Narrative:
NARR ID: 5740694
NARR Code: Contamination
Created By: Not reported
Created Date: 12/17/2002
Updated By: SFORTUN
Updated Date: 04/03/2012
Decode for NarcdID: Contamination
NARR Comments: (3/22/01 MTP/SAS) The property owner, Mr. Bud Hoffman, decommissioned two 10,000-gallon underground storage tanks (USTs) on October 18th and 19th, 1999. Mr. Hoffman indicated the tanks had contained diesel; in previously submitted information, Mr. Hoffman had indicated the tanks contained gasoline and diesel. At the time of removal, the DEQ NWR UST Section was preparing a notice of noncompliance (NON) for failure to upgrade or remove the tanks, which was subsequently issued on February 23, 1999. DEQ UST staff observed stained soil that appeared to be related to overfills, limited to near the surface. Soil sample results submitted to DEQ showed non-detects for each of three samples collected below the tanks. Because it could not be determined if a release from the UST had occurred, DEQ UST Section closed the file. On October 3, 2000, DEQ Hazardous Waste (HW) and UST staff conducted a site visit. The paint operation was observed to generate lacquer thinner used to clean the paint guns at a rate of about 2 drums every 6 months. Lead batteries were observed throughout the facility. A wash pad area associated with the painting business is located outside the building. Collected water apparently was treated and reused on-site; sludge from the sump and pad was shipped off-site as non-hazardous waste about twice a year. The waste profile

HOFFMAN PROPERTY (Continued) **S111247462**

was based on 1997 data that showed cadmium (24 parts per million [ppm]) and lead (33 ppm). Lab results for a sludge sample collected by DEQ are pending. On the opposite side of the building was an elevated asphalt area to accommodate masking of trucks prior to painting. A lower area contains an 8' x 10' pit that had been cemented over to a sump approximately 2'x 3'. Prior to capping of the pit the water was pumped to a dry well about 20 feet away. The drywell appeared to be 20 feet deep. As a result of the HW inspection, a Notice of Noncompliance (NON) was issued on October 11, 2000 for failure to conduct hazardous waste determinations and failure to properly clean up a spill. Mr. Hoffman stores dumpsters on the property as part of a sanitary service; attempts to reclaim glass, metals, and plastic had resulted in a buildup of these materials. The east side of the site is an area overgrown with blackberries where standing water was observed. The water had an organic odor and a sheen. Mr. Hoffman indicated a water pipe had broken as a result of freezing. Two five-gallon buckets were overturned in the standing water. Oil was stored in rusty drums. Enamel and latex paint were observed to be stored on pallets. Stormwater runoff with a sheen, which appeared to originate from the Interstate Street overpass, was observed to fall onto the ground and then flow to a City of Portland drain line. As part of the Tri-Met Interstate MAX line construction, soil samples were collected along the alignment in the easement running along the west side of the site. In a report dated 2/14/01, it was reported that diesel (543 ppm) and total petroleum hydrocarabons (TPH; 1,190 ppm) were detected in surface soil collected just north of the former UST excavation site. A number of volatile organic compounds (VOCs), including trimethylbenzene, were detected at up to 1,940 parts per billion (ppb) in subsurface soil collected at 17 feet below ground surface just south of the former UST location. TPH as gas (20 ppm), oil (74.3 ppm) and diesel (111 ppm) were also detected in this sample. Elevated levels of a number of metals (e.g., lead 1,110 ppm) were detected from the 5-to-7 foot sample interval in a boring collected along the western easement. PCBs were not detected in any of the four surface soil samples analyzed. (4/3/12, smf) An Integrated Assessment conducted for EPA by E&E in June 2011 detected concentrations of metals, TPH, SVOCs, and pesticides in surface soils, wash pad sludges, drainage ditch sediments, Columbia Slough sediments, subsurface soils, and site groundwater that represent a potential threat to on-site workers, potential groundwater consumers, terrestrial wildlife, and/or aquatic life in the Columbia Slough. Several of the contaminants detected at elevated concentrations in upland environmental media were also detected at somewhat elevated concentrations in nearby Columbia Slough sediments, suggesting that site contaminants may be contributing to sediment contamination in the Columbia Slough. E&E also catalogued and catagorized the contents of approximately 700 containers of miscellaneous wastes or hazardous substances found at various locations across the site. EPA issued the site a NFRAP decision in February 2011 contingent upon the successful removal and disposal of containerized hazardous substances from the site. However, further evaluation and cleanup are needed at the state level to assure that human health and the environment are adequately protected.

Updated By: SFORTUN
Updated Date: 04/03/2012
Decode for NarcdID: Remedial Action
NARR Comments: (2/13/01 ACV/VCS) Site part of acquisition for Interstate Light Rail. Tri-Met directed investigation (January 2001) found TPH and lead in site soils. Tri-Met plans to properly manage contamination during construction activities. Residual contamination referred to Site Assessment Program. (3/22/01 MTP/SAS) Based on a review of existing information it appears that there has been a release of petroleum at the site consistent with surface discharges, possibly related to the former USTs. The source of groundwater contamination is not clear, but the compounds detected suggest a gasoline impact. The dry well and former collection pit are a likely source of petroleum and possibly metals contamination to soil and shallow groundwater, and could be impacting or may have historically impacted the Columbia Slough. DEQ SAS recommends a site investigation to assess the nature and extent of contamination in the on-site dry well system and to determine if there is currently, or has been a historic pathway to the Columbia Slough. In addition, the extent of petroleum contamination in the vicinity of the former UST should be determined. DEQ SAS further recommends groundwater sampling to determine if there is an on-site groundwater contaminant source. Because a release has been demonstrated, the site should be added to the Confirmed Release List (CRL). Because further site investigation is required, the site should also be added to the Inventory of hazardous substance sites. DEQ SAS has determined that further work should be conducted under a high priority. (6/1/09 CWH/SA) Site Federal Screening (update) completed. Site recommended to EPA Region 10 for Federal Site Inspection. Primary areas of concern for DEQ: Prior investigation in 2000 and 2001 by Tri-Met, during preparation work for the light rail line, detected elevated concentrations of several metals in surface soils. The Tri-Met work also measured concentrations of metals and semi-volatile, volatile and petroleum hydrocarbons in groundwater. The sources, and full extent and nature of the detected contaminants has not been resolved. The extent of contamination in the drainage ditch along the east side of the site that has received petroleum and metals contaminated discharge from the Harrah s truck washing pad. The extent of any impacts to subsurface soils or groundwater from the

HOFFMAN PROPERTY (Continued) **S111247462**

underground injection control (UIC) device, also referred to as a drywell, located at the northwest corner of the site s single building. Since the site borders the Columbia Slough, a water-quality limited stream that supports migration and rearing of several species of endangered salmonid species, additional work is needed to evaluate any existing upland sources of contamination and to measures sediments along the shoreline of the Slough to determine if there has been any impact from the site. (4/3/11, smf) E&E completed a detailed investigation of the site in 2011, and issued an Integrated Assessment Report to EPA in February 2012. While EPA's Removal Program is continuing to work with the site owner to safely remove and dispose of containerized hazardous substances from the site, EPA's CERCLA Program issued the site a NFRAP decision in February 2012. Further evaluation and cleanup will be needed at the state level, however, to assure that human health and the environment are protected.

Updated By: Not reported
Updated Date: 12/17/2002
Decode for NarcdID: Health Threats
NARR Comments: Possible impacts to the Columbia Slough through overland runoff, and/or shallow groundwater discharge. Shallow groundwater may have been impacted by petroleum associated with the former USTs at the site, and likely discharges into the Columbia Slough. Possible connections between the existing dry well and shallow groundwater and/or the Columbia Slough is a significant concern. Direct exposure of site utility workers to contaminated surface and subsurface soil is likely. Economically disadvantaged residential properties are located south of North Columbia Drive, greater than 2000 feet from the site. There are 10 industrial use wells listed in Oregon Water Resource Department's well log database for Section 9. One well in Section 9 with no indicated use and no specific location was installed at a depth of 217 feet and could possibly be a potable water supply well. Groundwater discharge to the Columbia may be of concern.

NARR Comments: An April 2006 Groundwater Characterization report presents results from a focused groundwater characterization. Arsenic, chromium and lead were undetected in some samples and detected in others at levels below MCLs and tap water PRGs (chromium and lead) or similar to background levels (arsenic). Metals in sandblast grit are present in fill areas in the northern portion of the site. Soil sampling in the western vegetated area indicated elevated concentrations of some metals, including lead and zinc.

NARR Comments: A 19-acre industrially zoned property located in an area predominated by heavy-industrial uses. The southern section of property is occupied by a large warehouse and the northern half of the property is graded and either paved or graveled. The southern portion of the property is paved. Storm water either infiltrates or is managed in catch basins and pipes. The property is bordered to the north by the Columbia Slough and its riparian area, on the northeast by a ramp to interstate 5, and on the south by Old Columbia Boulevard and the Union Pacific Rail line. The western side of the property is a vegetated low-lying swale area that receives stormwater runoff from the site and surrounding properties.

NARR Comments: Spent sand used for fill on the northern portion of the property contains several metals at concentrations elevated above background. Soil in the western swale has been impacted by metals from stormwater runoff associated with various possible sources. Groundwater characterization included two rounds of sampling in 2006 for five metals (arsenic, barium, cadmium, copper and lead). This groundwater investigation does not indicate that groundwater has been impacted by site operations.

NARR Comments: Remedial Investigation and risk assessment completed in September 2008. A Record of Decision on the selected remedial action was issued in August 2010. The selected remedial action addresses the presence of sandblast grit and metals in contaminated soil at the site and metals exceeding risk-based concentrations for occupational worker direct contact exposure and DEQ Cleanup Program screening values in stormwater (DEQ 2009a). The selected remedial action consists of the following elements: 1) Containment and isolation of contaminants in soil though engineering controls. This control will consist of a two-foot thick gravel cap in the Northern Fill Area. This will require improvements to the existing fill area by adding additional gravel. Alternatively, if the site is redeveloped, the site redevelopment infrastructure may serve as the functional equivalent of the isolation layer. These elements could consist of buildings, work or parking surfaces, or landscaped areas. Implementation of capping may be delayed up to three years to accommodate future development opportunities for the facility. In the interim, institutional controls will be implemented to restrict access to the area. 2) Erosion control on the Columbia Slough bank, consisting of planting willow cuttings (or similar) using standard planting techniques, in an area that is presently partially devoid of vegetation. This area is approximately 20 ft x 20 ft in size. 3) Implement stormwater program. Two alternatives are prescribed (see ROD). Under either alternative, Best Management Practices (BMPs) will be implemented to control release of contaminants present in upland portions of the site to the Columbia Slough through storm water runoff or the western swale. The BMPs will be documented in a

BLASEN FAMILY LLC (Continued) **1006865327**

stormwater management plan and include performance criteria. 4) Institutional Controls: Easement and Equitable Servitudes, Cap Maintenance, Inspection, and Monitoring Plan, Soil Management Plan, stormwater management and monitoring plan and on-going maintenance of stormwater system, documentation of stormwater system BMPs, monthly inspections of access restrictions, and annual stormwater system inspections and documentation. All of these plans would be developed as elements of a single comprehensive monitoring and maintenance plan and would be developed to accommodate then existing conditions (including redevelopment if the site is redeveloped during remedy implementation) and modified within six months, if the site is redeveloped after the remedy is implemented.

NARR Comments: Blasen Family LLC has owned the property since 1994. Formerly a paint/metal coatings plant from 1955 to 1967. Sand Products, Inc. reprocessed new and used sand for abrasive blasting and roof-felt manufacture from approximately 1985 until 2001. Sand was mixed with other inert fill on the northern portion of the property. The northern part of the property was leased by TriMet from 2001 to 2003 and was leased to Forklift Headquarters in 2006. Currently, several structures are located across the property and are used for storage, office space and maintenance activities.

BLASEN FAMILY LLC (Continued) **1006865327**

Updated Date: 05/28/2021
Decode for NarcdID: Current Site Summary Statement
NARR Comments: The Department of Environmental Quality entered into a prospective purchaser agreement with Lawrence B Stone Properties #66, LLC, following public comment in November 2019, for the Blasen Family site at 1601 North Columbia Boulevard. The agreement in the form of a Consent Order became effective January 31, 2020. Subsequently, LB Stone Properties acquired the property and plans to implement cleanup actions identified in DEQ s 2010 Record of Decision (ROD) for the property, in conjunction with redevelopment. The cleanup identified in the ROD requires an engineered cap over landfill containing sandblast grit in the northern portion of the site, erosional controls on the Columbia Slough bank, and upgrading the site stormwater system to prevent stormwater and stormwater sediment above acceptable levels entering the Columbia Slough and adjacent Wester Ravine area. This new property owner in consultation with DEQ is currently preparing plans to install stormwater improvements and construct a cap over the north yard area.

 In 2009, the Blasen Family, LLC, entered into a settlement with DEQ to resolve liabilities associated with historical releases and corresponding impacts to the Columbia Slough (see ECSI No. 1283 and Columbia Slough Sediment Project website: https://www.deq.state.or.us/Webdocs/Forms/Output/FPController.ashx?SourceIdType=11&SourceId=1283). North Columbia, LCC, acquired the Blasen Family site in 2014 and assumed responsibility for implementing the ROD. A cleanup Consent Order was executed in late 2015; however, there were significant delays with implementation.

Environmental Interest/Information System:
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

Registry ID: 110071402787

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Decode for NarcdID: Remedial Action
NARR Comments: (11/14/97 LSK) Site should be re-evaluated as part of review of all sites within the Columbia Slough Study Area. Located just south of the Lower Slough. Medium priority. [3/27/2012 SAM/SA] DEQ reviewed site information to determine if the property had historically contributed to Columbia Slough sediment contamination via private or public stormwater conveyance. Based on available evidence, the site is a low priority for immediate follow up, however any future work should resolve this pathway.

Environmental Interest/Information System:

WAYMIRE DRUM CO. (Continued) **1006857476**

OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

NARR Comments: [3/26/12 SA/SAM] Site added as part of the Columbia Slough Stormwater Source Control Evaluation. City of Portland records indicate most of the property drains to UICs. Washwater\\fuel station and interior areas drain to sanitary. A DEQ site visit to adjacent property to the west in 2010, found site water from the NE part of the property follows the fence line and crosses to the Lainer Brugh\\Wilkins Trucking property and possibly to the Columbia Slough. Google arieal maps indicate water from the NW section of Lainer Brugh drains towards fence line/grassy ditch and possibly to the Columbia Slough. A Stormwater Source Control Evaluation should be performed to determine property stormwater pathways.

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: The 1950 s refinery operation, assumed to be the source of the oil sludge pond, may have contaminated subsurface soils around the lube oil warehouse and the refinery in addition to the area around N. Hunt Street. Methane produced as a by-product of the decomposing fill material may also be present in subsurface soil gas at the RB site. Methane gas poses a potential explosive and asphyxiation threat to site workers in enclosed spaces on the site and on neighboring properties. Surface water may be threatened by subsurface migration of contaminated groundwater though a preferential pathway emanating via bank seepages or base flow to the Slough. [8/7/12 SAM/SA] Surface Stormwater from property drains to Columbia Slough via city of Portland conveyance and a private drain(Wastech) in N Hunt St. Process water is sent to sanitary sewer. There is one dry well onsite. [8/21/14 VCP/SAM] N. Hunt St drain permanently sealed at the northern end(Columbia Slough discharge) by Wastech(701 N Hunt St). Sanitary sewer connection has been terminated. UIC decomissioned.

Decode for NarcdID: Remedial Action
NARR Comments: (5/25/2004 YJ/SAP) Related to discovery of Oil sludge pond at the Wastech Facility located at 701 N Hunt St. Sludge pit may have been located on site as well. [8/7/12 SAM/SA] DEQ recommended completion of a stormwater source control of the site in 2010, as the property drains to the Columbia Slough. DEQ re-initiated conversations with RB Recycling in 2012 to address stormwater runoff to the N Hunt St private drain, as the Wastech(ESCI#1271) cleanup action requires the pipe be decommissioned to complete the Wastech cleanup. [5/7/13 SAM/SA] RB Recycling/Dash Multi-Corp signed a letter agreement 3/20/13 to complete a stormwater source control evaluation and dry well decommissioning. Work Plan was sent May 2013. [11/18/13 SAM/VCP] DEQ approved work plan in 6/2013- surface soil scraping and removal, dry well decommisioning and stormwater pipe cleanout are a part of the work. Dry well removed 9/2013. [4/17/14 SAM/VCP] Surface soil scraping/removal and stormwater pipe cleanout performed Feburary/March 2014. Concentrations of surface soils removed included Total PCBs up to 10.7mg/kg; zinc up to 1,300mg/kg, Chromium up to 508mg/kg; Copper up to 388mg/kg, Lead up to 681mg/kg and zinc up to 2,290mg/kg. PAHs were also detected in removed soils. Current surface soil leave concentrations reported in contamination information section below. Clean gravel, with minimum depth of 6 inches was placed on surface soils. Final report available on web-docs. [8/26/14 VCP/SAM] The work performed under the 2013 Voluntary agreement has been successfully implemented. The following objectives have been achieved: Exposure to surface soil contamination has been eliminated by removing surface soils to occupational risk based screening levels

RB RECYCLING, INC. (Continued) **1006854095**

and removing most surface soils to Columbia Slough source control screening values. Erosion of contaminated material from the site to the Columbia Slough has been prevented by covering surface soils with clean gravel and cleaning out the stormwater pipe conveyance system. Surface soils with concentrations above source control screening levels are covered with gravel and located in areas where stormwater infiltrates. The N. Hunt St drain was permanently sealed so stormwater from the site no longer enters the slough via this conduit. [10/24/14 VCP/SAM] Source Control Decision issued. On September 1, 2014, DEQ published a notice of the proposed source control completion determination and provided opportunity for public comment. No comments were received. This source control decision does not apply to site groundwater, subsurface soil or historical releases to the Columbia Slough. DEQ has concluded that RB Recycling activities at this site contributed to sediment contamination in the Columbia Slough via stormwater discharge at Outfall #62 and the N. Hunt St. Drain. Additional work is needed to investigate and possibly cleanup sediments within the Columbia Slough. Contamination may remain on the RB Recycling site at depth. Additional sub-surface work is needed to investigate contamination at the site associated with historic activities, including the lube oil refinery. [6/6/18 VCP/SAM] On May 24, 2018 a $261,000 sediment settlement and a $39,000 natural resource settlement with RB Recycling parties was issued for sediment impacts and natural resource damages to the Columbia Slough. [1/4/2019 VCP/SAM] on or before July 31, 2018 a total of $261,000 was deposited to DEQ s Columbia Slough remediation account and a total of $39,000 was deposited to DEQ s Columbia Slough Natural Resource Damages account as required under the Consent Judgment. Certificate of Completion issued 12/14/2018. Additional sub-surface work is needed to investigate contamination at the site associated with historic activities, including the lube oil refinery. [5/31/2019 VCP/SAM] On Feb 12, 2016, DEQ issued letters to current owners notifying them that source control measures that are applicable to current and future site activities must be maintained. If stormwater source control measures are not maintained and a release occurs, current owners may be liable for future investigation and cleanup of Columbia Slough sediments.

recycling operations at the 8501 N Borthwick Ave. from 1999 to 2014. DEQ s Lower Slough sediment investigation in 2012 determined that sediment in the vicinity of the two outfalls where the Site stormwater discharged contains significantly elevated concentrations of metals and PCBs and is a high priority area for sediment cleanup. Various industrial uses have occurred on the property since approximately 1950. In December 2012, DEQ notified RB Recycling it was liable for contributing to contamination in Columbia Slough sediment. RB Recycling vacated the site in 2013 and performed upland source control measures including removal of surface soil which contained elevated concentrations of PCBs and metals. On Oct. 20, 2014, DEQ issued a stormwater source control determination for the RB Recycling facility. RB Recycling and the property owners proposed to settle to address historical releases to the Columbia Slough sediment and natural resource damages. On May 24, 2018, a $261,000 sediment settlement and a $39,000 natural resource settlement with RB Recycling parties was issued for sediment impacts and natural resource damages to the Columbia Slough. On or before July 31, 2018 a total of $261,000 was deposited to DEQ s Columbia Slough remediation account and a total of $39,000 was deposited to DEQ s Columbia Slough Natural Resource Damages account as required under the Consent Judgment. Contamination may remain on the RB Recycling site at depth. Additional sub-surface work is needed to investigate contamination at the site associated with historic activities, including the lube oil refinery.

FINDS:
Registry ID: 110014162985

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Narrative:
NARR ID: 5730662
NARR Code: Contamination
Created By: Not reported
Created Date: 12/17/2002
Updated By: RWILLIA
Updated Date: 11/09/2004
Decode for NarcdID: Contamination
NARR Comments: During a RCRA 3012 inspection (5/31/84), 43 drums of waste materials were noted to be stored on-site, including spent cleaning solvents, grease residue from a trichloroethylene stripper, machine oil/grease, and sludge from hard chrome plating baths. These wastes were contained in 55-gal. drums. Shortly after the inspection, 55 gal. Wheelmate 291 metalworking fluid were dumped into a storm water collection sump. The plant manager advised DEQ that PEI staff 'decanted the liquid' from three 55 gal. drums of the spent coolant into a storm drain leading to a dry well on the property. DEQ sampled what appeared to be a 'spill oil substance' from storm drain runoff. Contaminants found in DEQ sump sediment/liquid samples included high levels of total chromium, and low levels of pentachlorophenol and PCBs. In October 1992, DEQ hazardous waste inspectors documented two items with the potential to cause subsurface contamination. Within the plating room, acidic wastewaters all drained into a below-grade, concrete structure designed as secondary containment. DEQ staff felt that plating wastes collecting in this sump could have leaked through the concrete slab into the ground below. In addition, the inspectors found a leaking drum of concentrated chromium sludge in the outdoor hazardous waste storage area. Samples collected by Precision Equipment in March 1995 showed no residual PCBs or pentachlorophenol

PRECISION EQUIPMENT INC (Continued) **S108662032**

in sump sludge or a soil sample, but both samples contained leachable chromium. In 2002 Precision began investigation of Area 2, the portion of the property that extends north to the Columbia Slough. Petroleum in the lube oil range, PAHs, PCBs, lead, and arsenic were found throughout this area in shallow soil/fill. Woody debris consistent with the areas former use as a construction debris landfill was also widespread.

Updated Date: 06/15/2016
Decode for NarcdID: Remedial Action
NARR Comments: Past practices at this facility, combined with on-site drainage into dry wells and possible leaks from the interior containment sump, have introduced organic and inorganic contaminants into the subsurface. The extent of contamination is unknown, beyond the 1984 and 1995 sampling data that confirmed releases to dry wells & some soil on-site. Site Assessment recommends that the owner/operator: 1) Investigate the extent of on- and off-site contamination, particularly for chromium and other metals; 2) Establish engineering or other controls to prevent hazardous materials from entering storm drains and dry wells; and 3) Assess whether the sump in the building has ever permitted plating wastes to leak into the subsurface. The site should be added to the Confirmed Release List and Inventory. (LSK 10/17/97) Site re-evaluated as part of review of all sites within the Columbia Slough Study Area. The site is located directly adjacent to the Lower Slough. There are two Priority B sediment sites within the Lower Slough (on either side of the site) and one Priority A sediment site, further west of the site, which is prioritized based on chromium levels. Based on this evaluation, a high priority for further action was recommended. DEQ received an Intent to Participate in the Voluntary Cleanup Program on 6/5/97. (11/4/98 TER/VCP) VCP began a file review of the site information in August 1998. (10/20/99 TER/VCP) Chromium-contaminated soils were discovered beneath the plating area sump and pit in August 1998. Precision will conduct additional investigation to define the extent of contamination in October 1999. (4/19/00 TER/VCP) Groundwater investigation to begin

PRECISION EQUIPMENT INC (Continued) **S108662032**

5/00. (10/14/04 RKW/SRS) In July 1995 two drywells in the north parking lot were decommissioned and the plant was connected to the City of Portland storm water system. In August 2002 a drywell at southwest corner of the plant was discovered to be operational. This drywell was decommissioned in January 2003. (RKW 1/10) The May 1, 2008 Summary Report for Tax Lot 1102 summarizes the work done for the site RI. DEQ completed a staff report with recommended remedial action in December 2009. Public Comment period runs through January 2010. The building and paving would serve as a cap for the chromium VI-contaminated soil that lies below the chrome plating area inside the building. When chrome plating ceases at the site the soil would be re-evaluated. (RKW 12/10) The Final ROD was issued October 4, 2010. (RKW 12/12) The EES and Soil Management Plan have been finalized. The remedy stipulated in the 2010 ROD is primarily maintenance of the existing cap which includes the paving and building at the site. The cap will prevent any exposure to the chromium-contaminated soil below the building. If the building is ever removed the soil will have to be re-evaluated for possible removal or treatment. An EES restricts use of onsite groundwater and residential use. The site is recommended for CNFA by DEQ. CNFA letter dated February 27, 2013. (RKW 6/16) A final Certificate of Completion was issued May 26, 2016 to resolve the Columbia Slough sediment settlement Consent Judgement from 2008.

NARR Comments: Sanborn Fire Insurance maps from 1920 to 1965 show a lube oil refinery located at 615/625 North Argyle Street, across North Kirby from the Precision Equipment North Annex (ECSI #1050). A large oil swale or oil sludge pond, apparently associated with the refinery, occupied low-lying land northeast of the refinery. The sludge pond size fluctuates in historic air photos but at greatest extent covers all of Precision's shoreline property as well as much of the shoreline properties immediately to the east and west. DEQ files show that in 1971-1972 the oil sludge pond was filled as a non-putrescible solid waste landfill known as the Knapp Landfill. Precision has operated in a building just south of landfill debris since 1978.

