storage containers are present in both parcels of the subject property. The current building at adjacent properties 11021 and 10937 N. Vancouver Way are now present. Additional development has occurred adjacent to building east of the subject property.
1990	Little to no change is evident on the subject property. Properties north of North Vancouver Way and south of Highway 99E have been developed to include industrial buildings and storage yards. Soccer and baseball fields remain present to the west of the subject property.
1994	Little to no change is evident on the subject property. Some changes have occurred to industrial buildings in adjacent properties.
2000-2020	Little to no change is evident on the subject property or adjacent properties.

Based on the historical review, the subject property was farmland and undeveloped land until the commercial and industrial development of the subject property beginning the mid-1970s. The subject property appears to be mostly developed similar to current conditions by 1981. No buildings have been located on the partial areas of the parcels that may be acquired as part of the IBR Program. The surrounding area was primarily undeveloped, wooded land, agricultural land, and rural residential properties until the 1960 s when industrial development is visible. No RECs were identified on the subject property, including the partial areas of the properties that may be acquired as part of the IBR Program, during the historical aerial review.

3.2.3 Local Agency Records

Information from local agencies was reviewed for environmental significance as described in the following sections.

3.2.3.1 City of Portland

A review of permits for environmental significance (i.e., septic tank, stormwater, dry wells, aboveground storage tanks [ASTs], and/or USTs). No evidence of significant use or storage of hazardous substances and/or petroleum products was noted on the subject property. Various building and plumbing permits were recorded online with the Portland Maps records for the subject

property. One permit for parcel 1N1E03-00202 listed a fire system for a temporary liquid natural gas fueling tank was installed in 2014, and that the permit expired in 2016. No RECs were identified on the subject property, including the partial areas of the properties that may be acquired as part of the IBR Program, during the permit review.

3.2.3.2 Multnomah County

Based on information from the Multnomah County Tax Assessor's Office, the subject property consists of the following tax lots:

- IBR-1N1E03-00201 1N1E03-00201 10725 N. Vancouver Way
- IBR-1N1E03-00202 1N1E03-00202 10615 N. Vancouver Way

3.3 Additional Environmental Information

The following sections provide a summary of additional environmental information obtained for the site.

3.3.1 Asbestos

The manufacture of most asbestos-containing materials (ACM) was banned by the EPA by 1979. Prior to this, asbestos was a common constituent of numerous building materials, including floor and ceiling tiles, caulking, pipe insulation, roofing materials, and exterior siding.

No buildings are present on the subject property and therefore it is unlikely that ACM is present within the partial areas of the parcels that may be acquired as part of the IBR Program.

3.3.2 Lead-Based Paint

Before 1977, paint commonly contained lead which is considered to cause human health problems if ingested. No buildings are present on the subject property and therefore it is unlikely that lead based paint is present within the partial areas of the parcels that may be acquired as part of the IBR Program.

3.3.3 Polychlorinated Biphenyls

Transformers can potentially contain polychlorinated biphenyls (PCBs). No buildings are present on the subject property and therefore it is unlikely that PCBs is present within the partial areas of the parcels that may be acquired as part of the IBR Program.

3.3.4 Radon

Radon is a naturally occurring radioactive gas formed by the decay of uranium in some rocks and soil. The adverse health effects associated with radon gas depends upon various factors, such as the concentration of the gas, and exposure duration. The potential concentration of radon gas within a

building depends on subsurface soil conditions, the integrity of the building's foundation, the existence of a basement or crawl space (primary areas of concern), and the building's ventilation.

Multnomah County ZIP code 97217 is located in the Federal EPA Radon Zone 2. The Zone 2 indoor average radon level is greater than 2 picocuries per liter (pCi/L) but less than 4 pCi/L. Based on this limited information, radon likely does not represent an environmental concern at the subject property.

4. FILE REVIEW

In accordance with ASTM Standard E1527-21, inquiries and review of previous investigations for the subject property, and a review of regulatory files for the subject property or adjacent properties may be conducted to further evaluate environmental conditions on the property or adjacent properties, and to fill in data gaps where applicable. Previous investigations and file reviews are summarized below.

4.1 Previous Investigations

As discussed in Section 3.1.1.2, the subject property includes the Fazio Property site (DEQ LUST 26-93-0011), located in the southern portion of the subject property. DEQ issued an NFA determination in July 1997 after decommissioning of five USTs, excavation of petroleum contaminated soils, and confirmation that remaining petroleum concentrations were less than the RBCs. The exact locations of the tanks are unknown. The LUST on this portion of the subject property represents a HREC. The NFA determination letter is included in Appendix E. No additional previous investigations of the subject property, including the partial areas of the parcels that may be acquired as part of the IBR Program, were identified during the course of this Phase I ESA.

4.2 Adjacent and Nearby Properties File Review

No properties located immediately adjacent to the proposed acquisition area were listed on environmental databases. Nearby properties were listed on environmental databases, as described in Section 3. Sufficient site-specific information was available through review of the EDR report, as well as online DEQ files, to develop an opinion on the potential for these properties to have affected the subject property. Therefore, a specific file review (physical review at DEQ) was not required, beyond those completed during the course of this Phase I ESA. Specific information on the nature of release, types of contaminants, media impacted, and the potential to have affected the subject property or otherwise caused environmental concern is provided in Section 3. A copy of the available material is included in Appendix E, Supporting Documents.

5. SITE EXAMINATION

Parametrix conducted a site examination of the subject property from public right-of-way on October 31, 2023. The site examination consisted of observing the areas immediately surrounding the subject property, providing observations of the general environmental conditions on the subject property, and visually assessing the subject property and adjacent properties for evidence of hazardous materials. The site examination focused on partial areas of the parcels that may be acquired as part of the IBR Program. Photographs of the subject property taken during the site walk are included in Appendix D.

5.1 Subject Property

The subject property includes gravel parking lots and equipment storage areas, and wooded areas along the southwest fence line. Hardscaping such as sidewalks border the property to the northeast. The partial areas of the parcels that may be acquired as part of the IBR Program are limited to sidewalk and graveled areas. All observations were taken from the public right-of-way on the east side of North Vancouver Way and through a chain link security fence.

The North Parcel includes graveled parking/storage yard that supports trucking company storage. The parcel was observable from the sidewalk along the public right of way through a chain link security fence along North Vancouver Way. The observed areas included most of the gravel storage yard and the undeveloped and wooded area on the south side of the parcel. No buildings or other improvements were observed on the parcel.

The South Parcel includes a graveled parking lots and storage yards for shipping containers. A mobile office was present near the main gate to this parcel. Observations of the parcel were taken from the sidewalk along the public right of way through a chain link security fence along North Vancouver Way.

The partial area of the South Parcel (1N1E03-00202) that may be acquired as part of the IBR Program consist of an irregular shaped piece of land (gravel area and paved sidewalk) where the parcel abuts North Vancouver Way.

No evidence of USTs, ASTs, or other indications of environmental significance were observed on the exterior portions of the property. In addition, no evidence of significant storage or spills of hazardous substances and/or petroleum products was observed on the subject property. No evidence of staining, adverse odors, or other indications of potential releases was observed. In general, no RECs or other adverse environmental conditions were identified associated with the subject property. Table 2 summarizes the observed conditions.

The lack of access to the subject property and a full site examination represents a data gap in accordance with ASTM Standard E1527-21.

Table 2. Subject Property Observed Conditions

SWC ID	Address	Area	Current Use (determined through visual observation)	Site Examination Observations
IBR-1N1E03-00201	10725 N. Vancouver Way	3.32 acres	Industrial property, truck, and trailer storage	Fenced gravel and dirt parking lot with truck and trailer storage
IBR-1N1E03-00202	10615 N. Vancouver Way	3.33 acres	Industrial property, shipping container and mobile office storage and rental (United Rentals)	Fenced gravel and dirt parking lot with industrial shipping container storage

5.2 Adjacent Properties

The vicinity of the subject property is significantly developed with residential properties and commercial buildings. Adjacent properties were examined from public areas for the presence of environmental conditions which have the potential to impact the subject property.

The subject property is bounded to the north and east by an empty lot and by industrial properties and to the south and west by NE Martin Luther King Jr. Boulevard (Highway 99E) followed by greenspace and the Delta Park sports complex (see Figure 2).

No evidence of significant staining or stressed vegetation was noted on the ground surface on assessable properties adjacent to the site. No evidence of the storage of chemical or hazardous materials was identified on visible areas of adjacent properties.

6. INTERVIEWS

An interview was not able to be conducted with a property representative to identify any potential environmental conditions and to address information data gaps during the Phase I ESA process. The lack of a property owner or representative interview represents a data gap in accordance with ASTM Standard E1527-21.

7. CONCLUSIONS

Based on the findings of this investigation, Parametrix concluded the following:

1. The subject property includes two Multnomah County tax lots, 1N1E03-00201 and 1N1E03-00202, and currently includes gravel parking lots, shipping container storage, and new truck storage areas. One mobile office is located within the partial areas of the properties that may be acquired as part of the IBR Program.
2. Based on the historical review, the subject property was farmland and undeveloped land until the commercial and industrial development of the subject property beginning in the mid-1970s. The subject property appears to be mostly developed similar to current conditions by 1981. Buildings in the partial areas of the parcels that may be acquired as part of the IBR Program are limited to one mobile office. The surrounding area was primarily undeveloped, wooded land, agricultural land, and rural residential properties until the 1960s, when industrial development is visible. No RECs were identified on the subject property, including the partial areas of the properties that may be acquired as part of the IBR Program, during the historical Sanborn map and historical aerial photograph review.
3. Based on the lack of buildings at the subject property, there is low potential for lead-based paint, ACMs, and/or PCBs to have been used or be present at the subject property.
4. The southeast area of the subject property (tax lot 1N1E03 -00202) is listed as an UST and LUST site (Fazio Property site). DEQ issued an NFA determination in July 1997 after decommissioning of five USTs, excavation of petroleum contaminated soils, and confirmation that remaining petroleum concentrations were less than the RBCs. This issue appears to be a HREC to the subject property. In addition, six LUST sites were located within 0.25 miles of the subject property. Based on the inferred groundwater flow direction, available soil and groundwater data, and/or current regulatory status, these sites do not represent a REC to the subject property.
5. No evidence of significant use or storage of hazardous substances and/or petroleum products was noted on or near the subject property. No evidence of distressed vegetation, spills or releases, dry wells, or other indications of environmental concern was identified during the site reconnaissance.
6. An on-site reconnaissance and interview were not conducted with a property representative to identify any potential environmental conditions and to address information data gaps during the Phase I ESA process. The lack of a property owner or representative interview and the lack of a full on-site reconnaissance represent data gaps in accordance with ASTM Standard E1527-21. However, the information obtained for the Phase I ESA, including regulatory database and historical documentation, was deemed sufficient.

8. RECOMMENDATION

Based upon the conclusions of this investigation of the subject property, Parametrix offers the following recommendation.

1. No further assessment of environmental conditions on the subject property, including the partial areas of the parcels that may be acquired as part of the IBR Program, is recommended.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless

information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 06/22/2023 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Lists of Federal RCRA generators

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 03/06/2023 has revealed that there are 3 RCRA-VSQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Lists of state and tribal registered storage tanks

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Quality's UST List on Disk.

