Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS WQP: Ambient Environmental Sampling for PFAS

The Water Quality Portal (WQP) is a part of a modernized repository storing ambient sampling data for all environmental media and tissue samples. A wide range of federal, state, tribal and local governments, academic and non-governmental organizations and individuals submit project details and sampling results to this public repository. The information is commonly used for research and assessments of environmental quality.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Version Date:	2020

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

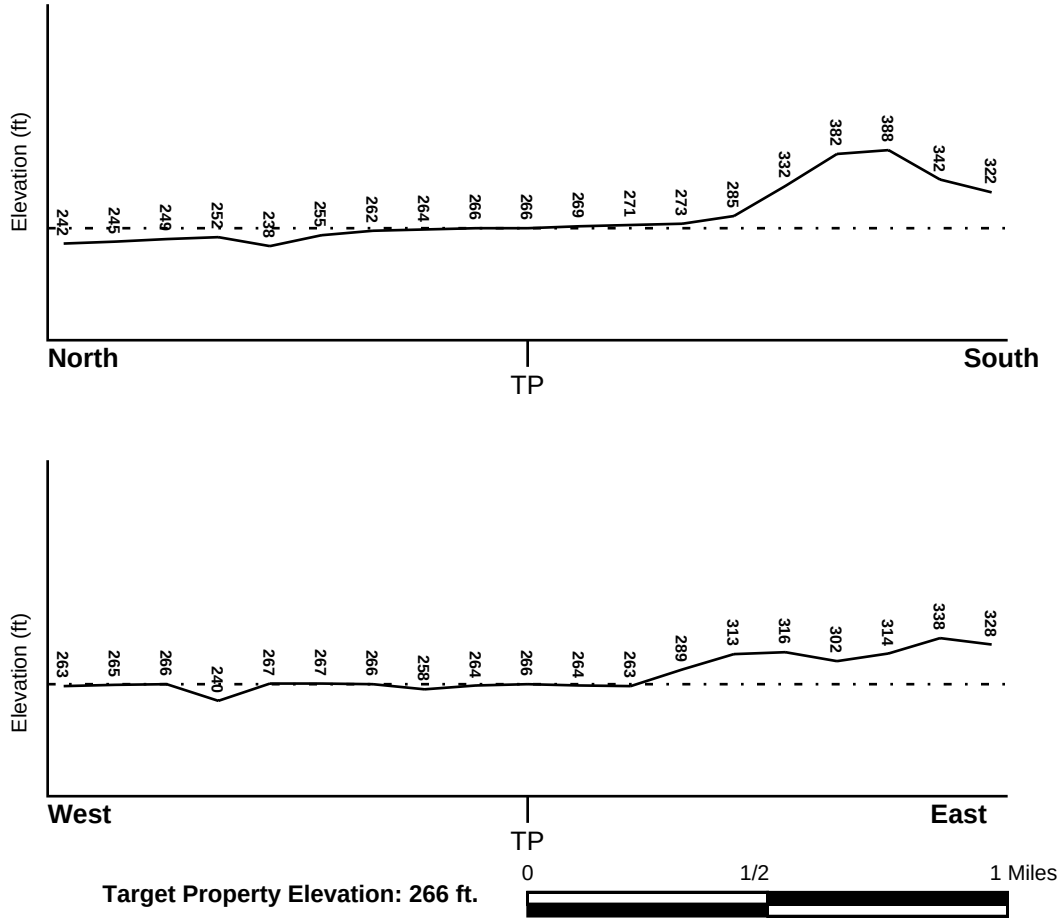
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
4101830140F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
41051C0218H	FEMA FIRM Flood data
41051C0214H	FEMA FIRM Flood data
4101830226E	FEMA FIRM Flood data
41051C0402H	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
CAMAS	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

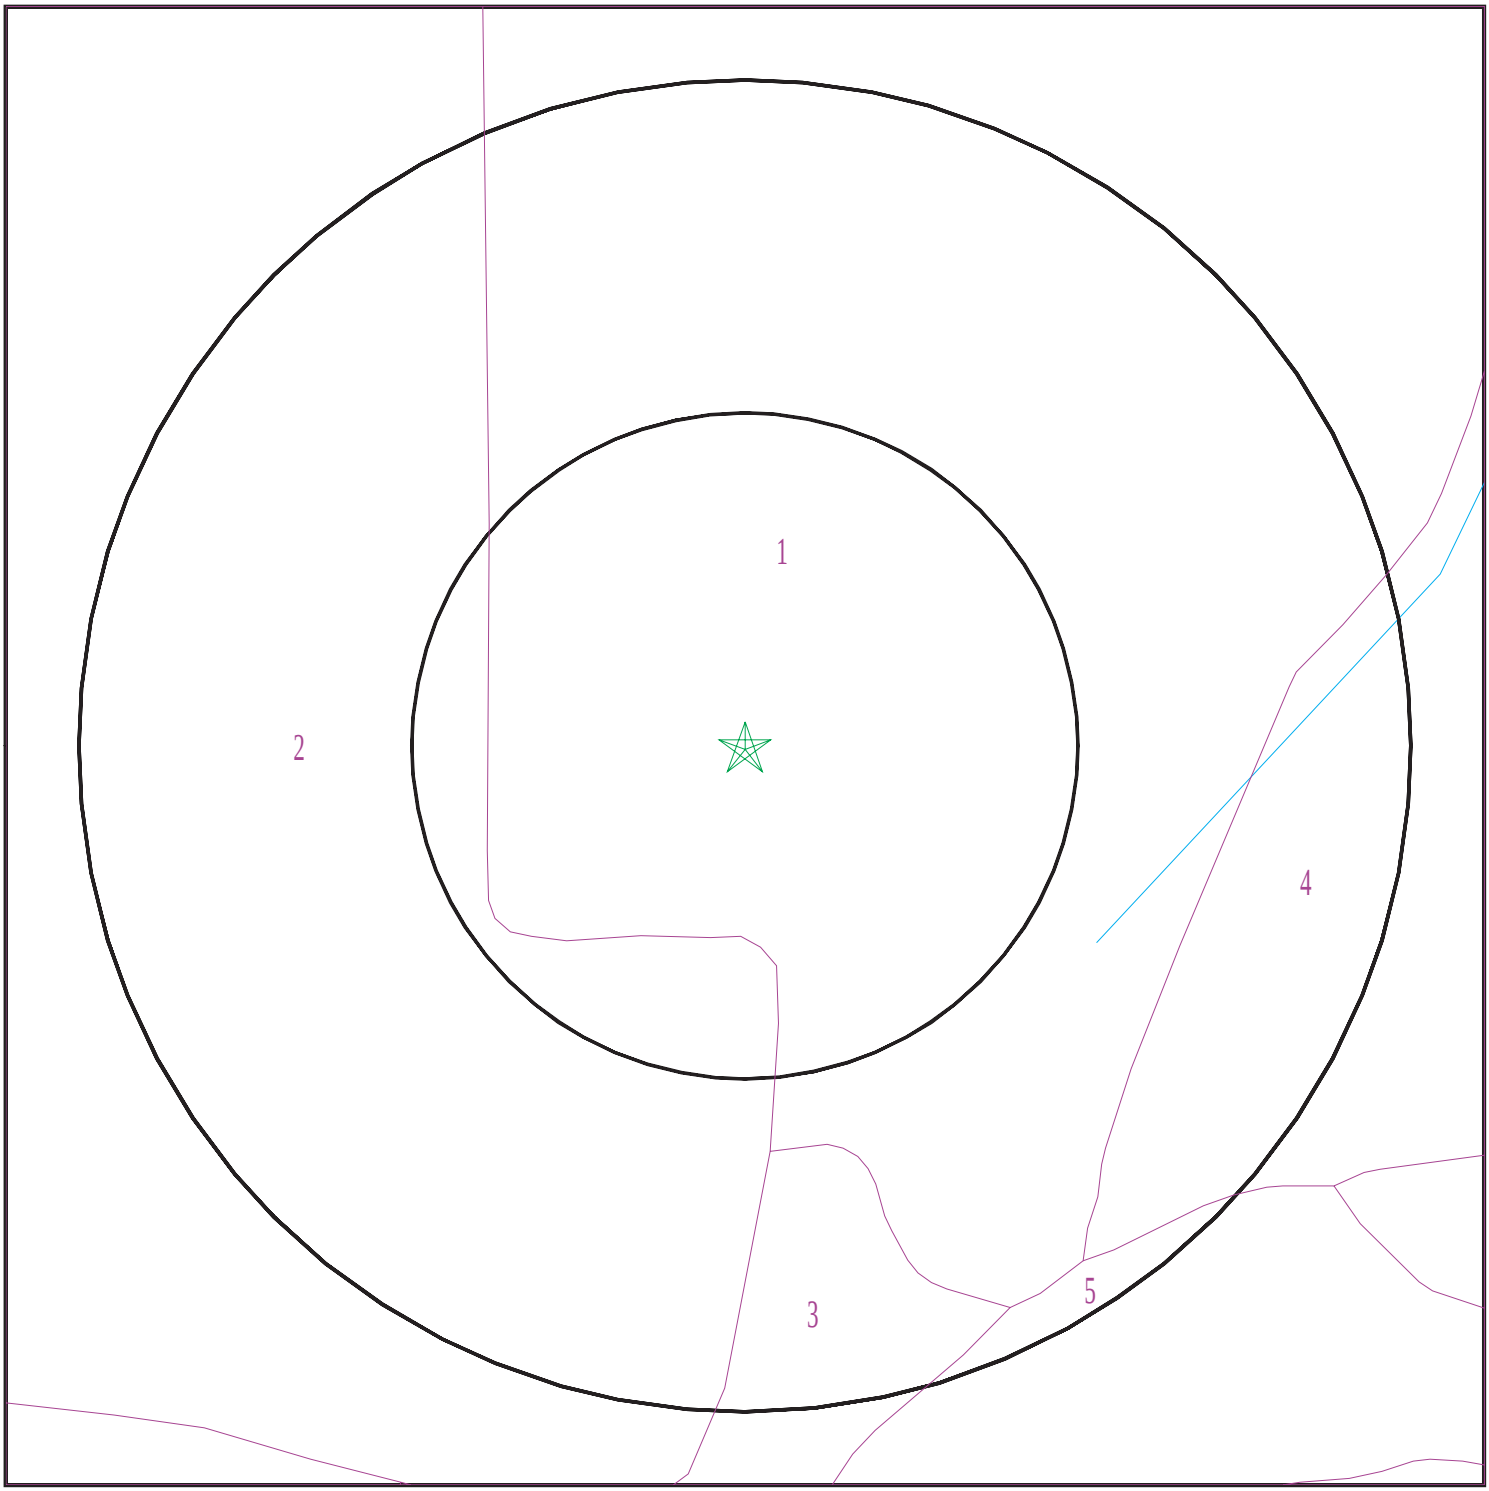
GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT



Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Multnomah

Soil Surface Texture: silt loam

gic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	7 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Clean gravels, Poorly Graded Gravel. COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel.	Max: 141 Min: 42	Max: 6.5 Min: 6.1
2	7 inches	38 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Clean gravels, Poorly Graded Gravel. COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel.	Max: 141 Min: 42	Max: 6.5 Min: 6.1

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
3	38 inches	59 inches	very gravelly sand	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Clean gravels, Poorly Graded Gravel. COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel.	Max: 141 Min: 42	Max: 6.5 Min: 6.1

Soil Map ID: 2

Soil Component Name: Pits

Soil Surface Texture: silt loam

gic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 3

Soil Component Name: Wapato

Soil Surface Texture: silt loam

oup: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 15 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	18 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Clayey Gravel	Max: 4 Min: 1.4	Max: 6 Min: 5.6
2	18 inches	44 inches		Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Clayey Gravel	Max: 4 Min: 1.4	Max: 6 Min: 5.6
3	44 inches	59 inches	very gravelly sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Clayey Gravel	Max: 4 Min: 1.4	Max: 6 Min: 5.6

Soil Map ID: 4

Soil Component Name: Multnomah

Soil Surface Texture: silt loam

gic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetlands Inventory Data

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Parametrix, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

CERTIFICATION

The technical material and data contained in this document were prepared under the supervision and direction of the undersigned. We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the *all appropriate inquiries* in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

Parametrix was retained by the Oregon Department of Transportation (ODOT) to perform a Phase I Environmental Site Assessment (ESA) on the developed property located at 1709 NW Eleven Mile Avenue in Gresham, Oregon (Figure 1). This property may be acquired as part of the Interstate Bridge Replacement (IBR) Program and is known as IBR-1S3E05DA-03500. Based on the findings of this investigation, Parametrix reached the following conclusions:

1. The subject property is located on Multnomah County tax lot 1S3E05DA-03500. The subject property encompasses an area of approximately 1.0 acres and is used for heavy industry. Operations in the vicinity of the site include sand and gravel mining to the west and south, the Ruby Junction Rail Maintenance Facility to the north, and other heavy industry to the northeast and east. Improvements on the subject property include an office building, a warehouse, and a wash shed.
2. Based on historical review of aerial photographs and local agency records, the subject property was developed in 2005. Additional construction occurred in 2017. The adjacent sand and gravel mining operations began between 1935 and 1948 and continue to the present. The properties were developed for industrial uses beginning between 1975 and 1981 and were open space or cultivated farmland prior to development. Recognized environmental conditions (RECs) associated with historical land use were not identified.
3. Based on the age of the building at the subject property, there is low potential for lead-based paint (LBP), asbestos-containing materials (ACM), or polychlorinated biphenyls (PCBs) to have been used at the subject property.

[redacted]

5. The subject property is not listed on any regulatory database that would indicate a past or current release or storage of hazardous materials.
6. A review of regulatory information indicated that several adjacent or nearby sites were identified in the regulatory record databases. The areas to the west and south are operated as active sand and gravel mines and infiltration and transport of contamination related to mining operations is a potential transport pathway to the subject property. However, there were no indications of metals contamination in groundwater during regulatory review. Based on this information, no RECs were identified associated with historical land use of the subject and adjacent properties.

[redacted]

[redacted]

1. INTRODUCTION

Parametrix was retained by the Oregon Department of Transportation (ODOT) to perform a Phase I Environmental Site Assessment (ESA) on the developed property located at 1709 NW Eleven Mile Avenue in Gresham, Oregon (herein referred to as the *subject property*) (Figure 1). The subject property consists of tax lot 1S3E05DA-03500 in Multnomah County, Oregon. It is our understanding that ODOT may pursue acquisition of the subject property as part of the Interstate Bridge Replacement (IBR) Program. The subject property is identified as IBR-1S3E05DA-03500 (Figure 2).

This Phase I ESA includes a review of available documentation pertaining to the subject property, a site reconnaissance, and a review of pertinent public agency documents. The ESA consists of two distinct tasks: (1) a review of documents and of oral information, and (2) a site examination. Conclusions and recommendations within this report are based solely on observed evidence and data collected during the performance of this assessment.

1.1 Purpose

The Phase I ESA was conducted in general accordance with ASTM International (ASTM) Standard E1527-21, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, which defines the generally accepted industry practices and procedures currently applicable at the time and place of this study (ASTM 2021). The Phase I ESA is intended to permit the user to satisfy the requirements to qualify for the bona fide prospective purchaser limitation under the Comprehensive Environmental Response, Compensation, and Liability Act, and as such constitutes "all appropriate inquiries in the previous ownership and uses of the property consistent with good commercial or customary practice" as defined at 42 U.S. Code §9601 (35)(B).

The purpose of this Phase I ESA is to identify recognized environmental conditions (RECs) on or near the subject property. The term recognized environmental conditions is defined in ASTM Standard E1527-21 as:

> "…(1) the presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* due to a *release* to the *environment*; (2) the likely presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* due to a *release* or likely *release* to the *environment*; or (3) the presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* under conditions that pose a *material threat* of a future *release* to the *environment*."

In accordance with ASTM Standard E1527-21, some RECs may be further defined as historical recognized environmental conditions (HRECs) or controlled recognized environmental conditions (CRECs).

An HREC is defined as:

> "…*a past release of any hazardous substances* or *petroleum* products that has occurred in connection with the *property* and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the *property* to any required controls."

A CREC is defined as:

> "…a *recognized environmental condition* resulting from a past *release of hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority, with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls."

This Phase I ESA endeavors to identify all RECs, HRECs, and CRECs at the subject property.

1.2 Significant Assumptions

This assessment was conducted in accordance with generally accepted industry practices and procedures within the scope of work authorized at the time and place of this study. Parametrix observations are limited to those areas to which it had access on the subject property.

Phase I ESA methodology included viewing accessible areas of the subject property on foot. Unless otherwise stated, no exceptions to the guidelines presented in ASTM E1527-21 were made during completion of this Phase I ESA.

1.3 Limitations

The findings, conclusions, and recommendations presented in this report are based on site conditions and the best available information known or made available by regulators, other consultants, or other sources at the time of the investigation. Parametrix conducted a diligent search and investigation in compliance with prevailing standards of the profession; however, certain adverse conditions may exist at the site not detected at the time of the investigation.

The services provided under this contract, as described in this report, include professional opinions and judgments based on data collected. These services have been provided according to generally accepted engineering practices. The opinions and conclusions contained in this report are typically based on information obtained from the following:

- Observations and measurements made by Parametrix field staff.
- Contacts and discussions with regulatory agencies and others.
- Review of available hazardous substance or solid waste lists.
- Opinions and judgments of Parametrix based on the information available.

In the professional judgment of Parametrix, the services performed pursuant to the scope of services are an adequate basis to collect data for a preliminary evaluation of the site and upon which to draw the conclusions stated in this report.

2. SUBJECT PROPERTY DESCRIPTION

2.1 Location

The subject property is located at 1709 NW Eleven Mile Avenue in Gresham, Oregon and includes Multnomah County tax lot 1S3E05DA-03500. The site location is shown on Figure 1; the boundary of the subject property is shown on Figure 2.

The subject property is a 1.0-acre property. A Knife River Sand and Gravel mine is located to the west and south, the Ruby Junction Rail Maintenance Facility is located to the north and northeast, Magic City Garage is located to the northeast, and Eastside Paving followed by residential housing located to the east.

2.2 Site and Vicinity Characteristics

The subject property is owned by Wagoner Properties LLC and is operated by Cantel Sweeping. It is a 1.0-acre rectangular property. Properties in the immediate vicinity consist of heavy industry and open pit mining. The nearest residential area is located approximately 0.2 miles east of the subject property. Burnside Road is located approximately 0.4 miles north and commercial operations are present in this area.

2.3 Physical Setting

The subject property is located in the Portland Basin, which marks the northern terminus of the Willamette Lowland in Oregon (Swanson et al. 1993). The northern portion of the basin is known for its low topographic relief, with the subject property at an elevation of approximately 266 feet above mean sea level. The Portland Basin is bound by the Cascade Range to the east and the Coast Range to the west.

Geologic processes in the Portland Basin consist of volcanism, sedimentation, and cataclysmic flood deposits in both fluvial and marine depositional environments. The subject property lies on what is mapped as coarse-grained Missoula flood deposits, cobbly, sandy gravel deposited by the Missoula floods (Wells et al. 2020). Surface soils consist of silt loam.

The topography in the vicinity of the subject property is a consistent slope, rising with distance from the Columbia River. The anticipated groundwater gradient is to the north toward the Columbia River. Groundwater has been encountered at 20 to 30 feet below ground surface at nearby properties (see Mult 2956 hydrograph, Appendix E; OWRD 2023).

2.4 Current Use of the Subject Property

Operations on the subject property consist of parking and maintenance of sweeping vehicles and other equipment, storage and sorting of swept debris, storage and maintenance of street painting equipment and similar supplies.

2.5 Descriptions of Improvements on the Subject Property

Improvements on the subject property include one office with an attached vehicle maintenance building, an open-sided wash shed, and an asphaltic parking area. The site is paved except for landscaping at the frontage to NW Eleven Mile Avenue, a narrow grassy area adjacent to the northern fence line, and swales located adjacent to the western and southern fence line.

Stormwater and wash water from the wash shed, which is used for cleaning sweeping vehicles, is directed to an oil-water separator (OWS) and then to the site's storm sewer system. Stormwater flows through sediment traps and then into an on-site drywell.

2.6 Environmental Liens

An environmental lien is defined by ASTM as a charge, security, or encumbrance upon title to a property to secure the payment of a cost, damage, obligation, or duty arising out of response actions, cleanup, or other remediation of hazardous substances or petroleum products. No evidence of environmental liens against the subject property was identified during the course of this Phase I ESA.

3. RECORDS REVIEW

The purpose of the records review task was to gather environmental data on the subject property prior to the site examination. The information review consisted of two subtasks: a review of various lists and files published by federal and state agencies; and a compilation of historical uses of the site and site vicinity, to determine whether past operations pose an environmental risk to the subject property. Information for agency file review is based, in part, on a report provided by Environmental Data Resources (EDR). The EDR report is included in Appendix A.

The EDR report is a summary of state and federal database searches for sites of possible environmental concern. The information review enabled Parametrix personnel to characterize the types of activities performed at the site, identify data gaps prior to the site examination, and facilitate recognition of discrepancies between reported and observed data. Data gaps identified during the document review were addressed by interviewing knowledgeable personnel, observations during the site examination, or by additional detailed investigation.

It should be noted that this information is reported as Parametrix received it from EDR, which in turn reports information as it is provided in various government databases. It is not possible for either Parametrix or EDR to verify the accuracy or completeness of information contained in these databases. However, the use of and reliance on this information is a generally accepted practice in the conduct of environmental due diligence. The following sections present information from the document review.

3.1 Standard Environmental Record Sources

The following section summarizes information collected from records maintained by the U.S. Environmental Protection Agency (EPA) and the Oregon Department of Environmental Quality (DEQ). The information includes details on sites identified in regulatory databases within recommended ASTM search distances. A complete listing of the databases reviewed is included in the EDR Radius Map™ Report (EDR 2023a) in Appendix A.

3.1.1 Review of Oregon Department of Environmental Quality Databases

The following sections summarize the most relevant information obtained from the EDR Radius Map™ Report regarding sites identified within the ASTM E1527-21 search radii from the databases listed below. Additional information regarding these sites was reviewed on DEQ's Environmental Cleanup Site Information Database (DEQ n.d. [a]) and Leaking Underground Storage Tank Cleanup Site Database (DEQ n.d. [b]) to supplement data gaps in the EDR report. A complete listing of the databases reviewed is included in the EDR report. Relevant database listings from DEQ include:

- DEQ Underground Storage Tank (UST) List
- DEQ Leaking Underground Storage Tank (LUST) List

- DEQ Environmental Cleanup Site Information (ECSI) List
- Spill Database (SPILLS)
- Solid Waste Facility/Landfill (SWF/LF) List
- DEQ Confirmed Release List (CRL)
- DEQ Brownfields List
- DEQ Drycleaners List
- DEQ Engineering or Institutional Controls

3.1.1.1 DEQ Underground Storage Tank List

The UST database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data were obtained from the DEQ UST List.

Information contained in the EDR report indicates that the subject property is not listed as a UST site. One UST site is located within 0.25 miles of the subject property, as described below:

- The Morse Bros. Gresham Sand and Gravel (S&G) site (1339 NW Eastwood Avenue) is located southwest of the subject property. This site is also listed on the LUST and SPILLS databases and is described in further detail in Section 3.1.1.2.

Unless otherwise noted, the mere presence of a UST near a site does not, in itself, constitute a REC. Where available, other information was reviewed regarding the presence of a UST including the age of the facility, proximity to the subject property, and known releases or spills. UST sites that have had known releases are discussed in Section 3.1.1.2 below.

3.1.1.2 DEQ Leaking Underground Storage Tank List

The LUST Incident Reports contain an inventory of reported LUST incidents. The data were obtained from the DEQ LUST Database List.

Information contained in the EDR report indicates that the subject property is not listed as a LUST site.

Sixteen LUST sites were identified within 0.5 miles of the subject property. The following three LUST sites were located within 0.25 miles of the subject property:

- The Morse Bros. Gresham S&G site (1339 NW Eastwood Avenue; LUST # 26-09-0606) is located southwest of the subject property. This location is the current Knife River sand and gravel mine and is also listed as the Gresham Sand & Gravel site (ECSI #1407). In 2009, two 4,000-gallon diesel USTs were decommissioned by removal. Petroleum-contaminated soil (PCS) was present and removed by excavation. Confirmation sampling verified that PCS had been removed and remaining diesel concentrations in soil were less than the regulatory limits. In 2010, two additional 5,000-gallon diesel USTs and one 4,000-gallon gasoline UST were decommissioned by removal. PCS from around the tanks was also excavated. Confirmation samples verified that remaining petroleum concentrations in soil were less than the

regulatory limits. DEQ issued a No Further Action (NFA) determination on January 19, 2011 (Appendix E). Based on the regulatory status of the site, the facility does not represent a potential REC to the subject property.

- A heating oil tank site (1843 NW Eleven Mile Avenue; LUST #26-91-0398) is located approximately 550 feet north of the subject property. In 1991, PCS was identified due to leaks from an aboveground storage tank (AST) used for heating oil. PCS was removed by excavation, except for a "pocket" of PCS that remained in place. Groundwater was not encountered during excavation activities. DEQ issued a conditional NFA determination for this heating oil tank (Appendix E). However, this site is not considered a REC to the subject property based on distance from the subject property, the type of contaminant (heavy oil), and because groundwater was not encountered during removal of PCS.
- A second heating oil tank site (2005 NW Eleven Mile Avenue; LUST # 26-12-1437) is located approximately 850 feet north of the subject property. The heating oil tank was registered and decommissioned by a licensed service provider (Appendix E). Based on the regulatory status of the site, the facility does not represent a potential REC to the subject property.

Based on DEQ information indicating site closure activities have been completed or other supplemental information, none of the identified sites discussed above appear to represent a REC to the subject property. In addition, the remaining LUST sites identified in the EDR report appear to be at sufficient distances from the subject property and/or cleanup activities have been completed so that they do not appear to represent a REC to the subject property.

3.1.1.3 DEQ Environmental Cleanup Site Information List

The ECSI identifies and tracks known or potentially contaminated sites within Oregon and is the state's equivalent to the Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS). The CRL is a subset of the ECSI and includes sites that have known releases of hazardous substances. The Voluntary Cleanup Program (VCP) database is a list of sites that have been entered into the DEQ VCP and are undergoing cleanup. The subject property is not identified on the ECSI, CRL or VCP databases.

Thirteen ECSI, CRL, or VCP sites were identified within 1 mile of the subject property. The following ECSI site was located within 0.25 miles of the subject property:

- The Gresham Sand & Gravel site, also identified as the Morse Bros. Gresham S&G site (1339 NW Eastwood Avenue; ECSI #1407), is located southwest of the subject property. In addition to the former LUSTs on the site (LUST # 26-09-0606; Section 3.1.1.2), a landfill was originally present on this site. The landfill began accepting brush and yard debris in the late 1950s, and accepted garbage until 1967 or 1968 (Appendix E). In 1978 or 1979, most of the garbage was moved to the area now known as the Vance Pit (ECSI #5780), located approximately 0.5 miles west of the subject property. In 1993, a worker reported burning and swelling after handling sediments removed from a sump area in the gravel pit. The sump area was located near water flowing from the wall of Vance Pit. DEQ collected groundwater and landfill gas samples from Vance Pit. DEQ recommended an NFA determination due to the low levels of the contaminants

identified. Based on the regulatory status of the site, and the distance from the subject property to Vance Pit, the facility does not represent a potential REC to the subject property.

The remaining ECSI, CRL, and VCP sites are located at sufficient distances or cleanup activities have been completed so that they do not appear to represent RECs to the subject property.

3.1.1.4 SPILLS Database

This database provides a comprehensive list of reported spills. The subject property is not listed as a SPILLS site.

