Updated By: KDANA
Updated Date: 04/17/2013
Decode for NarcdID: Contamination
NARR Comments: A landfill was originally present where the Environmental Services building is now located. The landfill began accepting brush and yard debris in the late 1950s, and later accepted garbage until 1967 or 1968. In 1978 or 1979, most of the garbage was moved to the area now known as the Vance Pit (see ECSI #5780). Samples were taken by DEQ staff from the sump area and were analyzed by DEQ's lab for volatile organic compounds, semivolatile compounds, herbicides and total metals. Levels of metals identified in the samples were below DEQ's SOCLEAN levels and appeared to be normal background. Eight organics were identified at low levels. Their association with the landfill is unclear. See the Strategy Recommendation for more information.

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: A worker at Gresham Sand & Gravel experienced burning and swelling after handling sediments removed from a sump area in the gravel pit. The sump area is located near and fed by water flowing from the wall of an area of landfill debris known as Vance Pit. A cross-section of the landfill is visible, as gravel pit operations have caused soil from that area to slide. According to a report from the Mine Safety and Health Administration, the worker who experienced the burning and swelling of his hands reported that other workers at the site had complained of headaches and nausea when working around sump material.

Decode for NarcdID: Remedial Action
NARR Comments: DEQ recommended NFA due to the low levels of the contaminants identified. However, the Strategy Recommendation states that the finding of contaminants indicates that there may be a need to address future releases from the landfill and any current or future threats to area groundwater. It was recommended that the area of exposed landfill be covered and erosion in this area prevented.

NARR Comments: (10/30/12 SMF) Monthly monitoring of soil vapors at eight gas probes on the southern half of Tax Lot 300 (T1S/R3E-S05CA) detected the presence of elevated concentrations of methane in the subsurface during August 2011 through September 2012. Methane soil vapor concentrations at Gas Probes P-1, P-2, P-3, P-4, and P-8 consistently exceeded methane's Upper Explosive Limit (UEL), while methane concentrations at Gas Probe P-7 exceeded methane's UEL more than 50 percent of the time. Methane concentrations at Gas Probes P-5 and P-6 were either non-detect or well-below methane's Lower Explosive Limit (LEL). Hydrogen Sulfide was detected at concentrations of Non-Detect to up to 20 ppm in Gas Probes P-1, P-2, P-3, P-4, and P-8 (August 2011 through September 2012). No Hydrogen Sulfide was detected in soil vapors at Gas Probes P-5, P-6, or P-7.

NARR Comments: According to Robert Pearson with the Gresham Department of Environmental Services, the Vance Pit consists of landfill material removed from the original landfill area where the Environmental Services building is now located. The original landfill began accepting brush and yard debris in the late 1950s. It later accepted garbage from individual residents. In 1967 or 1968, the landfill quit receiving garbage. In 1978 or 1979, most of the garbage was removed to the area now known as the Vance Pit, next to the Gresham Sand & Gravel site (see ECSI #1407).

NARR Comments: (4/9/02 MTP/SAS) DEQ received a complaint in June 2000 alleging improper waste management of automotive-related fluids drained from vehicles at the site. The complaint indicated that gasoline and waste oil were improperly stored in drums and other containers without lids, and that pressure washing occurred at the site without containment, allowing washwater to penetrate the ground. It was reported that these practices had occurred at least since 1994. Staff from DEQ's Hazardous Waste Section substantiated these allegations during a 3/20/01 site visit. Batteries were observed to be stored on the ground surface, drums were filled with petroleum waste and some were filled with rainwater. Gasoline was stored in open 5-gallon buckets beneath a tarp. A solvent parts washer and drum labeled <quot>used solvent<quot> were observed. Numerous oil-stained soil areas were observed throughout the yard. Partially buried solid waste was observed near the northwest corner of the property, and could be related to the adjacent landfill. An area behind the main shop, where drums were stored and steam cleaning was conducted, appeared to be the most impacted area at the site. Steam cleaning was conducted over bare soil and the wastewater was allowed to infiltrate. It is unclear if runoff from the steam clean area drains to a dry well, reportedly located on the other side of the building near the southeast corner of the property. A catch basin was observed near the southwest area of the site, and appeared to show staining. It is not known if the catch basin is connected to the dry well. As a result of the inspection, DEQ issued a Notice of Noncompliance (NON) for three

BOB'S FORD (Continued) **S125687621**

violations, which included failure to make a hazardous waste determination, failure to properly containerize waste, and discharging vehicle parts wash water to shallow soil and groundwater. DEQ requested documentation that all wastes were properly managed and containerized, and that Bob's Ford cease pressure washing until the appropriate wash water management and/or permitting was obtained. Reportedly, limited car washing (<8 cars/month) is occurring at the site but does not appear to require a discharge permit. Bob's Ford has indicated that parts washing will be discontinued until a berm to contain the water is constructed. Following the inspection, disposal documentation received by DEQ indicated that 534 gallons of used oil (flashpoint <200 degrees Fahrenheit) and 133 batteries were removed from the site. It does not appear that any waste characterization sampling was conducted, and it is unclear how used solvent is managed. Based on the potential contamination, the site was referred to DEQ's Site Assessment Program on September 26, 2001.

NARR Comments: Possibly overland runoff of impacted surface water to the dry well

BOB'S FORD (Continued) **S125687621**

and possibly shallow groundwater; direct infiltration into relatively permeable site soil. Both surface soil and subsurface soil are likely impacted at the pressure-washing area. Relatively high use of groundwater in the area. The nearest domestic well is 3,000+ feet from the site. Surface water runoff does not appear to be a pathway of concern.

NARR Comments: Site referred from the Hazardous Waste Program: RCRA non-notifier; improperly managed hazardous wastes in containers; discharging parts washer to shallow soils and groundwater. (4/9/02 MTP/SAS) DEQ has reviewed site information and classified the site as a medium priority for further investigation, including: 1) submission of information to DEQ regarding solvent use, management, and disposal; 2) inspection and sampling of the dry well system to determine the nature of previous discharges into it, and construction details of the dry well and associated drainage system; and 3) sampling to determine the nature and extent of soil contamination, particularly in the former pressure-washing area, and, depending on findings of the dry well evaluation, in the vicinity of the dry well. Based on site observations and supporting photodocumentation, the site should be proposed for listing on the Confirmed Release List (CRL). There is insufficient information to propose the site for listing on the Inventory of Hazardous Substance Sites.