A review of the UST list, as provided by EDR, and dated 01/11/2023 has revealed that there are 7 UST sites within approximately 0.25 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/06/2023 has revealed that

there are 5 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

NARR Comments: RP moving aggressively to remove free product from ground and define extent of plume. 10/20/93 - RP is continuing independent cleanup. (10/25/93 GMW/SAS) Further action letter sent. (11/10/97 LSK) Site re-evaluated as part of review of all sites within the Columbia Slough Study Area. PAE recommended, under medium priority. (4/13/99 ACV/VCP) RP entered the Voluntary Cleanup Program in January 1999 to obtain DEQ review of existing file information. RP has conducted independent groundwater investigation and product recovery. DEQ file memo expected in April 1999. (1/7/00 ACV/VCP) VCP coordinated review of all UST and cleanup issues in 1999, and issued an NFA for environmental issues (with UST concurrence) in January 2000.

Environmental Interest/Information System:
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

erage Amount Possessed During The Year Code: 10
ximum Amount Possessed During The Year Code: 11
plicable Unit Of Measure Code: 2
Description Of The Unit Of Measure: GALLONS
pe Code: D
Description: STEEL DRUM
Code: Not reported
perature Description: Not reported
essure of Code: 1
Pressure Description: NORMAL PRESSURE
sure of Code: Not reported
sure Description: Not reported
Temperature Description: NORMAL TEMPERATURE
mperature of The Hazardous Substance Code: 4
perature Description: Not reported
perature of The Hazardous Substance Code: Not reported
ays Hazardous Substance On Site During Year: 365
The Substance Protected A Trade Secret: False
ription Of The Max Qnty Code: 500-999
ription Of The Avg Qnty Code: 200-499
Most Hazardous Ingridient: ETHYLENE GLYCOL
ted Nations/north America 4 Digit Class Number: 3082
azard Rank: 2
Ingredient: Not reported
ubstance Pure: False
bstance Mix: True
irst Hazardous Class Code For Chemical: Acute Health Hazard
nd Hazardous Class Code For Chemical: Not reported
Hazardous Class Code For Chemical: Not reported
azard Class 1 Of The Chemical: 6.3
rd Class 2 Of The Chemical: Not reported
rd Class 3 Of The Chemical: Not reported

Additional Chemical:

hemical Is A Toxic 313 Chemical: N
Pesticide Registration Number: Not reported
ontains 112R: N
ontains EHS: N
ertilizer: N
esticide: N
ontains 313: Y

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Updated By: KDANA
Updated Date: 11/19/2015
Decode for NarcdID: Contamination
NARR Comments: Site is suspected of petroleum releases to the subsurface. As part of Columbia Slough Area-wide Discovery (CSD) Project this site was noted due to the presense of soil borings found in Water Resources Department well log database. Site runoff or subsurface contamination could reach part of Columbia Slough via stormwater piping system. Site has received cleanup of USTs via DEQ UST program (26-92-0348) cited as ending in 1997. However, CSD project found investigation on the site initiated in 2000, in areas away from the main building, to the west.

NARR Comments: The City of Portland discontinued sewer service to Redi-Strip 8/84 because of violations of discharge limits to the City system. The owner of the business (Jim Davis) installed a wastewater treatment vault 10/84, and reconnected to the city system without prior authorization. The city renewed the permit, then revoked it 12/84. City inspectors replugged the sewer. Inspectors noted 3/85 that the plug had again been removed and that the company had been operating as before. The city again plugged the sewer. DEQ made a 4/85 compliance inspection for hazardous waste, in response to numerous complaints. Samples of various materials were taken to characterize the waste. A sample of sludge from the adjacent property contained lead with an EP Tox concentration of 170 mg/L and chromium with 7.1 mg/L. This material had moved from Redi-Strip's property. A sample of an accumulation of dried sludge on the ground adjacent to barrels of waste contained lead with an EP Tox concentration of 25 mg/l. A five-day notice was issued by DEQ 12/85. Jim Davis left the operation

AMERICAN METAL CLEANING INC (Continued) **S103303303**

in 1986 and was assessed a $2,500 judgement for unauthorized disposal of hazardous waste. Fourteen inches of topsoil were allegedly removed from one area of the facility.

Updated Date: 06/06/2011
Decode for NarcdID: Remedial Action
NARR Comments: (LSK 10/17/97) Site reevaluated as part of review of all sites within the Columbia Slough Study Area. The site has a history of discharging excessive quantities of zinc, chromium and lead to the City of Portland sewer system and then discharging wastewaters to site soils and ditches that drained to the Slough when the City discontinued sewer service to the site. Sediment sampling in the Slough in general has shown high levels of lead and chromium. (4/28/99 DAB/SRP) Phase I of the RI has been completed. DEQ did not approve the workplan for Phase II of the RI. (5/1/00 DAB/SRP) Following Mr. Sullivan's refusal to perform additional work, DEQ issued an enforcement order (April 2000) for a remedial investigation and feasibility study. Mr. Sullivan has agreed to perform the RI/FS. (9/27/00 DAB/SRP) The RI proposal and RI workplan have been approved by DEQ. Field work was completed in July 2000. (4/6/01 DAB/SRP) A draft remedial investigation report was submitted in January 2001. (11/25/01 RKW/SRP) In October 2001, storm drain was cleaned out and additional samples were collected from groundwater monitoring wells. (11/4/02 RKW/SRP) Sediment contaminated with lead, zinc, chromium, and cyanide was removed from storm drain ditch downstream of the site. Confirmation samples collected following sediment removal indicate that lead, chromium, zinc, cyanide, and petroleum contamination remains in ditch sediments. The Multnomah County Drainage District controls the ditch and has plans to widen it for flood mitigation in 2004. They are aware of contamination and plan to remove a large quantity of sediment. Redi-Strip will collect additional samples after ditch widening. (9/26/03 RKW/SRP) Sediment samples from the ditch were collected in fall 2005. Results show diesel and oil up to 36,600 mg/kg, chromium up to 115 mg/kg, cyanide up to 3 mg/kg, lead up to 212 mg/kg, and zinc up to 794 mg/kg. Due to the large volume of sediment that must be removed and associated cost, the work will be delayed until summer 2006. (11/23/05 RKW/SRP) Ditch cleanout delayed.

NARR Comments: (CWH/SA 6/5/08) Petroleum releases from leaking underground storage tanks were remediated under the oversight of DEQ's Leaking Underground Storage Tank (LUST) program (DEQ LUST Program #26-98-1028). A no further action determination under LUST Program was issued January 10, 2001. Site was erroneously cross listed in ECSI by Site Assessment. This error was corrected by noting an NFA on June 6, 2008.

NARR Comments:	(Bob Schwarz, Mar. 11, 2014) Anderson Portland Properties purchased the site in 1975. Tenants since that time have included a roofing

ANDERSON PORTLAND PROPERTIES - VANCOUVER WAY (Continued) **S110638461**

equipment and supplies company, Trojan Manufacturing, Power-Serv, Pro-Trucks, Armack, Olson s Mobile Tractor Service, and Motors & Controls Company. The site is currently owned by Webster Family, LLC and the current tenant is Potter Webster Company. The site currently is used for truck and trailer repair and service. Soil, groudnwater and stormwater were tested between 2007 and 2013. DEQ determined that contaminant concentrations do not exceed acceptable risk levels. A No Further Action determination was issued for the site on March 6, 2014. A copy of the NFA letter and the staff report in support of this decision are attached.

Narrative:
NARR ID: 5745252
NARR Code: Contamination
Created By: CHARMAN
Created Date: 07/29/2004
Updated By: CHARMAN
Updated Date: 08/03/2004
Decode for NarcdID: Contamination
NARR Comments: Site is suspected of petroleum releases to the subsurface. As part of Columbia Slough Area-wide Discovery Project this site was noted due to the presence of soil borings found in Water Resources Department well log database. Site runoff or subsurface contamination could reach part of Columbia Slough via stormwater piping system. (8/3/04 CWH/SAP) Site cleanup was completed under DEQ's UST program.

NARR ID: 5745289
NARR Code: Remedial Action

Decode for NarcdID: Contamination
NARR Comments: (09/07/2011 KPD/ICP) The site was added to ECSI in May 2004 as part of the Columbia Slough Area-wide Discovery Project when well logs for five monitoring wells were noted in the Oregon Water Resources Department well log database. Subsequent sampling of the monitoring wells in October 2010 found gasoline, diesel, and chlorinated solvents (PCE and its degradation products) in MW-1, in the northwest corner of the site. Only low levels of PCE (around 2 ppb) were noted in the other wells.

Decode for NarcdID: Remedial Action
NARR Comments: (09/07/2011 KPD/ICP) The principals of BCB Properties signed an Independent Cleanup Agreement with DEQ in November 2010 to conduct an investigation of the site prior to selling the property. However, a sale went through in May 2011, and neither the seller nor the new buyer expressed an interest in continuing the investigation.

Created Date: 12/17/2002
Updated By: GWISTAR
Updated Date: 06/23/2003
Decode for NarcdID: Contamination
NARR Comments: (9/8/92 DJH/SAS) A number of businesses have operated at the site since the 1950s; these have included a boat storage facility, a manufacturer of concrete blocks, and an auto body shop. 75-100 drums, containing what were said to be chemicals used to manufacture industrial floor cleaning compounds, were stored in a shed at the site from 1983 to 1984. Materials in these drums were tested and found to have pH values ranging from 1 to 14. These drums were apparently purchased and removed by Apollo Chemical Company in 1984. From 1984 to 1985, Auric Enterprises salvaged and recovered metals at the site through open burning and smelting. Transformers were present on-site during this time; some of these are known to have contained at least low levels of PCBs. The lead and aluminum smelters at Auric apparently used oil from the transformers as fuel. In early 1991, 35 on-site soil samples and 15 sediment samples from nearby wetlands and drainage canals were taken. PCBs were detected in two of the soil samples (at 12,000 and 72 ppb). No metals were found in soil or sediment samples at concentrations significantly above background. (10/27/97 LSK) On June 9, 1995, PEMCO excavated approximately 5 cubic yards of soil from the northeast edge of the paved area and approximately 0.25 cubic yard of soil buildup on the concrete where PCBs had been detected during a previous investigation. Three soil samples were collected by PEMCO from the bottom of the excavation and a sample was taken from stockpiled material. The stockpile material was also analyzed for petroleum hydrocarbons and priority metals (TCLP). One sample from the excavation had 0.24 ppm PCBs, and the stockpile sample had 0.13 ppm PCBs. (5/14/03 RGS/VCP) The site is

AURIC ENTERPRISES (Continued) **1008175145**

currently vacant. Soil samples were collected in July 2000 by Creekside Environmental. Samples in the vicinity of the soil excavation were analyzed for PCBs at three depth intervals (0-6<quot>, 8-10<quot> and 12-16<quot> below ground surface). PCBs were below laboratory detection limits in these samples. Petroleum hydrocarbons were detected in the former burn pit area and in a surficial oil-stained area (believed to be a diesel/lube oil release from a backhoe parked at the site.

NARR Comments: Drainage channels are located on the north, east and south sides of the site; these run to the Columbia Slough. There is wetlands frontage along the drainage canals. Groundwater beneath the site is shallow, and is almost certainly in hydraulic connection with the Columbia River and/or Columbia Slough. Less than 60 persons use groundwater within 4 miles of the site for drinking purposes.