3.1.1.5 Solid Waste Facilities/Landfill

The Solid Waste Facilities/Landfill (SWF/LF) records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data were obtained from Oregon's Solid Waste Facilities List Solid Waste Facilities List.

The subject property is not listed as a SWF/LF site. One SWF/LF site (Gresham Sanitary Service, 2131 NW Birdsdale Avenue) was reported within 0.5 miles of the subject property. Based on a review of regulatory status, investigation and cleanup actions conducted, and distance from the subject property; this site does not represent a REC to the subject property.

3.1.1.6 DEQ Brownfields List

The Brownfields database lists sites of real property where expansion or redevelopment is complicated by actual or perceived environmental contamination. One DEQ Brownfields site was identified within 1 mile of the subject property.

- Lot 5 Vance Landfill, also identified as Vance Pit (1541 SE 190th Avenue; ECSI #5780) was originally established in 1978 or 1979 after a landfill was moved from the adjacent Gresham Sand & Gravel site (1339 NW Eastwood Avenue; ECSI #1407). Site screening was recommended by DEQ in 2013 (Appendix E). Based on the distance from Vance Pit, the facility does not represent a potential REC to the subject property.

3.1.1.7 DEQ Dry Cleaner List

The dry cleaner database is a listing of former or current drycleaners in Oregon. No DEQ dry cleaner sites were identified within 0.125 miles of the subject property.

3.1.1.8 DEQ Engineering/Institutional Controls

DEQ maintains two databases for sites with implemented engineering controls and/or institutional controls. No sites with engineering or institutional controls were identified within 1 mile of the subject property.

3.1.2 Environmental Protection Agency Database Review

The EPA administers several programs designed to protect the environment and monitor the generation, storage, treatment, and disposal of hazardous substances. The following sections summarize the most relevant information obtained from the EDR report regarding sites identified within ASTM E1527-21 search radii from the following databases. A complete listing of the databases reviewed is included in the EDR report.

- National Priorities List (NPL)
- Superfund Enterprise Management System (SEMS) List
- RCRA Corrective Action Report (CORRACTS) List
- Resource Conservation and Recovery Information System (RCRIS) List
- Emergency Response Notification System (ERNS) List
- U.S. Brownfields List

3.1.2.1 NPL List

The NPL identifies priority hazardous waste sites for remedial actions under the EPA Superfund program. The EDR report indicates that the subject property is not listed as an NPL site. No NPL sites were identified within 1 mile of the subject property.

3.1.2.2 SEMS List

The EPA publishes a list of sites that may potentially pose a threat to the environment or the health of the general public. This list is known as the SEMS list (formerly the CERCLIS list). Information contained in the EDR report indicates the subject property is not listed as a SEMS site. The Columbia Slough is identified as a SEMS-Archive site and is located approximately 0.350 miles northeast of the subject property. Based on distance, this site is not a REC to the subject property.

The EPA also publishes the SEMS no further remedial action planned (NFRAP) list, which are SEMS sites that have been designated “no further remedial action planned” and have been removed from the SEMS list. Information contained in the EDR report indicated that the subject property is not listed as a SEMS-NFRAP site. No SEMS-NFRAP sites were identified within 1 mile of the subject property.

3.1.2.3 CORRACTS Review

The CORRACTS report identifies hazardous waste handlers with corrective action activity. Information contained in the EDR report indicates the subject property is not listed as a CORRACTS site. No CORRACTS sites are listed within 1 mile of the subject property.

3.1.2.4 Resource Conservation and Recovery Information System List

The RCRIS list includes selective information on sites which generate, transport, store, treat, and dispose of hazardous waste as defined by RCRA. Information contained in the EDR report indicates the subject property is not listed as a RCRIS site. Information contained in the EDR report indicates that two sites within 0.25 miles of the subject property are listed as RCRA Non-Generator of Hazardous Waste (NonGen/NLR).

- Coachman Body and Frame, Inc. (1825 NW Eleven Mile Road) is located less than 0.125 miles north of the subject property. No violations were found for this generator. Based on the lack of violations and lack of reported releases or spills, the listing is not a REC for the subject property.
- Ricks Auto Body Shop (1959 NW Birdsdale Avenue) is located less than 0.25 miles northeast of the subject property. No violations were found for this generator. Based on the lack of violations and lack of reported releases or spills, the listing is not a REC for the subject property.

The EPA also regulates the management of hazardous waste at transportation, storage, and disposal (TSD) facilities. Information contained in the EDR report indicates the subject property is not listed as a RCRIS-TSD site. No RCRIS-TSD sites were identified within 0.5 miles of the subject property.

3.1.2.5 ERNS List

The ERNS is a national database containing information from spill reports made to federal authorities. Information contained in the EDR report indicates the subject property is not listed as an ERNS site.

3.1.2.6 U.S. Brownfields List

The EPA's U.S. Brownfields list identifies Brownfields properties addressed by Cooperative Agreement Recipients and Brownfields properties addressed by Targeted Brownfields Assessments. The EDR report indicates the subject property is not listed as a U.S. Brownfields site. No U.S. Brownfield sites were identified within 0.5 miles of the subject property.

3.1.3 Other Databases

The following sections include other databases identified in the EDR report that may be relevant to assessing potential environmental liability or environmental issues at the subject property.

3.1.3.1 EDR Proprietary Databases

EDR has conducted research on the occurrence of historical business practices that may constitute a REC to properties. The database was developed from data found in historical city directories and contains information on over 100,000 former gas stations, manufactured gas plants, and dry cleaners. Due to the nature of these businesses, the sites have the potential for soil and groundwater contamination to have occurred.

EDR Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. The listings reviewed include, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, and service station.

Unless otherwise noted, the mere presence of historical auto stations near a site does not in itself constitute a REC. A review of the EDR Historical Auto Stations list, as provided by, indicated that there are no EDR Historical Auto Stations sites within 0.125 miles of the subject property.

EDR Manufactured Gas List

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800s to 1950s to produce a gas that could be distributed and used as fuel. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and nonvolatile chemicals), sludges, oils, and other compounds, are potentially hazardous to human health and the environment. The byproducts from this process were frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

No manufactured gas sites are listed within 1.0 miles of the subject property.

EDR Historical Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to, dry cleaners, cleaners, laundries, laundromats, cleaning/laundry businesses, wash and dry businesses.

A review of the EDR Historical Auto Stations list, as provided by, indicated that there are no EDR Historical Auto Stations sites within 0.125 miles of the subject property.

3.1.4 Orphan Site List

Orphan sites are sites for which mapping information is not detailed adequately to plot the location of the site, or for which there is no known responsible party or the responsible party is unwilling or unable to pay for cleanup. The orphan site list and available mapping information were reviewed by Parametrix. Ten orphan sites were identified by EDR in the vicinity of the subject property. The 10 orphan sites identified are located at sufficient distances and/or cleanup activities have been completed so that they do not appear to represent RECs to the subject property.

3.1.5 Vapor Encroachment

ASTM Standard E1527-21 defines vapor migration as "the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface." The recognition of vapor migration as a possible REC may require incorporation of new types of controls and restrictions to address this contamination pathway.

The subject property and adjacent sites were reviewed in an effort to determine whether vapor migration has, or has the potential to have, occurred at the site, from adjacent properties. Based on the information reviewed, the subject property is not identified as a potential vapor intrusion site.

No properties were identified in the near vicinity which have confirmed releases of volatile contaminants in soil or groundwater which have not been sufficiently addressed or would otherwise present a potential impact to the subject property.

3.2 Historical Use Information

The objective of the historical use information review is to develop a history of the previous uses of the subject property and surrounding area that helps to identify the likelihood of past uses having led to RECs for the subject property. Parametrix researched the historical land use, occupancy, and ownership of the subject property and adjacent properties to evaluate historical uses that are known to be associated with RECs. Historical records reviewed include Sanborn Fire Insurance Maps (EDR 2023b) and aerial photographs (EDR 2023c).

3.2.1 Certified Sanborn Maps™ Fire Insurance Map Review

Fire insurance maps in the EDR Certified Sanborn Map Report showing the vicinity of the subject property were requested to establish historical business operations at the subject property and adjacent properties. This report (Appendix B) certifies that the complete holdings of the Sanborn Library, LLC collection were searched based on client-supplied target property information and fire insurance maps covering the target property were not found.

3.2.2 Historical Aerial Photograph Review

Historical aerial photographs of the subject property area were obtained from EDR in the EDR Aerial Photo Decade Package. Aerial photographs for the years 1935, 1948, 1951, 1955, 1960, 1970, 1975, 1981, 1990, 1994, 2000, 2006, 2009, 2012, 2016, and 2020 were examined. Copies of the aerial photographs are included in Appendix C. Observations are listed below.

1935	The subject property appears undeveloped and with some trees. Most adjacent properties appear undeveloped or cultivated agriculture land. The current NW Burnside Road is visible to the north.
1948–1951	The subject property remains undeveloped and vegetated. Residential buildings are present north and northwest of the subject property, along the current Eleven

	Mile Avenue. An excavation area is present approximately 2,000 feet west of the subject property (part of current sand and gravel mining operations).
1955	Little or no change is present on the subject property. Additional excavation areas are present west of the subject property in areas that are part of current sand and gravel mining operations.
1960	Little or no change is present on the subject property. Sand and gravel mining areas continue to expand west of the subject property.
1970	Little or no change is present on the subject property. Sand and gravel mining areas continue to expand west of the subject property.
1975	Little or no change is present on the subject property. Sand and gravel mining areas have expanded to the area south of the subject property.
1981	Little or no change is present on the subject property. Ponding water is present in the excavation pits from the adjacent sand and gravel mining. Industrial warehouses have been constructed north and south of the subject property and residential houses are present to the east.
1990	Little or no change is present on the subject property. Sand and gravel mining continues west of the subject property and standing water is present immediately adjacent to the subject property. Additional industrial warehouses have been constructed north of the subject property and a railyard (current Ruby Junction Maintenance Facility) is present to the north. Residences previously present directly north of the subject property have been removed. Ground disturbance is present directly east of the subject property.
1994	Little or no change is present on the subject property. Sand and gravel mining continues west of the subject property and standing water is present immediately adjacent to the subject property. Additional industrial buildings are present directly north of the subject property have been removed. Construction is occurring directly east of the subject property.
2000	Ground disturbance is present on the subject property and the area directly north. Sand and gravel mining continue west of the subject property and standing water is present immediately adjacent to the subject property. Most vegetated lots on Eleven Mile Avenue have been replaced with industrial buildings on gravel or asphaltic surfaces.
2006–2012	Improvements on the subject property and on properties to the east, south, and west of the subject property appear similar to current conditions. Sand and gravel mining continues west of the subject property and ditches to contain standing water are present adjacent to the subject property. The Ruby Junction Maintenance Facility has expanded to the south.
2016	Little or no change is present on the subject property or adjacent properties. The Ruby Junction Maintenance Facility has expanded to the west.

2020 The subject property has recently been paved. Vicinity properties appear similar to the previous aerial photograph.

Based on the historical review, the subject property existed as undeveloped land until circa 2000. Current site conditions are similar to original development. The nearby parcels adjacent to NW Eleven Mile Avenue were developed for industrial use over time, beginning between 1975 and 1981 and continuing until development of the subject property circa 2000. Initial development of the Ruby Junction Maintenance Facility occurred between 1981 and 1990 and the facility expanded over time. Sand and gravel mining began west of the subject property between 1935 and 1948 and expanded over time to the current extent. Standing water within the excavation pits and constructed ditches were present adjacent to the subject property beginning sometime between 1975 and 1981 and continuing through 2020.

Standing water associated with adjacent mining operations may have provided for transport of contaminants into groundwater under the subject property. However, there were no indications of contamination in groundwater during regulatory review. Based on this information, no RECs were identified associated with historical land use of the subject and adjacent properties.

3.2.3 Local Agency Records

Information from local agencies was reviewed for environmental significance as described in the following sections.

3.2.3.1 City of Gresham

A review of permits for environmental significance (i.e., septic tank, stormwater, dry wells, and USTs or ASTs) was completed. No evidence of significant use or storage of hazardous substances or petroleum products was noted on the subject property. Building and plumbing permits dated between 2007 and 2016 were noted, likely associated with additional development of the subject property in 2017.

The City of Gresham lists the owner as Wagoner Properties LLC and the tenant as Cantel Sweeping. The listed year built is 2017 and reflects improvements that were constructed at that time.

3.2.3.2 Multnomah County

Based on information from the Multnomah County Tax Assessor's Office, the subject property is known as tax lot # 1S3E05DA-03500 and is 1.0 acres in size. It is listed by Multnomah County as being owned by Wagoner Properties LLC. Two improvements are listed on the subject property, one constructed in 2005, with updates in 2017, and the other constructed in 2017.

3.3 Additional Environmental Information

The following sections provide a summary of additional environmental information obtained for the site.

3.3.1 Asbestos

The manufacture of most asbestos-containing materials (ACM) was banned by the EPA by 1979. Prior to this, asbestos was a common constituent of numerous building materials, including floor and ceiling tiles, caulking, pipe insulation, roofing materials, and exterior siding. Buildings on the subject property were constructed in 2005 and 2017.

Based on the age of the buildings developed at the subject property, there is low potential for ACM to have been used at the subject property.

3.3.2 Lead-Based Paint

Before 1977, paint commonly contained lead which is considered to cause human health problems if ingested. Buildings on the subject property were constructed in 2005 and 2017.

Based on the age of the buildings developed at the subject property, there is low potential for lead-based paint (LBP) to have been used at the subject property.

3.3.3 Polychlorinated Biphenyls

Transformers can potentially contain polychlorinated biphenyls (PCBs). Buildings on the subject property were constructed in 2005 and 2017.

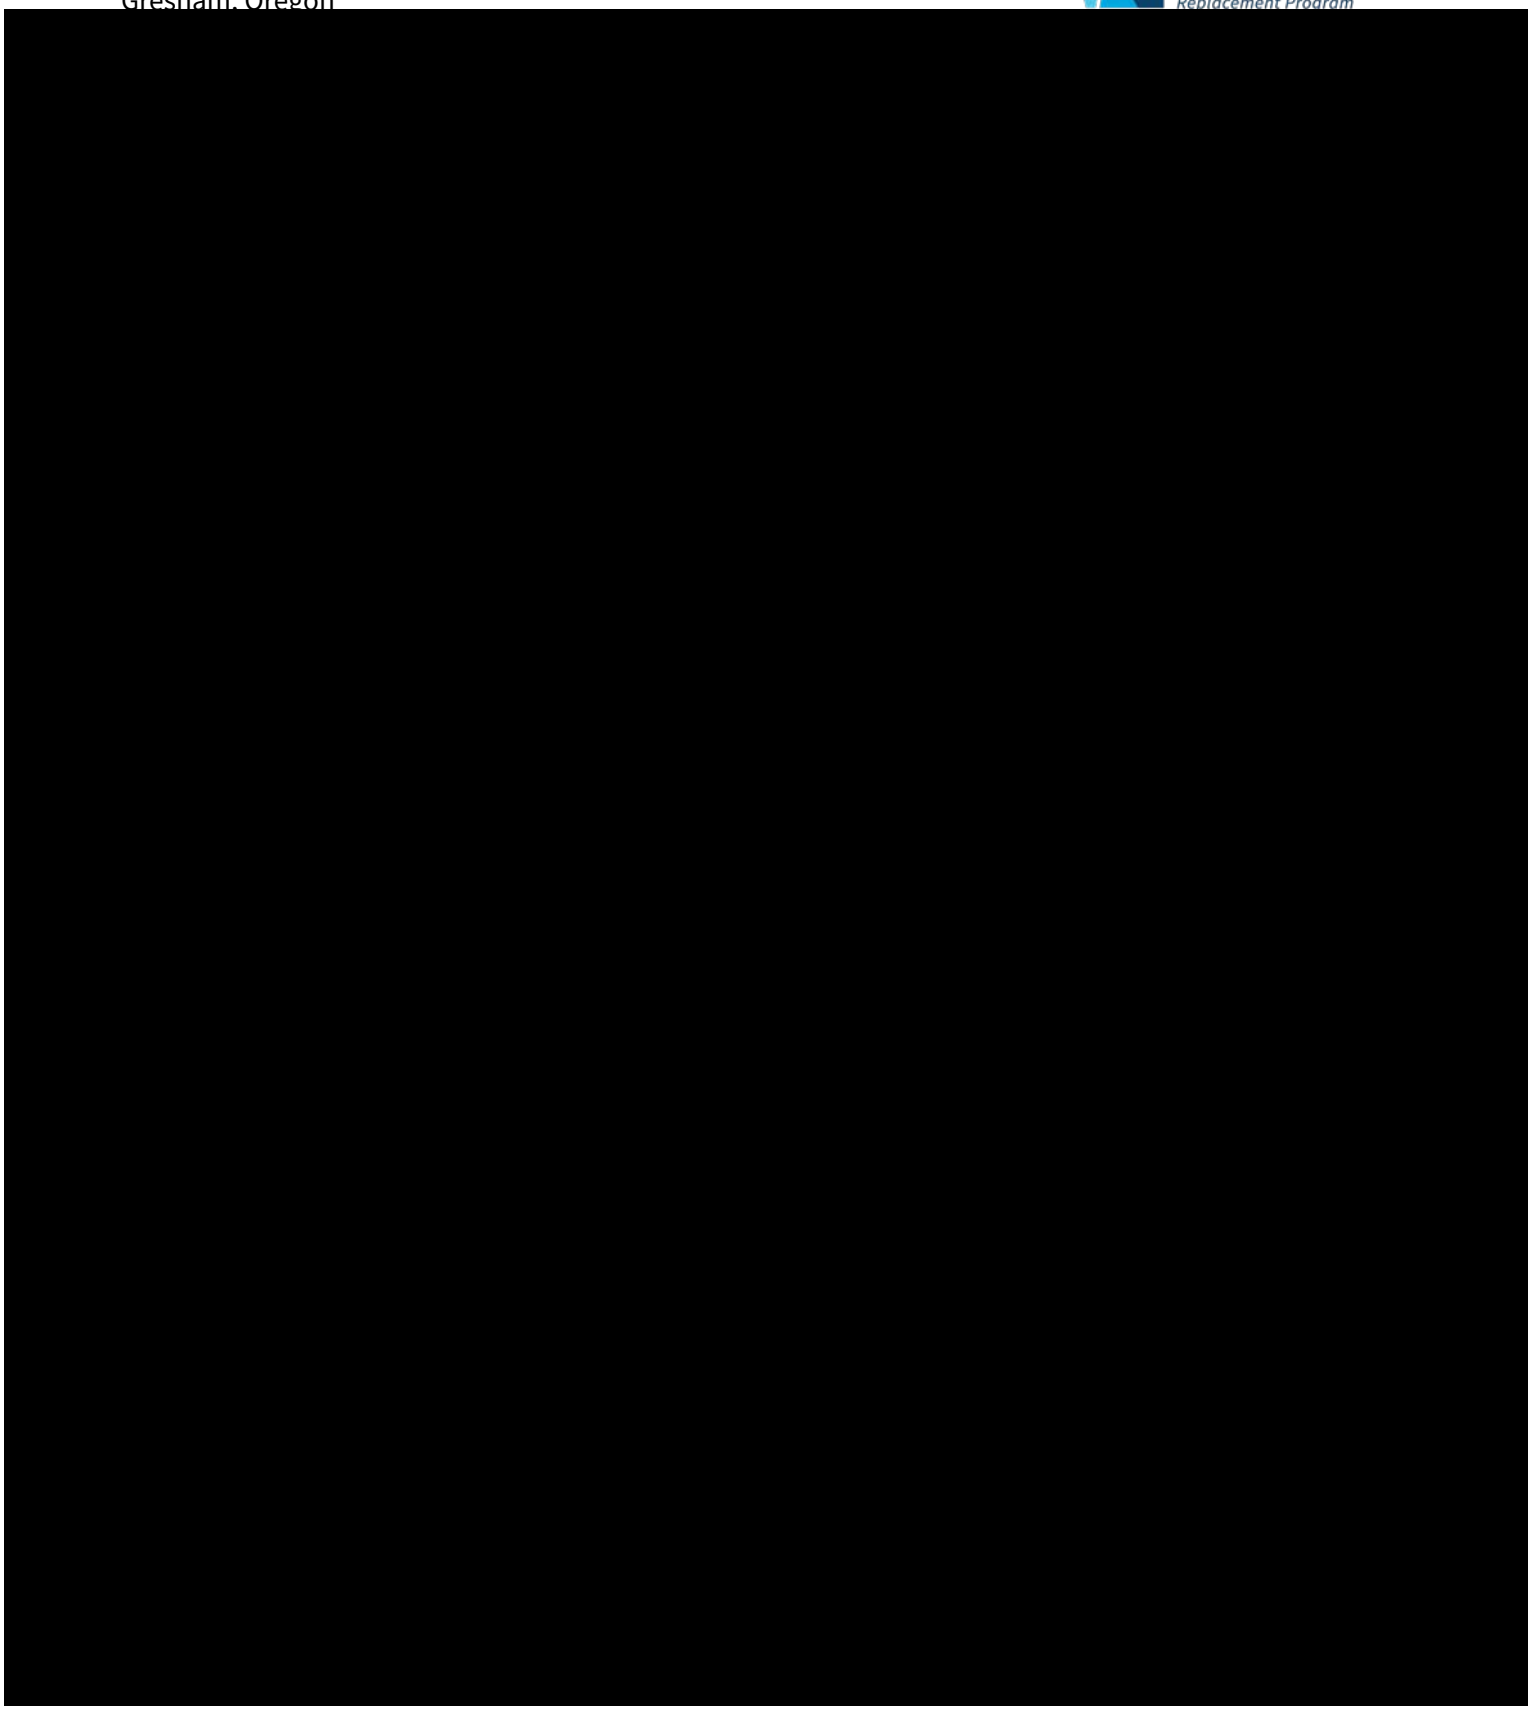
Based on the age of the buildings, there is low potential for PCBs to have been used at the subject property.

3.3.4 Radon

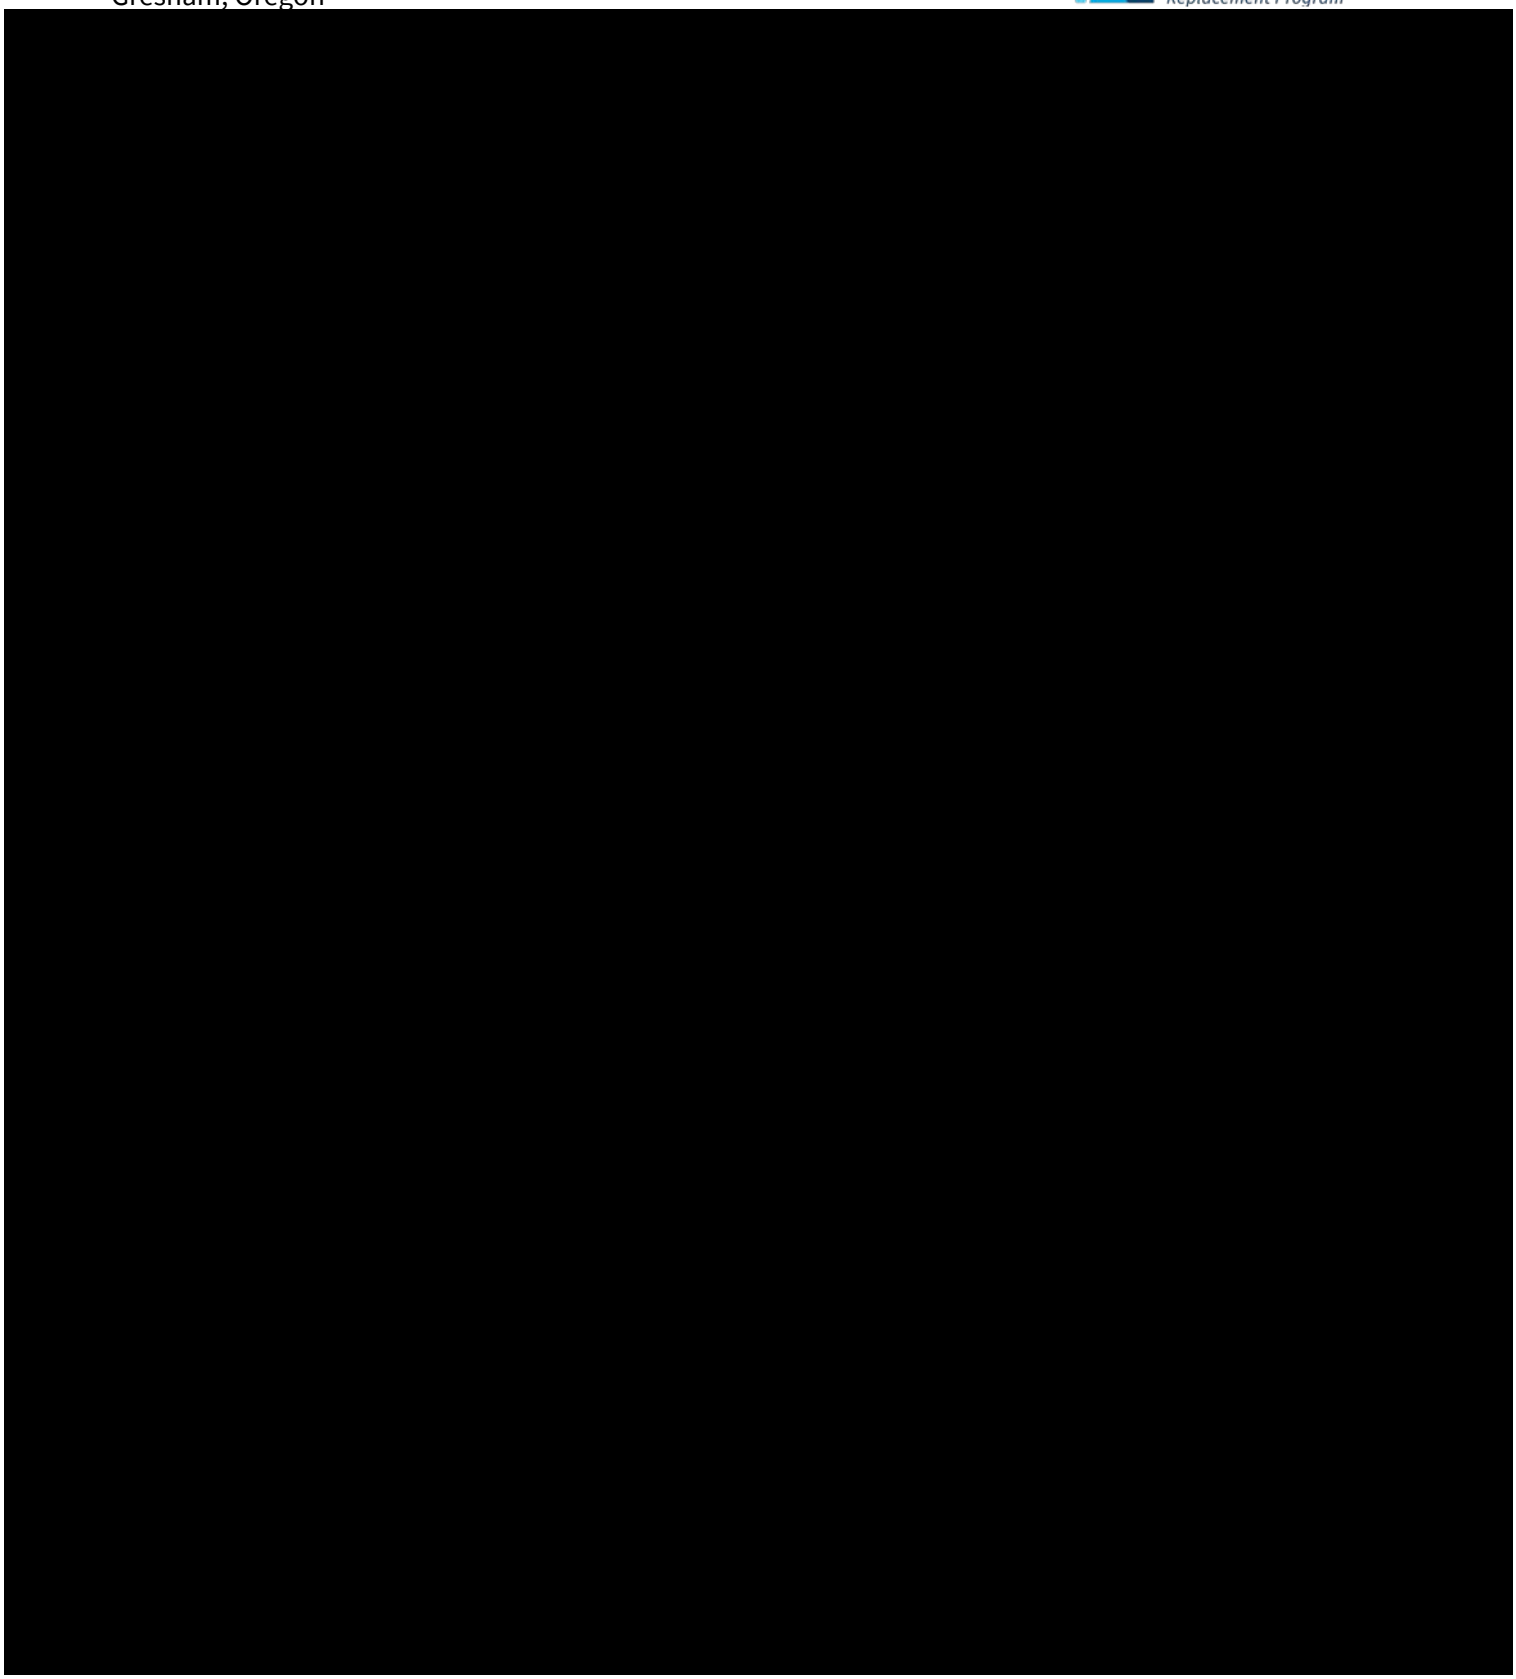
Radon is a naturally occurring radioactive gas formed by the decay of uranium in some rocks and soil. The adverse health effects associated with radon gas depends on various factors, such as the concentration of the gas and exposure duration. The potential concentration of radon gas within a building depends on subsurface soil conditions, the integrity of the building's foundation, the existence of a basement or crawl space (primary areas of concern), and the building's ventilation.