NARR ID: 5742201
NARR Code: Health Threats

Created Date: 12/17/2002
Updated By: Not reported
Updated Date: 12/17/2002
Decode for NarcdID: Health Threats
NARR Comments: Direct exposure of site visitors or workers to contaminated surface and subsurface soil possible. Permeable site soil and/or the dry well on-site may provide a pathway to groundwater. Groundwater appears to be 50 feet or more deep at the site. The nearest domestic well appears to be about 3,000 feet or more from the site. The Columbia South Shore Wellfield is about 2 miles from the site in a presumed downgradient direction. Ponds associated with Morse Bros. sand and gravel operation are located downgradient of the site and appear to intersect the uppermost groundwater aquifer in the vicinity of the site.

ROCKWOOD MACHINE SHOP (Continued) **1000473631**

Updated Date: 06/01/2016
Decode for NarcdID: Contamination
NARR Comments: (2/27/92 HMS) The property had been the site of an engine-rebuilding business for more than 35 years. Recently, the property owner evicted Rockwood Machine Shop, and current site operations are unknown. A spill of unidentified material, subsequently shown to contain solvents, occurred 8/18/90. Response personnel found two unlabeled 30-gal. drums lying on their sides with their contents spread across asphalt paving. Immediate and subsequent cleanup activities involved removal of spilled liquids and affected asphalt paving, and the excavation of a large volume of soil. Soil samples collected after excavation indicated that no substantial contamination remained from the spill. There may have been other releases in the course of the shop's 35+ years of operation, as evidenced by stained areas on the concrete floor inside the shop building. In addition, the site was not connected to sewer service until 1990, indicating that there may be a drywell or septic system on-site.

Decode for NarcdID: General Site Description
NARR Comments: The 1.4-acre commercial property consists of one paved tax lot with one, 11,497 ft2, two-story building located on the southeast corner of the property. The property is bordered by East Burnside Street and MAX light rail to the south, commercial property and residential apartments to the east, residential apartments to the north, and a commercial business to the west. The property is zoned for mixed-use that includes commercial and high-density urban residential. The site is covered in hardscape and therefore no ecological habitat is present on the site. Until the 1950s, historic site use was agricultural that included an outbuilding with hay, grain, and row crops. In 1954, the building that is currently on the property was constructed, and a gravel parking area was installed. Hall Building Supply and the Rockwood Machine Shop began site operations in the mid 1950s. A record and satellite television shop operated on the site for a short time in the 1970s. In 1990, the property was connected to

ROCKWOOD MACHINE SHOP (Continued) **1000473631**

the public sanitary sewer system and in 1994, the property was converted into a restaurant with an asphalt paved parking area. Current use of the site is a multi-tenant Community Center.

NARR Comments: In August of 1990, DEQ was notified of a spill from two, unmarked 30-gallon drums containing carburetor cleaner, or a similar solvent, that was assumed to be associated with the Rockwood Machine Shop. The spill was caused by trespassers, and occurred over a 35-foot by 70-foot asphalt covered area on the northeast side of the building. Between 1990 and 1991, DEQ coordinated the cleanup with the property owners, Pacific Wholesalers, Inc. In total, 27 yd3 of asphalt and 38 yd3 of soil were removed and confirmation samples were collected at the limits of the excavation. Soil removal was completed to at least 4 inches below the asphalt cover, however the final depth of excavation was not documented. Samples collected at the limits of the excavation were all non-detect for volatile organic compounds (VOCs). Groundwater was not encountered during the removal.

spill was caused by trespassers, and occurred over a 35-foot by 70-foot asphalt covered area on the northeast side of the building. Between 1990 and 1991, DEQ coordinated the cleanup with the property owners, Pacific Wholesalers, Inc. In total, 27 yd3 of asphalt and 38 yd3 of soil were removed and confirmation samples were collected at the limits of the excavation. Soil removal was completed to at least 4 inches below the asphalt cover, however the final depth of excavation was not documented. Samples collected at the limits of the excavation, were all non-detect for volatile organic compounds (VOCs). Groundwater was not encountered during the removal. In July 1992, the underground HOT was decommissioned by a licensed underground storage tank supervisor. The tank was removed and disposed of along with 16 yd3 of visually-stained soil to a depth of 6.25 feet below the ground surface. Confirmation samples collected from the extent of the excavation were non-detect for total petroleum hydrocarbons (TPH). The site owner at the time did not enter into a cost recovery agreement with DEQ for review. Therefore, DEQ did not evaluate the HOT for a no further action determination.

NARR Comments: [June 2016] In August 1990, DEQ was notified of a spill from two, unmarked 30-gallon drums containing carburetor cleaner, or a similar solvent, that was assumed to be associated with the Rockwood Machine Shop. The spill was caused by trespassers that occurred over a 35-foot by 70-foot asphalt-covered area on the northeast side of the building. Between 1990 and 1991, DEQ coordinated the cleanup with the property owners that involved the removal and disposal of 27 yd3 of asphalt and 38 yd3 of soil. Confirmation samples were collected at

ROCKWOOD MACHINE SHOP (Continued) **1000473631**

the limits of the excavation and were all non-detect for volatile organic compounds (VOCs).

 In 1992, the on-site heating oil tank was decommisioned and removed from the site. Confirmation samples collected at the extent of the excavation were non-detect for petroleum hydrocarbons.

 Additional investigation was performed in 2016 to address remaining data gaps. A geophysical survey was performed to locate the former septic system, which was used until 1990. No anomolies or the former septic system were found. Soil vapor samples were collected from beneath the existing building and throughout the property. No VOCs were detected in soil vapor samples above applicable risk-based concentrations.