Decode for NarcdID: Remedial Action
NARR Comments: (9/8/92 DJH/SAS) Site Assessment recommends that the owners of the property remove remaining soil contamination at the site. This can either be done through DEQ's Voluntary Cleanup Program, or perhaps with oversight from Site Assessment. Site Assessment further recommends that the site be proposed for the Confirmed Release List and Inventory. (10/27/97 LSK/SAS) Site re-evaluated as part of review of all sites within the Columbia Slough Study Area. Based on new information (see Contamination Information), the site recommendation has been changed from a medium to a low for further investigation. (4/21/00 RGS/VCP) The property owner entered the Independent Cleanup Program (ICP) in February 2000. DEQ denied the request for a NFA and provided the owner with a list of site data gaps. (11/21/01 RGS/VCP) In July 2000, soil samples were collected to address data gaps identified in DEQ's April 11, 2000 data-gaps memo. PCBs were not detected in potential source areas, while metals were in general detected at concentrations near background. Arsenic, cadmium, chromium, lead, and mercury appear slightly elevated in selected samples; however, concentrations are less than EPA Region 9 PRGs for residential properties, with the exception of arsenic (concentrations appear near regional background values). The property owner placed further investigation/cleanup on hold for financial reasons in January 2001.

NARR Comments: Historically, the Property was undeveloped marshland until approximately 1940. Between approximately 1940 and 1946, the Property was filled for development as a horse racing facility. On May 1, 2019, DEQ recieved a request to enter into a Prospective Purchaser Agreement. The prospective purchaser will develop the site for industrial use, including up to six industrial buildings with associated improvements. Substantial public benefits may include, but are not limited to, the following: The generation of resources and funding to complete remedial actions at theProperty consistent with the DEQ NFA for DEQ LUST File No. 26-04-1266. The generation of substantial funding to DEQ s Columbia Slough Cleanup Fund to further assess sediment impacts from industrial sources along the Columbia Slough, or the performance by Respondent of an equivalent baseline assessment. Additional job creation in connection with redevelopment and reuse of the property.

NARR Comments: In 2004 an underground storage tank and contaminated soil was removed from the site. Some residual contaminated soil was identified below a stable and could not be removed. Based on the site s industrial zoning and extent of contamination, DEQ concluded that the contamination remaining on the property did not present an unacceptable risk. The site received a conditional No Further Action from DEQ Leaking Underground Storage Tank Program. (DEQ LUST File No. 26-04-1266) Information contained in the property deed indicates that the southern boundary of the site extends to the centerline of the Columbia Slough. Industrial and urban developments along the Columbia

VERIZON WIRELESS (Continued) **S104900043**

Slough have resulted in accumulation of various contaminants in slough sediment, some of which bioaccumulate and have been detected in fish tissue. In March 2019 a Phase II Environmental Site Assessment was performed on the upland. The Phase II ESA consisted of collecting soil and groundwatersamples from 18 direct-push borings. Boring were advanced to depths ranging from 3 to 10 feet bgs. Representative soil and shallow groundwater samples were analyzed for RCRA 8 metals, PAHS, VOCs, PCBs, GRO, DRO and ORO. With exception of arsenic, all other chemical constituents were either not detected above the laboratory reporting limit or were detected at concentrations below industrial and construction worker risk based concentrations. On May 1, 2019, DEQ recieved a request to enter into a Prospective Purchaser Agreement. The prospective purchaser will develop the site for industrial use, including up to six industrial buildings with associated improvements. As a part of the Prospective Purchaser Agreement, the applicant agrees to perform the following: Conduct additional investigation and if needed, cleanup related to the former underground storage tank Perform a Columbia Slough Upland Source Control Evaluation. All stormwater system modifications or improvements shall be in accordance with the City of Portland Stormwater Manual as applicable. Abandon production water well or upgrade well to modern standards Perform pesticide sampling in upland soils Prepare an Environmental Media Management Plan for future construction activities Perform baseline sediment assessment of Columbia Slough sediments near the Portland Meadows facility or provide an equivalent contribution to the Columbia Slough Cleanup Fund. [9/14/2020 PPA/SAM] Prologis entered into a Prospective Purchaser Agreement with DEQ in August 2019. Environmental Medial Management Plan approved by DEQ in June 2020. Construction occuring summer 2020.

NARR Comments: Between 1940 and 1946 a horse racing complex was constructed at the Portland Meadows site. Additional structures related to this use were added over time. Currently the area south of N. Schmeer Road is used for trailer storage and sand, gravel and concrete recycling and stockpiling.

NARR Comments: (2/24/03 SMF/SAP) DEQ received four pollution complaints, (between 1991 - 1999) alleging that ongoing activities at the Former Schooner Creek Boat Works site were contaminating the Columbia River and

1610 NORTH PIER 99 ST. (Continued) **S106655861**

nearby properties. Two other pollution complaints, received in May 1990 and March 1999, described oil sheens and petroleum odors from unknown sources on the Columbia River near the Former Schooner Creek Boat Works. Although the release characteristics were similar to those described in pollution complaints against the boat works site, there is no information to indicate that the source(s) of these petroleum releases were ever determined. A number of other potential sources are found in the immediate vicinity of the Former Schooner Creek Boat Works site. See DEQ January 24, 2003, Strategy Recommendation for specific pollution complaint history. (8/11/03 AC/C&ER) Site tested for VOCs, petroleum hydrocarbons and metals. Diesel, oil and lead were detected at concentrations above background. Sediment and groundwater have not been tested. (9/10/09;smf) EPA completed an SI of the site in August 2009. Site soils and Columbia River (North Portland Harbor / Oregon Slough) sediments were sampled and analyzed for metals, SVOCs, organo-chlorine pesticides, PCBs, and tributyltin in October 2008. EPA's data indicates that site soils are contaminated with metals, PAHs, PCBs, DDT, phthalates, and tributyltin at concentrations that represent a potential risk to on-site workers, to the adjoining residents, to on-site plants and wildlife, and to nearby aquatic life. Sediments in the site's boat dock area are contaminated with metals, PAHs, and DDT at concentrations that represent potential toxic and bioaccumulative threats to aquatic life.

Decode for NarcdID: General Site Description
NARR Comments: The subject site is an approximate 1 acre parcel in North Portland, along the western edge of the Interstate Highway (I-5) bridge over North Portland Harbor. The site has been the location of boat building, repair, and machine shop activities since about 1937. Schooner Creek Boat Works, a boat building and repair business, began operating at the site in 1989, but relocated its operations about 1 mile northwest, to the north shore of Hayden Island, In July 2000. However, it continued to lease the site through December 2001. DEQ s Northwest Region (NWR) Hazardous Waste program first referred the site to Site Assessment in April 2002 for investigation of a pollution complaint. Mermaid Marine had recently begun leasing the site, but became involved in an extensive cleanup of wastes and

1610 NORTH PIER 99 ST. (Continued) **S106655861**

debris that Schooner Creek Boat Works allegedly left behind when they vacated the site.

Decode for NarcdID: Hazardous Substance/Waste Types
NARR Comments: Existing information suggests that site soils and nearby Columbia River Sediments may be contaminated with copper oxide, paint thinner, and heavier petroleum constituents such as polynuclear aromatic hydrocarbons (PAHs). Considering the types of activities conducted at the site, and the length of time that these activities were conducted, other potential site contaminants might include: Organotins, other potential toxic metals (such as arsenic, lead, cadmium, chromium, mercury, and zinc), volatile organic contaminants (VOCs), semi-volatile organic contaminants (SVOCs), and possibly polychlorinated biphenyls (PCBs). (9/11/09; smf) A 2008/2009 EPA SI found that site soils are contaminated with metals, PAHs, phthalates, PCBs, DDT, and tributyltin at concentrations that represent potential risks to on-site workers, adjoining residents, on-site plants and wildlife, and nearby aquatic life. Sediments in the site's boat dock area are contaminated with metals, PAHs, and DDT at concentrations that represent potential toxic and bioaccumulative risks to aquatic life.

NARR Comments: (Also known as 1601 N Marine Dr.; formerly 1523 N Marine Dr.) Located on the south shore of Oregon Slough (the Columbia River, North Portland Harbor), south of Hayden Island, beneath and west of the southbound lane of Interstate Highway 5. Site addresses: 1) 1610 N Pier 99 Street, Portland, OR, 97217 (which the Post Office doesn't recognize, hence no 4 digit tail code); 2) 1601 N Marine Drive, Portland, OR 97217-7801; 3) 1523 N Marine Drive, Portland, OR 97217-7801 (neither address 2 nor 3 is recognized by the Tax Office, but are recognized as separate addresses by the US Post Office). The 1601 address appears on a small building immediately west of the site of concern.

NARR Comments: The site is located in a narrow, isolated strip of industrial properties on the south bank of North Portland Harbor, along North Marine Drive. The area between North Portland Harbor on the north, I-5 on the east, Columbia Slough on the south, and a Burlington Northern Santa Fe Railroad right-of-way on the west comprises Peninsula Drainage District #1. The entire site lies within the Columbia River s 100-year flow zone, so flood waters could mobilize any surface contamination at the site. The nearest residence

1610 NORTH PIER 99 ST. (Continued) **S106655861**

evidently shares the same tax lot as the site. North Portland Harbor and I-5 should limit potential exposures for most upland residences, except for potential exposures at the on-site residence. There are approximately 200 houseboats moored along the north shore of the North Portland Harbor, within .5 mile of the site. It is unclear if site contaminants would significantly affect residents at the nearby houseboats. The Multnomah County Fairgrounds and Exposition Center lied southwest of the site, directly across North Marine Drive. East Delta Park, a municipal park, lies about .25 mile south-southeast of the site. The Portland International Raceway lies about .5 mile south-southwest of the site. Heron Lakes Golf Club, a municipal golf course, lies about .25 mile southwest of the site. In addition, Jantzen Beach Supercenter shopping center lies directly across North Portland Harbor from the site. In August 2001, Metro hired a consultant to advance five pushprobe soil borings 100 to 200 feet south of the site. These borings encountered groundwater at 7 to 16 feet below ground surface (bgs), suggesting that any potential contaminants at the boat yard site could represent a threat to nearby drinking water wells, and that potential shallow groundwater contamination could represent a threat to aquatic life in North Portland Harbor. Wetlands areas directly to the south of the site attract populations of sensitive wildlife species to the area. A major heronry is also located about 1 mile from the site. Site contaminants could represent a threat to sensitive wildlife and plant species within the drainage district. Along the 1610 North Pier 99 Street site, the Columbia River provides migratory and rearing habitat for twelve sensitive anadromous fish species.