NARR Comments: The dry cleaning solvent PCE as well as chloroform and petroleum solvents appear to have been released from former dry cleaning operations. Soil samples below the machine had not yet been collected as of Sept 2010. (Dec. 2013) High concentrations of perchloroethene (PCE) and chloroform were detected in soil gas below the facility and in indoor air inside the building. Alsco does not use dry cleaning in their facility but the previous owner of the building, Oregon Laundry Services (OLS), apparently operated a dry cleaning machine. It is

ALSCO INC (Continued) **1001489540**

suspected that dry cleaning solvents were released during OLS operations prior to 1984. High concentrations of PCE were found in soil below the area where a dry cleaning machine once operated and also below a former fuel UST.

NARR Comments: The chlorinated solvents tetrachloroethene (PCE) and chloroform along with a petroleum fuel or solvent with constituents such as benzene, toluene, ethylbenzene, and zylene appear to have been released at the site. Daughter products of PCE such as trichloroethene are also found. Clorinated solvents appear to be related to former dry cleaning operations at the facility.

NARR Comments: (6/8/09 RKW/VCP) ALSCO's consultant is preparing a Phase 1 investigation report and Phase II work plan for initial investigation. ALSCO has reported that they have never used PCE so question being assumed the source of PCE and TCE in soil gas and groundwater at their property border with Macadam Aluminum and Bronze site. (12/7/09 RKW/VCP) Soil gas investigation underway within the Alsco building. According to the Phase 1 investigation the previous owner of the facility operated a dry cleaning machine near the SE corner of the building, near the location of the highest soil gas detections at the Macadam facility. (3/15/10 RKW/VCP) Preliminary soil gas results indicate a significant release of dry cleaning solvent is centered on the old dry cleaning machine which was apparently never used by Alsco. A subslab soil gas measurement in this location indicated PCE at a concentration of 5,900,000 ug/m3 and TCE at a concentration of 7,000 ug/m3. This is 2,800X the risk-based concentration (RBC) for PCE and 50X the RBC for TCE. There is also indication of a release of chloroform at the facility. (6/7/10 RKW/VCP) A second round of indoor air samples were collected in April 2010. Results confirmed earlier sample results and indicate an indoor air problem. PCE was found at a higher concentration of 140 ug/m3 in the former dry cleaning room. Chloroform was found at a lower concentration than before in the SE corner office area but found at a higher concentration of 59 ug/m3 in the center of the facility. Alsco will be planning Interim Removal Action Measures (IRAM) to address contamination in soil gas and indoor air at the facility. Measures could include soil removal and/or vapor extraction or other technology such as chemical oxidation. Catch basin sediments were sampled and found to contain copper, nickel, and zinc at concentrations above DEQ screening levels for basin sediment. Petroleum and PAHs were also found. Various BMPs were proposed to correct the problem. Plans are being made to decommission site dry wells. In January 2011 the dry wells were decommissioned by removing the upper rings and filling with cement grout. A fourth dry well was discovered next to DW-3. There was no appreciable sludge to remove or sample in the base of the dry wells. Samples of soil below the bottoms were collected and contained diesel (up to 9400 ppm) and heavy oil (up to 12,300 ppm), PAHs, and metals. VOCs were not found. Lead was found up to 180 ppm but SPLC leaching test showed no leaching. Other contaminants were below RBCs. In February 2011 twenty

ALSCO INC (Continued) **1001489540**

borings were advanced at the site for collection of soil samples. Four borings were completed as temporary wells and nine were completed as permanent groundwater wells. PCE was found in all soil borings around and below the former dry cleaner room. One sample from 2.5 feet BGS contained PCE at 2,680,000 ppb. PCE was found in all groundwater wells surrounding the site but concentrations were generally low with the highest of 1,360 ug/L just below the very high soil sample result. Planning for a soil vapor extraction system is underway. (12/27/11 RKW-VCP) Two SVE systems were installed and started up in Sept 2011. One system is located inside the former dry cleaner room and another is located above the UST cavity in the southeast corner of the facility. Higher concentration VOC vapors are removed from the dry cleaner room than the UST cavity. The systems were shut down in late October when consultants were changed by Alsco. Systems were restarted in December. (10/18/12 RKW-VCP) Both systems were shut down in late summer 2012. Compliance soil gas and indoor air sampling show that remediation is not complete in the former dry cleaner room and this system will be restarted. The UST cavity system appears to have achieved remediation in this area. (10/31/13 RKW-VCP) After final shutdown in early 2013 another round of soil gas samples is collected and all samples were below RBC for PCE. Public comment period for NFA will run through Nov 2013.

NARR Comments: Originally, concentrations of PCE and TCE in soil gas at the neighboring site property line and below the Alsco facility suggested that vapor intrusion could threaten workers' health in both buildings. PCE and chloroform in indoor air at the Alsco facility also suggested an indoor air health threat. Remedial actions completed between 2011 and 2013 have eliminated these potential threats.

NARR Comments: [Dec. 2013] Soil gas results from 2009-10 indicated a significant release of dry cleaning solvent (PCE) near an old dry cleaning machine that had not been used since about 1984. On-site sampling also showed PCE in soil and shallow groundwater, as well as some metals and petroleum hydrocarbons associated with catch basins and drywells, which were removed in 2011. Two soil-vapor extraction systems operated at the site between 2011 and early 2013; subsequent soil gas sampling indicated that PCE vapors were below acceptable risk levels at all locations sampled. Therefore, DEQ proposed an NFA for the site in Nov. 2013, and finalized it in Dec. 2013.

Created By: Not reported
Created Date: 12/17/2002
Updated By: GWISTAR
Updated Date: 12/28/2016
Decode for NarcdID: Contamination
NARR Comments: TCE was found in groundwater during a 1987 site assessment to determine future environmental liability for prospective buyers of the property. There are no known past practices by site owners or lessees to suggest a source of TCE, although the building was previously used for the storage and repackaging of chemical products, including TCE. Chemical drums were stored on an asphalt apron around the building. The property owner worked with DEQ on a cooperative basis in 1989 and 1990 to evaluate the extent of TCE contamination and prepare a remedial action plan. DEQ terminated this agreement in 1990 due to resource limitations, but the property owner continued work independently. (11/1/02 ACV/VCP) TCE plume extends offsite to the WSW. An offsite groundwater investigation was conducted independently by the RP and risk assessment is proposed within the <quot>locality of facility.<quot> In a March 29, 2007 meeting, the RP agreed to complete four tasks to move the site forward, as follows: 1) An additional round of groundwater sampling; 2) Perform a soil vapor survey; 3) Complete a source control evaluation for stormwater; and, 4) Perform a screening level risk assessment. The groundwater sampling and vapor survey were completed in 2007 and confirmed declining TCE concentrations in groundwater. However, the vapor survey revealed a previously unknown source of TCE in site soils. Subsequent investigation between 2007 and September 2009 has focused on delineating the soil vapor plume under the Reed Production

PC DEVELOPMENT INC. (Continued) **S103303289**

Building and a soil vapor extraction (SVE) pilot study was conducted in February 2010. A proposed full-scale SVE system design was received in December 2010.

NARR Comments: Brander Meat Co. owned property from 1920s to 1977-operated a slaughterhouse. P&C Development purchased property in 1977, leased property to variety of businesses. Loomis Chemical Co leased property in 1980 - stored and distributed acids, caustics, and cyanides, organic compounds and solvents. Ashland Oil purchased Loomis in 1984 and occupied site until 1986. Ashland claimed no manufacturing or mixing of chemicals. Property has also been leased by: Pioneer Systems - a bottle and can recycler. Western Excell - meat wholesaler. Horizon Food (Hickory Farms) - advertising business. Material Flow - warehouse equipment retailer for shelving.

Updated Date: 11/14/2011
Decode for NarcdID: Remedial Action
NARR Comments: Since the 1987 discovery of TCE in groundwater onsite, investigations by the property owner have determined that the TCE probably originated onsite, although the manner and exact location of release are not known. Between 1989 and 1990, PC Development conducted site investigations under DEQ oversight, with later work occurring independently. PC conducted a Remedial Investigation in 1991, which showed TCE in 10 monitoring wells, both shallow and deep, at up to 13,000 ppb. An August 1992 remedial action plan proposed groundwater withdrawal through recovery wells, and subsequent air sparging. The pump-and-treat/air sparging program operated between November 1992 and May 1993, but ultimately failed because the extraction wells were unable to pull in the contaminant plume. PC's contractor has proposed an in-situ air sparging and vapor extraction system to treat groundwater. Site Assessment encourages PC's ongoing attempts to remediate groundwater contamination. (11/12/97 LSK/SAS) The site was reevaluated as part of review of all sites within the Columbia Slough Study Area and was determined a low priority for further investigation. (12/30/99 ACV/VCP) The site entered the ICP for technical assistance in July 1999 and the RP conducting an independent investigation. (10/2/00 ACV/VCP) ICP report anticipated for November 2000. (7/17/01 ACV/VCP) No reports received; ICP project on hold. (9/25/01 ACV/VCP) Five reports delivered to DEQ for review. Reports include RI, Groundwater Monitoring and Groundwater Beneficial Use Determination. DEQ response expected in November 2001. (11/1/02 ACV/VCP) DEQ comments on reports: Beneficial Use of Groundwater within LOF - Industrial and Surface Water Recharge, and recommended the RP conduct a Risk Assessment. (10/1/07 PS/VCP) In a March 30th, 2007 letter, DEQ requested that PC Development complete the following four steps to complete the RI and Risk Assessment: 1) Additional Groundwater Sampling Round; 2) Perform a soil vapor survey; 3) Complete a source control evaluation for stormwater, and; 4) Perform a screening level risk assessment. The groundwater sampling was completed in May of 2007 and is documented in the May 2007 groundwater monitoring report, submitted September, 2007. The soil vapor and source control evaluation have been completed and reports are in preparation. (07/11/11 EKM/VCP) The Preliminary Source Control Evaluation report was received in February 2008. Soil vapor surveys

PC DEVELOPMENT INC. (Continued) **S103303289**

were conducted in 2007 to 2009. A SVE pilot test was conducted in February 2010 and the results appear amenable in utilizing this technology for a site removal action. A proposed SVE system design to address the source area of chlorinated VOCs in the vadose zone was received in December 2010. DEQ has reviewed and provided comments on proposed system design. The property owner indicated the system could be installed in the summer of 2011. (11/14/11 EKM/VCP) A SVE system has been installed to address the believed source area of soil-gas in the subsurface and pose an unacceptable risk to human health. SVE wells have been installed at the perimeter and within the northern portion of the western most building. Startup of the system began November 2011. The site owner intends to collect system and environmental data and evaluate system performance, in addition to monitoring that negative pressure is sustained beneath the building sub-slab. Future project activities include: evaluating system effectiveness and possibly expansion, if needed, and delineating extent of impacted groundwater that may pose an unacceptable risk to human health and the environment.

NARR Comments: [July 2016] DEQ issued a Conditional No Further Action for the property in July 2016, which is subject to maintaining an effective engineering control and related institutional controls to mitigate vapor intrusion risks from subsurface volatile organic compounds (VOC) contamination. Chlorinated solvents were detected in groundwater at the Former Loomis Chemical Warehouse site during a site assessment in 1987. Subsequent investigation and interim cleanup efforts have been conducted by the property owners under an Independent Cleanup Pathway. Chlorinated VOCs in groundwater have been declining since the 1990s and present levels are below applicable risk-based screening criteria. Soil gas surveys conducted

PC DEVELOPMENT INC. (Continued) **S103303289**

in 2007 and afterward, identified a soil gas plume of chlorinated VOCs in the subsurface that exceed DEQ risk-based values for a vapor intrusion exposure scenario. In 2011 a soil vapor extraction (SVE) system was installed beneath a site building to address VOCs in soil gas that pose an unacceptable risk. Startup of the system began November 2011 and operated for approximately three years until concentrations were observed below screening values. A rebound study indicated increasing concentrations following shutdown and therefore it has been determined to resume system operations as a mitigation action long-term. DEQ's basis for this recommended remedial action and proposed Conditional No Further Action is documented in DEQ's Closure Memorandum, dated February 29, 2016. The memorandum is posted below under site documents.

Comments: Except upon prior written approval from DEQ, the Owner must operate the vapor mitigation system present beneath the northern portion of the Production Building at the Property. The DEQ-approved vapor mitigation system is comprised of 12 vertical and angled soil vapor extraction (SVE) wells connected to two blowers (designated alpha and beta) to extract soil vapor from the 12 wells. Monthly inspections and maintenance of engineering controls and Production Building floor areas will be documented by the Owner, and provided to DEQ upon request.

NARR Comments: [RKW 2/22/10] In January 2009 an initial hand auger sample of the dry well sediments was collected from the base of the dry well and solvent/petroleum contamination was discovered. In February 2009 a push probe was driven to 52 feet below ground surface (bgs) through the dry well. Pressure grouting was used to seal the hole tightly. Soil was sampled at several intervals. Low concentrations of PCE were found at 11.5, 32.5 and 38 feet bgs. The water table was found at 32 feet bgs. Groundwater sampled at the water table and contained PCE at 869 ug/L. Water was sampled at the bottom of the hole at 50 feet and contained PCE at 212 ug/L. In November 2009 the dry well and associated contaminated sediments and soil were removed for disposal. A sparging well was installed in the location of the former dry well. In December 2010 two geoprobe points were advanced next to well MW-1, in the release area. PCE and TCE were not detected but minor arsenic contamination was found, up 17 mg/Kg. [RKW 12/5/12] Sparging was shut down December 2010. The last groundwater sample was collected in March 2011, at least three months after sparging ceased, and contained PCE at 8.43 ppb. In early 2012 USEPA revised risk estimates for PCE and DEQ followed with changes that increased RBCs to levels greater than residual contamination at the site. Staff Report prepared and public comment period to run for January 2013. No comments were received.

NARR Comments: An old industrial water supply well exists on the site but it's location is uncertain. The wellhead may be buried by a building floor slab. There are no well abandonment records for this well. City of Portland records also indicate an old dry well exists on the site near the recently abandoned dry well.

NARR Comments: Solvent and petroleum contamination was found in the loading dock dry well. PCE contamination was found below the dry well and reached to the water table at 32 feet below the surface. The dry well was abandoned and contaminated soil and sediment below the dry well removed. A groundwater well was installed below the former dry well and a sparging system used to remediate groundwater contamination.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 06/22/2023

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 03/26/2023

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS TSCA: PFAS Manufacture and Imports Information
EPA issued the Chemical Data Reporting (CDR) Rule under the Toxic Substances Control Act (TSCA) and requires chemical manufacturers and facilities that manufacture or import chemical substances to report data to EPA. EPA publishes non-confidential business information (non-CBI) and includes descriptive information about each site, corporate parent, production volume, other manufacturing information, and processing and use information.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS ATSDR: PFAS Contamination Site Location Listing

PFAS contamination site locations from the Department of Health & Human Services, Center for Disease Control & Prevention. ATSDR is involved at a number of PFAS-related sites, either directly or through assisting state and federal partners. As of now, most sites are related to drinking water contamination connected with PFAS production facilities or fire training areas where aqueous film-forming firefighting foam (AFFF) was regularly used.

PFAS WQP: Ambient Environmental Sampling for PFAS

The Water Quality Portal (WQP) is a part of a modernized repository storing ambient sampling data for all environmental media and tissue samples. A wide range of federal, state, tribal and local governments, academic and non-governmental organizations and individuals submit project details and sampling results to this public repository. The information is commonly used for research and assessments of environmental quality.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

UTM Y (Meters):	5049275.0
Elevation:	22 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	14878142 PORTLAND, OR
Version Date:	2020

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

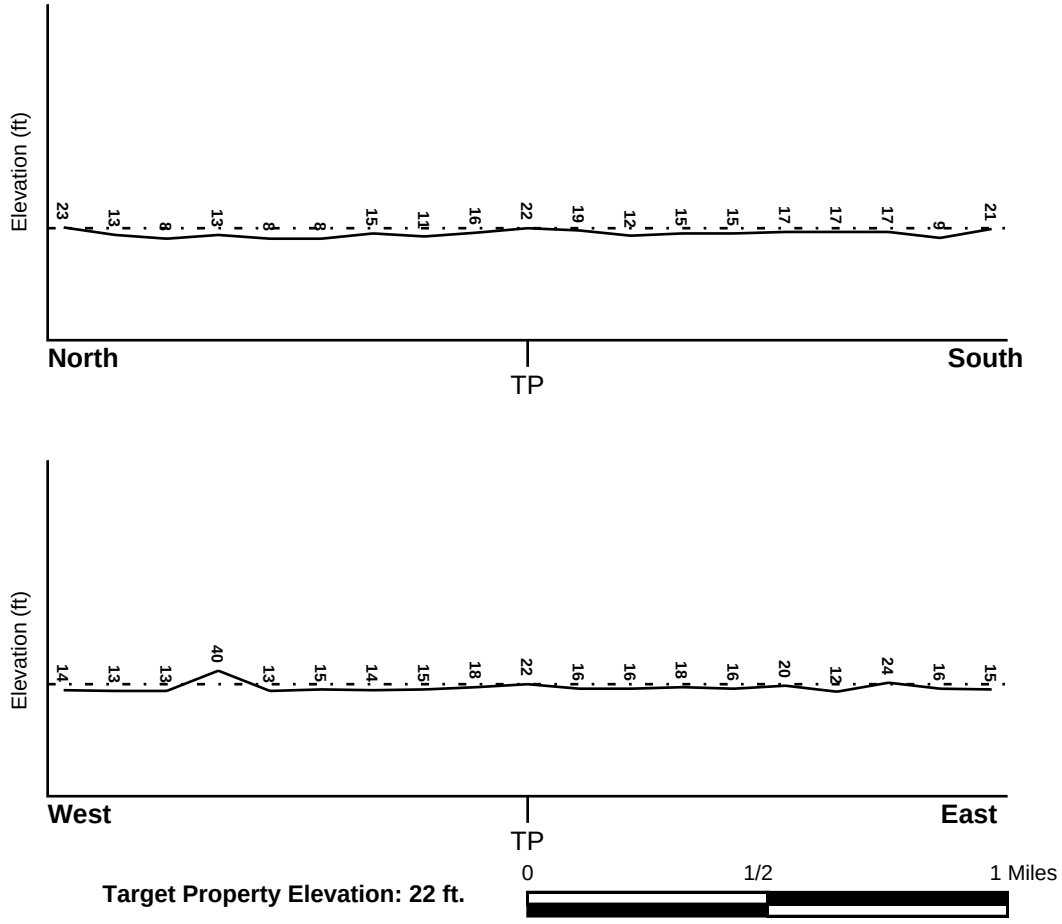
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
53011C0481D	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
53011C0482D	FEMA FIRM Flood data
4101830080F	FEMA FIRM Flood data
53011C0477D	FEMA FIRM Flood data
4101830085F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
PORTLAND	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Sauvie

Soil Surface Texture: silt loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Poorly drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 5 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity	
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	micro m/sec	Soil Reaction (pH)
1	0 inches	14 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 42 Min: 14	Max: 6.5 Min: 5.6
2	14 inches	38 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 42 Min: 14	Max: 6.5 Min: 5.6
3	38 inches	59 inches	very fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 42 Min: 14	Max: 6.5 Min: 5.6

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 2

Soil Component Name: Rafton

Soil Surface Texture: silt loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Very poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 15 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	9 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14 Min: 4	Max: 6.5 Min: 5.6
2	9 inches	40 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14 Min: 4	Max: 6.5 Min: 5.6
3	40 inches	59 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14 Min: 4	Max: 6.5 Min: 5.6

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Parametrix, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

DAVE THOMPSON
PORTLAND MACK
10360 N VANCOUVER
PORTLAND OR 97217

Re: H&H Trucking
File No. 26-91-129

Dear Mr. Thompson:

The Department of Environmental Quality has completed its review of the information submitted to date concerning the underground storage tank (UST) decommissioning conducted at 10360 N. Vancouver Way in Portland, Oregon. The Department has determined that the cleanup appears to have met the requirements of the Oregon Administrative Rules (OAR) 340-122-205 through 340-122-360 and that no further action is required at this time.

This determination is a result of our evaluation and judgement based on the regulations and facts as we now understand them, including:

1. One 10,000 gallon diesel UST, one 1,000 gallon waste oil UST, and one 1,500 gallon motor oil UST were decommissioned at this location. The tanks were reused by George Phillips of Spokane, Washington.

2. Diesel and heavy oil contamination was discovered during the UST decommissioning. Approximately 60 cubic yards of soil were excavated and disposed of at Hillsboro Landfill.

3. Up to 1,700 parts per million (ppm) total petroleum hydrocarbons (TPH) were detected in soils. After soil removal, additional site characterization indicated that up to 240 ppm TPH was detected in soils. One additional round of sampling indicated that up to 33 ppm TPH was detected in soils. It appears that contamination exceeding the most stringent cleanup standard of 100 ppm TPH was overexcavated and disposed of at Hillsboro Landfill. Any contamination remaining on-site is expected to be below the 100 ppm cleanup standard.

4. 1,1,2,2-Tetrachloroethane was initially detected by the Department in soils removed from the excavation. Additional sampling was conducted and no solvents were detected.

4. No groundwater was encountered in the excavation.

2020 SW Fourth Avenue
Suite 400
Portland, OR 97201-498
(503) 229-5263 Voice/TD
DEQ-1

The Department's determination will not be applicable if new or undisclosed facts show that the cleanup does not comply with the referenced rules. The Department's determination also does not apply to any conditions at the site other than the release of the petroleum product specifically addressed in the report(s). We recommend that a copy of this information be kept with the permanent facility records.

Please note that pursuant to OAR 340-122-360(2), a copy of your report must be retained until ten (10) years after the first transfer of the property.

Your efforts to comply with the regulations to ensure that your facility has been adequately cleaned up has been appreciated. If you have any questions, please feel free to contact me at (503) 229-5492.

Sincerely,

Rachel Carlin Segal

DENNIS WEBSTER
POTTER WEBSTER COMPANY
130 SOUTHEAST 7TH
PORTLAND OREGON 97214

RE: Potter Webster Company
File No. 26-92-0348

Dear Mr. Webster:

The Department of Environmental Quality has completed its review of the information submitted to date concerning the underground storage tank (UST) decommissioning and cleanup conducted during October 1992 at 1020 North Marine Drive, Portland, Oregon. The Department has determined that the cleanup appears to have met the requirements of Oregon Administrative Rules (OAR) 340-122-205 through 340-122-360 and that no further action is required at this time.

This determination is a result of our evaluation and judgment based on the regulations and facts as we now understand them, including:

1. A 2500 gallon UST was decommissioned at this location. The tank was recycled at Schnitzer Steel Products Company in Portland, Oregon.

2. A soil matrix score sheet was prepared for this site. Based on the available information and the results of the matrix score sheet, it was determined that soil matrix level II cleanup requirements [i.e. residual soil contaminant concentrations of gasoline $\leq$ 80 ppm and of diesel or heavier oils $\leq$ 500] would be applicable to this site.

3. Up to 190 parts per million (ppm) of diesel were detected in a soil sample located under the east end of the UST utilizing analytical method TPH-D. This concentrations is below the soil matrix level II cleanup requirements. No solvents, heavy metals, or polychlorinated biphenyls were detected in this soil sample.

4. Groundwater was not observed in the excavation.

The Department's determination will not be applicable if new or undisclosed facts show that the cleanup does not comply with the referenced rules. The Department's determination also does not apply to any conditions at the site other than the release of the petroleum product specifically addressed in the report(s).

Please note that pursuant to OAR 340-122-360(2), a copy of your report must be retained until ten (10) years after the first transfer of the property. We

RE: Fazio Property
File #26-93-0011

Dear Ms. Mary, Mr. Tony, & Mr. Jack Fazio:

The Department of Environmental Quality has completed its review of the information submitted to date regarding the underground storage tank (UST) decommissioning and cleanup conducted at your site located at 10365 North Vancouver Way in Portland, Oregon. The Department has determined that the site appears to be cleaned up in accordance with Oregon Administrative Rules (OAR) 340-122-201 through -360, and that no further action is required at this time.

This determination is a result of our evaluation and judgment based on the regulations and facts as we now understand them, including:

1. Three USTs, one 500 gallon, one 2,000 gallon, and one 3,000 gallon, were decommissioned by removal from the same excavation, pit A. Two 4,000 gallon USTs were decommissioned by removal from the same excavation, pit B. All five USTs were recycled at Schnitzer Steel in Portland, Oregon.

2. Diesel contamination of 110 and 75 parts per million (ppm) was discovered in pit A. These concentrations are below the cleanup level established for this site of 500 ppm for diesel. Groundwater was encountered in pit A. A sample taken of the recharged groundwater did not detect benzene, toluene, ethylbenzene, xylenes (BTEX) or polynuclear aromatic hydrocarbons (PAHs). Soil samples taken at the soil/water interface did not detect BTEX.

3. Heavy oil contamination was detected in pit B, however, this soil sample did not detect petroleum contamination when quantified by analytical method TPH-D. Groundwater was not encountered in the excavation.

4. Diesel contamination was discovered during the removal of the fuel island associated with the USTs in pit A. Approximately 152 tons of petroleum contaminated soil (PCS) were excavated from underneath the fuel island and thermally treated at OHI in Portland, Oregon. Confirmatory soil sampling detected 47 ppm of diesel contamination by analytical method TPH-D. This concentration is below the cleanup level established for this site of 500 ppm for diesel. Groundwater was not encountered in the excavation.