Multnomah County ZIP code 97030 is located in the federal EPA Radon Zone 2. The Zone 2 indoor average radon level predicted from 2 to 4 picocuries per liter (pCi/L), reported as a moderate risk of radon elevation. The EPA Action Level for radon is 4 pCi/L. Based on this limited information, radon likely does not represent an environmental concern at the property.

4. FILE REVIEW



In accordance with ASTM Standard E1527-21, inquiries and review of previous investigations for the subject property, and a review of regulatory files for the subject property or adjacent properties may be conducted to further evaluate environmental conditions on the property or adjacent properties, and to fill in data gaps where applicable. Previous investigations and file reviews are summarized below.



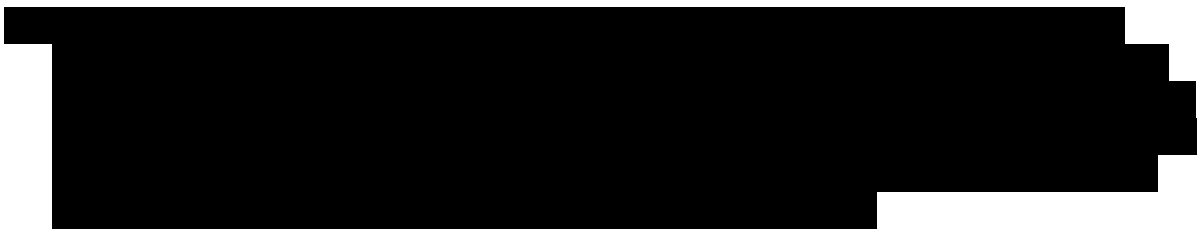
4.1 Previous Investigations

Based on regulatory information from DEQ, the subject property is listed on the underground injection control and hazardous substance information survey regulatory databases. Unless otherwise noted, registration in these databases does not, in itself, constitute a REC. No previous investigations of the subject property were identified during the course of this Phase I ESA (Section 3.0).

4.2 Adjacent and Nearby Properties File Review

Several adjacent properties were listed on environmental databases, as described in Section 3. Sufficient site-specific information was available through review of the EDR report, as well as online DEQ files, to develop an opinion on the potential for these properties to have affected the subject property. Therefore, a specific file review (physical review at DEQ) was not required, beyond those completed during the course of this Phase I ESA. Specific information on the nature of release, types of contaminants, media impacted, and the potential to have affected the subject property or otherwise caused environmental concern is provided in Section 3.

6. INTERVIEWS



7. CONCLUSIONS

Based on the findings of this investigation, Parametrix concluded the following:

1. The subject property is located on Multnomah County tax lot 1S3E05DA-03500. The subject property encompasses an area of approximately 1.0 acres and is used for heavy industry. Operations in the vicinity of the site include sand and gravel mining to the west and south, the Ruby Junction Rail Maintenance Facility to the north, and other heavy industry to the northeast and east. Improvements on the subject property include an office building, a warehouse, and a wash shed.
2. Based on historical review of aerial photographs and local agency records, the subject property was developed in 2005. Additional construction occurred in 2017. The adjacent sand and gravel mining operations began between 1935 and 1948 and continue to the present. The properties were developed for industrial uses beginning between 1975 and 1981 and were open space or cultivated farmland prior to development. RECs associated with historical land use were not identified.
3. Based on the age of the building on the subject property, there is low potential for LBP, ACM, or PCBs to have been used at the subject property.

5. The subject property is not listed on any regulatory database that would indicate a past or current release or storage of hazardous materials.
6. A review of regulatory information indicated that several adjacent or nearby sites were identified in the regulatory record databases. The areas to the west and south are operated as active sand and gravel mines and infiltration and transport of contamination related to mining operations is a potential transport pathway to the subject property. However, there were no indications of metals contamination in groundwater during regulatory review. Based on this information, no RECs were identified associated with historical land use of the subject and adjacent properties.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 04/26/2023 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Lists of state and tribal landfills and solid waste disposal facilities

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Department of Environmental Quality's Closure & Regular Solid Waste Active Disposal Permits database.

A review of the SWF/LF list, as provided by EDR, and dated 01/13/2023 has revealed that there is 1 SWF/LF site within approximately 0.5 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/06/2023 has revealed that

there are 2 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

NARR Comments: A landfill was originally present where the Environmental Services building is now located. The landfill began accepting brush and yard debris in the late 1950s, and later accepted garbage until 1967 or 1968. In 1978 or 1979, most of the garbage was moved to the area now known as the Vance Pit (see ECSI #5780). Samples were taken by DEQ staff from the sump area and were analyzed by DEQ's lab for volatile organic compounds, semivolatile compounds, herbicides and total metals. Levels of metals identified in the samples were below DEQ's SOCLEAN levels and appeared to be normal background. Eight organics were identified at low levels. Their association with the landfill is unclear. See the Strategy Recommendation for more information.

NARR Comments: A worker at Gresham Sand & Gravel experienced burning and swelling after handling sediments removed from a sump area in the gravel pit. The sump area is located near and fed by water flowing from the wall of an area of landfill debris known as Vance Pit. A cross-section of the landfill is visible, as gravel pit operations have caused soil from that area to slide. According to a report from the Mine Safety

GRESHAM SAND & GRAVEL (Continued) **S113408865**

and Health Administration, the worker who experienced the burning and swelling of his hands reported that other workers at the site had complained of headaches and nausea when working around sump material.

Decode for NarcdID: Remedial Action
NARR Comments: DEQ recommended NFA due to the low levels of the contaminants identified. However, the Strategy Recommendation states that the finding of contaminants indicates that there may be a need to address future releases from the landfill and any current or future threats to area groundwater. It was recommended that the area of exposed landfill be covered and erosion in this area prevented.

Environmental Interest/Information System:
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Decode for NarcdID:	Contamination
NARR Comments:	(1/21/92 ALB) The site was picked up from NWR source file review in SAS's 1988 discovery project. Regional personnel responded 6/87 to a complaint of solvent dumping on the site. DEQ collected soil samples from the hole where the disposal was alleged. These samples revealed trace levels of solvent contamination and low levels of diesel/oil contamination and gasoline constituents. Regional staff determined there was no hazardous waste violation. Shortly after the initial complaint response, the business was gutted by a fire. The property was subsequently transferred to new owners and redeveloped. The alley behind MAACO Auto Paint, where the dumping was alleged, was excavated to a depth of approximately one foot and paved over and roofed. DEQ did not sample the area after the excavation. The site is currently occupied by Pro-Met Machining Inc.

NARR Comments: (10/30/12 SMF) Monthly monitoring of soil vapors at eight gas probes on the southern half of Tax Lot 300 (T1S/R3E-S05CA) detected the presence of elevated concentrations of methane in the subsurface during August 2011 through September 2012. Methane soil vapor concentrations at Gas Probes P-1, P-2, P-3, P-4, and P-8 consistently exceeded methane's Upper Explosive Limit (UEL), while methane concentrations at Gas Probe P-7 exceeded methane's UEL more than 50 percent of the time. Methane concentrations at Gas Probes P-5 and P-6 were either non-detect or well-below methane's Lower Explosive Limit (LEL). Hydrogen Sulfide was detected at concentrations of Non-Detect to up to 20 ppm in Gas Probes P-1, P-2, P-3, P-4, and P-8 (August 2011 through September 2012). No Hydrogen Sulfide was detected in soil vapors at Gas Probes P-5, P-6, or P-7.

LOT 5 VANCE LANDFILL (Continued) **S109913235**

NARR Comments: According to Robert Pearson with the Gresham Department of Environmental Services, the Vance Pit consists of landfill material removed from the original landfill area where the Environmental Services building is now located. The original landfill began accepting brush and yard debris in the late 1950s. It later accepted garbage from individual residents. In 1967 or 1968, the landfill quit receiving garbage. In 1978 or 1979, most of the garbage was removed to the area now known as the Vance Pit, next to the Gresham Sand & Gravel site (see ECSI #1407).

NARR Comments: (4/9/02 MTP/SAS) DEQ received a complaint in June 2000 alleging improper waste management of automotive-related fluids drained from vehicles at the site. The complaint indicated that gasoline and waste oil were improperly stored in drums and other containers without lids, and that pressure washing occurred at the site without containment, allowing washwater to penetrate the ground. It was reported that these practices had occurred at least since 1994. Staff from DEQ's Hazardous Waste Section substantiated these allegations during a 3/20/01 site visit. Batteries were observed to be stored on the ground surface, drums were filled with petroleum waste and some were filled with rainwater. Gasoline was stored in open 5-gallon buckets beneath a tarp. A solvent parts washer and drum labeled <quot>used solvent<quot> were observed. Numerous oil-stained soil areas were observed throughout the yard. Partially buried solid waste was observed near the northwest corner of the property, and could be related to the adjacent landfill. An area behind the main shop, where drums were stored and steam cleaning was conducted, appeared to be the most impacted area at the site. Steam cleaning was conducted over bare soil and the wastewater was allowed to infiltrate. It is unclear if runoff from the steam clean area drains to a dry well, reportedly located on the other side of the building near the southeast corner of the property. A catch basin was observed near the southwest area of the site, and appeared to show staining. It is not known if the catch basin is connected to the dry well. As a result of the inspection, DEQ issued a Notice of Noncompliance (NON) for three violations, which included failure to make a hazardous waste determination, failure to properly containerize waste, and discharging vehicle parts wash water to shallow soil and groundwater. DEQ requested documentation that all wastes were properly managed and containerized, and that Bob's Ford cease pressure washing until the

BOBS USED FORD CARS & TRUCKS (Continued) **1004771915**

appropriate wash water management and/or permitting was obtained. Reportedly, limited car washing (<8 cars/month) is occurring at the site but does not appear to require a discharge permit. Bob's Ford has indicated that parts washing will be discontinued until a berm to contain the water is constructed. Following the inspection, disposal documentation received by DEQ indicated that 534 gallons of used oil (flashpoint <200 degrees Fahrenheit) and 133 batteries were removed from the site. It does not appear that any waste characterization sampling was conducted, and it is unclear how used solvent is managed. Based on the potential contamination, the site was referred to DEQ's Site Assessment Program on September 26, 2001.

NARR Comments: Possibly overland runoff of impacted surface water to the dry well and possibly shallow groundwater; direct infiltration into relatively permeable site soil. Both surface soil and subsurface soil are likely impacted at the pressure-washing area. Relatively high use of groundwater in the area. The nearest domestic well is 3,000+ feet from the site. Surface water runoff does not appear to be a pathway

BOBS USED FORD CARS & TRUCKS (Continued) **1004771915**

of concern.

NARR ID: 5742200

Updated By: Not reported
Updated Date: 12/17/2002
Decode for NarcdID: Remedial Action
NARR Comments: Site referred from the Hazardous Waste Program: RCRA non-notifier; improperly managed hazardous wastes in containers; discharging parts washer to shallow soils and groundwater. (4/9/02 MTP/SAS) DEQ has reviewed site information and classified the site as a medium priority for further investigation, including: 1) submission of information to DEQ regarding solvent use, management, and disposal; 2) inspection and sampling of the dry well system to determine the nature of previous discharges into it, and construction details of the dry well and associated drainage system; and 3) sampling to determine the nature and extent of soil contamination, particularly in the former pressure-washing area, and, depending on findings of the dry well evaluation, in the vicinity of the dry well. Based on site observations and supporting photodocumentation, the site should be proposed for listing on the Confirmed Release List (CRL). There is insufficient information to propose the site for listing on the Inventory of Hazardous Substance Sites.

Updated Date: 12/17/2002
Decode for NarcdID: Health Threats
NARR Comments: Direct exposure of site visitors or workers to contaminated surface and subsurface soil possible. Permeable site soil and/or the dry well on-site may provide a pathway to groundwater. Groundwater appears to be 50 feet or more deep at the site. The nearest domestic well appears to be about 3,000 feet or more from the site. The Columbia South Shore Wellfield is about 2 miles from the site in a presumed downgradient direction. Ponds associated with Morse Bros. sand and gravel operation are located downgradient of the site and appear to intersect the uppermost groundwater aquifer in the vicinity of the site.

NARR Comments: Soil samples from the Old Wash Bay Drywell showed the presence of gasoline, diesel and heavy oil in soils. Soil samples from the parking lot stormwater drywell showed the presence of diesel and heavy oil in soils. Parking lot stormwater drywell analytical results also showed the presence of lead at concentrations that qualified the material as hazardous waste.

NARR Comments: (7/11/05 JMW/SAP) Site entered DEQ’s Independent Cleanup Program in

OBRIST & CUNNINGHAM (Continued) **S103419397**

July 2005. (10/18/05 MG/ECP) Approximately 45 tons of soil were removed from the old wash bay drywell and disposed of at the Hillsboro Landfill. Approximately 65 tons of soil were removed from the parking lot stormwater drywell and disposed of as hazardous waste. Soil samples collected following the soil removal showed non-detect for all petroleum hydrocarbons on the walls and the floor of both excavations. The parking lot stormwater drywell further showed non-detect for total lead in all samples, except for one result at 4 mg/kg on the west wall of the excavation. Based on report review, DEQ has determined that the Underground Injection Control (UIC) systems have been decommissioned in accordance with regulation. The <quot>Old Wash Bay Drywell<quot> and the <quot>Parking Lot Stormwater Drywell<quot> have been decommissioned and closed. DEQ has issued a Partial NFA for these two UIC's.

NARR Comments: [10/29/12 SAM/ICP] Contaminants of concern included petroleum compounds, related to the former UST and unknown construction debris fill in the former gravel pit, which may include metals, petroleum, VOCs and methane gas production. Exposure pathways considered relevant to this site were: Subsurface soil dermal contact for construction and excavation workers and subsurface soil leaching to groundwater. Groundwater vapor intrusion, volatilization to outside air, inside air and groundwater in excavation for occupational and construction workers. Methane intrusion above the lower explosive limits. Groundwater is not used on site; the facility and surrounding area is generally supplied by a public drinking water system. Future use of the site is expected to remain light industrial.

NARR Comments: [10/29/12 SAM/ICP] Two Phase I Environmental Site Assessments were performed on the site in 2005 and 2012. The conclusions from both Phase I documents are similar, noting Recognized Environmental Conditions, including the former 4,000-gallon gas UST, former gravel pit and land filling activities, reported dry wells and a building floor drain near a compressor that may be connected to the dry wells. A Phase II Environmental Site Assessment was performed in August 2012 to provide additional information for the Recognized Environmental Conditions on site. A ground penetrating radar survey was performed to determine locations of onsite dry wells, underground utilities, and the potential buried UST. Subsurface soil, groundwater and soil-gas samples were also collected and analyzed. Subsurface borings indicated the gravel pit was filled with soil, construction debris-including asphalt, and smaller amounts of woody debris. No household or man-made organic items were found in borings in the former gravel pit. Methane was measured with a handheld unit and the

ALEXANDER SERVICES LLC (Continued) **1000439200**

report text indicated methane was not observed however, results and supporting documentation was not provided. To ensure correct methods were used DEQ requested additional measurements to support the conclusion that methane is not a concern. Locality of facility was considered the property boundary as groundwater and soil samples at the presumed down gradient side (North) indicate concentrations meet risk-based concentrations or were not detected. Two of the three groundwater samples detected metals, particularly lead (as high as 671ug/L) above risk-based concentrations for occupational ingestion. Groundwater samples with detections above risk-based concentrations were located within the former gravel pit/fill footprint. The expected downgradient boring groundwater concentrations were below detection limits. October 2012- Four additional soil gas measurement points within the former gravel pit were established. Borings were drilled to 5 feet and sealed to ensure no atmospheric gases entered the holes. An initial reading at one boring found methane at 0.3%, which then stabilized down to 0.0% after approximately 5 minutes. All other borings read 0% methane. DEQ Conclusions: An NFA determination is recommended for the Boden/Alexander site based on the following: Soils sampled on-site were protective for occupational and excavation workers. Groundwater is not used on site for any purpose and the nearest registered residential well is approximately 0.25miles away and cross-gradient from the site. In addition, the area is supplied by a public water system. Soil gas concentrations were below occupational risk-based concentrations. One of four methane samples detected concentrations of methane well below DEQ action levels. The other samples did not detect any methane. The site does not contain significant habitat for plants or animals. DEQ concludes that based on the information presented to date and under the current zoning, the Boden Alexander property is currently protective of public health and the environment and requires no further action under the Oregon Environmental Cleanup Law, ORS 465.200 et seq., unless new or previously undisclosed information becomes available.

NARR Comments: [9/28/12 SAM/ICP] In approximately 1948 much of the south and central portion of the property was utilized as a gravel pit. By the 1950s, the gravel pit appeared to be inactive and backfilling may have been started. The former gravel pit appears to have been completely filled by the 1960s. A portion of the current property building was initially constructed in the 1970s with subsequent additions throughout the 1990s. The site has been recently occupied by

NARR Comments: (10/2/00 MTP/SAS) DEQ SAS received a complaint in November 1998 alleging improper disposal of hazardous waste to the ground surface. It was alleged that during the preceding year the resident at the site operated a car repair business and used gasoline as a solvent. The waste allegedly was discharged in the vicinity of large trees, approximately 35 feet from the property line.

ROCKWOOD CLEANERS (Continued) **S106123747**

Updated Date: 12/21/2010
Decode for NarcdID: Remedial Action
NARR Comments: (1/5/04 BAG/VCP) Site entered DEQ's Voluntary Cleanup Program in January 2004. (2/5/08 GMW/SAS) Site is not on VCP waiting list, and owner/operator has not applied for Dry Cleaner Program funding. Further investigation is needed, under a medium priority. (6/5/10 MTPugh) ML Commercial Properties entered the VCP for review of recent investigation results and their request for an NFA. Based on our review it appears that the completed site investigations are adequate to assess whether significant releases of dry cleaning related chemicals, such as perchloroethene (PCE) or related decomposition products, have occurred to site soils. In rare instances where contamination was detected in soil, detected concentrations are below applicable risk-based concentrations. Three groundwater samples have been collected at the site from temporary borings. PCE and trichloroethene (TCE) were detected in one of three samples collected from the regional aquifer. Detected concentrations were above risk-based standards for drinking water. In the 2009 Phase II Investigation Report prepared by Partner Engineering and Science, Inc., it is recommended that additional groundwater characterization be conducted to assess the extent of groundwater impacts. Rather than conduct additional groundwater investigation at this time, DEQ recommends that a Beneficial Water Use Determination (BWUD) be completed to assess if groundwater in the vicinity of the site is used for a potable water supply. DEQ completed a cursory review of well log records, and there appear to be a number of potable use wells in the area, but specific locations cannot be determined. In addition, further investigation will be needed to assess the dry wells to verify that they are not significant source areas at the site. Next Steps For reasons discussed above, DEQ will not require additional soil (or soil gas) investigation beneath the dry cleaner operation, at the cess pools/septic system, or current sanitary sewer alignment. However, the presence of two or more dry wells triggers the need for additional work. Existing dry wells need to be registered with DEQ s Underground Injection Control (UIC) Program. They also will need to be evaluated as potential contaminants sources, regardless of whether they are abandoned or will remain operational. This typically involves locating the dry wells, sampling their contents and possibly adjacent or underlying soil, and removal of sediment/contents. DEQ s UIC requirements can be found at: Oregon DEQ: Water Quality - Underground Injection Control (UIC) Program - Home Dave Cole is DEQ s Northwest Region coordinator for UIC registration and will be the lead for dry well work. Dave can be reached at 503 229-6371, and by e-mail at Cole.David@deq.state.or.us. Dave will coordinate with me to determine investigative requirements and to interpret investigation results. DEQ will require a sampling plan for the UIC work. To address the detections of chlorinated hydrocarbons in the regional aquifer, ML Commercial Properties should, at a minimum, complete a BWUD per DEQ guidance available at: http://www.deq.state.or.us/lq/pubs/docs/cu/GuidanceBeneficialWaterUse.pdf ML Commercial Properties may elect to proceed with additional groundwater sampling. If additional groundwater sampling is to be conducted, DEQ requests submittal of a brief work plan. Based on the results of the BWUD and dry well investigation, DEQ will determine whether additional groundwater testing will be required. 12/20/10 Based on the presence of dry wells at the site, DEQ requested additional information regarding their number and location. DEQ and

ROCKWOOD CLEANERS (Continued) **S106123747**

Partner staff conducted a site visit on August 4, 2010. Based on the site visit and subsequent geophysical survey, a total of 23 suspected dry well locations were identified (Figure 2). DEQ requested additional investigation of the six dry wells located around the perimeter of the dry cleaner building (DW-13, DW-14, DW-16, DW-17, DW-22A. DW-22, and DW-23; Figure 2). A camera survey was conducted to assess sediment accumulation in each of the seven dry wells. There was insufficient sediment accumulation to readily collect a sample from any of the seven dry wells; no indication of dry cleaner discharges, such as lint accumulations or discoloration, was observed. No samples were collected and DEQ did not require additional investigation for these seven dry wells. Additional investigation on the remaining sixteen dry wells may be required as part of the pending registration of these dry wells with DEQ s Water Quality Program. The number and location of soil and groundwater samples collected at the site appear sufficient to assess whether significant releases of PCE occurred from historical dry cleaning operations. There is no indication that actionable releases occurred beneath or adjacent to the former dry cleaning area, or that dry cleaning chemicals were released to soil at or near the former cess pool, current sanitary sewer line, or nearby dry wells. Based on historical site use there is no indication that significant quantities of hazardous substances were used in other areas or businesses in the strip mall, although historical environmental testing was largely focused on the dry cleaner. DEQ is not aware of investigations in other site areas. DEQ has determined that a no further action determination (NFA) is warranted for the site. Per DEQ Underground Injection Control rules, existing dry wells at the site need to be registered. This may necessitate additional evaluation of approximately sixteen dry wells that have not yet been evaluated. Additional evaluation may include sampling and analysis of dry well contents or adjacent soil. Further work needed to register all site dry wells will be completed through coordination with DEQ s Water Quality Program.

NARR Comments: (2/27/92 HMS) The property had been the site of an engine-rebuilding business for more than 35 years. Recently, the property owner evicted Rockwood Machine Shop, and current site operations are unknown. A spill of unidentified material, subsequently shown to contain solvents, occurred 8/18/90. Response personnel found two unlabeled 30-gal. drums lying on their sides with their contents spread across asphalt paving. Immediate and subsequent cleanup activities involved removal of spilled liquids and affected asphalt paving, and the excavation of a large volume of soil. Soil samples collected after excavation indicated that no substantial contamination remained from the spill. There may have been other releases in the course of the shop's 35+ years of operation, as evidenced by stained areas on the concrete floor inside the shop building. In addition, the site was not connected to sewer service until 1990, indicating that there may be a drywell or septic system on-site.

NARR Comments: The 1.4-acre commercial property consists of one paved tax lot with one, 11,497 ft2, two-story building located on the southeast corner of the property. The property is bordered by East Burnside Street and MAX light rail to the south, commercial property and residential apartments to the east, residential apartments to the north, and a commercial business to the west. The property is zoned for mixed-use that includes commercial and high-density urban residential. The site is covered in hardscape and therefore no ecological habitat is present on the site. Until the 1950s, historic site use was agricultural that included an outbuilding with hay, grain, and row crops. In 1954, the building that is currently on the property was constructed, and a gravel parking area was installed. Hall Building Supply and the Rockwood Machine Shop began site operations in the mid 1950s. A record and satellite television shop operated on the site for a short time in the 1970s. In 1990, the property was connected to the public sanitary sewer system and in 1994, the property was converted into a restaurant with an asphalt paved parking area. Current use of the site is a multi-tenant Community Center.

NARR Comments: In August of 1990, DEQ was notified of a spill from two, unmarked 30-gallon drums containing carburetor cleaner, or a similar solvent, that was assumed to be associated with the Rockwood Machine Shop. The spill was caused by trespassers, and occurred over a 35-foot by 70-foot asphalt covered area on the northeast side of the building. Between 1990 and 1991, DEQ coordinated the cleanup with the property owners, Pacific Wholesalers, Inc. In total, 27 yd3 of asphalt and 38 yd3 of soil were removed and confirmation samples were collected at the limits of the excavation. Soil removal was completed to at least

ROCKWOOD MACHINE SHOP (Continued) **1000473631**

4 inches below the asphalt cover, however the final depth of excavation was not documented. Samples collected at the limits of the excavation were all non-detect for volatile organic compounds (VOCs). Groundwater was not encountered during the removal.

The spill was caused by trespassers, and occurred over a 35-foot by 70-foot asphalt covered area on the northeast side of the building. Between 1990 and 1991, DEQ coordinated the cleanup with the property owners, Pacific Wholesalers, Inc. In total, 27 yd3 of asphalt and 38 yd3 of soil were removed and confirmation samples were collected at the limits of the excavation. Soil removal was completed to at least 4 inches below the asphalt cover, however the final depth of excavation was not documented. Samples collected at the limits of the excavation, were all non-detect for volatile organic compounds (VOCs). Groundwater was not encountered during the removal. In July 1992, the underground HOT was decommissioned by a licensed underground storage tank supervisor. The tank was removed and disposed of along with 16 yd3 of visually-stained soil to a depth of 6.25 feet below the ground surface. Confirmation samples collected from the extent of the excavation were non-detect for total petroleum hydrocarbons (TPH). The site owner at the time did not enter into a cost recovery agreement with DEQ for review. Therefore, DEQ did not evaluate the HOT for a no further action determination.