Updated Date: 05/19/2020
Decode for NarcdID: Remedial Action
NARR Comments: (2/24/03 SMF/SAP) The site has a lengthy operational history, and DEQ has received multiple complaints alleging releases or improper handling of hazardous substances at the site. A high priority is assigned for conducting an Expanded Preliminary Assessment (XPA) of the site. Site soils, groundwater, and nearby Columbia River sediments should be sampled for toxic metals, VOCs, SVOCs, and PCBs to determine if past activities may have significantly contaminated the site and surrounding environment. (8/21/03 AC/C&ER) A preliminary investigation confirms the presence of petroleum hydrocarbons and metals in site soils. Site sediment must still be evaluated. [10/21/13 SA/SAM] A Site inspection Report was prepared in 2009. Sample results for the sediment samples collected from below the Pier 99 docks indicated the presence of one TAL metal at a significant concentration with respect to background concentration. No organotins, pesticides/PCBs, SVOCs were detected at significant concentrations with respect to background concentrations. Site soils contained sources of CERCLA hazardous substances. EPA completed an EE/CA on June 13, 2013. The site was divided up into 4 operable units: - Operable Unit 1 Bank Area - Operable Unit 2 Eastern Solid Waste Storage Area (Eastern Unimproved Area) - Operable Unit 3 Gravel Filter Area and Upland Boat Maintenance Repair Area - Operable Unit 4 Former Crane Area Based on the results of this EE/CA, the recommended

1610 NORTH PIER 99 ST. (Continued) **S106655861**

removal actions for the Site are OU3 Gravel Filter Removal and stormwater Pipe Removal and OU1 Bank Stabilization(which included some debris removal and sand blast grit removal). The OU 2 elevated area coresponded with the OU3 discharge area and is addressed in this action. An OU 4 data gap investigation indicate that removal is not needed for the former crane area soil or groundwater at the site. Onsite work by EPA started Sept 1, 2013. For more details, visit http://www.epaosc.org/site/site_profile.aspx?site_id=8650 By 10/10/2013 all initial removal and restoration activities at the Pier 99 site were completed. [6/26/14 SA/SAM] Additonal removal at two locations(REX-16 and RAC-2) will occur in June 2014. EPA will perform a one-year monitoring and maintenance review. [10/22/14 SA/SAM]Additional removal was completed at the burn area on June 30 and July 2, 2014. As much as 3.5 feet of ashy soil was removed along a 15 foot length at the base of the slope. Because a significant portion of the bank was exposed during the excavation, EPA agreed that further excavation could jeopardize the stability of the bank, and excavation could be stopped. The area at the toe of the slope was reinforced with Envirlok vegetated sand bags installed at approximately a 1:1 slope. The two foot soil cover requirement was met at the toe of the bank, but could not be met further up the bank on the steep slope. Up the slope only 18-20inches of soil cover was placed. The EPA will require Post-Removal Site Controls, including monthly inspections, prohibit any activity that damages or disturbs the integrity of the cover and restoring the integrity of the cover if it is jeopardized in any way. [5/19/20 SA/SAM] The 2015 Monitoring report(year 2), indicated bank conditions were stable; grass covered the bank and no ground distrubances occured. 2016 and 2020 monitoring reports demonstrated the bank continues to be covered with grass. Based on review of the previous removal action and project files, the DEQ Cleanup program is concerned that sediment adjacent to the North Pier 99 site has not been adequately characterized and may be contaminated above levels of concern to human health and the environment. In particular, there is no data for Columbia River sediments between the bank and the area sampled near the docks.

Updated Date: 11/27/2013
Decode for NarcdID: Health Threats
NARR Comments: The nearest residence evidently shares the same tax lot as the site. North Portland Harbor and I-5 should limit potential exposures for most upland residences, except for potential exposures at the on-site residence. There are approximately 200 houseboats moored along the north shore of the North Portland Harbor, within 0.5 mile of the site. Nearly 80% of these are located either directly across the harbor, or downstream from the boat works site. The Multnomah County Fairgrounds and Exposition Center lies southwest of the site, directly across North Marine Drive. East Delta Park, a municipal park, lies about 0.25 mile south-southeast of the site. The Portland International Raceway lies about .5 mile south-southwest of the site. Heron Lakes Golf Club, a municipal golf course, lies about 0.25 mile southwest of the site. In addition, the Jantzen Beach Supercenter (shopping center) lies directly across North Portland Harbor from the

1610 NORTH PIER 99 ST. (Continued) **S106655861**

site. In August 2001, Metro hired a consultant to advance five pushprobe soil borings 100 to 200 feet south of the site. These borings encountered groundwater at 7 to 16 feet below ground surface (bgs), suggesting that any potential contaminants at the boat yard site could represent a threat to nearby drinking water wells, and that potential shallow groundwater contamination could represent a threat to aquatic life in North Portland Harbor. City records indicate that the on-site residence is serviced by the Portland municipal water supply. The city also has supplemental supply wells along the Columbia River south shore, 6 to 11 miles east of the site, as well as four supplemental supply wells on Hayden Island. Two of the Hayden Island wells lie about 1,200 feet north of the site, directly across North Portland Harbor. The nearest municipal water supply wells lie across North Portland Harbor, a 1,000-foot-wide, 20 30 foot deep channel of the Columbia River, and may be about 225 250 feet deep, so it remains unclear if site contaminants represent a significant threat to the city drinking water supply. OWRD also has records of three community or group-domestic wells, one public water supply well, and five domestic wells within 1.25 miles of the site.

Updated By: CHARMAN
Updated Date: 05/17/2007
Decode for NarcdID: Contamination
NARR Comments: (5/17/07 CWH/CU&ER) DEQ has determined that the primary contaminants of concern at the site are petroleum hydrocarbons, polynuclear aromatic hydrocarbons (PAHs), metals and volatile organic compounds (VOCs). The primary release mechanisms for these contaminants are: past spills from the AST; possible residual subsurface contamination from the 1988-removed USTs; small spills from trucks on the gravel lot; releases of contaminated soil and grit off of the truck washing pad; runoff from the parking area outside of the office building which discharge to the east side drainage ditch and various site runoff into the settling pond near the east side drainage ditch.

Decode for NarcdID: General Site Description
NARR Comments: (5/17/07 CWH/CU&ER) The Mulflur Family property is located in northeast Portland. The site has been used for semi-truck servicing and storage and handling of shipping containers. The 13.2-acre property boundary is established by the legal boundaries for tax lot 1N1E11B 02200. The site is flat, with an office building and large main building located along its north and northwest areas. The rest of the property is vacant and unpaved - consisting largely of packed gravel. Based on report descriptions storm drainage from the site moves towards the east, collects in a small low-lying area (referred

COASTAL TRAILER REPAIRS INC (Continued) **1000387896**

to in some instances as a <quot>settling ditch<quot>), that empties into a east side drainage ditch that is eventually pumped over a dike and into the Columbia Slough about 0.6 mile south. The Mulflur Family LLC property is zoned for industrial use and is currently vacant. There are a few private residential properties in relatively close proximity to the site, primarily to the west and southwest.

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: (5/17/07 CWH/CU&ER) SURFACE WATER - The nearest surface water is a drainage ditch along the eastern border of the property. This drainage ditch flows to a pump station that conveys waters into the lower reach of the Columbia Slough at a point 0.6 miles downstream from the site. Area E served as a small solids settling area prior to discharging down the bank and into the drainage ditch. Original sampling in Area E in January of 2005 showed a concentration of heavy oil range petroleum hydrocarbons of 7,970 ppm in soils. Ten tons of soil were removed from Area E in February 2005. The removed soils were not evaluated for petroleum constituents such as PAHs. No sampling has been performed in the drainage ditch to determine if there are any residual impacts from runoff from the site. Three catch basins are located in the paved parking area just west of the office building. Plumbing records show that these catch basins are piped into subsurface pipes, which also receive roof runoff, and lead eastward. The catch basin waters are directed to the east side ditch and empty into just south of the northeast corner of the property. GROUNDWATER - A beneficial groundwater use evaluation was performed by GeoDesign. The nearest groundwater supply well found in Oregon Water Resources records was an irrigation-use well (MULT 970) located just over a quarter-mile west of the site that drew water from a depth of 163-feet. A search of area well logs reveals that there are several domestic water supply wells or water rights and several industrial use wells established within one mile of the site. Therefore, DEQ would conclude that local groundwater is currently being used for domestic, irrigation and industrial beneficial uses and that it is likely that these uses could continue in the future. In addition, DEQ is not aware of any groundwater use restrictions for this area. Based on collected data, DEQ does not believe that remaining shallow groundwater and subsurface soil contamination near the former AST/UST area presents a threat to current or future drinking water sources in the area. DEQ has determined that the locality of the facility (LOF) for the Area A petroleum contamination is within a small area near the former location of the AST, an area roughly delineated by K&S in their May 2005 report (See Attachment C) and verified by sampling performed by GeoDesign in June of 2006.

Decode for NarcdID: Remedial Action

NARR Comments: (5/17/07 CWH/CU&ER) The subject property has historically been a commercial/light industrial site in northeast Portland since about 1980, supporting a company that stored, serviced and repaired large shipping containers and trucks up through late 2004. Potential site contamination concerns were raised in a Phase I Environmental Site Assessment (ESA) completed in 2004. The ESA noted the following recommendations - Perform limited removal of petroleum contaminated soils at the following locations (a) near the gasoline AST; (b) [truck] steam cleaning area; (c) near (east) drainage ditch and (d) a few locations in the gravel lot. In addition the ESA recommended cleanout of a sediment catch basin and oil/separator vault associated with the steam cleaning area. In August 1988, two underground storage tanks (USTs) - a 3,000-gallon gasoline UST and a 6,000-gallon diesel UST, were removed from an area just southwest of the office building (see Attachment B). This area is also referred to as <quot>Area A<quot> in subsequent documentation. The UST Cleanup (26-88-0027) was approved as complete on October 14, 1988 by the DEQ UST Program. In January 2005, K&S Environmental collected samples from the site based on the Phase I ESA recommendations. During this work, K&S defined five areas on the site for investigation and potential remedial work. The areas were defined as follows: Area A: Above-ground storage tank area just SW of office building. This area also encompassed the location of the former removed USTs. Diesel-range petroleum hydrocarbons (Dx) were detected in soil samples in the range of 25,800 to 38,400 mg/kg (ppm) and heavy oil range (HO) of 1,410 ppm. Area B: Observed area of a small petroleum stained surface soil in gravel lot. One soil sample detected Dx of 8,270 ppm and HO of 32,900 ppm. Area C: Outside along NE corner of main building where equipment had been stored with observed petroleum contamination in surface soil. One soil sample detected 21,800 ppm HO. Area D: Area around the perimeter of the concrete truck-washing pad located in the north-central part of the property. Seven soil samples detected Dx ranging from 3,040 to 3,670 ppm and HO ranging from 7,510 to 72,800 ppm. Area E: Stormwater collection area, referred to as a <quot>settling ditch,<quot> adjacent to the east side drainage ditch. This area acted as a solids settling area prior to stormwater discharge into the drainage ditch. A single soil sample detected 7,970 ppm HO. Based on the soil and groundwater sampling performed in the noted areas, K&S removed soils from each of the five areas. In June and July 2006, GeoDesign performed additional site review and acquired confirmation soil and groundwater samples from the noted areas of concern. They also observed an additional area of apparent soil staining in the large gravel parking lot and noted it as Area F. Soils were sampled in Areas A to F and evaluated for petroleum hydrocarbons (Gx, Dx), polynuclear aromatic hydrocarbons (PAHs), polychlorinated biphenyls (PCBs), volatile organic compounds (VOCs), and metals using the Toxicity Characteristic Leaching Procedure (TCLP). Groundwater samples were collected in Area A from five temporary borehole locations and evaluated for Gx, Dx, PAHs, VOCs and dissolved metals. Soil sampling in Areas B to F indicated some minor petroleum contamination, including PAHs, but none at concentrations above applicable EPA and DEQ risk-based screening concentrations for industrial use land. Subsurface soil and groundwater samples collected in the former AST/UST area (Area A) in 2006 contained no petroleum-related contamination above DEQ RBCs for an occupational setting, except for one in soils (GP-A-5 (7)) and one in groundwater

