NARR Comments: (10/2/00 MTP/SAS) DEQ SAS received a complaint in November 1998 alleging improper disposal of hazardous waste to the ground surface. It was alleged that during the preceding year the resident at the site operated a car repair business and used gasoline as a solvent. The waste allegedly was discharged in the vicinity of large trees, approximately 35 feet from the property line.

Decode for NarcdID: Contamination
NARR Comments: This site was used for the mixing of rock, cement, and water to form concrete. To supply water for the process, a 6-inch, 60-foot deep production well was constructed on-site by Riedel. According to Riedel, between 3/3 and 10/6/86, vandals entered the property several times and smeared paint around the site, in addition to cutting the well cup and possibly dumping 5 gallons of paint down the well. The company reported finding 5 empty gallon cans of green and orange paint at the site. Therefore, a minimum of 5 gallons of paint may have been dumped down the well. Following this, the well cap was welded back onto the casing by Riedel. Organic and inorganic constituents of the paint may have contaminated soil, groundwater, and surface water. Contamination by the following compounds may have resulted: formaldehyde, epoxies, vinyls, polyurethanes, a variety of hydrocarbons, alcohols, esters, ketones, benzene, perchloroethylene, carbon tetrachloride, mercury aryl compounds, and organic lead compounds. Groundwater may be as shallow as 5 feet bgs. The well was buried under 4 to 5 feet of soil during September 1986.

NARR Comments: Fairview Creek is in close proximity to the site and there are approximately 110 wells within a three-mile radius of the site. Therefore, there is a potential for the contamination of domestic wells near the site. Based on its Preliminary Assessment, Ecology & Environment recommends that the well be uncovered and sampled in order to determine the extent of the contamination at the site. This

ROADWAY - NE GLISAN ST (Continued) **1006854679**

will also provide data for a more accurate risk assessment. There are also 5 municipal drinking water supply wells within 0.5 to 0.75 miles downgradient of the site, and a total of 18 within two miles downgradient. There appears to be a limited number of domestic surface water withdrawls from Fairview Creek.

Updated Date: 12/17/2002
Decode for NarcdID: Remedial Action
NARR Comments: (6/13/89 DS/SAS) EPA completed a PA, including a site visit, of the property and concluded that the well should be uncovered and the sediment/water sampled to determine whether any paint residue or groundwater contamination existed at the location of the suspected source of contamination. DEQ checked with EPA...the proposed sampling has not been done...until sampling occurs, it is not known whether soil or groundwater contamination exists at the point of the alleged release. The on-site well was buried under 4 to 5 feet of soil in September 1986. Since the well has not been maintained, it is further recommended that the well be permanently abandoned according to ORS.

NARR Comments: Contaminants are alleged to have been directly added to the groundwater (down a well). There are 5 municipal drinking water supply wells between 0.5 and 0.75 miles downgradient from the site, and a total of 18 municipal wells within 2 miles downgradient of the site. Fairview Creek is located near the well. There are several domestic water intakes along Fairview Creek within 2 miles downstream of the site. There are about 38 domestic wells within 2 miles of the site, and about 110 within 3 miles.

Updated By: Not reported
Updated Date: 12/17/2002
Decode for NarcdID: Contamination
NARR Comments: (12/14/93 KPD/SAS) Bugmaster is a private pesticide spray company owned and operated by Norm Hinote, and is run from his family's house in Gresham. Beginning in 1983, complaints were received of improper spraying and dumping at the house, mostly from equipment cleaning. In 1985, Hinote moved his equipment to a lot a few blocks away, but complaints of residual contamination (particularly odors) continued. A 1991 state PA found no visual evidence of contamination. A soil sample taken at an adjacent residence, however, found low levels of three pesticides.

Updated Date: 12/31/2020
Decode for NarcdID: Remedial Action
NARR Comments: (12/14/93 KPD/SAS) Although there is no visible evidence of contamination, no samples have been taken from the areas most likely to have been impacted by the alleged activities (i.e. the Hinotes' backyard and the adjacent woods). Site Assessment recommends an expanded PA (XPA), to include sampling for a broad range of pesticides (including insecticides, fungicides, and herbicides). Because groundwater in the area is used for municipal needs, the XPA should be given a medium priority. (8/21/12 RKW/SRS) Phase I and Phase II Environmental Site Assessments were performed in 2011 and 2012, respectively. The Phase II Investigation included 13 borings, placed with push probe or handauger equipment. Soil samples were collected from as shallow as 2 feet below ground surface and as deep as around 10 feet. Selected samples were analyzed for either petroleum or pesticides, arsenic, and lead. Petroleum was not found above detection limits. Low levels of pesticides such as chlordane, methoxychlor, and heptachlor epoxide were found at most of the shallow explorations. All arsenic sample results were below natural background levels for the region. All but one lead result was also below background. One lead sample at 33.9 mg/kg was possibly greater than background but far below risk-based level of 400 mg/kg. One groundwater sample was collected about 10 feet north of the possible former septic tank location. Groundwater was encountered at 16.7 feet below ground surface. The sample was analyzed for petroleum but it was not found. The most significant datagap appears to be concentration of pesticides at the gound surface where they would most likely accumulate. (10/25/12 RKW/SRS) Shallow soil was sampled at 10 hand auger points from 0.5-3.5 feet below ground surface in areas of concern, concentrated at the rear of the property where disposal was reported. Clordane (up to 26 mg/kg) was detected at all points with much higher concentrations near the surface. Anticipating the need for soil removal an acute aquatic toxicity text was run on soil samples and soil was not found to be toxic. This result suggests that soil could be removed to a subtitle D landfill at lower cost. At this point in the project the bank (apparently with a controlling interest in the property) decided to back out of the VCP program. A formal report with the recent data was not submitted but lab data is in the project file. Addition soil and possibly groundwater characterization is necessary to define the full extent of contamination. Soil removal is the presumed remedy for known soil contamination. 12.31.2020: Received report for inv. on subject property owner. They have requested an nfa for property only. Impacts to other properties not addressed. so it is likely we can close with a partial nfa, but need to address neighbors to west, north, and east. (RAH)

NARR Comments: Partial NFA for subject property issues on 6/11/2021. Still need to address surrounding properties, will not be done by Jonah. Most likely DEQ will need to come up with the money. (RAH) Bugmaster was a private pesticide spray company run from a residence in Gresham. Beginning in 1983, complaints were received of improper spraying and dumping at the house, mostly from equipment cleaning. Initial soil sampling in 2012 indicated low concentrations of pesticides such as chlordane were present at various locations on the property. Working with RP that signed VCP agreement. On-property investigtaion only. Other properties are impacted, but DEQ will need to contact previous owner for off-property investigations.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

NY MANIFEST: Facility and Manifest Data

Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

Date of Government Version: 01/01/2019

Elevation:	262 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	14898322 CAMAS, WA
Version Date:	2020

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

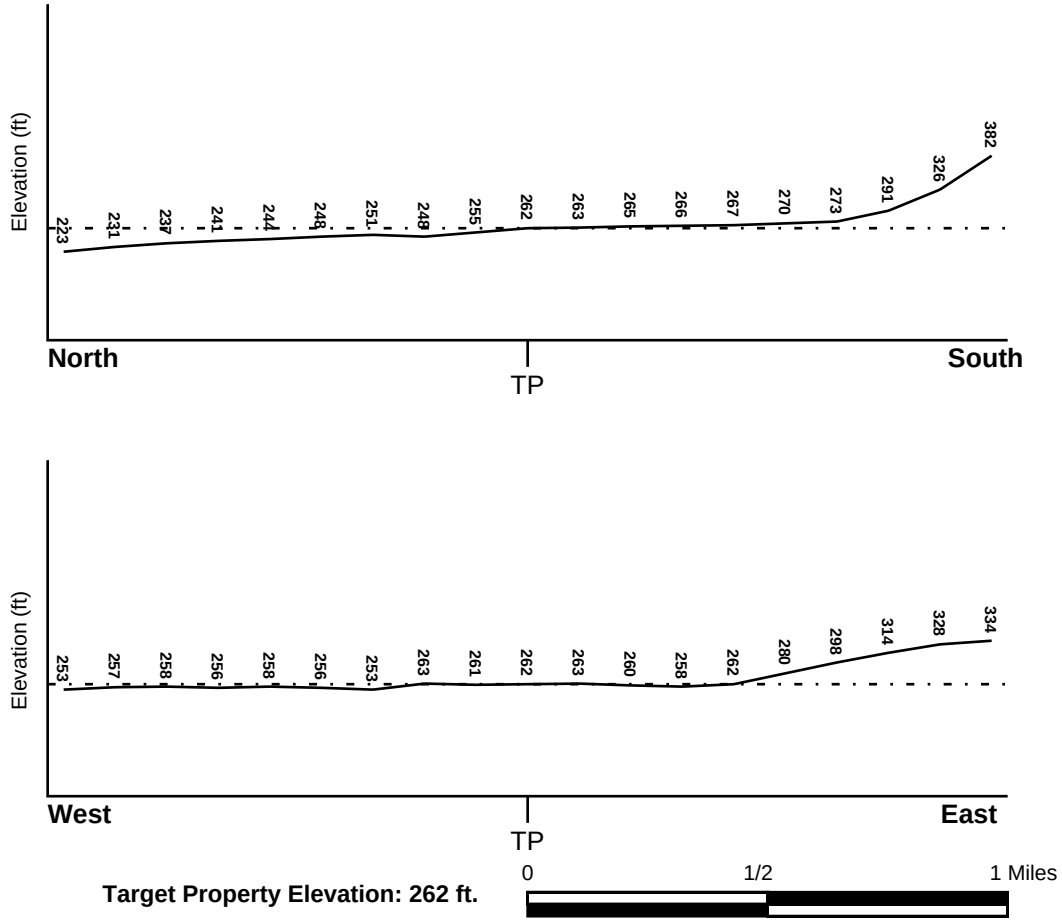
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General North

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
4101830140F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
41051C0218H	FEMA FIRM Flood data
41051C0214H	FEMA FIRM Flood data
41051C0402H	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
CAMAS	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Multnomah

Soil Surface Texture: silt loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	7 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Clean gravels, Poorly Graded Gravel. COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel.	Max: 141 Min: 42	Max: 6.5 Min: 6.1
2	7 inches	38 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Clean gravels, Poorly Graded Gravel. COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel.	Max: 141 Min: 42	Max: 6.5 Min: 6.1

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetlands Inventory Data
Source: Oregon Geospatial Enterprise Office
Telephone: 503-378-2166

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Data
Source: Department of Water Resources
Telephone: 503-986-0843

OTHER STATE DATABASE INFORMATION

Oil and Gas Well Locations
Source: Department of Geology and Mineral Industries
Telephone: 971-673-1540
A listing of oil and gas well locations in the state.

RADON

State Database: OR Radon
Source: Oregon Health Services
Telephone: 503-731-4272
Radon Levels in Orgeon

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Parametrix, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

Parametrix was retained by the Oregon Department of Transportation (ODOT) to perform a Phase I Environmental Site Assessment (ESA) on the developed property located at 2303-2363 NW Eleven Mile Avenue in Gresham, Oregon (Figure 1). A portion of this property, known as IBR-1SE05AD-03100, may be acquired as part of the Interstate Bridge Replacement (IBR) Program. Based on the findings of this investigation, Parametrix reached the following conclusions:

1. Based on the historical review, the subject property was undeveloped land in 1935 and remained undeveloped until at least 1975. In 1935, the surrounding area to the north, east, and west is largely undeveloped and/or farmland. Development in the area began in 1948, initially with a mix of residential properties and commercial/industrial sites. Commercial and industrial development continued until 2000, when most of the vicinity and adjacent properties had been developed. No buildings are located within the partial areas of the property that may be acquired as part of the IBR Program. No recognized environmental conditions (RECs) were identified on the subject property, including the partial area that may be acquired as part of the IBR Program, during the historical review.
2. Based on the age of the building, there is low potential for lead-based paint, polychlorinated biphenyls, and/or asbestos-containing materials to have been used in the building construction. The building on the subject property is not located within the partial areas of the properties that may be acquired as part of the IBR Program.
3. Some evidence of the use and storage of hazardous substances and petroleum products was observed on the subject property. Staining caused by what appears to be small spills and releases was observed during the site reconnaissance. According to the City of Gresham website, the two stormwater catch basins in the parking lot of the subject property do not appear to be connected to municipal stormwater lines, indicating that parking lot stormwater may be directed to drywells. No evidence of distressed vegetation or other indications of environmental concern was identified during the site reconnaissance.
4. The subject property was identified in the ECHO, RCRA, and FINDS environmental regulatory databases. However, no potential RECs were identified in these listings. A review of regulatory information indicated that several nearby sites were identified in the environmental regulatory record databases. However, based on regulatory status and/or distance from the subject property, none of the identified sites appear to present a REC to the subject property, including the partial areas of the properties that may be acquired as part of the IBR Program.

[redacted]

[redacted]

Based upon the conclusions of this investigation of the subject property, Parametrix offers the following recommendation.

1. Conduct a limited Phase II ESA to assess if contamination is present within the area of acquisition due to releases associated with observed staining on the subject property.

1. INTRODUCTION

Parametrix was retained by the Oregon Department of Transportation (ODOT) to perform a Phase I Environmental Site Assessment (ESA) of the subject property located in Multnomah County at 2303-2363 NW Eleven Mile Avenue in Gresham, Oregon. The subject property includes Multnomah County Tax Lot 1S3E05AD -03100 and is identified as IBR-1S3E05AD-03100. The site location is shown on Figure 1, the Site Vicinity Map. The boundary of the subject property and area of proposed acquisition are shown on Figure 2.

The subject property is approximately 1.0 acres in area, bounded to the north, south, and west by industrial zoned properties and to the east by NW Eleven Mile Avenue, followed by an industrial property. According to the City of Gresham, the Gordon L Nyhof Trust is the current owner of the subject property. A portion of this property may be acquired as part of the Interstate Bridge Replacement (IBR) Program and is known as IBR-1SE05AD-03100.

The property identifier, tax lot ID, and street address for the parcel are listed below:

- R303212 1S3E05AD 03100 2303-2363 NW Eleven Mile Avenue

It is our understanding that ODOT is interested in acquiring a portion of the parcel making up the subject property. The proposed acquisition area is shown on Figure 2. The Phase I ESA focused primarily on the partial area of the subject property that may be acquired as part of the IBR Program and assessed the potential for environmental conditions on the acquisition area from the larger property and adjacent or nearby properties.

This Phase I ESA includes a review of available documentation pertaining to the subject property, a site reconnaissance, and a review of pertinent public agency documents. The ESA consists of two distinct tasks: (1) a review of documents and of oral information, and (2) a site examination. Conclusions and recommendations within this report are based solely on observed evidence and data collected during the performance of this assessment.

1.1 Purpose

The Phase I ESA was conducted in general accordance with ASTM Standard E1527-21, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, which defines the generally accepted industry practices and procedures currently applicable at the time and place of this study (ASTM 2021). The Phase I ESA is intended to permit the user to satisfy the requirements to qualify for the bona fide prospective purchaser limitation under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), and as such constitutes “all appropriate inquiries in the previous ownership and uses of the property consistent with good commercial or customary practice” as defined at 42 U.S.C. §9601 (35)(B).

The purpose of this Phase I ESA is to identify recognized environmental conditions (RECs) on or near the subject property. The term *recognized environmental conditions* is defined in ASTM Standard E1527-21 as:

> "…(1) the presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* due to a *release* to the *environment*; (2) the likely presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* due to a *release* or likely *release* to the *environment*; or (3) the presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* under conditions that pose a *material threat* of a future *release* to the *environment*."

In accordance with ASTM Standard E1527-21, some RECs may be further defined as historical recognized environmental conditions (HRECs) or controlled recognized environmental conditions (CRECs).

An HREC is defined as:

> "…*a past release of any hazardous substances* or *petroleum* products that has occurred in connection with the *property* and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the *property* to any required controls."

A CREC is defined as:

> "…a *recognized environmental condition* resulting from a past *release of hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority, with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls."

This Phase I ESA endeavors to identify all RECs, HRECs, and/or CRECs at the subject property.

1.2 Significant Assumptions

This assessment was conducted in accordance with generally accepted industry practices and procedures within the scope of work authorized at the time and place of this study. Parametrix's observations are limited to those areas to which it had access on the subject property.

An interview was not able to be conducted with a property representative to identify any potential environmental conditions during the Phase I ESA process. Unless otherwise stated, no other exceptions to the guidelines presented in ASTM E1527-21 were made during completion of this Phase I ESA.

1.3 Limitations

The findings, conclusions, and recommendations presented in this report are based on site conditions and the best available information known or made available by regulators, other consultants, or other

sources at the time of the investigation. Parametrix conducted a diligent search and investigation in compliance with prevailing standards of the profession; however, certain adverse conditions may exist at the subject property not detected at the time of the investigation.

The services provided under this contract, as described In this report, include professional opinions and judgments based on data collected. These services have been provided according to generally accepted engineering practices. The opinions and conclusions contained in this report are typically based on information obtained from the following:

- Observations and measurements made by Parametrix field staff.
- Contacts and discussions with regulatory agencies and others.
- Review of available hazardous substance or solid waste lists.
- Opinions and judgments of Parametrix based on the information available.

In the professional judgment of Parametrix, the services performed pursuant to the scope of services are an adequate basis to collect data for a preliminary evaluation of the subject property and upon which to draw the conclusions stated in this report.

2. SUBJECT PROPERTY DESCRIPTION

2.1 Location

The subject property is located at 2303-2363 NW Eleven Mile Avenue in Gresham, Oregon. The subject property includes Multnomah County Tax Lot 1S3E05AD-03100 and is identified as IBR-1S3E05AD-03100. The site location is shown on Figure 1, the Site Vicinity Map.

The subject property is approximately 1.0 acre in area, bounded to the north, south, and west by industrial zoned properties and to the east by NW Eleven Mile Avenue, followed by an industrial property. According to the City of Gresham, the Gordon L Nyhof Trust is the current owner. The site location is shown on Figure 1, the Site Vicinity Map. The boundary of the subject property is shown on Figure 2.

2.2 Site and Vicinity Characteristics

The subject property consists of an approximately 1.0-acre parcel with an approximately 19,712-square-foot building that is occupied by four separate businesses. The site includes a common asphalt parking area, a grass strip along the north side, and a vegetated offset from the concrete public sidewalk to the east. The vicinity area is a significantly developed industrial area, including light rail tracks. The subject property is bounded to the north, south, and west by industrial properties and to the east by NW Eleven Mile Avenue, followed by an industrial property (see Figure 2).

2.3 Physical Setting

The subject property is located in the Portland Basin, which marks the northern terminus of the Willamette Lowland in Oregon (DNR 2023). The northern portion of the basin is known for its low topographic relief, with the subject property at an elevation of approximately 262 feet above mean sea level. The Portland Basin is bounded by the Cascade Range to the east and the Coast Range to the west.