VICTOR STIBOLT
JUBITZ CORPORTATION
33 NE MIDDLEFIELD ROAD
PORTLAND OR 97211

Re Jubitz Truck Stop
File No. 26-95-0235
Facility ID No.: 6886

Dear Mr. Stibolt:

The Department of Environmental Quality has completed its review of Robert D. Miller Consulting's "Supplemental Confirmation Sampling and Revised Risk Based Assessment" report, from July 30, 2002, concerning the cleanup project conducted at 10210 North Vancouver Way in Portland, Oregon. The Department has determined the cleanup of the Underground Storage Tanks (USTs) appears to have met the requirements of the Oregon Administrative Rules (OAR) 340-122-205 through 340-122-360 and that no further action is required at this time.

This determination is a result of our evaluation and judgment based on the regulation and facts as we now understand them, including:

1. Contamination was reported on November 8, 1995, from diesel released to soil and groundwater in the vicinity of two 20,000 gallon diesel USTs (Tanks #3 and #4). Subsequent site investigation identified gasoline, diesel, and oil ranged contamination on and off site. The extent of contamination ran under North Vancouver Way, across North Vancouver Way on the western portion of the Jubitz property, and on the K & B Trucking property to the south of the western portion of the Jubitz site.

2. This site had thirteen USTs that were decommissioned. All the USTs were recycled at Schnitzer Steel Products and removed on February 13, 1998, except tanks #11 and #12 which were disposed of on May 6, 1996.
   - Tanks #1, #2, #9 and #10 were 12,000 gallon gasoline tanks. Tanks #9 and #10 were fiberglass and were disposed of at the Hillsboro Landfill.
   - Tanks #11 and #12 were 12,000 gallon diesel tanks.
   - Tank #13 was a 10,000 gallon diesel tank,
   - Tanks #3 and #4 were 20,000 gallon diesel tanks.
   - Tank #5 was a duel compartment 4000 gallon gasoline UST. This tank had a 1500 gallon and a 2500 gallon compartment.
   - Tanks #6 and #7 were 2000 gallon new motor oil USTs and Tank #8 was a 1000 gallon new motor oil UST.

3. This site currently has five active 20,000 gallon diesel tanks that were installed in January 1997, under facility I.D. number 11674.

Due to the numerous USTs and large size of this site each cleanup area will be discussed separately. Please see Attachment 1, which is the site map [Figure 2] from Robert D. Miller's July 30, 2002 report mentioned above.

4. Cleanup of the US West Communications vault #1853 started on May 15, 1996. This vault is located on the east side of North Vancouver Way adjacent to the Jubitz Truck Stop fueling area. Approximately 100 gallons of water/diesel was pumped from the vault along with 30 gallons of sludge. On June 19, 1996 the diesel/water mixture was disposed of by Oil Re-Refining and the sludge was taken to the Hillsboro landfill.
   - Initial concentrations of the liquid had up to 730,000 parts per million (ppm) TPH-418M, with up to 28, 13, 82, 360 ppm benzene, toluene, ethylbenzene, total xylenes (BTEX).
   - The sludge had up to 2411 ppm TPH-418.1M, 3000 ppm TPH-D, and 170 ppm TPH-G; with 150, 450, 830, 790 ppm BTEX.
   - Soil from the excavation had 31,000 ppm TPH-418.1M. No halogenated compounds were identified by EPA Method 8010 and only low level metals below actionable levels were identified. The vault was pressure washed prior to closure of the site investigation. The impacted soil was excavated during the decommissioning activity associated with tanks #6, #7, and #8.

5. Work on tanks #11 and #12 began on March 4, 1996 with the drilling of borings that identified diesel contamination in both soil and groundwater.
   - The highest soil contamination was reported at 7280 ppm TPH-418.1M and 8190 ppm TPH-G.
   - The highest groundwater concentration reported had 26, 674, 506, 5380 ppb BTEX. While the highest diesel range constituent report as Polynuclear Aromatic Hydrocarbons (PAHs) was 4540 ppb naphthalene with only 0.6 ppb chrysene and 0.1 ppb benzo(a)anthracene.
   - A total of 1736.26 tons of impacted soil were thermally treated at TPS Technologies from April 1, 1996 through April 19, 1996.
   - Final soil samples found only 162 ppm TPH-418.1M at nine feet below land surface (BLS) and 46 ppmTPH-418.1M at 14 feet BLS.

- A total of 134,100 gallons of water were treated and discharged under permit to the City of Portland's storm sewer system; including 24,100 gallons of water from inside the two USTs, from when they had been previously filled during tank decommissioning in place. A total of 80 gallons of free product was removed from the groundwater and disposed of by Cowlitz Clean Sweep.
- Final groundwater samples were non-detect (ND) for BTEX and below 5 ppb for all PAHs, with no carcinogenic PAHs.

6. On December 9, 1996, construction work began on the tank nest for the five new USTs, east of the Office Building. Petroleum contamination in this area appears to have been from surface spills as the diesel impact was found only from one to three feet BLS.
   - The highest concentration of soil contamination was reported as 4960 ppm TPH- 418.1M at the oil/water separator, where a pocket of contamination remains.
   - Between January 9, 1997 and June 4, 1997, a total of 994.12 tons of diesel impacted soil was taken to TPS Technologies for thermal desorption.
   - Groundwater was not found to be impacted in this area, no BTEX or PAHs were found.
   - The highest remaining soil impact was 68 ppm TPH-418.1M in the tank pit, and 390 ppm TPH-418.1M in trench E.
   - A total of 200,000 gallons of pit water were treated and discharged under permit to the City of Portland's storm sewer.

7. Tanks #1 and #2 were removed in December 1997 from the western portion of the Jubitz site. Small pockets of soil contamination remain at or below the soil/water interface in this location (up to 2200 ppm TPH-G at 12 feet BLS; 112 ppm TPH-D, and 350 ppm TPH-418.1M at 15 feet BLS); however, the groundwater concentration is below actionable concentrations for BTEX and PAHs.
   - The highest petroleum impacted soil was reported as having 17,000 ppm TPH-G, 8800 ppm TPH-D, and 19,100 ppm TPH-Oil.
   - A total of 1011 tons of petroleum impacted soil were thermally desorped at TPS Technologies from December 4, 1997 through December 31, 1997.

- The highest groundwater concentration was reported at 1140, 17,500, 2220, 27,200 ppb BTEX. Dissolved lead was reported as high as 34 ppb, PAHs were reported up to 4540 ppb naphthalene and carcinogenic PAHs up to 0.6 ppb chrysene and benzo(a)anthracene at 0.1 ppb.
- A total of 29,000 gallons of water were treated and discharged under permit to City of Portland storm sewer on January 27 and 28, 1998. An air sparging system was installed from March 3, 1998 to August 31, 1998 in the excavation to reduce the benzene concentration.
- The remaining pocket of contamination is addressed as Pocket #3, in point #17 below.

8. Tank #5 was removed during November and December 1997. This tank was reportedly taken out of service in December 1988 and filled with water as a decommissioning in-place at that time. Both shallow soil contamination from assumed surface spills at four feet BLS and groundwater impact from nine to 21.5 feet BLS were identified.
   - Approximately 138 tons of gasoline impacted soil were taken to TPS Technologies for thermal desorption from October 27, 1997 to November 6, 1997.
   - Approximately 8000 gallons of impacted groundwater were treated and discharged to the City of Portland's storm sewer on December 18, 1997, under permit.
   - A pocket of petroleum impacted soil remains below the water table from 10 to 12 feet BLS with 2200 ppm TPH-G. The initial results found up to 40,000 ppm TPH-G and 7070 ppm TPH 418.1M in soil, and 2190, 2320, 7620, 31,300 ppb BTEX, with 30 ppb dissolved lead. Groundwater samples in the area after remediation were non detect for BTEX and found 64.3 ppb naphthalene and 0.7 ppb chrysene on August 14, 1998.
   - The remaining pocket of contamination is addressed as Pocket #5, in point #17 below.

9. Tank # 13 was found during site investigation during October 1997. This tank was presumed to have been removed during the 1970s and was not required to be registered.
   - Approximately 406 tons of diesel impacted soil were taken to TPS Technologies for thermal treatment in October 1997.
   - Approximately 7000 gallons of groundwater were treated and discharged under permit to the City of Portland's storm sewer on December 18, 1997.
   - Soil contamination was found up to 8300 ppm TPH-418.1M and 3700 ppm TPH-D.

- Final soil concentrations were found at ……..
- Groundwater after excavation activity was found to have a maximum of ND, ND, 0.8, 0.7 ppb BTEX and up to 0.22 ppb pyrene non carcinogenic PAHs.

10. Remediation of the three inch product line from the seven Above Ground Storage Tanks (ASTs), which cross North Vancouver Way, was conducted from April 2, 1996 through May 14, 1996.

- A total of 1488 tons of diesel impacted soil were thermally desorped at TPS Technologies from July 17, 1996 though August 1, 1996.
- Train ties were excavated and used off site as hog fuel, and the excavated metal was recycled.
- A total of 110,000 gallons of groundwater was treated and disposed under permit to the City of Portland's storm sewer between May 1, 1996 and June 2, 1996.
- Initial soil samples found up to 64,200 ppm TPH-418.1M. The final soil samples left a pocket in place adjacent to the AST pad with 3140 ppm TPH-418.1M (at three and one-half feet BLS) and 3202 ppm TPH-418.1M at (five and one-half feet BLS) at another location.

Due to free product emanating from the four product lines under the AST pad additional soil removal was conducted from November 11, 1997 through January 8, 1998.

- During this remedial work the ASTs and concrete pad were removed and another 1773.54 tons of diesel impacted soil were removed and taken to TPS Technologies for thermal treatment.
- Remaining soil after the second excavation episode left impacted soil above the Level II Matrix Cleanup Criteria (500 ppm TPH-Dx) from seven and one-half feet to 11 feet BLS.
- During this round of work another approximately 25,000 gallons of groundwater were removed and treated and disposed of under permit to the City of Portland's storm sewer system on December 18 and 19, 1997 and on January 27 and 28, 1998.

A third round of soil removal was conducted on site and on the K & B Trucking property from February 22, 1999 thought February 24, 1999.

- An additional 724.32 tons of diesel impacted soil were excavated and taken to TPS Technologies for thermal treatment.
- A small pocket of soil contamination was left on the K & B Trucking property due to a power pole and storm sewer line. The pocket estimated at 26 cubic yards has a maximum of 21,000 ppm NWTPH-Dx.

- Only a minor amount of groundwater was encountered in the excavation at nine feet BLS with 1.3 ppm NWTPH-Dx and was not removed. The highest groundwater concentration of PAHs was less then 1 ppb and no carcinogenic PAHs were identified in soil or water.
- The remaining pocket of contamination is addressed as Pocket #1, in point #17 below.

11. Additional investigation into the storm sewer on K & B Trucking property was conducted on April 26, 2000, which indicated that, both diesel and oil range hydrocarbon contamination was present with 4650 ppm NWTPH-Dx and 15,500 ppm NWTPH-Dx, respectively.
    - An additional 101.56 tons of soil were excavated in this area on January 16, 2001 and taken to TPS Technologies for thermal desorption.
    - Residual contamination remains from eight to 10 feet BLS in the south wall of the excavation and is estimated to extend another 15 feet, but was left in place due to the power pole.
    - The remaining contamination had a maximum concentration of 450 ppm NWTPH-Gx and 3000 ppm NWTPH-Dx. BTEX and PAH compounds were all below the most stringent risk based generic cleanup standard.
    - No groundwater was encountered in this excavation work but the area does have a monitoring well, which were evaluated for risk based cleanup criteria.

12. Additional investigation into the catch basin near the ASTs was conducted on July 1, 2000 and July 20, 2000. These soil probes indicated that additional soil was impacted in this area with 4850 ppm TPH-Oil and three carcinogenic PAHs above the generic risk based cleanup standard.
    - A total of 116.30 tons of gas and diesel ranged impacted soil were removed and taken to TPS Technologies for thermal treatment on January 17 and 18, 2001.
    - Remaining soil contamination remains in the south wall with TPH-Gx at 862 ppm NWTPH-Gx and oil with 1320 ppm NWTPH-Dx. This remaining pocket is estimated to extend 22 feet to the south . Several PAHs exceeded the generic risk based concentrations for occupational exposure to soil for naphthalene, benzo(a)anthracene, benzo(b)pyrene, and indeno(1,2,3-cd)pyrene, with 385 ppm, 249 ppm, 215 ppm, 168 ppm, and 59.8 ppm, respectively. This sample was in the southern side wall of the excavation at five feet BLS, but was not considered to pose a health risk as the volume of impacted soil was limited and a trench worker would not be exposed to this impacted material for the seven day period used in the risk assessment calculation.
    - The remaining pocket of contamination is addressed as Pocket #2, in point #17 below.

13. Tanks #6, #7, and #8 were removed on September 18 and 19, 1997.

- New motor oil contamination was found in the soil up to 17,300 ppm TPH-418.1M. Maximum concentration of TPH-418.1M in compliance samples had 453 ppm.
- A total of 409.42 tons of impacted soil were taken to TPS Technologies for thermal treatment in October 1997.
- Approximately 16,000 gallons of groundwater were removed and treated prior to discharge under permit to the City of Portland's storm sewer.
- Initial groundwater samples had up to 18,000 ppm TPH-418.1M and 8, 7.9, 2.2, 110, 168 ppb BTEX. Initially PAHs never exceeded 7 ppb for non-carcinogenic compounds and no carcinogenic PAHs were ever identified at this location.
- Compliance groundwater results never exceeded 1 ppb for any non carcinogenic PAH compound.
- The remaining pocket of contamination is addressed as Pocket #4, in point #17 below.

14. Tanks #9 and #10 were removed in September and October of 1997.

- A total of 136.48 tons of gasoline impacted soil were taken to TPS Technologies for thermal desorption during October and November 1997.
- Approximately 8000 gallons of groundwater were treated and disposed of in the City of Portland's storm sewer on December 22, 1997.
- A pocket of gasoline impacted soil estimated at 42 cubic yards was left between 10 and 15 feet BLS in the northeast portion of tank #9 due to structural concerns for the adjacent building.
- The estimated concentration of impacted soil remaining is 1600 ppm TPH-G. Tank #10 was non detect for TPH-G at 13 feet BLS.
- An air sparging system was operated in the excavation of tank #9 from December 1998 through August 1998. Groundwater results found 620, 81, 47, 145 ppb BTEX with 7.2 ppb naphthalene and no carcinogenic PAHs.
- This remaining pocket of contamination is addressed as Pocket #7, in point #17 below.

15. On March 6, 1998, petroleum contamination in the gasoline and oil range was identified south of the driver facility and north of the two story office building on the east site of North Vancouver Way.

- A total of 377.87 tons of contaminated soil were taken to TPS Technologies for thermal desorption on March 20, 1998. Initial soil samples had maximum concentrations of 1800 ppm TPH-G and 1700 ppm TPH-418.1M.
- Final soil samples were non detect for TPH-G and a maximum of 33 ppm TPH-418.1M. Groundwater has a maximum of 1100 ppm TPH-G but only ND, ND, 5.9, 13.3 ppb BTEX and 0.06 ppb naphthalene. This area did not require additional investigation.

16. Site investigation around tanks #3 and #4 began on September 8, 1997. These tanks were located under the fueling islands on the east side on North Vancouver Way.

- The highest concentrations of diesel and oil contamination in the soil in this area were 49,500 ppm TPH 418.1M at 11 feet BLS (diesel) and 57,000 ppm TPH 418.1M at the catch basin one foot BLS.
- The tank pit was excavated to 15.5 feet BLS, which only had 10 ppm TPH418.1M. Other confirmation samples in this area had 194 ppm TPH.418.1M and 67 ppm TPH418.1M, at 14 feet in the southeast and southwest, respectively.
- A total of 3175.84 tons of diesel and oil impacted soil were thermally treated at TPS Technology. All confirmatory samples near the catch basin were well below Level 11 cleanup standards on 500 ppm TPH 418.1M.
- Initial groundwater results in this area were very low in BTEX and PAHs except B7 which had 13, 7, 65, 118 ppb BTEX and several PAHs above excavation work RBC. The PAHs including 6040 ppb naphthalene, 5200 ppb fluorine, 2200 ppb acenaphthene, 1120 ppb anthracene, 880 ppb pyrene, 10 ppb benzo(a)anthracene and 25 ppb chrysene.

17. A Risk Based evaluation of this site covering the eight separate areas where petroleum contaminated soil was left in excess of soil Matrix Level II cleanup standards was submitted in the October 8, 2001 "Proposal for site closure under the generic remedy for simple risk based cleanups". This report summarized the twelve quarterly groundwater reports submitted for this site.

- Pocket 1 around the AST farm was below RBC for all contaminants of concern (COCs) for soil and had 31 ppb naphthalene in the groundwater.
- Pocket 2 at the catch basin had the high level PAHs in soil. This area was further defined by a groundwater sample taken in the remaining soil impact area, which had several non carcinogenic PAHs below the RBCs and lead at 7 ppb.
- Pocket 3 around tank pit #1 and #2 did not have COCs above action level prior to air sparging so confirmation samples were never taken or needed. Confirmation samples were taken on May 13, 2002, which found 199 ppm TPH-Gx in soil but no COCs above action levels in either soil or groundwater.
- Pocket 4 was between recovery well 7 and North Vancouver Way. Evaluation for RBCs in soil and groundwater did not find any COCs above action levels in this area.
- Pocket 5 was located just north of Pocket 4, near recovery well 2. A pocket of aged gasoline was left here due to subsurface utility, which were subsequently treated with air sparging. Three down gradient monitoring wells in this area were below action levels for all COCs. No additional soil sampling was possible due to the subsurface utilities, including fiber optic lines.

- Pocket 6 was located just southwest of the driver services building and has recovery well 8 within the remaining impacted soil. Soil left in place had benzene around the oil/water separator up to 1.6 ppm. Confirmation samples found high TPH-Gx up to 22,000 ppm at 11 feet BLS, but no benzene was detected in either sample. Recovery well 8 and down gradient monitoring well MW-21 were below RBC cleanup concentrations for four consecutive quarters. Hence, this area does not have a complete exposure pathway for vapor intrusion into the building, and only a limited soil pocket of benzene that exceeds vapor intrusion into the building cleanup criteria of 0.91.
- Pocket 7 is located north of pocket six and also adjacent to the driver services building. Residual diesel was left up to 1800 ppm due to structural concerns. The PAHs of concern were previously shown not to be above RBC cleanup standards in either soil or water. Additional evaluation for gasoline fraction COCs was conducted in May 2002. These results indicated that no compound was found to exceed the RBC cleanup standard in soil or groundwater.
- Pocket 8 was a small diesel contaminated area with up to 1800 ppm TPH-D on the east side of the driver services building. This pocket was never in contact with groundwater and the down gradient well MW-22 has never exceeded the RBC cleanup standards for any PAH compound.

No groundwater well may be installed in the area of the soil or groundwater petroleum release without prior notice to the Department. In addition, no groundwater may be extracted from the shallow aquifer from the Jubitz property or the portion of the K & B Trucking site that has or had impacted soil and/or groundwater on it.

The Department's determination will not be applicable if new or undisclosed facts show that the cleanup does not comply with the referenced rules. The Department's determination also does not apply to any gasoline, fuel oil, or hazardous substance conditions at the site other than specifically addressed in the report.

Please note that pursuant to OAR 340-122-360(2), a copy of your report must be retained until ten years after the first transfer of the property.

Your efforts to comply with the regulations to ensure that your facility has been adequately cleaned up have been appreciated. If you have any questions, please feel free to contact me at (503) 229-5477.

Sincerely,

Rick Silverman

DEPARTMENT OF
ENVIRONMENTAL
QUALITY

NORTHWEST REGION

DANIEL H TEMKIN
1080 MARKET PLACE TOWER
2025 FIRST AVENUE
SEATTLE WASHINGTON 98121

Re: Willig Freight Line
File No. 26-96-0521

Dear Mr. Temkin:

The Department of Environmental Quality has completed its review of the information submitted to date concerning the underground storage tank (UST) decommissioning and assessment conducted at 720 N. Hayden Meadows Drive in Portland, Oregon. The Department has determined that the work has met the requirements of Oregon Administrative Rules (OAR) 340-122-205 through 340-122-360 and that no further action is required at this time.

This determination is a result of our evaluation and judgment based on the regulations and facts as we now understand them, including:

1. Three 20,000 gallon diesel and one 1,000 gallon used oil UST were decommissioned at this location. The 20,000 tanks are to be used as part of a septic system. The 1,000 tank was recycled at Western Recyclers in Salem, Oregon.

2. No contamination was identified in the soil by method TPH-HCID

3. Groundwater was encountered in the excavation. Thirteen parts per billion (ppb) ethylbenzene and 63 ppb xylenes were detected in a sample from the groundwater in the tank excavation. These concentrations are below their cleanup standards of 700 and 10,000 ppb, respectively.

The Department's determination will not be applicable if new or undisclosed facts show that the cleanup does not comply with the referenced rules. The Department's determination also does not apply to any conditions at the site other than the release of the petroleum product specifically addressed in the report(s).

Please note that pursuant to OAR 340-122-360(2), a copy of your report must be retained until ten (10) years after the first transfer of the property. We recommend that a copy of this information be kept with the permanent facility records.

PORTLAND OR 97217

Re: Fruehauf Trailer Services, Inc.
File No. 26-99-1197
Facility ID. No. 11641

Dear Mr. Brooks:

The Department of Environmental Quality has completed its review of the information submitted to date, concerning the underground storage tank (UST) decommissioning and cleanup conducted at 10498 N. Vancouver Way in Portland, Oregon. The Department has determined that the cleanup appears to have met the requirements of Oregon Administrative Rules (OAR) 340-122-205 through 340-122-360 and that no further action is required at this time.

This determination is a result of our evaluation and judgment based on the regulations and facts as we now understand them, including:

1. One 2,000-gallon waste oil UST was decommissioned, by removal, at this location. The tank was recycled at Schnitzer Steel Products in Portland, Oregon. The rinsate/product were transported to Fuel Processors in Portland, Oregon for treatment.

2. Up to 350 parts per million (ppm) of diesel extended-range petroleum hydrocarbon contamination was discovered during the decommissioning. Volatile organic compounds (VOCs) were not detected. Approximately, 121 tons of soil was excavated and taken to TPS Technologies in Portland, Oregon for treatment and disposal.

3. After cleanup was complete, confirmation soil sampling was performed for total petroleum hydrocarbons, VOCs, and leachable metals. The results of sampling indicate all soil contaminated with detectable levels of petroleum hydrocarbons was successfully removed from the site. VOCs were not detected and metals were not detected above respective regulatory standards.

4. Groundwater was not encountered during the cleanup.

The Department's determination will not be applicable if new or undisclosed facts show that the cleanup does not comply with the referenced rules. The Department's determination also does not apply to any conditions at the site other than the release of the petroleum product specifically addressed in the report(s).

Please note that pursuant to OAR 340-122-360(2), a copy of your report must be retained until ten (10) years after the first transfer of the property. We recommend that a copy of this information be kept with the permanent facility records.

Your efforts to comply with the regulations to ensure that your facility has been adequately cleaned up have been appreciated. If you have any questions, please feel free to contact me at (503) 229-5617.

Re: No Further Action Determination
Yellow Freight Terminal
10510 N. Vancouver Way
Portland, Oregon

Dear Mr. Shinners:

The Department of Environmental Quality (DEQ) has reviewed the file information regarding the soil and groundwater contamination at the referenced site. Based on the available information for the site, it appears that residual contaminants do not pose an actionable risk and therefore no further action is required by DEQ under ORS 465.200 et. seq. unless information becomes available in the future which requires additional investigation.

This determination is a result of our evaluation of the facts as we understand them, including:

1. The Yellow Freight site was developed in the early 1980s and has been used as trucking and freight shipping terminal. Petroleum products have been used on the site to service site vehicles and trucks.
2. Four petroleum releases were reported for the site at the old UST farm, a waste oil sump, an AST line leak, and an UST leak.
3. Independent remedial actions and groundwater monitoring have determined that site groundwater is not contaminated above regulatory action levels. Some residual soil contamination potentially exists at or below the groundwater table but does not appear to be partitioning to groundwater and constituent concentrations do not exceed acceptable risk levels.

General

Based on the these findings, DEQ has determined that no further action is required to address the contamination at this site under Oregon Environmental Cleanup Law, ORS 465.200 et seq., unless additional information becomes available which indicates further investigation is warranted. Please be advised that petroleum contamination of soils may still exist below the concrete near the maintenance building and should any invasive work be attempted in this area, the groundwater/saturated soil will need to be managed in accordance with all applicable regulations.

This no further action decision includes the releases reported to DEQ as of 1997 and summarized in the attached File Review Memorandum dated January 6, 2000.

We shall update DEQ's Environmental Cleanup Site Information and UST Cleanup databases to reflect DEQ's no further action determination and then proceed with closing the administrative requirements of this project. These requirements include issuing a final invoice. If you have any questions, please contact me at 503-229-5011.

Thank you for taking part in DEQ's Voluntary Cleanup Program.

Sincerely,

Alicia C. Voss

To: Yellow Freight Systems, Inc Files (ECSI #1437 and UST Cleanup #26-88-056)

From: Alicia C. Voss, Voluntary Cleanup and Site Assessment, Northwest Region

Subject: File Review and No Further Action Justification

1. INTRODUCTION

This document is a review of existing file information for the Yellow Freight Systems, Inc. (Yellow Freight) terminal at 10510 N. Vancouver Way in Portland, Oregon (Figure 1). Yellow Freight entered into a Voluntary Cleanup Program Letter Agreement on February 9, 1999 with the Department of Environmental Quality (DEQ) for review and oversight of independent investigations and cleanup actions taken at the site.