COASTAL TRAILER REPAIRS INC (Continued) **1000387896**

(GP-A-5). Sample GP-A-5 (7) contained gasoline in soil at 305 ppm, above the RBC of 110 ppm for the leaching to groundwater pathway. Groundwater sample GP-A-5 contained diesel in groundwater at 370 ppb, above the RBC of 350 ppb for occupational exposure to tap water. The GP-A-5 samples were located in the source area of the AST release. Four other soil and groundwater samples collected in the area distal from the central area were either non-detect or detected at concentrations well below applicable risk-based concentrations for petroleum hydrocarbons and PAHs. GeoDesign's 2006 results from Area A were similar to K&S sampling post soil-removal sampling performed in 2005. A human health screening assessment was conducted, based on sample data from June 2006. Two soil samples were determined to exceed applicable DEQ Risk Based Concentrations (RBCs) and/or Environmental Protection Agency (EPA) Region 9 Preliminary Remediation Goals (PRGs). Soil sample GP-D-1, a confirmation soil sample collected in June 2006 at the perimeter of the truck washing pad from 4 ft bgs, contained benzo(a)pyrene at 1.61 ppm, above the DEQ RBC of 0.270 ppm (direct contact in an occupational setting). Given the depth of the soil sample and planned industrial development on the site, it is unlikely that an exposure would occur. Soil sample GP-A-5 (7), a confirmation soil sample collected in the central area of the AST/UST contamination (Area A), contained gasoline (NWTPH-Gx) at 305 ppm, above the occupational leaching to groundwater RBC of 110 ppm. However, as noted above, the limited areal extent of the subsurface soil and groundwater contamination in this area, and the fact that Gx was not detected in groundwater from this sample location, led DEQ to concludes that it does not threaten groundwater. Polychlorinated biphenyls (PCBs) were evaluated in soils collected in Areas B, C, D, and E in June 2006 by GeoDesign. All samples were non-detect at concentrations well below applicable RBC screening values for PCBs. For the upland areas (A-F) that have undergone remedial action and confirmation sampling, DEQ concludes that they do not pose a threat to human health or the environment. DEQ recommends that additional sampling be performed in the drainage ditch along the eastern side of the property to determine if there have been impacts to ditch sediments from discharges from the site. Any sediment investigation should sample at discharge points from the site into the drainage ditch and account for possible upstream and adjacent inputs (i.e. neighboring properties) to determine if the Mulflur Family LLC site runoff has contributed contamination to sediments in the drainage ditch that poses a threat to the environment. In April 2007, DEQ drafted a proposed partial no further action determination for the uplands portion of the property. DEQ issued a 30-day public comment announcement on May 1, 2007. (6/1/07 CWH/CU&ER) DEQ concludes, based on the information presented to date, no further investigation or remedial action is needed for the uplands area of the site. DEQ concludes that the defined areas of contamination shown below are sufficiently characterized, and no longer present a threat to human health or the environment: Area A Former AST/UST area. Areas B & F - Gravel lot stained soil. Area C Northeast corner of shop building. Area D Soils around truck washing pad. Area E - <quot>Settling pond<quot> adjacent to east side drainage ditch. DEQ concludes that additional characterization will be needed to determine if there are impacts from site drainage to the east side drainage ditch. An evaluation of drainage ditch sediments is needed to determine if there are potential threats to ecological species and the Columbia Slough. DEQ issued a Public Notification with a 30-day

COASTAL TRAILER REPAIRS INC (Continued) **1000387896**

comment period from May 1 31, 2007. One comment was received. One party noted that DEQ had not updated information related to the site on our Environmental Cleanup Site Information (ECSI) database. DEQ updated the information on the web site immediately after this issue was noted. The site received a Partial No Further Action on June 1, 2007.

NARR Comments: [June 2007] DEQ has concluded that no further investigation or remedial action is needed for the uplands area of the site, and has prepared a partial NFA for the uplands. However, additional characterization is needed to determine if there are impacts from site drainage to the east side drainage ditch. An evaluation of drainage ditch sediments is also needed to determine if there are potential threats to ecological species and the Columbia Slough.

Decode for NarcdID: General Site Description
NARR Comments: (4/1/2010 CWH/CU) (1) The R. A. Baer Site is a 1.4-acre property located in north Portland at 9100 N Vancouver Avenue. The site is bordered to the west by N. Vancouver and along its east by Martin Luther King Boulevard (MLK Blvd). To the south is a commercially developed property that is currently hosting a retail clothing store. The site is identified as tax lot 1N1E10AA 3700 A1. (Lot 3700, Section 10, Township 1 North, Range 1 East). This property is zoned General Industrial 2 (IG2h). Current land use in the immediate vicinity of the Site is a mix of general industrial (north, south and west) with a General Employment (EG2h) zoned area to the east across MLK Blvd, that has been in use as a mobile home park since about 1950. The Columbia Slough, a tidally-influenced water body that drains into the Willamette River and supports rearing and migration habitat for threatened and endangered salmon is located approximately 550 feet south-southeast of the property. The property directly to the south is identified in ECSI as Pay-N-Pak , and is site #4464. This site is currently undergoing evaluation under DEQ Cleanup Program oversight to remediate impacts to subsurface soil, groundwater and soil gas from a former oil sludge pond. The property directly north is a gas and service station known as Kwik Gas.

NARR Comments: Investigation History - In May of 2007, a potential purchaser hired a consultant to conduct a limited Phase II Environmental Site Assessment (ESA). Four direct push borings showed evident petroleum contamination and significant debris and fill on the site. In September 2007, the Ralph A. Baer Company hired the same consultant to do additional site investigation. HAI submitted a report Site Investigation Report, 9100 N. Vancouver Avenue, Portland, Oregon, March 12, 2008 to DEQ in March 2008 and requested that DEQ issue a no further action, adding that some form of institutional control for

RALPH A. BAER CO. PROPERTY (Continued) **S109051848**

the property was probably needed. A summary of the results from HAI s investigation - Soil samples were collected from seventeen borings at several depths and tested for a wide range of petroleum, metals, volatile organic compounds (VOCs) and polychlorinated biphenyls (PCBs). - Petroleum hydrocarbons, primarily diesel- and heavy oil-range, were detected in 12 of the seventeen borings. Detected concentrations for TPH-Dx ranged from 41 to 8,760 mg/kg (parts per million, or ppm) and for TPH-HO from 77.2 to 120,000 ppm. - Petroleum-based VOCs were detected in a few of the soil samples, but were not significant. Benzene was detected in two samples, P-10 and P-13, at concentrations of 0.0561 and 0.0194 ppm, respectively. - Grab groundwater samples were collected from twelve of the borings at depths ranging from 21 to 34 feet below ground surface. - TPH-Dx was detected in two of the six samples on which the tests were run. DEQ, in July 2008, responded to HAI s request for an NFA with several questions and an analysis of data gaps for the site. The following were the main data gaps - (1) Groundwater flow direction and potential impact: HAI had concluded that groundwater flow on the site was in an east-to-northeast direction, based on groundwater elevations from the Pay-N-Pak site (south) from prior site investigation work. The groundwater contours from the Pay-N-Pak site were estimated from measurements in January 1999, February 2000 and July of 2000. DEQ did not agree that the groundwater flow direction analysis was accurate, primarily due to the limited time frame of groundwater elevation measurements. (2) Groundwater impacts to deeper aquifer: Hart Crowser, in a data summary report for the Pay-N-Pak site, estimated that the groundwater gradient was downward , based on a deeper well (MW-12) that was screened at a deeper elevation (45-55 feet below ground surface) and showed signs of contamination impacts. DEQ did not completely agree that there was sufficient support for an HAI conclusion that there would be no impacts to local groundwater from the Baer site. (3) Groundwater data not collected in some of most contaminated areas: High concentrations of diesel-range petroleum contaminants were discovered in soils in the P-12 (plus P-2, collocated with P-12) and P-13 probe locations. However, at P-12 groundwater was not collected and at P-13, groundwater was not tested for diesel-range petroleum hydrocarbons (NWTPH-Dx). (4) Better understanding of contamination source at and around P-13 and P-10: DEQ wanted a better understanding of the nature of some of the apparent subsurface releases in the west-central and south central areas of the Baer property. (5) Soil and groundwater coverage along northeast side of site: DEQ noted that there was only a single probe in the northeast area of the site and that there were no probes were advanced within the foot print of the building. (6) The locality of the facility (LOF) is not defined for the site: Until there could be a more complete characterization of the site, DEQ was not sure that a CNFA could be issued. (7) Beneficial Water Use Determination (BWUD): A complete BWUD was not prepared. DEQ noted that we could not make a decision regarding a conditional or unconditional NFA determination until a BWUD was completed. (8) Methane Hazards: Given that that site was built over organic fill and there had been elevated concentrations of petroleum hydrocarbons measured in subsurface soils DEQ was concerned that the site presented a possible methane hazard. Site Investigation and Actions - 2008 to 2010: In 2008, based on DEQ s data gaps analysis and in order to assist potential redevelopment and revitalization of the site, the City of Portland Brownfields Program initiated additional investigation of the Baer Property. In

RALPH A. BAER CO. PROPERTY (Continued) **S109051848**

April of 2009 the City's consultant directed collection of soil and grab groundwater samples from six borings on the site. One original objective of the investigation was to install no less than three monitoring wells screened down to approximately 25 feet bgs to allow for groundwater sampling over several months and to measure groundwater flow direction. Unfortunately, the planned monitoring wells could not be installed due to refusal encountered in all of the borings at about 18-20 feet bgs. DEQ was contacted as soon as these problems were encountered and agreed that grab groundwater samples would be an acceptable alternative at that time. Similar to the observations made during the earlier HAI borings, heavy oil contamination, debris and other wastes were encountered during push probe boring. AMEC was able to collect three grab groundwater samples and five soil samples across the site in areas agreed upon by DEQ. Groundwater was present at depths ranging from 17 to 20 feet below ground surface. Groundwater recovery was difficult, and only a limited amount of groundwater could be recovered from MW-2, which was only tested for VOCs due to the limited amount of groundwater recovered. Soil sample results showed detections of gasoline, diesel and heavy-oil range petroleum hydrocarbons in MW-01 (at 18 bgs) and MW-03 (at 11 bgs) borings, but none were above applicable soil risk-based concentrations (RBCs). A few VOCs were detected in MW-01, -02 and -03 soils, but not above applicable RBCs, including soil concentrations for occupational indoor air. A lead concentration of 12,000 mg/kg was measured in a soil sample collected from the MW-03 boring, but other metals were detected at concentrations at or near expected Oregon background concentrations. Lead concentrations in the four other borings were generally within background. Groundwater samples from MW-01 and MW-03 both detected concentrations of diesel and heavy oil-range petroleum in the range of 1,700 to 6,080 ppb, which are below the direct contact RBCs for construction/excavation workers, but above the ingestion and inhalation from Tap Water occupational RBC of 350 ppb. Benzene was detected in two of the three groundwater samples. Benzene was detected in MW-01-GW at 3.52 ppb, somewhat above the tap water (occupational) RBC of 2.2 ppb. No other VOCs were detected above any of the RBCs. A couple of PAHs were detected at concentrations above the tap water RBC, but generally at low concentrations. Arsenic and lead were detected in both of the groundwater samples tested for metals MW-01 and MW-03 , at concentrations above tap water (occupational) RBCs. Lead concentrations of 387 ppb (MW-01) and 1,1,70 ppb (MW-03) were detected, well above the groundwater tap water RBC of 15 ppb. The City's consultant concluded that soil contamination detected in a couple of samples above the excavation/construction worker RBC were deep enough and posed no exposure threat due to the existing building and paved parking area. They also concluded that shallow groundwater on the site would not reasonably be used as drinking water. DEQ concluded from this report that there was contamination in soil and groundwater at the site that may pose a threat to future excavation/construction workers, and potentially to local drinking water. The April 2009 investigation also showed that contamination varied across the site and seemed to be highly localized. In 2009, DEQ entered into negotiations for a PPA with Moeller Family, LLC. Conditions of the PPA were stipulated as follows (1) Maintain the existing building and paved parking area as a cap over contaminated soils at the Property and take all reasonable measures to minimize rain water infiltration. (2) Submit for DEQ review and approval a