 DEQ issued a no further action (NFA) determination for the site in June 2016. Conditions of the NFA include notification to DEQ prior to excavation and offsite disposal of soil or construction of additional habitable structures on the property.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

NARR Comments:	Fifteen drywells were investigated, their contents removed, and decommissioned. The former drycleaning facility was demolished and

EAST MULTNOMAH COUNTY COURTHOUSE (Continued) **S110697304**

250 cubic yards of PCE-impacted soil beneath the building removed. After soil removal activities, confirmation sampling did not detect contaminants in soil above risk-screening criteria for human health receptors by direct contact or vapor intrusion scenarios. The site does not pose unacceptable risk to human health and the environment from soil. The site has been redeveloped and the location of the new East Multnomah County Courthouse. Low levels of VOCs were initially detected in groundwater in the vicinity of the former dry cleaner facility. A groundwater extraction test well (TW-1) was installed in this area for the courthouse heating-cooling system and to contain any potential contamination present prior to full delineation of the extent. Extracted groundwater was sampled frequently for over a year. Initial low level detections of VOCs in groundwater appear to be related to and localized adjacent to former drywells. A groundwater beneficial use determination did not identify any nearby offsite wells used for drinking water purposes. Groundwater is not consumed onsite and unlikely for the foreseeable future given the area is supplied by a municipal (Rockwood) water supply. There is no unacceptable risk at the site under current conditions.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: DEQ has determined that remedial action to address environmental contamination at the East Multnomah County Courthouse site is complete, and no further action is required. This determination is based on DEQ regulations and the following facts as we now understand them, which are described in more detail in DEQ s Staff Memorandum in support of a No Further Action determination (July 31, 2015). In 2011, Multnomah County entered into a voluntary agreement with the DEQ Cleanup Program for oversight to investigate volatile organic compounds (VOCs) in soil and groundwater attributed to drywells associated with the former dry cleaning facility. Site work included demolishing the dry cleaning building and removal of PCE-impacted soils beneath the building, investigation and removal of 15 drywells, and further delineation and testing of groundwater after initial sampling detected low levels of VOCs. Extracted groundwater was sampled frequently for over a year and no chlorinated VOCs were detected. Initial low level detections of VOCs in groundwater appear to be related to and localized adjacent to former drywells. In conclusion, the site does not pose unacceptable risk to human health and the environment.

NARR Comments: (12/06/2018 KPD/VCP) Three groundwater monitoring wells were installed along the edges of the site as part of an environmental assessment in March 1996. Four chlorinated solvents, at a total concentration of 50.6 ppb, were detected in MW-3, along SE Stark Street. The contamination is likely related to a dry cleaners that operated in the area in the 1960s and '70s. The three monitoring wells were resampled as part of a follow-up investigation in March 2017. Only one solvent, PCE, was detected in MW-3, at a concentration of 0.791 ppb. Extensive sampling was conducted at the site in October 2017. Sediment samples were collected from the bottom of 12 UICs (nine dry wells and three septic system seepage pits). Heavy oils were detected, along with elevated concentrations of metals including cadmium and lead. Six subsurface vapor samples were collected around the former dry cleaners site, finding low concentrations of PCE. Twenty surface soil samples were also collected from across the former Fred Meyer site, but no contamination was identified.

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: Soils at the site are generally silty, sandy gravels with cobbles and occasional boulders to a maximum explored depth of 45 ft bgs. Groundwater was encountered at an average depth of 35 ft bgs, with an observed gradient to the west. The nearest surface water bodies are rock quarry ponds (half-a-mile to the southeast) and the Salish Ponds (one mile to the east-northeast). A municipal water supply is provided to the area by Rockwood Water PUD.

NARR Comments: (12/06/2018 KPD/VCP) In late 2017, sediments and septic solids were vacuumed out of the nine dry wells and three seepage pits and shipped off-site for disposal. The dry wells and seepage pits were decommissioned by backfilling with CDF in December 2017. A 1,800-gallon steel septic tank was excavated and removed from the site, as was a stormwater sedimentation vault. The three groundwater monitoring wells were decommissioned in October 2018. Approximately 20,000 cubic yards of surface soils are expected to be excavated as part of the development of the site.

Updated Date: 10/17/2018
Decode for NarcdID: Site History
NARR Comments: The site was a rural residential area with up to 11 residences from at least 1935 to 1955. A Fred Meyer shopping and department store was constructed on the large, western tax lot circa 1958. The Rockwood Shopping Center, a multi-tenant commercial building, was constructed on the small, eastern tax lot around the same time. The two buildings were separated by an asphalt parking lot. A dry cleaning facility operated from a storefront at the south end of the Rockwood Shopping Center from at least 1967 to about 1980. The cleaners operated under various names including <quot>Rockwood Coin-Op Dry Cleaner<quot>, <quot>Rockwood Cleaner & Laundry<quot>, and <quot>Laundry Basket Coin-Op<quot>. The Fred Meyer store was vacated in 2005 and razed in 2007. The Gresham Redevelopment Commission purchased the site in March 2010. The northern 4,000 square feet of the Rockwood Shopping Center was demolished shortly thereafter, and the remaining 8,000 sq. ft. building was remodeled into a Community Office Building. Southeast 188th Avenue, extending from Stark Street north to Burnside on the east side of the Community Office Building, was vacated in 2011 and replaced with a new SE 187th Avenue on the west side of the building. The Fred Meyer lot remained vacant until construction of the Rockwood Rising development began in 2018.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: Rockwood Rising is a mixed-use development on the site of a former Fred Meyer store. Nine stormwater dry wells, three septic system seepage pits, two septic tanks, and a stormwater sedimentation vault were present at the site. Sediments and septic solids at the bottom of the dry wells and seepage pits were impacted with heavy oils and elevated concentrations of metals. Between October and December 2017, the sediments and septic solids were vacuumed out and shipped off-site for disposal, and the wells and pits were backfilled.

Decode for NarcdID: Contamination
NARR Comments: (2/12/1998 TER/VCP) The Bill Yoder Jeep-Eagle and Bill Yoder Custom Van Shop properties were leased by Chrysler Realty Corporation (CRC) from the owners: Melba Roth (18449 SE Stark) and Lyle Cumming (18345 SE Stark). Bill Yoder subleased the properties from CRC. A pending transfer of the lease from CRC to Bill Yoder resulted in CRC performing Phase I Preliminary Assessments in 1994, which identified the following potential release sources: 1) three underground storage tanks (two gasoline and one waste oil) north of the Jeep-Eagle main building; 2) six hydraulic hoists (three of which were out-of-service) in the main Jeep-Eagle building; and 3) seven dry wells, five on the Jeep-Eagle property and two on the Custom Vans property. Phase II Assessments were conducted following the results of the Phase I. Sump samples were collected and soil borings were completed downgradient of each dry well. Analytical results confirmed the presence of gasoline and heavy oil range petroleum hydrocarbon contamination, BTEX compounds, and other volatile and semivolatile organic compounds. Following the Phase II Assessment, CRC signed a Letter Agreement with the Voluntary Cleanup Program in February 1995 for review and oversight of further investigation and cleanup.