2. BACKGROUND

Yellow Freight has operated its Northwest terminal facility at the present location since 1983. Yellow Freight owns a portion of the property and has a long-term (99-year) lease for the remaining portion (Figure 2).

Four releases of petroleum products were reported at the facility between 1988 and 1994. The releases include:

- A waste oil sump overflow (1988),
- A release from an underground storage tank (UST) farm (1988),
- A 10,000-gallon diesel fuel release from a supply line (1993), and
- A release from a 10,000-gallon diesel fuel UST (1995).

The DEQ Voluntary Cleanup Program is coordinating Yellow Freight's request for review of all site information and consideration of a no further action determination.

2.1 Site Description

The Yellow Freight terminal occupies about 35 acres on Hayden Island in north Portland, between the Columbia River and the Columbia River Slough (Figure 1). Surrounding

properties include other trucking terminals to the east and south, an open parcel to the west, and North Marine Drive and a river dike to the north.

The site is topographically flat with surface water drainage directed toward storm drains that discharge to a ditch along the east property boundary. The ditch drains to the south and empties into the Columbia Sough. The property is almost completely covered with concrete-paved truck driveways and parking areas, a truck maintenance facility, warehouse, and an aboveground storage tank (AST) farm (Figures 3 and 4).

2.2 Site Operations

The facility has been in operation since about 1983 and serves as Yellow Freight's terminal for truck maintenance and packaged freight distribution in the Pacific Northwest. Trucks are fueled and serviced out of one of the site buildings and freight is loaded out of a large warehouse building.

Bulk petroleum products are stored on site to service the trucks and other vehicles. Two, 80,000-gallon ASTs on the north property boundary near Marine Drive supply truck fuel via an underground supply line to the maintenance building. A concrete spill containment barrier surrounds the ASTs. Two USTs are currently in use near that same building and are used to store motor oil (10,000-gallon UST) and waste oil (6,000-gallon UST). Two other USTs (one 6,000-gallon antifreeze UST and one 6,000-gallon gear oil UST) that were decommissioned in place in 1997 are located adjacent to the current motor oil and waste oil USTs. Nine other USTs have been used in the past on the site and have been decommissioned in-place or have been removed. Detailed UST information is included in the Regulatory Issues section of this memo.

One oil/water separator currently exists on the site and is located near the northwest corner of the property (Figure 4). This separator discharges to the storm drain system, which empties into the ditch on the east side of the property. Another oil/water separator or sump system was used historically at the building near the southeast corner of the property (Figure 4, Area 1). An investigation related to the historic sump is detailed in Section 5.1 of this memorandum.

3. ENVIRONMENTAL SETTING

3.1 Regional Geology and Hydrogeology

The Yellow Freight site is in the Columbia River flood plain. The regional geologic units consist of three principal sedimentary formations and the underlying Columbia River Basalt Group. The sedimentary units are river deposits and their thickness exceeds 1,000 feet in this area.

4. REGULATORY ISSUES

This section summarizes a review of DEQ's Underground Storage Tank, Water Quality, Hazardous Waste, Air Quality, Solid Waste, and Spill Program files.

4.1 Underground Storage Tanks (USTs)

The Yellow Freight terminal has utilized USTs since its development in the early 1980s. The following table lists the status of USTs at the site.

Table 1
UST Status

Tank ID	Contents	Capacity (gal.)	Age	Status
1	Diesel Fuel	20,000	1983-1988	Removed
2	Diesel Fuel	20,000	1983-1988	Removed
3	Motor Oil	6,000	1983-1988	Removed
4	Antifreeze	6,000	1983-1988	Removed
5	Waste Oil	6,000	1983-1988	Removed
6	Diesel Fuel	500	1985-1996	Removed
7	Diesel Fuel	10,000	1986-1995	Removed
8	Antifreeze	6,000	1987-1997	Abandoned in-place
9	Gear Oil	6,000	1987-1997	Abandoned in-place
10	Waste oil	6,000	1987-present	Current
11	Motor Oil	10,000	1987-present	Current

The UST investigations undertaken at Yellow Freight are discussed in the Site Investigations section of this memo.

4.2 Water Quality

DEQ's Water Quality Program issued a special permit in 1993 for the discharge of treated groundwater to the ditch along the east property line. The ditch empties into the Columbia Slough. The treated groundwater came from a groundwater remediation system that was used to recover diesel fuel and contaminated groundwater after a 10,000-gallon release from a line leak (see Spill and Site Investigation sections).

The special permit was formalized into a 1500-J permit, which was extended until 1995 when it was terminated because the treatment system was no longer in operation.

5. SITE INVESTIGATIONS

Yellow Freight investigated four release areas (Figure 4) from 1988 through 1997:

- Waste Oil release from a sump (Area 1);
- Petroleum release from the original UST farm (Area 1);
- Diesel Fuel release from a supply line (Area 2); and
- Diesel Fuel release from a UST (Area 3).

Information from these investigations was forwarded to DEQ's UST Cleanup section for review. Because the waste oil and supply line releases were not related to UST systems, the file review is being completed in DEQ's Voluntary Cleanup Program.

5.1 Waste Oil Sump and Original UST Farm Release

In 1988, the Yellow Freight terminal maintenance shop was housed in the site building near the southeast corner of the property (Figure 4, Area 1). The maintenance shop utilized a waste oil sump and an oil/water separator to handle wastes generated in the service bays. The original UST farm (five USTs) was located directly west of the shop (Figures 5 and 5a).

A release of waste oil from the sump area was discovered during a storm event in 1988 and Yellow Freight contracted an investigation to evaluate soil and groundwater conditions in the vicinity of the sump and separator. A UST farm was decommissioned by removal at the same time and a release was reported in the UST excavation.

In 1988 and 1989, the sump area investigation documented very shallow groundwater conditions (1 to 3 feet bgs) with variable flow directions. Laboratory analysis detected total petroleum hydrocarbon (TPH) contamination of soil (up to 7,600 milligrams per kilogram or parts per million or ppm) and groundwater (up to 6,200 ppm). No constituent analysis was conducted on soil samples.

Groundwater analysis for volatile organic compounds (VOCs), including benzene, ethylbenzene, toluene, and total xylenes (BTEX), did not detect compounds above method detection limits (i.e. less than 5 micrograms per liter, ppb). Analysis for polycyclic aromatic hydrocarbons (PAHs) was not conducted. The highest TPH concentrations were detected near the supply lines from the UST farm. The soil and groundwater contamination distributions are depicted in Figures 5b and 5c.

In 1988, five USTs were located in the original UST farm area (the UST information is located in Section 4.1 of this memorandum). TPH-contaminated soil and groundwater were detected at the base of the excavation, which is depicted in Figure 6. Contaminated soil was excavated from the UST excavation and aerated on site with the approval of the

Three of the soil borings were located adjacent to the oil/water separator at the northwest corner of the property. No contaminants were detected above method detection limits.

The groundwater recovery system operated until 1994, when it was stopped due to the diminished product recovery. TPH was not detected in groundwater during the last monitoring event in 1995.

DEQ calculated probable residual constituent concentrations based on the 90% upper confidence limit (UCL) of the detected TPH concentrations, knowledge of the type of product released, and the average constituent concentrations (weight percent basis) for diesel fuel #2 from the May 1998 Composition of Petroleum Mixtures, Volume 2, Total Petroleum Hydrocarbon Criteria Working Group Series, by Potter and Simmons. The calculations are shown in Table 3a. DEQ determined that residual constituent concentrations are likely below the EPA Region 9 residential soil Preliminary Remediation Goals based on comparisons for benzo(a)pyrene (PAHs) and benzene (aromatics). Benzo(a)pyrene and benzene are considered the most toxic of the potential petroleum constituents. A summary of the calculations is shown below.

Summary Table for Diesel #2
Benzo(a)pyrene and Benzene

Site TPH 90% UCL	Benzo(a)pyrene in Diesel #2 by Weight %	Benzene in Diesel #2 by Weight %	Benzo(a)pyrene in site soils	Benzene in site soils
518 ppm	2.2x10-4	2.9x10-2	1.14 ppb	150 ppb
Residential PRG			62 ppb	670 ppb

The concept of using typical constituent values for various fuel mixtures has been utilized by DEQ in the development of the new Heating Oil Generic Remedy for the UST Cleanup Program. The Heating Oil Generic Remedy does not require constituent analysis for heating oil TPH concentrations less than 2500 ppm. The generic remedy TPH cleanup value can be used for comparison to the TPH (diesel) concentrations at the Yellow Freight site because heating oil and diesel fuel are similar products and because the 90% UCL for site TPH concentrations (518 ppm) was considerably less than the allowable TPH concentration of 2500 ppm in the generic remedy.

5.2 Diesel UST Release

A 10,000-gallon diesel fuel UST was decommissioned by removal in 1995 (Figure 4, Area 3). Soil contamination was documented during the decommissioning activities (up to 270 ppm TPH as diesel fuel and 110 ppm TPH as gasoline). Approximately 75 cubic yards of contaminated soil were excavated and properly disposed off-site.

8. SUMMARY AND CONCLUSIONS

The Yellow Freight site was developed in the early 1980s and has been used as trucking and freight shipping terminal. Petroleum products have been used on the site to service site vehicles and trucks. Four petroleum releases were reported for the site at the old UST farm, a waste oil sump, an AST line leak, and an UST leak.

Independent remedial actions and groundwater monitoring have determined that site groundwater is not contaminated above regulatory action levels. Some residual soil contamination potentially exists at or below the groundwater table but does not appear to be partitioning to groundwater. Yellow Freight did not conduct constituent analysis of soils in the line leak area. However, DEQ calculated that likely concentrations of residual PAHs and aromatics would not exceed acceptable risk levels. The conclusion that TPH-contaminated soil should not pose an unacceptable risk is supported by:

a) the relatively low TPH concentrations (518 ppm UCL) detected in the soil,
b) the lack of evidence that the residual TPH is partitioning to groundwater based on groundwater monitoring,
c) extensive initial product recovery efforts that were largely successful,
d) knowledge of the spill event and type of product released, and
e) average diesel fuel constituent data obtained from the Total Petroleum Hydrocarbon Working Group Series and a comparison to DEQ's Heating Oil Generic Remedy cleanup level for heating oil.

No further action is warranted for soil and groundwater on the site according to OAR 340-122-0205 through 0590. A condition of the no further action determination is a caution for future invasive activities in the line leak area because TPH-contaminated soil may be encountered and would require appropriate management.

DEQ's UST Cleanup Program and Voluntary Cleanup Program files will be updated to reflect the no further action determination.

CERTIFICATION

The technical material and data contained in this document were prepared under the supervision and direction of the undersigned. We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the *all appropriate inquiries* in conformance with the standards and practices set forth in 40 CFR Part 312. Copies of resumes for Parametrix staff involved in the preparation of this report are included in Appendix F.

EXECUTIVE SUMMARY

Parametrix was retained by the Interstate Bridge Replacement (IBR) Program to perform a Phase I Environmental Site Assessment (ESA) on two contiguous commercial properties located generally to the south of N Marine Drive and north of N Martin Luther King Jr. Boulevard, and bisected by N Vancouver Way in Portland, Oregon (Figure 1). The Phase I ESA focused on the developed properties located at 11051 N Vancouver Way and the partial area of 1014 N Marine Drive, in Portland, Oregon that may be acquired by the IBR Program. The subject properties consist of two parcels identified as IBR-1N1E03BB-01200 and IBR-1N1E03BB-01300. Based on the findings of this investigation, Parametrix reached the following conclusions:

1. The subject property includes two separate Multnomah County tax lots: 1N1E03BB-01200 and 1N1E03BB-01300. The subject property currently includes a convenience store, a massage studio, a Union 76-branded filling station, a power steering repair shop, wireless communications tower, and a commercial sign shop.
2. Based on the historical review, the subject property was undeveloped land and cultivated farmland until the 1950s and 1960s, when two small, unidentified buildings appeared on the north parcel (tax lot 1200). The north building was first a store, then an automobile shop, and eventually a gas station, which was renovated into the current building in the early 2000s as a Union 76-branded gas station and a Plaid Pantry market. The south building on the north parcel was built in 1967 as a warehouse and later used as a truck repair shop until the 2010s. The building is currently a repair shop for automotive and truck steering systems.

   The current building appeared on the south parcel (tax lot 1300) in the early 1970s and was used as a non-specified repair shop. The building is currently a commercial sign shop. All of the buildings on the subject property were connected to septic holding tanks until they were connected to the municipal sewer system in the early 1980s.

   The surrounding areas were primarily undeveloped land, farmland, and small private residences until the 1960s and 1970s, when industrial businesses began appearing to the north and south. The historical presence of a gas station and automotive repair businesses on the subject property are not identified as recognized environmental conditions (RECs) to the subject property based on results and recommendations from previous Phase II ESA investigations.
3. A Phase I ESA was conducted at this location in November 2023. This Phase I ESA provides an update to address an update to the boundary of the subject property.
4. A Phase II ESA was conducted in July 2024 and January 2025 for tax lot 1N1E03BB-01200. The 2024 Phase II ESA evaluated subsurface soil conditions and resulted in no detection for gasoline-, diesel-, and oil-range total petroleum hydrocarbons (TPH-g, TPG-d, and TPD-o, respectively) and volatile organic compounds (VOCs). The January 2025 Phase II ESA recommended the following: (1) Groundwater was not encountered during Phase II investigations. If dewatering for construction is necessary, groundwater samples should be

collected for disposal purposes; and (2) No additional environmental investigation is recommended at this time.

5. Based on the age of the buildings, hazardous building materials (lead-based paint [LBP], asbestos-containing materials [ACM], or polychlorinated biphenyls [PCBs]) are potentially present in buildings located in tax lot 1300.
6. With the exception of the underground storage tanks (USTs) at the gas station on tax lot 1200 and waste oil stored outdoors in containers on the Pro Steering site, no other evidence of significant use or storage of hazardous substances or petroleum products was noted on or near the subject property. No evidence of distressed vegetation, spills or releases, dry wells, or other indications of environmental concern was identified during the site reconnaissance.
7. The north parcel of the subject property (tax lot 1200) is listed on several regulatory databases. The parcel is listed on the leaking underground storage tank (LUST) regulatory database, which indicates a past release of gasoline that was discovered during tank decommissioning in 1992. Confirmatory soil samples showed contaminant levels below cleanup levels. The remedial action taken on the site resulted in the issuance of a No Further Action determination by the Oregon Department of Environmental Quality (DEQ).
8. An on-site reconnaissance was not conducted with a property representative to identify potential environmental conditions and to address information data gaps during the Phase I ESA process. The lack of a full on-site reconnaissance represents a data gap in accordance with ASTM Standard E1527-21. However, the information obtained for the Phase I ESA, including regulatory database and historical documentation, was deemed sufficient.
9. [redacted]

Based on the conclusions of this investigation of the subject property, Parametrix offers the following recommendation.

1. Follow recommendations provided in the 2025 Phase II ESA.
2. If the buildings on tax lot 1300 are to be demolished, it is recommended that a hazardous building materials survey be completed. If ACM, LBP, and/or PCBs are identified, they should be managed, handled, and disposed of in accordance with local, state and federal regulations.

1. INTRODUCTION

Parametrix was retained by the Interstate Bridge Replacement (IBR) Program to perform a Phase I Environmental Site Assessment (ESA) on two contiguous commercial parcels located generally to the south of N. Marine Drive, north of N. Martin Luther King Jr. Blvd., and bisected by N. Vancouver Way in Portland, Oregon (herein referred to as the *subject property*) (Figure 1). The subject property is located in Multnomah County, Oregon, and is comprised of two parcels included in the IBR Program. The property identifiers, tax lot IDs, and street addresses for each of the two parcels are listed below, and the configuration of the properties is shown in Figure 2.

- IBR-1N1E03BB-01200 1N1E03BB01200 1014 N. Marine Dr
- IBR-1N1E03BB-01300 1N1E03BB01300 11051 N. Vancouver Way

The subject properties are approximately (tax lot 1200) 1.3 acres and (tax lot 1300) 0.5 acres in size and include a convenience store, a massage studio, a Union 76-branded filling station, a power steering repair shop, a commercial sign shop, and a wireless communications tower.

The IBR Program acquisition areas were updated following publication of the initial Phase I ESA in November 2023. Because the initial Phase I ESA was completed over 1 year ago, a new Phase I ESA was conducted in compliance with EPA's All Appropriate Inquiries Rule (40 CFR Part 312). Information provided in the 2023 Phase I ESA was assessed as part of this Phase I ESA. Conclusions and recommendations within this report are based solely on the observed evidence and data collected during the performance of this assessment.

1.1 Purpose and Methodology

This Phase I ESA has been prepared at the request of the Federal Transit Administration (FTA) to follow guidance provided in Standard Operating Procedure (SOP) 19, *Consideration of Contaminated Properties including Brownfields.* SOP 19 applies to "property being considered for acquisition for FTA-funded projects, with an emphasis on property that is or may be contaminated, and is limited to the property considerations taking place during the environmental review process conducted pursuant to the National Environmental Policy Act (NEPA)" (FTA 2016). The primary objective of the SOP 19 is to provide guidelines for environmental review of the property proposed for acquisition prior to approval of the final environmental impact statement.

This assessment follows the regulatory records search and evaluation standards set forth in the ASTM International (ASTM) Standard E1527-21, Standard Practice for Environmental Site Assessments. The search radius for regulatory databases was conducted in accordance with ASTM guidelines. The goal of the Phase I ESA process is to identify recognized environmental conditions (RECs), historical recognized environmental conditions (HRECs), and controlled recognized environmental conditions (CRECs) associated with the subject property as defined by ASTM E1527-21 and summarized below:

- Recognized environmental condition (REC): (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. A de minimis condition is not a recognized environmental condition.
- Historical recognized environmental condition (HREC): a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations, or other property use limitations). A historical recognized environmental condition is not a recognized environmental condition.
- Controlled recognized environmental condition (CREC): recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations).

1.2 Scope

The Phase I ESA process identifies potential environmental contamination on a property, helps establish a defense to liability under CERCLA should the property be acquired by the IBR Program, and includes a review of current and historical site use, ownership, regulatory records, and a site reconnaissance performed by a qualified environmental professional. If the current property owner refuses to grant right-of-entry and state law does not allow for limited right-of-entry, the property may be visually inspected from a public right-of-way or off-site vantage point, or from overhead.

The scope of services for this Phase I ESA was as follows:

- A public right-of-way site reconnaissance.
- Property Owner Questionnaire.
- A review of tax assessor's office records.
- A review of local, state and federal regulatory agency documents which aid in identifying RECs for the subject property.
- A review of available historical records to establish previous site land uses that may have led to RECs for the subject property.
- A report summarizing the above activities.

The following services were attempted but could not be completed at the time of publication due to lack of owner permission. Additional attempts will be made prior to final acquisition of the subject property:

- A right-of-entry and visual reconnaissance of the entirety of the acquisition area.
- An interview with the owner's representative.
- Property Owner Questionnaire.

Additional (beyond the ASTM 1527-21 Standard) services performed for this Phase I ESA include the following:

- Review the age of improvements on the subject property to evaluate the potential presence of asbestos-containing materials (ACM), lead-based paint (LBP), and polychlorinated biphenyl (PCB)-containing materials. A summary of this review is provided in Section 3.3.
- Review available state or federal radon information for indoor air quality risks. A summary of this review is provided in Section 3.3.4.

1.3 Significant Assumptions

Parametrix has assumed that all provided documentation, records, and data sources are accurate, complete, and reliable, unless otherwise stated. This Phase I ESA is based on visual observations conducted from the public right-of-way of accessible areas of the subject property and adjoining properties. The conclusions and recommendations are based on information gathered during the execution of the scope of work described above.

1.4 Limitations

The findings, conclusions, and recommendations presented in this report are based on site conditions and the best available information known or made available by regulators, other consultants, or other sources at the time of the investigation. Parametrix conducted a diligent search and investigation in compliance with prevailing standards of the profession; however, certain adverse conditions may exist at the site not detected at the time of the investigation.

The services provided under this contract, as described in this report, include professional opinions and judgments based on data collected. These services have been provided according to generally accepted engineering practices. The opinions and conclusions contained in this report are typically based on information obtained from the following:

- Observations and measurements made by Parametrix field staff.
- Contacts and discussions with regulatory agencies and others.
- Review of available hazardous substance or solid waste lists.
- Opinions and judgments of Parametrix based on the information available.

In the professional judgment of Parametrix, the services performed pursuant to the scope of services are an adequate basis to collect data for a preliminary evaluation of the site and upon which to draw the conclusions stated in this report.

2. SUBJECT PROPERTY DESCRIPTION

2.1 Location

The subject property includes two contiguous commercial parcels located generally to the south of N. Marine Drive and north of N. Martin Luther King Jr. Boulevard in Portland, Oregon. The site location is shown on Figure 1, the Site Vicinity Map. The boundary of the subject property is shown on Figure 2. The subject properties are approximately (tax lot 1200) 1.3 acres and (tax lot 1300) 0.5 acres in size. No improvements are reported within the boundaries of the subject property.

2.2 Site and Vicinity Characteristics

The subject property consists of a convenience store, a massage studio, a Union 76-branded filling station, a power steering repair shop, a commercial sign shop, and a wireless communications tower. The property is located in a moderately developed residential and undeveloped area of southwest Portland.

Table 1. Subject Property Characteristics

IBR ID	Address	Owner	Total Area (acres)	Potential Acquisition Area (sq ft)	Current Use (determined through visual observations)
IBR-1N1E03BB-01200	1014-1020 N. Marine Dr., 11051 N. Vancouver Way	The Webster Family LTD Partnership	1.3 acres	2,614.2	Union 76 gas station, Plaid Pantry Market, Marina Foot Massage, Pro Steering Systems, Wireless communications tower and supporting gear (Crown Castle) .
IBR-1N1E03BB-01300	11077 N. Vancouver Way	Arrington Properties LLC	0.5 acres	21231.8	Anderson Signs (commercial sign company).

The subject property is bounded to the north by apartment buildings (across N. Marine Dr.), to the east by a vacant property and an industrial sales business, and to the south and west by public roadways and interchanges and a city park (Delta Park) (see Figure 2).

2.3 Physical Setting

The subject property is located in the Portland Basin, which marks the northern terminus of the Willamette Lowland in Oregon (WDNR 2025). The northern portion of the basin is known for its low topographic relief, with the subject property at an elevation of approximately 20 feet above mean sea level. The Portland Basin is bounded by the Cascade Range to the east and the Coast Range to the west.

Geologic processes in the Portland Basin consist of volcanism, sedimentation, and cataclysmic flood deposits in both fluvial and marine depositional environments. The subject property lies on what is mapped as stratified clay, silt, sand and gravel alluvium deposited along rivers and streams with localized areas of artificial fill (Wells et al. 2020). Surface soils consist of silt loam.

The topography in the vicinity of the subject property is generally level, with roadways built on naturally elevated features as well as areas built up with fill. The anticipated groundwater gradient is to the north toward the Columbia River. Groundwater has been reported at depths of 8 to 10 feet below ground surface during a subsurface investigation on the subject property in 2000.

2.4 Current Use of the Subject Property

The subject property includes a gas station and convenience store, a massage studio, an automotive steering system repair shop, and a commercial sign shop. The proposed acquisition areas include areas of paved sidewalks and adjacent landscaping along the western boundaries of the two tax lots. The acquisition areas are bordered by N. Marine Drive, N. Marine Way and N. Vancouver Way (see Figure 2).

2.5 Descriptions of Improvements on the Subject Property

The subject properties include the following: tax lot 1200 features a Union 76-branded gasoline filling station with four fuel dispensers, three underground storage tanks (USTs), a canopy over the fueling area, and a Plaid Pantry convenience store. The store shares its building with a massage studio. Two separate buildings on the property include a power steering repair shop, a wireless communications tower, and a support building. On the south side of the filling station, there is a small, densely vegetated swale secured with a chain-link fence. Tax lot 1300 includes a commercial sign shop. The remaining areas, not covered by buildings, consist mostly of hardscaping, such as sidewalks and asphalt parking lots. Power, water, and natural gas are provided by local utilities and municipalities.

The partial acquisition of tax lot 1200 contains no buildings, while tax lot 1300 includes two buildings.

2.6 Environmental Liens

An environmental lien is defined by ASTM as a charge, security, or encumbrance upon title to a property to secure the payment of a cost, damage, obligation, or duty arising out of response actions, cleanup, or other remediation of hazardous substances or petroleum products. No evidence of environmental liens against the subject property was identified during the course of this Phase I ESA.

3. RECORDS REVIEW

The purpose of the records review task was to gather environmental data on the subject property prior to the site examination. The information review consisted of two subtasks: a review of various lists and files published by federal and State of Oregon agencies; and a compilation of historical uses of the site and site vicinity, to determine if past operations pose an environmental risk to the subject property. Information for agency file review is based, in part, on a report provided by Environmental Data Resources. The EDR report is included in Appendix A.

The EDR report is a summary of state and federal database searches for sites of possible environmental concern. The information review enabled Parametrix personnel to characterize the types of activities performed at the site, identify data gaps prior to the site examination, and facilitate recognition of discrepancies between reported and observed data. Data gaps identified during the document review were addressed by interviewing knowledgeable personnel, observations during the site examination, or by additional detailed investigation.

It should be noted that this information is reported as Parametrix received it from EDR, which in turn reports information as it is provided in various government databases. It is not possible for either Parametrix or EDR to verify the accuracy or completeness of information contained in these databases. However, the use of and reliance on this information is a generally accepted practice in the conduct of environmental due diligence. The following sections present information from the document review.