The surface geology in this area is identified as coarse-grained Missoula flood deposits, which consist of boulder, cobbly, and sandy gravel (Wells et al. 2020). Surface soils consist of silty sands (see well log MULT 61962, Appendix E; OWRD 2023).

The topography in the vicinity of the subject property is a consistent slope, rising with distance from the Columbia River. The anticipated groundwater gradient is to the north toward the Columbia River. A static groundwater level of 17 feet below ground surface was documented on July 18, 2000, in a geotechnical hole at the adjacent property, approximately 700 feet to the south of the subject property.

2.4 Current Use of the Property

The subject property is an approximately 1.0-acre lot used for industrial purposes.

2.5 Descriptions of Improvements on the Subject Property

The subject property consists of an approximately 1.0-acre parcel with an approximately 19,712-square-foot building that is occupied by four tenants with a common asphalt parking area. Power, water, and sewer are supplied to the buildings by local utilities and municipalities.

No buildings or other significant structures are located on the partial areas of the properties that may be acquired as part of the IBR Program.

2.6 Environmental Liens

An environmental lien is defined by ASTM as a charge, security, or encumbrance upon title to a property to secure the payment of a cost, damage, obligation, or duty arising out of response actions, cleanup, or other remediation of hazardous substances or petroleum products. No evidence of environmental liens against the subject property was identified during the course of this Phase I ESA.

3. RECORDS REVIEW

The purpose of the records review task was to gather environmental data on the subject property prior to the site examination. The information review consisted of two subtasks: a review of various lists and files published by federal and State of Oregon agencies; and a compilation of historical uses of the site and site vicinity, to determine if past operations pose an environmental risk to the subject property. Information for agency file review is based, in part, on a report provided by Environmental Data Resources (EDR). The EDR report is included in Appendix A.

The EDR report is a summary of state and federal database searches for sites of possible environmental concern (EDR 2023a). The information review enabled Parametrix personnel to characterize the types of activities performed at the site, identify data gaps prior to the site examination, and facilitate recognition of discrepancies between reported and observed data. Data gaps identified during the document review were addressed by interviewing knowledgeable personnel, observations during the site examination, or by additional detailed investigation.

It should be noted that this information is reported as Parametrix received it from EDR, which in turn reports information as it is provided in various government databases. It is not possible for either Parametrix or EDR to verify the accuracy or completeness of information contained in these databases. However, the use of and reliance on this information is a generally accepted practice in the conduct of environmental due diligence. The following sections present information from the document review.

3.1 Standard Environmental Record Sources

The following section summarizes information collected from records maintained by the U.S. Environmental Protection Agency (EPA) and the Oregon Department of Environmental Quality (DEQ). The information includes details on sites identified in regulatory databases within recommended ASTM search distances. A complete listing of the databases reviewed is included in the EDR Radius Map™ Report (Appendix A).

3.1.1 Review of Oregon Department of Environmental Quality Databases

The following sections summarize the most relevant information obtained from the EDR Radius Map™ Report regarding sites identified within the ASTM E1527-21 search radii from the following databases. Additional information regarding these sites was reviewed on the DEQ Environmental Cleanup Site Information Database website (DEQ n.d.a.) and the DEQ LUST Cleanup Site Database website (DEQ n.d.b.) to supplement data gaps in the EDR report. A complete listing of the databases reviewed is included in the EDR report. Relevant database listings from DEQ include:

- DEQ Underground Storage Tank (UST) List
- DEQ Leaking Underground Storage Tank (LUST) List

- DEQ Environmental Cleanup Site Information (ECSI) List
- DEQ Confirmed Release (CRL) List
- DEQ Brownfields List
- DEQ Engineering or Institutional Controls
- DEQ Solid Waste Facilities (SWF/LF) List
- DEQ Spill Data List

3.1.1.1 DEQ Underground Storage Tank List

The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data was obtained from the DEQ UST List.

Information contained in the EDR report indicates that the subject property is not included as a UST site. Six UST sites are listed within 0.25 miles of the subject property:

- The Columbia Fence site (2410 NW Burnside Ct.) is located approximately 0.1 miles northeast of the subject property. According to DEQ records, a gasoline UST was removed from the subject property. The date for the UST removal was not proved. The site is not included on the DEQ LUST list.
- The Priest Petroleum site (2406 NW Eleven Mile Av.) is located approximately 100 feet northeast of the subject property. According to DEQ records, two gasoline USTs and a diesel UST were removed from the subject site. A release was reported in 1991. A cleanup was conducted, and a No Further Action (NFA) determination letter was issued by DEQ on October 9, 1996. No groundwater was observed in the remedial excavation.
- The TriMet site (2222 NW Eleven Mile Av.) is located approximately 0.1 miles northeast of the subject property. According to DEQ records, two used oil USTs, one gasoline UST and one diesel UST were decommissioned. A release was reported in 1994. A cleanup was conducted, and an NFA determination letter was issued by DEQ on November 3, 1994. No groundwater was observed in the remedial excavation.
- The AAMCO site (2415 NW Eleven Mile Rd.) is located approximately 100 feet north of the subject property. According to DEQ records, one waste-oil UST was removed. A release was reported in 1993. A cleanup was conducted, and an NFA determination letter was issued by DEQ on November 5, 1997. No groundwater was observed in the remedial excavation.
- The R C Long Shake Co. site (2303 NW Birdsdale Av.) is located approximately 0.2 miles east of the subject property. According to DEQ records, two USTs were removed. The site is not included on the DEQ LUST list.
- The Gresham Sanitary Service site (2131 NW Birdsdale Av.) is located approximately 0.2 miles southeast of the subject property. According to DEQ records, two USTs were removed. The site is not included on the DEQ LUST list.

Unless otherwise noted, the presence of a UST on and/or near a site does not, in itself, constitute a REC. Where available, other information was reviewed regarding the presence of a UST such as the age of the facility, proximity to the subject property, and known releases or spills. UST sites that have had known releases are discussed in Section 3.1.1.2 below.

3.1.1.2 DEQ Leaking Underground Storage Tank List

Leaking Underground Storage Tank (LUST) Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data was obtained from the DEQ LUST Database List.

Information contained in the EDR report indicates that the subject property is not listed as a LUST site.

Eleven LUST sites were identified within 0.5 miles of the subject property. Three LUST sites located in near proximity to the subject property (within 0.125 miles) are discussed below:

- The Priest Petroleum site (2406 NW Eleven Mile Av.) is located approximately 100 feet northeast of the subject property. According to DEQ records, two gasoline USTs and a diesel UST were removed from the subject site. A release was reported in 1991. Following remediation, DEQ issued an NFA determination letter on October 9, 1996. No groundwater was observed in the remedial excavation.
- The TriMet site (2222 NW Eleven Mile Av.) is located approximately 0.1 miles northeast of the subject property. According to DEQ records, two used oil USTs, one gasoline UST and one diesel UST were decommissioned. A release was reported in 1994. Following remediation, DEQ issued an NFA determination letter on November 3, 1994. No groundwater was observed in the remedial excavation.
- The AAMCO site (2415 NW Eleven Mile Rd.) is located approximately 100 feet north of the subject property. According to DEQ records, one waste-oil UST was removed. A release was reported in 1993. Following remediation, DEQ issued an NFA determination letter on November 5, 1997. No groundwater was observed in the remedial excavation.

All eight of the LUST sites located between 0.125 miles and 0.5 miles from the subject property have received NFA determinations or, in the case of heating oil tanks, closure letters from DEQ.

Based on DEQ information indicating NFA determinations or site closure activities have been completed at all of the above identified LUST sites, none of the LUST sites within 0.5 miles of the subject property appear to represent a REC to the subject property, including the partial area of the property that may be acquired as part of the IBR Program.

3.1.1.3 DEQ Environmental Cleanup Site Information List

The ECSI identifies and tracks known or potentially contaminated sites within Oregon and is the state's equivalent to CERCLIS. The Confirmed Release List (CRL) is a subset of the ECSI and includes sites that have known releases of hazardous substances. The Voluntary Cleanup Program (VCP) database is a list of sites that have been entered into the VCP and are undergoing cleanup.

Information contained in the EDR report indicates that the subject property is not identified on the ECSI, CRL or VCP databases.

Twelve ECSI and VCP sites were identified within 1 mile of the subject property. Of the 12 sites, 2 are located within 0.25 miles of the subject property:

- The MAACO Auto Paint site (2441 NW Eleven Mile Av.) is located approximately 0.1 miles north of the subject property. The site listed in the ECSI database. DEQ records indicate that solvents were alleged to have been dumped on site. In 1992, DEQ collected soil samples and based on the detection of low concentrations of petroleum, volatile organic compounds, and naphthalene in soil, DEQ determined that no further action was recommended. No formal NFA determination letter was issued. This site does not appear to represent a REC to the subject property, including the partial areas of the properties that may be acquired as part of the IBR Program.
- The Obrist & Cunningham site (935 SE 202nd Av.) is located approximately 0.2 miles northeast of the subject property. The site is listed in the ECSI, VCP, AIRS, HSIS, and UIC databases. DEQ records indicate soil samples that were collect from drywells showed the presence of petroleum and lead. Following a cleanup, DEQ issued an NFA determination letter on December 13, 2005. This site does not appear to represent a REC to the subject property, including the partial areas of the properties that may be acquired as part of the IBR Program.

None of the other 10 identified ECSI and VCP sites are located within 0.5 miles of the subject property. The remaining ECSI an VCP sites are located at sufficient distances and/or cleanup activities have been completed so that they do not appear to represent RECs to the subject property, including the partial areas of the properties that may be acquired as part of the IBR Program.

3.1.1.4 DEQ Brownfields List

The Brownfields database lists sites of real property where expansion or redevelopment is complicated by actual or perceived environmental contamination. The subject property is not listed as a DEQ Brownfield. One DEQ Brownfield site was identified within 1 mile of the subject property.

The Lot 5 Vance Landfill site (1541 SE 190th Avenue) is located approximately 0.5 miles southwest of the subject property and is listed in the ECSI, VCP, SPILLS, and Brownfields databases. DEQ records indicate that ending in 1978 or 1979, the site received municipal garbage and yard debris transferred from an adjacent property (Gresham Sand & Gravel). Methane and hydrogen sulfide are the contaminates of concern. DEQ has not issued an NFA for this site. Based on distance and the identified contaminants, this site does not appear to be a REC to the subject property.

3.1.1.5 DEQ Drycleaner List

The drycleaner database is a listing of former or current drycleaners in Oregon. No DEQ drycleaner sites were identified within 0.125 miles of the subject property.

3.1.1.6 Solid Waste Facilities/Landfill

The Solid Waste Facilities/Landfill (SWF/LF) records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data were obtained from DEQ's Solid Waste Facilities List.

The subject property is not listed as a SWF/LF site. One SWF/LF site was identified within 0.5 miles of the subject property.

The Gresham Sanitary Service facility (2131 NW Birdsdale Avenue) is located approximately 0.2 miles southeast of the subject property and is listed on the SWF/LF, AST, HSIS, and UIC databases. DEQ records indicate the facility operates as a garbage transfer station. Garbage and recycling are received and processed for off-site disposal. The facility is not permitted to accept hazardous waste. Based upon not being listed on regulatory cleanup databases, a restriction on acceptance of hazardous waste, the absence of on-site disposal of wastes, and distance, this facility does not appear to be a REC to the subject property.

3.1.1.7 SPILLS Database

The database provides a comprehensive list of reported spills. The subject property is not listed as a SPILLS site.

3.1.1.8 DEQ Engineering/Institutional Controls

DEQ maintains two databases for sites with implemented engineering controls and/or institutional controls. No sites with engineering or institutional controls were identified within 1 mile of the subject property.

3.1.2 Environmental Protection Agency Database Review

The EPA administers several programs designed to protect the environment and monitor the generation, storage, treatment, and disposal of hazardous substances. The following sections summarize the most relevant information obtained from the EDR report regarding sites identified within ASTM E1527-21 search radii from the following databases. A complete listing of the databases reviewed is included in the EDR report.

- National Priorities List (NPL)
- Superfund Enterprise Management System (SEMS) List
- Resource Conservation and Recovery Act (RCRA) Corrective Action Report (CORRACTS) List
- Resource Conservation and Recovery Information System (RCRIS) List
- Emergency Response Notification System (ERNS) List
- U.S. Brownfields List

3.1.2.1 NPL

The National Priorities List (NPL) identifies priority hazardous waste sites for remedial actions under the EPA Superfund program. The EDR report indicates that the subject property is not listed as an NPL site. No NPL sites were identified within 1 mile of the subject property.

3.1.2.2 SEMS List

The EPA publishes a list of sites that may potentially pose a threat to the environment or the health of the general public. This list is known as the SEMS list (formerly the CERCLIS list). Information contained in the EDR report indicates the subject property is not listed as a SEMS site. One SEMS site was identified by EDR in the database search for potential RECs potentially impacting the subject property.

- The Columbia Slough is listed as a SEMS-ARCHIVE and AOCONCERN. The Columbia Slough, located approximately 2 miles north of the subject property, is an ongoing, long term remediation site. Decades of direct discharges and upland pollutant runoff have contaminated Columbia Slough sediments. Based on information in the EDR report, a pond adjacent to Fairview Creek is a potential pollution source of Fairview Creek, and, therefore, the Columbia Slough. The pond beside Fairview Creek is located approximately 0.25 miles northeast from and cross gradient of the subject property. The Columbia Slough is not a confirmed source of contamination to the subject property and the Columbia Slough is greater than 0.5 miles from the proposed area of acquisition. The Columbia Slough issues do not appear to be a REC to the area that may be acquired as part of the IBR Program.

The EPA also publishes the SEMS-NFRAP list, which are SEMS sites that have been designated “no further remedial action planned” (NFRAP) and have been removed from the SEMS list. Information contained in the EDR report indicated that the subject property is not listed as a SEMS-NFRAP site. No SEMS-NFRAP sites were identified within 1 mile of the subject property.

3.1.2.3 CORRACTS Review

The CORRACTS report identifies hazardous waste handlers with corrective action activity. Information contained in the EDR report indicates the subject property is not listed as a CORRACTS site. No CORRACTS sites are listed within 1 mile of the subject property.

3.1.2.4 Resource Conservation and Recovery Information System List

The RCRIS list includes selective information on sites which generate, transport, store, treat, and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Information contained in the EDR report indicates the subject property is listed in the RCRIS list database.

- Seaquel Restoration (2313 NW Eleven Mile Avenue) is listed as a RCRA NonGen/NLR, FINDS, and ECHO site. Seaquel Restoration is no longer an occupant of the subject property. No spills

or releases of hazardous waste have been reported at the subject property and there does not appear to be an RCRA associated REC at the subject property.

One site adjacent to the subject property is included in the RCRIS list:

- The TriMet Ruby Junction Facility (2222 NW Eleven Mile Av.) is located to the southeast across NW Eleven Mile Avenue and is listed in RCRA-VSQG, OR HAZMAT, HAZNET, MANIFEST, NPDES, and UIC databases. DEQ issued the facility a NON for a universal waste violation occurrence on January 17, 2008. There is no additional information about the violation in the records reviewed. On March 13, 2008, the site was listed as having returned to compliance. Based upon the absence of any required cleanup regarding the NON, there is no indication that this violation created a REC at the subject property, including the area proposed for acquisition for the IBR Program.

Twelve additional RCRIS sites are listed within 0.25 miles of the subject property. Based on distance and/or regulatory status, these hazardous waste generators do not represent RECs for the subject property.

The EPA also regulates the management of hazardous waste at Transportation, Storage, and Disposal (TSD) facilities. Information contained in the EDR report indicates the subject property is not listed as a RCRIS-TSD site. No RCRIS-TSD sites were identified within 0.5 miles of the subject property.

3.1.2.5 ERNS List

The ERNS is a national database containing information from spill reports made to federal authorities. Information contained in the EDR report indicates the subject property is not listed as an ERNS site.

3.1.2.6 U.S. Brownfields List

The EPA's U.S. Brownfields list identifies Brownfields properties addressed by Cooperative Agreement Recipients and Brownfields properties addressed by Targeted Brownfields Assessments. The EDR report indicates the subject property is not listed as a U.S. Brownfield site. No U.S. Brownfield sites were identified within 0.5 miles of the subject property.

3.1.3 Other Databases

3.1.3.1 EDR Proprietary Databases

EDR Historical Auto Stations

Historical auto stations are identified on a proprietary database maintained by EDR. Information contained in the EDR report indicates the subject property is not listed as a historical auto station. Information contained in the EDR report indicates that there are two historical auto stations sites listed within 0.125 miles of the subject property. Two of the listed sites, AAMCO and Cusick L G Investment Corp. are the same property and are discussed below as one site).

- The AAMCO/Cusick L G Investment Corp. site (2515 NW Eleven Mile Rd.) is located approximately 300 feet north of the subject property and is listed in the RCRA-VSQG database. The site is not listed on regulatory release or cleanup databases. Therefore, this site does not appear to be a potential REC to the subject property.

EDR Manufactured Gas List

Former manufactured gas plant (coal gas) sites are identified on the Manufactured Gas database. Information contained in the EDR report indicates the subject property is not listed as a manufactured gas plant site and no manufactured gas plants are listed within 1 mile of the subject property.

EDR Historical Cleaners

Historical cleaners are identified on a proprietary database maintained by EDR. Information contained in the EDR report indicates that there are no historical cleaner sites within 0.125 miles of the subject property.

3.1.4 Orphan Site List

Orphan sites are sites for which mapping information is not detailed adequately to plot the location of the site, or for which there is no known responsible party or the responsible party is unwilling or unable to pay for cleanup. The orphan site list and available mapping information were reviewed by Parametrix. Five orphan sites were identified by EDR in the vicinity of the subject property. The five orphan sites identified are located at sufficient distances and/or cleanup activities have been completed so that they do not appear to represent RECs to the subject property.

3.1.5 Vapor Encroachment

ASTM Standard E1527-21 defines vapor migration as “the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface." The recognition of vapor migration as a possible REC may require incorporation of new types of controls and restrictions to address this contamination pathway.

The subject property and adjacent sites were reviewed in an effort to determine if vapor migration has, or has the potential to have, occurred at the site, from adjacent properties. Based on the information reviewed, though one parcel of the subject property has been identified as a LUST site with a confirmed release to the soil, based on the cleanup of the LUST, the location of the release relative to buildings on the subject property, the depth of the release, and the composition of the release, it is unlikely to present a vapor intrusion issue to indoor air.

No properties were identified in the near vicinity that have confirmed releases of volatile contaminants in soil or groundwater that have not been sufficiently addressed or would otherwise present a potential impact to the subject property. Information related to the adjacent properties LUSTs and cleanup sites is discussed in Sections 3.1.1.2 and 3.1.1.3 suggest that there is no current potential for vapor intrusion impacts to the subject property.