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: The site vicinity includes light commercial and some residential use. Shallow unconfined groundwater is at a depth of 50-55 feet. Well logs from the area suggest that static water levels fluctuate significantly based in part on seasonal conditions. Groundwater flows north-northwest toward the Columbia River. The nearest city well is operated by the City of Rockwood, about 0.75 miles west (cross gradient) of the site. The nearest downgradient well is more than one mile north of the site. Drinking water to local residents and businesses is provided by the Portland Water Bureau from the Bull Run Reservoir. The ground surface of the site gently slopes to the north. The nearest surface water is Fairview Creek, approximately 1 mile east.

NARR Comments: (2/12/1998 TER/VCP) CRC submitted a Work Plan for site investigative work to DEQ in June 1995. DEQ and CRC agreed to address the hydraulic hoists separately from the other site work. CRC then changed consultants, and a revised work plan was submitted by Dames & Moore in November 1995. Field work was completed in April 1996. A Site Characterization report was approved by DEQ in July 1996. Sludge was removed from all sumps and from all dry wells except DW-2AB and DW-5 by the end of September. Additional sampling indicated that no soil cleanup was necessary, and that groundwater impacts were not a concern. A No Further Action letter was issued in August 1997. The NFA did not apply to the hydraulic hoists. Melba Roth signed a Letter Agreement with DEQ on September 1, 1997 for oversight of the hydraulic hoist removal. Work plans for the removal were reviewed by DEQ and EPA in September 1997. PCBs were detected in soil during sampling and hoist removal in October 1997. TPH & PCB impacted soils were removed at each hoist. The concrete floor of the building was cleaned and a report submitted to DEQ in November 1997. A No Further Action determination was proposed in December 1997 and approved in February 1998. (9/30/2011 KPD/VCP) DEQ's UIC program referred the

MR. TRANSMISSION (Continued) **S109346067**

site to Cleanup in February 2008. An investigation of five underground injection control wells at the site in 2005 showed contamination above DEQ's risk-based screening levels. The UICs need to be cleaned up and decommissioned. (See UIC file #13203). The site was added to a waiting list for assignment to a Cleanup Project Manager in October 2008, but eventually was dropped from the list in September 2011 due to an apparent lack of interest from the site owner/operator. The site is a medium priority for further action.

NARR Comments: (10/2/00 MTP/SAS) DEQ SAS received a complaint in November 1998 alleging improper disposal of hazardous waste to the ground surface. It was alleged that during the preceding year the resident at the site operated a car repair business and used gasoline as a solvent. The waste allegedly was discharged in the vicinity of large trees, approximately 35 feet from the property line.

NARR Comments: (1/5/04 BAG/VCP) Site entered DEQ's Voluntary Cleanup Program in

ROCKWOOD CLEANERS (Continued) **S106123747**

January 2004. (2/5/08 GMW/SAS) Site is not on VCP waiting list, and owner/operator has not applied for Dry Cleaner Program funding. Further investigation is needed, under a medium priority. (6/5/10 MTPugh) ML Commercial Properties entered the VCP for review of recent investigation results and their request for an NFA. Based on our review it appears that the completed site investigations are adequate to assess whether significant releases of dry cleaning related chemicals, such as perchloroethene (PCE) or related decomposition products, have occurred to site soils. In rare instances where contamination was detected in soil, detected concentrations are below applicable risk-based concentrations. Three groundwater samples have been collected at the site from temporary borings. PCE and trichloroethene (TCE) were detected in one of three samples collected from the regional aquifer. Detected concentrations were above risk-based standards for drinking water. In the 2009 Phase II Investigation Report prepared by Partner Engineering and Science, Inc., it is recommended that additional groundwater characterization be conducted to assess the extent of groundwater impacts. Rather than conduct additional groundwater investigation at this time, DEQ recommends that a Beneficial Water Use Determination (BWUD) be completed to assess if groundwater in the vicinity of the site is used for a potable water supply. DEQ completed a cursory review of well log records, and there appear to be a number of potable use wells in the area, but specific locations cannot be determined. In addition, further investigation will be needed to assess the dry wells to verify that they are not significant source areas at the site. Next Steps For reasons discussed above, DEQ will not require additional soil (or soil gas) investigation beneath the dry cleaner operation, at the cess pools/septic system, or current sanitary sewer alignment. However, the presence of two or more dry wells triggers the need for additional work. Existing dry wells need to be registered with DEQ s Underground Injection Control (UIC) Program. They also will need to be evaluated as potential contaminants sources, regardless of whether they are abandoned or will remain operational. This typically involves locating the dry wells, sampling their contents and possibly adjacent or underlying soil, and removal of sediment/contents. DEQ s UIC requirements can be found at: Oregon DEQ: Water Quality - Underground Injection Control (UIC) Program - Home Dave Cole is DEQ s Northwest Region coordinator for UIC registration and will be the lead for dry well work. Dave can be reached at 503 229-6371, and by e-mail at Cole.David@deq.state.or.us. Dave will coordinate with me to determine investigative requirements and to interpret investigation results. DEQ will require a sampling plan for the UIC work. To address the detections of chlorinated hydrocarbons in the regional aquifer, ML Commercial Properties should, at a minimum, complete a BWUD per DEQ guidance available at:

pdf ML Commercial Properties may elect to proceed with additional groundwater sampling. If additional groundwater sampling is to be conducted, DEQ requests submittal of a brief work plan. Based on the results of the BWUD and dry well investigation, DEQ will determine whether additional groundwater testing will be required. 12/20/10 Based on the presence of dry wells at the site, DEQ requested additional information regarding their number and location. DEQ and Partner staff conducted a site visit on August 4, 2010. Based on the site visit and subsequent geophysical survey, a total of 23 suspected