3.1 Standard Environmental Record Sources

The following section summarizes information collected from records maintained by the U.S. Environmental Protection Agency (EPA) and the Oregon Department of Environmental Quality (DEQ). The information includes details on sites identified in regulatory databases within recommended ASTM search distances. A complete listing of the databases reviewed is included in the EDR Radius Map$_A$ Report (Appendix A).

3.1.1 Review of Oregon Department of Environmental Quality (DEQ) Databases

The following sections summarize the most relevant information obtained from the EDR Radius Map$_A$ Report regarding sites identified within the ASTM E1527-21 search radii from the following databases. Additional information regarding these sites was reviewed on DEQ's Environmental Cleanup Site Information Database and Leaking Underground Storage Tank Cleanup Site Database to supplement data gaps in the EDR report. A complete listing of the databases reviewed is included in the EDR report. Relevant database listings from DEQ include:

- DEQ Underground Storage Tank (UST) List

- DEQ Leaking Underground Storage Tank (LUST) List
- DEQ Environmental Cleanup Site Information (ECSI) List
- Spill Database (SPILLS)
- Solid Waste Facilities (SWF/LF) List
- DEQ Confirmed Release List (CRL)
- DEQ Brownfields List
- DEQ Drycleaners List
- DEQ Engineering or Institutional Controls

3.1.1.1 DEQ Underground Storage Tank List

The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data was obtained from the DEQ UST List.

Information contained in the EDR report indicates that the IBR-1N1E03BB-01200 parcel of the subject property (1020 N. Marine Dr.) has two listings as a UST site.

- The Plaid Pantry #209 site (Facility ID 12242) has three permitted and active tanks. No decommissioned tanks are reported. The site is also listed in the LUST database and is discussed in Section 3.1.1.2.
- The Potter Webster site is registered as Facility ID #11154. DEQ records indicate that the facility has no reported permitted and active tanks, and one decommissioned tank. The site is also listed in the LUST database and is discussed in Section 3.1.1.2.

Unless otherwise noted, the presence of USTs near the site does not, in itself, constitute a REC. UST sites which have had known releases are discussed in Section 3.1.1.2 below.

3.1.1.2 DEQ Leaking Underground Storage Tank (LUST) List

The LUST Incident Reports contain an inventory of reported LUST incidents. The data was obtained from the DEQ LUST Database List.

Information contained in the EDR report indicates that the IBR-1N1E03BB-01200 parcel of the subject property is listed as a LUST site:

- The Plaid Pantry #209 LUST site (1020 N. Marine Drive) is located on the western half of tax lot 1200 of the subject property. A release was reported to Oregon DEQ during the removal of a UST in 1992 and was assigned LUST file #26-92-0348. This UST had originally been registered under the site name “Potter Webster Co.” but the LUST file opened after the removal of the tank was named after the Plaid Pantry #209, which had replaced the Potter Webster facility.

A 2,500-gallon UST was decommissioned by removal. Soil samples collected from the excavation contained up to 190 parts per million diesel-fraction petroleum hydrocarbons. It was determined that Soil Matrix Level II cleanup requirements (500 ppm diesel cleanup level) was applicable to this site. The detected concentration of diesel in the soil samples did not exceed this cleanup level. No solvents, heavy metals, or PCBs were detected in the soil. Groundwater was not observed during excavation. DEQ issued an NFA determination in January 1997.

The LUST designation on this portion of the subject property represents a Historical REC (HREC). Phase II ESAs conducted in July 2024 and January 2025 concluded no additional environmental investigations is recommended at this time; therefore, the site is not considered a REC.

Ten additional LUST sites were identified within 0.5 miles of the subject property. Based on DEQ information indicating site closure activities have been completed or other supplemental information, none of the identified sites discussed above appear to represent a REC to the subject property, including the partial areas of the parcels that may be acquired as part of the IBR Program. In addition, the remaining LUST sites identified in the EDR report appear to be at sufficient distances from the subject property and/or cleanup activities have been completed so that they do not appear to represent a REC to the subject property.

3.1.1.3 DEQ Environmental Cleanup Site Information (ECSI) List

The ECSI identifies and tracks known or potentially contaminated sites within Oregon and is the state's equivalent to CERCLIS. The Confirmed Release List (CRL) is a subset of the ECSI and includes sites which have known releases of hazardous substances. The Voluntary Cleanup Program (VCP) database is a list of sites that have been entered into the DEQ voluntary cleanup program and are undergoing cleanup.

Information contained in the EDR report indicates that the subject property (Plaid Pantry #209) is identified on the ECSI, CRL or VCP databases, and is discussed below.

- The Plaid Pantry #209 ECSI site (1020 N. Marine Drive) is located on the western half of tax lot 1200 of the subject property. The site was suspected by DEQ of petroleum releases to the subsurface as part of Columbia Slough Area-wide Discovery (CSD) Project and was assigned ECSI file #4134. This site was identified by DEQ from records of soil borings found in Oregon Water Resources Department well log database (OWRD 2025). DEQ's stated concern was that site runoff or subsurface contamination could reach part of Columbia Slough via the stormwater piping system. The site has undergone cleanup associated with USTs through the DEQ UST program (LUST file #26-92-0348) cited as ending in 1997. However, the CSD project found evidence of the investigation on the site initiated in 2000, in areas away from the main building, to the west. No additional action has been taken by DEQ since the opening of this file in 2004.

A Phase II ESA was conducted within the potential area of acquisition of tax lot 1200 in July 2024 to evaluate subsurface soil conditions. Soil was collected and field observations performed. A total of eight soil samples were collected and analyzed for gasoline-, diesel-, and oil-range total petroleum hydrocarbons (TPH-g, TPG-d, and TPD-o, respectively) and volatile organic compounds (VOCs). TPH-g, TPG-d, TPD-o, and VOCs were not detected in any samples analyzed for these constituents. Groundwater was not encountered during the subsurface investigation.

Based on the Phase II ESA recommendations, the site does not appear to represent a REC to the subject property.

Multiple ECSI, CRL, and VCP sites were identified within 1 mile of the subject property. The remaining ECSI, CRL, and VCP sites are located at sufficient distances and/or cleanup activities have been completed so that they do not appear to represent RECs to the subject property, including the partial areas of the parcels that may be acquired as part of the IBR Program.

3.1.1.4 SPILLS Database

This database provides a comprehensive list of reported spills. The subject property is not listed as a SPILLS site.

3.1.1.5 Solid Waste Facilities/Landfill

The Solid Waste Facilities/Landfill (SWF/LF) records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data were obtained from Oregon's Solid Waste Facilities List Solid Waste Facilities List.

The subject property is not listed as a SWF/LF site. One SWF/LF site (Diversified Marine) was reported within 0.5 miles of the subject property, and based on a review of regulatory status, investigation and cleanup actions conducted, and/or distance from the subject property, the SWF/LF site does not appear to represent a REC to the subject property.

3.1.1.6 DEQ Brownfields List

The Brownfields database lists sites of real property where expansion or redevelopment is complicated by actual or perceived environmental contamination. No DEQ Brownfields sites were identified within 1 mile of the subject property.

3.1.1.7 DEQ Drycleaner List

The drycleaner database is a listing of former or current drycleaners in Oregon. No DEQ drycleaner sites were identified within 0.125 miles of the subject property.

3.1.1.8 DEQ Engineering/Institutional Controls

DEQ maintains two databases for sites with implemented engineering controls and/or institutional controls. No sites with engineering or institutional controls were identified within 1 mile of the subject property.

3.1.2 Environmental Protection Agency (EPA) Database Review

The EPA administers several programs designed to protect the environment and monitor the generation, storage, treatment, and disposal of hazardous substances. The following sections summarize the most relevant information obtained from the EDR report regarding sites identified within ASTM E1527-21 search radii from the following databases. A complete listing of the databases reviewed is included in the EDR report.

- National Priorities List (NPL)
- Superfund Enterprise Management System (SEMS) List
- Resource Conservation and Recovery Act (RCRA) Corrective Action Report (CORRACTS) List
- Resource Conservation and Recovery Information System (RCRIS) List
- Emergency Response Notification System (ERNS) List
- US Brownfields List

3.1.2.1 National Priorities List

The National Priorities List (NPL) identifies priority hazardous waste sites for remedial actions under the EPA Superfund program. The EDR report indicates that the subject property is not listed as an NPL site. No NPL sites were identified within 1 mile of the subject property.

3.1.2.2 SEMS List

The EPA publishes a list of sites that may potentially pose a threat to the environment or the health of the general public. This list is known as the SEMS list (formerly the CERCLIS list). Information contained in the EDR report indicates the subject property is not listed as a SEMS site. One SEMS site (Pier 99 – Portland) was identified within 1 mile of the subject property. Based on the distance and gradient from the subject property, the site is not anticipated to impact the subject property and is not considered a REC to the subject property.

The EPA also publishes the SEMS-NFRAP list, which are SEMS sites that have been designated “no further remedial action planned” and have been removed from the SEMS list. Information contained in the EDR report indicated that the subject property is not listed as a SEMS-NFRAP site. Two SEMS-NFRAP sites (Columbia Slough and Diversified Marine) were identified within 0.5 miles of the subject property. Based on the distance and gradient from the subject property, the sites are not anticipated to impact the subject property and are not considered a REC to the subject property.

3.1.2.3 CORRACTS Review

The CORRACTS report identifies hazardous waste handlers with corrective action activity. Information contained in the EDR report indicates the subject property is not listed as a CORRACTS site. No CORRACTS sites are listed within 1 mile of the subject property.

3.1.2.4 Resource Conservation and Recovery Information System (RCRIS) List

The RCRIS list includes selective information on sites which generate, transport, store, treat, and/or dispose of hazardous waste as defined by RCRA. Information contained in the EDR report indicates that the subject property is listed as RCRA Non-Generator of Hazardous Waste (RCRA NonGen/NLR).

- Potter Webster Company (1020 N. Marine Dr.) is located on the IBR-1N1E03BB-01200 parcel of the subject property and is listed as a former generator of hazardous waste from 1995 until 2001. No violations were found for this generator. Based on the lack of violations and lack of reported releases or spills, the listing is not a REC for the subject property.

Two additional RCRIS-TSD sites (Prima Donna Development and Marineland Pier 99) were identified within 0.25 miles of the subject property. Based on the distance and gradient from the subject property or the lack of reported hazardous waste violations, the sites are not anticipated to impact the subject property and are not considered a REC to the subject property.

The EPA also regulates the management of hazardous waste at Transportation, Storage, and Disposal (TSD) facilities. Information contained in the EDR report indicates the subject property is not listed as a RCRIS-TSD site. No RCRIS-TSD sites were identified within 0.5 miles of the subject property.

3.1.2.5 ERNS List

The ERNS is a national database containing information from spill reports made to Federal authorities. Information contained in the EDR report indicates the subject property is not listed as an ERNS site.

3.1.2.6 US Brownfields List

The EPA's US Brownfields list identifies Brownfields properties addressed by Cooperative Agreement Recipients and Brownfields properties addressed by Targeted Brownfields Assessments. The EDR report indicates the subject property is not listed as a US Brownfields site. No US Brownfield sites were identified within 0.5 miles of the subject property.

3.1.3 Other Databases

The following sections include other databases identified in the EDR report that may be relevant to assessing potential environmental liability or environmental issues at the subject property.

3.1.3.1 EDR Proprietary Databases

EDR has conducted research on the occurrence of historical business practices that may constitute a REC to properties. The database was developed from data found in historical city directories and contains information on over 100,000 former gas stations, manufactured gas plants, and dry cleaners. Due to the nature of these businesses, the sites have the potential for soil and groundwater contamination to have occurred.

EDR Historical Auto Stations

Historical auto stations are identified on a proprietary database maintained by EDR. Information contained in the EDR report indicates the subject property (Pee Gee Diesel Engine and ProLube, 11051 N. Vancouver Way) is listed as a historical auto station. Pee Gee Diesel was reported as operating on the subject property (IBR 1N1E03BB-01300) in 1985, and ProLube operated from 2001 through 2014. No other information is known about these businesses.

Unless otherwise noted, the mere presence of historical auto stations near a site does not, in itself, constitute a REC. No other historical auto stations are listed within 0.125 miles of the subject property.

EDR Manufactured Gas List

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800s to 1950s to produce a gas that could be distributed and used as fuel. Many of the by-products of the gas production, such as coal tar (oily waste containing volatile and nonvolatile chemicals), sludges, oils, and other compounds, are potentially hazardous to human health and the environment. The by-products from this process were frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

No manufactured gas plant sites were identified within 1 mile of the subject property.

EDR Historical Dry Cleaners

EDR has searched selected national collections of businesses directories and has collected listings of potential dry-cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to, dry cleaners, cleaners, laundries, laundromats, cleaning/laundry businesses, wash and/or dry businesses.

No historical dry cleaner sites were identified within 0.125 miles of the subject property.

3.1.4 Orphan Site List

Orphan sites are sites for which mapping information is not detailed adequately to plot the location of the site, or for which there is no known responsible party or the responsible party is unwilling or unable to pay for cleanup. The orphan site list and available mapping information were reviewed by Parametrix. Three orphan sites were identified by EDR in the vicinity of the subject property. All three of the orphan sites identified are located at sufficient distances and/or cleanup activities have been completed so that they do not appear to represent RECs to the subject property.

3.1.5 Vapor Encroachment

ASTM Standard E1527-21 defines vapor migration as "the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface." The recognition of vapor migration as a possible REC may require incorporation of new types of controls and restrictions to address this contamination pathway.

The subject property and adjacent sites were reviewed in an effort to determine if vapor migration has, or has the potential to have, occurred at the site, from adjacent properties. Based on the information reviewed, though one parcel of the subject property has been identified as a LUST site with a confirmed release to the soil, based on the cleanup of the LUST, the location of the release relative to buildings on the subject property, the depth of the release, and the composition of the release, it is unlikely to present a vapor intrusion issue to indoor air.

No properties were identified in the near vicinity that have confirmed releases of volatile contaminants in soil or groundwater that have not been sufficiently addressed or would otherwise present a potential impact to the subject property. Information related to the adjacent properties LUSTs are discussed in Section 3.1.1.2 and suggests that there is no current potential for vapor intrusion impacts to the subject property.

3.2 Historical Use Information

The objective of the historical use information review is to develop a history of the previous uses of the subject property and surrounding area that helps to identify the likelihood of past uses having led to RECs in connection with the subject property. Parametrix researched the historical land use, occupancy, and ownership of the subject property and adjacent properties to evaluate historical uses that are known to be associated with RECs. Historical records reviewed include Sanborn Fire Insurance Maps (Appendix B) and aerial photographs (Appendix C).

3.2.1 Certified Sanborn Maps₰ Fire Insurance Map Review

Parametrix requested Sanborn Fire Insurance maps from EDR in an effort to help identify past land uses. Sanborn Fire Insurance map from the year 1969 was examined. A copy of the Certified Sanborn Map Report is included in Appendix B. Observations are provided below.

1969 The map provides no coverage of the subject property. The nearest area of coverage to the subject property is the area around the highway interchange between N Union Avenue (Highway 99E), N. Denver Avenue and N. Centennial Way, 600 feet to the west. The images indicate boat sales and service businesses along N Portland Harbor to the north of the interchange. No property uses were identified that may present a potential REC to the subject property.

3.2.2 Historical Aerial Photograph Review

Historical aerial photographs of the subject property area were obtained from EDR. Aerial photographs for the years 1936, 1948, 1951, 1955, 1960, 1963, 1970, 1975, 1981, 1990, 1994, 2000, 2006, 2011, 2014, 2017 and 2020 were examined. Copies of the aerial photographs are included in Appendix C. Observations are listed below.

1936 The subject property is part of a larger agricultural field that extends to the east and west. The subject property is bounded to the north by N. Marine Drive, which appears to be unpaved, and Highway 99E to the south. N. Denver Avenue (eventual location of Interstate 5) is located 1,200 feet to the west. Nearby properties are developed as farmland and pasture. A small building is located across N. Marine Drive to the north, near a long, narrow pond or cut-off slough parallel to the shoreline of the Columbia River. The Columbia River is located 800 feet north of the subject property.

1948 This image was taken in July 1948, two months after the Vanport flood that inundated the area. The south half of the subject property is covered with floodwaters and the north half of the property is higher, undeveloped land. A small building is located immediately west of the subject property at the intersection of Marine Drive and Highway 99E. Flooding is evident on both sides of Highway 99E, which appears to be elevated above the surrounding land. The area south of Highway 99E was part of the former Vanport area which was the site of housing for persons involved in shipbuilding during and after WWII. The image shows remnants of gridded streets with scattered buildings to the south and west, apparently displaced by the floodwaters. Additional development (small houses) appears to the east along Marine Drive. Highway interchanges appear to the west.

1951–1955 The north half of the subject property (tax lot 1200) remains as farmland and the south half of the property (tax lot 1300) is bare, undeveloped land. Vancouver Way appears in its current location, separating the two tax lots of the subject property. Adjacent property use remains unchanged.

1960–1963 A small building appears on the northeast corner of the subject property, along Marine Drive.

1970	A second building appears on the south side of the existing building on the subject property. The ground has been cleared on the south half of the subject property (tax lot 1300) and a small building appears on the southwest corner of the lot. A large building appears across Marine Drive.
1975	The building on tax lot 1300 has been replaced with a larger building (current building). Adjacent property use remains unchanged.
1981–2000	The subject property remains unchanged. Buildings appear to the southeast, along Highway 99E.
2006–2017	The existing canopy appears on the west side of tax lot 1200. Motels and condominium developments appear across Marine Drive to the north.
2020	The subject property and adjacent properties appear to be similar to current conditions.

Based on the historical review, the subject property was undeveloped land and cultivated farmland until the 1950s and 1960s when two small, unidentified buildings appeared on the north parcel (tax lot 1200). The north building was eventually part of a gas station, which was renovated into the current building in the early 2000s as a Union 76-branded gas station, a Plaid Pantry market, and a massage studio. The south building on the north parcel is a repair shop for automotive and truck steering systems.

The current building appeared on the south parcel (tax lot 1300) in the early to mid-1970s and was used as an automobile or truck repair shop at various times between 1984 and 2014. The partial acquisition of tax lot 1200 contains no buildings, whereas tax lot 1300 acquisition one building.

The surrounding areas were primarily undeveloped land, farmland and small private residences until the 1960s and 1970s when industrial businesses began appearing to the north and south. The historical presence of a gas station and automotive repair businesses on the subject property are identified as RECs to the subject property, including the partial areas of the properties that may be acquired as part of the IBR Program.

3.2.3 Local Agency Records

Information from local agencies was reviewed for environmental significance as described in the following sections.

3.2.3.1 City of Portland

A review of permits for environmental significance (i.e., septic tank, stormwater, dry wells, and/or USTs or aboveground storage tanks [ASTs]) was completed. No evidence of significant use or storage of hazardous substances and/or petroleum products was noted on the subject property. In addition, no UST or AST permit records were recorded online with the Portland Maps records for the subject

property. The oldest building permits for the subject property were from 2001 and yielded no relevant information.

Historical plumbing permits indicate that the north building on the north parcel (1020 N. Marine Drive) was an "old one-story store" in 1972 and an auto shop in 1982, at which time the building was connected to the municipal sanitary sewer. The south building on the north parcel (11051 N. Vancouver Way) was a new one-story warehouse in 1967 with a septic holding tank on the east side of the building and a well on the northwest corner of the new building. The building was connected to the municipal storm sewer in 1985.

The current building on the south parcel had a septic holding tank on the northwest corner of the building in 1975. The building was connected to the municipal sewer system in 1979, at which time the building was an "old 2-story repair shop." The septic tank was filled at that time.

3.2.3.2 Multnomah County

Based on information from the Multnomah County Tax Assessor's Office, the subject property consists of the following tax lots:

- IBR-1N1E03BB-01200 1N1E03BB-01200 1014 N. Marine Dr.
- IBR-1N1E03BB-01300 1N1E03BB-01300 11051 N. Vancouver Way

The address indicated for tax lot 1300 (11051 N Vancouver Way) is the address for the Pro Steering Systems business on tax lot 1200. The address for the business on tax lot 1300 (Anderson Signs) is 11077 N Vancouver Way.

3.3 Additional Environmental Information

The following sections provide a summary of additional environmental information obtained for the site.

3.3.1 Asbestos

The manufacture of most ACM was banned by the EPA by 1979. Prior to this, asbestos was a common constituent of numerous building materials, including floor and ceiling tiles, caulking, pipe insulation, roofing materials, and exterior siding.

Based on the age of the buildings (constructed between 1968 and 2000), there is potential for ACM to have been used in the construction of the buildings.

3.3.2 Lead-Based Paint

Before 1977, paint commonly contained lead, which is considered to cause human health problems if ingested. Based on the age of the buildings (constructed between 1968 and 2000), there is potential for LBP to have been used in the construction of the buildings.

3.3.3 Polychlorinated Biphenyls

PCBs were commercially manufactured from 1929 until PCBs were banned in 1979. PCBs were present in a range of materials where thermal stability was necessary, such as PCB-containing oils in transformers and capacitors. Based on the age of the buildings (constructed between 1968 and 2000), there is some potential for PCBs to be present in building materials.

3.3.4 Radon

Radon is a naturally occurring radioactive gas formed by the decay of uranium in some rocks and soil. The adverse health effects associated with radon gas depends upon various factors, such as the concentration of the gas, and exposure duration. The potential concentration of radon gas within a building depends on subsurface soil conditions, the integrity of the building's foundation, the existence of a basement or crawl space (primary areas of concern), and the building's ventilation.

Multnomah County ZIP code 97217 is located in the Federal EPA Radon Zone 2. The Zone 2 indoor average radon level is greater than 2 picocuries per liter (pCi/L) but less than 4 pCi/L. Based on this limited information, radon likely does not represent an environmental concern at the subject property.

4. FILE REVIEW

In accordance with ASTM Standard E1527-21, inquiries and review of previous investigations for the subject property, and a review of regulatory files for the subject property or adjacent properties may be conducted to further evaluate environmental conditions on the property or adjacent properties, and to fill in data gaps where applicable. Previous investigations and file reviews are summarized below.

4.1 Previous Investigations

As discussed in Section 3.1.1.2, the Plaid Pantry/Potter Webster site (1020 N/ Marine Dr.) is located on the west half of tax lot 1200 of the subject property and is listed in the LUST, UST, and RCRIS databases. The UST database lists one decommissioned UST. Diesel-contaminated soil was detected during decommissioning. The tank was decommissioned, and confirmatory samples showed no residual contamination above cleanup levels. No groundwater was encountered during the decommissioning. DEQ issued an NFA determination in January 1997.

An independent subsurface investigation was completed in 2000, without involvement by DEQ. The investigation involved the completion of eight push-probe borings. No releases of hazardous substances were reported following the sampling. The results of the investigation were not released by the property owner.

A Phase I ESA was previously completed for portions of this subject property in 2023 (IBR Program 2023). The 2023 Phase I recommended a Phase II investigation for the proposed acquisition areas. A Phase II ESA was completed in July 2024 and January 2025 for tax lot 1N1E03BB-01200 ((IBR Program 2025). The 2024 Phase II ESA evaluated subsurface soil conditions and resulted in no detection for gasoline-, diesel-, and oil-range total petroleum hydrocarbons (TPH-g, TPG-d, and TPD-o, respectively) and volatile organic compounds (VOCs). Groundwater was not encountered during the subsurface investigation. The 2025 Phase II ESA provided the following recommendations:

1. Groundwater was not encountered during the Phase II investigations. If dewatering for construction is necessary, groundwater samples should be collected for disposal purposes.
2. No additional environmental investigation is recommended at this time.

No other previous investigations of the subject property were identified during the course of this Phase I ESA.

4.2 Adjacent and Nearby Properties File Review

No properties located adjacent to the proposed acquisition area were listed on environmental databases. Nearby properties were listed on environmental databases, as described in Section 3. Sufficient site-specific information was available through review of the EDR report, as well as online

DEQ files, to develop an opinion on the potential for these properties to have affected the subject property. Therefore, a specific file review (physical review at DEQ) was not required, beyond those completed during the course of this Phase I ESA. Specific information on the nature of release, types of contaminants, media impacted, and the potential to have affected the subject property or otherwise caused environmental concern is provided in Section 3.

5. SITE EXAMINATION

Parametrix conducted a site examination of the subject property from public right-of-way on February 18, 2025. The site examination consisted of observing the areas immediately surrounding the subject property, providing observations of the general environmental conditions on the subject property, and visually assessing the subject property and adjacent properties for evidence of hazardous materials. The site examination focused on tax lot 1300 and the partial area of tax lot 1200 that may be acquired by the IBR Program. Photographs of the subject property taken during the site walk are included in Appendix D.

5.1 Subject Property

The two tax lots that make up the subject property are separated by N. Vancouver Way and include three commercial and industrial buildings, commercial fuel dispensers, a wireless communications tower, asphalt parking lots, and a small vegetated swale. Hardscaping such as sidewalks and asphalt parking lots border all of the buildings. The partial areas of the parcels that may be acquired as part of the IBR Program are limited to paved and landscaped areas. All observations were taken from the public right-of-way.

Three USTs (one unleaded gasoline, one premium gasoline and one diesel) are located on the north side of the fuel dispensers (see Figure 2). Two barrels (one empty and one containing used oil filters) was located in the paved parking area behind the Plaid Pantry building. Twelve empty barrels and one 300-gallon plastic tote, partially filled with used oil, were stored on an asphalt paved surface east of the Pro Steering Systems building. Two Safety-Kleen parts washing stations were located in the Pro Steering Systems shop.