NARR Comments: (3/13/91 MJM) Site is bounded to the north and east by apartments. It is a commercial site that's accessible to the public. The northern and eastern boundaries are fenced. The soil type is flood gravels; topography is flat. (This information is based on a 12/3/90 site visit.). (6/1/16 RWA) Applicable potential pathways of exposure include: A) Direct contact with contaminated soil to current and future occupational site workers and future construciton and excavation workers.; B) Inhalation of impacted indoor air from VOCs in soil and soil vapor to: current and future occupational site workers; C) Inhalation of impacted outdoor air from VOCs in soil and soil vapor to current and future occupational site workers. Groundwater was not encountered during the heating oil tank decommissioning and removal in 1992, or the spill response excavation in 1990-1991. Drinking water is supplied to the site by the Rockwood Public Utility District. No surface water bodies are on or near the site.

NARR Comments: [June 2016] In August 1990, DEQ was notified of a spill from two, unmarked 30-gallon drums containing carburetor cleaner, or a similar solvent, that was assumed to be associated with the Rockwood Machine Shop. The spill was caused by trespassers that occurred over a 35-foot by 70-foot asphalt-covered area on the northeast side of the building. Between 1990 and 1991, DEQ coordinated the cleanup with the property owners that involved the removal and disposal of 27 yd3 of asphalt and 38 yd3 of soil. Confirmation samples were collected at the limits of the excavation and were all non-detect for volatile organic compounds (VOCs).

 In 1992, the on-site heating oil tank was decommisioned and removed from the site. Confirmation samples collected at the extent of the excavation were non-detect for petroleum hydrocarbons.

 Additional investigation was performed in 2016 to address remaining data gaps. A geophysical survey was performed to locate the former septic system, which was used until 1990. No anomolies or the former septic system were found. Soil vapor samples were collected from beneath the existing building and throughout the property. No VOCs were detected in soil vapor samples above applicable risk-based concentrations.

 DEQ issued a no further action (NFA) determination for the site in June 2016. Conditions of the NFA include notification to DEQ prior to excavation and offsite disposal of soil or construction of additional habitable structures on the property.

NARR Comments: Fifteen drywells were investigated, their contents removed, and decommissioned. The former drycleaning facility was demolished and 250 cubic yards of PCE-impacted soil beneath the building removed. After soil removal activities, confirmation sampling did not detect contaminants in soil above risk-screening criteria for human health receptors by direct contact or vapor intrusion scenarios. The site does not pose unacceptable risk to human health and the environment from soil. The site has been redeveloped and the location of the new East Multnomah County Courthouse. Low levels of VOCs were initially detected in groundwater in the vicinity of the former dry cleaner facility. A groundwater extraction test well (TW-1) was installed in this area for the courthouse heating-cooling system and to contain any potential contamination present prior to full delineation of the extent. Extracted groundwater was sampled frequently for over a year. Initial low level detections of VOCs in groundwater appear to be related to and localized adjacent to former drywells. A groundwater beneficial use determination did not identify any nearby offsite wells used for drinking water purposes. Groundwater is not consumed onsite and unlikely for the foreseeable future given the area is supplied by a municipal (Rockwood) water supply. There is no unacceptable risk at the site under current conditions.

NARR Comments: DEQ has determined that remedial action to address environmental contamination at the East Multnomah County Courthouse site is complete, and no further action is required. This determination is based on DEQ regulations and the following facts as we now understand them, which are described in more detail in DEQ s Staff Memorandum in support of a No Further Action determination (July 31, 2015). In 2011, Multnomah County entered into a voluntary agreement with the DEQ Cleanup Program for oversight to investigate volatile organic

MULTNOMAH COUNTY (Continued) **S110697304**

compounds (VOCs) in soil and groundwater attributed to drywells associated with the former dry cleaning facility. Site work included demolishing the dry cleaning building and removal of PCE-impacted soils beneath the building, investigation and removal of 15 drywells, and further delineation and testing of groundwater after initial sampling detected low levels of VOCs. Extracted groundwater was sampled frequently for over a year and no chlorinated VOCs were detected. Initial low level detections of VOCs in groundwater appear to be related to and localized adjacent to former drywells. In conclusion, the site does not pose unacceptable risk to human health and the environment.

Updated By:	KDANA
Updated Date:	12/06/2018
Decode for NarcdID:	Contamination
NARR Comments:	(12/06/2018 KPD/VCP) Three groundwater monitoring wells were installed along the edges of the site as part of an environmental assessment in March 1996. Four chlorinated solvents, at a total concentration of 50.6 ppb, were detected in MW-3, along SE Stark Street. The contamination is likely related to a dry cleaners that operated in the area in the 1960s and '70s. The three monitoring wells were resampled as part of a follow-up investigation in March 2017. Only one solvent, PCE, was detected in MW-3, at a concentration of 0.791 ppb. Extensive sampling was conducted at the site in October 2017. Sediment samples were collected from the bottom of 12 UICs (nine dry wells and three septic system seepage pits). Heavy oils were detected, along with elevated concentrations of metals including cadmium and lead. Six subsurface vapor samples were collected around the former dry cleaners site, finding low concentrations of PCE.

ROCKWOOD RISING (Continued) **S120851093**

Twenty surface soil samples were also collected from across the former Fred Meyer site, but no contamination was identified.

NARR Comments: Soils at the site are generally silty, sandy gravels with cobbles and occasional boulders to a maximum explored depth of 45 ft bgs. Groundwater was encountered at an average depth of 35 ft bgs, with an observed gradient to the west. The nearest surface water bodies are rock quarry ponds (half-a-mile to the southeast) and the Salish Ponds (one mile to the east-northeast). A municipal water supply is provided to the area by Rockwood Water PUD.

NARR Comments: (12/06/2018 KPD/VCP) In late 2017, sediments and septic solids were vacuumed out of the nine dry wells and three seepage pits and shipped off-site for disposal. The dry wells and seepage pits were decommissioned by backfilling with CDF in December 2017. A 1,800-gallon steel septic tank was excavated and removed from the site, as was a stormwater sedimentation vault. The three groundwater monitoring wells were decommissioned in October 2018. Approximately 20,000 cubic yards of surface soils are expected to be excavated as part of the development of the site.

Updated Date: 10/17/2018
Decode for NarcdID: Site History
NARR Comments: The site was a rural residential area with up to 11 residences from at least 1935 to 1955. A Fred Meyer shopping and department store was constructed on the large, western tax lot circa 1958. The Rockwood Shopping Center, a multi-tenant commercial building, was constructed on the small, eastern tax lot around the same time. The two buildings were separated by an asphalt parking lot. A dry cleaning facility operated from a storefront at the south end of the Rockwood Shopping Center from at least 1967 to about 1980. The cleaners operated under various names including <quot>Rockwood Coin-Op Dry Cleaner<quot>, <quot>Rockwood Cleaner & Laundry<quot>, and <quot>Laundry Basket Coin-Op<quot>. The Fred Meyer store was vacated in 2005 and razed in 2007. The Gresham Redevelopment Commission purchased the site in March 2010. The northern 4,000 square feet of the Rockwood Shopping Center was demolished shortly thereafter, and the remaining 8,000 sq. ft. building was remodeled into a Community Office Building.

ROCKWOOD RISING (Continued) **S120851093**

Southeast 188th Avenue, extending from Stark Street north to Burnside on the east side of the Community Office Building, was vacated in 2011 and replaced with a new SE 187th Avenue on the west side of the building. The Fred Meyer lot remained vacant until construction of the Rockwood Rising development began in 2018.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: Rockwood Rising is a mixed-use development on the site of a former Fred Meyer store. Nine stormwater dry wells, three septic system seepage pits, two septic tanks, and a stormwater sedimentation vault were present at the site. Sediments and septic solids at the bottom of the dry wells and seepage pits were impacted with heavy oils and elevated concentrations of metals. Between October and December 2017, the sediments and septic solids were vacuumed out and shipped off-site for disposal, and the wells and pits were backfilled.

NARR Comments: (2/12/1998 TER/VCP) The Bill Yoder Jeep-Eagle and Bill Yoder Custom Van Shop properties were leased by Chrysler Realty Corporation (CRC) from the owners: Melba Roth (18449 SE Stark) and Lyle Cumming (18345

MR. TRANSMISSION (Continued) **S109346067**

SE Stark). Bill Yoder subleased the properties from CRC. A pending transfer of the lease from CRC to Bill Yoder resulted in CRC performing Phase I Preliminary Assessments in 1994, which identified the following potential release sources: 1) three underground storage tanks (two gasoline and one waste oil) north of the Jeep-Eagle main building; 2) six hydraulic hoists (three of which were out-of-service) in the main Jeep-Eagle building; and 3) seven dry wells, five on the Jeep-Eagle property and two on the Custom Vans property. Phase II Assessments were conducted following the results of the Phase I. Sump samples were collected and soil borings were completed downgradient of each dry well. Analytical results confirmed the presence of gasoline and heavy oil range petroleum hydrocarbon contamination, BTEX compounds, and other volatile and semivolatile organic compounds. Following the Phase II Assessment, CRC signed a Letter Agreement with the Voluntary Cleanup Program in February 1995 for review and oversight of further investigation and cleanup.

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: The site vicinity includes light commercial and some residential use. Shallow unconfined groundwater is at a depth of 50-55 feet. Well logs from the area suggest that static water levels fluctuate significantly based in part on seasonal conditions. Groundwater flows north-northwest toward the Columbia River. The nearest city well is operated by the City of Rockwood, about 0.75 miles west (cross gradient) of the site. The nearest downgradient well is more than one mile north of the site. Drinking water to local residents and businesses is provided by the Portland Water Bureau from the Bull Run Reservoir. The ground surface of the site gently slopes to the north. The nearest surface water is Fairview Creek, approximately 1 mile east.

Updated Date: 10/03/2011
Decode for NarcdID: Remedial Action
NARR Comments: (2/12/1998 TER/VCP) CRC submitted a Work Plan for site investigative work to DEQ in June 1995. DEQ and CRC agreed to address the hydraulic hoists separately from the other site work. CRC then changed consultants, and a revised work plan was submitted by Dames & Moore in November 1995. Field work was completed in April 1996. A Site Characterization report was approved by DEQ in July 1996. Sludge was removed from all sumps and from all dry wells except DW-2AB and DW-5 by the end of September. Additional sampling indicated that no soil cleanup was necessary, and that groundwater impacts were not a concern. A No Further Action letter was issued in August 1997. The NFA did not apply to the hydraulic hoists. Melba Roth signed a Letter Agreement with DEQ on September 1, 1997 for oversight of the hydraulic hoist removal. Work plans for the removal were reviewed by DEQ and EPA in September 1997. PCBs were detected in soil during sampling and hoist removal in October 1997. TPH & PCB impacted soils were removed at each hoist. The concrete floor of the building was cleaned and a report submitted to DEQ in November 1997. A No Further Action determination was proposed in December 1997 and approved in February 1998. (9/30/2011 KPD/VCP) DEQ's UIC program referred the site to Cleanup in February 2008. An investigation of five underground injection control wells at the site in 2005 showed contamination above DEQ's risk-based screening levels. The UICs need to be cleaned up and decommissioned. (See UIC file #13203). The site was added to a waiting list for assignment to a Cleanup Project Manager in October 2008, but eventually was dropped from the list in September 2011 due to an apparent lack of interest from the site

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

Date of Government Version: 08/30/2013

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS TSCA: PFAS Manufacture and Imports Information

EPA issued the Chemical Data Reporting (CDR) Rule under the Toxic Substances Control Act (TSCA) and requires chemical manufacturers and facilities that manufacture or import chemical substances to report data to EPA. EPA publishes non-confidential business information (non-CBI) and includes descriptive information about each site, corporate parent, production volume, other manufacturing information, and processing and use information.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS ATSDR: PFAS Contamination Site Location Listing

PFAS contamination site locations from the Department of Health & Human Services, Center for Disease Control & Prevention. ATSDR is involved at a number of PFAS-related sites, either directly or through assisting state and federal partners. As of now, most sites are related to drinking water contamination connected with PFAS production facilities or fire training areas where aqueous film-forming firefighting foam (AFFF) was regularly used.

PFAS WQP: Ambient Environmental Sampling for PFAS

The Water Quality Portal (WQP) is a part of a modernized repository storing ambient sampling data for all environmental media and tissue samples. A wide range of federal, state, tribal and local governments, academic and non-governmental organizations and individuals submit project details and sampling results to this public repository. The information is commonly used for research and assessments of environmental quality.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

USGS TOPOGRAPHIC MAP

Target Property Map:	14898322 CAMAS, WA
Version Date:	2020
South Map:	14878114 DAMASCUS, OR
Version Date:	2020

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

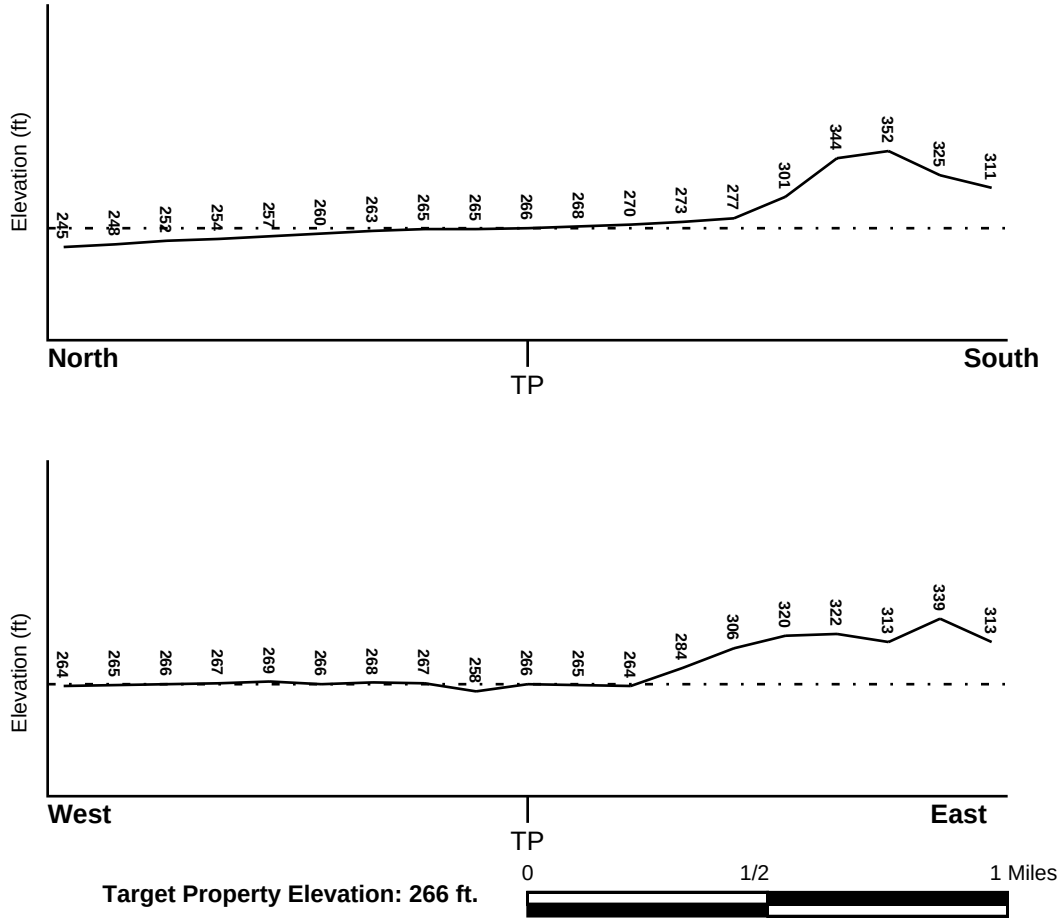
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 266 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
4101830140F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
41051C0214H	FEMA FIRM Flood data
4101830226E	FEMA FIRM Flood data
41051C0402H	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
CAMAS	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

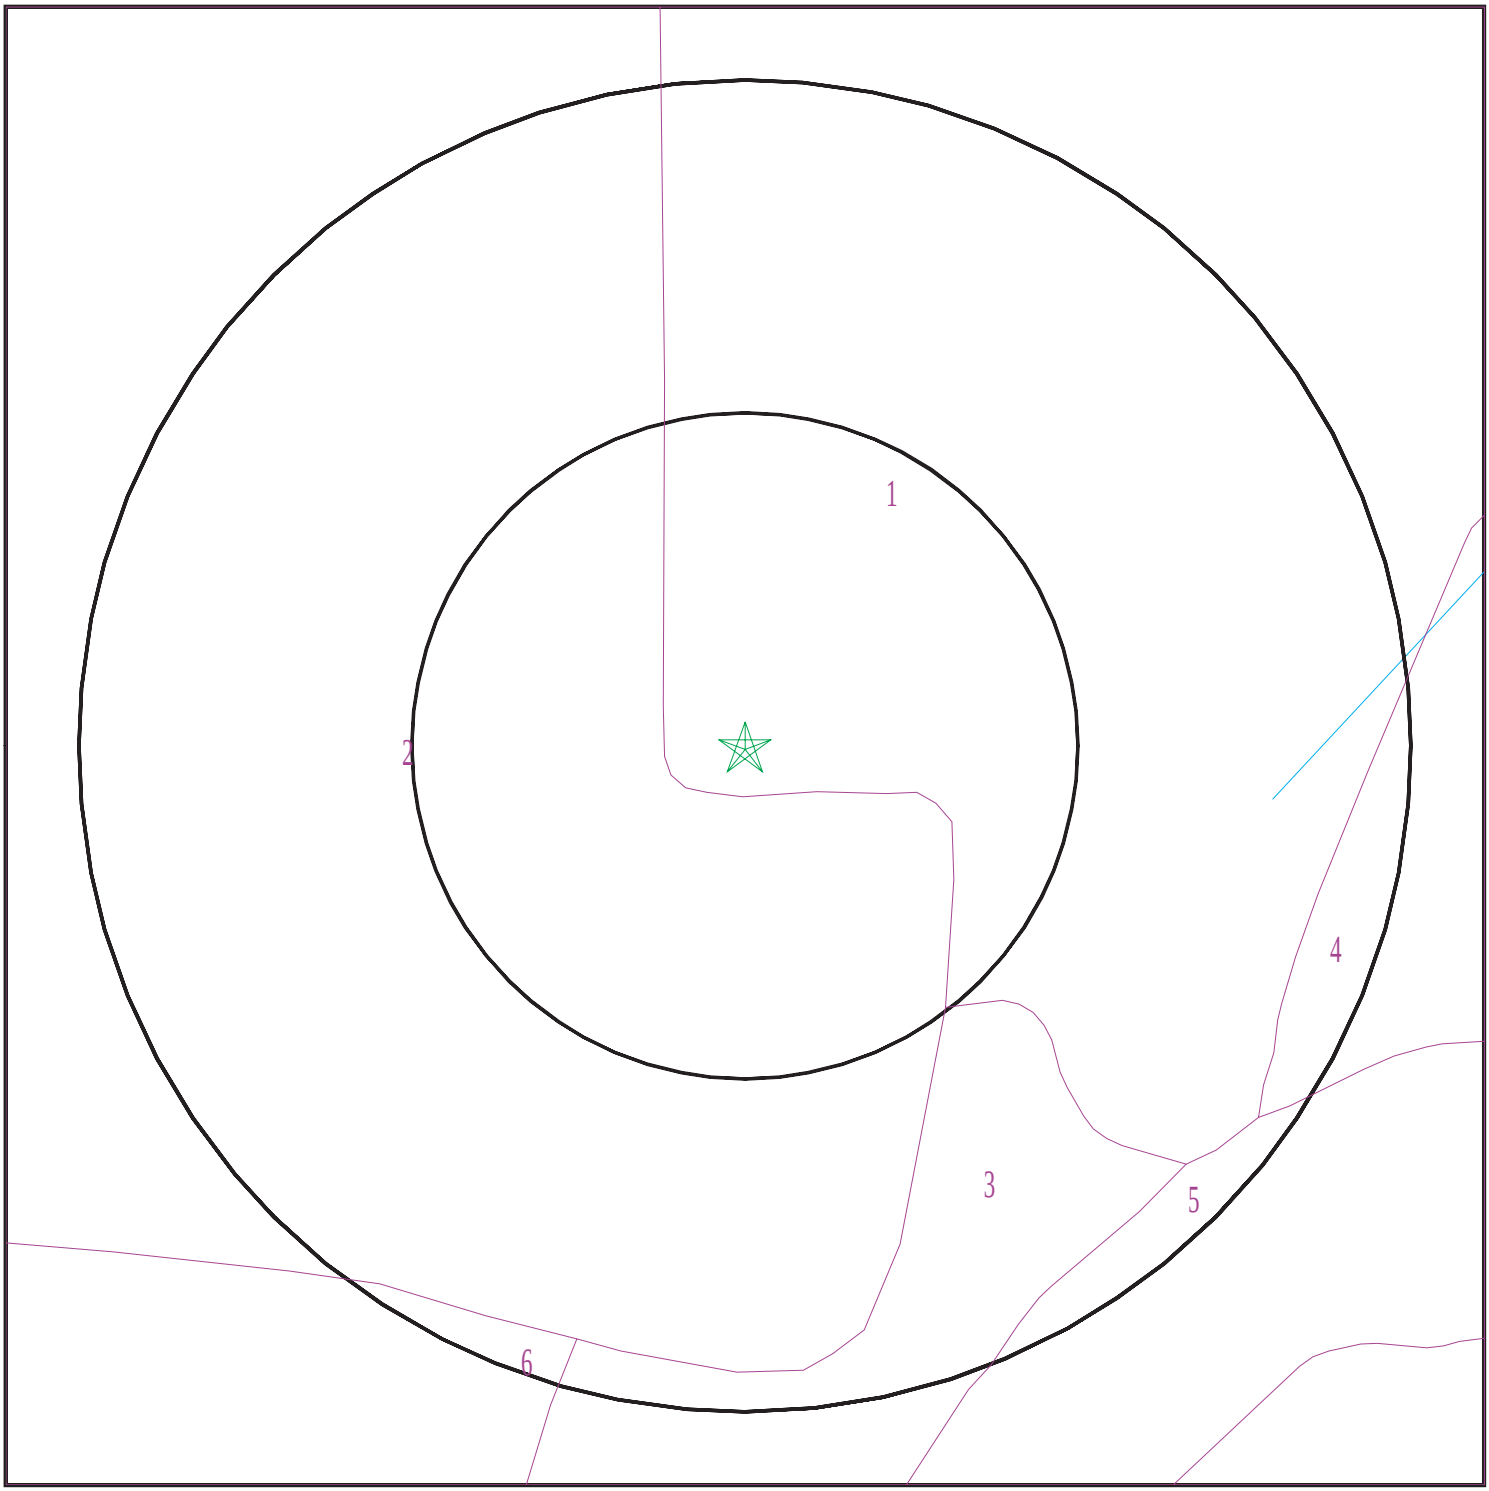
GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY



Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Multnomah

Soil Surface Texture: silt loam

gic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	7 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Clean gravels, Poorly Graded Gravel. COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel.	Max: 141 Min: 42	Max: 6.5 Min: 6.1
2	7 inches	38 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Clean gravels, Poorly Graded Gravel. COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel.	Max: 141 Min: 42	Max: 6.5 Min: 6.1

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
3	38 inches	59 inches	very gravelly sand	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Clean gravels, Poorly Graded Gravel. COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel.	Max: 141 Min: 42	Max: 6.5 Min: 6.1

Soil Map ID: 2

Soil Component Name: Pits

Soil Surface Texture: silt loam

gic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 3

Soil Component Name: Wapato

Soil Surface Texture: silt loam

oup: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 15 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetlands Inventory Data

Telephone: 503-378-2166

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Parametrix, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Re: Morse Bros.
UST Cleanup File No. 26-09-0606
UST Facility ID No. 2861

Dear Mr. Steyaert:

The Department of Environmental Quality (DEQ) has completed its review of the information submitted to date concerning the underground storage tank (UST) decommissioning and cleanup conducted at 1339 NW Eastwood Avenue in Gresham, Oregon. DEQ has determined that the cleanup appears to have met the requirements of Oregon Administrative Rules (OAR) 340-122-0205 through 340-122-0360. No further action is required at this time.

This determination is a result of our evaluation and judgment based on the regulations and facts as we now understand them:

July 2009 Decommissioning

1. Two 4,000-gallon diesel USTs were decommissioned by removal at this site on July 3, 2009. The tanks were shipped to Max Hendrix in Boring, Oregon for recycling as scrap. A total of 193.05 tons of petroleum-contaminated soil (PCS) were excavated from around the USTs and shipped to the Hillsboro Landfill for disposal.

2. On July 6, 2009, Construction and Environmental Services Company (CAESCO) collected six soil samples from the walls of the UST excavation pit, which extended 11-12 feet below ground surface (bgs). A seventh sample was collected from the PCS (which at the time was stockpiled at the site). All seven samples were analyzed for petroleum hydrocarbons using the NWTPH-HCID sampling method. Contamination consistent with diesel was detected in the stockpile sample and three of the six sidewall samples.

3. The four contaminated samples were further analyzed for diesel using the NWTPH-Dx sampling method. Diesel was detected in the stockpile sample at a concentration of 7,390 parts per million (ppm). Diesel was detected in two of the excavation sidewall samples at concentrations of 275 and 279 ppm. The remaining sample, from the east sidewall, showed diesel at 4,040 ppm.

4. On July 9, 2009, apparently after additional excavation, CAESCO collected a final confirmation soil sample from the east sidewall at a depth of 18 feet bgs. The sample was analyzed for diesel using the NWTPH-Dx sampling method. No diesel was detected, down to a detection limit of 25 ppm.

5. The reported results meet DEQ's Level II Soil Matrix cleanup standard, which requires no residual diesel contamination above 500 ppm and no impacts to groundwater. With the removal of the stockpiled PCS and further excavation of the east sidewall from 12 to 18 feet bgs, the highest concentration of diesel remaining at the site is 279 ppm. In addition, no groundwater was encountered in the excavation.

6. The residual diesel concentration would also meet DEQ's risk-based cleanup criteria, which require no contaminants to exceed specific Risk-Based Concentrations (RBCs) for complete pathways of exposure. The highest remaining diesel concentration at the site (279 ppm) falls well below the most stringent RBC of 3,200 ppm for diesel leaching to groundwater.

7. The soil samples were submitted to Wy'East Environmental Sciences, Inc. for analysis. During an inspection in August 2010, DEQ found that Wy'East varied the procedures specified by DEQ and Environmental Protection Agency (EPA) analytical methods. As a consequence, the contaminant concentrations reported by Wy'East may be less than the actual concentrations at the site. After reviewing the results, however, DEQ has determined that the Morse Bros. site at a minimum meets DEQ's risk-based cleanup criteria and likely meets DEQ's Level II Soil Matrix cleanup standard. The potential low bias of the sample results is likely not substantial enough for a reported result of 279 ppm diesel to actually exceed 500 ppm diesel, and is certainly not substantial enough to exceed 3,200 ppm diesel.

<u>September 2010 Decommissioning</u>

8. Two 5,000-gallon diesel USTs and one 4,000-gallon gasoline UST were decommissioned by removal from the site on September 28, 2010. About 400 gallons of emulsified fuels and wash waters were pumped from the USTs and shipped to Oil Re-Refining Company (ORRCO) in Portland for recycling and disposal. A total of 23.69 tons of PCS were also excavated from around the USTs and shipped to the Hillsboro Landfill on October 15 for disposal. Knife River retained control of the tanks.

9. As the USTs were removed, Environmental Science & Associates (ESA) collected soil samples from the common excavation pit. Samples were collected beneath each end of the two diesel USTs at depths of 12 feet bgs and analyzed for petroleum hydrocarbons by the NWTPH-HCID sampling method. No petroleum hydrocarbons were detected.