ROCKWOOD CLEANERS (Continued) **S106123747**

dry well locations were identified (Figure 2). DEQ requested additional investigation of the six dry wells located around the perimeter of the dry cleaner building (DW-13, DW-14, DW-16, DW-17, DW-22A. DW-22, and DW-23; Figure 2). A camera survey was conducted to assess sediment accumulation in each of the seven dry wells. There was insufficient sediment accumulation to readily collect a sample from any of the seven dry wells; no indication of dry cleaner discharges, such as lint accumulations or discoloration, was observed. No samples were collected and DEQ did not require additional investigation for these seven dry wells. Additional investigation on the remaining sixteen dry wells may be required as part of the pending registration of these dry wells with DEQ s Water Quality Program. The number and location of soil and groundwater samples collected at the site appear sufficient to assess whether significant releases of PCE occurred from historical dry cleaning operations. There is no indication that actionable releases occurred beneath or adjacent to the former dry cleaning area, or that dry cleaning chemicals were released to soil at or near the former cess pool, current sanitary sewer line, or nearby dry wells. Based on historical site use there is no indication that significant quantities of hazardous substances were used in other areas or businesses in the strip mall, although historical environmental testing was largely focused on the dry cleaner. DEQ is not aware of investigations in other site areas. DEQ has determined that a no further action determination (NFA) is warranted for the site. Per DEQ Underground Injection Control rules, existing dry wells at the site need to be registered. This may necessitate additional evaluation of approximately sixteen dry wells that have not yet been evaluated. Additional evaluation may include sampling and analysis of dry well contents or adjacent soil. Further work needed to register all site dry wells will be completed through coordination with DEQ s Water Quality Program.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 12/19/2024

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/19/2024

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/19/2024

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

HIST FTTS INSP: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing
A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

UST FINDER RELEASE: UST Finder Releases Database

US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

Date of Government Version: 06/08/2023
Date Data Arrived at EDR: 10/31/2023

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

NY MANIFEST: Facility and Manifest Data

Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

Date of Government Version: 12/31/2019

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

South Map:	14878114 DAMASCUS, OR
Version Date:	2020

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

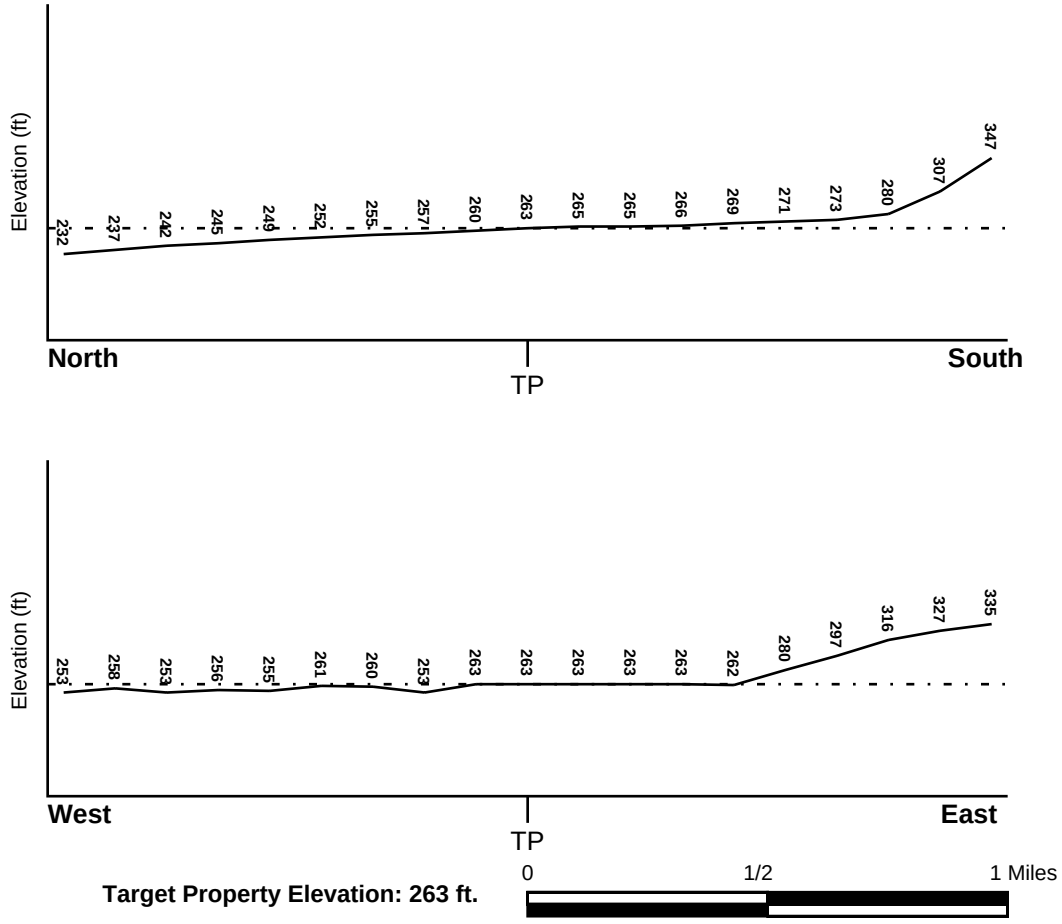
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
4101830140F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
41051C0214H	FEMA FIRM Flood data
41051C0402H	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
CAMAS	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Multnomah

Soil Surface Texture: silt loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	7 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Clean gravels, Poorly Graded Gravel. COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel.	Max: 141 Min: 42	Max: 6.5 Min: 6.1
2	7 inches	38 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Clean gravels, Poorly Graded Gravel. COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel.	Max: 141 Min: 42	Max: 6.5 Min: 6.1

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity	
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	micro m/sec	Soil Reaction (pH)
3	38 inches	59 inches	very gravelly sand	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Clean gravels, Poorly Graded Gravel. COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel.	Max: 141 Min: 42	Max: 6.5 Min: 6.1

Soil Map ID: 2

Soil Component Name: Pits

Soil Surface Texture: silt loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Parametrix, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

RANDALL PRIEST
PRIEST PETROLEUM PRODUCTS
2406 NW 11 MILE AVENUE
GRESHAM OREGON 97030

Re: Priest Petroleum Products
File No. 26-91-206

Dear Mr. Priest:

The Department of Environmental Quality has completed its review of the information submitted to date concerning the underground storage tank (UST) decommissioning and cleanup conducted at 2406 NW 11 Mile Avenue in Gresham, Oregon. The Department has determined that the cleanup appears to have met the requirements of Oregon Administrative Rules (OAR) 340-122-205 through 340-122-360 and that no further action is required at this time.

This determination is a result of our evaluation and judgment based on the regulations and facts as we now understand them, including:

1. A 1,000 gallon diesel and two 10,000 gallon gasoline USTs were decommissioned at this location. The disposal location of the tanks was not reported to the Department.