No other evidence of USTs, ASTs, or other indications of environmental significance were observed on the exterior portions of the property. In addition, no evidence of significant storage or spills of hazardous substances and/or petroleum products was observed on the subject property. No evidence of staining, adverse odors, or other indications of potential releases was observed. The presence of the gasoline filling station on the subject property is identified as a REC. In general, no other RECs or other adverse environmental conditions were identified associated with the subject property. Table 2 summarizes the observed conditions.

The lack of access to tax lot 1300 and a full site examination represents a data gap in accordance with ASTM Standard E1527-21.

Table 2. Subject Property Observed Conditions

SWC ID	Address	Acres	Current Use (determined through visual observation)	Site Examination Observations
IBR-1N1E03BB-01200	1014-1020 N. Marine Dr., 11051 N. Vancouver Way	1.3 acres	Union 76 gas station, Plaid Pantry Market, Pro Steering Systems.	Two commercial and industrial buildings with paved parking and driveways. Used oil stored in containers on asphalt surface.
IBR-1N1E03BB-01300	11077 N. Vancouver Way	0.5 acres	Anderson Signs (sign company)	One commercial building with paved parking and driveways.

5.2 Adjacent Properties

The vicinity of the subject property is significantly developed residential apartment and commercial buildings. Adjacent properties were examined from public areas for the presence of environmental conditions which have the potential to impact the subject property.

The subject property is bounded to the north by apartment buildings (across N. Marine Dr.), to the east by a large vacant property, an industrial sales business and a town car transportation business, and to the south and west by public roadways and interchanges and a city park (Delta Park) (see Figure 2).

No evidence of significant staining or stressed vegetation was noted on the ground surface on assessable properties adjacent to the site. No evidence of the storage of chemical or hazardous materials was identified on visible areas of adjacent properties.

6. INTERVIEWS

[redacted]

7. CONCLUSIONS

Based on the findings of this investigation, Parametrix concluded the following:

1. The subject property includes two separate Multnomah County Tax Lots: 1N1E03BB-01200 and 1N1E03BB-01300. The subject property currently includes a convenience store, a massage studio, a Union 76-branded filling station, a power steering repair shop, wireless communications tower, and a commercial sign shop.
2. Based on the historical review, the subject property was undeveloped land and cultivated farmland until the 1950s and 1960s, when two small, unidentified buildings appeared on the north parcel (tax lot 1200). The north building was first a store, then an automobile shop, and eventually a gas station, which was renovated into the current building in the early 2000s as a Union 76-branded gas station and a Plaid Pantry market. The south building on the north parcel was built in 1967 as a warehouse and later used as a truck repair shop until the 2010s. The building is currently a repair shop for automotive and truck steering systems.

   The current building appeared on the south parcel (tax lot 1300) in the early 1970s and was used as a non-specified repair shop. The building is currently a commercial sign shop. All of the buildings on the subject property were connected to septic holding tanks until they were connected to the municipal sewer system in the early 1980s.

   The surrounding areas were primarily undeveloped land, farmland, and small private residences until the 1960s and 1970s when industrial businesses began appearing to the north and south. The historical presence of a gas station and automotive repair businesses on the subject property are not identified as recognized environmental conditions (RECs) to the subject property based on results and recommendations from previous Phase II ESA investigations.
3. A Phase I ESA was previously completed for portions of this subject property in November 2023. This Phase I ESA provides an update to address an update to the boundary of the subject property.
4. A Phase II ESA was conducted in July 2024 and January 2025 for tax lot 1N1E03BB-01200. The 2024 Phase II ESA evaluated subsurface soil conditions and resulted in no detection for gasoline-, diesel-, and oil-range total petroleum hydrocarbons (TPH-g, TPG-d, and TPD-o, respectively) and volatile organic compounds (VOCs). The January 2025 Phase II ESA recommended the following: 1) Groundwater was not encountered during Phase II investigations. If dewatering for construction is necessary, groundwater samples should be collected for disposal purposes; and 2) No additional environmental investigation is recommended at this time.
5. Based on the age of the buildings, hazardous building materials (LBP, ACM, or PCBs) are potentially present in buildings located in tax lot 1300.
6. With the exception of the USTs at the gas station on tax lot 1200 and waste oil stored outdoors in containers on the Pro Steering site, no other evidence of significant use or storage of

hazardous substances or petroleum products was noted on or near the subject property. No evidence of distressed vegetation, spills or releases, dry wells, or other indications of environmental concern was identified during the site reconnaissance.

7. The north parcel of the subject property (tax lot 1200) is listed on several regulatory databases. The parcel is listed on the LUST regulatory database, which indicates a past release of gasoline that was discovered during tank decommissioning in 1992. Confirmatory soil samples showed contaminant levels below cleanup levels. The remedial action taken on the site resulted in the issuance of an NFA determination by DEQ.
8. An on-site reconnaissance was not conducted with a property representative to identify potential environmental conditions and to address information data gaps during the Phase I ESA process. The lack of a full on-site reconnaissance represents a data gap in accordance with ASTM Standard E1527-21. However, the information obtained for the Phase I ESA, including regulatory database and historical documentation, was deemed sufficient.
9. [redacted]

8. RECOMMENDATIONS

Based on the conclusions of this investigation of the subject property, Parametrix offers the following recommendation.

1. Follow recommendations provided in the 2025 Phase II ESA.
2. If the buildings on tax lot 1300 are to be demolished, it is recommended that a hazardous building materials survey be completed. If ACM, LBP, and/or PCBs are identified, they should be managed, handled, and disposed of in accordance with local, state and federal regulations.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL ---------- National Priority List
Proposed NPL ---------- Proposed National Priority List Sites
NPL LIENS ---------- Federal Superfund Liens

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY ---------- Federal Facility Site Information listing

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS ---------- Corrective Action Report

Lists of Federal RCRA TSD facilities

RCRA-TSDF ---------- RCRA - Treatment, Storage and Disposal

Lists of Federal RCRA generators

RCRA-LQG ---------- RCRA - Large Quantity Generators
RCRA-SQG ---------- RCRA - Small Quantity Generators
RCRA-VSQG ---------- RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

Federal institutional controls / engineering controls registries

LUCIS ---------- Land Use Control Information System
US ENG CONTROLS ---------- Engineering Controls Sites List
US INST CONTROLS ---------- Institutional Controls Sites List

Federal ERNS list

ERNS ---------- Emergency Response Notification System

Lists of state and tribal leaking storage tanks

INDIAN LUST ---------- Leaking Underground Storage Tanks on Indian Land

EXECUTIVE SUMMARY

Lists of state and tribal registered storage tanks

FEMA UST ---- Underground Storage Tank Listing
AST ---- Aboveground Storage Tanks
INDIAN UST ---- Underground Storage Tanks on Indian Land

State and tribal institutional control / engineering control registries

ENG CONTROLS ---- Engineering Controls Recorded at ESCI Sites
INST CONTROL ---- Institutional Controls Recorded at ESCI Sites

Lists of state and tribal voluntary cleanup sites

INDIAN VCP ---- Voluntary Cleanup Priority Listing

Lists of state and tribal brownfield sites

BROWNFIELDS ---- Brownfields Projects

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS ---- A Listing of Brownfields Sites

Local Lists of Landfill / Solid Waste Disposal Sites

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal Delisted NPL sites

Delisted NPL: The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may deleted from the NPL where no further response is appropriate.

A review of the Delisted NPL list, as provided by EDR, and dated 12/19/2024 has revealed that there is 1 Delisted NPL site within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Lists of Federal sites subject to CERCLA removals and CERCLA orders

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 12/19/2024 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 12/19/2024 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Lists of state- and tribal hazardous waste facilities

ECSI: The Environmental Cleanup Site Information System records information about sites in Oregon that may be of environmental interest. The data come from the Department of Environmental Quality.

A review of the ECSI list, as provided by EDR, and dated 04/16/2024 has revealed that there are 25 ECSI sites within approximately 1 mile of the target property.

Lists of state and tribal landfills and solid waste disposal facilities

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Department of Environmental Quality's Closure & Regular Solid Waste Active Disposal Permits database.

A review of the SWF/LF list, as provided by EDR, and dated 07/26/2024 has revealed that there is 1

SWF/LF site within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/16/2024 has revealed that there are 3 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 9 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there are

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto

site within approximately 0.125 miles of the target property.

Environmental Interest/Information System:

The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Updated By: KDANA
Updated Date: 11/19/2015
Decode for NarcdID: Contamination
NARR Comments: Site is suspected of petroleum releases to the subsurface. As part of Columbia Slough Area-wide Discovery (CSD) Project this site was noted due to the presense of soil borings found in Water Resources Department well log database. Site runoff or subsurface contamination could reach part of Columbia Slough via stormwater piping system. Site has received cleanup of USTs via DEQ UST program (26-92-0348) cited as ending in 1997. However, CSD project found investigation on the site initiated in 2000, in areas away from the main building, to the west.

Narrative:
NARR ID: 5743043
NARR Code: Contamination
Created By: JWAGGY
Created Date: 03/02/2003
Updated By: SFORTUN
Updated Date: 09/11/2009
Decode for NarcdID: Contamination
NARR Comments: (2/24/03 SMF/SAP) DEQ received four pollution complaints, (between 1991 - 1999) alleging that ongoing activities at the Former Schooner Creek Boat Works site were contaminating the Columbia River and nearby properties. Two other pollution complaints, received in May 1990 and March 1999, described oil sheens and petroleum odors from unknown sources on the Columbia River near the Former Schooner Creek Boat Works. Although the release characteristics were similar to those described in pollution complaints against the boat works site, there is no information to indicate that the source(s) of these petroleum releases were ever determined. A number of other potential sources are found in the immediate vicinity of the Former Schooner Creek Boat Works site. See DEQ January 24, 2003, Strategy Recommendation for specific pollution complaint history. (8/11/03 AC/C&ER) Site tested for VOCs, petroleum hydrocarbons and metals. Diesel, oil and lead were detected at concentrations above background. Sediment and groundwater have not been tested. (9/10/09;smf) EPA completed an SI of the site in August 2009. Site soils and Columbia River (North Portland Harbor / Oregon Slough) sediments were sampled and analyzed for metals, SVOCs, organo-chlorine pesticides, PCBs, and tributyltin in October 2008. EPA's data indicates that site soils are contaminated with metals, PAHs, PCBs, DDT, phthalates, and tributyltin at concentrations that represent a potential risk to on-site workers, to the adjoining residents, to on-site plants and wildlife, and to nearby aquatic life. Sediments in the site's boat dock area are contaminated with metals, PAHs, and DDT at concentrations that represent potential toxic and bioaccumulative threats to aquatic life.

Updated Date: 07/23/2003
Decode for NarcdID: General Site Description
NARR Comments: The subject site is an approximate 1 acre parcel in North Portland, along the western edge of the Interstate Highway (I-5) bridge over North Portland Harbor. The site has been the location of boat building, repair, and machine shop activities since about 1937. Schooner Creek Boat Works, a boat building and repair business, began operating at the site in 1989, but relocated its operations about 1 mile northwest, to the north shore of Hayden Island, In July 2000. However, it continued to lease the site through December 2001. DEQ s Northwest Region (NWR) Hazardous Waste program first referred the site to Site Assessment in April 2002 for investigation of a pollution complaint. Mermaid Marine had recently begun leasing the site, but became involved in an extensive cleanup of wastes and debris that Schooner Creek Boat Works allegedly left behind when they vacated the site.

Created Date: 03/02/2003
Updated By: SFORTUN
Updated Date: 09/11/2009
Decode for NarcdID: Hazardous Substance/Waste Types
NARR Comments: Existing information suggests that site soils and nearby Columbia River Sediments may be contaminated with copper oxide, paint thinner, and heavier petroleum constituents such as polynuclear aromatic hydrocarbons (PAHs). Considering the types of activities conducted at the site, and the length of time that these activities were conducted, other potential site contaminants might include: Organotins, other potential toxic metals (such as arsenic, lead, cadmium, chromium, mercury, and zinc), volatile organic contaminants (VOCs), semi-volatile organic contaminants (SVOCs), and possibly polychlorinated biphenyls (PCBs). (9/11/09; smf) A 2008/2009 EPA SI found that site soils are contaminated with metals, PAHs, phthalates, PCBs, DDT, and tributyltin at concentrations that represent potential risks to on-site workers, adjoining residents, on-site plants and wildlife, and nearby aquatic life. Sediments in the site's boat dock area are contaminated with metals, PAHs, and DDT at concentrations that represent potential toxic and bioaccumulative risks to aquatic life.

Decode for NarcdID: Site Ownership
NARR Comments: (9/12/07 smf) Multnomah County Tax Office currently lists the property (site) owner as Oliver C. Larson Trust, 8320 NE Highway 99, Vancouver, WA 98665. Oliver C. Larson died September 9, 2002. The mailing address is that of Tigard Plaza, tele. 360-566-8192. The Registrant for Tigard Plaza is Tigard Plaza LLC, and Authorized Representative is Milton O. Brown. Milton O. Brown is also the Manager of Tigard Plaza.

NARR Comments: (9/10/09;smf) EPA completed an SI of the site in August 2009. Site soils and Columbia River (North Portland Harbor / Oregon Slough) sediments were sampled and analyzed for metals, SVOCs, organo-chlorine pesticides, PCBs, and tributyltin in October 2008. EPA's data indicates that site soils are contaminated with metals,

1610 NORTH PIER 99 ST. (Continued) **S106655861**

PAHs, PCBs, DDT, phthalates, and tributyltin at concentrations that represent a potential risk to on-site workers, to the adjoining residents, to on-site plants and wildlife, and to nearby aquatic life. Sediments in the site's boat dock area are contaminated with metals, PAHs, and DDT at concentrations that represent potential toxic and bioaccumulative threats to aquatic life.

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: The site is located in a narrow, isolated strip of industrial properties on the south bank of North Portland Harbor, along North Marine Drive. The area between North Portland Harbor on the north, I-5 on the east, Columbia Slough on the south, and a Burlington Northern Santa Fe Railroad right-of-way on the west comprises Peninsula Drainage District #1. The entire site lies within the Columbia River s 100-year flow zone, so flood waters could mobilize any surface contamination at the site. The nearest residence evidently shares the same tax lot as the site. North Portland Harbor and I-5 should limit potential exposures for most upland residences, except for potential exposures at the on-site residence. There are approximately 200 houseboats moored along the north shore of the North Portland Harbor, within .5 mile of the site. It is unclear if site contaminants would significantly affect residents at the nearby houseboats. The Multnomah County Fairgrounds and Exposition Center lied southwest of the site, directly across North Marine Drive. East Delta Park, a municipal park, lies about .25 mile south-southeast of the site. The Portland International Raceway lies about .5 mile south-southwest of the site. Heron Lakes Golf Club, a municipal golf course, lies about .25 mile southwest of the site. In addition, Jantzen Beach Supercenter shopping center lies directly across North Portland Harbor from the site. In August 2001, Metro hired a consultant to advance five pushprobe soil borings 100 to 200 feet south of the site. These borings encountered groundwater at 7 to 16 feet below ground surface (bgs), suggesting that any potential contaminants at the boat yard site could represent a threat to nearby drinking water wells, and that potential shallow groundwater contamination could represent a threat to aquatic life in North Portland Harbor. Wetlands areas directly to the south of the site attract populations of sensitive wildlife species to the area. A major heronry is also located about 1 mile from the site. Site contaminants could represent a threat to sensitive wildlife and plant species within the drainage district. Along the 1610 North Pier 99 Street site, the Columbia River provides migratory and rearing habitat for twelve sensitive anadromous fish species.

1610 NORTH PIER 99 ST. (Continued) **S106655861**

NARR Comments: (2/24/03 SMF/SAP) The site has a lengthy operational history, and DEQ has received multiple complaints alleging releases or improper handling of hazardous substances at the site. A high priority is assigned for conducting an Expanded Preliminary Assessment (XPA) of the site. Site soils, groundwater, and nearby Columbia River sediments should be sampled for toxic metals, VOCs, SVOCs, and PCBs to determine if past activities may have significantly contaminated the site and surrounding environment. (8/21/03 AC/C&ER) A preliminary investigation confirms the presence of petroleum hydrocarbons and metals in site soils. Site sediment must still be evaluated. [10/21/13 SA/SAM] A Site inspection Report was prepared in 2009. Sample results for the sediment samples collected from below the Pier 99 docks indicated the presence of one TAL metal at a significant concentration with respect to background concentration. No organotins, pesticides/PCBs, SVOCs were detected at significant concentrations with respect to background concentrations. Site soils contained sources of CERCLA hazardous substances. EPA completed an EE/CA on June 13, 2013. The site was divided up into 4 operable units: - Operable Unit 1 Bank Area - Operable Unit 2 Eastern Solid Waste Storage Area (Eastern Unimproved Area) - Operable Unit 3 Gravel Filter Area and Upland Boat Maintenance Repair Area - Operable Unit 4 Former Crane Area Based on the results of this EE/CA, the recommended removal actions for the Site are OU3 Gravel Filter Removal and stormwater Pipe Removal and OU1 Bank Stabilization(which included some debris removal and sand blast grit removal). The OU 2 elevated area coresponded with the OU3 discharge area and is addressed in this action. An OU 4 data gap investigation indicate that removal is not needed for the former crane area soil or groundwater at the site. Onsite work by EPA started Sept 1, 2013. For more details, visit

10/10/2013 all initial removal and restoration activities at the Pier 99 site were completed. [6/26/14 SA/SAM] Additonal removal at two locations(REX-16 and RAC-2) will occur in June 2014. EPA will perform a one-year monitoring and maintenance review. [10/22/14 SA/SAM]Additional removal was completed at the burn area on June 30 and July 2, 2014. As much as 3.5 feet of ashy soil was removed along a 15 foot length at the base of the slope. Because a significant portion of the bank was exposed during the excavation, EPA agreed that further excavation could jeopardize the stability of the bank, and excavation could be stopped. The area at the toe of the slope was reinforced with Envirlok vegetated sand bags installed at approximately a 1:1 slope. The two foot soil cover requirement was met at the toe of the bank, but could not be met further up the bank on the steep slope. Up the slope only 18-20inches of soil cover was placed. The EPA will require Post-Removal Site Controls, including monthly inspections, prohibit any activity that damages or disturbs the integrity of the cover and restoring the integrity of the cover if it is jeopardized in any way. [5/19/20 SA/SAM] The 2015 Monitoring report(year 2), indicated bank conditions were stable; grass covered the bank and no ground distrubances occured. 2016 and 2020 monitoring reports demonstrated the bank continues to be covered with grass. Based on review of the previous removal action and project files, the DEQ Cleanup program is concerned that sediment adjacent to the North Pier 99 site has not been adequately characterized and may be contaminated above levels of concern to human health and the environment. In particular, there is no data for Columbia River

1610 NORTH PIER 99 ST. (Continued) **S106655861**

sediments between the bank and the area sampled near the docks.

Decode for NarcdID: Health Threats
NARR Comments: The nearest residence evidently shares the same tax lot as the site. North Portland Harbor and I-5 should limit potential exposures for most upland residences, except for potential exposures at the on-site residence. There are approximately 200 houseboats moored along the north shore of the North Portland Harbor, within 0.5 mile of the site. Nearly 80% of these are located either directly across the harbor, or downstream from the boat works site. The Multnomah County Fairgrounds and Exposition Center lies southwest of the site, directly across North Marine Drive. East Delta Park, a municipal park, lies about 0.25 mile south-southeast of the site. The Portland International Raceway lies about .5 mile south-southwest of the site. Heron Lakes Golf Club, a municipal golf course, lies about 0.25 mile southwest of the site. In addition, the Jantzen Beach Supercenter (shopping center) lies directly across North Portland Harbor from the site. In August 2001, Metro hired a consultant to advance five pushprobe soil borings 100 to 200 feet south of the site. These borings encountered groundwater at 7 to 16 feet below ground surface (bgs), suggesting that any potential contaminants at the boat yard site could represent a threat to nearby drinking water wells, and that potential shallow groundwater contamination could represent a threat to aquatic life in North Portland Harbor. City records indicate that the on-site residence is serviced by the Portland municipal water supply. The city also has supplemental supply wells along the Columbia River south shore, 6 to 11 miles east of the site, as well as four supplemental supply wells on Hayden Island. Two of the Hayden Island wells lie about 1,200 feet north of the site, directly across North Portland Harbor. The nearest municipal water supply wells lie across North Portland Harbor, a 1,000-foot-wide, 20 30 foot deep channel of the Columbia River, and may be about 225 250 feet deep, so it remains unclear if site contaminants represent a significant threat to the city drinking water supply. OWRD also has records of three community or group-domestic wells, one public water supply well, and five domestic wells within 1.25 miles of the site.

NARR Comments: RP moving aggressively to remove free product from ground and define extent of plume. 10/20/93 - RP is continuing independent cleanup. (10/25/93 GMW/SAS) Further action letter sent. (11/10/97 LSK) Site re-evaluated as part of review of all sites within the Columbia Slough Study Area. PAE recommended, under medium priority. (4/13/99 ACV/VCP) RP entered the Voluntary Cleanup Program in January 1999 to obtain DEQ review of existing file information. RP has conducted independent groundwater investigation and product recovery. DEQ file memo expected in April 1999. (1/7/00 ACV/VCP) VCP coordinated review of all UST and cleanup issues in 1999, and issued an NFA for environmental issues (with UST concurrence) in January 2000.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

NARR Comments: (12/5/2001 DGA/SRS) Dry-cleaning facilities have operated at the site since the mid-1970s. A preliminary environmental assessment in November 1994 identified four floor drains within the facility, three of which yielded a positive reading on a photoionization detector. In August 1995, four Geoprobe borings were advanced at the site to see if PCE had been released to the soil or groundwater. PCE was detected in soil gas (up to 75 ppm) and groundwater (up to 780 ug/L) in all four boreholes. It appears that PCE may have been released down the floor drains at the site, leaking into the soil through cracks in the sanitary sewer lines. Tidal fluctuations in the shallow groundwater may have spread the contaminants across the site. Hayden Island Cleaners applied to DEQ's Dry Cleaner Program in January 1997, and was accepted in February 1997.

NARR Comments: The City of Portland owns four deep production wells on Hayden Island, two of which are within 600 feet of the site. Since 1988, Bull Run water has been provided for residents and businesses on Hayden and Tomahawk Islands, and the wells are currently designated for backup fire suppression only. Three of the four wells are contaminated with low levels of TCE and PCE; however, the contamination is thought to be unrelated to Hayden Island Cleaners. Because of the site's proximity to the Columbia River, surface water was another potential pathway of concern. But the contamination does not appear to have reached either the river or the deeper aquifer.

HAYDEN ISLAND CLEANERS (Continued) **S104329423**

NARR Comments: (12/5/2001 DGA/SRS) DEQ retained Jacobs Engineering to conduct an expanded Preliminary Assessment (XPA) at the site in August 1997. As part of the XPA, three monitoring wells were installed, and soil and groundwater samples collected. PCE was detected in soil samples (up to 267 ug/kg) and groundwater samples (up to 1,230 ug/L) from all three wells. The XPA report was completed in June 1998. DEQ retained Ecology & Environment (E&E) to follow up with a focused Site Investigation in August 1998. Additional groundwater monitoring wells were installed at the site and on adjacent properties. In addition, a pumping test was conducted at the secondary municipal wells (backup fire suppression wells) to determine if there was any connection between the shallow and deep aquifers. No connection was established. The Site Investigation report was completed in March 1999. In May 1999, DEQ injected Hydrogen Releasing Compound (HRC) into the shallow groundwater to accelerate the natural biodegradation of the PCE. Monitoring over the next couple of years showed that the HRC was successful in stimulating degradation of the PCE. DEQ formally notified the site owners and operators in December 2001 that no further cleanup of the site was necessary.

Decode for NarcdID: Contamination
NARR Comments: Stormwater quality data collected twice since June 2002 indicate that the facility meets DEQ's stormwater benchmark values, although concentrations of copper and zinc in site stormwater exceeded the National Recommended Water Quality Criteria's respective Freshwater Critical Maximum Concentrations, DEQ's respective Freshwater Acute Toxicity Criteria, and DEQ's Level II Ecological Risk Assessment Screening Benchmark Values for freshwater aquatic life. Between 1990 and 2001, DEQ received nine Pollution Complaints and six Spill Reports associated with potential hazardous substance releases at the Diversified Marine facility, or petroleum sheens present on the river directly adjacent to the facility. Five of the Pollution Complaints and one of the Spill Reports involved fugitive dust emissions associated with sandblasting operations at the site. There is concern that sandblasting of boat hulls at the site could have released paint chips and toxic metals at concentrations that could represent a threat to the river s aquatic life, or otherwise accumulated in the river s sediments. Two other Spill Reports and another Pollution Complaint involved petroleum sheens of unknown origin on North Portland Harbor adjacent to the site. One additional 1998 Spill Report and simultaneous Pollution Complaint were associated with a petroleum release at the site that drained across N Marine Drive onto state highway property located 200 yards from the site. Diversified Marine s record of Pollution Complaints and Spill Reports suggests that on-site activities could have contaminated site soils and nearby Columbia River sediments with any of a variety of boat building, maintenance, and repair related contaminants, including toxic metals and paint chips containing toxic metals such as copper oxide, organotins, lead, cadmium, chromium, mercury, and zinc; petroleum constituents such as BTEX (benzene, toluene, ethylbenzene, toluene) and polynuclear aromatic hydrocarbons (PAHs); and other potential organic contaminants such as, phthalates, pentachlorophenol, chlorinated solvents, and possibly polychlorinated biphenyls (PCBs). (1/13/10 CWH/CU) The march 2009 Preliminary Assessment produced by Ecology and Environment for EPA Region 10 noted that, based on comparison to immediate upstream sediments, that the sediment sample (CR05SD) collected just downstream/adjacent to DMI <quot>indicates that DMI is contributing to copper, lead, and zinc contamination in the river.<quot> DEQ feels it is important to note that with the exception of copper, none of the detected metals, while elevated locally, exceed DEQ freshwater sediment SLVs. It is also important to note that the CR05SD sample was collected at a location that was not

DIVERSIFIED MARINE INC (Continued) **S108659504**

near where DMI stormwater runoff or working areas might be expected to be impacted.Similarly, PAH sediment data for CR05SD shows locally elevated concentrations of PAHs, but none above DEQ SLVs. PCBs were non-detect for CR05SD, but detection limits (41-45 ppb) were above DEQ SLVs. To summarize - the CR05SD sediment sample collected on behalf of EPA in October 2008 does indicate releases are likely to have occurred from the DMI site, but there were no samples collected in locations that would be suspected as release points.