3.2 Historical Use Information

The objective of the historical use information review is to develop a history of the previous uses of the subject property and surrounding area that helps to identify the likelihood of past uses having led to RECs in connection with the subject property. Parametrix researched the historical land use, occupancy, and ownership of the subject property and adjacent properties to evaluate historical uses that are known to be associated with RECs. Historical records reviewed include Sanborn Fire Insurance Maps and aerial photographs.

3.2.1 Sanborn Maps™ Fire Insurance Map Review

Parametrix requested Sanborn Fire Insurance maps from EDR in an effort to help identify past land uses. However, according to EDR, the project area is an "unmapped property." A copy of the Certified Sanborn Map Report that confirms the unmapped status is included in Appendix B.

3.2.2 Historical Aerial Photograph Review

Historical aerial photographs of the subject property area were obtained from EDR in the EDR Aerial Photo Decade Package. Aerial photographs for the years 1935, 1948, 1951, 1955, 1960, 1970, 1975, 1981, 1990, 1994, 2000, 2006, 2009, 2012, 2016 and 2020 were examined. Copies of the aerial photographs are included in Appendix C. Observations are listed below:

1935	The subject property appears to be undeveloped and covered by trees. The adjacent property to the west appears to be undeveloped and treed. Adjacent properties to the west, east and south appear be farms with residential buildings. Northwest Burnside Rd. is visible to the north.
1948–1960	The subject property and adjacent properties appear similar to the previous photograph. Larger buildings, probable commercial or warehouse use, are visible to the north along Burnside Street.
1970	The subject and adjacent properties to the north, east, and west appear similar to the previous photograph. The adjacent property to the west has been cleared of trees and may be an aggregate mine.
1975	The subject and adjacent properties to the south, west, and east appear similar to the previous photograph. Large commercial/industrial size buildings are visible on the adjacent property to the north. Commercial/industrial development is visible in the vicinity to the north.
1981	The subject property has been developed. The current building and parking lot are visible. The adjacent properties appear to be in similar use.
1990	The subject property appears to be similar to the previous aerial photograph. The property to the south remains farmland. Trees are visible on the property to the west. The adjacent properties to the north and east are developed for commercial or industrial use, including the Ruby Junction Operations Facility on the adjacent

	property to the southeast. Commercial and industrial development is denser on vicinity properties.
1994	The subject and adjacent properties appear similar to the previous aerial photograph. Note: the photograph is low resolution, impairing the assessment of land use.
2000	The subject, adjacent properties to the north and east appear similar to the previous aerial photograph. The adjacent property to the west has been cleared of trees, a couple of visible objects are visible on site. A building is visible on the property to the south.
2006	The subject property appears similar to the previous aerial photograph. Buildings and vehicles are visible on the adjacent property to the west.
2009	The subject, adjacent, and vicinity properties appear similar to the previous aerial photograph, except the property to the west which appears to have a pile of material on the area southwest of the subject property, indicating the property may be in use for aggregate materials.
2012-2020	The subject, adjacent, and vicinity properties appear similar to the previous aerial photograph, except the property to the west where the apparent pile of material has been enlarged and extends to the area directly west of the subject property.

Based on the historical review, the subject property was undeveloped land in 1935 and remained undeveloped until at least 1981, when the current commercial building is visible on the subject property. (Note: According to Sanborn Maps, the subject property is “unmapped property.”) In 1935, the surrounding area to the north, east and west are largely undeveloped and/or farmland. Beginning in 1948, development in the area began, initially with some residential properties and some commercial sites. Commercial and industrial development continued until 2000, when most of the vicinity and adjacent properties had been developed. No buildings are located within the partial areas of the property that may be acquired as part of the IBR Program. No RECs were identified on the subject property, including the partial area of the property that may be acquired as part of the IBR Program, during the historical review.

3.2.3 Local Agency Records

Information from local agencies was reviewed for environmental significance as described in the following sections.

3.2.3.1 City of Gresham

A review of permits for environmental significance (i.e., septic tank, stormwater, dry wells, and/or USTs or aboveground storage tanks [ASTs]) was completed. No permits of environmental significance were identified.

3.2.3.2 Multnomah County

Based on information from the Multnomah County Tax Assessor's Office, the subject property consists of the following tax lot: 1S3E05AD-03100

3.3 Additional Environmental Information

The following sections provide a summary of additional environmental information obtained for the site.

3.3.1 Asbestos

The manufacture of most asbestos-containing materials (ACM) was banned by the EPA by 1979. Prior to this, asbestos was a common constituent of numerous building materials, including floor and ceiling tiles, caulking, pipe insulation, roofing materials, and exterior siding.

Based on the age of the building (constructed before 1981), there is low potential for ACM to have been used in the construction of the building. However, no buildings are located within the partial area of the subject property that may be acquired as part of the IBR Program.

3.3.2 Lead-Based Paint

Before 1977, paint commonly contained lead, which is considered to cause human health problems if ingested and/or inhaled. Based on the age of the building (constructed prior to 1981), there is low potential for lead-based paint (LBP) to have been used in the construction of the building. However, no buildings are located within the partial areas of the subject property that may be acquired as part of the IBR Program.

3.3.3 Polychlorinated Biphenyls

Polychlorinated biphenyls (PCBs) were commercially manufactured from 1929 to 1979. Transformers can potentially contain PCBs. No transformers were observed on or immediately adjacent to the subject property. Based on the age of the primary building (constructed prior to 1981), there is some potential for PCBs to have been used in the construction of the building (primarily used in lighting and electrical equipment). However, no buildings are located within the partial areas of the subject property that may be acquired as part of the IBR Program.

3.3.4 Radon

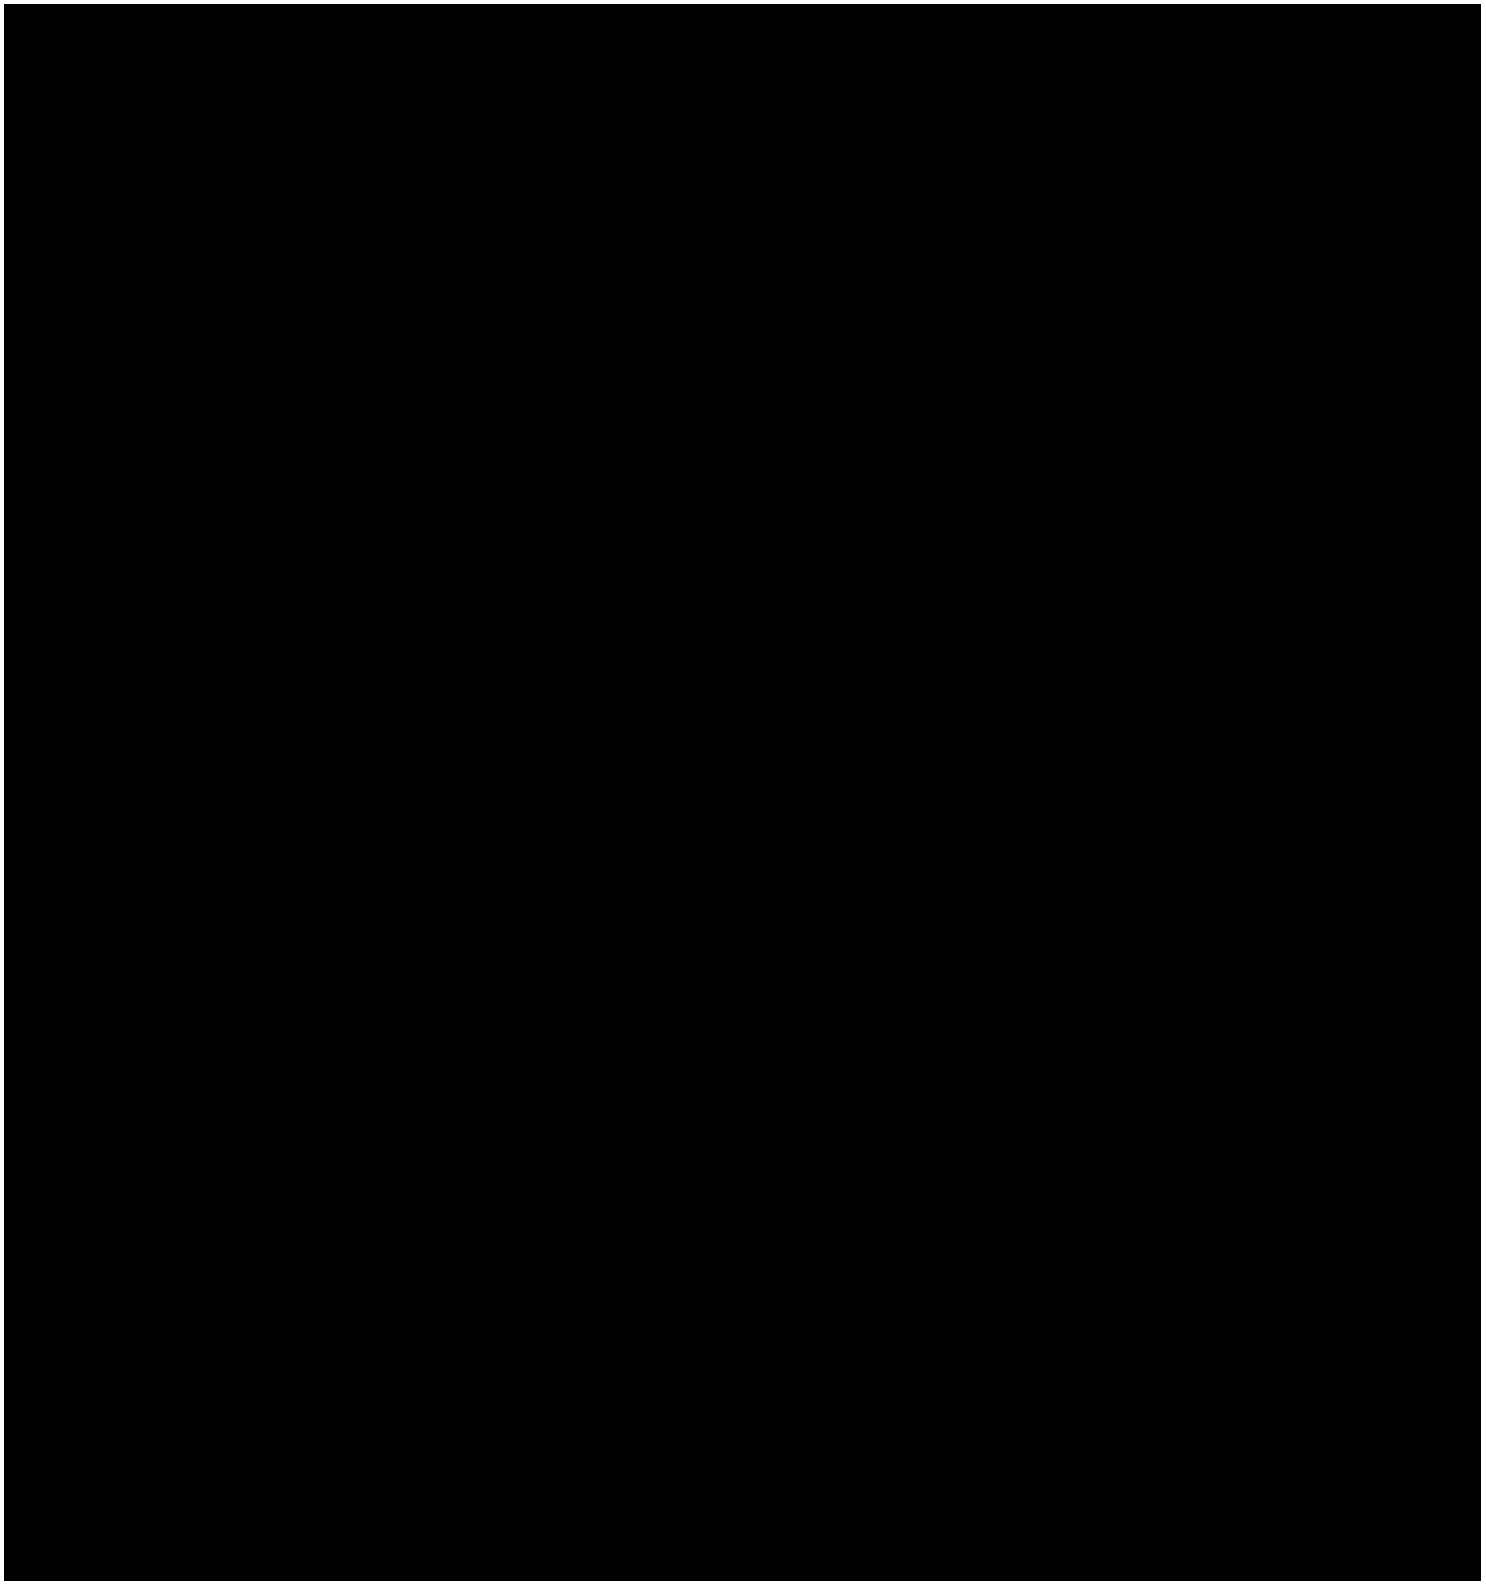
Radon is a naturally occurring radioactive gas formed by the decay of uranium in some rocks and soil. The adverse health effects associated with radon gas depends upon various factors, such as the concentration of the gas, and exposure duration. The potential concentration of radon gas within a building depends on subsurface soil conditions, the integrity of the building's foundation, the existence of a basement or crawl space (primary areas of concern), and the building's ventilation.

Multnomah County ZIP code 97030 is located in the Federal EPA Radon Zone 2. The Zone 2 indoor average radon level is greater than 2 picocuries per liter (pCi/L) but less than 4 pCi/L. Based on this limited information, radon likely does not represent an environmental concern at the property.

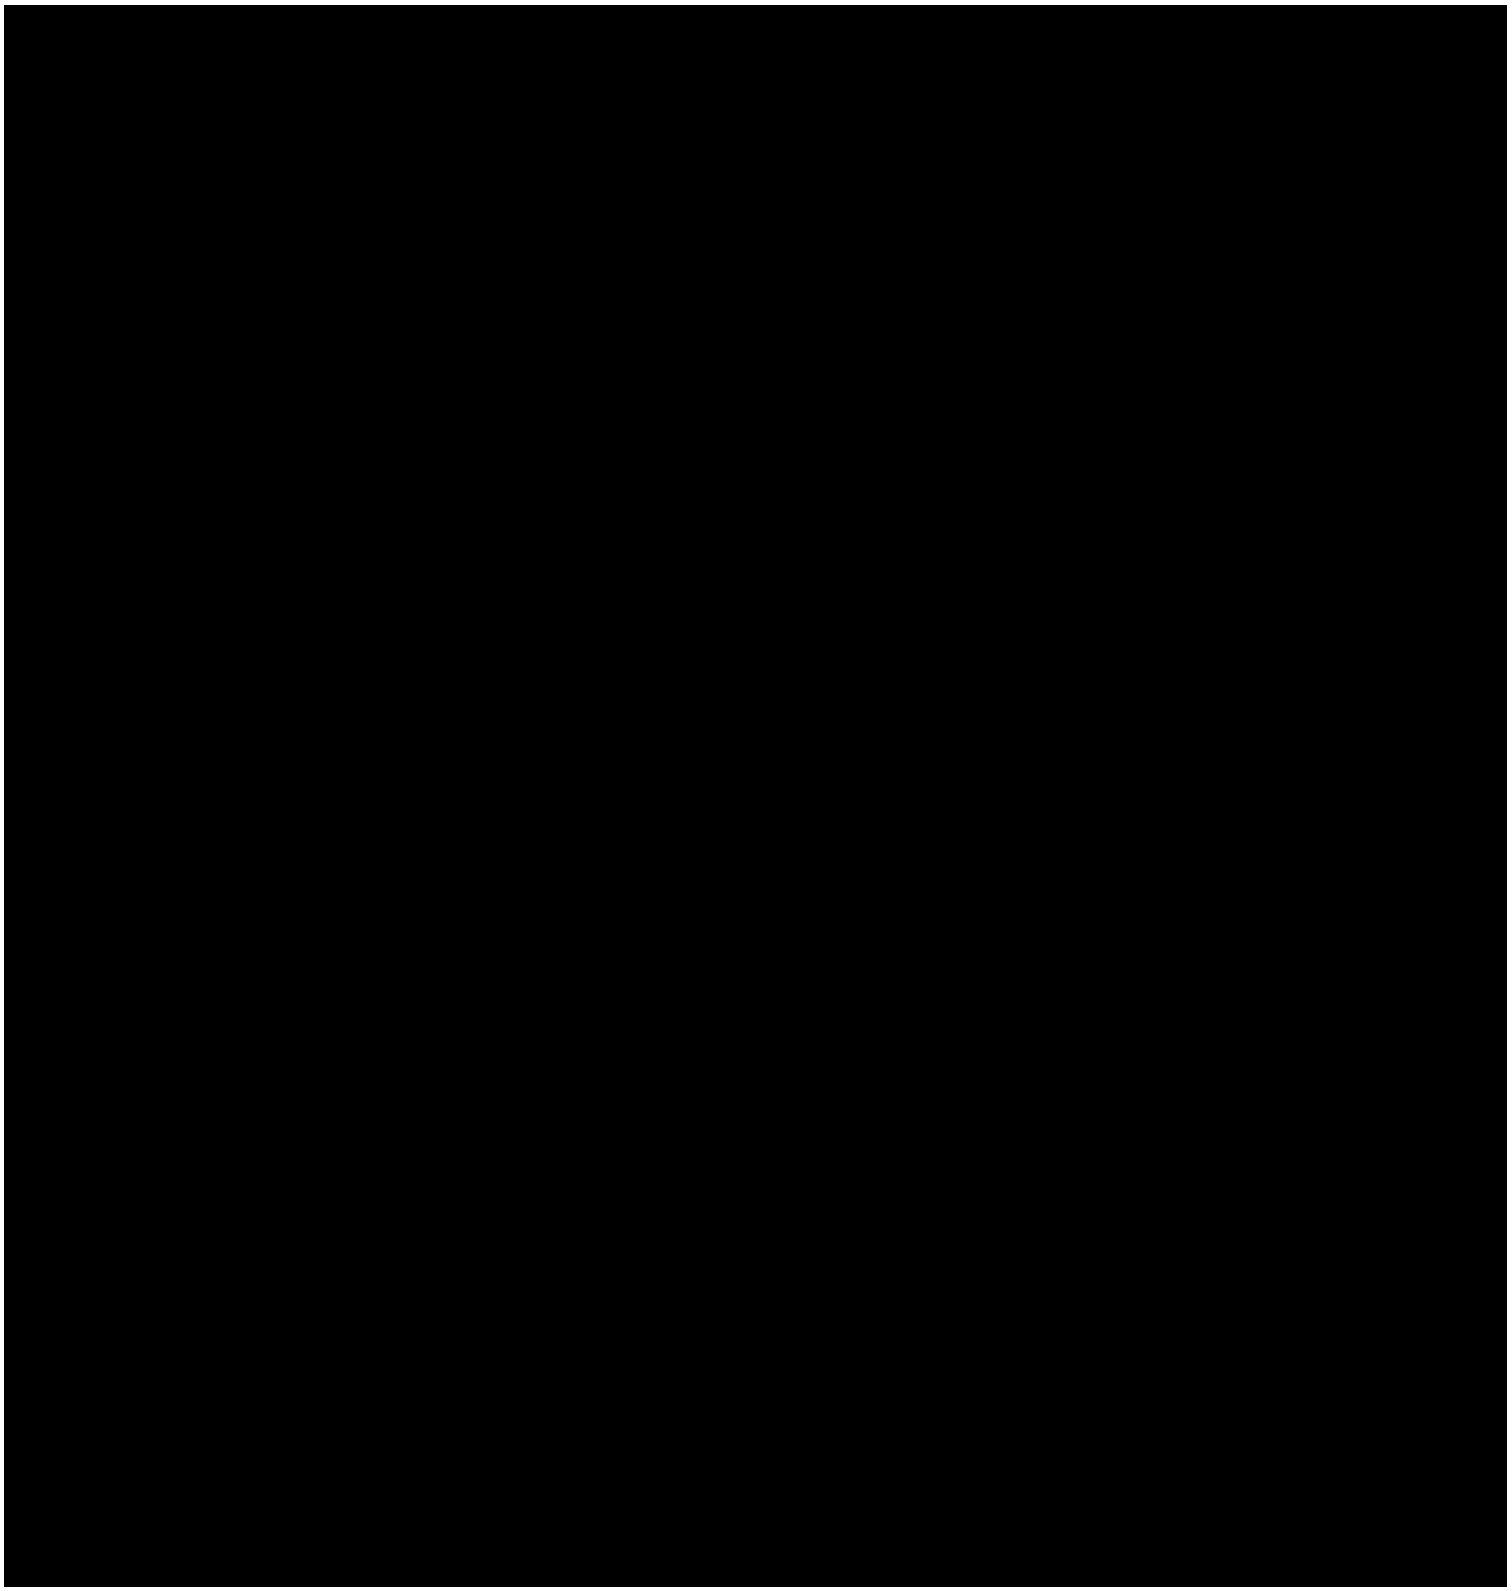
4. FILE REVIEW

In accordance with ASTM Standard E1527-21, inquiries and review of previous investigations for the subject property, and a review of regulatory files for the subject property or adjacent properties may be conducted to further evaluate environmental conditions on the property or adjacent properties, and to fill in data gaps where applicable. Previous investigations and file reviews are summarized below.