2. No obvious signs of contamination were observed during the decommissioning. One of four samples contained 62 parts per million (ppm) gasoline. Although a matrix evaluation was not conducted, it appears that an 80 ppm cleanup level, for gasoline, would apply to the site.

3. No groundwater was encountered in the excavation.

The Department's determination will not be applicable if new or undisclosed facts show that the cleanup does not comply with the referenced rules. The Department's determination also does not apply to any conditions at the site other than the release of the petroleum product specifically addressed in the report(s).

Please note that pursuant to OAR 340-122-360(2), a copy of your report must be retained until ten (10) years after the first transfer of the property. We recommend that a copy of this information be kept with the permanent facility records.

John A. Kitzhaber

GRESHAM OREGON 97030

DEPARTMENT OF
ENVIRONMENTAL
QUALITY

NORTHWEST REGION

RE: Aamco
File #26-93-0110

Dear Mr. Ryan & Mr. Parsons:

The Department of Environmental Quality has completed its review of the information submitted to date regarding the underground storage tank (UST) decommissioning and cleanup conducted at your site located at 2441 NW Elevenmile Avenue in Gresham, Oregon. The Department has determined that the site appears to be cleaned up in accordance with Oregon Administrative Rules (OAR) 340-122-201 through -360, with the exception of not performing the correct analysis per item number 4, and that no further action is required at this time.

This determination is a result of our evaluation and judgment based on the regulations and facts as we now understand them, including:

1. One 1,000 gallon waste oil UST was decommissioned by removal and taken to Schnitzer Steel in Portland, Oregon, for recycling.

2. Approximately 1/3 of a ton of petroleum contaminated soil was excavated and disposed of at the Hillsboro Landfill in Hillsboro, Oregon.

3. Ground water was not encountered in the excavation.

4. No volatile chlorinated solvents, volatile aromatic solvents or leachable metals were detected at the UST excavation. A soil sample taken from around the fill pipe detected diesel and heavy oil contamination of 10,000 parts per million (ppm) by analytical method 418.1 Modified. After excavation was complete, confirmatory soil samples did not detect any residual contamination by analytical method TPH-HCID. However, as required by OAR 340-122-335 (3), the results of the HCID test shall be used to determine which analytical method or methods are required for verifying compliance with the Matrix cleanup levels. The confirmatory soil samples taken at this site should have been analyzed by 418.1 Modified.

The Department feels that no further investigation is required at this site based upon the following information submitted:

John A. Kitzhaber
Governor

2020 SW Fourth Avenu
Suite 400
Portland, OR 97201-498
(503) 229-5263 Voice
TTY (503) 229-5471
DEQ-1

(a) No volatile chlorinated solvents, volatile aromatic solvents or leachable metals were detected at the UST excavation in a heavily contaminated sample.

(b) No residual contamination was detected by analytical method TPH-HCID.

The Department's determination will not be applicable if new of undisclosed facts show that the cleanup does not comply with the referenced rules. The Department's determination also does not apply to any conditions at the site other than the release of the petroleum product specifically addressed in your report. We recommend that a copy of all information be maintained with the permanent facility records.

Please note that pursuant to OAR 340-122-360 (2), a copy of this report must be retained until ten (10) years after the first transfer of the property.

Your effort to comply with the regulations to ensure that your facility has been adequately cleaned up is appreciated. If you have any questions, please feel free to contact me at (503) 229-5618.

Sincerely,

Mitch Scheel

PORTLAND OREGON 97202

Re: Tri-Met - Ruby Junction
File No. 26-94-042

Dear Mr. Williams:

The Department of Environmental Quality has completed its review of the information submitted to date concerning the underground storage tank (UST) decommissioning and cleanup conducted at 2222 NW Eleven Mile Avenue in Gresham, Oregon. The Department has determined that the cleanup appears to have met the requirements of the Oregon Administrative Rules (OAR) 340-122-205 through 340-122-360 and that no further action is required at this time.

This determination is a result of our evaluation and judgement based on the regulations and facts as we now understand them, including:

1. A 2,550 fiberglass gasoline and a 2,000 gallon steel diesel UST were decommissioned at this location. The fiberglass tank was taken to Metro transfer for disposal and the steel tank was taken to East County Recycling.

2. Gasoline and diesel contamination were detected in the soil during a site assessment prior to tank removal and during decommissioning. Approximately 180 tons of contaminated soil was removed from the excavation and taken to TPS Technologies for treatment.

3. After cleanup was complete, no diesel contamination was detected in soil samples. A maximum of 25 parts per million (ppm) gasoline was detected remaining in the excavation. This is below the most stringent cleanup level for gasoline of 25 ppm.

4. No groundwater was encountered in the excavation.

The Department's determination will not be applicable if new or undisclosed facts show that the cleanup does not comply with the referenced rules. The Department's determination also does not apply to any conditions at the site other than the release of the petroleum product specifically addressed in the report(s). We recommend that a copy of this information be kept with the permanent facility records.

2020 SW Fourth Avenu
Suite 400
Portland, OR 97201-49
(503) 229-5263 Voice/TT

Please note that pursuant to OAR 340-122-360(2), a copy of your report must be retained until ten (10) years after the first transfer of the property.

Your efforts to comply with the regulations to ensure that your facility has been adequately cleaned up has been appreciated. If you have any questions, please feel free to contact me at (503) 229-5474.

Sincerely,

Andree Pollock
UST Cleanup Specialist

RE: UIC Decommissioning Approval
"Old Wash Bay Drywell", and
"Parking Lot Stormwater Drywell"
935 SE 202nd Avenue
Portland, Oregon 97233
ECSI Site ID No. 4237

Dear Mr. Kim:

The Oregon Department of Environmental Quality (DEQ) has completed a review of the two documents entitled "Soil Matrix Level II Closure Report" dated January, 2005 and submitted to DEQ on your behalf by CAESCO, Inc. These reports were submitted for two decommissioned Underground Injection Control (UIC) systems located on the property at 935 SE 202nd Avenue in Portland, Oregon. These UIC systems were designated as the "Old Wash Bay Drywell" and the "Parking Lot Stormwater Drywell".