Decode for NarcdID: General Site Description
NARR Comments: The subject site is an approximate 0.8 acre parcel in North Portland, on the south shore of North Portland Harbor, about 500 feet west of the Interstate Highway 5 (I-5) bridge over North Portland Harbor. Work is performed within an onshore building, on vessels moored at the site, and in a 200-ton floating dry dock at the site. North Marine Drive and North Pier 99 Street are located along the site s southern boundary. A paved parking lot for the Multnomah County Fairgrounds and Exposition Center lies directly across North Marine Drive, 100 to 300 feet south and southwest of the site. Hayden Island is across North Portland Harbor, about 1,000 feet north of the site.

NARR Comments: Although DEQ has records of known and suspected hazardous substance releases at the site, there is no indication that environmental sampling has ever been conducted at the site. Because of an abundance of nearby receptors (nearby wetlands, community drinking water wells, Critical Habitat for Threatened and Endangered fish), a high priority has been assigned to conducting an expanded Preliminary Assessment of the site.

NARR Comments: Fugitive dust emissions associated with sandblasting of boat hulls at the site could have released paint chips and toxic metals at concentrations that could represent a threat to the river s aquatic life, or otherwise accumulated in the river s sediments. Petroleum sheens of unknown origin have been reported on North Portland Harbor

DIVERSIFIED MARINE INC (Continued) **S108659504**

adjacent to the site. A historic petroleum release at the site was also reported to have drained across N Marine Drive onto state highway property located 200 yards from the site. Since Diversified Marine site activities include machine shop activities, bilge removal, and boat and equipment refueling activities, it may not be unreasonable to suspect that some of the petroleum contamination observed in the river channel could have originated from on-site activities. Such releases could represent a threat to the river s aquatic life, or otherwise have accumulated in river sediments.

DIVERSIFIED MARINE INC (Continued) **S108659504**

NARR Comments: There is concern that site activities may have contributed contaminants to on-site soils and shallow groundwater, as well as in Columbia River surface water and sediments. Soil contaminants could represent a health threat for on-site workers or utility trench workers. North Portland Harbor (the Columbia River; Oregon Slough) forms the site's northern boundary; the entire site lies within the river's 100-year flood zone. The Columbia River is migratory and rearing habitat for eleven varieties of Threatened or Endangered salmonids. The Columbia Slough lies about 1 mile south of the site. The area between North Portland Harbor on the north, I-5 on the east, Columbia Slough on the south, and a Burlington Northern Santa Fe Railroad right-of-way on the west comprises Peninsula Drainage District No. 1. Most of the drainage district is publicly owned wetlands. Wetlands areas directly south of the site attract populations of sensitive wildlife species to the area. Metro has designated much of Peninsula Drainage District No. 1 as important wetlands or wildlife Habitats of Concern, or regionally significant riparian corridors. Migratory waterfowl and songbirds have been observed within the drainage district, as well as a variety of other sensitive and Threatened and Endangered wildlife species. Sensitive and Threatened plant species may also be present within the wetlands. Site contaminants could represent a threat to sensitive plant and wildlife species within the wetlands. The nearest residence is located on a tax lot at the site's eastern boundary. Other residences are located across I-5, about 0.3 mile east-southeast of the site, and across North Portland Harbor, about 0.4 mile northeast and 0.5 mile north-northwest of the site. Oregon Water Resources Department (OWRD) has records for three community or group-domestic wells, one Public Water Supply well, and five domestic wells within 1.25 mile of the site. The nearest is a 261 foot well installed at Kernan Village in 1958 to supply drinking water for a store, service station, apartment building, and trailer park. The well is believed to be located about 600- to 900 feet south-southwest of the site. Kernan Village no longer exists; its well may now be located either within the current I-5 / North Marine Drive cloverleaf interchange, or within the county fairgrounds paved parking area. It seems unlikely that the well is still being used or even still exists, although OWRD has no record to indicate that the well was formally decommissioned. The City of Portland has supplemental Municipal Supply Wells along the Columbia River south shore, 6- to 11 miles east of the site, as well as four supplemental supply wells on Hayden Island. Two of the Hayden Island wells lie about 1,200 feet north of the site, directly across North Portland Harbor. These wells lie across North Portland Harbor, a 1,000 foot wide, 20- to 30 foot deep branch of the Columbia River, and may be about 225- to 250 feet deep. Several nearby public facilities draw substantial numbers of people to the area. The Multnomah County Fairgrounds and Exposition Center lie southwest of the site, directly across North Marine Drive. East Delta (municipal) Park lies about 0.25 mile south-southeast of the site, across I-5. The Portland International Raceway lies about 0.5 mile south-southwest of the site. Heron Lakes (public) Golf Club lies about 0.25 mile southwest of the site. Jantzen Beach Supercenter shopping center lies directly across North Portland Harbor from the site.

NARR Comments: (10/19/04 AC/ER&CU) Site status on hold. Responsible party (RP) unwilling to join the Voluntary Cleanup Program or perform an Expanded Preliminary Assessment (XPA). Principle concern is that potential site contaminants in sediments could pose a threat to Columbia River ecological receptors. Insufficient evidence to require sediment sampling in the Columbia River. Project on hold pending available orphan funds or willing responsible party. [3/20/15 SA/SAM] An Abbriviated Preliminary Assessment was finalized by EPA through its contractor E&E on May 14, 2009. EPA also performed a SI in 2009 at a neighboring property(ECSI#3526 1610 N Pier 99) downstream samples indicates releases are likely to have occurred from the DMI site, but there were no samples collected in locations that would be suspected as release points for this facility. No Further Remedial Action Planned under Federal program was designated in 2010. A Site Investigation is recommended under state supervision.

NARR Comments: Also known as Portmarco, Inc., and Whitecap Cove, Inc. (both active entities, same president, same secretary, same business address, same mailing address) (different registered agent for Whitecap Cove). The company has conducted tug boat and barge building, repair, sandblasting, painting, machine shop, bilge removal, and boat and equipment refueling activities at the site since at least 1990 - possibly as early as 1986. Between 1990 and 2001, DEQ received five Pollution Complaints and one Spill Report about the facility's sandblasting and painting operations, and releases of paint chips to the river. Additional complaints have been received for petroleum flowing southward, off-site from the site, and for petroleum sheens on the river from unknown sources near the facility.

Incident Narrative: STATE HAZMAT TEAM 6 FROM PFB CALLED BY PORTLAND DVD TO 1801 N MARINE

DIVERSIFIED MARINE INC (Continued) **S108659504**

DR. SUSPECTS HAD DUMPED DRUG LAB WASTE AND SUPPLIES IN A PARKING AREA NEAR A ROADWAY. THE SUSPECTS HAD BEEN ABOARD A NEARBY 60 FOOT YACHT AND THERE WAS A STRONG CHEMICAL SMELL COMING FROM THE BOAT. THE TEAM ARRIVED AND CONFERRED WITH DVD OFFICER IN CHARE SGT HENDRICKS DETERMINING HOT ZONE AND NEEDED SETUP. THERE WERE THREE BACKPACKS AND A DUFFEL BAG IN THE PARKING LOT. UNKNOWN NUMBER OF SAMPLES TO BE TAKEN. TWO DVD OFFICERS WERE SUITED UP IN LEVEL B WITH SCBA- ALL PERSONNEL WORE LIFE PRESERVERS DUE TO THE PROXIMITY TO THE COLUMBIA RIVER. THE TWO OFFICERS WERE: DORIS PAISLEY (#BPSST UNK) AND BILL SHAW (#28923). SHAW SUITED UP AND WENT WITH HENDRICKS DOWN THE DOCK TO "CLEAR" THE YACHT OF ANY POTENTIAL TWO-LEGGED THREATS. SHAW FOUND ONE CONTAINER OF LIQUID AND TOOK A SAMPLE FROM IT FOR EVIDENCE. FB 17 WAS CALLED TO THE SCENE TO EVALUATE MOVING THE YACHT TO A SAFER LOCATION FOR EVIDENCE TAKING, BUT THAT PROVED UNNECESSARY. PAISLEY AND SHAW TOOK A TOTAL OF 12 SAMPLES FROM THE BACKPACKS AND DUFFL BAG. THEY ENTERED THE HOT ZONE AT 1559 HOURS AND EXITED AT APPROX 1702 HOURS FOR DECON. HM TEAM SET UP EVIDENCE COLLECTION TABLE AND MATERIALS FOR DVD - PROVIDE DECON.

Environmental Interest/Information System:
The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and

MARKET TRANSPORT LTD (Continued) **1004770051**

reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

Updated By:	CHARMAN
Updated Date:	07/29/2004
Decode for NarcdID:	Contamination

NARR Comments: Area around site has been extensively investigated and the past activity has not been evaluated as part of DEQ Cleanup program. As part of Columbia Slough Area-wide Discovery Project this site was noted due to the presense of soil borings found in Water Resources Department well log database. Site runoff or subsurface contamination could reach part of Columbia Slough or location wetlands via stormwater drainage system.

NARR Comments: (CWH/SA 6/5/08) Petroleum releases from leaking underground storage tanks were remediated under the oversight of DEQ's Leaking Underground Storage Tank (LUST) program (DEQ LUST Program #26-98-1028). A no further action determination under LUST Program was issued January 10, 2001. Site was erroneously cross listed in ECSI by Site Assessment. This error was corrected by noting an NFA on June 6, 2008.

NARR Code: Contamination
Created By: Not reported
Created Date: 12/17/2002
Updated By: Not reported
Updated Date: 12/17/2002
Decode for NarcdID: Contamination
NARR Comments: The City of Portland discontinued sewer service to Redi-Strip 8/84 because of violations of discharge limits to the City system. The owner of the business (Jim Davis) installed a wastewater treatment vault 10/84, and reconnected to the city system without prior authorization. The city renewed the permit, then revoked it 12/84. City inspectors replugged the sewer. Inspectors noted 3/85 that the plug had again been removed and that the company had been operating as before. The city again plugged the sewer. DEQ made a 4/85 compliance inspection for hazardous waste, in response to numerous complaints. Samples of various materials were taken to characterize the waste. A sample of sludge from the adjacent property contained lead with an EP Tox concentration of 170 mg/L and chromium with 7.1 mg/L. This material had moved from Redi-Strip's property. A sample of an accumulation of dried sludge on the ground adjacent to barrels of waste contained lead with an EP Tox concentration of 25 mg/l. A five-day notice was issued by DEQ 12/85. Jim Davis left the operation in 1986 and was assessed a $2,500 judgement for unauthorized disposal of hazardous waste. Fourteen inches of topsoil were allegedly removed from one area of the facility.

NARR Comments: Soil and groundwater at the site have been contaminated by surface releases. Surface releases also entered the stormwater system via a local drain. The site storm drains discharge to the Multnomah County Drainage District Ditch which goes eventually to the Columbia Slough. The sediments in the ditch have been contaminated with metals, cyanide, and petroleum.

NARR Comments: (LSK 10/17/97) Site reevaluated as part of review of all sites within the Columbia Slough Study Area. The site has a history of discharging excessive quantities of zinc, chromium and lead to the City of Portland sewer system and then discharging wastewaters to site soils and ditches that drained to the Slough when the City discontinued sewer service to the site. Sediment sampling in the Slough in general has shown high levels of lead and chromium. (4/28/99 DAB/SRP) Phase I

REDI-STRIP OF OREGON (Continued) **S103303303**

of the RI has been completed. DEQ did not approve the workplan for Phase II of the RI. (5/1/00 DAB/SRP) Following Mr. Sullivan's refusal to perform additional work, DEQ issued an enforcement order (April 2000) for a remedial investigation and feasibility study. Mr. Sullivan has agreed to perform the RI/FS. (9/27/00 DAB/SRP) The RI proposal and RI workplan have been approved by DEQ. Field work was completed in July 2000. (4/6/01 DAB/SRP) A draft remedial investigation report was submitted in January 2001. (11/25/01 RKW/SRP) In October 2001, storm drain was cleaned out and additional samples were collected from groundwater monitoring wells. (11/4/02 RKW/SRP) Sediment contaminated with lead, zinc, chromium, and cyanide was removed from storm drain ditch downstream of the site. Confirmation samples collected following sediment removal indicate that lead, chromium, zinc, cyanide, and petroleum contamination remains in ditch sediments. The Multnomah County Drainage District controls the ditch and has plans to widen it for flood mitigation in 2004. They are aware of contamination and plan to remove a large quantity of sediment. Redi-Strip will collect additional samples after ditch widening. (9/26/03 RKW/SRP) Sediment samples from the ditch were collected in fall 2005. Results show diesel and oil up to 36,600 mg/kg, chromium up to 115 mg/kg, cyanide up to 3 mg/kg, lead up to 212 mg/kg, and zinc up to 794 mg/kg. Due to the large volume of sediment that must be removed and associated cost, the work will be delayed until summer 2006. (11/23/05 RKW/SRP) Ditch cleanout delayed.

NARR Comments: (Bob Schwarz, Mar. 11, 2014) Anderson Portland Properties purchased the site in 1975. Tenants since that time have included a roofing equipment and supplies company, Trojan Manufacturing, Power-Serv, Pro-Trucks, Armack, Olson s Mobile Tractor Service, and Motors & Controls Company. The site is currently owned by Webster Family, LLC and the current tenant is Potter Webster Company. The site currently is used for truck and trailer repair and service. Soil, groudnwater and stormwater were tested between 2007 and 2013. DEQ determined that contaminant concentrations do not exceed acceptable risk levels. A No Further Action determination was issued for the site on March 6, 2014. A copy of the NFA letter and the staff report in support of this decision are attached.

Decode for NarcdID: Contamination
NARR Comments: Site is suspected of petroleum releases to the subsurface. As part of Columbia Slough Area-wide Discovery Project this site was noted due to the presence of soil borings found in Water Resources Department well log database. Site runoff or subsurface contamination could reach part of Columbia Slough via stormwater piping system. (8/3/04 CWH/SAP) Site cleanup was completed under DEQ's UST program.

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: [5/22/13 SAM/SA] Soil contact to occupational workers, construction and excavation workers could be a potential pathway of concern. Stormwater and soils could be deposited in nearby wetlands at concentrations that could pose an ecological concern.

Updated Date: 05/22/2013
Decode for NarcdID: Remedial Action
NARR Comments: [5/22/13 SAM/SA] Prior investigations in the late 1980s/early 1990s found metals, TPH and VOC contamination generally below human health risk based concentrations in site soils and groundwater(except for TCE/PCE which is found in groundwater area wide), but elevated from background concentrations. Sources of the elevated soils are unknown and the true nature and extent of contamination has not been adequately determined. Several spills have occurred on site since 1994 with no record of cleanup provided to DEQ. DEQ Site Assessment recommends the following activities be performed at the site to help clarify site risk and priority for further action. Based on the results of a DEQ site assessment prioritization scoring, the priority for further action is medium. Soils o Prior characterization of waste disposal piles (potential dump area found elevated concentrations of metals. SVOCs were never analyzed, even though PID readings were elevated. SVOCs and metals should be examined further in the waste disposal pile area. o Characterize the full magnitude, nature, and extent of contamination in subsurface soils in the backfilled retention pond. Prior work showed elevated concentrations of petroleum constituents. o Determine if spills were adequately cleaned up; particularly the 1994 diesel spill, 1997 unknown solvent spill and 2005 CCA spill. o Characterize areas where any historic Harbor Oil releases that may have migrated to the site, particularly if a change of land use is considered. Stormwater drainage for the site should be mapped to determine where runoff is directed after entry to the vegetated strip in center of the parking area s southern boundary. If stormwater is directed towards wetlands, additional sediment characterization and source control evaluation may be needed. Groundwater- the southern extent of PCE/TCE groundwater contamination present on the adjacent northern properties (Stockyards Commerce Center #5695) should be defined in the Bulk Transport area.

NARR Comments: Contaminants in site soils groundwater could represent a potential threat to aquatic life in the Columbia River, wildlife and aquatic life in nearby wetlands, and/or other users of groundwater and surface water in the immediate vicinity of the site. Water quality in the Columbia River is already impaired. The Columbia River is used for recreational and commercial fishing, as well as other recreational purposes. It also provides Critical Habitat for threatened and endangered fish species. The river and nearby wetlands also provide important habitat for other sensitive species such as protected migratory bird species, sensitive amphibian, reptile, and plant species, and food resources for sensitive aquatic and terrestrial species.

NARR Comments: [5/22/13 SAM/SA] The property was developed in the 1940 s as an on-site fertilizer yard that received manure produced at the nearby stockyards. J.W. Fertilizer, a commercial fertilizer and soil additive facility was operating on the eastern portion of the site during the 1970 s until 1990. Since about 1995, Bulk Transportation / DTI a chemical transport company uses the site as a satellite trucking terminal. Liquids, gases, chemicals, and hazardous materials are unloaded from rail cars and trucked to their final destination. Other services include product mixing, liquid bulk storage, tank containers, and warehousing. The western portion of the site is an undeveloped 6acre wetland

Release Date: 09/13/2005
Description: Bulk Transport spilled 10 gallons of a product called CCA which contains Arsenic Acid to asphalt. They have applied absorbent materials and boomed off the area. US Environmental is on-scene.
Lat/Long: 45.6065 / -122.6926
Source: Business
Media: On pavement/asphalt - not direct on soil
Responsible Company: Bulk Transport
Responsible Address: 11619 N Force Ave
Responsible City,St,Zip: Portland, OR 97217-7703
Unknown Quantity Released: Not reported
Maximum Potential Quantity: Not reported
Quantity Recovered: Not reported

Name: Not reported
Address: 11619 N FORCE AVE
City,State,Zip: PORTLAND, OR 97217-7703
Facility ID: 2005-2160
Incident Status: Archive
Material: Products, manufacturing intermediates, etc.
Quantity: 10
Unit of Measure: Gallons
Release Date: 09/13/2005
Description: Bulk Transport spilled 10 gallons of a product called CCA which contains Arsenic Acid to asphalt. They have applied absorbent materials and boomed off the area. US Environmental is on-scene.

NARR Comments: This unregulated landfill was located in a seasonal lake basin and probably operated between 1950 and 1970, when it was covered by a 7 to 8-foot layer of clean fill. An ARCO facility that opened in 1971

HAYDEN ISLAND LANDFILL (Continued) **S103842510**

at the eastern edge of the former landfill initiated an investigation in 1989 that showed gasoline contamination in groundwater. Borings also revealed a layer of landfill debris beneath clean fill. DEQ's LUST program (file #26-89-0149) requested a Corrective Action Plan from ARCO, leading to pump-and-treat remediation that began operating 8/90. Groundwater samples from eight monitoring wells contained dissolved metals, which are most likely a result of leachate percolating through unknown solid wastes in the unsaturated zone. Because of system fouling from these metals, the treatment program was shut down in May 1991.

NARR Comments: In June 1993, ARCO concluded that it was not possible to remediate benzene in groundwater without first removing dissolved metals. ARCO maintained that it had no responsibility for the metals. The LUST section may continue to require regular monitoring as a part of <quot>conditional closure.<quot> Potential pathways of exposure appear limited to groundwater and surface water. Because more information is needed about the landfill and its levels of contamination, Site Assessment recommends that affected property owners characterize contamination in and below the former landfill. Otherwise, a PA should be completed to investigate the site's history and to evaluate potential exposure pathways, under a low priority. Confined space methane testing was performed by PBS for the Hayden's Corner property. The only significant methane was found at two bathroom floor drains where the likely source was sewer gas. Three soil gas samples were collected from borings around the former ARCO site as part of the investigation of the Hayden's Corner property (ECSI #5711). Methane at 2% was found near the former waste oil but this could have been from residual petroleum contamination. Other samples showed only trace methane.

basin and probably operated between 1950 and 1970, when it was covered by a 7 to 8-foot layer of clean fill. An ARCO facility that opened in 1971 at the eastern edge of the former landfill initiated an investigation in 1989 that showed gasoline contamination in groundwater. High concentrations of metals were also found. Borings revealed a layer of landfill debris beneath clean fill. The Hayden's Corner property (former ARCO site) was split off from the greater landfill site with a separate ECSI number (#5711). Another site was investigated in the Hayden Island Landfill area in 2016/17 (1445 and 1463 N. Hayden Island Drive). These properties' recent use was commercial, and not expected to lead to contamination. Groundwater below the properties is contaminated with TPH and metals, particularly arsenic, barium, lead, silver, and mercury.

NARR Comments: Methane and other atmospheric gases were measured in confined spaces inside the site buildings using a handheld meter in May 2011. Methane at levels from 1.5 to 5.5% was detected at the drains of two restrooms. This could be related to sewer gas from leaking drain traps. Little or no methane was detected in any other confined space locations within the buildings. In May 2012 three borings were arrayed around the property and one included the location of a former leaking waste oil tank from the prior gas station. Borings were sampled for methane using a handheld meter as well as summa canister sampling. VOCs samples were also collected using a summa. The maximum methane detection was around 2% in one hole (near the former waste oil tank) and near zero in other holes. Various VOCs (largely associated with petroleum) were found at generally low concentrations. No VOCs were found at concentrations greater than commercial risk-based concentrations. In July 2012 a plumber was hired by site owner to inspect and correct any problems with the bathroom drains/traps. No Further Action determination in August 2012. The determination applies only to the immediate Hayden's Corner site and not to the greater Hayden Island Landfill (ECSI #1559).

NARR Comments: An ARCO service station that operated on the property starting in 1971 initiated an investigation in 1989 that showed gasoline contamination in groundwater. Borings also revealed a layer of landfill debris beneath clean fill. The property is apparently located within the footprint of the former Hayden Island Landfill, an unregulated landfill that was located in a seasonal lake basin and probably operated between 1950 and 1970, when it was covered by a 7 to 8-foot layer of clean fill. DEQ's LUST program (file #26-89-0149) requested a Corrective Action Plan from ARCO, leading to pump-and-treat remediation that began operating 8/90. Groundwater samples from eight monitoring wells contained dissolved metals, which are most likely a result of landfill leachate percolating through unknown solid wastes in the unsaturated zone. Because of system fouling from these metals, the treatment program was shut down in May 1991. The ARCO station recieved a No Further Action determination in 1998 with the exception that the determination did not apply to other contaminants found at the site related to the greater Hayden Island

Decode for NarcdID: Contamination
NARR Comments: (5/29/01 MDK/SRP) Waste oil purified and recycled in a process involving screening, filtering, and heating. Oil trucks cleaned on-site generating wastewater with approximately 5% trichloroethylene (TCE). TCE was vaporized, condensed, and reused. Waste TCE, waste oil sludge stored in drums and tanks. Surface runoff may have contributed to a major fish kill in Force Lake in March 1974. Runoff collection system installed since then, consisting of an oil/water separator. Suspect past operating practices and frequent spills as potential problems. A major fire in 1979 destroyed the facility and was reported to have caused oil and other contaminants to pour across the site and into the wetlands west and south of the site, however, records for this are mostly anecdotal. The TCE used to clean out tank trucks has been found in low concentrations in surface water at the southwest (lowest) end of the site, and has entered the environment. Comprehensive sampling in 1990 showed high levels of oil in site soils and low levels of chlorinated VOCs in deep groundwater (100 ft. depth), although these same VOCs appear to be widespread in groundwater in the immediate site vicinity. Off-site sampling in 1994 showed significant oil contamination in shallow wetland soils, and this contamination is likely to have originated from past releases at the site. Sampling by EPA's contractor in 2000 on behalf of EPA Region 10 has confirmed the presence and extent of contamination originating from past site operations. (12/27/06 MDK/CU&ER) Site added to NPL in 2001. Efforts by EPA to negotiate a cleanup order is on-going (2001 - 2006).

NARR Comments: (1/27/10 MDK/CU&ER) Site investigation activities were conducted in 2007 and 2008. Draft HHRA and ERA reports were submitted to EPA and then provided to DEQ and stakeholders. Draft Remedial Investigation Report submitted. DEQ provided comments on the HHRA and ERA in November 2009, and then comments on the VG responses to the consolidated EPA comments on January 14, 2010. Risk Assessment have been revised in accordance with US EPA comments, and US EPA has responded to DEQ, Portland BES, and other stakeholder comments. Draft risk assessments are expected to be finalized in accordance with US EPA comments early 2012 and proposed plan Spring 2012.