RALPH A. BAER CO. PROPERTY (Continued) **S109051848**

contaminated soil and debris management plan. (3) Implement methane mitigation measures as approved by DEQ to prevent buildup of the gas in confined spaces to levels that may create an explosion threat, should monitoring data indicate mitigation measures are required. (4/1/2010 CWH/CU) DEQ has determined that completed remedial actions and engineering and institutional controls (EC/IC) implemented on the Site have resulted in conditions that pose no unacceptable exposure risk to human health and the environment and that a conditional no further action (CNFA) determination can be recommended. (5/4/2010 CWH/CU) Conditional No Further Action (CNFA) is granted for site. Current and future owners will need to continue to maintain controls and conditions as described in the E&ES. (5/4/2010 CWH/CU) Prior soil and groundwater samples have detected concentrations of contamination in the buried materials and fill underneath the building at concentrations that pose an exposure risk to future construction and excavation workers. DEQ and Moeller Family, LLC have agreed that no treatment or removal will occur and that exposure risk can effectively be managed through engineering (cap and building maintenance) and institutional (E&ES) controls. Since an E&ES is required, the site must be listed on the Confirmed Release List (CRL). Listing on the CRL provides important public information. Opportunities for Comment on the CRL listing occurred during the CNFA period of April 1-30, 2010.

Decode for NarcdID: Water Use (Current/Reasonably Likely)
NARR Comments: (4/1/2010 CWH/CU) As part of our file review for this CNFA determination, DEQ evaluated local water use. In 2007, Hart Crowser produced a Beneficial Water Use Determination (BWUD) for the Pay-N-Pak site (ECSI #4464) to the south. Their BWUD evaluated local wells and surface water uses. The conclusion was that City of Portland water is readily available and currently supplies water to the site and surrounding properties. Furthermore, that city water use is anticipated to continue in the future in this area. Water wells are present in the general vicinity, but tap into aquifers or water-bearing zones that are deeper than local contamination. In summary they concluded that the local (deeper) aquifer consists of sand and gravel, and has a beneficial use as a drinking water source; however, the shallow (upper) aquifer is fill material/native fine-grained soils (slightly silty sand) and is not used. DEQ concurs with this finding. A review of well log records shows that the closest domestic use well is a 163-deep well with perforations from 145 to 158 feet bgs in a Waterbearing sand and gravel unit at the mobile home park just east of MLK Blvd. DEQ contacted the current mobile home park manager in 2009, who was aware of the well and water right, but told us that they are not using the well and instead are on city water. Given the depth of the well and the institutional controls in place, DEQ does not believe that potential future use of the well or other wells about 1 mile northeast of the site would be impacted by contamination present on the Baer Property. In summary: Deeper groundwater in areas to the northeast of the site has a beneficial use as drinking water. Contaminated groundwater in the

RALPH A. BAER CO. PROPERTY (Continued) **S109051848**

subsurface fill area beneath the Baer Site is not and would not reasonably likely be used for drinking water. Public water supply is readily available in the area. Institutional controls in place for the Baer property to redirect surface waters away from the site will mitigate potential migration of the site s contaminated groundwater.

NARR Comments: (4/1/2010 CWH/CU) The R.A. Baer site has hosted several industrial and commercial facilities since the 1940 s. Prior to and during the first developed use of the property, aerial photographs show that significant fill had occurred on the site to raise it to the same grade as the two bordering roads, which were approximately 20 above the original surface elevation in this area. Sanborn Fire Insurance maps and other historical records show that the site hosted a truck trailer factory and sales facility, an equipment storage area, a dwelling and a restaurant between 1940 through around 1966. A significant finding from reviews of aerial photographs and Phase I Environmental Site Assessments was the presence of an oil sludge pond that was present on the property to the south. Investigations at the site to the south, currently known as the Pay-N-Pak site (ECSI #4464), showed heavy-oil range petroleum hydrocarbon and volatile organic compound (VOC) contamination in groundwater through much of the area within and just beyond the footprint of the former sludge pond. The Pay-N-Pak site is currently undergoing remedial investigation through DEQ s Voluntary Cleanup Program. In 1970, the Baers purchased the property. The Baers used the warehouse for retail sales and storage of toys and sporting goods between 1970 through the mid-1990s. Prior to their ownership, the site was a retail store, the original G.I. Joes.

NARR Comments: (12/5/2001 DGA/SRS) Dry-cleaning facilities have operated at the site since the mid-1970s. A preliminary environmental assessment in November 1994 identified four floor drains within the facility, three of which yielded a positive reading on a photoionization detector. In August 1995, four Geoprobe borings were advanced at the site to see if PCE had been released to the soil or groundwater. PCE was detected in soil gas (up to 75 ppm) and groundwater (up to 780 ug/L) in all four boreholes. It appears that PCE may have been released down the floor drains at the site, leaking into the soil through cracks in the sanitary sewer lines. Tidal fluctuations in the shallow groundwater may have spread the contaminants across the site. Hayden Island Cleaners applied to DEQ's Dry Cleaner Program in January 1997, and was accepted in February 1997.

NARR Comments: The City of Portland owns four deep production wells on Hayden

HAYDEN ISLAND CLEANERS (Continued) **S104329423**

Island, two of which are within 600 feet of the site. Since 1988, Bull Run water has been provided for residents and businesses on Hayden and Tomahawk Islands, and the wells are currently designated for backup fire suppression only. Three of the four wells are contaminated with low levels of TCE and PCE; however, the contamination is thought to be unrelated to Hayden Island Cleaners. Because of the site's proximity to the Columbia River, surface water was another potential pathway of concern. But the contamination does not appear to have reached either the river or the deeper aquifer.

NARR Comments: (12/5/2001 DGA/SRS) DEQ retained Jacobs Engineering to conduct an expanded Preliminary Assessment (XPA) at the site in August 1997. As part of the XPA, three monitoring wells were installed, and soil and groundwater samples collected. PCE was detected in soil samples (up to 267 ug/kg) and groundwater samples (up to 1,230 ug/L) from all three wells. The XPA report was completed in June 1998. DEQ retained Ecology & Environment (E&E) to follow up with a focused Site Investigation in August 1998. Additional groundwater monitoring wells were installed at the site and on adjacent properties. In addition, a pumping test was conducted at the secondary municipal wells (backup fire suppression wells) to determine if there was any connection between the shallow and deep aquifers. No connection was established. The Site Investigation report was completed in March 1999. In May 1999, DEQ injected Hydrogen Releasing Compound (HRC) into the shallow groundwater to accelerate the natural biodegradation of the PCE. Monitoring over the next couple of years showed that the HRC was successful in stimulating degradation of the PCE. DEQ formally notified the site owners and operators in December 2001 that no further cleanup of the site was necessary.

NARR Comments: (8/2/05 DM/SAP) Site referred to Cleanup from DEQ's Tanks Program (LUST log #26-00-0878, now administratively closed). Site screening recommended to evaluate all sources of contamination at the site. (6/19/08 CWH/SA) Aerial photographs and confirming soil and groundwater data show a large area of contamination from an old oil pond that existed on the site from about 1940s to 60s. Given age of oil pond, there is also concern that it could be a possible source of PCB contamination.

NARR Comments: Investigation initiated from three complaints during the summer of 1987. The complainants alleged that they could smell <quot>strong chemical odors.<quot> The odor was traced to Container Care. DEQ investigated and determined the odors were from open containers at Container Care. The facility was ordered to clean the containers. Soils were also sampled.

NARR Code: Contamination
Created By: Not reported
Created Date: 12/17/2002
Updated By: Not reported
Updated Date: 12/17/2002
Decode for NarcdID: Contamination
NARR Comments: This facility is limited to recycled paper products; no hazardous materials exist on-site. Facility was previously operated by Resource Recovery By-Products. This was a transfer station for all types of salvage and refuse. The facility now accepts only paper products. (8/8/02 CWH/SAS) In 2001, soil boring logs recorded by a contractor to Wastech indicated oily sludge. Subsequent laboratory analysis confirmed the presence of petroleum products in the diesel and lube oil range. PCBs were also detected in several samples. The old lube oil refinery sludge pond may be the source of contamination and was filled as a construction debris landfill. Heavy petroleum contamination was found along the northern edge of property, adjacent to Columbia Slough. Risk of release to Slough is considered high due to records indicating inadequate containment and closure of the landfill.

Updated Date: 12/29/2003
Decode for NarcdID: General Site Description
NARR Comments: The site is artificially elevated above the immediate surroundings, apparently by fill placed during site-use as a construction debris landfill. The surface is largely paved and a large industrial building shelters recycling operations. The site is separated from the bank of the Columbia Slough by a Portland greenway zone with native vegetation and recently planted trees.

WM-AGILYX WASTECH (Continued) **S105754753**

NARR Comments: Widespread petroleum contamination was found in soils beneath the site with TPH concentrations as high as 13,000 ppm in the southeast corner of the property. Associated with the petroleum contamination, elevated levels of lead, PCBs, and PAHs, were also found. Groundwater samples from temporary points contained TPH as high as 3,100 ppb and low concentrations of VOCs.

NARR Comments: Concern for groundwater contamination although local use is minimal. Subsurface path to waters and sediment of Columbia Slough. In a survey of the Columbia Slough shoreline adjacent to the property, two pipe discharges were discovered. Water from both discharges left an orange stain and was topped with a faint sheen. One pipe was found near the east border of the site where an old map indicates a drain from the old oil sludge pond.