10. Additional soil samples were collected beneath each end of the gasoline UST (at 12 feet bgs) and beneath the fuel dispenser island (at 2½ feet bgs). The three samples were analyzed for petroleum hydrocarbons by the NWTPH-HCID sampling method. No petroleum hydrocarbons were detected.

11. The final two soil samples were collected from the northeast corner of the excavation pit, adjacent to one of the diesel USTs. The first sample was collected at a depth of three (3) feet bgs and was analyzed for petroleum hydrocarbons by the NWTPH-HCID sampling method. Contamination consistent with diesel was detected, and the sample was further analyzed for diesel by the NWTPH-Dx sampling method. The laboratory (Specialty Analytical) identified an "aged or degraded diesel" at a concentration of 2,080 ppm. The second of the two samples was collected at a depth of four (4) feet bgs, apparently after removal of the first sample, and was analyzed for petroleum hydrocarbons by the NWTPH-HCID sampling method. No petroleum hydrocarbons were detected.

12. The confirmation sample should also have been specifically analyzed for diesel by the NWTPH-Dx sampling method, as well as for diesel constituents such as polycyclic aromatic hydrocarbons (PAHs). However, the detection of 2,080 ppm diesel does not appear to be a significant concern. The concentration falls below the most stringent risk-based concentration of 3,200 ppm for leaching to groundwater, and the characterization of the diesel as "aged or degraded" makes it unlikely that significant concentrations of volatile or semi-volatile constituents were present in the sample. Consequently, DEQ has determined that no additional confirmation soil sampling is necessary at this site.

DEQ's determination that no further action is necessary will not be applicable if new or undisclosed facts show that the investigation and cleanup did not comply with the referenced rules. DEQ's determination also does not apply to any conditions at the site other than the release of the petroleum product specifically addressed in this letter.

Please note that pursuant to OAR 340-122-0360(2), a copy of your decommissioning report from Environmental Science Associates (ESA) must be retained until ten (10) years after you transfer your property. We recommend that a copy of the report be kept with your permanent records.

DEQ appreciates your efforts to comply with the regulations and ensure that your property has been adequately cleaned up.

If you have any questions, please feel free to contact Kevin Dana at (503) 229-5369.

Sincerely,

Bruce A. Gilles
UST Cleanup Manager

PORTLAND, OR 97232-2168

Re: Trimet
File No.: 26-12-1437

Dear Real Estate Dept-TRIMET:

The Department of Environmental Quality has received a report and Alpha Environmental Services, Inc. certification concerning the heating oil underground storage tank (HOT) assessment and/or cleanup conducted at 2005 NW Eleven Mile Ave, in Gresham, Oregon.

Alpha Environmental Services, Inc. was licensed to provide heating oil tank services and has certified that the cleanup has met the Department's requirements. The Department has registered this report and certification and closed its file on the project.

The decision to register the report and certification and to close the Department's file will no longer apply if new or undisclosed facts show that the project does not comply with the rules governing heating oil tank cleanups.

Please note that you are required by state law (ORS 105.464) to provide potential buyers a disclosure statement that includes information regarding underground storage tanks, HOTs and the environmental conditions on your property.

Accordingly, we recommend that you keep a copy of this letter, the certification and any reports of testing or corrective actions relating to your HOT with the permanent property records.

Your efforts to comply with Oregon's environmental rules and regulations to ensure that your heating oil tank has been adequately addressed have been appreciated. Proper decommissioning and cleanup helps ensure protection of the environment from future heating oil tank leaks and ensures that the heating oil does not adversely impact human health or the environment. If you have any questions, please feel free to contact the HOT Program at (503) 229-6170.

Sincerely,

Kevin Donna for

Michael H Kortenhof, Manager
DEQ Heating Oil Tank Program

DEPARTMENT OF ENVIRONMENTAL QUALITY

March 11, 1992

Mr. Harold Gillis
Pacific First Bank
975 Oak Street Suite 920
EUGENE OR 97401

Re: Heating Oil Tank Release
File No. 26-91-398

The Department of Environmental Quality (Department) has completed its review of the reports prepared by Squier Associates, dated November 7, 1991 and February 4, 1992, concerning the cleanup conducted at 1823 N.W. Eleven-Mile Avenue, in Gresham, Oregon. The Department has determined the cleanup appears to have met the requirements of the Oregon Administrative Rules (OAR) 340-122-205 through 340-122-360 and that no further action is required at this time.

This determination is a result of our evaluation and judgement based on the regulations and facts as we now understand them, including:

1. Contamination from an aboveground storage tank used for heating oil was discovered during removal of the tank. Soil samples were collected to verify and identify the type of contamination using the total petroleum hydrocarbon (TPH) HCID method. Hydrocarbons in the diesel range were identified.

2. Approximately 8 yards of contaminated soil was removed from the excavation and disposed of at the Hillsboro landfill.

3. Groundwater was not encountered in the pit.

4. Confirmatory samples and analysis using the TPH diesel (TPH-D) method identified a pocket of contamination, in excess of the soil matrix standard that was determined appropriate for this site. The pocket of contamination is estimated by Squier Associates to be approximately 108 cubic yards and has a maximum concentration of 4600 parts per million (ppm) TPH.

A pocket of contamination still exists on this property which exceeds the currently required cleanup levels for this site, but which the Department approves leaving pursuant to OAR 340-122-355(4) since the removal of this contamination would endanger structures on the property or be prohibitively expensive, and the contamination does not threaten human health, safety, welfare and the environment.

However, you should be aware that the Department's approval to leave a pocket of contamination is based on the site conditions described in the report as they exist today. Should conditions (i.e. land use) change allowing access to the contamination, you would be responsible for further evaluation of the remaining contamination and any cleanup necessary at that time. You would also be responsible for notifying any potential purchaser of the property about this remaining pocket of contamination.

811 SW Sixth Avenue
Portland, OR 97204-13
(503) 229-5696
TDD (503) 229-6993
DEQ-1

The Department's determination would not be applicable if new or undisclosed facts show that the cleanup does not comply with the referenced rules. The Department's determination also does not apply to any conditions at the site other than the release of the petroleum product specifically addressed in the report. We recommend that a copy of this information be kept with the permanent facility records.

Please note that pursuant to OAR 340-122-360(2), a copy of your report must be retained until ten (10) years after the first transfer of the property.

Your efforts to comply with the regulations to ensure that your facility is adequately cleaned up has been appreciated. Should you have any questions, please feel free to contact me at (503) 229-6931.

Sincerely,

Michael J. Zollitsch

Environmental Cleanup Site Information (ECSI) Database Site Summary Full Report - Details for Site ID 1407, Gresham Sand & Gravel

This report shows data entered as of November 7, 2023 at 7:42:23 PM

This report contains site details, organized into the following sections: 1) Site Photos (appears only if the site photos); 2) General Site Information; 3) Site Characteristics; 4) Substance Contamination Information; 5) Investigative, Remedial and Administrative Actions; 6) Site Environmental Controls (i.e., institutional ; and appears only if DEQ has applied one or more such controls to the site). A key to certain acronyms and terms used in the report appears at the bottom of the page.

Note: DEQ may have posted online documents related to this site. If so, they would be available for viewing or download in DEQ's Environmental Records Online Search (http://deq12.deq.state.or.us/ECSIDocs/Default.aspx?SiteID=1407). To see if any such documents are available for this site, go to ECSI Document Powered by FileNet (http://deq12.deq.state.or.us/EPOR/Default.aspx?SiteID=1407&SourceType=WB&SourceID=1407) and click on the Search button. Be aware that not all documents may be scanned and uploaded as well as some older documents may not be available online. Contact DEQ's Records Coordinator (mailto:recordscoordinator@deq.state.or.us?Subject=Records%20Request%20for%20Site%20ID%201407) for assistance in obtaining copies of documents. Also, be aware that other DEQ programs may be active at this site.

General Site Information

Site ID: 1407	Site Name: Gresham Sand & Gravel	CERCLIS No:	
Address:	1339 NW Eastwood Ave. Gresham 97030		
	County: Multnomah	Region: Northwest	
Other location information:	East of SE 190th Avenue, between about SE Division Street on the south and about SE Yamhill Street on the north.		
Investigation Status:	No further action required		
	Brownfield Site: No NPL Site: No	Orphan Site: No	Study Area: No
Property:	Twnshp/Range/Sect: 1S , 3E , 5	Tax Lots:	
	Latitude: 45.5074 deg. Longitude: -122.4629 deg.	Site Size:	
Other Site Names:	Morse Bros.		

Site Characteristics

General Site Description:	
Site History:	
Contamination Information:	A landfill was originally present where the Environmental Services building is now located. The landfill began accepting brush and yard debris in the late 1950s, and later accepted garbage until 1967 or 1968. In 1978 or 1979, most of the garbage was moved to the area now known as the Vance Pit (see ECSI #5780). Samples were taken by DEQ staff from the sump area and were analyzed by DEQ's lab for volatile organic compounds, semivolatile compounds, herbicides and total metals. Levels of metals identified in the samples were below DEQ's SOCLEAN levels and appeared to be normal background. Eight organics were identified at low levels. Their association with the landfill is unclear. See the Strategy Recommendation for more information.
Manner and Time of Release:	
Hazardous Substances/Waste Types:	unknown
Pathways:	A worker at Gresham Sand & Gravel experienced burning and swelling after handling sediments removed from a sump area in the gravel pit. The sump area is located near and fed by water flowing from the wall of an area of landfill debris known as Vance Pit. A cross-section of the landfill is visible, as gravel pit operations have caused soil from that area to slide. According to a report from the Mine Safety and Health Administration, the worker who experienced the burning and swelling of his hands reported that other workers at the site had complained of headaches and nausea when working around sump material.
Environmental/Health Threats:	No environmentally sensitive areas were identified in the immediate vicinity.
Status of Investigative or Remedial Action:	DEQ recommended NFA due to the low levels of the contaminants identified. However, the Strategy Recommendation states that the finding of contaminants indicates that there may be a need to address future releases from the landfill and any current or future threats to area groundwater. It was recommended that the area of exposed landfill be covered and erosion in this area prevented.
Data Sources:	DEQ Pollution complaint - NWR-1993-0642 - initiated by the U.S. Mine Safety and Health Administration on April 30, 1993.

Key to Certain Acronyms and Terms in this Report:

- **CERCLIS No.**: The U.S. EPA's Hazardous Waste Site identification number, shown only if EPA has been involved at the site.
- **Region**: DEQ divides the state into three regions, Eastern, Northwest, and Western; the regional office shown is responsible for site investigation/cleanup.
- **NPL Site** : Is this site on EPA's National Priority List (i.e., a federal Superfund site)? (Y/N).

- **Orphan Site**: Has DEQ's Orphan Program been active at this site? (Y/N). The Orphan Program uses state funds to clean up high-priority sites where owners and operators responsible for the contamination are absent, or are unable or unwilling to use their own resources for cleanup.

- **Study Area** : Is this site a Study Area? (Y/N). Study Areas are groupings of individual ECSI sites that ma contributing to a larger, area-wide problem. ECSI assigns unique Site ID numbers to both individual sites and to Study Areas.

- **Pathways** : A description of human or environmental resources that site contamination could affect.

- **Lead Pgm**: This column refers to the Cleanup Program affiliation of the DEQ employee responsible for the action shown. SAS or SAP = Site Assessment; VCS or VCP = Voluntary Cleanup; ICP = Independent Cleanup; SRS or SRP = Site Response (enforcement cleanup); ORP = Orphan Program.

Other DEQ programs may be active at this site.

General Site Information

Site ID: 5780	Site Name: Lot 5 Vance Landfill		CERCLIS No:
Address:	1541 SE 190th Ave. Gresham 97233		
	County: Multnomah		Region: Northwest
Other location information:			
Investigation Status:	Suspect site requiring further investigation		
	Brownfield Site: Yes	NPL Site: No	Orphan Site: No / Study Area: No
Property:	Twnshp/Range/Sect: 1S , 3E , 5		Tax Lots: 300
	Latitude: 45.5091 deg.	Longitude: -122.4693 deg.	Site Size: 19.08 acres
Other Site Names:	Vance Pit Landfill		

Site Characteristics

General Site Description:	
Site History:	According to Robert Pearson with the Gresham Department of Environmental Services, the Vance Pit consists of landfill material removed from the original landfill area where the Environmental Services building is now located. The original landfill began accepting brush and yard debris in the late 1950s. It later accepted garbage from individual residents. In 1967 or 1968, the landfill quit receiving garbage. In 1978 or 1979, most of the garbage was removed to the area now known as the Vance Pit, next to the Gresham Sand & Gravel site (see ECSI #1407).
Contamination Information:	(10/30/12 SMF) Monthly monitoring of soil vapors at eight gas probes on the southern half of Tax Lot 300 (T1S/R3E-S05CA) detected the presence of elevated concentrations of methane in the subsurface during August 2011 through September 2012. Methane soil vapor concentrations at Gas Probes P-1, P-2, P-3, P-4, and P-8 consistently exceeded methane's Upper Explosive Limit (UEL), while methane concentrations at Gas Probe P-7 exceeded methane's UEL more than 50 percent of the time. Methane concentrations at Gas Probes P-5 and P-6 were either non-detect or well-below methane's Lower Explosive Limit (LEL). Hydrogen Sulfide was detected at concentrations of Non-Detect to up to 20 ppm in Gas Probes P-1, P-2, P-3, P-4, and P-8 (August 2011 through September 2012). No Hydrogen Sulfide was detected in soil vapors at Gas Probes P-5, P-6, or P-7.
Manner and Time of Release:	
Hazardous Substances/Waste Types:	Methane and Hydrogen Sulfide were detected in landfill soil gasses during August 2011 through September 2012.

EXECUTIVE SUMMARY

Parametrix was retained by the Oregon Department of Transportation (ODOT) to perform a Phase I Environmental Site Assessment (ESA) on the developed property located at N. Jantzen Avenue and N. Center Avenue in Portland, Oregon (Figure 1). This property may be acquired as part of the Interstate Bridge Replacement (IBR) Program and is known as IBR-2N1E33D-00101. Based on the findings of this investigation, Parametrix reached the following conclusions:

1. The subject property is located on Multnomah County Tax Lot 2N1E33D-00101. The subject property consists of roadways (N. Center Avenue and N. Jantzen Avenue) that cover an area of approximately 1.30 acres. No developments exist at the subject property, with the exception of paved road surfaces and associated curbing and landscaping.
2. Based on the historical review, the subject property was part of the Jantzen Beach Amusement Park, from the time of the park's opening in the late 1920s. Most of the area of the subject property that is occupied by N. Center Avenue was previously developed with a paved footpath that provided pedestrian access between areas on the east side of the amusement park, including restaurants, swimming pools, and dressing rooms. The southern leg of N. Center Avenue crosses the former locations of the swimming pools and the boiler house that heated water for the swimming pools.

   A ground-level photograph taken of the building during the 1948 Vanport flood shows the former boiler building in more detail. A possible vent pipe for an underground storage tank (UST) is visible on the east side of the building, within the approximate footprint of the subject property.

   The amusement park closed in 1970, and a Conoco gas station began operating adjacent to the north end of the subject property. The Jantzen Beach Center shopping mall was constructed in the mid-1970s on the former amusement park site. By 1981, the swimming pool, boiler house and other buildings in the area were removed and the current streets (N. Center Avenue and N. Jantzen Avenue) were constructed.

   A 2-inch vent pipe, possibly representing a UST, was observed adjacent to the subject property in the general location of the west side of the former boiler house. The possible presence of underground oil tanks around the former boiler house is identified as a recognized environmental condition (REC). No other RECs were identified in association with the historical land use.
3. Based on the lack of a building at the subject property, there is low potential for lead-based paint or asbestos-containing materials to have been used at the subject property.
4. With the exception of the possible UST discussed above, no evidence of significant use or storage of hazardous substances or petroleum products was noted on or near the subject property. No evidence of distressed vegetation, spills or releases or other indications of environmental concern was identified during the site reconnaissance.
5. The subject property is not listed on any regulatory database that would indicate a past or current release or storage of hazardous materials.

6. A review of regulatory information indicated that several adjacent or nearby sites were identified in the regulatory record databases. Soil and groundwater contamination has been documented on the former Conoco Phillips gas station site adjacent to the northeast of the subject property. A portion of the subject property appears to have been impacted by the contamination, which is being managed by a Contaminated Media Management Plan. This issue is identified as a controlled recognized environmental condition (CREC). None of the remaining sites identified appear to present a REC to the subject property.

   An interview was not conducted with a property representative to identify any potential environmental conditions and to address information data gaps during the Phase I ESA process. The lack of a property owner or representative interview represents a data gap in accordance with ASTM International Standard E1527-21. However, the information obtained for the Phase I ESA, including regulatory database and historical documentation, was deemed sufficient.

Based upon the conclusions of this investigation of the subject property, Parametrix offers the following recommendations:

1. A geophysical survey is recommended in the area of the steel vent pipe located on the north end of the subject property and other areas around the former boiler house to identify possible USTs in the area. Any identified USTs should be properly decommissioned and environmental sampling conducted according to State of Oregon requirements and standard industry practices.
2. Future excavation and other subsurface work on the north end of the subject property that was impacted by petroleum contamination from the adjacent Conoco site (Tax Lot 00602) should follow the requirements outlined in the Contaminated Media Management Plan, which is included in Appendix E.

1. INTRODUCTION

Parametrix was retained by the Oregon Department of Transportation (ODOT) to perform a Phase I Environmental Site Assessment (ESA) on developed property consisting of sections of roadways occupied by N. Center Avenue and N. Jantzen Avenue in Portland, Oregon (herein referred to as the subject property) (Figure 1). The subject property consists of Tax Lot ID#2N1E33D-00101 in Multnomah County, Oregon. It is our understanding that ODOT may pursue acquisition of the subject property as part of the Interstate Bridge Replacement (IBR) Program. The subject property is identified as IBR-2N1E33D-00101 (Figure 2).

This Phase I ESA includes a review of available documentation pertaining to the subject property, a site reconnaissance, and a review of pertinent public agency documents. The ESA consists of two distinct tasks: (1) a review of documents and of oral information, and (2) a site examination. Conclusions and recommendations within this report are based solely on observed evidence and data collected during the performance of this assessment.

1.1 Purpose

The Phase I ESA was conducted in general accordance with American Society for Testing Materials (ASTM) Standard E1527-21, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, which defines the generally accepted industry practices and procedures currently applicable at the time and place of this study (ASTM 2021). The Phase I ESA is intended to permit the user to satisfy the requirements to qualify for the bona fide prospective purchaser limitation under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), and as such constitutes "all appropriate inquiries in the previous ownership and uses of the property consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601 (35)(B).

The purpose of this Phase I ESA is to identify recognized environmental conditions (RECs) on or near the subject property. The term *recognized environmental conditions* is defined in ASTM Standard E1527-21 as:

> "…(1) the presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* due to a *release* to the *environment*; (2) the likely presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* due to a *release* or likely *release* to the *environment*; or (3) the presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* under conditions that pose a *material threat* of a future *release* to the *environment*."

In accordance with ASTM Standard E1527-21, some RECs may be further defined as historical recognized environmental conditions (HRECs) or controlled recognized environmental conditions (CRECs).

An HREC is defined as:

> "…*a past release of any hazardous substances* or *petroleum* products that has occurred in connection with the *property* and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the *property* to any required controls."

A CREC is defined as:

> "…a *recognized environmental condition* resulting from a past *release of hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority, with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls."

This Phase I ESA endeavors to identify all RECs, HRECs, and/or CRECs at the subject property.

1.2 Significant Assumptions

This assessment was conducted in accordance with generally accepted industry practices and procedures within the scope of work authorized at the time and place of this study. Parametrix's observations are limited to the areas to which it had access on the subject property.

Phase I ESA methodology included viewing accessible areas of the subject property on foot. Unless otherwise stated, no exceptions to the guidelines presented in ASTM E1527-21 were made during completion of this Phase I ESA.

1.3 Limitations

The findings, conclusions, and recommendations presented in this report are based on site conditions and the best available information known or made available by regulators, other consultants, or other sources at the time of the investigation. Parametrix conducted a diligent search and investigation in compliance with prevailing standards of the profession; however, certain adverse conditions may exist at the site not detected at the time of the investigation.

The services provided under this contract, as described in this report, include professional opinions and judgments based on data collected. These services have been provided according to generally accepted engineering practices. The opinions and conclusions contained in this report are typically based on information obtained from the following:

- Observations and measurements made by Parametrix field staff.
- Contacts and discussions with regulatory agencies and others.
- Review of available hazardous substance or solid waste lists.
- Opinions and judgments of Parametrix based on the information available.

In the professional judgment of Parametrix, the services performed pursuant to the scope of services are an adequate basis to collect data for a preliminary evaluation of the site and upon which to draw the conclusions stated in this report.

2. SUBJECT PROPERTY DESCRIPTION

2.1 Location

The subject property is located at N. Center Avenue and N. Jantzen Avenue in Portland, Oregon. The subject property consists of Multnomah County Tax Lot 2N1E33D-00101 and is identified as IBR-2N1E33D-00101 The site location is shown on Figure 1, and the boundary of the subject property is shown on Figure 2.

The subject property is a 1.30-acre property located west of Interstate 5 (I-5), south of N. Hayden Island Drive and east of Jantzen Beach Center. According to the Multnomah County Assessment office, Columbia Crossing LLC et al. is the current owner of the subject property.

2.2 Site and Vicinity Characteristics

The subject property consists of paved public roadways (N. Center Avenue and N Jantzen Avenue) that provide vehicle access to local businesses on the west side of I- 5. The 1.30-acre lot consists of paved roadways, curbs, and manicured landscaping. It is currently owned by Columbia Crossing LLC et al. The property is located in a fully developed commercial area of the Jantzen Beach area of North Portland.

The subject property is located to the east of Jantzen Beach Center (shopping center) and west of the I- 5 freeway. The subject property is bounded in all directions by commercial businesses and restaurants and further to the east by I- 5 (Figure 2).

2.3 Physical Setting

The subject property is located in the Portland Basin, which marks the northern terminus of the Willamette Lowland in Oregon (DNR n.d.). The northern portion of the basin is known for its low topographic relief, with the subject property at an elevation of approximately 35 feet above mean sea level. The Portland Basin is bounded by the Cascade Range to the east and the Coast Range to the west.

Geologic processes in the Portland Basin consist of volcanism, sedimentation, and cataclysmic flood deposits in both fluvial and marine depositional environments. The subject property lies on what is mapped as fine-grained Holocene alluvium consisting of sand and silty sand deposited by the Columbia River (Wells et al. 2020).

The topography in the vicinity of the subject property is a consistent slope, rising with distance from the Columbia River. Based on the results of groundwater studies on nearby properties, the anticipated groundwater gradient is to the south toward the North Portland Harbor, which is a narrow reach of the Columbia River between Hayden Island and North Portland. Groundwater has been encountered at 13 to 35 feet below ground surface on nearby properties.

2.4 Current Use of the Subject Property

The subject property is a 1.30-acre section of roadways that provide vehicle access to local businesses and access to other streets on the east side of I-55 via an underpass beneath the freeway near the southeast corner of the subject property.

2.5 Descriptions of Improvements on the Subject Property

The subject property includes public streets featuring paved roadbed with curbs, catch basins, and landscaped right-of-way, including a traffic island. The property consists of an approximately 950-foot section of N. Center Avenue and an approximately 300-foot section of N. Jantzen Avenue. The streets are privately owned and are not maintained by ODOT or the City of Portland Bureau of Transportation.

2.6 Environmental Liens

An environmental lien is defined by ASTM as a charge, security, or encumbrance upon title to a property to secure the payment of a cost, damage, obligation, or duty arising out of response actions, cleanup, or other remediation of hazardous substances or petroleum products. No evidence of environmental liens against the subject property was identified during the course of this Phase I ESA.

3. RECORDS REVIEW

The purpose of the records review task was to gather environmental data on the subject property prior to the site examination. The information review consisted of two subtasks: a review of various lists and files published by federal and State of Oregon agencies, and a compilation of historical uses of the site and site vicinity, to determine if past operations pose an environmental risk to the subject property. Information for agency file review is based, in part, on a report provided by Environmental Data Resources (EDR). The EDR report is included in Appendix A.

The EDR report (EDR 2023a) is a summary of state and federal database searches for sites of possible environmental concern. The information review enabled Parametrix personnel to characterize the types of activities performed at the site, identify data gaps prior to the site examination, and facilitate recognition of discrepancies between reported and observed data. Data gaps identified during the document review were addressed by interviewing knowledgeable personnel, observations during the site examination, or additional detailed investigation.

It should be noted that this information is reported as Parametrix received it from EDR, which in turn reports information as it is provided in various government databases. It is not possible for either Parametrix or EDR to verify the accuracy or completeness of information contained in these databases. However, the use of and reliance on this information is a generally accepted practice in the conduct of environmental due diligence. The following sections present information from the document review.

3.1 Standard Environmental Record Sources

The following section summarizes information collected from records maintained by the U.S. Environmental Protection Agency (EPA) and the Oregon Department of Environmental Quality (DEQ). The information includes details on sites identified in regulatory databases within recommended ASTM search distances. A complete listing of the databases reviewed is included in the EDR Radius Map™ Report (Appendix A).

3.1.1 Review of Oregon Department of Environmental Quality Databases

The following sections summarize the most relevant information obtained from the EDR Radius Map™ Report regarding sites identified within the ASTM E1527-21 search radii from the following databases. Additional information regarding these sites was reviewed on DEQ's Environmental Cleanup Site Information (ECSI) Database (DEQ n.d.a) and Leaking Underground Storage Tank (LUST) Cleanup Site Database (DEQ n.d.b) to supplement data gaps in the EDR report. A complete listing of the databases reviewed is included in the EDR report. Relevant database listings from DEQ include:

- DEQ Underground Storage Tank (UST) List
- DEQ Leaking Underground Storage Tank (LUST) List
- DEQ Environmental Cleanup Site Information (ECSI) List
- Spill Database (SPILLS)
- Solid Waste Facilities (SWF/LF) List
- DEQ Confirmed Release List (CRL)
- DEQ Brownfields List
- DEQ Drycleaners List
- DEQ Engineering or Institutional Controls

3.1.1.1 Department of Environmental Quality Underground Storage Tank List

The UST database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data was obtained from the DEQ UST List.

Information contained in the EDR report indicates that the subject property is not listed as a UST site. Five UST sites were identified within 0.25 miles of the subject property. One of the sites (Conoco Phillips Company) is located adjacent to the north end of the subject property and is discussed below under Section 3.1.1.2 as a LUST site.

The remaining four UST sites identified in the EDR report appear to be at sufficient distances from the subject property and/or cleanup activities have been completed so that they do not appear to represent a REC to the subject property.

3.1.1.2 Department of Environmental Quality Leaking Underground Storage Tank List

Twelve LUST sites were identified within 0.25 miles of the subject property. One of the sites (Conoco Phillips Company) is located adjacent to the north end of the subject property and a second site (ARCO SS 4475) is located 900 feet north of the subject property. Both sites are discussed below.

- Conoco Phillips Company (12205 N. Center Ave.), is located on the adjacent property to the northeast of the subject property (Tax Lot 00602). The site was assigned DEQ LUST file numbers 26-90-0055 and 26-94-0063. The property was a service station from 1967 through 2007. The earlier petroleum release was reported in 1990 which involved the removal of 750 cubic yards of petroleum-contaminated soil. The site was closed under the Soil Matrix rules and was issued a No Further Action (NFA) letter from DEQ.

  A second petroleum release was reported in 1994 during upgrades to the UST system. Groundwater monitoring between 2000 and 2011 showed groundwater flow directions toward the south to southwest. Between 2004 and 2006, five air-sparge and three vapor extraction wells were installed and operated until 2007.