4.1 Previous Investigations



As Based on regulatory information from DEQ, the subject property is not listed on any regulatory databases. No previous investigations of the subject property were identified during the course of this Phase I ESA.



Based on regulatory information from DEQ, the subject property is not listed on any regulatory databases. No previous investigations of the subject property were identified during the course of this Phase I ESA, including the partial areas of the properties that may be acquired as part of the IBR Program.

4.2 Adjacent Properties File Review

Several adjacent and nearby properties were listed on environmental databases, as described in Section 3. Sufficient site-specific information was available through review of the EDR report, as well as online DEQ files, to develop an opinion on the potential for these properties to have affected the subject property. Therefore, a specific file review (physical review at DEQ) was not required, beyond those completed during the course of this Phase I ESA. Specific information on the nature of release, types of contaminants, media impacted, and the potential to have affected the subject property or otherwise caused environmental concern is provided in Section 3.

5. SITE EXAMINATION

6. INTERVIEWS

An interview was not able to be conducted with a property representative to identify any potential environmental conditions and to address information data gaps during the Phase I ESA process. The lack of a property owner or representative interview represents a data gap in accordance with ASTM Standard E1527-21.

7. CONCLUSIONS

Based on the findings of this investigation, Parametrix reached the following conclusions:

1. Based on the historical review, the subject property was undeveloped land in 1935 and remained undeveloped until at least 1975. In 1935, the surrounding area to the north, east, and west is largely undeveloped and/or farmland. Development in the area began in 1948, initially with a mix of residential properties and commercial/industrial sites. Commercial and industrial development continued until 2000, when most of the vicinity and adjacent properties had been developed. No buildings are located within the partial areas of the property that may be acquired as part of the IBR Program. No RECs were identified on the subject property, including the partial area that may be acquired as part of the IBR Program, during the historical review.
2. Based on the age of the building, there is low potential for LBP, PCBs, and/or ACM to have been used in the building construction. The building on the subject property is not located within the partial areas of the properties that may be acquired as part of the IBR Program.
3. Some evidence of the use and storage of hazardous substances and petroleum products was observed on the subject property. Staining caused by what appears to be small spills and releases was observed during the site reconnaissance. According to the City of Gresham website, the two stormwater catch basins in the parking lot of the subject property do not appear to be connected to municipal stormwater lines, indicating that parking lot stormwater may be directed to drywells. No evidence of distressed vegetation or other indications of environmental concern was identified during the site reconnaissance.
4. The subject property was identified in the ECHO, RCRA, and FINDS environmental regulatory databases. However, no potential RECs were identified in these listings. A review of regulatory information indicated that several nearby sites were identified in the environmental regulatory record databases. However, based on regulatory status and/or distance from the subject property, none of the identified sites appear to present a REC to the subject property, including the partial areas of the properties that may be acquired as part of the IBR Program.

[redacted]

8. RECOMMENDATIONS

Based upon the conclusions of this investigation of the subject property, Parametrix offers the following recommendation.

1. Conduct a limited Phase II ESA to assess if contamination is present within the area of acquisition due to releases associated with observed staining on the subject property.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal CERCLA sites with NFRAP

EXECUTIVE SUMMARY

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 06/22/2023 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Lists of Federal RCRA generators

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 03/06/2023 has revealed that there are 5 RCRA-VSQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Lists of state- and tribal hazardous waste facilities

OR ECSI: The Environmental Cleanup Site Information System records information about sites in Oregon that may be of environmental interest. The data come from the Department of Environmental Quality.

A review of the OR ECSI list, as provided by EDR, and dated 03/01/2023 has revealed that there are 12 OR ECSI sites within approximately 1 mile of the target property.

Lists of state and tribal landfills and solid waste disposal facilities

OR SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Department of Environmental Quality's Closure & Regular Solid Waste Active Disposal Permits database.

A review of the OR SWF/LF list, as provided by EDR, and dated 01/13/2023 has revealed that there is 1 OR SWF/LF site within approximately 0.5 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/06/2023 has revealed that there are 8 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 03/30/2023 has revealed that there is 1 PFAS ECHO site within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EXECUTIVE SUMMARY

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 2 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

MAACO AUTO PAINT - GRESHAM (Continued) **S103841472**

Decode for NarcdID: Contamination
NARR Comments: (1/21/92 ALB) The site was picked up from NWR source file review in SAS's 1988 discovery project. Regional personnel responded 6/87 to a complaint of solvent dumping on the site. DEQ collected soil samples from the hole where the disposal was alleged. These samples revealed trace levels of solvent contamination and low levels of diesel/oil contamination and gasoline constituents. Regional staff determined there was no hazardous waste violation. Shortly after the initial complaint response, the business was gutted by a fire. The property was subsequently transferred to new owners and redeveloped. The alley behind MAACO Auto Paint, where the dumping was alleged, was excavated to a depth of approximately one foot and paved over and roofed. DEQ did not sample the area after the excavation. The site is currently occupied by Pro-Met Machining Inc.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste Code:	D001
Waste Description:	Ignitable Waste
Waste Code:	D006
Waste Description:	Cadmium

TRI MET RUBY JUNCTION FACILITY (Continued) **1004770281**

Waste Code: D018
Waste Description: Benzene

Waste Code: D035
Waste Description: Methyl Ethyl Ketone

Waste Code: D039
Waste Description: Tetrachloroethylene

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

GRESHAM SANITARY SERVICE INC (Continued) **1004771372**

program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste Code: D000
Waste Description: Not Defined

Waste Code: D001
Waste Description: Ignitable Waste

Waste Code: F002
Waste Description: The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F004
Waste Description: The Following Spent Nonhalogenated Solvents: Cresols, Cresylic Acid, And Nitrobenzene; And The Still Bottoms From The Recovery Of These Solvents; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Environmental Interest/Information System:
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

NARR Comments: Soil samples from the Old Wash Bay Drywell showed the presence of gasoline, diesel and heavy oil in soils. Soil samples from the parking lot stormwater drywell showed the presence of diesel and heavy oil in soils. Parking lot stormwater drywell analytical results also showed the presence of lead at concentrations that qualified the material as hazardous waste.

NARR Comments: (7/11/05 JMW/SAP) Site entered DEQ's Independent Cleanup Program in July 2005. (10/18/05 MG/ECP) Approximately 45 tons of soil were removed from the old wash bay drywell and disposed of at the Hillsboro Landfill. Approximately 65 tons of soil were removed from the parking lot stormwater drywell and disposed of as hazardous

OBRIST & CUNNINGHAM (Continued) **S103419397**

waste. Soil samples collected following the soil removal showed non-detect for all petroleum hydrocarbons on the walls and the floor of both excavations. The parking lot stormwater drywell further showed non-detect for total lead in all samples, except for one result at 4 mg/kg on the west wall of the excavation. Based on report review, DEQ has determined that the Underground Injection Control (UIC) systems have been decommissioned in accordance with regulation. The <quot>Old Wash Bay Drywell<quot> and the <quot>Parking Lot Stormwater Drywell<quot> have been decommissioned and closed. DEQ has issued a Partial NFA for these two UIC's.

ALEXANDER SERVICES LLC (Continued) **1000439200**

NARR Comments: [10/29/12 SAM/ICP] Contaminants of concern included petroleum compounds, related to the former UST and unknown construction debris fill in the former gravel pit, which may include metals, petroleum, VOCs and methane gas production. Exposure pathways considered relevant to this site were: Subsurface soil dermal contact for construction and excavation workers and subsurface soil leaching to groundwater. Groundwater vapor intrusion, volatilization to outside air, inside air and groundwater in excavation for occupational and construction workers. Methane intrusion above the lower explosive limits. Groundwater is not used on site; the facility and surrounding area is generally supplied by a public drinking water system. Future use of the site is expected to remain light industrial.

Updated Date: 10/30/2012
Decode for NarcdID: Remedial Action
NARR Comments: [10/29/12 SAM/ICP] Two Phase I Environmental Site Assessments were performed on the site in 2005 and 2012. The conclusions from both Phase I documents are similar, noting Recognized Environmental Conditions, including the former 4,000-gallon gas UST, former gravel pit and land filling activities, reported dry wells and a building floor drain near a compressor that may be connected to the dry wells. A Phase II Environmental Site Assessment was performed in August 2012 to provide additional information for the Recognized Environmental Conditions on site. A ground penetrating radar survey was performed to determine locations of onsite dry wells, underground utilities, and the potential buried UST. Subsurface soil, groundwater and soil-gas samples were also collected and analyzed. Subsurface borings indicated the gravel pit was filled with soil, construction debris-including asphalt, and smaller amounts of woody debris. No household or man-made organic items were found in borings in the former gravel pit. Methane was measured with a handheld unit and the report text indicated methane was not observed however, results and supporting documentation was not provided. To ensure correct methods were used DEQ requested additional measurements to support the conclusion that methane is not a concern. Locality of facility was considered the property boundary as groundwater and soil samples at the presumed down gradient side (North) indicate concentrations meet risk-based concentrations or were not detected. Two of the three groundwater samples detected metals, particularly lead (as high as 671ug/L) above risk-based concentrations for occupational ingestion. Groundwater samples with detections above risk-based concentrations were located within the former gravel pit/fill footprint. The expected downgradient boring groundwater concentrations were below detection limits. October 2012- Four additional soil gas measurement points within the former gravel pit were established. Borings were drilled to 5 feet and sealed to ensure no atmospheric gases entered the holes. An initial reading at one boring found methane at 0.3%, which then stabilized down to 0.0% after approximately 5 minutes. All other borings read 0% methane. DEQ Conclusions: An NFA determination is recommended for the Boden/Alexander site based on the following: Soils sampled on-site were protective for occupational and excavation workers. Groundwater is not used on site for any purpose and the

ALEXANDER SERVICES LLC (Continued) **1000439200**

nearest registered residential well is approximately 0.25miles away and cross-gradient from the site. In addition, the area is supplied by a public water system. Soil gas concentrations were below occupational risk-based concentrations. One of four methane samples detected concentrations of methane well below DEQ action levels. The other samples did not detect any methane. The site does not contain significant habitat for plants or animals. DEQ concludes that based on the information presented to date and under the current zoning, the Boden Alexander property is currently protective of public health and the environment and requires no further action under the Oregon Environmental Cleanup Law, ORS 465.200 et seq., unless new or previously undisclosed information becomes available.

NARR Comments: [9/28/12 SAM/ICP] In approximately 1948 much of the south and central portion of the property was utilized as a gravel pit. By the 1950s, the gravel pit appeared to be inactive and backfilling may have been started. The former gravel pit appears to have been completely filled by the 1960s. A portion of the current property building was initially constructed in the 1970s with subsequent additions throughout the 1990s. The site has been recently occupied by BodenAlexander, a custom wood display and manufacturing facility.

Created By: Not reported
Created Date: 12/17/2002
Updated By: KDANA
Updated Date: 04/17/2013
Decode for NarcdID: Contamination
NARR Comments: A landfill was originally present where the Environmental Services building is now located. The landfill began accepting brush and yard debris in the late 1950s, and later accepted garbage until 1967 or 1968. In 1978 or 1979, most of the garbage was moved to the area now known as the Vance Pit (see ECSI #5780). Samples were taken by DEQ staff from the sump area and were analyzed by DEQ's lab for volatile organic compounds, semivolatile compounds, herbicides and total metals. Levels of metals identified in the samples were below DEQ's SOCLEAN levels and appeared to be normal background. Eight organics were identified at low levels. Their association with the landfill is unclear. See the Strategy Recommendation for more information.

NARR Comments: A worker at Gresham Sand & Gravel experienced burning and swelling after handling sediments removed from a sump area in the gravel pit. The sump area is located near and fed by water flowing from the wall of an area of landfill debris known as Vance Pit. A cross-section of the landfill is visible, as gravel pit operations have caused soil from that area to slide. According to a report from the Mine Safety and Health Administration, the worker who experienced the burning and swelling of his hands reported that other workers at the site had complained of headaches and nausea when working around sump material.

Decode for NarcdID: Remedial Action
NARR Comments: DEQ recommended NFA due to the low levels of the contaminants identified. However, the Strategy Recommendation states that the finding of contaminants indicates that there may be a need to address future releases from the landfill and any current or future threats to area groundwater. It was recommended that the area of exposed landfill be covered and erosion in this area prevented.

NARR Comments: (10/30/12 SMF) Monthly monitoring of soil vapors at eight gas probes on the southern half of Tax Lot 300 (T1S/R3E-S05CA) detected the presence of elevated concentrations of methane in the subsurface during August 2011 through September 2012. Methane soil vapor concentrations at Gas Probes P-1, P-2, P-3, P-4, and P-8 consistently exceeded methane's Upper Explosive Limit (UEL), while methane concentrations at Gas Probe P-7 exceeded methane's UEL more than 50 percent of the time. Methane concentrations at Gas Probes P-5 and P-6 were either non-detect or well-below methane's Lower Explosive Limit (LEL). Hydrogen Sulfide was detected at concentrations of Non-Detect to up to 20 ppm in Gas Probes P-1, P-2, P-3, P-4, and P-8 (August 2011 through September 2012). No Hydrogen Sulfide was detected in soil vapors at Gas Probes P-5, P-6, or P-7.

NARR Comments: According to Robert Pearson with the Gresham Department of Environmental Services, the Vance Pit consists of landfill material removed from the original landfill area where the Environmental Services building is now located. The original landfill began accepting brush and yard debris in the late 1950s. It later accepted garbage from individual residents. In 1967 or 1968, the landfill quit receiving garbage. In 1978 or 1979, most of the garbage was removed to the area now known as the Vance Pit, next to the Gresham Sand & Gravel site (see ECSI #1407).

NARR Comments: (4/9/02 MTP/SAS) DEQ received a complaint in June 2000 alleging improper waste management of automotive-related fluids drained from vehicles at the site. The complaint indicated that gasoline and waste oil were improperly stored in drums and other containers without lids, and that pressure washing occurred at the site without containment, allowing washwater to penetrate the ground. It was reported that these practices had occurred at least since 1994. Staff from DEQ's Hazardous Waste Section substantiated these allegations during a 3/20/01 site visit. Batteries were observed to be stored on the ground surface, drums were filled with petroleum waste and some were filled with rainwater. Gasoline was stored in open 5-gallon buckets beneath a tarp. A solvent parts washer and drum labeled <quot>used solvent<quot> were observed. Numerous oil-stained soil areas were observed throughout the yard. Partially buried solid waste was observed near the northwest corner of the property, and could be related to the adjacent landfill. An area behind the main shop, where drums were stored and steam cleaning was conducted, appeared to be the most impacted area at the site. Steam cleaning was conducted over bare soil and the wastewater was allowed to infiltrate. It is unclear if runoff from the steam clean area drains to a dry well, reportedly located on the other side of the building near the southeast corner of the property. A catch basin was observed near the southwest area of the site, and appeared to show staining. It is not known if the catch basin is connected to the dry well. As a result of the inspection, DEQ issued a Notice of Noncompliance (NON) for three violations, which included failure to make a hazardous waste determination, failure to properly containerize waste, and discharging vehicle parts wash water to shallow soil and groundwater. DEQ requested documentation that all wastes were properly managed and containerized, and that Bob's Ford cease pressure washing until the appropriate wash water management and/or permitting was obtained. Reportedly, limited car washing (<8 cars/month) is occurring at the site but does not appear to require a discharge permit. Bob's Ford has indicated that parts washing will be discontinued until a berm to contain the water is constructed. Following the inspection, disposal documentation received by DEQ indicated that 534 gallons of used oil (flashpoint <200 degrees Fahrenheit) and 133 batteries were removed from the site. It does not appear that any waste characterization sampling was conducted, and it is unclear how used solvent is managed. Based on the potential contamination, the site was referred to DEQ's Site Assessment Program on September 26, 2001.

Updated Date: 12/17/2002
Decode for NarcdID: Pathways & Other Hazards
NARR Comments: Possibly overland runoff of impacted surface water to the dry well and possibly shallow groundwater; direct infiltration into relatively permeable site soil. Both surface soil and subsurface soil are likely impacted at the pressure-washing area. Relatively high use of groundwater in the area. The nearest domestic well is 3,000+ feet from the site. Surface water runoff does not appear to be a pathway of concern.