NARR Comments: The site is located within 100 feet of Force Lake to the southwest and the Columbia River 1000 feet to the north. A drainage system of buried tiles drains the lake through the adjacent wetland marsh, west and south where it is pumped into the Columbia Slough. The wetlands associated with Force Lake support great blue heron nesting areas, and the City of Portland considers this wetlands area, as well as the lake, to be a sensitive environment. Site is now largely paved and the berm on the western edge of the property leveled off in 2011 dring site modifications

Decode for NarcdID: Remedial Action
NARR Comments: (5/29/01 MDK/SRP) There is no evidence that historical releases from the Harbor Oil site were followed by any remedial actions, and recent sampling shows that significant hydrocarbon contamination remains on-site and in the wetlands area. The primary issue of concern at this site is the effect from past releases on ecologically sensitive wetlands associated with Force Lake. An RP notice letter was sent in January 2000 requesting committment to perform an RI/FS and pay DEQ oversight. The RP did not commit to RI/FS and payment of oversight, and site was referred to EPA for further site assessment. Field work for the EPA Site Inspection was conducted July 31 - August 4, 2000. A summary report was released November 2000. EPA determined that the site qualified for listing on the NPL. (6/30/03 MDK/C&ER) The draft PA/SI was released on February 2, 2003. October 2001 letter from Gov. Kitzhaber supports proposed NPL listing. (6/5/14 GMW/SAS) EPA proposed the site for the NPL in 2002. The site was listed on the NPL in 2003, and subsequent investigation and risk assessment work has been conducted under EPA oversight. In June 2014, following a notice in the Federal Register and soliciting public comment, EPA delisted Harbor Oil from the NPL.

NARR Comments: [June 2014] EPA declared the property a Superfund (NPL) site in 2003 at the request of DEQ, which wanted EPA to use Superfund law to bring responsible parties to the table. Harbor Oil ceased operating in 1999. In 2012, EPA s project manager for the site indicated that EPA believed the property posed no unacceptable risk to people or wildlife, despite its Superfund designation.

 On June 5, 2014, EPA removed Harbor Oil from the NPL.

ECOLUBE RECOVERY (Continued) **1000302670**

Hazardous Waste Summary:

Waste Code: D007
Waste Description: Chromium

Waste Code: D008
Waste Description: Lead

Waste Code: D018
Waste Description: Benzene

Waste Code: D039
Waste Description: Tetrachloroethylene

Waste Code: D040
Waste Description: Trichloroethylene

Waste Code: F001
Waste Description: The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichlorethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F002
Waste Description: The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

ECOLUBE RECOVERY (Continued) **1000302670**

Waste Code: K001
Waste Description: Bottom Sediment Sludge From The Treatment Of Wastewaters From Wood Preserving Processes That Use Creosote And/Or Pentachlorophenol.

Waste Code: K049
Waste Description: Slop Oil Emulsion Solids From The Petroleum Refining Industry.

Waste Code: K051
Waste Description: Api Separator Sludge From The Petroleum Refining Industry.

Waste Code: K052
Waste Description: Tank Bottoms (Leaded) From The Petroleum Refining Industry.

Waste Code: NONE
Waste Description: Not Defined

Waste Code: P030
Waste Description: Cyanides (Soluble Cyanide Salts), Not Otherwise Specified

Waste Code: U019
Waste Description: Benzene (I,T)

Waste Code: U051
Waste Description: Creosote

Waste Code: U061
aste Description: Benzene, 1,1'-(2,2,2-Trichloroethylidene)Bis[4-Chloro- (Or) Ddt

Waste Code: U112
Waste Description: Acetic Acid, Ethyl Ester (I) (Or) Ethyl Acetate (I)

Waste Code: U117
Waste Description: Ethane, 1,1'-Oxybis-(I) (Or) Ethyl Ether (I)

Waste Code: U159
Waste Description: 2-Butanone (I,T) (Or) Methyl Ethyl Ketone (Mek) (I,T)

Waste Code: U226
Waste Description: Ethane, 1,1,1-Trichloro- (Or) Methyl Chloroform

Waste Code: U228
Waste Description: Ethene, Trichloro- (Or) Trichloroethylene

Waste Code: U239
Waste Description: Benzene, Dimethyl- (I,T) (Or) Xylene (I)

Waste Code: U242
Waste Description: Not Defined

Updated By: KDANA
Updated Date: 09/08/2011
Decode for NarcdID: Contamination
NARR Comments: (09/07/2011 KPD/ICP) The site was added to ECSI in May 2004 as part of the Columbia Slough Area-wide Discovery Project when well logs for five monitoring wells were noted in the Oregon Water Resources Department well log database. Subsequent sampling of the monitoring wells in October 2010 found gasoline, diesel, and chlorinated solvents (PCE and its degradation products) in MW-1, in the northwest corner of the site. Only low levels of PCE (around 2 ppb) were noted in the other wells.

NARR Comments: (09/07/2011 KPD/ICP) The principals of BCB Properties signed an Independent Cleanup Agreement with DEQ in November 2010 to conduct an investigation of the site prior to selling the property. However, a sale went through in May 2011, and neither the seller nor the new buyer expressed an interest in continuing the investigation.

NARR Comments: [12/23/2004, BP] As a part of complaint investigation, DEQ has collected three hand-augured soil samples to a depth of 4 feet near the reported spill area. A field visit and lab analyses indicate surface soil contamination with heavy oil-range hydrocarbons at uo to 7,810 ppm at a depth of 1 foot below ground surface, decreasing to 247 ppm at a depth of 4 feet.

NARR Comments: [12/23/2004, BP] The neighboring Oregon Waste Management has two off-site monitoring wells on the Marina property as a part of their remedial system. The access to these wells has been, and still is, in litigation. A contractor with Waste Management first observed and reported the spilled drum.

Updated By: Not reported
Updated Date: 12/17/2002
Decode for NarcdID: Contamination
NARR Comments: (11/20/90 MM) This site includes multiple businesses. Low levels of hazardous substances were identified in soils and groundwater on-site during an environmental audit for a proposed transfer station. One business on-site has free petroleum product floating on groundwater and high concentrations of dissolved volatile organics in groundwater. DEQ's UST program is working with Oregon Waste Systems, Inc. and the truck-stop operator to remediate petroleum problems on-site. The other contaminants present at the site need to be

OREGON WASTE SYSTEMS - PROPOSED TRANSFER STATION (Continued) **S103303248**

evaluated to determine the need for further assessment or corrective action.

NARR Comments: Gasoline, diesel, 1,2-dichlorobenzene, 1,1-dichloroethane, PCBs, vinyl chloride, methyl isobutyl ketone, perchloroethene, total xylenes. (11/14/97 LSK) Soil contamination was associated with primarily 5 areas of the site: Rod's Truck Repair, The Merit Truck Stop, areas adjacent to the Peninsula Terminal Railroad, Harbor Oil and Star Oil. At Rod's Truck Repair and Merit Truck Stop, BTEX contamination likely from leaking USTs. There is some floating product in shallow groundwater beneath the Merit Truck Stop site. Petroleum hydrocarbons were found in shallow soils at Star Oil (100 to 2,000 ppm) and Farmers (200 to 5,000 ppm). Harbor Oil is described in a separate file (ECSI#24).

OREGON WASTE SYSTEMS - PROPOSED TRANSFER STATION (Continued) **S103303248**

Updated By: Not reported
Updated Date: 12/17/2002
Decode for NarcdID: Pathways & Other Hazards
NARR Comments: (11/20/90 MM) Site is located in a light industrial area, and consists of a stockyard, two truck service stations, a card-lock station, a restaurant, railroad tracks and engine barns, and wetlands. Other than workers, the population immediately around the site is low. Land to the south is vacant, to the east and west is industrial. Nearest dense population is one mile south and north across the Slough. The site is on flat land and in the floodplain of the Columbia River. Soils are fine-grained alluvium intermixed with fill consisting of crushed rock, and clayey silt - gravel. Threat or potential threat to surface water - sediments from storm sewer outfalls that enter the Columbia River contained methyl isobutyl ketone (MIBK), 1,2-, 1,3-, and 1,4-dichlorobenzene, Cr, Cd, Zn, Pb, Cu, and Ni above background levels. Depth to groundwater varies from ground surface to 15 feet across the site; its uses are unknown. (11/14/97 LSK) The site is located within 1,000 ft. of Force Lake to the southeast and is adjacent to the Oregon Slough to the north. The wetlands associated with Force Lake support great blue heron nesting areas, and the City of Portland considers this wetlands area, as well as the lake, a sensitive environment. Stormwater runoff from some of the site is carried north towards the Oregon Slough by storm drains that run beneath Marine Dr. Some runoff flows south towards Force Lake and area wetlands. Force Lake drains via the North Ditch, which is part of Peninsula Drainage District No. 1. Water in the ditch is routed to the District's main pumping station southwest of the site, where it is pumped into the Columbia Slough. Shallow groundwater north of the railroad flows radially outward in all directions, and south of the railroad flows to Force Lake and the wetlands area. Deep and intermediate groundwater flow is both to the northwest towards the Oregon Slough and Columbia River and to the south away from the river, depending upon the season and river level changes.

Narrative:

NARR ID: 5733859
NARR Code: Contamination
Created By: Not reported
Created Date: 12/17/2002
Updated By: GWISTAR
Updated Date: 06/27/2003
Decode for NarcdID: Contamination
NARR Comments: (10/9/1996 DJH/VCS) Site owner Peninsula Terminal Company contacted DEQ in October 1993 regarding their intent to participate in the Voluntary Cleanup Program, and signed a Letter Agreement with DEQ in March 1994 requesting that DEQ review an investigative report prepared for the site by Braun Intertec. There appear to have been a number of small releases of chemicals during off-loading activities at the site. An underground storage tank formerly located near the Locomotive House, and possibly used to store waste oil, was later removed (exact date unknown). Waste oil in the past has been released from the Locomotive House via a drain line.

NARR ID: 5733860

Updated Date: 12/17/2002
Decode for NarcdID: Pathways & Other Hazards
NARR Comments: The site is located in an industrial area of north Portland. However, wetlands and a golf course are located a short distance south of the site. Shallow groundwater beneath the site contains low levels of chlorinated solvents, the source of which appears to be off-site. Shallow groundwater is not known to be used for drinking. Access to the site is restricted.

Updated Date: 12/17/2002
Decode for NarcdID: Remedial Action
NARR Comments: (10/9/1996 DJH/VCS) Site owner signed Letter Agreement with DEQ's Voluntary Cleanup Program to review investigation and cleanup documents in March 1994. File review memo requesting additional soil and groundwater sampling at the site was completed in June 1994. DEQ-requested soil and groundwater sampling was completed at the site in August 1995. Based on the results of this work, additional sampling was completed in the transloading area in 1996. Contaminants detected in site soil were below industrial cleanup standards presented in OAR 340-122-045, and no significant impacts to groundwater were observed. DEQ therefore determined on 10/9/96 that no further action was required for the site under an industrial cleanup scenario.

Decode for NarcdID: Health Threats
NARR Comments: Volatile and semi-volatile compounds released to soil at the site, but at concentrations below DEQ soil cleanup levels (OAR 340-122-045) for industrial sites. As long as the site remains in industrial use, soil contamination should pose no significant exposure risks to humans.

NARR Comments: The site is just north of the center of Hayden Island in the Columbia River. The topography is flat and the elevation is approximately 20 feet above of sea level. The main channel of the Columbia River is just over 500 feet north of the site. Subsurface material encountered below asphalt and base gravel was medium-grained sand. At depths as little as 5 feet below ground surface (bgs) fill material consisting of paper, glass, wood, brick, plastic and metal, was encountered and found at depths up to 18 feet bgs.

NARR Comments: (November 2016 RKW) Phase II investigation including sampling of soil and shallow groundwter. Minor diesel and oil contamination was found in soil on the 1445 lot. Groundwater below the site contains

HAYDEN ISLAND - UMATILLA PROPERTY (Continued) **S118869506**

widespread petroleum, metals (arsenic, barium, cadmium, lead, silver, and mercury), minor VOCs and PAHs. Follow-up investigation for methane (landfill gas) was undertaken in January 2017 using handheld Landtec instrument. Samples from two boring on each property and from interior confined spaces in the 1463 building. No significant levels of methane were detected. NFAs for both properties were dated April 4, 2017.

NARR Comments: This site, the location of a former US Bank branch (since demolished) is situated on top of the abandoned Hayden Island Landfill (ECSI #1559). The site is currently owned by Umatilla, Inc. Belmar Properties, the owners of an adjacent property, are proposing to purchase the site. Belmar has applied to DEQ's Voluntary Cleanup Program to obtain a No Further Action determination for the site. These properties recent landuse was commercial and not expected to lead to contamination. Groundwater below the properties is contaminated with TPH and metals, particularly arsenic, barium, lead, silver, and mercury. Groundwater contaminatinon is thought to be associated with the former landfill.

Decode for NarcdID: Remedial Action
NARR Comments: [4/8/13 SA/SAM] Site Investigations and some cleanup has occured on site since approximately 1988; generally focusing on underground storage tank removal and remediation. DEQ Site Assessment recommends the following activities be performed at the site to help clarify site risk and priority for further action. Contaminated soil remained under the Rod s Truck Stop building with issuance of underground storage tank program NFA in 1993. A review of the archived UST file and possible investigation should be completed to determine the risk of contaminated soils for vapor intrusion for petroleum. PCE/TCE samples were collected from shallow groundwater in 1991. Confirmation of PCE/TCE concentrations is recommended to ensure vapor intrusion occupational risk based concentrations are currently met. Potential sources of PCE/TCE in shallow groundwater include remaining soils at Rod s Truck Service and potential spills from Peninsula Railroad Terminal to the south of the Stockyard property. Current site stormwater drainage should be diagramed and determine discharge points for the property. Columbia Slough Sediments- sediment sampling near current and historic stormwater outfalls should be tested for metals, PCBs, PAHs and VOCs. Sediment results should be compared to the average Lower Columbia River concentrations to determine if the sediments are either near average conditions or significantly above average Lower Columbia River sediment conditions. If sediment concentrations are above average, a source control evaluation may

NARR Comments: Contaminants in site groundwater and stormwater could represent a potential threat to on-site workers, aquatic life in the Columbia River, wildlife and aquatic life in nearby wetlands, and/or other users of groundwater and surface water in the immediate vicinity of the site. Water quality in the Columbia River is already impaired. The Columbia River is used for recreational and commercial fishing, as well as other recreational purposes. It also provides Critical Habitat for threatened and endangered fish species. The river and nearby wetlands also provide important habitat for other sensitive species such as protected migratory bird species, sensitive amphibian, reptile, and plant species, and food resources for sensitive aquatic and terrestrial species.

NARR Comments: [4/8/13 SA/SAM] The site was originally developed in 1908 with the construction of a small hotel and a livestock Exchange Building. The Portland Union Stockyards was built in about 1910. The stockyards ceased operations in 1980. Site buildings also included Merit USA (Texaco) Truck Stop (built in about 1952), which included two fueling stations, truck scales, and a cafT. Rod s Truck Repair, a commercial gas station and repair shop began operating in the 1980 s. The stockyards were demolished in 1996 and redeveloped in approximately 1997 to its current configuration as light industry and warehousing.

NARR Comments: (9/8/92 DJH/SAS) A number of businesses have operated at the site since the 1950s; these have included a boat storage facility, a manufacturer of concrete blocks, and an auto body shop. 75-100 drums, containing what were said to be chemicals used to manufacture industrial floor cleaning compounds, were stored in a shed at the site from 1983 to 1984. Materials in these drums were tested and found to have pH values ranging from 1 to 14. These drums were apparently purchased and removed by Apollo Chemical Company in 1984. From 1984 to 1985, Auric Enterprises salvaged and recovered metals at the site through open burning and smelting. Transformers were present on-site during this time; some of these are known to have contained at least low levels of PCBs. The lead and aluminum smelters at Auric apparently used oil from the transformers as fuel. In early 1991, 35 on-site soil samples and 15 sediment samples from nearby wetlands and drainage canals were taken. PCBs were detected in two of the soil samples (at 12,000 and 72 ppb). No metals were found in soil or sediment samples at concentrations significantly above background. (10/27/97 LSK) On June 9, 1995, PEMCO excavated approximately 5 cubic yards of soil from the northeast edge of the paved area and approximately 0.25 cubic yard of soil buildup on the concrete where PCBs had been detected during a previous investigation. Three soil samples were collected by PEMCO from the bottom of the excavation and a sample was taken from stockpiled material. The stockpile material was also analyzed for petroleum hydrocarbons and priority metals (TCLP). One sample from the excavation had 0.24 ppm PCBs, and the stockpile sample had 0.13 ppm PCBs. (5/14/03 RGS/VCP) The site is currently vacant. Soil samples were collected in July 2000 by Creekside Environmental. Samples in the vicinity of the soil excavation were analyzed for PCBs at three depth intervals (0-6<quot>, 8-10<quot> and 12-16<quot> below ground surface). PCBs were below laboratory detection limits in these samples. Petroleum hydrocarbons were detected in the former burn pit area and in a surficial oil-stained area (believed to be a diesel/lube oil release from a backhoe parked at the site.

NARR Comments: (9/8/92 DJH/SAS) Site Assessment recommends that the owners of the property remove remaining soil contamination at the site. This can either be done through DEQ's Voluntary Cleanup Program, or perhaps with oversight from Site Assessment. Site Assessment further recommends that the site be proposed for the Confirmed Release List and Inventory. (10/27/97 LSK/SAS) Site re-evaluated as part of review of all sites within the Columbia Slough Study Area. Based on new information (see Contamination Information), the site recommendation has been changed from a medium to a low for further investigation. (4/21/00 RGS/VCP) The property owner entered the Independent Cleanup Program (ICP) in February 2000. DEQ denied the request for a NFA and provided the owner with a list of site data gaps. (11/21/01 RGS/VCP) In July 2000, soil samples were collected to address data gaps identified in DEQ's April 11, 2000 data-gaps memo. PCBs were not detected in potential source areas, while metals were in general detected at concentrations near background. Arsenic, cadmium, chromium, lead, and mercury appear slightly elevated in selected samples; however, concentrations are less than EPA Region 9 PRGs for residential properties, with the exception of arsenic (concentrations appear near regional background values). The property owner placed further investigation/cleanup on hold for financial reasons in January 2001.

NARR Comments: Site is suspected of petroleum releases to the subsurface. As part of Columbia Slough Area-wide Discovery Project this site was noted due to the presence of soil borings found in Water Resources Department well log database. Site runoff or subsurface contamination could reach part of Columbia Slough via stormwater piping system.

NARR Comments: Historically, the Property was undeveloped marshland until approximately 1940. Between approximately 1940 and 1946, the Property was filled for development as a horse racing facility. On May 1, 2019, DEQ recieved a request to enter into a Prospective Purchaser Agreement. The prospective purchaser will develop the site for industrial use, including up to six industrial buildings with associated improvements. Substantial public benefits may include, but are not limited to, the following: The generation of resources and funding to complete remedial actions at theProperty consistent with the DEQ NFA for DEQ LUST File No. 26-04-1266. The generation of substantial funding to DEQ s Columbia Slough Cleanup Fund to further assess sediment impacts from industrial sources along the Columbia Slough, or the performance by Respondent of an equivalent baseline assessment. Additional job creation in connection with redevelopment and reuse of the property.

NARR Comments: In 2004 an underground storage tank and contaminated soil was removed from the site. Some residual contaminated soil was identified below a stable and could not be removed. Based on the site s industrial

SPRINT NEXTEL CORPORATION (Continued) **S104900043**

zoning and extent of contamination, DEQ concluded that the contamination remaining on the property did not present an unacceptable risk. The site received a conditional No Further Action from DEQ Leaking Underground Storage Tank Program. (DEQ LUST File No. 26-04-1266) Information contained in the property deed indicates that the southern boundary of the site extends to the centerline of the Columbia Slough. Industrial and urban developments along the Columbia Slough have resulted in accumulation of various contaminants in slough sediment, some of which bioaccumulate and have been detected in fish tissue. In March 2019 a Phase II Environmental Site Assessment was performed on the upland. The Phase II ESA consisted of collecting soil and groundwatersamples from 18 direct-push borings. Boring were advanced to depths ranging from 3 to 10 feet bgs. Representative soil and shallow groundwater samples were analyzed for RCRA 8 metals, PAHS, VOCs, PCBs, GRO, DRO and ORO. With exception of arsenic, all other chemical constituents were either not detected above the laboratory reporting limit or were detected at concentrations below industrial and construction worker risk based concentrations. On May 1, 2019, DEQ recieved a request to enter into a Prospective Purchaser Agreement. The prospective purchaser will develop the site for industrial use, including up to six industrial buildings with associated improvements. As a part of the Prospective Purchaser Agreement, the applicant agrees to perform the following: Conduct additional investigation and if needed, cleanup related to the former underground storage tank Perform a Columbia Slough Upland Source Control Evaluation. All stormwater system modifications or improvements shall be in accordance with the City of Portland Stormwater Manual as applicable. Abandon production water well or upgrade well to modern standards Perform pesticide sampling in upland soils Prepare an Environmental Media Management Plan for future construction activities Perform baseline sediment assessment of Columbia Slough sediments near the Portland Meadows facility or provide an equivalent contribution to the Columbia Slough Cleanup Fund. [9/14/2020 PPA/SAM] Prologis entered into a Prospective Purchaser Agreement with DEQ in August 2019. Environmental Medial Management Plan approved by DEQ in June 2020. Construction occuring summer 2020.

NARR Comments: Investigation initiated from three complaints during the summer of 1987. The complainants alleged that they could smell <quot>strong chemical odors.<quot> The odor was traced to Container Care. DEQ investigated and determined the odors were from open containers at Container Care. The facility was ordered to clean the containers. Soils were also sampled.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

SCRD DRYCLEANERS: State Coalition for Remediation of Drycleaners Listing

The State Coalition for Remediation of Drycleaners was established in 1998, with support from the U.S. EPA Office of Superfund Remediation and Technology Innovation. It is comprised of representatives of states with established drycleaner remediation programs. Currently the member states are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

UST FINDER: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

NY MANIFEST: Facility and Manifest Data

Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

Date of Government Version: 12/31/2019
Date Data Arrived at EDR: 11/30/2023
Date Made Active in Reports: 12/01/2023
Number of Days to Update: 1

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

UTM Y (Meters):	5049754.0
Elevation:	23 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	14878142 PORTLAND, OR
Version Date:	2020

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

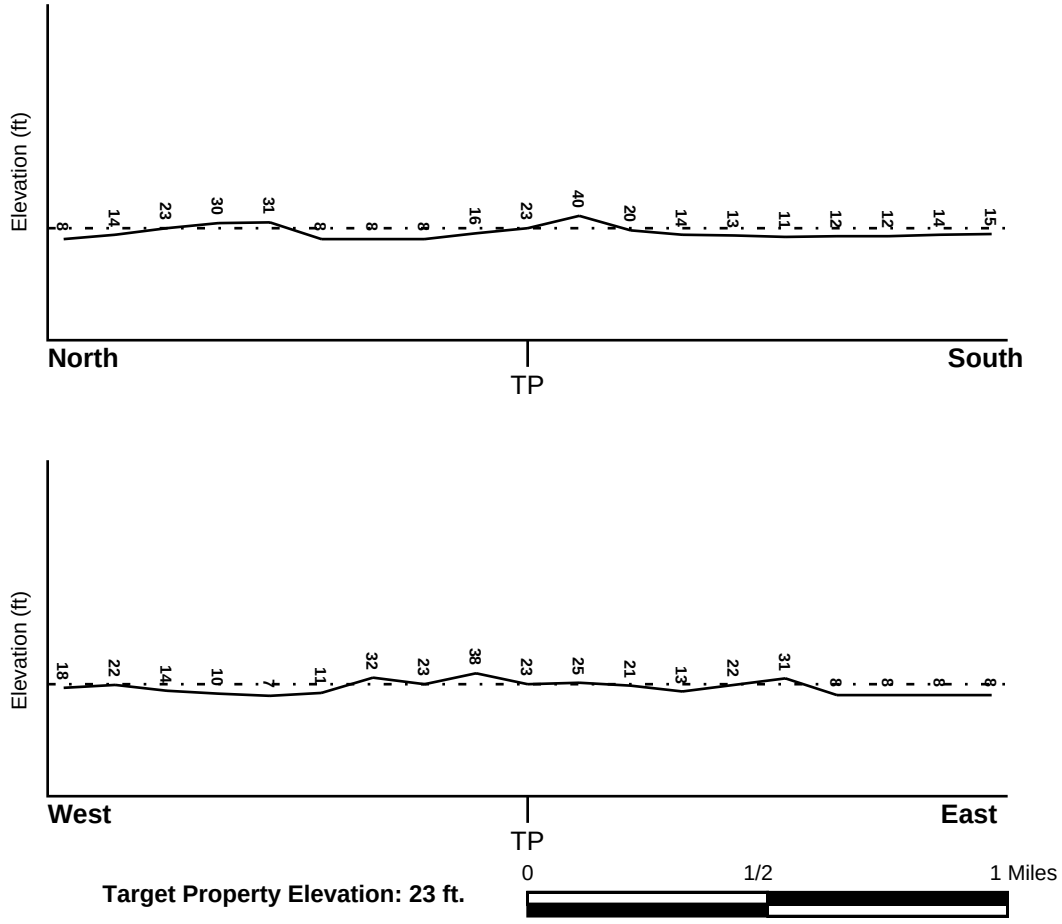
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 23 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
53011C0481D	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
4101830080F	FEMA FIRM Flood data
53011C0477D	FEMA FIRM Flood data
4101830085F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
PORTLAND	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Sauvie

Soil Surface Texture: silt loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Poorly drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 5 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	14 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 42 Min: 14	Max: 6.5 Min: 5.6
2	14 inches	38 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 42 Min: 14	Max: 6.5 Min: 5.6
3	38 inches	59 inches	very fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 42 Min: 14	Max: 6.5 Min: 5.6

Soil Map ID: 2

Soil Component Name: Rafton

Soil Surface Texture: silt loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Very poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 15 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	9 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14 Min: 4	Max: 6.5 Min: 5.6
2	9 inches	40 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14 Min: 4	Max: 6.5 Min: 5.6
3	40 inches	59 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14 Min: 4	Max: 6.5 Min: 5.6

Soil Map ID: 3

Soil Component Name: Water

Soil Surface Texture: silt loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.