Based on final compliance sampling, residual contamination in soil did not exceed any risk-based concentrations for occupational property use. Three soil gas samples were collected on the Conoco property. No analytes were detected that exceeded risk-based concentrations for soil vapor.

DEQ issued an NFA letter for the site in October 2012. As a condition of closure, DEQ required that a Contaminated Media Management Plan (CMMP) be developed for the site and the portion of the subject property that was impacted by the contamination. A copy of the NFA letter and the CMMP are included in Appendix E of this report. This site is discussed in more detail in Section 4.2 of this report.

Based on this information, the previous releases of petroleum products into the soil and groundwater, and the migration of the contaminants onto the subject property represents a Controlled REC (CREC) to the subject property.

- The ARCO SS 4475 site (1305 N. Hayden Island Dr.) was located 900 feet north of the subject property from 1971 until 1998.

  A July 1989 site investigation identified gasoline contamination in both soil and groundwater beneath the site. The borings also revealed a layer of landfill debris, 5 to 7 feet thick, beneath the cover. Groundwater was documented at a depth of about 25 feet below ground surface, and its flow direction varied, due to the heterogenous nature of landfill materials and fluctuations in the level of the surrounding Columbia River.

  The property owner (ARCO) installed a groundwater pump and treat system that quickly became fouled from iron bacteria and silt, which was attributed to leachate from the buried landfill debris. The system was shut down permanently in May 1991.

  A Technical Feasibility Study in 1993 concluded that it was not possible to remediate benzene in groundwater without first removing dissolved metals. ARCO maintained that it had no responsibility for the metals, and that it was not feasible to proceed with remediation until DEQ addressed the landfill issue.

  Groundwater at the site met the final compliance closure requirements based on the previous six groundwater sampling events. The site was issued an NFA letter on July 17, 1998. Based on this information, the previous releases of petroleum products into the soil and groundwater from the former gasoline station do not represent a REC to the subject property.

Ten additional LUST sites were identified within 0.5 mile of the subject property. Based on information reviewed, the remaining LUST sites identified in the EDR report appear to be at sufficient distances from the subject property and/or cleanup activities have been completed so that they do not appear to represent a REC to the subject property.

3.1.1.3 Department of Environmental Quality Environmental Cleanup Site Information List

The ECSI list identifies and tracks known or potentially contaminated sites within Oregon and is the state's equivalent to the Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS). The CRL is a subset of the ECSI list and includes sites which have

known releases of hazardous substances. The Voluntary Cleanup Program (VCP) database is a list of sites that have been entered into the DEQ voluntary cleanup program and are undergoing cleanup. The subject property is not identified on the ECSI, CRL or VCP databases.

Nineteen ECSI, CRL, or VCP sites were identified within 1 mile of the subject property. Of those, three are located within 0.25 mile north of the subject property. The sites are discussed below.

The remaining ECSI, CRL, and VCP sites are located at sufficient distances, and/or cleanup activities have been completed, so that they do not appear to represent RECs to the subject property.

- The Hayden Island Landfill ECSI site (ECSI #1559) is located 900 feet north of the subject property.

  The Hayden Island Landfill was located in a seasonal lake basin on Hayden Island and appears to have operated between about 1950 and the early 1970s, when it was covered with a 7- to 8-foot layer of clean fill. All information known about the landfill is based on subsurface activities at a former ARCO service station, 1305 N. Hayden Island Dr., built on the eastern end of the old landfill.

  The landfill debris was found to be 5 to 7 feet thick, beneath 7 to 8 feet of cover. Groundwater was documented at a depth of about 25 feet below ground surface, and its flow direction varied due to the heterogenous nature of landfill materials and fluctuations in the level of the surrounding Columbia River.

  A groundwater pump and treat system began treating gasoline-contaminated groundwater on the site in 1990. The system quickly became fouled from iron bacteria and silt, which was attributed to leachate from the buried landfill debris. The treatment system was decommissioned. Soil gas sampling on the ARCO site showed traces of volatile organic compounds (VOCs) and methane, but nothing above action levels.

  The DEQ Site Assessment Section recommended that affected property owners characterize contamination in and below the former landfill, under low priority. DEQ has not performed an organized assessment of the former Hayden Island Landfill.

  Given the extensive groundwater monitoring completed on the Conoco property to the north of the subject property between 1996 and 2008 (see discussion of LUST file 26-94-0063), which did not identify any suspected contaminants from off-site sources, the presence of the Hayden Island Landfill site is not considered a REC to the subject property.

- Hayden's Corner (ECSI #5711) is an ECSI site that is located 900 feet north of the subject property, within the Hayden Island Landfill ECSI site (ECSI #1559).

  The investigation focused on the potential for vapor intrusion of potentially hazardous landfill-related gases such as methane and VOCs that could be related to the landfill or residual contamination from the former waste oil tank on the former ARCO service station.

  In May 2011, methane was detected at levels of 1.5% to 5.5% at floor drains in two restrooms in the Vitamin Shop and in Original Joes. The methane was attributed to sewer gas due to problems with the venting or plumbing traps. Other enclosed spaces within the building

indicated little or no methane. In May 2012, methane was reported in exploratory borings at 2% near a former waste oil UST, and near zero in the other two locations. Various VOCs were also reported at low concentrations. DEQ concluded that there would be considerable attenuation of vapors migrating into interior spaces of the building, making the detected concentrations of methane insignificant.

DEQ concluded that conditions at the Hayden's Corner site were protective of public health and the environment and required no further action under Oregon Cleanup Law. The determination only applied to the Hayden's corner property and does not include the greater Hayden Island Landfill site. This site is not considered a REC to the subject property.

- The Hayden Island Cleaners site located at 1190 N. Jantzen Drive (ECSI #1865) is listed in the EDR report as being 0.104 miles (550 feet) east of the subject property, on the east side of I-5. In 1995, groundwater and soil gas samples were collected from four probe borings. Tetrachloroethene (PCE) was detected in the soil gas (up to 75 parts per million) and groundwater (up to 780 micrograms per liter [µg/L]) in all four boreholes. Three groundwater monitoring wells were installed which contained up to 1,230 µg/L PCE. Additional monitoring wells were installed on the site and on adjacent properties. In May 1999, hydrogen release compound was injected into the shallow groundwater to accelerate the natural degradation of the PCE. The treatment was successful, and DEQ issued an NFA letter for the site in December 2001.

  Based on the cleanup completed and the NFA determination, this site is not considered a REC to the subject property.

3.1.1.4 SPILLS Database

This database provides a comprehensive list of reported spills. The subject property is not listed as a SPILLS site.

3.1.1.5 Solid Waste Facilities/Landfill

The SWF/LF records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data were obtained from Oregon's Solid Waste Facilities List Solid Waste Facilities List.

The subject property is not listed as a SWF/LF site. One SWF/LF site (Diversified Marine) was reported within 0.5 miles of the subject property and, based on a review of regulatory status, investigation and cleanup actions conducted, and/or distance from the subject property, the SWF/LF site does not appear to represent a REC to the subject property.

3.1.1.6 Department of Environmental Quality Brownfields List

The Brownfields database lists sites of real property where expansion or redevelopment is complicated by actual or perceived environmental contamination. One DEQ Brownfields site was identified within 1 mile of the subject property. The site (Hayden's Corner, ECSI #5711) is discussed under the ECSI section of this report Section 3.1.1.3.

3.1.1.7 Department of Environmental Quality Drycleaner List

The drycleaner database is a listing of former or current drycleaners in Oregon. One DEQ drycleaner site (Safe Dry Cleaners) was identified within 0.125 miles of the subject property. The site is located at a sufficient distance from the subject property so that it does not appear to represent REC to the subject property.

3.1.1.8 Department of Environmental Quality Engineering/Institutional Controls

DEQ maintains two databases for sites with implemented engineering controls and/or institutional controls. No sites with engineering or institutional controls were identified within 1 mile of the subject property.

3.1.2 Environmental Protection Agency Database Review

The EPA administers several programs designed to protect the environment and monitor the generation, storage, treatment, and disposal of hazardous substances. The following sections summarize the most relevant information obtained from the EDR report regarding sites identified within ASTM E1527-21 search radii from the following databases. A complete listing of the databases reviewed is included in the EDR report.

- National Priorities List (NPL)
- Superfund Enterprise Management System (SEMS) List
- RCRA Corrective Action Report (CORRACTS) List
- Resource Conservation and Recovery Information System (RCRIS) List
- Emergency Response Notification System (ERNS) List
- U.S. Brownfields List

3.1.2.1 National Priorities List

The NPL identifies priority hazardous waste sites for remedial actions under the EPA Superfund program. The EDR report indicates that the subject property is not listed as an NPL site. No NPL sites were identified within 1 mile of the subject property.

3.1.2.2 Superfund Enterprise Management System List

The EPA publishes a list of sites that may potentially pose a threat to the environment or the health of the general public. This list is known as the SEMS list (formerly the CERCLIS list). Information contained in the EDR report indicates the subject property is not listed as a SEMS site.

One SEMS site (Pier 99 – Portland) was identified within 1 mile of the subject property. The site is located at a sufficient distance and/or cleanup activities have been completed so that it does not appear to represent REC to the subject property.

The EPA also publishes the SEMS-NFRAP list, which are SEMS sites that have been designated "no further remedial action planned" and have been removed from the SEMS list. Information contained in the EDR report indicated that the subject property is not listed as a SEMS-NFRAP site.

Two SEMS-NFRAP sites (Diversified Marine and Canoe Bay) were identified within 1 mile of the subject property. The sites are located at sufficient distances and/or cleanup activities have been completed so that they do not appear to represent RECs to the subject property.

3.1.2.3 Corrective Action Reports Review

The CORRACTS report identifies hazardous waste handlers with corrective action activity. Information contained in the EDR report indicates the subject property is not listed as a CORRACTS site. No CORRACTS sites are listed within 1 mile of the subject property.

3.1.2.4 Resource Conservation and Recovery Information System List

The RCRIS list includes selective information on sites that generate, transport, store, treat, and/or dispose of hazardous waste as defined by RCRA. Information contained in the EDR report indicates the subject property is not listed as an RCRIS site. Two small-quantity generator sites and three very small-quantity generator sites are listed within 0.25 miles of the subject property. The sites are located at sufficient distances so they do not appear to represent RECs to the subject property.

The EPA also regulates the management of hazardous waste at Transportation, Storage, and Disposal (TSD) facilities. Information contained in the EDR report indicates the subject property is not listed as an RCRIS-TSD site. No RCRIS-TSD sites were identified within 0.5 miles of the subject property.

3.1.2.5 Emergency Response Notification System List

The ERNS is a national database containing information from spill reports made to federal authorities. Information contained in the EDR report indicates the subject property is not listed as an ERNS site.

3.1.2.6 U.S. Brownfields List

The EPA's U.S. Brownfields list identifies brownfields properties addressed by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. The EDR report indicates that the subject property is not listed as a U.S. Brownfields site. No U.S. Brownfield sites were identified within 0.5 miles of the subject property.

3.1.3 Other Databases

The following sections include other databases identified in the EDR report that may be relevant to assessing potential environmental liability or environmental issues at the subject property.

3.1.3.1 Environmental Data Resources Proprietary Databases

EDR has conducted research on the occurrence of historical business practices that may constitute a REC to properties. The database was developed from data found in historical city directories and contains information on over 100,000 former gas stations, manufactured gas plants, and dry cleaners. Due to the nature of these businesses, the sites have the potential for soil and groundwater contamination to have occurred.

EDR Historical Auto Stations

Historical auto stations are identified on a proprietary database maintained by EDR. Information contained in the EDR report indicates the subject property is not listed as a historical auto station. Three historical auto stations are listed within 0.125 miles of the subject property. One of the sites (Jantzen Beach Union, 12205 N. Center Ave.) is located adjacent to the north end of the subject property and is discussed in Section 3.1.1.2 of this report. The other sites are located at sufficient distances from the subject property that they do not appear to represent a REC to the subject property.

EDR Manufactured Gas List

Former manufactured gas plant (coal gas) sites are identified on the Manufactured Gas database. Information contained in the EDR report indicates the subject property is not listed as a manufactured gas plant site, and no manufactured gas plants are listed within 1 mile of the subject property.

EDR Historical Cleaners

Historical cleaners are identified on a proprietary database maintained by EDR. Information contained in the EDR report indicates that there is one historical cleaner site within 0.125 miles of the subject property. The site (Country Club Cleaners, 1190 N. Jantzen Dr.) is an alias of Hayden Island Cleaners, which is discussed in Section 3.1.1.3 of this report.

3.1.4 Orphan Site List

Orphan sites are sites for which mapping information is not detailed adequately to plot the location of the site, or for which there is no known responsible party, or whose responsible party is unwilling or unable to pay for cleanup. The orphan site list and available mapping information were reviewed by Parametrix. Ten orphan sites were identified by EDR in the vicinity of the subject property. The 10 orphan sites identified are located at sufficient distances, and/or cleanup activities have been completed, so that they do not appear to represent RECs to the subject property.

3.1.5 Vapor Encroachment

ASTM Standard E1527-21 defines vapor migration as “the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface,

and vapor in the subsurface." The recognition of vapor migration as a possible REC may require incorporation of new types of controls and restrictions to address this contamination pathway.

The subject property and adjacent sites were reviewed in an effort to determine if vapor migration has, or has the potential to have, occurred at the site, from adjacent properties. Based on the information reviewed, the subject property is not identified as a potential vapor intrusion site.

No properties were identified in the near vicinity that have confirmed releases of volatile contaminants in soil or groundwater that have not been sufficiently addressed or would otherwise present a potential impact to the subject property.

3.2 Historical Use Information

The objective of the historical use information review is to develop a history of the previous uses of the subject property and surrounding area that helps to identify the likelihood of past uses having led to RECs in connection with the subject property. Parametrix researched the historical land use, occupancy, and ownership of the subject property and adjacent properties to evaluate historical uses that are known to be associated with RECs. Historical records reviewed include Sanborn Fire Insurance maps and aerial photographs (EDR 2023b, 2023c).

3.2.1 Certified Sanborn Maps™ Fire Insurance Map Review

Parametrix requested Sanborn Fire Insurance maps from EDR in an effort to help identify past land uses. Sanborn Fire Insurance maps from the years 1950, 1952 and 1969 were examined. A copy of the Certified Sanborn Map Report is included in Appendix B. Observations are listed below.

1950	The subject property is located entirely within the boundaries of the Jantzen Beach Amusement Park, which is labeled on the map as “Hayden Island Amusement – Jantzen Beach Park.” A general note on the map indicates “Oil Fuel” on the amusement park site. The N. Jantzen Avenue leg of the subject property is located in an undeveloped area of the park. The south Center Avenue leg of the subject property runs across the swimming pools and most of the boiler house south of the main pool. The intersection of N. Jantzen Avenue and N. Center Avenue is the former location of a tavern. The northern leg of N. Center Avenue runs along the general location of a paved footpath leg that runs almost the length of the amusement park. Adjacent properties include the dressing/ locker rooms near the swimming pools, a water pump house, a dance hall and a restaurant. N. Denver Ave. (Highway 99) is located adjacent to the east.
1952	There are no significant changes from the previous map.
1969	A covered picnic area appears at the south end of the Jantzen Avenue leg of the subject property. A bowling alley replaced the restaurant along the paved footpath. I- 5 appears to the east (labeled NE Union Ave.), replacing Highway 99. There are no other changes from the previous map.

3.2.2 Historical Aerial Photograph Review

Historical aerial photographs of the subject property area were obtained from EDR. Aerial photographs for the years 1935, 1948, 1951, 1955, 1960, 1970, 1975, 1981, 1990, 1994, 2000, 2006, 2011, 2014, 2017 and 2020 were examined. Copies of the aerial photographs are included in Appendix C. Observations are listed below.

1935	The subject property extends across the east and southeast areas of the Jantzen Beach Amusement Park. The Jantzen Avenue leg of the subject property is undeveloped, sparsely wooded property west of the paved footpath, as identified on the Sanborn maps. The south leg of Center Avenue runs across the swimming pools and over the eastern ¾ of the boiler house, terminating near the shore of North Portland Harbor to the south. The north leg of Center Avenue runs along the footpath and includes some vacant land to the east. Adjacent properties include vacant, undeveloped land, a building (dance hall), swimming pools, locker/ dressing rooms near the pool, and swimming pools. The vacant land to the east is sparsely wooded and is crossed by unpaved footpaths. North Portland Harbor is located to the south and Highway 99 is located to the east and spans North Portland Harbor and Hayden Island.
1948–1955	A dock with moored boats and seaplanes appears offshore to the south, in North Portland Harbor. Buildings appear to the east of the subject property, across Highway 99. There are no significant changes to the subject property.
1960	The covered picnic structure appears at the south end of Jantzen Avenue. The beach along North Portland Harbor has been expanded to the south and the houseboat moorage appears in its current location. The north end of the north leg of Center Avenue is part of a larger parking lot to the east used for parking lot for the amusement park. I- 5 appears to the east, replacing Highway 99.
1970	The subject property remains unchanged. The Conoco gas station appears adjacent to the north end of the subject property. The houseboat moorage has expanded farther to the west.
1975	The Jantzen Beach Amusement Park to the west has been removed and replaced by the Jantzen Beach Center (shopping mall). The north half of the subject property appears to be undeveloped. The south half of the subject property appears to be unchanged. The buildings and swimming pool are still located on the adjacent property to the north.
1981–2006	The buildings and swimming pools on the south half of the subject property have been removed and the current roadways of Jantzen Avenue and Center Avenue (subject property) appear in their current locations. Commercial businesses appear on parcels to the east. Jantzen Beach Center has been expanded to the south.

2011–2020 The Conoco gas station adjacent to the north of the subject property has been replaced by the current commercial building. The subject property and adjacent property appear in their current configurations.

Based on the historical review, the subject property was part of the Jantzen Beach Amusement Park from the time the park was opened in the late 1920s. Most of the area of the subject property that is occupied by N. Center Avenue was previously developed with a paved footpath that provided pedestrian access between areas on the east side of the amusement park, including restaurants, swimming pools, and dressing rooms. The north end of N. Center Avenue was developed in the 1950s as part of a parking lot for the amusement park. The southern leg of N. Center Avenue crosses the former locations of the swimming pools and the boiler house that heated water for the swimming pools. The land occupied by N. Jantzen Avenue was undeveloped until the eventual use of the area as a picnic grounds and later paved as road access to the newly established houseboat moorage (Jantzen Beach Moorage). The houseboat moorage has operated south of the subject property, along the north shore of N. Portland Harbor, since the 1950s.

A low-altitude oblique aerial photograph taken in 1946 shows more details of the area of the subject property, including the swimming pools and the boiler house, viewed from the south. A second ground-level photograph taken of the building during the 1948 Vanport flood shows the suspected boiler building in more detail. A possible vent pipe for an underground tank is visible on the east side of the building, within the general footprint of the subject property. Copies of the photographs are included in Appendix E. I-5 was constructed to the east in the mid- to late-1950s.

The amusement park closed in 1970, and a Conoco gas station began operating adjacent to the north end of the subject property. The Jantzen Beach Center shopping mall was constructed in the mid-1970s on the former amusement park site. By 1981, the swimming pool, boiler house and other buildings in the area were removed and the current streets (N. Center Avenue and N. Jantzen Avenue) were constructed, along with the adjacent buildings that have housed commercial businesses.

The possible presence of underground oil tanks around the former boiler house is identified as a REC. No other RECs were identified in association with the historical land use.

3.2.3 Local Agency Records

Information from local agencies was reviewed for environmental significance as described in the following sections.

3.2.3.1 City of Portland

A review of permits for environmental significance (i.e., septic tank, stormwater, dry wells, and/or USTs or aboveground storage tanks [ASTs]) was completed. No evidence of significant use or storage of hazardous substances or petroleum products was noted on the subject property. In addition, no building, plumbing, septic, UST, or AST permit records were recorded online with the Portland Maps records for the subject property.

3.2.3.2 Multnomah County

Based on information from the Multnomah County Tax Assessor's Office, the subject property is known as Tax Lot #2N1E33D-00101 and is approximately 1.30 acres. It is listed by Multnomah County as being owned by Columbia Crossing LLC et al. The subject property is currently used as a public street.

3.3 Additional Environmental Information

The following sections provide a summary of additional environmental information obtained for the site.

3.3.1 Asbestos

The manufacture of most asbestos-containing materials (ACM) was banned by the EPA by 1979. Prior to this, asbestos was a common constituent of numerous building materials, including floor and ceiling tiles, caulking, pipe insulation, roofing materials, and exterior siding.

Based on the lack of the buildings developed at the subject property, there is low potential for ACM to have been used at the subject property.

3.3.2 Lead-Based Paint

Before 1977, paint commonly contained lead, which is considered to cause human health problems if ingested. Based on the lack of the buildings developed at the subject property, there is low potential for lead-based paint (LBP) to have been used at the subject property.

3.3.3 Polychlorinated Biphenyls

Transformers can potentially contain polychlorinated biphenyls (PCBs). Based on the lack of the buildings developed at the subject property, there is low potential for PCBs to have been used at the subject property.

3.3.4 Radon

Radon is a naturally occurring radioactive gas formed by the decay of uranium in some rocks and soil. The adverse health effects associated with radon gas depend upon various factors, such as the concentration of the gas, and exposure duration. The potential concentration of radon gas within a building depends on subsurface soil conditions, the integrity of the building's foundation, the existence of a basement or crawl space (primary areas of concern), and the building's ventilation.

Multnomah County ZIP code 97217 is located in the Federal EPA Radon Zone 2. The Zone 2 indoor average radon level predicted from 2 to 4 picocuries per liter (pCi/L), reported as a moderate risk of

radon elevation. The EPA Action Level for radon is 4 pCi/L. Based on this limited information, radon likely does not represent an environmental concern at the property.

4. FILE REVIEW

In accordance with ASTM Standard E1527-21, inquiries and review of previous investigations for the subject property, and a review of regulatory files for the subject property or adjacent properties may be conducted to further evaluate environmental conditions on the property or adjacent properties, and to fill in data gaps where applicable. Previous investigations and file reviews are summarized below.

4.1 Previous Investigations

Based on regulatory information from DEQ, the subject property is not listed on any regulatory databases. A Draft Phase I ESA was completed on the subject property by Parametrix in March 2012 in support of the Columbia River Crossing project (Parametrix 2012). The following is a summary of the report.

The subject property consisted of Tax Lot 101 (N. Jantzen Avenue and N. Center Avenue roadways) in addition to an additional roadway of N. Jantzen Avenue to the west (Tax Lot 100). The subject property encompassed N. Jantzen Avenue and N. Center Avenue from I-5 west-northwest to the entrance to Jantzen Beach Moorage (approximately 2,100 feet total length) and north-northeast along N. Center Avenue approximately 750 feet. The subject property included paved roads, curbs and landscaped traffic islands.

A portion of the subject property along N. Center Avenue was first developed in the 1920s as part of the Jantzen Beach Amusement Park. The rest of the subject property along N. Jantzen Avenue was relatively undeveloped until the early 1960s when a paved road was constructed as access to the newly established Jantzen Beach Moorage. The subject property has remained relatively unchanged since that time.

The site reconnaissance and the interview with the property owner did not identify any RECs associated with the subject property. The subject property was not listed on any regulatory databases. None of the sites identified in the vicinity of the subject property appeared to represent a REC to the subject property. No additional environmental investigations were recommended.

4.2 Adjacent and Nearby Properties File Review

Several adjacent properties were listed on environmental databases, as described in Section 3. Sufficient site-specific information was available through review of the EDR report, as well as online DEQ files, to develop an opinion on the potential for these properties to have affected the subject property. Therefore, a specific file review (physical review at DEQ) was not required, beyond those completed during the course of this Phase I ESA. Specific information on the nature of release, types of contaminants, media impacted, and the potential to have affected the subject property or otherwise caused environmental concern is provided in Section 3.

The following discussion provides details on the contaminant release from the adjacent property to the northeast which impacted a small portion of the subject property.

- Conoco Phillips Company (12205 N. Center Ave.), is located on the adjacent property to the northeast of the subject property and was assigned DEQ LUST file numbers 26-90-0055 and 26-94-0063. The Conoco property was a service station from 1967 through 2007. The earlier petroleum release was reported in 1990 which involved the removal of 600 cubic yards of gasoline-contaminated soil and 15 cubic yards of heating oil-contaminated soil. The site was closed under the Soil Matrix rules and was issued an NFA letter from DEQ.

  A second petroleum release was reported in 1994 during upgrades to the UST system. Between 1996 and 2008, up to 41 borings and 16 monitoring wells were installed to determine the magnitude and extent of the contamination. Groundwater depths were measured between 13 and 35 feet below ground surface, within unconsolidated alluvial silts and sands. Groundwater monitoring between 2000 and 2011 showed groundwater flow directions toward the south to southwest. Between 2004 and 2006, five air-sparge and three vapor extraction wells were installed and operated until 2007.

  Based on final compliance sampling, residual contamination in soil did not exceed any risk-based concentrations for occupational property use. Residual contamination in groundwater exceeded risk-based concentrations for *vapor intrusion into buildings* (benzene) and *groundwater in excavation* (total gasoline and benzene). No groundwater users were identified within ¼ mile of the subject property.

  In July 2011, three soil gas samples were collected on the property. No analytes were detected that exceeded risk-based concentrations for soil vapor.

  In 2010, the existing commercial building was constructed which included a vapor barrier and a passive ventilation system. Vapor sampling within the ventilation system did not detect any petroleum.

  DEQ issued an NFA letter for the site in October 2012. As a condition of closure, DEQ required that a CMMP be developed for the site. A copy of the NFA letter and the CMMP are included in Appendix E of this report. The general area impacted by the contaminants is shown on Figure 2.

  The CMMP, developed by 76 Products, requires that a Health and Safety Plan be used by all contractors working on the site. Excavation below a depth of 3 feet may result in potential exposure to contaminants via inhalation, ingestion and direct contact with impacted soil and/or groundwater. The CMMP also outlines requirements for handling and disposal of soil and water when excavating deeper than 3 feet or when soil or groundwater displays evidence of contamination. A copy of the CMMP is included in Appendix E.

  Based on this information, the previous releases of petroleum products into the soil and groundwater represent a CREC to the subject property.

5. SITE EXAMINATION

Parametrix conducted a site examination of the subject property from public right-of-way on September 28, 2023. The site examination consisted of observing the areas immediately surrounding the subject property, providing observations of the general environmental conditions on the subject property, and visually assessing the subject property and adjacent properties for evidence of hazardous materials. Photographs of the subject property taken during the site walk are included in Appendix D.

5.1 Subject Property

The subject property consists primarily of paved roads and associated curbs, traffic islands, and stormwater catch basins (see photos in Appendix D). The property is currently owned by the Columbia Crossing LLC et al. All observations were taken from the public right-of-way.

No permanent structures except for paved roadways and curbs are developed at the subject property. The topography of the subject property was observed to be generally level.

No evidence of transformers, USTs, ASTs, or other indications of environmental significance were observed on the exterior portions of the property. In addition, no evidence of significant storage or spills of hazardous substances and/or petroleum products was observed on the subject property. No evidence of staining, adverse odors, or other indications of potential releases was observed. In general, no RECs or other adverse environmental conditions were identified associated with the subject property.

5.2 Adjacent Properties

The vicinity of the subject property is fully developed with commercial businesses and public roadways. Adjacent properties were examined from public areas for the presence of environmental conditions which have the potential to impact the subject property.

The subject property is located to east of Jantzen Beach Center and west of the I-5 freeway. The subject property is bounded in all directions by commercial businesses and restaurants, and also to the south by a private houseboat moorage (Figure 2).