Decode for NarcdID: Remedial Action
NARR Comments: Site referred from the Hazardous Waste Program: RCRA non-notifier; improperly managed hazardous wastes in containers; discharging parts washer to shallow soils and groundwater. (4/9/02 MTP/SAS) DEQ has

BOBS USED FORD CARS & TRUCKS (Continued) **1004771915**

reviewed site information and classified the site as a medium priority for further investigation, including: 1) submission of information to DEQ regarding solvent use, management, and disposal; 2) inspection and sampling of the dry well system to determine the nature of previous discharges into it, and construction details of the dry well and associated drainage system; and 3) sampling to determine the nature and extent of soil contamination, particularly in the former pressure-washing area, and, depending on findings of the dry well evaluation, in the vicinity of the dry well. Based on site observations and supporting photodocumentation, the site should be proposed for listing on the Confirmed Release List (CRL). There is insufficient information to propose the site for listing on the Inventory of Hazardous Substance Sites.

Updated Date: 12/17/2002
Decode for NarcdID: Health Threats
NARR Comments: Direct exposure of site visitors or workers to contaminated surface and subsurface soil possible. Permeable site soil and/or the dry well on-site may provide a pathway to groundwater. Groundwater appears to be 50 feet or more deep at the site. The nearest domestic well appears to be about 3,000 feet or more from the site. The Columbia South Shore Wellfield is about 2 miles from the site in a presumed downgradient direction. Ponds associated with Morse Bros. sand and gravel operation are located downgradient of the site and appear to intersect the uppermost groundwater aquifer in the vicinity of the site.

NARR Comments: (2/27/92 HMS) The property had been the site of an engine-rebuilding business for more than 35 years. Recently, the property owner evicted Rockwood Machine Shop, and current site operations are unknown. A spill of unidentified material, subsequently shown to contain solvents, occurred 8/18/90. Response personnel found two unlabeled 30-gal. drums lying on their sides with their contents spread across asphalt paving. Immediate and subsequent cleanup activities involved removal of spilled liquids and affected asphalt paving, and the excavation of a large volume of soil. Soil samples collected after excavation indicated that no substantial contamination remained from the spill. There may have been other releases in the course of the shop's 35+ years of operation, as evidenced by stained areas on the concrete floor inside the shop building. In addition, the site was not connected to sewer service until 1990, indicating that there may be a drywell or septic system on-site.

Decode for NarcdID: General Site Description
NARR Comments: The 1.4-acre commercial property consists of one paved tax lot with one, 11,497 ft2, two-story building located on the southeast corner of the property. The property is bordered by East Burnside Street and MAX light rail to the south, commercial property and residential apartments to the east, residential apartments to the north, and a commercial business to the west. The property is zoned for mixed-use that includes commercial and high-density urban residential. The site is covered in hardscape and therefore no ecological habitat is present on the site. Until the 1950s, historic site use was agricultural that included an outbuilding with hay, grain, and row crops. In 1954, the building that is currently on the property was constructed, and a gravel parking area was installed. Hall Building Supply and the Rockwood Machine Shop began site operations in the mid 1950s. A record and satellite television shop operated on the site for a short time in the 1970s. In 1990, the property was connected to the public sanitary sewer system and in 1994, the property was converted into a restaurant with an asphalt paved parking area. Current use of the site is a multi-tenant Community Center.

NARR Comments: In August of 1990, DEQ was notified of a spill from two, unmarked 30-gallon drums containing carburetor cleaner, or a similar solvent, that was assumed to be associated with the Rockwood Machine Shop. The spill was caused by trespassers, and occurred over a 35-foot by 70-foot asphalt covered area on the northeast side of the building. Between 1990 and 1991, DEQ coordinated the cleanup with the property owners, Pacific Wholesalers, Inc. In total, 27 yd3 of asphalt and 38 yd3 of soil were removed and confirmation samples were collected at the limits of the excavation. Soil removal was completed to at least 4 inches below the asphalt cover, however the final depth of excavation was not documented. Samples collected at the limits of the excavation were all non-detect for volatile organic compounds (VOCs). Groundwater was not encountered during the removal.

Soil removal was completed to at least 4 inches below the asphalt cover, however the final depth of excavation was not documented. Samples collected at the limits of the excavation, were all non-detect for volatile organic compounds (VOCs). Groundwater was not encountered during the removal. In July 1992, the underground HOT was decommissioned by a licensed underground storage tank supervisor. The tank was removed and disposed of along with 16 yd3 of visually-stained soil to a depth of 6.25 feet below the ground surface. Confirmation samples collected from the extent of the excavation were non-detect for total petroleum hydrocarbons (TPH). The site owner at the time did not enter into a cost recovery agreement with DEQ for review. Therefore, DEQ did not evaluate the HOT for a no further action determination.

NARR Comments: (3/13/91 MJM) Site is bounded to the north and east by apartments. It is a commercial site that's accessible to the public. The northern and eastern boundaries are fenced. The soil type is flood gravels; topography is flat. (This information is based on a 12/3/90 site visit.). (6/1/16 RWA) Applicable potential pathways of exposure include: A) Direct contact with contaminated soil to current and future occupational site workers and future construciton and excavation workers.; B) Inhalation of impacted indoor air from VOCs in soil and soil vapor to: current and future occupational site workers; C) Inhalation of impacted outdoor air from VOCs in soil and soil vapor to current and future occupational site workers. Groundwater was not encountered during the heating oil tank decommissioning and removal in 1992, or the spill response excavation in 1990-1991. Drinking water is supplied to the site by the Rockwood Public Utility District. No surface water bodies are on or near the site.

NARR Comments: [June 2016] In August 1990, DEQ was notified of a spill from two, unmarked 30-gallon drums containing carburetor cleaner, or a similar solvent, that was assumed to be associated with the Rockwood Machine Shop. The spill was caused by trespassers that occurred over a 35-foot by 70-foot asphalt-covered area on the northeast side of the building. Between 1990 and 1991, DEQ coordinated the cleanup with the property owners that involved the removal and disposal of 27 yd3 of asphalt and 38 yd3 of soil. Confirmation samples were collected at the limits of the excavation and were all non-detect for volatile organic compounds (VOCs).

 In 1992, the on-site heating oil tank was decommisioned and removed from the site. Confirmation samples collected at the extent of the excavation were non-detect for petroleum hydrocarbons.

 Additional investigation was performed in 2016 to address remaining data gaps. A geophysical survey was performed to locate the former septic system, which was used until 1990. No anomolies or the former septic system were found. Soil vapor samples were collected from beneath the existing building and throughout the property. No VOCs were detected in soil vapor samples above applicable risk-based concentrations.

 DEQ issued a no further action (NFA) determination for the site in June 2016. Conditions of the NFA include notification to DEQ prior to excavation and offsite disposal of soil or construction of additional habitable structures on the property.

Environmental Interest/Information System:

OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

NARR Comments: Fifteen drywells were investigated, their contents removed, and decommissioned. The former drycleaning facility was demolished and 250 cubic yards of PCE-impacted soil beneath the building removed. After soil removal activities, confirmation sampling did not detect contaminants in soil above risk-screening criteria for human health receptors by direct contact or vapor intrusion scenarios. The site does not pose unacceptable risk to human health and the environment from soil. The site has been redeveloped and the location of the new East Multnomah County Courthouse. Low levels of VOCs were initially detected in groundwater in the vicinity of the former dry cleaner facility. A groundwater extraction test well (TW-1) was installed in this area for the courthouse heating-cooling system and to contain any potential contamination present prior to full delineation of the extent. Extracted groundwater was sampled frequently for over a year. Initial low level detections of VOCs in groundwater appear to be related to and localized adjacent to former drywells. A groundwater beneficial use determination did not identify any nearby offsite wells used for drinking water purposes. Groundwater is not consumed onsite and unlikely for the foreseeable future given the area is supplied by a municipal (Rockwood) water supply. There is no unacceptable risk at the site under current conditions.

NARR Comments: DEQ has determined that remedial action to address environmental contamination at the East Multnomah County Courthouse site is complete, and no further action is required. This determination is based on DEQ regulations and the following facts as we now understand them, which are described in more detail in DEQ s Staff Memorandum in support of a No Further Action determination (July 31, 2015). In 2011, Multnomah County entered into a voluntary agreement with the DEQ Cleanup Program for oversight to investigate volatile organic compounds (VOCs) in soil and groundwater attributed to drywells associated with the former dry cleaning facility. Site work included demolishing the dry cleaning building and removal of PCE-impacted soils beneath the building, investigation and removal of 15 drywells, and further delineation and testing of groundwater after initial sampling detected low levels of VOCs. Extracted groundwater was sampled frequently for over a year and no chlorinated VOCs were detected. Initial low level detections of VOCs in groundwater appear to be related to and localized adjacent to former drywells. In

MULTNOMAH COUNTY (Continued) **S110697304**

conclusion, the site does not pose unacceptable risk to human health and the environment.

Updated By:	KDANA
Updated Date:	12/06/2018
Decode for NarcdID:	Contamination
NARR Comments:	(12/06/2018 KPD/VCP) Three groundwater monitoring wells were installed along the edges of the site as part of an environmental assessment in March 1996. Four chlorinated solvents, at a total concentration of 50.6 ppb, were detected in MW-3, along SE Stark Street. The contamination is likely related to a dry cleaners that operated in the area in the 1960s and '70s. The three monitoring wells were resampled as part of a follow-up investigation in March 2017. Only one solvent, PCE, was detected in MW-3, at a concentration of 0.791 ppb. Extensive sampling was conducted at the site in October 2017. Sediment samples were collected from the bottom of 12 UICs (nine dry wells and three septic system seepage pits). Heavy oils were detected, along with elevated concentrations of metals including cadmium and lead. Six subsurface vapor samples were collected around the former dry cleaners site, finding low concentrations of PCE. Twenty surface soil samples were also collected from across the former Fred Meyer site, but no contamination was identified.

NARR Comments: Soils at the site are generally silty, sandy gravels with cobbles and occasional boulders to a maximum explored depth of 45 ft bgs. Groundwater was encountered at an average depth of 35 ft bgs, with an observed gradient to the west. The nearest surface water bodies are rock quarry ponds (half-a-mile to the southeast) and the Salish Ponds (one mile to the east-northeast). A municipal water supply is provided to the area by Rockwood Water PUD.

NARR Comments: (12/06/2018 KPD/VCP) In late 2017, sediments and septic solids were vacuumed out of the nine dry wells and three seepage pits and shipped off-site for disposal. The dry wells and seepage pits were decommissioned by backfilling with CDF in December 2017. A 1,800-gallon steel septic tank was excavated and removed from the site, as was a stormwater sedimentation vault. The three groundwater monitoring wells were decommissioned in October 2018. Approximately 20,000 cubic yards of surface soils are expected to be excavated as part of the development of the site.

Updated Date: 10/17/2018
Decode for NarcdID: Site History
NARR Comments: The site was a rural residential area with up to 11 residences from at least 1935 to 1955. A Fred Meyer shopping and department store was constructed on the large, western tax lot circa 1958. The Rockwood Shopping Center, a multi-tenant commercial building, was constructed on the small, eastern tax lot around the same time. The two buildings were separated by an asphalt parking lot. A dry cleaning facility operated from a storefront at the south end of the Rockwood Shopping Center from at least 1967 to about 1980. The cleaners operated under various names including <quot>Rockwood Coin-Op Dry Cleaner<quot>, <quot>Rockwood Cleaner & Laundry<quot>, and <quot>Laundry Basket Coin-Op<quot>. The Fred Meyer store was vacated in 2005 and razed in 2007. The Gresham Redevelopment Commission purchased the site in March 2010. The northern 4,000 square feet of the Rockwood Shopping Center was demolished shortly thereafter, and the remaining 8,000 sq. ft. building was remodeled into a Community Office Building. Southeast 188th Avenue, extending from Stark Street north to Burnside on the east side of the Community Office Building, was vacated in 2011 and replaced with a new SE 187th Avenue on the west side of the building. The Fred Meyer lot remained vacant until construction of the Rockwood Rising development began in 2018.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: Rockwood Rising is a mixed-use development on the site of a former Fred Meyer store. Nine stormwater dry wells, three septic system seepage pits, two septic tanks, and a stormwater sedimentation vault were present at the site. Sediments and septic solids at the bottom of the dry wells and seepage pits were impacted with heavy oils and elevated concentrations of metals. Between October and December 2017, the sediments and septic solids were vacuumed out and shipped off-site for disposal, and the wells and pits were backfilled.

Decode for NarcdID: Contamination
NARR Comments: (2/12/1998 TER/VCP) The Bill Yoder Jeep-Eagle and Bill Yoder Custom Van Shop properties were leased by Chrysler Realty Corporation (CRC) from the owners: Melba Roth (18449 SE Stark) and Lyle Cumming (18345 SE Stark). Bill Yoder subleased the properties from CRC. A pending transfer of the lease from CRC to Bill Yoder resulted in CRC performing Phase I Preliminary Assessments in 1994, which identified the following potential release sources: 1) three underground storage tanks (two gasoline and one waste oil) north of the Jeep-Eagle main building; 2) six hydraulic hoists (three of which were out-of-service) in the main Jeep-Eagle building; and 3) seven dry wells, five on the Jeep-Eagle property and two on the Custom Vans property. Phase II Assessments were conducted following the results of the Phase I. Sump samples were collected and soil borings were completed downgradient of each dry well. Analytical results confirmed the presence of gasoline and heavy oil range petroleum hydrocarbon contamination, BTEX compounds, and other volatile and semivolatile organic compounds. Following the Phase II Assessment, CRC signed a Letter Agreement with the Voluntary Cleanup Program in February 1995 for review and oversight of further investigation and cleanup.

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: The site vicinity includes light commercial and some residential use. Shallow unconfined groundwater is at a depth of 50-55 feet. Well logs from the area suggest that static water levels fluctuate significantly based in part on seasonal conditions. Groundwater flows north-northwest toward the Columbia River. The nearest city well is operated by the City of Rockwood, about 0.75 miles west (cross

MR. TRANSMISSION (Continued) **S109346067**

gradient) of the site. The nearest downgradient well is more than one mile north of the site. Drinking water to local residents and businesses is provided by the Portland Water Bureau from the Bull Run Reservoir. The ground surface of the site gently slopes to the north. The nearest surface water is Fairview Creek, approximately 1 mile east.

Decode for NarcdID: Remedial Action
NARR Comments: (2/12/1998 TER/VCP) CRC submitted a Work Plan for site investigative work to DEQ in June 1995. DEQ and CRC agreed to address the hydraulic hoists separately from the other site work. CRC then changed consultants, and a revised work plan was submitted by Dames & Moore in November 1995. Field work was completed in April 1996. A Site Characterization report was approved by DEQ in July 1996. Sludge was removed from all sumps and from all dry wells except DW-2AB and DW-5 by the end of September. Additional sampling indicated that no soil cleanup was necessary, and that groundwater impacts were not a concern. A No Further Action letter was issued in August 1997. The NFA did not apply to the hydraulic hoists. Melba Roth signed a Letter Agreement with DEQ on September 1, 1997 for oversight of the hydraulic hoist removal. Work plans for the removal were reviewed by DEQ and EPA in September 1997. PCBs were detected in soil during sampling and hoist removal in October 1997. TPH & PCB impacted soils were removed at each hoist. The concrete floor of the building was cleaned and a report submitted to DEQ in November 1997. A No Further Action determination was proposed in December 1997 and approved in February 1998. (9/30/2011 KPD/VCP) DEQ's UIC program referred the site to Cleanup in February 2008. An investigation of five underground injection control wells at the site in 2005 showed contamination above DEQ's risk-based screening levels. The UICs need to be cleaned up and decommissioned. (See UIC file #13203). The site was added to a waiting list for assignment to a Cleanup Project Manager in October 2008, but eventually was dropped from the list in September 2011 due to an apparent lack of interest from the site owner/operator. The site is a medium priority for further action.

NARR Comments: (10/2/00 MTP/SAS) DEQ SAS received a complaint in November 1998 alleging improper disposal of hazardous waste to the ground surface. It was alleged that during the preceding year the resident at the site operated a car repair business and used gasoline as a solvent. The waste allegedly was discharged in the vicinity of large trees,

NARR Comments: (1/5/04 BAG/VCP) Site entered DEQ's Voluntary Cleanup Program in January 2004. (2/5/08 GMW/SAS) Site is not on VCP waiting list, and owner/operator has not applied for Dry Cleaner Program funding. Further investigation is needed, under a medium priority. (6/5/10 MTPugh) ML Commercial Properties entered the VCP for review of recent investigation results and their request for an NFA. Based on our review it appears that the completed site investigations are adequate to assess whether significant releases of dry cleaning related chemicals, such as perchloroethene (PCE) or related decomposition products, have occurred to site soils. In rare instances where contamination was detected in soil, detected concentrations are below applicable risk-based concentrations. Three groundwater samples have been collected at the site from temporary borings. PCE and trichloroethene (TCE) were detected in one of three samples collected from the regional aquifer. Detected concentrations were above risk-based standards for drinking water. In the 2009 Phase II Investigation Report prepared by Partner Engineering and Science, Inc., it is recommended that additional groundwater characterization be conducted to assess the extent of groundwater impacts. Rather than conduct additional groundwater investigation at this time, DEQ recommends that a Beneficial Water Use Determination (BWUD) be completed to assess if groundwater in the vicinity of the site is used for a potable water supply. DEQ completed a cursory review of well log records, and there appear to be a number of potable use wells in the area, but specific locations cannot be determined. In addition, further investigation will be needed to assess the dry wells to verify that they are not significant source areas at the site. Next Steps For reasons discussed above, DEQ will not require additional soil (or soil gas) investigation beneath the dry cleaner operation, at the cess pools/septic system, or current sanitary sewer alignment. However, the presence of two or more dry wells triggers the need for additional work. Existing dry wells need to be registered with DEQ s Underground Injection Control (UIC) Program. They also will need to be evaluated as potential contaminants sources, regardless of whether they are abandoned or will remain operational. This typically involves locating the dry wells, sampling their contents and possibly adjacent or underlying soil, and removal