Updated Date: 10/05/2020
Decode for NarcdID: Remedial Action
NARR Comments: A hazardous waste site inspection was conducted by EPA in June 1980; EPA's file memo indicated hazardous materials were not accepted or processed at the facility and all vehicles/haulers observed passing through the weigh station at the time of the site inspection were carrying baled waste paper and other paper products. Although site was added to CERCLIS, EPA found that no hazardous substances were generated, stored, or disposed of on-site. Based on existing site information, the file was closed and referred to DEQ. It is a low priority for site screening. (5/3/02 CWH/SAS) The EPA review was cursory. April 2000 well logs indicate oily sludge along the north end of the site (which is the south bank of the Columbia Slough). (8/8/02 CWH/SAS) Site recommended for a Site Investigation under a high priority. (12/2/02 RKW/SRP) Letter Agreement signed for high priority Site Investigation (SI). A Site Investigation was completed in the summer of 2003. Widespread petroleum contamination was found in soils beneath the site with associated lead, PCBs, and PAHs. Groundwater samples from temporary points contained TPH and low

WM-AGILYX WASTECH (Continued) **S105754753**

concentrations of VOCs. Negotiations on a voluntary agreement for an RI/FS are ongoing (12/29/03 RKW/SRS). Quarterly groundwater monitoring results from RI indicate very little groundwater contamination. Lead and arsenic slightly elevated in two wells. Lead and zinc elevated in pipe #1 discharge (7/05 RKW/SRS). (3/9/07 RKW/SRS). An RI report has been submitted but DEQ considers it incomplete since the Columbia Slough bank was not sampled. Stormwater source control work also needs to be done. (1/20/10 RKW) Bank sampling was completed in 2007 and soils analyzed for metals, PCBs, PAHs, and SVOCs. Metals arsenic, cadmium, copper, lead, zinc, and mercury were all found at concentrations greater than DEQ default background concentrations. Arsenic was found at concentrations up to 10 mg/kg and lead up to 250 mg/kg. A variety of PAHs were widely detected with benzo(a)pyrene up to 0.43 mg/kg. The PCB Aroclor 1260 was found at concentrations up to 0.13 mg/kg. Additional bank stability analysis was performed and the erosion potential was determined to be low. Stormwater source control sampling was completed in late 2007. The metals copper, lead, and zinc were the only constituents detected and zinc the only contaminant exceeding benchmark stormwater values. The zinc has been attributed to the metal roof on the building. DEQ is preparing a staff report to document a recommendation for a conditional no further action determination for the site. An Easement and Equitable Servitude (EES) for the site would be required. The EES would include: 1. Maintaining existing landfill gas controls 2. Development of a Soil Management Plan (SMP) for the site 3. Procedures for notifying DEQ of subsurface work 4. Contaminated soil management procedures 5. Protocols for maintaining and inspecting the asphalt cap 6. Protocols for maintaining and inspecting the stability of the Columbia Slough bank 7. Measures for protecting excavation and construction workers 8. Residential and agricultural use of the property would be prohibited (10/13/11 RKW) Facility is preparing for retooling and will be used for processing waste plastics into synthetic crude oil. The stormwater and methane mitigation systems will remain in place. (1/22/14 RKW) Plans are being made to decommission the old private stormwater line that runs under the property. The old line's presence is the primary obstacle to closure of the project. The line was apparently installed in the days of the Knapp landfill or earlier and is now partially blocked or crushed and discharges contaminated groundwater from the site's fill. (4/1/15 RKW) In spring of 2014 Wastech's contractor plugged the lower end of the of the old private stormwater line but was not instructed or permitted (City of Portland) to decommission the upper portion of the line or the inlet. A request was made to Wastech to complete the work in January 2015. [10/5/20 SAM] DEQ approved soil management plan in September 2020. Over next several months, Waste Management will prepare following documents. Draft Methane Evaluation Work Plan Stormwater Pipe Cap Evaluation EES

NARR Comments: Aquatic and terrestrial species in the Columbia Slough are threatened by migration of site contaminants into the waterway. Subsurface methane below the building slab was discovered during construction in the fall of 2000 when welding ignited a small fire. A methane venting system was installed to remove methane from below the slab and to vent the methane to the atmosphere at the roof of the building. There are no records of follow-up indoor air testing after system installation and the methane system has not been evaluated by DEQ.

NARR Comments: From 1920-65 the site was used for lumber and shingle production. From 1971-73 the site was filled as a construction debris landfill. From 1974-79 the facility was operated by Resource Recovery By-Products as a transfer station for all types of salvage and recycling. From 1979 to the mid-1980s Alexander Paper Products collected paper at the site for recycling. Waste Management acquired the site in the mid-1980s and the Wastech facility accepts primarily paper and wood products for recycling.

Updated By: CHARMAN
Updated Date: 01/13/2010
Decode for NarcdID: Contamination
NARR Comments: Stormwater quality data collected twice since June 2002 indicate that the facility meets DEQ's stormwater benchmark values, although concentrations of copper and zinc in site stormwater exceeded the National Recommended Water Quality Criteria's respective Freshwater Critical Maximum Concentrations, DEQ's respective Freshwater Acute Toxicity Criteria, and DEQ's Level II Ecological Risk Assessment Screening Benchmark Values for freshwater aquatic life. Between 1990 and 2001, DEQ received nine Pollution Complaints and six Spill Reports associated with potential hazardous substance releases at the Diversified Marine facility, or petroleum sheens present on the river directly adjacent to the facility. Five of the Pollution Complaints and one of the Spill Reports involved fugitive dust emissions associated with sandblasting operations at the site. There is concern that sandblasting of boat hulls at the site could have released paint chips and toxic metals at concentrations that could represent a threat to the river s aquatic life, or otherwise accumulated in the river s sediments. Two other Spill Reports and another Pollution Complaint involved petroleum sheens of unknown origin on North Portland Harbor adjacent to the site. One additional 1998 Spill Report and simultaneous Pollution Complaint were associated with a petroleum release at the site that drained across N Marine Drive onto state highway property located 200 yards from the site. Diversified Marine s record of Pollution Complaints and Spill Reports suggests that on-site activities could have contaminated site soils and nearby Columbia River sediments with any of a variety of boat building, maintenance, and repair related contaminants, including toxic metals and paint chips containing toxic metals such as copper oxide,

DIVERSIFIED MARINE, INC. (Continued) **S108659504**

organotins, lead, cadmium, chromium, mercury, and zinc; petroleum constituents such as BTEX (benzene, toluene, ethylbenzene, toluene) and polynuclear aromatic hydrocarbons (PAHs); and other potential organic contaminants such as, phthalates, pentachlorophenol, chlorinated solvents, and possibly polychlorinated biphenyls (PCBs). (1/13/10 CWH/CU) The march 2009 Preliminary Assessment produced by Ecology and Environment for EPA Region 10 noted that, based on comparison to immediate upstream sediments, that the sediment sample (CR05SD) collected just downstream/adjacent to DMI <quot>indicates that DMI is contributing to copper, lead, and zinc contamination in the river.<quot> DEQ feels it is important to note that with the exception of copper, none of the detected metals, while elevated locally, exceed DEQ freshwater sediment SLVs. It is also important to note that the CR05SD sample was collected at a location that was not near where DMI stormwater runoff or working areas might be expected to be impacted.Similarly, PAH sediment data for CR05SD shows locally elevated concentrations of PAHs, but none above DEQ SLVs. PCBs were non-detect for CR05SD, but detection limits (41-45 ppb) were above DEQ SLVs. To summarize - the CR05SD sediment sample collected on behalf of EPA in October 2008 does indicate releases are likely to have occurred from the DMI site, but there were no samples collected in locations that would be suspected as release points.

NARR Comments: The subject site is an approximate 0.8 acre parcel in North Portland, on the south shore of North Portland Harbor, about 500 feet west of the Interstate Highway 5 (I-5) bridge over North Portland Harbor. Work is performed within an onshore building, on vessels moored at the site, and in a 200-ton floating dry dock at the site. North Marine Drive and North Pier 99 Street are located along the site s southern boundary. A paved parking lot for the Multnomah County Fairgrounds and Exposition Center lies directly across North Marine Drive, 100 to 300 feet south and southwest of the site. Hayden Island is across North Portland Harbor, about 1,000 feet north of the site.

NARR Comments: Although DEQ has records of known and suspected hazardous substance releases at the site, there is no indication that environmental sampling has ever been conducted at the site. Because of an abundance of nearby receptors (nearby wetlands, community drinking water wells, Critical Habitat for Threatened and Endangered fish), a high priority has been assigned to conducting an expanded Preliminary Assessment of the site.

NARR Comments: Fugitive dust emissions associated with sandblasting of boat hulls at the site could have released paint chips and toxic metals at concentrations that could represent a threat to the river s aquatic life, or otherwise accumulated in the river s sediments. Petroleum sheens of unknown origin have been reported on North Portland Harbor adjacent to the site. A historic petroleum release at the site was also reported to have drained across N Marine Drive onto state highway property located 200 yards from the site. Since Diversified Marine site activities include machine shop activities, bilge removal, and boat and equipment refueling activities, it may not be unreasonable to suspect that some of the petroleum contamination observed in the river channel could have originated from on-site activities. Such releases could represent a threat to the river s aquatic life, or otherwise have accumulated in river sediments.

NARR Comments: There is concern that site activities may have contributed contaminants to on-site soils and shallow groundwater, as well as in Columbia River surface water and sediments. Soil contaminants could represent a health threat for on-site workers or utility trench workers. North Portland Harbor (the Columbia River; Oregon Slough) forms the site's northern boundary; the entire site lies within the river's 100-year flood zone. The Columbia River is migratory and rearing habitat for eleven varieties of Threatened or Endangered salmonids. The Columbia Slough lies about 1 mile south of the site. The area between North Portland Harbor on the north, I-5 on the east, Columbia Slough on the south, and a Burlington Northern Santa Fe Railroad right-of-way on the west comprises Peninsula Drainage District No. 1. Most of the drainage district is publicly owned wetlands. Wetlands areas directly south of the site attract populations of sensitive wildlife species to the area. Metro has designated much of Peninsula Drainage District No. 1 as important wetlands or wildlife Habitats of Concern, or regionally significant riparian corridors. Migratory waterfowl and songbirds have been observed within the drainage district, as well as a variety of other sensitive and Threatened and Endangered wildlife species. Sensitive and Threatened plant species may also be present within the wetlands. Site contaminants could represent a threat to sensitive plant and wildlife species within the wetlands. The nearest residence is located on a tax lot at the site's eastern boundary. Other residences are located across I-5, about 0.3 mile east-southeast of the site, and across North Portland Harbor, about 0.4 mile northeast and 0.5 mile north-northwest of the site. Oregon Water Resources Department (OWRD) has records for three community or group-domestic wells, one Public Water Supply well, and five domestic wells within 1.25 mile of the site. The nearest is a 261 foot well installed at Kernan Village in 1958 to supply drinking water for a store, service station, apartment building, and trailer park. The well is believed to be located about 600- to 900 feet south-southwest of the site. Kernan Village no longer exists; its well may now be located either within the current I-5 / North Marine Drive cloverleaf interchange, or within the county fairgrounds paved parking area. It seems unlikely that the well is still being used or even still exists, although OWRD has no record to indicate that the well was formally decommissioned. The City of Portland has supplemental Municipal Supply Wells along the Columbia River south shore, 6- to 11 miles east of the site, as well as four supplemental supply wells on Hayden Island. Two of the Hayden Island wells lie about 1,200 feet north of the site, directly across North Portland Harbor. These wells lie across North Portland

DIVERSIFIED MARINE, INC. (Continued) **S108659504**

Harbor, a 1,000 foot wide, 20- to 30 foot deep branch of the Columbia River, and may be about 225- to 250 feet deep. Several nearby public facilities draw substantial numbers of people to the area. The Multnomah County Fairgrounds and Exposition Center lie southwest of the site, directly across North Marine Drive. East Delta (municipal) Park lies about 0.25 mile south-southeast of the site, across I-5. The Portland International Raceway lies about 0.5 mile south-southwest of the site. Heron Lakes (public) Golf Club lies about 0.25 mile southwest of the site. Jantzen Beach Supercenter shopping center lies directly across North Portland Harbor from the site.