DEQ has determined that the UICs have been decommissioned in compliance with the regulations. This determination is based on the regulations and facts as we now understand them, including but not limited to the following:

1. Soil samples from the "Old Wash Bay Drywell" showed the presence of gasoline, diesel and heavy oil fraction hydrocarbons in the subsurface soils. Soil samples from the "Parking Lot Stormwater Drywell" showed the presence of diesel and heavy oil fraction hydrocarbons in the subsurface soils. "Parking Lot Stormwater Drywell" analytical results also showed the presence of lead at concentrations that qualified the material as hazardeous waste.
2. In November, 2004 approximately 45 tons of soil were removed from the "Old Wash Bay Drywell" and disposed of at Hillsboro Landfill. Approximately 65 tons of soil were removed from the "Parking Lot Stormwater Drywell" and disposed of as hazardous waste at the Chemical Waste Management disposal facility in Arlington, Oregon..
3. Subsequently, soil samples collected following soil removal showed non-detect for all petroleum hydrocarbons on the walls and floor of both excavations. "Parking Lot Stormwater Drywell" further showed non-detect for Total Lead in all samples, except for

one result at 4 mg/Kg on the West wall of the excavation. This lead level is well within the range of background levels commonly observed for this heavy metal in this area.

Unless new or previously undisclosed information becomes available, DEQ concludes that the "Old Wash Bay Drywell" and "Parking Lot Stormwater Drywell" UIC's at 935 SE 202nd Avenue have been decommissioned in accordance with Oregon Administrative Rule 340-044-0040. DEQ will update the Environmental Cleanup Site Information System (ECSI) database to reflect this decision and register the two UICs as closed.

If you have any questions about this letter, please contact Mike Greenburg at 503-229-5153.

Sincerely,

Bruce Gilles

DEPARTMENT OF ENVIRONMENTAL QUALITY

March 11, 1992

Mr. Harold Gillis
Pacific First Bank
975 Oak Street Suite 920
EUGENE OR 97401

Re: Heating Oil Tank Release
File No. 26-91-398

The Department of Environmental Quality (Department) has completed its review of the reports prepared by Squier Associates, dated November 7, 1991 and February 4, 1992, concerning the cleanup conducted at 1823 N.W. Eleven-Mile Avenue, in Gresham, Oregon. The Department has determined the cleanup appears to have met the requirements of the Oregon Administrative Rules (OAR) 340-122-205 through 340-122-360 and that no further action is required at this time.

This determination is a result of our evaluation and judgement based on the regulations and facts as we now understand them, including:

1. Contamination from an aboveground storage tank used for heating oil was discovered during removal of the tank. Soil samples were collected to verify and identify the type of contamination using the total petroleum hydrocarbon (TPH) HCID method. Hydrocarbons in the diesel range were identified.

2. Approximately 8 yards of contaminated soil was removed from the excavation and disposed of at the Hillsboro landfill.

3. Groundwater was not encountered in the pit.

4. Confirmatory samples and analysis using the TPH diesel (TPH-D) method identified a pocket of contamination, in excess of the soil matrix standard that was determined appropriate for this site. The pocket of contamination is estimated by Squier Associates to be approximately 108 cubic yards and has a maximum concentration of 4600 parts per million (ppm) TPH.

A pocket of contamination still exists on this property which exceeds the currently required cleanup levels for this site, but which the Department approves leaving pursuant to OAR 340-122-355(4) since the removal of this contamination would endanger structures on the property or be prohibitively expensive, and the contamination does not threaten human health, safety, welfare and the environment.

However, you should be aware that the Department's approval to leave a pocket of contamination is based on the site conditions described in the report as they exist today. Should conditions (i.e. land use) change allowing access to the contamination, you would be responsible for further evaluation of the remaining contamination and any cleanup necessary at that time. You would also be responsible for notifying any potential purchaser of the property about this remaining pocket of contamination.

811 SW Sixth Avenue
Portland, OR 97204-13
(503) 229-5696
TDD (503) 229-6993
DEQ-1

The Department's determination would not be applicable if new or undisclosed facts show that the cleanup does not comply with the referenced rules. The Department's determination also does not apply to any conditions at the site other than the release of the petroleum product specifically addressed in the report. We recommend that a copy of this information be kept with the permanent facility records.

Please note that pursuant to OAR 340-122-360(2), a copy of your report must be retained until ten (10) years after the first transfer of the property.

Your efforts to comply with the regulations to ensure that your facility is adequately cleaned up has been appreciated. Should you have any questions, please feel free to contact me at (503) 229-6931.

PORTLAND, OR 97232-2168

Re: Trimet
File No.: 26-12-1437

Dear Real Estate Dept-TRIMET:

The Department of Environmental Quality has received a report and Alpha Environmental Services, Inc. certification concerning the heating oil underground storage tank (HOT) assessment and/or cleanup conducted at 2005 NW Eleven Mile Ave, in Gresham, Oregon.

Alpha Environmental Services, Inc. was licensed to provide heating oil tank services and has certified that the cleanup has met the Department's requirements. The Department has registered this report and certification and closed its file on the project.

The decision to register the report and certification and to close the Department's file will no longer apply if new or undisclosed facts show that the project does not comply with the rules governing heating oil tank cleanups.

Please note that you are required by state law (ORS 105.464) to provide potential buyers a disclosure statement that includes information regarding underground storage tanks, HOTs and the environmental conditions on your property.

Accordingly, we recommend that you keep a copy of this letter, the certification and any reports of testing or corrective actions relating to your HOT with the permanent property records.

Your efforts to comply with Oregon's environmental rules and regulations to ensure that your heating oil tank has been adequately addressed have been appreciated. Proper decommissioning and cleanup helps ensure protection of the environment from future heating oil tank leaks and ensures that the heating oil does not adversely impact human health or the environment. If you have any questions, please feel free to contact the HOT Program at (503) 229-6170.

Sincerely,

Kevin Donna for

Phase I ESA Site Visit Guide

Project: 274.1585.058.AE.06.06

Subject Property Location

Facility/Name	
Address	2227 NW Eleven Mile Ave Gresham, OR
Property Description	location of Green Concepts Container Company

Site Layout Description

Parcel#/Building Name 1S3E05AD-03200	Purpose:
Other Structures and Improvements	☐Tanks ☐Railroad tracks/railroad spur ☐Detention/retention pond ☐Storage shed(s) ☐Boneyard/junkyard ☐ Agricultural area ☐ Other: large ☑ Other: storage containers
Are any areas paved?	If Yes – **Paving Material** **Location** Asphalt Concrete Gravel

Physical Setting

Topography of subject property	Flat
Are there any bodies of water on property?	