ROCKWOOD CLEANERS (Continued) **S106123747**

of sediment/contents. DEQ s UIC requirements can be found at: Oregon DEQ: Water Quality - Underground Injection Control (UIC) Program - Home Dave Cole is DEQ s Northwest Region coordinator for UIC registration and will be the lead for dry well work. Dave can be reached at 503 229-6371, and by e-mail at Cole.David@deq.state.or.us. Dave will coordinate with me to determine investigative requirements and to interpret investigation results. DEQ will require a sampling plan for the UIC work. To address the detections of chlorinated hydrocarbons in the regional aquifer, ML Commercial Properties should, at a minimum, complete a BWUD per DEQ guidance available at: http://www.deq.state.or.us/lq/pubs/docs/cu/GuidanceBeneficialWaterUse.pdf ML Commercial Properties may elect to proceed with additional groundwater sampling. If additional groundwater sampling is to be conducted, DEQ requests submittal of a brief work plan. Based on the results of the BWUD and dry well investigation, DEQ will determine whether additional groundwater testing will be required. 12/20/10 Based on the presence of dry wells at the site, DEQ requested additional information regarding their number and location. DEQ and Partner staff conducted a site visit on August 4, 2010. Based on the site visit and subsequent geophysical survey, a total of 23 suspected dry well locations were identified (Figure 2). DEQ requested additional investigation of the six dry wells located around the perimeter of the dry cleaner building (DW-13, DW-14, DW-16, DW-17, DW-22A. DW-22, and DW-23; Figure 2). A camera survey was conducted to assess sediment accumulation in each of the seven dry wells. There was insufficient sediment accumulation to readily collect a sample from any of the seven dry wells; no indication of dry cleaner discharges, such as lint accumulations or discoloration, was observed. No samples were collected and DEQ did not require additional investigation for these seven dry wells. Additional investigation on the remaining sixteen dry wells may be required as part of the pending registration of these dry wells with DEQ s Water Quality Program. The number and location of soil and groundwater samples collected at the site appear sufficient to assess whether significant releases of PCE occurred from historical dry cleaning operations. There is no indication that actionable releases occurred beneath or adjacent to the former dry cleaning area, or that dry cleaning chemicals were released to soil at or near the former cess pool, current sanitary sewer line, or nearby dry wells. Based on historical site use there is no indication that significant quantities of hazardous substances were used in other areas or businesses in the strip mall, although historical environmental testing was largely focused on the dry cleaner. DEQ is not aware of investigations in other site areas. DEQ has determined that a no further action determination (NFA) is warranted for the site. Per DEQ Underground Injection Control rules, existing dry wells at the site need to be registered. This may necessitate additional evaluation of approximately sixteen dry wells that have not yet been evaluated. Additional evaluation may include sampling and analysis of dry well contents or adjacent soil. Further work needed to register all site dry wells will be completed through coordination with DEQ s Water Quality Program.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 06/22/2023

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

NY MANIFEST: Facility and Manifest Data

Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

Date of Government Version: 01/01/2019

Version Date:	2020

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

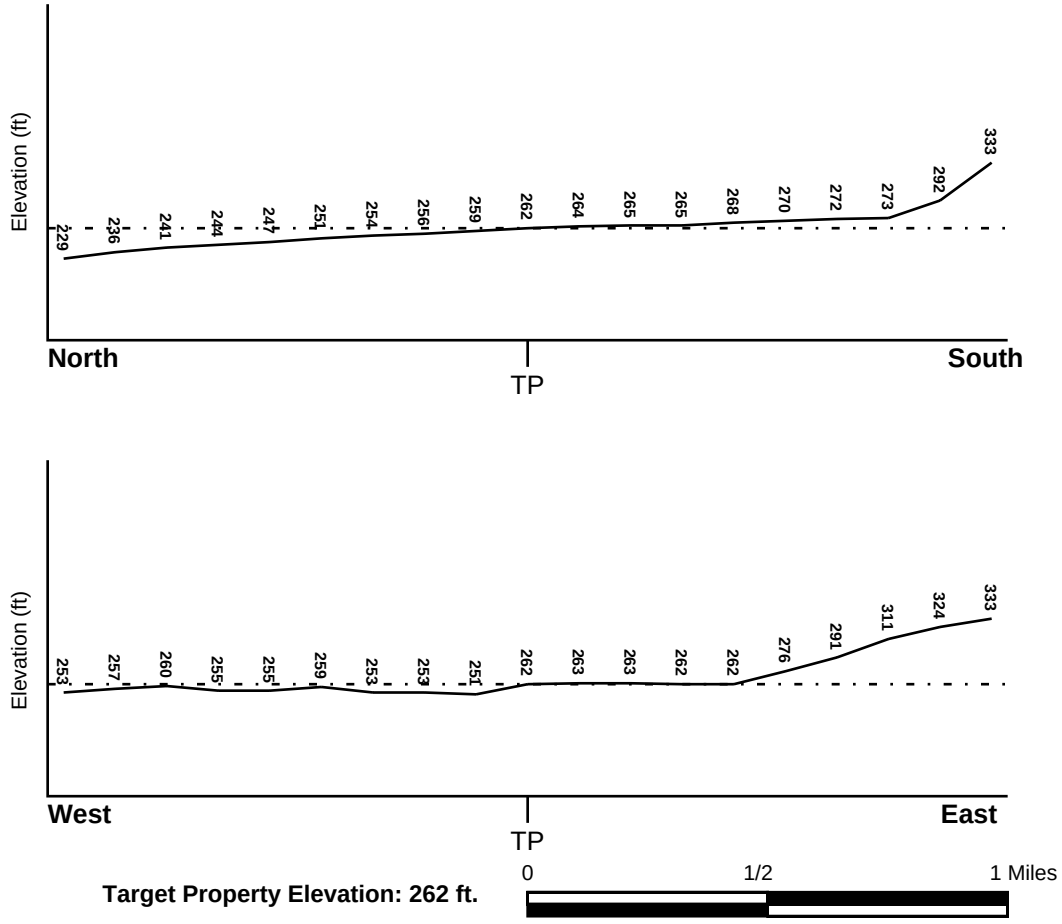
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
4101830140F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
41051C0214H	FEMA FIRM Flood data
41051C0402H	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
CAMAS	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Multnomah

Soil Surface Texture: silt loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity	
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	micro m/sec	Soil Reaction (pH)
1	0 inches	7 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Clean gravels, Poorly Graded Gravel. COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel.	Max: 141 Min: 42	Max: 6.5 Min: 6.1
2	7 inches	38 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Clean gravels, Poorly Graded Gravel. COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel.	Max: 141 Min: 42	Max: 6.5 Min: 6.1

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
3	38 inches	59 inches	very gravelly sand	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Clean gravels, Poorly Graded Gravel. COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel.	Max: 141 Min: 42	Max: 6.5 Min: 6.1

Soil Map ID: 2

Soil Component Name: Pits

Soil Surface Texture: silt loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetlands Inventory Data
Source: Oregon Geospatial Enterprise Office
Telephone: 503-378-2166

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Data
Source: Department of Water Resources
Telephone: 503-986-0843

OTHER STATE DATABASE INFORMATION

Oil and Gas Well Locations
Source: Department of Geology and Mineral Industries
Telephone: 971-673-1540
A listing of oil and gas well locations in the state.

RADON

State Database: OR Radon
Source: Oregon Health Services
Telephone: 503-731-4272
Radon Levels in Orgeon

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Parametrix, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

Parametrix was retained by the Interstate Bridge Replacement (IBR) Program to perform a Phase I Environmental Site Assessment (ESA) on the developed property located at 2227 NW Eleven Mile Avenue, in Gresham, Oregon (Figure 1). This property may be acquired by the IBR Program and is known as IBR-1S3E05AD-03200. Based on the findings of this investigation, Parametrix reached the following conclusions:

1. The subject property is located on Multnomah County tax lot 1S3E05AD-03200, encompassing approximately 1.0 acre. The subject property includes two buildings and a garage, currently occupied by Green Concepts Containers, a container reuse and recycling business.
2. A Phase I ESA was previously completed for portions of this subject property in November 2023. This Phase 2025 I ESA provides an update to address an update to the boundary of the subject property.
3. Based on the historical review, the subject property was developed with a small residence and was part of a larger parcel of farmland to the south in 1935. The farmland primarily supported field and row crops until the 1990s. Commercial use of the subject property began in the 1990s with an audio business and is now a container reuse business. Adjacent properties were originally undeveloped land, residential, and farmland until industrial development began along NW Eleven Mile Avenue in the 1990s, including the establishment of a TriMet light-rail maintenance facility. A large gravel pit operated to the west of the subject property from the 1960s through the 1980s.
4. The subject property contains a decommissioned-in-place heating oil tank (HOT). Because of the potential risks of soil or groundwater contamination due to residual oil or leaks from a decommissioned-in-place HOT, this tank represents a REC to the subject property.
5. Based on the age of the buildings, hazardous building materials (asbestos-containing material [ACM], lead-based paint [LBP], or polychlorinated biphenyls [PCBs]) are potentially present in some buildings.
6. The subject property is not listed on any environmental regulatory databases. A review of regulatory information indicated that several nearby sites were identified in the environmental regulatory record databases. However, based on regulatory status and/or distance from the subject property, none of the sites appear to present a REC to the subject property, including any partial areas of the properties that may be acquired by the IBR Program.
7. The property operates as an active container reuse business. During the site examination, various storage bins and containers were visible from the public right of way on the subject property.
8. An on-site reconnaissance and interview were not conducted with a property representative to identify potential environmental conditions and to address information data gaps during the Phase I ESA process. The lack of a property owner or representative interview and the lack of a full on-site reconnaissance represent data gaps in accordance with ASTM Standard

E1527-21. However, the information obtained for the Phase I ESA, including regulatory database and historical documentation, was deemed sufficient.

Based upon the conclusions of this investigation of the subject property, Parametrix offers the following recommendation:

1. Conduct a Phase II ESA adjacent to the decommissioned HOT to assess potential soil or groundwater contamination. Samples should be collected in accordance with Oregon regulations for UST site assessment (OAR 340-122-0340). After the acquisition of the subject property, it is recommended the HOT be removed prior to IBR Program construction activities.
2. If the buildings on the subject property are to be demolished or redeveloped, conduct a hazardous building materials survey. If ACM, LBP, and/or PCBs are identified, they should be managed, handled, and disposed of in accordance with applicable local, state, and federal regulations.

1. INTRODUCTION

Parametrix was retained by the Interstate Bridge Replacement (IBR) Program to perform a Phase I Environmental Site Assessment (ESA) on developed property located at 2227 NW Eleven Mile Avenue in Gresham, Oregon (herein referred to as the subject property) (Figure 1). The subject property consists of tax lot ID 1S3E05AD-03200 in Multnomah County, Oregon. It is our understanding that the IBR Program may pursue acquisition of the subject property. The subject property is identified as IBR-1S3E05AD-03200 (Figure 2).

The IBR Program acquisition areas were updated following publication of the initial Phase I ESA in November 2023. Because the initial Phase I ESA was completed over 1 year ago, a new Phase I ESA was conducted, in compliance with EPA's All Appropriate Inquiries Rule (40 CFR Part 312). Information provided in the 2023 Phase I ESA was assessed as part of this Phase I ESA. Conclusions and recommendations within this report are based solely on the observed evidence and data collected during the performance of this assessment.

1.1 Purpose and Methodology

This Phase I ESA has been prepared at the request of the Federal Transit Administration (FTA) to follow guidance provided in Standard Operating Procedure (SOP) 19, *Consideration of Contaminated Properties including Brownfields.* SOP 19 applies to "property being considered for acquisition for FTA-funded projects, with an emphasis on property that is or may be contaminated, and is limited to the property considerations taking place during the environmental review process conducted pursuant to the National Environmental Policy Act (NEPA)" (FTA 2016). The primary objective of the SOP 19 is to provide guidelines for environmental review of the property proposed for acquisition prior to approval of the final environmental impact statement.

This assessment follows the regulatory records search and evaluation standards set forth in the ASTM International (ASTM) Standard E1527-21, Standard Practice for Environmental Site Assessments. The search radius for regulatory databases was conducted in accordance with ASTM guidelines. The goal of the Phase I ESA process is to identify recognized environmental conditions (RECs), historical recognized environmental conditions (HRECs), and controlled recognized environmental conditions (CRECs) associated with the subject property as defined by ASTM E1527-21 and summarized below:

- Recognized environmental condition (REC): (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. A *de minimis* condition is not a recognized environmental condition.
- Historical recognized environmental condition (HREC): a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to

the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations, or other property use limitations). A historical recognized environmental condition is not a recognized environmental condition.

- Controlled recognized environmental condition (CREC): recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations).

1.2 Scope

The Phase I ESA process identifies potential environmental contamination on a property, helps establish a defense to liability under CERCLA should the property be acquired by the IBR Program, and includes a review of current and historical site use, ownership, regulatory records, and a site reconnaissance performed by a qualified environmental professional. If the current property owner refuses to grant right-of-entry and state law does not allow for limited right-of-entry, the property may be visually inspected from a public right-of-way or off-site vantage point, or from overhead.

The scope of services for this Phase I ESA was as follows:

- A public right-of-way site reconnaissance.
- Property Owner Questionnaire.
- A review of tax assessor's office records.
- A review of local, state and federal regulatory agency documents which aid in identifying RECs for the subject property.
- A review of available historical records to establish previous site land uses that may have led to RECs for the subject property.
- A report summarizing the above activities.

The following services were attempted but could not be completed at the time of publication due to lack of owner permission. Additional attempts will be made prior to final acquisition of the subject property:

- A right-of-entry and visual reconnaissance of the entirety of the acquisition area.
- An interview with the owner's representative.
- Property Owner Questionnaire.

Additional (beyond the ASTM 1527-21 Standard) services performed for this Phase I ESA include the following:

- Review the age of improvements on the subject property to evaluate the potential presence of asbestos-containing materials (ACM), lead-based paint (LBP), and polychlorinated biphenyl (PCB)-containing materials. A summary of this review is provided in Section 3.3.
- Review available state or federal radon information for indoor air quality risks. A summary of this review is provided in Section 3.3.4.

1.3 Significant Assumptions

Parametrix has assumed that all provided documentation, records, and data sources are accurate, complete, and reliable, unless otherwise stated. This Phase I ESA is based on visual observations conducted from the public right-of-way of accessible areas of the subject property and adjoining properties. The conclusions and recommendations are based on information gathered during the execution of the scope of work described above.

1.4 Limitations

The findings, conclusions, and recommendations presented in this report are based on site conditions and the best available information known or made available by regulators, other consultants, or other sources at the time of the investigation. Parametrix conducted a diligent search and investigation in compliance with prevailing standards of the profession; however, certain adverse conditions may exist at the site not detected at the time of the investigation.

The services provided under this contract, as described in this report, include professional opinions and judgments based on data collected. These services have been provided according to generally accepted engineering practices. The opinions and conclusions contained in this report are typically based on information obtained from the following:

- Observations and measurements made by Parametrix field staff.
- Contacts and discussions with regulatory agencies and others.
- Review of available hazardous substance or solid waste lists.
- Opinions and judgments of Parametrix based on the information available.

In the professional judgment of Parametrix, the services performed pursuant to the scope of services are an adequate basis to collect data for a preliminary evaluation of the site and upon which to draw the conclusions stated in this report.

2. SUBJECT PROPERTY DESCRIPTION

2.1 Location

The subject property is located at 2227 NW Eleven Mile Avenue in Gresham, Oregon. The subject property includes Multnomah County tax lot 1S3E05AD-03200 and is identified as IBR-1S3E05AD-03200. The site location is shown on Figure 1, the Site Vicinity Map. The boundary of the subject property is shown on Figure 2.

The subject property is approximately 1.0-acre property, bounded to the north by industrial properties, to the east by the TriMet Ruby Junction Light-Rail Operations and Maintenance Facility, and to the west by a former gravel pit. According to the City of Gresham, Joseph M. Dodd is the current owner. The site location is shown on Figure 1, the Site Vicinity Map. The boundary of the subject property is shown on Figure 2.

2.2 Site and Vicinity Characteristics

The subject property consists of an approximately 1.0-acre parcel with two buildings and a garage that are occupied by Green Concepts Containers, a container reuse and recycling business. The subject property includes outdoor areas used for storage of recycled bulk liquid containers such as wine barrels, water storage, and tanks. The vicinity is a significantly developed commercial and industrial area, including light-rail tracks.

The subject property is bounded to the north, south, and west by industrial properties and to the east by NW Eleven Mile Avenue, followed by an industrial property (see Figure 2).

2.3 Physical Setting

The subject property is located in the Portland Basin, which marks the northern terminus of the Willamette Lowland in Oregon (WDNR 2025). The northern portion of the basin is known for its low topographic relief, with the subject property at an elevation of approximately 265 feet above mean sea level. The Portland Basin is bound by the Cascade Range to the east and the Coast Range to the west (Swanson et al. 1993)

Geologic processes in the Portland Basin consist of volcanism, sedimentation, and cataclysmic flood deposits in both fluvial and marine depositional environments. The subsurface consists of boulders and cobbly, sandy gravel deposited by Missoula floods as they spilled into the Portland Basin from the Columbia Gorge. The sediments are crudely stratified, commonly with west- and south-dipping forests and are locally capped by several meters of sandy silt (Wells et al. 2020). Soils are mapped as well-drained silty loam.

The topography in the vicinity of the subject property is a consistent slope, rising with distance from the Columbia River. The anticipated groundwater gradient is to the north toward the Columbia River. Groundwater has been encountered at 20 to 35 feet below ground surface on nearby properties.

2.4 Current Use of the Subject Property

The subject property consists of an approximately 1.0-acre parcel with two buildings and a garage that is occupied by a container reuse and recycling business. The subject property consists of an approximately 1.0-acre parcel with a 1,588-square-foot residential building with a detached garage and a separate storage building that supports the tenant activities. Power, water, and sewer are supplied to the buildings by local utilities and municipalities.

2.5 Environmental Liens

An environmental lien is defined by ASTM as a charge, security, or encumbrance upon title to a property to secure the payment of a cost, damage, obligation, or duty arising out of response actions, cleanup, or other remediation of hazardous substances or petroleum products. No evidence of environmental liens against the subject property was identified during the course of this Phase I ESA.

3. RECORDS REVIEW

The purpose of the records review task was to gather environmental data on the subject property prior to the site examination. The information review consisted of two subtasks: a review of various lists and files published by federal and State of Oregon agencies; and a compilation of historical uses of the site and site vicinity, to determine if past operations pose an environmental risk to the subject property. Information for agency file review is based, in part, on a report provided by Environmental Data Resources (EDR). The EDR report is included in Appendix A.

The EDR report is a summary of state and federal database searches for sites of possible environmental concern. The information review enabled Parametrix personnel to characterize the types of activities performed at the site, identify data gaps prior to the site examination, and facilitate recognition of discrepancies between reported and observed data. Data gaps identified during the document review were addressed by interviewing knowledgeable personnel, observations during the site examination, or by additional detailed investigation.

It should be noted that this information is reported as Parametrix received it from EDR, which in turn reports information as it is provided in various government databases. It is not possible for either Parametrix or EDR to verify the accuracy or completeness of information contained in these databases. However, the use of and reliance on this information is a generally accepted practice in the conduct of environmental due diligence. The following sections present information from the document review.

3.1 Standard Environmental Record Sources

The following section summarizes information collected from records maintained by the U.S. Environmental Protection Agency (EPA) and the Oregon Department of Environmental Quality (DEQ). The information includes details on sites identified in regulatory databases within recommended ASTM search distances. A complete listing of the databases reviewed is included in the EDR Radius Map Report (Appendix A).