NARR Comments: (10/19/04 AC/ER&CU) Site status on hold. Responsible party (RP) unwilling to join the Voluntary Cleanup Program or perform an Expanded Preliminary Assessment (XPA). Principle concern is that potential site contaminants in sediments could pose a threat to Columbia River ecological receptors. Insufficient evidence to require sediment sampling in the Columbia River. Project on hold pending available orphan funds or willing responsible party. [3/20/15 SA/SAM] An Abbriviated Preliminary Assessment was finalized by EPA through its contractor E&E on May 14, 2009. EPA also performed a SI in 2009 at a neighboring property(ECSI#3526 1610 N Pier 99) downstream samples indicates releases are likely to have occurred from the DMI site, but there were no samples collected in locations that would be suspected as release points for this facility. No Further Remedial Action Planned under Federal program was designated in 2010. A Site Investigation is recommended under state supervision.

NARR Comments: On-site activities could have contaminated site soils and nearby Columbia River sediments with any of a variety of boat building, maintenance, and repair related contaminants, including toxic metals and paint chips containing toxic metals such as copper oxide, organotins, lead, cadmium, chromium, mercury, and zinc; petroleum constituents such as BTEX (benzene, toluene, ethylbenzene, xylenes) and polynuclear aromatic hydrocarbons (PAHs); and other potential organic contaminants such as, phthalates, pentachlorophenol, chlorinated solvents, and possibly polychlorinated biphenyls (PCBs).

DIVERSIFIED MARINE, INC. (Continued) **S108659504**

Updated Date: 07/07/2003
Decode for NarcdID: Health Threats
NARR Comments: Any potential site contaminants present could represent a threat to site workers, utility trench workers, Threatened and Endangered fish species and other aquatic life in the Columbia River, wildlife within the nearby Peninsula Drainage District Number 1 wetlands, occupants of an adjoining residence, or to users of the Portland Municipal Water Supply.

NARR ID: 5743789

Updated By: SFORTUN
Updated Date: 07/07/2003
Decode for NarcdID: Water Use (Current/Reasonably Likely)
NARR Comments: OWRD also has records for three community or group-domestic wells, one Public Water Supply well, and five domestic wells within 1.25 mile of the site. The nearest is a 261 foot well installed at Kernan Village in 1958 to supply drinking water for a store, service station, apartment building, and trailer park. The well is believed to be located about 600- to 900 feet south-southwest of the site. Kernan Village no longer exists; its well may now be located either within the current I-5 / North Marine Drive cloverleaf interchange, or within the county fairgrounds paved parking area. It seems unlikely that the well is still being used or even still exists, although OWRD has no record to indicate that the well was formally decommissioned. The City of Portland has supplemental supply wells along the Columbia River south shore, 6- to 11 miles east of the site, as well as four supplemental supply wells on Hayden Island. Two of the Hayden Island wells lie about 1,200 feet north of the site, directly across North Portland Harbor. The nearest Municipal Water Supply wells lie across North Portland Harbor, a 1,000 foot wide, 20- to 30 foot deep branch of the Columbia River, and may be about 225- to 250 feet deep. It is unclear if any potential site contaminants could represent a direct threat to the nearby Municipal Drinking Water Supply wells.

NARR Comments: Also known as Portmarco, Inc., and Whitecap Cove, Inc. (both active entities, same president, same secretary, same business address, same mailing address) (different registered agent for Whitecap Cove). The company has conducted tug boat and barge building, repair, sandblasting, painting, machine shop, bilge removal, and boat and equipment refueling activities at the site since at least 1990 - possibly as early as 1986. Between 1990 and 2001, DEQ received five Pollution Complaints and one Spill Report about the facility's sandblasting and painting operations, and releases of paint chips to the river. Additional complaints have been received for petroleum flowing southward, off-site from the site, and for petroleum sheens on the river from unknown sources near the facility.

Incident Narrative: STATE HAZMAT TEAM 6 FROM PFB CALLED BY PORTLAND DVD TO 1801 N MARINE DR. SUSPECTS HAD DUMPED DRUG LAB WASTE AND SUPPLIES IN A PARKING AREA NEAR A ROADWAY. THE SUSPECTS HAD BEEN ABOARD A NEARBY 60 FOOT YACHT AND THERE WAS A STRONG CHEMICAL SMELL COMING FROM THE BOAT. THE TEAM ARRIVED AND CONFERRED WITH DVD OFFICER IN CHARE SGT HENDRICKS DETERMINING HOT ZONE AND NEEDED SETUP. THERE WERE THREE BACKPACKS AND A DUFFEL BAG IN THE PARKING LOT. UNKNOWN NUMBER OF SAMPLES TO BE TAKEN. TWO DVD OFFICERS WERE SUITED UP IN LEVEL B WITH SCBA- ALL PERSONNEL WORE LIFE PRESERVERS DUE TO THE PROXIMITY TO THE COLUMBIA RIVER. THE TWO OFFICERS WERE: DORIS PAISLEY (#BPSST UNK) AND BILL SHAW (#28923). SHAW SUITED UP AND WENT WITH HENDRICKS DOWN THE DOCK TO "CLEAR" THE YACHT OF ANY POTENTIAL TWO-LEGGED THREATS. SHAW FOUND ONE CONTAINER OF LIQUID AND TOOK A SAMPLE FROM IT FOR EVIDENCE. FB 17 WAS CALLED TO THE SCENE TO EVALUATE MOVING THE YACHT TO A SAFER LOCATION FOR EVIDENCE TAKING, BUT THAT PROVED UNNECESSARY. PAISLEY AND SHAW TOOK A TOTAL OF 12 SAMPLES FROM THE BACKPACKS AND DUFFL BAG. THEY ENTERED THE HOT ZONE AT 1559 HOURS AND EXITED AT APPROX 1702 HOURS FOR DECON. HM TEAM SET UP EVIDENCE COLLECTION TABLE AND MATERIALS FOR DVD - PROVIDE DECON.

NARR Comments: (12/31/02 CH/SAS) Evaluated as part of focused work on Columbia Slough. In 2000 and 2001, environmental investigations were performed on this property. Past use as auto/truck repair. (6/16/05 HDL/VCP) [3/27/12 SAM/SA] DEQ reviewed site information to determine if the property had historically contributed to Columbia Slough sediment contamination via private or public stormwater conveyance. Based on available evidence, the site is a low priority for immediate follow up, however any future work should resolve this pathway.

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: Site was operated as Steel Specialties from 1982 or 83 until 1987 or 88. Steel Specialties apparently sold or imported power-transmission equipment. Company not currently listed in Portland city directory. (11/12/97 LSK) Major pathways of concern are surface water and groundwater. The site is located about 500 ft. south of the Lower Slough (south of West Delta Park). Groundwater is expected to be less than 25 ft. bgs. Direct contact possible during construction/excavation.

NARR Comments: (11/12/97 LSK) Site reevaluated as part of review of all sites within the Columbia Slough Study Area. High priority for PA, to summarize historical practices, spills, pathways and any investigation and cleanup conducted independently. (7/12/99 MTP) site evaluated as a

SCHNITZER PROPERTY - N KERBY AVE. (Continued) **S119161946**

medium priority for an expanded PA (XPA) with sampling; site purchased 3/99 by Precision Equipment, who is currently in the VCP. No environmental work has been conducted at the site since 1989. (7/19/2007 RKW) This site is being managed as part of the Precision Equipment site (ECSI #152). Recent stormwater work traced the path of catch basins located on the west side of the building to an outfall located on the adjacent Wastech site (ECSI #1271). Several PAHs, chromium, lead, mercury, and zinc were detected in catch basin sediment at concentration above Columbia Slough source control screening levels. The same contaminants, less chromium, were also detected in outfall sediments above screening levels. (1/5/10 RKW) Precision has proposed to demolish the warehouse building on the property and fill the depression it sits in to grade. The private stormwater system discussed above would be permanently decommissioned before filling. DEQ is proposing a remedy for the entire site in a December 2009 Staff Report. For this portion of the Precision property (now known as Tax Lot 1103) the owner would have 5 years to sell the property for redevelopment before a cap must be installed on the property. If sold the cap would be installed at the time of development. In the interim the fencing would be completed around the property to restrict access. An EES would specify maintenance of the cap. (6/4/12 RKW) The Schnitzer building has now been demolished and removed. The concrete foundation has been broken up and the stormwater line branch that connects with the old RB Rubber (former Knapp Landfill) private stormwater line, has been removed. The hole where the building was located will be filled with clean (analyzed) dredge sand from Meadow Rock Mine on Tomahawk Island in Portland. In the summer of 2012 a soil cap to cover the former Schnitzer Property site and Area 3 of the Precision Equipment site (Tax Lot 1103) is planned for installation. (10/31/12 RKW) The soil cap for the entire property has been postponed due to complications with capping the City ROW at N. Argyle St. The process for vacation of the ROW is underway. Meanwhile the Schnitzer Building has been demolished and the foundation broken up. The storm drain system was decommissioned and the pipe leading to the Slough capped. The resulting hole is being filled in with dredge sand. (6/15/16 RKW) After invasive species removal, the soil cap was placed in 2013. A demarcation layer of woven geotextile fabric separates the clean fill from the contaminated soil below. The broken concrete foundation below the Schnitzer Building serves as the demarcation layer in the building hole. A wall of modular concrete Ultrablocks was installed on the western border of Area 4 to protect the City right-of-way for N Kerby Ave. from erosion of the backfill. After grading the upland area was planted with a hydroseed grass mix. Black Cottonwood trees were planted along the top of the Columbia Slough bank. Ocean Spray, Snowberry, and a grass seed mix were planted in the bank area as an erosion control method. Completing the process of vacating the ROW separating the 1102 and 1103 tax lots was completed by 2014. A conditional No Further Action letter was issued September 21, 2015. Conditions are detailed in a recorded EES document. To resolve the 2008 Columbia Slough sediment settlement Consent Judgement, a final Certificate of Completion was issued May 26, 2016. The Certificate of Completion applies to both ECSI #1050 and also ECSI #152. [7/26/18 VCP/SAM] 21st Century Towing entered into VCP to redevelop the property consistant with the EES. The Long-term monitoirng, maintenace and soil management plan will be updated to reflect site redevelopment. DEQ approved work plan July 2018.

Last Updated Date: 08/24/2022
Site Comment: Soil cap over Areas 2 and 4 must be inspected annually and maintained until such time as this control is no longer needed. <b> No residential or agricultural uses of property; any disturbance of soil must be in accordance with the DEQ-approved Contaminated Media Management Plan prepared for the site. In addition, any new building on the property requires a vapor-barrier membrane to prevent methane migration into the building (unless methane is deminstrated, prior to construction, not to be a risk). <b> No use of groundwater permitted on property.