A 2-inch steel pipe extends 6 feet out of the ground from the landscaped area on the adjacent commercial property located at 11850 N. Center Street (Figure 2). The pipe is located within 8 feet of the sidewalk on the south side of N. Center Avenue. The end of the pipe curves 180 degrees and has a damaged screen covering the opening of the pipe, similar to a vent pipe for an underground storage tank. The possible location of a UST in this area, either on or adjacent to the subject property, is identified as a REC.

No evidence of significant staining or stressed vegetation was noted on the ground surface on assessable properties adjacent to the site. With the exception of the possible underground storage tank on the adjacent property discussed above, no other evidence of the storage of chemical or hazardous materials was identified on visible areas of adjacent properties.

6. INTERVIEWS

An interview was not conducted with a property representative to identify any potential environmental conditions and to address information data gaps during the Phase I ESA process. The lack of a property owner or representative interview represents a data gap in accordance with ASTM Standard E1527-21.

7. CONCLUSIONS

Based on the findings of this investigation, Parametrix concluded the following:

1. The subject property is located on Multnomah County Tax Lot 2N1E33D-00101. The subject property consists of roadways (N. Center Avenue and N. Jantzen Avenue) that cover an area of approximately 1.30 acres. No developments exist at the subject property, with the exception of paved road surfaces and associated curbing and landscaping.
2. Based on the historical review, the subject property was part of the Jantzen Beach Amusement Park, from the time of the park's opening in the late 1920s. Most of the area of the subject property that is occupied by N. Center Avenue was previously developed with a paved footpath that provided pedestrian access between areas on the east side of the amusement park, including restaurants, swimming pools, and dressing rooms. The southern leg of N. Center Avenue crosses the former locations of the swimming pools and the boiler house that heated water for the swimming pools.

   A ground-level photograph taken of the building during the 1948 Vanport flood shows the former boiler building in more detail. A possible vent pipe for UST is visible on the east side of the building, within the approximate footprint of the subject property.

   The amusement park closed in 1970, and a Conoco gas station began operating adjacent to the north end of the subject property. The Jantzen Beach Center shopping mall was constructed in the mid-1970s on the former amusement park site. By 1981, the swimming pool, boiler house and other buildings in the area were removed and the current streets (N. Center Avenue and N. Jantzen Avenue) were constructed.

   A 2-inch vent pipe, possibly representing an underground storage tank, was observed adjacent to the subject property in the general location of the west side of the former boiler house. The possible presence of underground oil tanks around the former boiler house is identified as a REC. No other RECs were identified in association with the historical land use.
3. Based on the lack of a building at the subject property, there is low potential for LBP or ACM to have been used at the subject property.
4. With the exception of the possible UST discussed above, no evidence of significant use or storage of hazardous substances and/or petroleum products was noted on or near the subject property. No evidence of distressed vegetation, spills or releases or other indications of environmental concern was identified during the site reconnaissance.
5. The subject property is not listed on any regulatory database that would indicate a past or current release or storage of hazardous materials.
6. A review of regulatory information indicated that several adjacent or nearby sites were identified in the regulatory record databases. Soil and groundwater contamination has been documented on the former Conoco Phillips gas station site adjacent to the northeast of the subject property. A portion of the subject property was impacted by the contamination, which is being managed by a CMMP. This issue is identified as a CREC. None of the remaining sites identified appear to present a REC to the subject property.

7. An interview was not conducted with a property representative to identify any potential environmental conditions and to address information data gaps during the Phase I ESA process. The lack of a property owner or representative interview represents a data gap in accordance with ASTM Standard E1527-21. However, the information obtained for the Phase I ESA, including regulatory database and historical documentation, was deemed sufficient.

8. RECOMMENDATIONS

Based upon the conclusions of this investigation of the subject property, Parametrix offers the following recommendations:

1. A geophysical survey is recommended in the area of the steel vent pipe located on the north end of the subject property and other areas around the former boiler house to identify possible USTs in the area. Any identified USTs should be properly decommissioned and environmental sampling conducted according to State of Oregon requirements and standard industry practices.
2. Future excavation and other subsurface work on the north end of the subject property that was impacted by petroleum contamination from the adjacent Conoco site (Tax Lot 00602) should follow the requirements outlined in the CMMP, which is included in Appendix E.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal Delisted NPL sites

Delisted NPL: The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may deleted from the NPL where no further response is appropriate.

A review of the Delisted NPL list, as provided by EDR, and dated 04/26/2023 has revealed that there is 1 Delisted NPL site within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Lists of Federal sites subject to CERCLA removals and CERCLA orders

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 04/26/2023 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 04/26/2023 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Lists of Federal RCRA generators

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/06/2023 has revealed that there are 2

RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 03/06/2023 has revealed that there are 3 RCRA-VSQG sites within approximately 0.25 miles of the target property.

WA CSCSL: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Ecology's Confirmed & Suspected Contaminated Sites List.

A review of the WA CSCSL list, as provided by EDR, and dated 04/10/2023 has revealed that there is 1 WA CSCSL site within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Site Status: Cleanup Started
Clean Up Siteid: 2033
Facility ID: 15891
Soil: Confirmed Above Cleanup Levels
Ground Water: Suspected
Contaminant Name: Metals Priority Pollutants
Contaminant Name: Polycyclic Aromatic Hydrocarbons

Lists of state and tribal landfills and solid waste disposal facilities

OR SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Department of Environmental Quality's Closure & Regular Solid Waste Active Disposal Permits database.

A review of the OR SWF/LF list, as provided by EDR, and dated 01/13/2023 has revealed that there is 1 OR SWF/LF site within approximately 0.5 miles of the target property.

Lists of state and tribal registered storage tanks

OR UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Quality's UST List on Disk.

A review of the OR UST list, as provided by EDR, and dated 01/11/2023 has revealed that there are 5 OR UST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

ADDITIONAL ENVIRONMENTAL RECORDS

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/06/2023 has revealed that there are 3 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station,

service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 3 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

Environmental Interest/Information System:
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

NARR Comments: (12/5/2001 DGA/SRS) Dry-cleaning facilities have operated at the site since the mid-1970s. A preliminary environmental assessment in November 1994 identified four floor drains within the facility, three of which yielded a positive reading on a photoionization detector. In August 1995, four Geoprobe borings were advanced at the site to see if PCE had been released to the soil or groundwater. PCE was detected in soil gas (up to 75 ppm) and groundwater (up to 780 ug/L) in all four boreholes. It appears that PCE may have been released down the floor drains at the site, leaking into the soil through cracks in the sanitary sewer lines. Tidal fluctuations in the shallow groundwater may have spread the contaminants across the site. Hayden Island Cleaners applied to DEQ's Dry Cleaner Program in January 1997, and was accepted in February 1997.

NARR Comments: The City of Portland owns four deep production wells on Hayden Island, two of which are within 600 feet of the site. Since 1988, Bull Run water has been provided for residents and businesses on Hayden and Tomahawk Islands, and the wells are currently designated for backup fire suppression only. Three of the four wells are contaminated with low levels of TCE and PCE; however, the contamination is thought to be unrelated to Hayden Island Cleaners. Because of the site's proximity to the Columbia River, surface water was another potential pathway of concern. But the contamination does not appear to have reached either the river or the deeper aquifer.

NARR Comments: (12/5/2001 DGA/SRS) DEQ retained Jacobs Engineering to conduct an expanded Preliminary Assessment (XPA) at the site in August 1997. As part of the XPA, three monitoring wells were installed, and soil and groundwater samples collected. PCE was detected in soil samples (up to 267 ug/kg) and groundwater samples (up to 1,230 ug/L) from all three wells. The XPA report was completed in June 1998. DEQ retained Ecology & Environment (E&E) to follow up with a focused Site Investigation in August 1998. Additional groundwater monitoring wells were installed at the site and on adjacent properties. In addition, a pumping test was conducted at the secondary municipal wells (backup fire suppression wells) to determine if there was any connection between the shallow and deep aquifers. No connection was established. The Site Investigation report was completed in March 1999. In May 1999, DEQ injected Hydrogen Releasing Compound (HRC) into the shallow groundwater to accelerate the natural biodegradation of the PCE. Monitoring over the next couple of years showed that the HRC was successful in stimulating degradation of the PCE. DEQ formally notified the site owners and operators in December 2001 that no further cleanup of the site was necessary.

Environmental Interest/Information System:

OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Narrative:

NARR ID: 5743043
NARR Code: Contamination
Created By: JWAGGY
Created Date: 03/02/2003
Updated By: SFORTUN
Updated Date: 09/11/2009
Decode for NarcdID: Contamination
NARR Comments: (2/24/03 SMF/SAP) DEQ received four pollution complaints, (between 1991 - 1999) alleging that ongoing activities at the Former Schooner Creek Boat Works site were contaminating the Columbia River and nearby properties. Two other pollution complaints, received in May 1990 and March 1999, described oil sheens and petroleum odors from unknown sources on the Columbia River near the Former Schooner Creek Boat Works. Although the release characteristics were similar to those described in pollution complaints against the boat works site, there is no information to indicate that the source(s) of these petroleum releases were ever determined. A number of other potential sources are found in the immediate vicinity of the Former Schooner Creek Boat Works site. See DEQ January 24, 2003, Strategy Recommendation for specific pollution complaint history. (8/11/03 AC/C&ER) Site tested for VOCs, petroleum hydrocarbons and metals. Diesel, oil and lead were detected at concentrations above background. Sediment and groundwater have not been tested. (9/10/09;smf) EPA completed an SI of the site in August 2009. Site soils and Columbia River (North Portland Harbor / Oregon Slough) sediments were sampled and analyzed for metals, SVOCs, organo-chlorine pesticides, PCBs, and tributyltin in October 2008. EPA's data indicates that site soils are contaminated with metals, PAHs, PCBs, DDT, phthalates, and tributyltin at concentrations that represent a potential risk to on-site workers, to the adjoining residents, to on-site plants and wildlife, and to nearby aquatic life. Sediments in the site's boat dock area are contaminated with metals, PAHs, and DDT at concentrations that represent potential toxic and bioaccumulative threats to aquatic life.

1610 NORTH PIER 99 ST. (Continued) **S106655861**

Decode for NarcdID: General Site Description
NARR Comments: The subject site is an approximate 1 acre parcel in North Portland, along the western edge of the Interstate Highway (I-5) bridge over North Portland Harbor. The site has been the location of boat building, repair, and machine shop activities since about 1937. Schooner Creek Boat Works, a boat building and repair business, began operating at the site in 1989, but relocated its operations about 1 mile northwest, to the north shore of Hayden Island, In July 2000. However, it continued to lease the site through December 2001. DEQ s Northwest Region (NWR) Hazardous Waste program first referred the site to Site Assessment in April 2002 for investigation of a pollution complaint. Mermaid Marine had recently begun leasing the site, but became involved in an extensive cleanup of wastes and debris that Schooner Creek Boat Works allegedly left behind when they vacated the site.

Updated Date: 09/11/2009
Decode for NarcdID: Hazardous Substance/Waste Types
NARR Comments: Existing information suggests that site soils and nearby Columbia River Sediments may be contaminated with copper oxide, paint thinner, and heavier petroleum constituents such as polynuclear aromatic hydrocarbons (PAHs). Considering the types of activities conducted at the site, and the length of time that these activities were conducted, other potential site contaminants might include: Organotins, other potential toxic metals (such as arsenic, lead, cadmium, chromium, mercury, and zinc), volatile organic contaminants (VOCs), semi-volatile organic contaminants (SVOCs), and possibly polychlorinated biphenyls (PCBs). (9/11/09; smf) A 2008/2009 EPA SI found that site soils are contaminated with metals, PAHs, phthalates, PCBs, DDT, and tributyltin at concentrations that represent potential risks to on-site workers, adjoining residents, on-site plants and wildlife, and nearby aquatic life. Sediments in the site's boat dock area are contaminated with metals, PAHs, and DDT at concentrations that represent potential toxic and bioaccumulative risks to aquatic life.

NARR Comments: (9/10/09;smf) EPA completed an SI of the site in August 2009. Site soils and Columbia River (North Portland Harbor / Oregon Slough) sediments were sampled and analyzed for metals, SVOCs, organo-chlorine pesticides, PCBs, and tributyltin in October 2008. EPA's data indicates that site soils are contaminated with metals, PAHs, PCBs, DDT, phthalates, and tributyltin at concentrations that represent a potential risk to on-site workers, to the adjoining residents, to on-site plants and wildlife, and to nearby aquatic life. Sediments in the site's boat dock area are contaminated with metals, PAHs, and DDT at concentrations that represent potential toxic and bioaccumulative threats to aquatic life.

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: The site is located in a narrow, isolated strip of industrial properties on the south bank of North Portland Harbor, along North Marine Drive. The area between North Portland Harbor on the north, I-5 on the east, Columbia Slough on the south, and a Burlington Northern Santa Fe Railroad right-of-way on the west comprises Peninsula Drainage District #1. The entire site lies within the Columbia River s 100-year flow zone, so flood waters could mobilize any surface contamination at the site. The nearest residence evidently shares the same tax lot as the site. North Portland Harbor and I-5 should limit potential exposures for most upland residences, except for potential exposures at the on-site residence. There are approximately 200 houseboats moored along the north shore of the North Portland Harbor, within .5 mile of the site. It is unclear if site contaminants would significantly affect residents at the nearby houseboats. The Multnomah County Fairgrounds and Exposition Center lied southwest of the site, directly across North Marine Drive. East Delta Park, a municipal park, lies about .25 mile south-southeast of the site. The Portland International Raceway lies about .5 mile south-southwest of the site. Heron Lakes Golf Club, a municipal golf course, lies about .25 mile southwest of the site. In addition, Jantzen Beach Supercenter shopping center lies directly across North Portland Harbor from the site. In August 2001, Metro hired a consultant to advance five pushprobe soil borings 100 to 200 feet south of the site. These borings encountered groundwater at 7 to 16 feet below ground surface (bgs), suggesting that any potential contaminants at the boat yard site could represent a threat to nearby drinking water wells, and that potential shallow groundwater contamination could represent a threat to aquatic life in North Portland Harbor. Wetlands areas directly to the south of the site attract populations of sensitive wildlife species to the area. A major heronry is also located about 1 mile from the site. Site contaminants could represent a threat to sensitive wildlife and plant species within the drainage district. Along the 1610 North Pier 99 Street site, the Columbia River provides migratory and rearing habitat for twelve sensitive anadromous fish species.

Decode for NarcdID: Remedial Action
NARR Comments: (2/24/03 SMF/SAP) The site has a lengthy operational history, and DEQ has received multiple complaints alleging releases or improper handling of hazardous substances at the site. A high priority is assigned for conducting an Expanded Preliminary Assessment (XPA) of the site. Site soils, groundwater, and nearby Columbia River sediments should be sampled for toxic metals, VOCs, SVOCs, and PCBs to determine if past activities may have significantly contaminated the site and surrounding environment. (8/21/03 AC/C&ER) A preliminary investigation confirms the presence of petroleum hydrocarbons and

1610 NORTH PIER 99 ST. (Continued) **S106655861**

metals in site soils. Site sediment must still be evaluated. [10/21/13 SA/SAM] A Site inspection Report was prepared in 2009. Sample results for the sediment samples collected from below the Pier 99 docks indicated the presence of one TAL metal at a significant concentration with respect to background concentration. No organotins, pesticides/PCBs, SVOCs were detected at significant concentrations with respect to background concentrations. Site soils contained sources of CERCLA hazardous substances. EPA completed an EE/CA on June 13, 2013. The site was divided up into 4 operable units: - Operable Unit 1 Bank Area - Operable Unit 2 Eastern Solid Waste Storage Area (Eastern Unimproved Area) - Operable Unit 3 Gravel Filter Area and Upland Boat Maintenance Repair Area - Operable Unit 4 Former Crane Area Based on the results of this EE/CA, the recommended removal actions for the Site are OU3 Gravel Filter Removal and stormwater Pipe Removal and OU1 Bank Stabilization(which included some debris removal and sand blast grit removal). The OU 2 elevated area coresponded with the OU3 discharge area and is addressed in this action. An OU 4 data gap investigation indicate that removal is not needed for the former crane area soil or groundwater at the site. Onsite work by EPA started Sept 1, 2013. For more details, visit http://www.epaosc.org/site/site_profile.aspx?site_id=8650 By 10/10/2013 all initial removal and restoration activities at the Pier 99 site were completed. [6/26/14 SA/SAM] Additonal removal at two locations(REX-16 and RAC-2) will occur in June 2014. EPA will perform a one-year monitoring and maintenance review. [10/22/14 SA/SAM]Additional removal was completed at the burn area on June 30 and July 2, 2014. As much as 3.5 feet of ashy soil was removed along a 15 foot length at the base of the slope. Because a significant portion of the bank was exposed during the excavation, EPA agreed that further excavation could jeopardize the stability of the bank, and excavation could be stopped. The area at the toe of the slope was reinforced with Envirlok vegetated sand bags installed at approximately a 1:1 slope. The two foot soil cover requirement was met at the toe of the bank, but could not be met further up the bank on the steep slope. Up the slope only 18-20inches of soil cover was placed. The EPA will require Post-Removal Site Controls, including monthly inspections, prohibit any activity that damages or disturbs the integrity of the cover and restoring the integrity of the cover if it is jeopardized in any way. [5/19/20 SA/SAM] The 2015 Monitoring report(year 2), indicated bank conditions were stable; grass covered the bank and no ground distrubances occured. 2016 and 2020 monitoring reports demonstrated the bank continues to be covered with grass. Based on review of the previous removal action and project files, the DEQ Cleanup program is concerned that sediment adjacent to the North Pier 99 site has not been adequately characterized and may be contaminated above levels of concern to human health and the environment. In particular, there is no data for Columbia River sediments between the bank and the area sampled near the docks.

1610 NORTH PIER 99 ST. (Continued) **S106655861**

North Portland Harbor and I-5 should limit potential exposures for most upland residences, except for potential exposures at the on-site residence. There are approximately 200 houseboats moored along the north shore of the North Portland Harbor, within 0.5 mile of the site. Nearly 80% of these are located either directly across the harbor, or downstream from the boat works site. The Multnomah County Fairgrounds and Exposition Center lies southwest of the site, directly across North Marine Drive. East Delta Park, a municipal park, lies about 0.25 mile south-southeast of the site. The Portland International Raceway lies about .5 mile south-southwest of the site. Heron Lakes Golf Club, a municipal golf course, lies about 0.25 mile southwest of the site. In addition, the Jantzen Beach Supercenter (shopping center) lies directly across North Portland Harbor from the site. In August 2001, Metro hired a consultant to advance five pushprobe soil borings 100 to 200 feet south of the site. These borings encountered groundwater at 7 to 16 feet below ground surface (bgs), suggesting that any potential contaminants at the boat yard site could represent a threat to nearby drinking water wells, and that potential shallow groundwater contamination could represent a threat to aquatic life in North Portland Harbor. City records indicate that the on-site residence is serviced by the Portland municipal water supply. The city also has supplemental supply wells along the Columbia River south shore, 6 to 11 miles east of the site, as well as four supplemental supply wells on Hayden Island. Two of the Hayden Island wells lie about 1,200 feet north of the site, directly across North Portland Harbor. The nearest municipal water supply wells lie across North Portland Harbor, a 1,000-foot-wide, 20 30 foot deep channel of the Columbia River, and may be about 225 250 feet deep, so it remains unclear if site contaminants represent a significant threat to the city drinking water supply. OWRD also has records of three community or group-domestic wells, one public water supply well, and five domestic wells within 1.25 miles of the site.

NARR Comments: Methane and other atmospheric gases were measured in confined spaces inside the site buildings using a handheld meter in May 2011. Methane at levels from 1.5 to 5.5% was detected at the drains of two restrooms. This could be related to sewer gas from leaking drain traps. Little or no methane was detected in any other confined space locations within the buildings. In May 2012 three borings were arrayed around the property and one included the location of a former leaking waste oil tank from the prior gas station. Borings were sampled for methane using a handheld meter as well as summa canister sampling. VOCs samples were also collected using a summa. The maximum methane detection was around 2% in one hole (near the former waste oil tank) and near zero in other holes. Various VOCs (largely associated with petroleum) were found at generally low concentrations. No VOCs were found at concentrations greater than commercial risk-based concentrations. In July 2012 a plumber was hired by site owner to inspect and correct any problems with the bathroom drains/traps. No Further Action determination in August 2012. The determination applies only to the immediate Hayden's Corner site and not to the greater Hayden Island Landfill (ECSI #1559).

HAYDEN'S CORNER (Continued) **S111766412**

NARR Comments: An ARCO service station that operated on the property starting in 1971 initiated an investigation in 1989 that showed gasoline contamination in groundwater. Borings also revealed a layer of landfill debris beneath clean fill. The property is apparently located within the footprint of the former Hayden Island Landfill, an unregulated landfill that was located in a seasonal lake basin and probably operated between 1950 and 1970, when it was covered by a 7 to 8-foot layer of clean fill. DEQ's LUST program (file #26-89-0149) requested a Corrective Action Plan from ARCO, leading to pump-and-treat remediation that began operating 8/90. Groundwater samples from eight monitoring wells contained dissolved metals, which are most likely a result of landfill leachate percolating through unknown solid wastes in the unsaturated zone. Because of system fouling from these metals, the treatment program was shut down in May 1991. The ARCO station recieved a No Further Action determination in 1998 with the exception that the determination did not apply to other contaminants found at the site related to the greater Hayden Island Landfill.

HAYDEN ISLAND LANDFILL (Continued) **S103842510**

NARR Comments: This unregulated landfill was located in a seasonal lake basin and probably operated between 1950 and 1970, when it was covered by a 7 to 8-foot layer of clean fill. An ARCO facility that opened in 1971 at the eastern edge of the former landfill initiated an investigation in 1989 that showed gasoline contamination in groundwater. Borings also revealed a layer of landfill debris beneath clean fill. DEQ's LUST program (file #26-89-0149) requested a Corrective Action Plan from ARCO, leading to pump-and-treat remediation that began operating 8/90. Groundwater samples from eight monitoring wells contained dissolved metals, which are most likely a result of leachate percolating through unknown solid wastes in the unsaturated zone. Because of system fouling from these metals, the treatment program was shut down in May 1991.

NARR Comments: In June 1993, ARCO concluded that it was not possible to remediate benzene in groundwater without first removing dissolved metals. ARCO maintained that it had no responsibility for the metals. The LUST section may continue to require regular monitoring as a part of <quot>conditional closure.<quot> Potential pathways of exposure appear limited to groundwater and surface water. Because more information is needed about the landfill and its levels of contamination, Site Assessment recommends that affected property owners characterize contamination in and below the former landfill. Otherwise, a PA should be completed to investigate the site's history and to evaluate potential exposure pathways, under a low priority. Confined space methane testing was performed by PBS for the Hayden's Corner property. The only significant methane was found at two bathroom floor drains where the likely source was sewer gas. Three soil gas samples were collected from borings around the former ARCO site as part of the investigation of the Hayden's Corner property (ECSI #5711). Methane at 2% was found near the former waste oil but this could have been from residual petroleum contamination. Other samples showed only trace methane.

HAYDEN ISLAND LANDFILL (Continued) **S103842510**

Updated Date: 06/21/2017
Decode for NarcdID: Current Site Summary Statement
NARR Comments: [April 2017] This unregulated landfill was located in a seasonal lake basin and probably operated between 1950 and 1970, when it was covered by a 7 to 8-foot layer of clean fill. An ARCO facility that opened in 1971 at the eastern edge of the former landfill initiated an investigation in 1989 that showed gasoline contamination in groundwater. High concentrations of metals were also found. Borings revealed a layer of landfill debris beneath clean fill. The Hayden's Corner property (former ARCO site) was split off from the greater landfill site with a separate ECSI number (#5711). Another site was investigated in the Hayden Island Landfill area in 2016/17 (1445 and 1463 N. Hayden Island Drive). These properties' recent use was commercial, and not expected to lead to contamination. Groundwater below the properties is contaminated with TPH and metals, particularly arsenic, barium, lead, silver, and mercury.

NARR Comments: Stormwater quality data collected twice since June 2002 indicate that the facility meets DEQ’s stormwater benchmark values, although concentrations of copper and zinc in site stormwater exceeded the National Recommended Water Quality Criteria’s respective Freshwater Critical Maximum Concentrations, DEQ’s respective Freshwater Acute Toxicity Criteria, and DEQ’s Level II Ecological Risk Assessment Screening Benchmark Values for freshwater aquatic life. Between 1990 and 2001, DEQ received nine Pollution Complaints and six Spill Reports associated with potential hazardous substance releases at the Diversified Marine facility, or petroleum sheens present on the river directly adjacent to the facility. Five of the Pollution Complaints and one of the Spill Reports involved fugitive dust emissions

S S LEADER AT DIVERSIFIED MARINE (Continued) **S108659504**

associated with sandblasting operations at the site. There is concern that sandblasting of boat hulls at the site could have released paint chips and toxic metals at concentrations that could represent a threat to the river s aquatic life, or otherwise accumulated in the river s sediments. Two other Spill Reports and another Pollution Complaint involved petroleum sheens of unknown origin on North Portland Harbor adjacent to the site. One additional 1998 Spill Report and simultaneous Pollution Complaint were associated with a petroleum release at the site that drained across N Marine Drive onto state highway property located 200 yards from the site. Diversified Marine s record of Pollution Complaints and Spill Reports suggests that on-site activities could have contaminated site soils and nearby Columbia River sediments with any of a variety of boat building, maintenance, and repair related contaminants, including toxic metals and paint chips containing toxic metals such as copper oxide, organotins, lead, cadmium, chromium, mercury, and zinc; petroleum constituents such as BTEX (benzene, toluene, ethylbenzene, toluene) and polynuclear aromatic hydrocarbons (PAHs); and other potential organic contaminants such as, phthalates, pentachlorophenol, chlorinated solvents, and possibly polychlorinated biphenyls (PCBs). (1/13/10 CWH/CU) The march 2009 Preliminary Assessment produced by Ecology and Environment for EPA Region 10 noted that, based on comparison to immediate upstream sediments, that the sediment sample (CR05SD) collected just downstream/adjacent to DMI <quot>indicates that DMI is contributing to copper, lead, and zinc contamination in the river.<quot> DEQ feels it is important to note that with the exception of copper, none of the detected metals, while elevated locally, exceed DEQ freshwater sediment SLVs. It is also important to note that the CR05SD sample was collected at a location that was not near where DMI stormwater runoff or working areas might be expected to be impacted.Similarly, PAH sediment data for CR05SD shows locally elevated concentrations of PAHs, but none above DEQ SLVs. PCBs were non-detect for CR05SD, but detection limits (41-45 ppb) were above DEQ SLVs. To summarize - the CR05SD sediment sample collected on behalf of EPA in October 2008 does indicate releases are likely to have occurred from the DMI site, but there were no samples collected in locations that would be suspected as release points.

Decode for NarcdID: General Site Description
NARR Comments: The subject site is an approximate 0.8 acre parcel in North Portland, on the south shore of North Portland Harbor, about 500 feet west of the Interstate Highway 5 (I-5) bridge over North Portland Harbor. Work is performed within an onshore building, on vessels moored at the site, and in a 200-ton floating dry dock at the site. North Marine Drive and North Pier 99 Street are located along the site s southern boundary. A paved parking lot for the Multnomah County Fairgrounds and Exposition Center lies directly across North Marine Drive, 100 to 300 feet south and southwest of the site. Hayden Island is across North Portland Harbor, about 1,000 feet north of the site.

NARR Comments: Although DEQ has records of known and suspected hazardous substance releases at the site, there is no indication that environmental sampling has ever been conducted at the site. Because of an abundance of nearby receptors (nearby wetlands, community drinking water wells, Critical Habitat for Threatened and Endangered fish), a high priority has been assigned to conducting an expanded Preliminary Assessment of the site.