3.1.1 Review of Oregon Department of Environmental Quality Databases

The following sections summarize the most relevant information obtained from the EDR Radius Map Report regarding sites identified within the ASTM E1527-21 search radii from the following databases. Additional information regarding these sites was reviewed on the DEQ Facility Profiler database website (http://deq12.deq.state.or.us/fp20/) to supplement data gaps in the EDR report. A complete listing of the databases reviewed is included in the EDR report (Appendix A). Relevant database listings from DEQ include:

- DEQ Underground Storage Tank (UST) List
- DEQ Leaking Underground Storage Tank (LUST) List

- DEQ Environmental Cleanup Site Information (ECSI) List
- DEQ Confirmed Release List (CRL)
- DEQ Brownfields List
- DEQ Drycleaners List
- DEQ Engineering or Institutional Controls

3.1.1.1 DEQ Underground Storage Tank List

The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data was obtained from the DEQ UST List.

Information contained in the EDR report indicates that the subject property is listed as a heating-oil tank (HOT) decommissioned site. Six additional UST sites were identified within 0.25 miles of the subject property, as described in detail below:

- The subject property (2227 NW Eleven Mile Ave; HOT ID 14830) is listed on the HOT DECOM database with a status of decommissioned in place. Available information does not verify if required soil samples were collected prior to decommissioning, in accordance with Oregon Administrative Rule 340-122-0340. Because there is no documentation in the DEQ database stating decommissioning samples were collected, the decommissioned-in-place HOT represents a REC to the subject property that may be acquired as part of the IBR Program.
- The Priest Petroleum Products site (2406 NW Eleven Mile Ave; UST ID 4994) is located approximately 319 feet northeast of the subject property and is listed on the UST and LUST databases. Three USTs are listed for the subject property and have a status of decommissioned. This site is also listed in the LUST database and is discussed further in Section 3.1.1.2.
- The Columbia Fence Company (2410 NW Burnside Ct; UST ID 9839) is located approximately 439 feet northeast of the subject property and is listed on the UST database. One UST is listed for the subject property and has a status of decommissioned.
- The AAMCO site (2415 NW Eleven Mile Ave; UST ID 11249) is located approximately 463 feet north of the subject property and is listed on the UST and LUST databases. One UST is listed for the subject property and has a status of decommissioned. This site is also listed in the LUST database and is discussed further in Section 3.1.1.2.
- The Tri-Met site (2222 NW Eleven Mile Ave; UST ID 7910) is located approximately 638 feet northeast of the subject property and is listed on the UST, LUST, and HOT databases. Four USTs are listed for the subject property and have a status of decommissioned. This site is also listed in the LUST database and is discussed further in Section 3.1.1.2.
- The Gresham Sanitary Service site (2131 NW Birdsale Ave; UST ID 2224) is located approximately 724 feet southeast of the subject property and is listed on the UST database. Two USTs are listed for the subject property and have a status of decommissioned.

- The RC Long Shake Co. site (2303 NW Birdsale Ave; UST ID 2593) is located approximately 820 feet northeast of the subject property and is listed on the UST database. Two USTs are listed for the subject property and have a status of decommissioned.

Given that the subject property contains a decommissioned-in-place HOT, subsurface sampling is recommended to identify potential soil and/or groundwater contamination that could be impacted by future subsurface work during the IBR Program construction project.

Unless otherwise noted, the presence of a UST on and/or near a site does not, in itself, constitute a REC. Where available, other information was reviewed regarding the presence of a UST such as the age of the facility, proximity to the subject property, and known releases or spills. Nearby UST sites that have had known releases are discussed in Section 3.1.1.2 below.

3.1.1.2 DEQ Leaking Underground Storage Tank (LUST) List

The Leaking Underground Storage Tank (LUST) Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data was obtained from the DEQ LUST Database List.

Information contained in the EDR report indicates that the subject property is not listed as a LUST site.

Twelve LUST sites were identified within 0.5 miles of the subject property. Six LUST sites are within 0.25 miles of the subject property and are discussed below:

- The Priest Petroleum Products site (2406 NW Eleven Mile Ave; Facility ID 26-91-0206) is located approximately 319 feet northeast of the subject property and is listed on the UST and LUST databases. One 1,000-gallon and two 10,000-gallon gasoline USTs were decommissioned, with one of four samples detecting gasoline at 62 parts per million (ppm). A matrix evaluation was not conducted, as the site's applicable cleanup level for gasoline was 80 ppm. DEQ determined the LUST cleanup was complete on July 2, 1996. A copy of the cleanup report is included in Appendix E.
- The AAMCO site (2415 NW Eleven Mile Ave; LUST ID OR17-88-0023) is located approximately 463 feet north of the subject property and is listed on the UST and LUST databases. A 1,000-gallon waste oil UST associated with the site was decommissioned, removed, and recycled. Approximately one-third of a ton of petroleum-contaminated soil was excavated and properly disposed of. Post-excavation sampling confirmed that contamination levels met regulatory standards, and DEQ determined cleanup was complete on January 23, 1997. A copy of the cleanup report is included in Appendix E.
- The Tri-Met site (2005 NW Eleven Mile Ave; Facility ID 26-12-1437) is located approximately 555 feet south of the subject property and is listed on the UST, LUST, and HOT databases. The USTs associated with the site have been decommissioned. Alpha Environmental Services, Inc., a licensed heating-oil tank service provider, certified that the cleanup met DEQ requirements. DEQ determined the LUST cleanup was complete on January 30, 2013.
- The Tri-Met – Ruby Junction South Maintenance Facility site (2222 NW Eleven Mile Ave; Facility ID 26-94-0042) is located approximately 638 feet northeast of the subject property and is listed

on the UST and LUST databases. A 2,550-fiberglass gasoline UST and a 2,000-gallon steel diesel UST were decommissioned and removed. Approximately 180 tons of contaminated soil were excavated and treated. No diesel contamination was detected, and gasoline concentrations were below the applicable cleanup threshold. DEQ determined the LUST cleanup was complete on August 15, 1994.

- The Former Clark Property site (1851 NW Eleven Mile Ave; Facility ID2 6-11-1202) is located approximately 638 feet northeast of the subject property and is listed on the LUST and HOT databases. A release was reported from the HOT, which has since been decommissioned and removed. Testing was conducted following the release, and DEQ determined the LUST cleanup was complete on February 19, 2015. A copy of the cleanup report is included in Appendix E.
- The Coach Body & Frame site (1843 NW Eleven Mile Ave; Facility ID 26-91-0398) is located approximately 883 feet northeast of the subject property and is listed on the LUST database. Contamination from an aboveground HOT was discovered during its removal. Approximately 8 cubic yards of contaminated soil were excavated and disposed of. Confirmatory sampling identified a remaining pocket of contamination on-site; however, due to site conditions, DEQ determined that no further remediation was necessary. As a result, the LUST cleanup was deemed complete on March 11, 1992. A copy of the cleanup report is included in Appendix E.

Based on DEQ information indicating site closure activities have been completed or other supplemental information, none of the identified sites discussed above appear to represent a REC to the subject property. In addition, the remaining LUST sites identified in the EDR report appear to be at sufficient distances from the subject property and/or cleanup activities have been completed so that they do not appear to represent a REC to the subject property.

3.1.1.3 DEQ Environmental Cleanup Site Information List

The ECSI list identifies and tracks known or potentially contaminated sites within Oregon and is the state's equivalent to CERCLIS. The Confirmed Release List (CRL) is a subset of ECSI and includes sites which have known releases of hazardous substances. The Voluntary Cleanup Program (VCP) database is a list of sites that have been entered into the DEQ voluntary cleanup program and are undergoing cleanup. The subject property is not identified on the ECSI, CRL or VCP databases.

Thirteen ECSI, CRL, or VCP sites were identified within 1 mile of the subject property. Of the 13 sites, 2 are located within 0.25 miles of the subject property.

- The MAACO Auto Paint site (2441 NW Eleven Mile Ave; ECSI ID 6081) is located approximately 520 feet north of the subject property and is listed on the ECSI database. According to the EDR report, the site was identified during a review of a 1988 discovery project that was initiated in response to a June 1987 complaint regarding alleged solvent dumping on the site, which prompted an investigation by DEQ. DEQ collected soil samples from the area where the dumping was reported. The samples revealed trace levels of solvent contamination, as well as low levels of diesel/oil contamination and gasoline constituents. However, DEQ staff determined that no hazardous waste violation occurred. Subsequent to the complaint

response, the MAACO Auto Paint business was destroyed by a fire. The property was then transferred to new ownership and redeveloped. The area behind the MAACO Auto Paint site, where the dumping was alleged to have occurred, was excavated to a depth of approximately 1 foot, then paved and roofed. DEQ did not conduct additional sampling after the excavation. The site is currently occupied by Pro-Met Machining Inc. and has been closed with an NFA status. Based on the available information and the NFA status, this site does not appear to represent a REC to the subject property.

- The Obrist and Cunningham, Inc. site (935 SE 202nd Ave; ECSI ID 86429) is located approximately 1,165 feet northeast of the subject property and is listed on the ECSI database. According to the EDR report, the site entered DEQ's Independent Cleanup Program in July 2005. As part of the cleanup, approximately 45 tons of soil were removed from the old wash bay drywell and disposed of at the Hillsboro Landfill. Additionally, about 65 tons of soil were removed from the parking lot stormwater drywell and disposed of as hazardous waste.

  Soil samples collected after the soil removal showed non-detect levels for all petroleum hydrocarbons on the walls and the floor of both excavations. The parking lot stormwater drywell further showed non-detect levels for total lead in all samples, except for one result at 4 mg/kg on the west wall of the excavation. Based on a review of the report, DEQ confirmed that the underground injection control systems have been properly decommissioned in accordance with regulations. Both the old wash bay drywell and the parking lot stormwater drywell have been decommissioned and closed. DEQ issued a partial NFA for these two systems. Based on the available information and the partial NFA status, this site does not appear to represent a REC to the subject property.

The remaining ECSI, CRL, and VCP sites are located at sufficient distances and/or cleanup activities have been completed so that they do not appear to represent RECs to the subject property.

3.1.1.4 SPILLS Database

This database provides a comprehensive list of reported spills. The subject property is not listed as a SPILLS site.

3.1.1.5 Solid Waste Facilities/Landfill

The Solid Waste Facilities/Landfill (SWF/LF) records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data were obtained from Oregon’s Solid Waste Facilities List.

The subject property is not listed as a SWF/LF site. One SWF/LF site (Gresham Sanitary Service; 2131 NW Birdsale Ave, Registry ID 110004813934) was reported within 0.5 miles of the subject property and based on a review of regulatory status, investigation and cleanup actions conducted, and/or distance from the subject property, none of the SWF/LF sites appear to represent a REC to the subject property.

3.1.1.6 DEQ Brownfields List

The Brownfields database lists sites of real property where expansion or redevelopment is complicated by actual or perceived environmental contamination. No DEQ Brownfields sites were identified within 1 mile of the subject property.

3.1.1.7 DEQ Drycleaner List

The drycleaner database is a listing of former or current drycleaners in Oregon. No DEQ drycleaner sites were identified within 0.125 miles of the subject property.

3.1.1.8 DEQ Engineering/Institutional Controls

DEQ maintains two databases for sites with implemented engineering controls and/or institutional controls. No sites with engineering or institutional controls were identified within 1 mile of the subject property.

3.1.2 Environmental Protection Agency (EPA) Database Review

The EPA administers several programs designed to protect the environment and monitor the generation, storage, treatment, and disposal of hazardous substances. The following sections summarize the most relevant information obtained from the EDR report regarding sites identified within ASTM E1527-21 search radii from the following databases. A complete listing of the databases reviewed is included in the EDR report.

- National Priorities List (NPL)
- Superfund Enterprise Management System (SEMS) List
- Resource Conservation and Recovery Act (RCRA) Corrective Action Report (CORRACTS) List
- Resource Conservation and Recovery Information System (RCRIS) List
- Emergency Response Notification System (ERNS) List
- US Brownfields List

3.1.2.1 National Priorities List

The National Priorities List (NPL) identifies priority hazardous waste sites for remedial actions under the EPA Superfund program. The EDR report indicates that the subject property is not listed as an NPL site. No NPL sites were identified within 1 mile of the subject property.

3.1.2.2 SEMS List

The EPA publishes a list of sites that may potentially pose a threat to the environment or the health of the general public. This list is known as the SEMS list (formerly the CERCLIS list). Information

contained in the EDR report indicates the subject property is not listed as a SEMS site. No SEMS sites were identified within 1 mile of the subject property.

The EPA also publishes the SEMS-NFRAP list, which are SEMS sites that have been designated "no further remedial action planned" and have been removed from the SEMS list. Information contained in the EDR report indicates that the subject property is not listed as a SEMS-NFRAP site. One SEMS-NFRAP site was identified within 1 mile of the subject property.

Based on a review of regulatory status, investigation and cleanup actions conducted, and/or distance from the subject property, the SEMS-NFRAP site does not appear to represent a REC to the subject property.

3.1.2.3 CORRACTS Review

The CORRACTS report identifies hazardous waste handlers with corrective action activity. Information contained in the EDR report indicates the subject property is not listed as a CORRACTS site. No CORRACTS sites are listed within 1 mile of the subject property.

3.1.2.4 Resource Conservation and Recovery Information System List

The RCRIS list includes selective information on sites which generate, transport, store, treat, and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Information contained in the EDR report indicates the subject property is not listed as a RCRIS site. Five RCRIS sites are listed within 0.25 miles of the subject property. The five sites are listed as RCRA VSQG, conditionally exempt small quantity generators.

The EPA also regulates the management of hazardous waste at transportation, storage, and disposal (TSD) facilities. Information contained in the EDR report indicates the subject property is not listed as a RCRIS-TSD site, and no RCRIS-TSD sites were identified within 0.5 miles of the subject property.

Based on a review of regulatory status, investigation and cleanup actions conducted, and/or distance from the subject property, none of the RCRIS sites appear to represent a REC to the subject property.

3.1.2.5 ERNS List

The ERNS is a national database containing information from spill reports made to federal authorities. Information contained in the EDR report indicates the subject property is not listed as an ERNS site.

3.1.2.6 U.S. Brownfields List

The EPA's U.S. Brownfields list identifies brownfield properties addressed by Cooperative Agreement Recipients and brownfield properties addressed by Targeted Brownfields Assessments. The EDR report indicates the subject property is not listed as a U.S. Brownfields site. No U.S. Brownfield sites were identified within 0.5 miles of the subject property.

3.1.3 Other Databases

The following sections include other databases identified in the EDR report that may be relevant to assessing potential environmental liability or environmental issues at the subject property.

3.1.3.1 EDR Proprietary Databases

EDR has conducted research on the occurrence of historical business practices that may constitute a REC to properties. The database was developed from data found in historical city directories and contains information on over 100,000 former gas stations, manufactured gas plants, and dry cleaners. Due to the nature of these businesses, the sites have the potential for soil and groundwater contamination to have occurred.

EDR Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. The listings reviewed include, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, and/or service station.

No historical auto station sites were identified within 0.125 miles of the subject property.

EDR Manufactured Gas List

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800s to 1950s to produce a gas that could be distributed and used as fuel. Many of the by-products of the gas production, such as coal tar (oily waste containing volatile and nonvolatile chemicals), sludges, oils, and other compounds, are potentially hazardous to human health and the environment. The by-products from this process were frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

No manufactured gas sites are listed within 1 mile of the subject property.

EDR Historical Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry-cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to, dry cleaners, cleaners, laundries, laundromats, cleaning/laundry businesses, wash and/or dry businesses.

No historical dry cleaners were identified within 0.125 miles of the subject property.

3.1.4 Orphan Site List

Orphan sites are sites for which mapping information is not detailed adequately to plot the location of the site, or for which there is no known responsible party or the responsible party is unwilling or unable to pay for cleanup. The orphan site list and available mapping information were reviewed by Parametrix. Five orphan sites were identified by EDR in the vicinity of the subject property. The five orphan sites identified are located at sufficient distances and/or cleanup activities have been completed so that they do not appear to represent RECs to the subject property.

3.1.5 Vapor Encroachment

ASTM Standard E1527-21 defines vapor migration as “the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface." The recognition of vapor migration as a possible REC may require incorporation of new types of controls and restrictions to address this contamination pathway.

The subject property and adjacent sites were reviewed in an effort to determine if vapor migration has, or has the potential to have, occurred at the site, from adjacent properties. Based on the information reviewed, the subject property is not identified as a potential vapor intrusion site.

No properties were identified in the near vicinity which have confirmed releases of volatile contaminants in soil or groundwater which have not been sufficiently addressed or would otherwise present a potential impact to the subject property.

3.2 Historical Use Information

The objective of the historical use information review is to develop a history of the previous uses of the subject property and surrounding area that helps to identify the likelihood of past uses having led to RECs in connection with the subject property. Parametrix researched the historical land use, occupancy, and ownership of the subject property and adjacent properties to evaluate historical uses that are known to be associated with RECs. Historical records reviewed include Sanborn Fire Insurance Maps and aerial photographs.

3.2.1 Certified Sanborn Maps Fire Insurance Map Review

Fire insurance maps in the EDR Certified Sanborn Map Report showing the vicinity of the subject property were requested to establish historical business operations at the subject property and adjacent properties. This map report (Appendix B) certifies that the complete holdings of the Sanborn Library, LLC collection were searched based on client-supplied target property information and fire insurance maps covering the target property were not found.

3.2.2 Historical Aerial Photograph Review

Historical aerial photographs of the subject property area were obtained from EDR in the EDR Aerial Photo Decade Package. Aerial photographs for the years 1935, 1948, 1951, 1955, 1960, 1970, 1975, 1981, 1994, 2000, 2006, 2009, 2012, 2016, and 2020 were examined. Copies of the aerial photographs are included in Appendix C. Observations are listed below.

1935	The subject property appears to have an established residence. The north and west of the property are undeveloped lands. The east and south have residential and agricultural uses.
1948–1960	The subject property remains a residence with an agricultural crop, and the adjacent properties remain unchanged. Additional residential developments are visible in the vicinity. Development of the Interstate 5 freeway to the east of the property is depicted by 1955. A large gravel pit operated to the west of the subject property from the 1960s through the 1980s.
1970–1994	The subject property appears relatively unchanged. Additional residential and commercial developments appear on the surrounding properties.
2000–2020	A shop/garage has been added to the subject property. The surrounding area is significantly developed primarily for commercial/industrial uses.

Based on the historical review, the subject property existed as a residence with some agricultural crops in 1935, which remain throughout 2020. The surrounding area to the north, east, and west was also depicted as undeveloped land in 1935 and remains through 1970. Additional commercial and industrial developments were depicted from the 1970s through 2020. RECs associated with historical land use were not identified.

3.2.3 Local Agency Records

Information from local agencies was reviewed for environmental significance as described in the following sections.

3.2.3.1 City of Portland

A review of permits for environmental significance (i.e., septic tank, stormwater, dry wells, and/or USTs or ASTs) was completed. No evidence of significant use or storage of hazardous substances and/or petroleum products was noted on the subject property. In addition, no building, plumbing, septic and/or UST or AST permit records were recorded online with the Portland Maps records for the subject property.

3.2.3.2 Multnomah County

Based on information from the Multnomah County Tax Assessor's Office, the subject property is known as tax lot S3E05AD-03200 and is approximately 1 acre in size. It is listed by Multnomah County as being owned by Jospeh M Dodd. The subject property currently includes two buildings and a garage that are occupied by a container reuse and recycling business.

3.3 Additional Environmental Information

The following sections provide a summary of additional environmental information obtained for the site.

3.3.1 Asbestos

The manufacture of most ACM was banned by the EPA by 1979. Prior to this, asbestos was a common constituent of numerous building materials, including floor and ceiling tiles, caulking, pipe insulation, roofing materials, and exterior siding.

Based on the age of the buildings on the subject property (earliest construction date of 1935), there is a potential for ACM to have been used in the construction or renovation of the subject property.

3.3.2 Lead-Based Paint

Before 1977, paint commonly contained lead which is considered to cause human health problems if ingested. Based on the age of the buildings on the subject property (earliest construction date of 1935), there is potential for LBP to have been in the construction or renovation of the subject property.

3.3.3 Polychlorinated Biphenyls

PCBs were commercially manufactured from 1929 until PCBs were banned in 1979. PCBs were present in a range of materials where thermal stability was necessary, such as PCB-containing oils in transformers and capacitors. Based on the age of the building (initial construction in 1935), there is a potential for PCB-containing materials to be present.

3.3.4 Radon

Radon is a naturally occurring radioactive gas formed by the decay of uranium in some rocks and soil. The adverse health effects associated with radon gas depends upon various factors, such as the concentration of the gas, and exposure duration. The potential concentration of radon gas within a building depends on subsurface soil conditions, the integrity of the building's foundation, the existence of a basement or crawl space (primary areas of concern), and the building's ventilation.

Multnomah County ZIP code 97030 is located in the Federal EPA Radon Zone 2. The Zone 2 indoor average radon level predicted from 2 to 4 pCi/L, reported as a moderate risk of radon elevation. The EPA Action Level for radon is 4 pCi/L. Based on this limited information, radon likely does not represent an environmental concern at the property.

4. FILE REVIEW

In accordance with ASTM Standard E1527-21, inquiries and review of previous investigations for the subject property, and a review of regulatory files for the subject property or adjacent properties may be conducted to further evaluate environmental conditions on the property or adjacent properties, and to fill in data gaps where applicable. Previous investigations and file reviews are summarized below.

4.1 Previous Investigations

Based on regulatory information from DEQ, the subject property is not listed on any regulatory databases.

A Phase I ESA was previously completed for portions of this subject property in 2023 (IBR Program 2023). No RECs were identified, and no further environmental investigations were recommended during the 2023 Phase I ESA.

No other previous investigations of the subject property were identified during the course of this Phase I ESA.

4.2 Adjacent and Nearby Properties File Review

Several adjacent properties were listed on environmental databases, as described in Section 3. Sufficient site-specific information was available through review of the EDR report, as well as online DEQ files, to develop an opinion on the potential for these properties to have affected the subject property. Therefore, a specific file review (physical review at DEQ) was not required, beyond those completed during the course of this Phase I ESA. Specific information on the nature of release, types of contaminants, media impacted, and the potential to have affected the subject property or otherwise caused environmental concern is provided in Section 3.

5. SITE EXAMINATION

Parametrix conducted a site examination of the subject property from public right of way on February 18, 2020. The site examination consisted of observing the areas immediately surrounding the subject property, providing observations of the general environmental conditions on the subject property, and visually assessing the subject property and adjacent properties for evidence of hazardous materials. Photographs of the subject property taken during the site walk are included in Appendix D.

5.1 Subject Property

The subject property is approximately 1 acre in size. It is listed by Multnomah County as being owned by Justin M Dodd. The subject property currently includes two buildings and a garage that are occupied by a container reuse and recycling business. All observations were taken from the public right of way.

No evidence of transformers, USTs, ASTs, or other indications of environmental significance were observed on the exterior portions of the property. In addition, no evidence of significant storage or spills of hazardous substances and/or petroleum products was observed on the subject property. No evidence of staining, adverse odors, or other indications of potential releases was observed. In general, no RECs or other adverse environmental conditions were identified associated with the subject property. The lack of access to the subject property and a full site examination represents a data gap in accordance with ASTM Standard E1527-21.

5.2 Adjacent Properties

The vicinity of the subject property is significantly developed with industrial and commercial properties surrounding the property and Interstate 5 directly north. Adjacent properties were examined from public areas for the presence of environmental conditions which have the potential to impact the subject property. The subject property is located south of Interstate 5 and east of Eleven Mile Avenue. The subject property is bounded to by commercial and industrial properties (Figure 2).

No evidence of significant staining or stressed vegetation was noted on assessable ground surface of properties adjacent to the site. No evidence of the storage of chemical or hazardous materials was identified on visible areas of adjacent properties.

6. INTERVIEWS

An interview was not able to be conducted with a property representative to identify potential environmental conditions and to address information data gaps during the Phase I ESA process. The lack of a property owner or representative interview represents a data gap in accordance with ASTM Standard E1527-21.

7. CONCLUSIONS

Based on the findings of this investigation, Parametrix concluded the following:

1. The subject property is located on Multnomah County tax lot 1S3E05AD-03200, encompassing approximately 1.0 acre. The subject property includes two buildings and a garage, currently occupied by Green Concepts Containers, a container reuse and recycling business.
2. A Phase I ESA was previously completed for portions of this subject property in November 2023. This Phase 2025 I ESA provides an update to address an update to the boundary of the subject property.
3. Based on the historical review, the subject property was developed with a small residence and was part of a larger parcel of farmland to the south in 1935. The farmland primarily supported field and row crops until the 1990s. Commercial use of the subject property began in the 1990s with an audio business and is now a container reuse business. Adjacent properties were originally undeveloped land, residential, and farmland until industrial development began along NW Eleven Mile Avenue in the 1990s, including the establishment of a TriMet light-rail maintenance facility. A large gravel pit operated to the west of the subject property from the 1960s through the 1980s.
4. The subject property contains a decommissioned in-place HOT. Because of the potential risks of soil or groundwater contamination due to residual oil or leaks from a decommissioned-in-place HOT, this tank represents a REC to the subject property.
5. Based on the age of the buildings, hazardous building materials (ACM, LBP, or PCBs) are potentially present in some buildings.
6. The subject property is not listed on any environmental regulatory databases. A review of regulatory information indicated that several nearby sites were identified in the environmental regulatory record databases. However, based on regulatory status and/or distance from the subject property, none of the sites appear to present a REC to the subject property, including any partial areas of the properties that may be acquired by the IBR Program.
7. The property operates as an active container reuse business. During the site examination, various storage bins and containers were visible from the public right of way on the subject property.
8. An on-site reconnaissance and interview were not conducted with a property representative to identify potential environmental conditions and to address information data gaps during the Phase I ESA process. The lack of a property owner or representative interview and the lack of a full on-site reconnaissance represent data gaps in accordance with ASTM Standard E1527-21. However, the information obtained for the Phase I ESA, including regulatory database and historical documentation, was deemed sufficient.

8. RECOMMENDATIONS

Based upon the conclusions of this investigation of the subject property, Parametrix offers the following recommendations.

1. Conduct a Phase II ESA adjacent to the decommissioned HOT to assess potential soil or groundwater contamination. Samples should be collected in accordance with Oregon regulations for UST site assessments (OAR 340-122-0340). After the acquisition of the subject property, it is recommended the HOT be removed prior to IBR Program construction activities.
2. If buildings on the subject property are to be demolished or redeveloped, complete a hazardous building materials survey. If ACM, LBP, and/or PCBs are identified, they should be managed, handled, and disposed of in accordance with local, state, and federal regulations.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL ---------- National Priority List
Proposed NPL ---------- Proposed National Priority List Sites
NPL LIENS ---------- Federal Superfund Liens

Lists of Federal Delisted NPL sites

Delisted NPL ---------- National Priority List Deletions

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY ---------- Federal Facility Site Information listing
SEMS ---------- Superfund Enterprise Management System

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS ---------- Corrective Action Report

Lists of Federal RCRA TSD facilities

RCRA-TSDF ---------- RCRA - Treatment, Storage and Disposal

Lists of Federal RCRA generators

RCRA-LQG ---------- RCRA - Large Quantity Generators
RCRA-SQG ---------- RCRA - Small Quantity Generators

Federal institutional controls / engineering controls registries

LUCIS ---------- Land Use Control Information System
US ENG CONTROLS ---------- Engineering Controls Sites List
US INST CONTROLS ---------- Institutional Controls Sites List

Federal ERNS list

ERNS ---------- Emergency Response Notification System

EXECUTIVE SUMMARY

Lists of state- and tribal hazardous waste facilities

OR CRL ---------- Confirmed Release List and Inventory

Lists of state and tribal leaking storage tanks

INDIAN LUST ---------- Leaking Underground Storage Tanks on Indian Land

Lists of state and tribal registered storage tanks

FEMA UST ---------- Underground Storage Tank Listing
INDIAN UST ---------- Underground Storage Tanks on Indian Land

State and tribal institutional control / engineering control registries

OR ENG CONTROLS ---------- Engineering Controls Recorded at ESCI Sites
OR INST CONTROL ---------- Institutional Controls Recorded at ESCI Sites

Lists of state and tribal voluntary cleanup sites

INDIAN VCP ---------- Voluntary Cleanup Priority Listing

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS ---------- A Listing of Brownfields Sites

Local Lists of Landfill / Solid Waste Disposal Sites

OR HIST LF ---------- Old Closed SW Disposal Sites
OR SWRCY ---------- Recycling Facility Location Listing
INDIAN ODI ---------- Report on the Status of Open Dumps on Indian Lands
ODI ---------- Open Dump Inventory
DEBRIS REGION 9 ---------- Torres Martinez Reservation Illegal Dump Site Locations
IHS OPEN DUMPS ---------- Open Dumps on Indian Land

Local Lists of Hazardous waste / Contaminated Sites

OR AOCONCERN ---------- Columbia Slough
US HIST CDL ---------- Delisted National Clandestine Laboratory Register
US CDL ---------- National Clandestine Laboratory Register

Local Land Records

LIENS 2 ---------- CERCLA Lien Information

Records of Emergency Release Reports

HMIRS ---------- Hazardous Materials Information Reporting System
OR SPILLS 90 ---------- SPILLS 90 data from FirstSearch

Other Ascertainable Records

FUDS ---------- Formerly Used Defense Sites

EXECUTIVE SUMMARY

DOD ---- Department of Defense Sites
SCRD DRYCLEANERS ---- State Coalition for Remediation of Drycleaners Listing
US FIN ASSUR ---- Financial Assurance Information
EPA WATCH LIST ---- EPA WATCH LIST
2020 COR ACTION ---- 2020 Corrective Action Program List
TSCA ---- Toxic Substances Control Act

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 12/19/2024 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Lists of Federal RCRA generators

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 09/16/2024 has revealed that there are 5 RCRA-VSQG sites within approximately 0.25 miles of the target property.

Lists of state and tribal landfills and solid waste disposal facilities

OR SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Department of Environmental Quality's Closure & Regular Solid Waste Active Disposal Permits database.

A review of the OR SWF/LF list, as provided by EDR, and dated 07/26/2024 has revealed that there is 1 OR SWF/LF site within approximately 0.5 miles of the target property.

Lists of state and tribal registered storage tanks

OR UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Quality's UST List on Disk.

A review of the OR UST list, as provided by EDR, and dated 11/04/2024 has revealed that there are 6 OR UST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

ADDITIONAL ENVIRONMENTAL RECORDS

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/16/2024 has revealed that there are 10 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 12/30/2024 has revealed that there is 1 PFAS ECHO site within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 5 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there are 7 UST FINDER sites within approximately 0.25 miles of the target property.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

MAACO AUTO PAINT - GRESHAM (Continued) **S103841472**

Decode for NarcdID: Contamination
NARR Comments: (1/21/92 ALB) The site was picked up from NWR source file review in SAS's 1988 discovery project. Regional personnel responded 6/87 to a complaint of solvent dumping on the site. DEQ collected soil samples from the hole where the disposal was alleged. These samples revealed trace levels of solvent contamination and low levels of diesel/oil contamination and gasoline constituents. Regional staff determined there was no hazardous waste violation. Shortly after the initial complaint response, the business was gutted by a fire. The property was subsequently transferred to new owners and redeveloped. The alley behind MAACO Auto Paint, where the dumping was alleged, was excavated to a depth of approximately one foot and paved over and roofed. DEQ did not sample the area after the excavation. The site is currently occupied by Pro-Met Machining Inc.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
The Resource Conservation and Recovery Act Information System

MAACO AUTO PAINTING & BODY WORKS (Continued) **1000175265**

(RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Hazardous Waste Summary:

Waste Code: D000
Waste Description: Not Defined

Waste Code: D001
Waste Description: Ignitable Waste

Waste Code: F002
Waste Description: The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F004
Waste Description: The Following Spent Nonhalogenated Solvents: Cresols, Cresylic Acid, And Nitrobenzene; And The Still Bottoms From The Recovery Of These Solvents; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

Environmental Interest/Information System:
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

NARR Comments: Soil samples from the Old Wash Bay Drywell showed the presence of gasoline, diesel and heavy oil in soils. Soil samples from the parking lot stormwater drywell showed the presence of diesel and heavy oil in soils. Parking lot stormwater drywell analytical results also showed the presence of lead at concentrations that qualified the material as hazardous waste.

NARR Comments: (7/11/05 JMW/SAP) Site entered DEQ's Independent Cleanup Program in July 2005. (10/18/05 MG/ECP) Approximately 45 tons of soil were removed from the old wash bay drywell and disposed of at the Hillsboro Landfill. Approximately 65 tons of soil were removed from the parking lot stormwater drywell and disposed of as hazardous waste. Soil samples collected following the soil removal showed non-detect for all petroleum hydrocarbons on the walls and the floor of both excavations. The parking lot stormwater drywell further showed non-detect for total lead in all samples, except for one result at 4 mg/kg on the west wall of the excavation. Based on report review, DEQ has determined that the Underground Injection Control (UIC) systems have been decommissioned in accordance with regulation. The <quot>Old Wash Bay Drywell<quot> and the <quot>Parking Lot Stormwater Drywell<quot> have been decommissioned and closed. DEQ has issued a Partial NFA for these two UIC's.

Hazardous Waste Summary:

OBRIST & CUNNINGHAM (Continued) **1004769973**

Waste Code: D001
Waste Description: Ignitable Waste

Waste Code: D005
Waste Description: Barium

Waste Code: D007
Waste Description: Chromium

Waste Code: D008
Waste Description: Lead

Waste Code: D018
Waste Description: Benzene

Waste Code: D039
Waste Description: Tetrachloroethylene

Waste Code: F001
Waste Description: The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichlorethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

NARR Comments: [10/29/12 SAM/ICP] Contaminants of concern included petroleum compounds, related to the former UST and unknown construction debris fill in the former gravel pit, which may include metals, petroleum, VOCs and methane gas production. Exposure pathways considered relevant to this site were: Subsurface soil dermal contact for construction and excavation workers and subsurface soil leaching to groundwater. Groundwater vapor intrusion, volatilization to outside air, inside air and groundwater in excavation for occupational and construction workers. Methane intrusion above the lower explosive limits. Groundwater is not used on site; the facility and surrounding area is generally supplied by a public drinking water system. Future use of the site is expected to remain light industrial.

NARR ID: 5754257

NARR Comments: [10/29/12 SAM/ICP] Two Phase I Environmental Site Assessments were performed on the site in 2005 and 2012. The conclusions from both Phase I documents are similar, noting Recognized Environmental Conditions, including the former 4,000-gallon gas UST, former gravel pit and land filling activities, reported dry wells and a building floor drain near a compressor that may be connected to the dry wells. A Phase II Environmental Site Assessment was performed in August 2012 to provide additional information for the Recognized Environmental Conditions on site. A ground penetrating radar survey was performed to determine locations of onsite dry wells, underground utilities, and the potential buried UST. Subsurface soil, groundwater and soil-gas samples were also collected and analyzed. Subsurface borings indicated the gravel pit was filled with soil, construction debris-including asphalt, and smaller amounts of woody debris. No household or man-made organic items were found in borings in the former gravel pit. Methane was measured with a handheld unit and the report text indicated methane was not observed however, results and supporting documentation was not provided. To ensure correct methods were used DEQ requested additional measurements to support the conclusion that methane is not a concern. Locality of facility was considered the property boundary as groundwater and soil samples at the presumed down gradient side (North) indicate concentrations meet risk-based concentrations or were not detected. Two of the three

ALEXANDER SERVICES LLC (Continued) **1000439200**

groundwater samples detected metals, particularly lead (as high as 671ug/L) above risk-based concentrations for occupational ingestion. Groundwater samples with detections above risk-based concentrations were located within the former gravel pit/fill footprint. The expected downgradient boring groundwater concentrations were below detection limits. October 2012- Four additional soil gas measurement points within the former gravel pit were established. Borings were drilled to 5 feet and sealed to ensure no atmospheric gases entered the holes. An initial reading at one boring found methane at 0.3%, which then stabilized down to 0.0% after approximately 5 minutes. All other borings read 0% methane. DEQ Conclusions: An NFA determination is recommended for the Boden/Alexander site based on the following: Soils sampled on-site were protective for occupational and excavation workers. Groundwater is not used on site for any purpose and the nearest registered residential well is approximately 0.25miles away and cross-gradient from the site. In addition, the area is supplied by a public water system. Soil gas concentrations were below occupational risk-based concentrations. One of four methane samples detected concentrations of methane well below DEQ action levels. The other samples did not detect any methane. The site does not contain significant habitat for plants or animals. DEQ concludes that based on the information presented to date and under the current zoning, the Boden Alexander property is currently protective of public health and the environment and requires no further action under the Oregon Environmental Cleanup Law, ORS 465.200 et seq., unless new or previously undisclosed information becomes available.

NARR Comments: [9/28/12 SAM/ICP] In approximately 1948 much of the south and central portion of the property was utilized as a gravel pit. By the 1950s, the gravel pit appeared to be inactive and backfilling may have been started. The former gravel pit appears to have been completely filled by the 1960s. A portion of the current property building was initially constructed in the 1970s with subsequent additions throughout the 1990s. The site has been recently occupied by BodenAlexander, a custom wood display and manufacturing facility.

Hazardous Waste Summary:

Waste Code: D001
Waste Description: Ignitable Waste

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