Decode for NarcdID: Manner of Release
NARR Comments: Fugitive dust emissions associated with sandblasting of boat hulls at the site could have released paint chips and toxic metals at concentrations that could represent a threat to the river s aquatic life, or otherwise accumulated in the river s sediments. Petroleum sheens of unknown origin have been reported on North Portland Harbor adjacent to the site. A historic petroleum release at the site was also reported to have drained across N Marine Drive onto state highway property located 200 yards from the site. Since Diversified Marine site activities include machine shop activities, bilge removal, and boat and equipment refueling activities, it may not be unreasonable to suspect that some of the petroleum contamination observed in the river channel could have originated from on-site activities. Such releases could represent a threat to the river s aquatic life, or otherwise have accumulated in river sediments.

NARR Comments: There is concern that site activities may have contributed contaminants to on-site soils and shallow groundwater, as well as in Columbia River surface water and sediments. Soil contaminants could represent a health threat for on-site workers or utility trench workers. North Portland Harbor (the Columbia River; Oregon Slough) forms the site's northern boundary; the entire site lies within the river's 100-year flood zone. The Columbia River is migratory and rearing habitat for eleven varieties of Threatened or Endangered salmonids. The Columbia Slough lies about 1 mile south of the site. The area between North Portland Harbor on the north, I-5 on the east, Columbia Slough on the south, and a Burlington Northern Santa Fe Railroad right-of-way on the west comprises Peninsula Drainage District No. 1. Most of the drainage district is publicly owned wetlands. Wetlands areas directly south of the site attract populations of sensitive wildlife species to the area. Metro has designated much of Peninsula Drainage District No. 1 as important wetlands or wildlife Habitats of Concern, or regionally significant riparian corridors. Migratory waterfowl and songbirds have been observed within the drainage district, as well as a variety of other sensitive and Threatened and Endangered wildlife species. Sensitive and Threatened plant species may also be present within the wetlands. Site contaminants could represent a threat to sensitive plant and wildlife species within the wetlands. The nearest residence is located on a tax lot at the site's eastern boundary. Other residences are located across I-5, about 0.3 mile east-southeast of the site, and across North Portland Harbor, about 0.4 mile northeast and 0.5 mile north-northwest of the site. Oregon Water Resources Department (OWRD) has records for three community or group-domestic wells, one

S S LEADER AT DIVERSIFIED MARINE (Continued) **S108659504**

Public Water Supply well, and five domestic wells within 1.25 mile of the site. The nearest is a 261 foot well installed at Kernan Village in 1958 to supply drinking water for a store, service station, apartment building, and trailer park. The well is believed to be located about 600- to 900 feet south-southwest of the site. Kernan Village no longer exists; its well may now be located either within the current I-5 / North Marine Drive cloverleaf interchange, or within the county fairgrounds paved parking area. It seems unlikely that the well is still being used or even still exists, although OWRD has no record to indicate that the well was formally decommissioned. The City of Portland has supplemental Municipal Supply Wells along the Columbia River south shore, 6- to 11 miles east of the site, as well as four supplemental supply wells on Hayden Island. Two of the Hayden Island wells lie about 1,200 feet north of the site, directly across North Portland Harbor. These wells lie across North Portland Harbor, a 1,000 foot wide, 20- to 30 foot deep branch of the Columbia River, and may be about 225- to 250 feet deep. Several nearby public facilities draw substantial numbers of people to the area. The Multnomah County Fairgrounds and Exposition Center lie southwest of the site, directly across North Marine Drive. East Delta (municipal) Park lies about 0.25 mile south-southeast of the site, across I-5. The Portland International Raceway lies about 0.5 mile south-southwest of the site. Heron Lakes (public) Golf Club lies about 0.25 mile southwest of the site. Jantzen Beach Supercenter shopping center lies directly across North Portland Harbor from the site.

NARR Comments: (10/19/04 AC/ER&CU) Site status on hold. Responsible party (RP) unwilling to join the Voluntary Cleanup Program or perform an Expanded Preliminary Assessment (XPA). Principle concern is that potential site contaminants in sediments could pose a threat to Columbia River ecological receptors. Insufficient evidence to require sediment sampling in the Columbia River. Project on hold pending available orphan funds or willing responsible party. [3/20/15 SA/SAM] An Abbriviated Preliminary Assessment was finalized by EPA through its contractor E&E on May 14, 2009. EPA also performed a SI in 2009 at a neighboring property(ECSI#3526 1610 N Pier 99) downstream samples indicates releases are likely to have occurred from the DMI site, but there were no samples collected in locations that would be suspected as release points for this facility. No Further Remedial Action Planned under Federal program was designated in 2010. A Site Investigation is recommended under state supervision.

Incident Id: 010336
Incident Narrative: STATE HAZMAT TEAM 6 FROM PFB CALLED BY PORTLAND DVD TO 1801 N MARINE DR. SUSPECTS HAD DUMPED DRUG LAB WASTE AND SUPPLIES IN A PARKING AREA NEAR A ROADWAY. THE SUSPECTS HAD BEEN ABOARD A NEARBY 60 FOOT YACHT AND THERE WAS A STRONG CHEMICAL SMELL COMING FROM THE BOAT. THE TEAM ARRIVED AND CONFERRED WITH DVD OFFICER IN CHARE SGT HENDRICKS DETERMINING HOT ZONE AND NEEDED SETUP. THERE WERE THREE BACKPACKS AND A DUFFEL BAG IN THE PARKING LOT. UNKNOWN NUMBER OF SAMPLES TO BE TAKEN. TWO DVD OFFICERS WERE SUITED UP IN LEVEL B WITH SCBA- ALL PERSONNEL WORE LIFE PRESERVERS DUE TO THE PROXIMITY TO THE COLUMBIA RIVER. THE TWO OFFICERS WERE: DORIS PAISLEY (#BPSST UNK) AND BILL SHAW (#28923). SHAW SUITED UP AND WENT WITH HENDRICKS DOWN THE DOCK TO "CLEAR" THE YACHT OF ANY POTENTIAL TWO-LEGGED THREATS. SHAW FOUND ONE CONTAINER OF LIQUID AND TOOK A SAMPLE FROM IT FOR EVIDENCE. FB 17 WAS CALLED TO THE SCENE TO EVALUATE MOVING THE YACHT TO A SAFER LOCATION FOR EVIDENCE TAKING, BUT THAT PROVED UNNECESSARY. PAISLEY AND SHAW TOOK A TOTAL OF 12 SAMPLES FROM THE BACKPACKS AND DUFFL BAG. THEY ENTERED THE HOT ZONE AT 1559 HOURS AND EXITED AT APPROX 1702 HOURS FOR DECON. HM TEAM SET UP EVIDENCE COLLECTION TABLE AND MATERIALS FOR DVD - PROVIDE DECON.

NARR Comments: The site is just north of the center of Hayden Island in the Columbia River. The topography is flat and the elevation is approximately 20 feet above of sea level. The main channel of the Columbia River is just over 500 feet north of the site. Subsurface material encountered below asphalt and base gravel was medium-grained sand. At depths as little as 5 feet below ground surface (bgs) fill material consisting of paper, glass, wood, brick, plastic and metal, was encountered and found at depths up to 18 feet bgs.

NARR Comments: (November 2016 RKW) Phase II investigation including sampling of soil and shallow groundwter. Minor diesel and oil contamination was found in soil on the 1445 lot. Groundwater below the site contains widespread petroleum, metals (arsenic, barium, cadmium, lead, silver,

HAYDEN ISLAND - UMATILLA PROPERTY (Continued) **S118869506**

and mercury), minor VOCs and PAHs. Follow-up investigation for methane (landfill gas) was undertaken in January 2017 using handheld Landtec instrument. Samples from two boring on each property and from interior confined spaces in the 1463 building. No significant levels of methane were detected. NFAs for both properties were dated April 4, 2017.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: This site, the location of a former US Bank branch (since demolished) is situated on top of the abandoned Hayden Island Landfill (ECSI #1559). The site is currently owned by Umatilla, Inc. Belmar Properties, the owners of an adjacent property, are proposing to purchase the site. Belmar has applied to DEQ's Voluntary Cleanup Program to obtain a No Further Action determination for the site. These properties recent landuse was commercial and not expected to lead to contamination. Groundwater below the properties is contaminated with TPH and metals, particularly arsenic, barium, lead, silver, and mercury. Groundwater contaminatinon is thought to be associated with the former landfill.

NARR Comments: Area around site has been extensively investigated and the past activity has not been evaluated as part of DEQ Cleanup program. As part of Columbia Slough Area-wide Discovery Project this site was noted due to the presense of soil borings found in Water Resources Department well log database. Site runoff or subsurface contamination could reach part of Columbia Slough or location wetlands via stormwater drainage system.

NARR Comments: [12/23/2004, BP] As a part of complaint investigation, DEQ has collected three hand-augured soil samples to a depth of 4 feet near the reported spill area. A field visit and lab analyses indicate surface soil contamination with heavy oil-range hydrocarbons at uo to 7,810 ppm at a depth of 1 foot below ground surface, decreasing to 247 ppm at a depth of 4 feet.

NARR Comments: [12/23/2004, BP] The neighboring Oregon Waste Management has two off-site monitoring wells on the Marina property as a part of their remedial system. The access to these wells has been, and still is, in litigation. A contractor with Waste Management first observed and reported the spilled drum.

Updated By: Not reported
Updated Date: 12/17/2002
Decode for NarcdID: Contamination
NARR Comments: (11/20/90 MM) This site includes multiple businesses. Low levels of hazardous substances were identified in soils and groundwater on-site during an environmental audit for a proposed transfer station. One business on-site has free petroleum product floating on groundwater and high concentrations of dissolved volatile organics in groundwater. DEQ's UST program is working with Oregon Waste Systems, Inc. and the truck-stop operator to remediate petroleum problems on-site. The other contaminants present at the site need to be evaluated to determine the need for further assessment or corrective action.

NARR Comments: Gasoline, diesel, 1,2-dichlorobenzene, 1,1-dichloroethane, PCBs, vinyl chloride, methyl isobutyl ketone, perchloroethene, total xylenes. (11/14/97 LSK) Soil contamination was associated with primarily 5 areas of the site: Rod's Truck Repair, The Merit Truck Stop, areas adjacent to the Peninsula Terminal Railroad, Harbor Oil and Star Oil. At Rod's Truck Repair and Merit Truck Stop, BTEX contamination likely from leaking USTs. There is some floating product in shallow groundwater beneath the Merit Truck Stop site. Petroleum hydrocarbons were found in shallow soils at Star Oil (100 to 2,000 ppm) and Farmers (200 to 5,000 ppm). Harbor Oil is described

NARR Comments: (11/20/90 MM) Site is located in a light industrial area, and consists of a stockyard, two truck service stations, a card-lock station, a restaurant, railroad tracks and engine barns, and wetlands. Other than workers, the population immediately around the site is low. Land to the south is vacant, to the east and west is industrial. Nearest dense population is one mile south and north across the Slough. The site is on flat land and in the floodplain of the Columbia River. Soils are fine-grained alluvium intermixed with fill consisting of crushed rock, and clayey silt - gravel. Threat or potential threat to surface water - sediments from storm sewer outfalls that enter the Columbia River contained methyl isobutyl ketone (MIBK), 1,2-, 1,3-, and 1,4-dichlorobenzene, Cr, Cd, Zn, Pb, Cu, and Ni above background levels. Depth to groundwater varies from ground surface to 15 feet across the site; its uses are unknown. (11/14/97 LSK) The site is located within 1,000 ft. of Force Lake to the southeast and is adjacent to the Oregon Slough to the north. The wetlands associated with Force Lake support great blue heron nesting areas, and the City of Portland considers this wetlands area, as well as the lake, a sensitive environment. Stormwater runoff from some of the site is carried north towards the Oregon Slough by storm drains that run beneath Marine Dr. Some runoff flows south towards Force Lake and area wetlands. Force Lake drains via the North Ditch, which is part of Peninsula Drainage District No. 1. Water in the ditch is routed to the District's main pumping station southwest of the site, where it is pumped into the Columbia Slough. Shallow groundwater north of the railroad flows radially outward in all directions, and south of the railroad flows to Force Lake and the wetlands area. Deep and intermediate groundwater flow is both to the northwest towards

OREGON WASTE SYSTEMS - PROPOSED TRANSFER STATION (Continued) **S103303248**

the Oregon Slough and Columbia River and to the south away from the river, depending upon the season and river level changes.

Decode for NarcdID: Remedial Action
NARR Comments: [4/8/13 SA/SAM] Site Investigations and some cleanup has occured on site since approximately 1988; generally focusing on underground storage tank removal and remediation. DEQ Site Assessment recommends the following activities be performed at the site to help clarify site risk and priority for further action. Contaminated soil remained under the Rod s Truck Stop building with issuance of underground storage tank program NFA in 1993. A review of the archived UST file and possible investigation should be completed to determine the risk of contaminated soils for vapor intrusion for petroleum. PCE/TCE samples were collected from shallow groundwater in 1991. Confirmation

STOCKYARDS COMMERCE CENTER (Continued) **S111766402**

of PCE/TCE concentrations is recommended to ensure vapor intrusion occupational risk based concentrations are currently met. Potential sources of PCE/TCE in shallow groundwater include remaining soils at Rod s Truck Service and potential spills from Peninsula Railroad Terminal to the south of the Stockyard property. Current site stormwater drainage should be diagramed and determine discharge points for the property. Columbia Slough Sediments- sediment sampling near current and historic stormwater outfalls should be tested for metals, PCBs, PAHs and VOCs. Sediment results should be compared to the average Lower Columbia River concentrations to determine if the sediments are either near average conditions or significantly above average Lower Columbia River sediment conditions. If sediment concentrations are above average, a source control evaluation may need to be performed.

NARR Comments: Contaminants in site groundwater and stormwater could represent a potential threat to on-site workers, aquatic life in the Columbia River, wildlife and aquatic life in nearby wetlands, and/or other users of groundwater and surface water in the immediate vicinity of the site. Water quality in the Columbia River is already impaired. The Columbia River is used for recreational and commercial fishing, as well as other recreational purposes. It also provides Critical Habitat for threatened and endangered fish species. The river and nearby wetlands also provide important habitat for other sensitive species such as protected migratory bird species, sensitive amphibian, reptile, and plant species, and food resources for sensitive aquatic and terrestrial species.

NARR Comments: [4/8/13 SA/SAM] The site was originally developed in 1908 with the construction of a small hotel and a livestock Exchange Building. The Portland Union Stockyards was built in about 1910. The stockyards ceased operations in 1980. Site buildings also included Merit USA (Texaco) Truck Stop (built in about 1952), which included two fueling stations, truck scales, and a cafT. Rod s Truck Repair, a commercial gas station and repair shop began operating in the 1980 s. The stockyards were demolished in 1996 and redeveloped in approximately 1997 to its current configuration as light industry and warehousing.

NARR Comments: Site is suspected of petroleum releases to the subsurface. As part of Columbia Slough Area-wide Discovery (CSD) Project this site was noted due to the presense of soil borings found in Water Resources Department well log database. Site runoff or subsurface contamination could reach part of Columbia Slough via stormwater piping system. Site has received cleanup of USTs via DEQ UST program (26-92-0348) cited as ending in 1997. However, CSD project found investigation on the site initiated in 2000, in areas away from the main building, to the west.

Updated Date: 05/22/2013
Decode for NarcdID: Remedial Action
NARR Comments: [5/22/13 SAM/SA] Prior investigations in the late 1980s/early 1990s found metals, TPH and VOC contamination generally below human health risk based concentrations in site soils and groundwater(except for TCE/PCE which is found in groundwater area wide), but elevated from background concentrations. Sources of the elevated soils are unknown and the true nature and extent of contamination has not been adequately determined. Several spills have occurred on site since 1994 with no record of cleanup provided to DEQ. DEQ Site Assessment recommends the following activities be performed at the site to help clarify site risk and priority for further action. Based on the results of a DEQ site assessment prioritization scoring, the priority for further action is medium. Soils o Prior characterization of waste disposal piles (potential dump area found elevated concentrations of metals. SVOCs were never analyzed, even though PID readings were elevated. SVOCs and metals should be examined further in the waste disposal pile area. o Characterize the full magnitude, nature, and extent of contamination in subsurface soils in the backfilled retention pond. Prior work showed elevated concentrations of petroleum constituents. o Determine if spills were adequately cleaned up; particularly the 1994 diesel spill, 1997 unknown solvent spill and 2005 CCA spill. o Characterize areas where any historic Harbor Oil releases that may have migrated to the site, particularly if a change of land use is considered. Stormwater drainage for the site should be mapped to determine where runoff is directed after entry to the vegetated strip in center of the parking area s southern boundary. If stormwater is directed towards wetlands, additional sediment characterization and source control evaluation may be needed. Groundwater- the southern extent of PCE/TCE groundwater contamination present on the adjacent northern properties (Stockyards Commerce Center #5695) should be defined in the Bulk Transport area.

NARR Comments: Contaminants in site soils groundwater could represent a potential threat to aquatic life in the Columbia River, wildlife and aquatic life in nearby wetlands, and/or other users of groundwater and surface water in the immediate vicinity of the site. Water quality in the Columbia River is already impaired. The Columbia River is used for recreational and commercial fishing, as well as other recreational purposes. It also provides Critical Habitat for threatened and endangered fish species. The river and nearby wetlands also provide important habitat for other sensitive species such as protected migratory bird species, sensitive amphibian, reptile, and plant species, and food resources for sensitive aquatic and terrestrial species.

NARR Comments: [5/22/13 SAM/SA] The property was developed in the 1940 s as an on-site fertilizer yard that received manure produced at the nearby stockyards. J.W. Fertilizer, a commercial fertilizer and soil additive facility was operating on the eastern portion of the site during the 1970 s until 1990. Since about 1995, Bulk Transportation / DTI a chemical transport company uses the site as a satellite trucking terminal. Liquids, gases, chemicals, and hazardous materials are unloaded from rail cars and trucked to their final destination. Other services include product mixing, liquid bulk storage, tank containers, and warehousing. The western portion of the site is an undeveloped 6acre wetland

Material: Wastewater (Non-Sewage)
Quantity: Unknown
Unit of Measure: Gallons
Release Date: 10/19/2015
Description: A private citizen reported a chemical spill at a business. Reporting party was at Bulk Transportation for a job interview this morning and stepped in a substance on his way out. He was told by an employee that this substance was chicken fat but the sole of his shoe later turned white in color. There were no markings to indicate what the chemical may have been. The spill is located on the north east site of the equipment yard, near the office and was approximately 6inches deep and 20feet long. There was absorbent on the ground near the spill.

NARR ID: 5733859
NARR Code: Contamination
Created By: Not reported
Created Date: 12/17/2002
Updated By: GWISTAR
Updated Date: 06/27/2003
Decode for NarcdID: Contamination
NARR Comments: (10/9/1996 DJH/VCS) Site owner Peninsula Terminal Company contacted DEQ in October 1993 regarding their intent to participate in the Voluntary Cleanup Program, and signed a Letter Agreement with DEQ in March 1994 requesting that DEQ review an investigative report prepared for the site by Braun Intertec. There appear to have been a number of small releases of chemicals during off-loading activities at the site. An underground storage tank formerly located near the Locomotive House, and possibly used to store waste oil, was later removed (exact date unknown). Waste oil in the past has been released from the Locomotive House via a drain line.

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: The site is located in an industrial area of north Portland. However, wetlands and a golf course are located a short distance south of the site. Shallow groundwater beneath the site contains low levels of chlorinated solvents, the source of which appears to be off-site. Shallow groundwater is not known to be used for drinking. Access to the site is restricted.

Updated Date: 12/17/2002
Decode for NarcdID: Remedial Action
NARR Comments: (10/9/1996 DJH/VCS) Site owner signed Letter Agreement with DEQ's Voluntary Cleanup Program to review investigation and cleanup documents in March 1994. File review memo requesting additional soil and groundwater sampling at the site was completed in June 1994. DEQ-requested soil and groundwater sampling was completed at the site in August 1995. Based on the results of this work, additional sampling was completed in the transloading area in 1996. Contaminants detected in site soil were below industrial cleanup standards presented in OAR 340-122-045, and no significant impacts to groundwater were observed. DEQ therefore determined on 10/9/96 that no further action was required for the site under an industrial cleanup scenario.

Decode for NarcdID: Health Threats
NARR Comments: Volatile and semi-volatile compounds released to soil at the site, but at concentrations below DEQ soil cleanup levels (OAR 340-122-045) for industrial sites. As long as the site remains in industrial use, soil contamination should pose no significant exposure risks to humans.

NARR ID: 5730348
NARR Code: Contamination
Created By: Not reported
Created Date: 12/17/2002
Updated By: JWAGGY
Updated Date: 07/30/2007
Decode for NarcdID: Contamination
NARR Comments: (5/29/01 MDK/SRP) Waste oil purified and recycled in a process involving screening, filtering, and heating. Oil trucks cleaned on-site generating wastewater with approximately 5% trichloroethylene (TCE). TCE was vaporized, condensed, and reused. Waste TCE, waste oil sludge stored in drums and tanks. Surface runoff may have contributed to a major fish kill in Force Lake in March 1974. Runoff collection system installed since then, consisting of an oil/water separator. Suspect past operating practices and frequent spills as potential problems. A major fire in 1979 destroyed the facility and was reported to have caused oil and other contaminants to pour across the site and into the wetlands west and south of the site, however, records for this are mostly anecdotal. The TCE used to clean out tank trucks has been found in low concentrations in surface water at the southwest (lowest) end of the site, and has entered the environment. Comprehensive sampling in 1990 showed high levels of oil in site soils and low levels of chlorinated VOCs in deep groundwater (100 ft. depth), although these same VOCs appear to be widespread in groundwater in the immediate site vicinity. Off-site sampling in 1994

HARBOR OIL INC. (Continued) **1000302670**

showed significant oil contamination in shallow wetland soils, and this contamination is likely to have originated from past releases at the site. Sampling by EPA's contractor in 2000 on behalf of EPA Region 10 has confirmed the presence and extent of contamination originating from past site operations. (12/27/06 MDK/CU&ER) Site added to NPL in 2001. Efforts by EPA to negotiate a cleanup order is on-going (2001 - 2006).

NARR Comments: (1/27/10 MDK/CU&ER) Site investigation activities were conducted in 2007 and 2008. Draft HHRA and ERA reports were submitted to EPA and then provided to DEQ and stakeholders. Draft Remedial Investigation Report submitted. DEQ provided comments on the HHRA and ERA in November 2009, and then comments on the VG responses to the consolidated EPA comments on January 14, 2010. Risk Assessment have been revised in accordance with US EPA comments, and US EPA has responded to DEQ, Portland BES, and other stakeholder comments. Draft risk assessments are expected to be finalized in accordance with US EPA comments early 2012 and proposed plan Spring 2012.

NARR Comments: The site is located within 100 feet of Force Lake to the southwest and the Columbia River 1000 feet to the north. A drainage system of buried tiles drains the lake through the adjacent wetland marsh, west and south where it is pumped into the Columbia Slough. The wetlands associated with Force Lake support great blue heron nesting areas, and the City of Portland considers this wetlands area, as well as the lake, to be a sensitive environment. Site is now largely paved and the berm on the western edge of the property leveled off in 2011 dring site modifications

NARR Comments: (5/29/01 MDK/SRP) There is no evidence that historical releases from the Harbor Oil site were followed by any remedial actions, and recent sampling shows that significant hydrocarbon contamination remains on-site and in the wetlands area. The primary issue of concern at this site is the effect from past releases on ecologically sensitive wetlands associated with Force Lake. An RP notice letter was sent in January 2000 requesting committment to perform an RI/FS and pay DEQ oversight. The RP did not commit to RI/FS and payment of oversight, and site was referred to EPA for further site assessment. Field work for the EPA Site Inspection was conducted July 31 - August 4, 2000. A summary report was released November 2000. EPA determined that the site qualified for listing on the NPL. (6/30/03 MDK/C&ER) The draft PA/SI was released on February 2, 2003. October 2001 letter from Gov.

HARBOR OIL INC. (Continued) **1000302670**

Kitzhaber supports proposed NPL listing. (6/5/14 GMW/SAS) EPA proposed the site for the NPL in 2002. The site was listed on the NPL in 2003, and subsequent investigation and risk assessment work has been conducted under EPA oversight. In June 2014, following a notice in the Federal Register and soliciting public comment, EPA delisted Harbor Oil from the NPL.

NARR Comments: [June 2014] EPA declared the property a Superfund (NPL) site in 2003 at the request of DEQ, which wanted EPA to use Superfund law to bring responsible parties to the table. Harbor Oil ceased operating in 1999. In 2012, EPA s project manager for the site indicated that EPA believed the property posed no unacceptable risk to people or wildlife, despite its Superfund designation.

 On June 5, 2014, EPA removed Harbor Oil from the NPL.

Hazardous Waste Summary:

Waste Code: D007
Waste Description: Chromium

Waste Code: D008
Waste Description: Lead

Waste Code: D018
Waste Description: Benzene

Waste Code: D039
Waste Description: Tetrachloroethylene

Waste Code: D040
Waste Description: Trichlorethylene

Waste Code: F001
Waste Description: The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichlorethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F002
Waste Description: The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane,

HARBOR OIL INC. (Continued) **1000302670**

Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: K001
Waste Description: Bottom Sediment Sludge From The Treatment Of Wastewaters From Wood Preserving Processes That Use Creosote And/Or Pentachlorophenol.

Waste Code: K049
Waste Description: Slop Oil Emulsion Solids From The Petroleum Refining Industry.

Waste Code: K051
Waste Description: Api Separator Sludge From The Petroleum Refining Industry.

Waste Code: K052
Waste Description: Tank Bottoms (Leaded) From The Petroleum Refining Industry.

Waste Code: NONE
Waste Description: Not Defined

Waste Code: P030
Waste Description: Cyanides (Soluble Cyanide Salts), Not Otherwise Specified

Waste Code: U019
Waste Description: Benzene (I,T)

Waste Code: U051
Waste Description: Creosote

Waste Code: U061
aste Description: Benzene, 1,1'-(2,2,2-Trichloroethylidene)Bis[4-Chloro- (Or) Ddt

Waste Code: U112

HARBOR OIL INC. (Continued) **1000302670**

Waste Description: Acetic Acid, Ethyl Ester (I) (Or) Ethyl Acetate (I)

Waste Code: U117
Waste Description: Ethane, 1,1'-Oxybis-(I) (Or) Ethyl Ether (I)

Waste Code: U159
Waste Description: 2-Butanone (I,T) (Or) Methyl Ethyl Ketone (Mek) (I,T)

Waste Code: U226
Waste Description: Ethane, 1,1,1-Trichloro- (Or) Methyl Chloroform

Waste Code: U228
Waste Description: Ethene, Trichloro- (Or) Trichloroethylene

Waste Code: U239
Waste Description: Benzene, Dimethyl- (I,T) (Or) Xylene (I)

Waste Code: U242
Waste Description: Not Defined

Decode for NarcdID: Remedial Action
NARR Comments: [1/6/15 SA/SAM] See ECSI#127 for site history-The following text is from ECSI #127: James River characterized soil and groundwater contamination associated with the three major UST areas across the site, and excavated and aerated soils from leaking USTs in the late 1980s. DEQ's UST Section issued an NFA letter for the gasoline UST area in 1996, but referred all other UST issues to Site Assessment in 1997, since the remaining USTs did not contain motor fuels or waste oils. Site Assessment recommended a remedial investigation (RI) covering the entire facility(including this property), to determine the extent, magnitude, and sources of chlorinated solvents, BTEX, and metals in shallow soil and groundwater.

NARR Comments: 5.2021: They entered program to receive full nfa. DEQ identified one area in need of some additional investigation (flammable liquid and solvent mixing rooms). Also, they need to provide the storm outfalls discharges.-RAH Site investigation completed at former UST solvent area, only. DEQ replying on that report.