Are there any man-made bodies of water on the property?	
Are there any wetlands on the property?	
Are there are any water wells on the property?	

Utilities (meters, transformers, access covers, etc.)

Electricity	
Natural Gas	
Water	
Sanitary sewer	Septic systems? If yes, where?
Storm sewer	
Are there back-up power supplies?	Emergency generator(s)- how many, location? Fuel type: ☐ Batteries ☐ Diesel ☐ Natural Gas

Heating and Cooling (if observed)

Equipment Type	**Area(s)**	**Equipment Type**
☐ Central HVAC		☐ Chillers
☐ Boilers		☐ Cooling Towers
☐ Electric Heaters		☐ Window A/C Units
☐ Other		☐ Refrigeration

Operations

Operation of Property (commercial, residential, etc.)		
What ancillary (support) operations are performed at the property?	☐ Administration (office) ☐ Building Maintenance ☐ Equipment Maintenance ☐ Vehicle Washing	☐ Supply Water Treatment ☐ Wastewater Treatment ☐ Other: ☐ Other:
Are there any outdoor storage areas?	If Yes -	

Aboveground Storage Tanks

Are any ASTs currently located at the property? ☐ Yes (fill out table below) ☐ No

Location	Contents/Tank Mtl	Size	Secondary Containment

* Describe any visual evidence of spills or releases around the AST.

Underground Storage Tanks

Are any USTs currently located at the property? ☐ Yes (fill out table below) ☐ No

Location	Size/Contents	Installation Date	Overfill Protection

Any visible evidence that there were USTs previously on the property that had been removed? ☐ Yes ☐ No

Other Material Handling and Storage

Does any equipment on the property contain hydraulic oil? ☐ Yes ☐ No

Type of Equipment	# of Units/Location	Reservoir Size	Any evidence of spills/releases?
Process Equipment			
Hydraulic Lifts			

Elevators			
Trash Compactors			
Balers (i.e., cardboard)			
Other:			
Other:			

Describe other materials handled and store on property. Consider oils, propane, compressed gases including refrigerants, glycol, maintenance chemicals, boiler chemicals, cleaning products, etc.

Material	**Contain Capacity**	**Container Type**	**Material Purpose/Use**	**Storage Location(s)**	**Secondary Containment**	**Evidence of Spills/Releases**
Process Equipment						
Hydraulic Lifts						
Elevators						
Trash Compactors						
Balers (i.e., cardboard)						
Other:						
Other:						

Air Emissions

Are there any sources of air emissions at the property? (e.g., natural gas and oil-fired boilers and ovens, other combustion equipment, welding, coating and painting operations, solvent use)

Source (equipment or process)	**Pollutants**	**Emissions control device(s)**

Hazardous Waste

Does the property generate any hazardous waste? Consider waste products, pharmacy wastes, off-spec chemicals, maintenance chemicals, solvent wastes, and others.

Does the property have an RCRA identification number? ☐ Yes ☐ No

Waste Material	Generating Process	Container Size and Type, Condition	Amounts Present

Does the property accumulate hazardous waste in a central accumulation area (aka 90-day or 180-day accumulation area? ☐ Yes (describe condition of area and containers) ☐ No

Does the property accumulate hazardous wastes in any satellite accumulation areas?
☐ Yes (describe condition of area and containers) ☐ No

Other Regulated Waste

Universal Waste?	☐ Lamps ☐ Batteries ☐ Mercuy-containment equipment ☐ Pesticides ☐ Aerosol cans ☐ Other – _____
Location of Universal Waste	
Does facility generate used oil?	☐ Yes ☐ No Yes – describe type, size, location:

Other Regulated Wastes? (e.g., medical waste, PCB, laboratory, etc.)	☐ Yes ☐ No Yes – describe type, generation process, container sizes, location:

Non-hazardous Wastes

Consider non-hazardous parts washer solvent, oily rags, scrap metal, empty containers, wood, paper and cardboard, and general refuse.

Waste Material	Container Size and Type, Condition	Accumulation Location

Wastewater

Are there any wastewater features such as sumps, pits, ponds, or lagoons on the property? ☐ Yes ☐ No

Are there any oil-water separators, grease traps? ☐ Yes ☐ No

Is there evidence of septic tanks systems or drain fields at the property? ☐ Yes ☐ No

If yes, describe feature, location, wastewater discharged, an destination (if known):

Stormwater

Describe stormwater runoff and where it appears to flow (Consider features such as roof drains, catch basins, storm drains, drainage	

ditches, ponds, containment structures, and dry wells)	
Are any materials stored outside?	☐ Vehicles or trailers ☐ Pallets or packaging ☐ Scrap metal ☐ Uncovered dumpsters ☐ Other: ☐ Other:

Per-and Polyfluoroalkyl Substances (PFAS)

Does the property have a fire suppression systems? What type(s)? Please write down the type of foam or chemicals present in any chemical system, if on a nameplate or sticker on the equipment.	☐ Aqueous Film Forming Foam (AFFF) ☐ Wet sprinkler system (uses water) ☐ Dry pipe system (uses air or nitrogen under pressure) ☐ Dry chemical system (uses dry chemicals under pressure) ☐ Carbon Dioxide (typically in places where people aren't present) ☐ Fire extinguishers ☐ No fire suppression system is present ☐ Unknown

RE: Former Clark Property
File No.: 26-11-1202

A release was reported from an underground heating oil tank (HOT) system located at 1851 NW Eleven Mile Ave in Gresham, Oregon. As the responsible party for the property, you are required to clean up the heating oil release according to Oregon Administrative Rules (OAR) OAR 340-177-0001 through OAR 340-177-0095. These rules require cleaning up the soil, groundwater, surface water, soil vapor, and any other media contaminated by heating oil to the appropriate standards or demonstrating that the contamination does not pose a risk to human health or the environment.

Please reference the Department of Environmental Quality (DEQ) File Number listed on this letter in all future correspondence and reports.

A copy of the HOT cleanup regulations will be provided upon request by calling 1-800-742-7878. This information is also available at DEQ's web site, http://www.deq.state.or.us/lq/tanks/index.htm As the responsible party, you should be aware of the requirements for cleanup, even if you have hired a licensed contractor to assist you.

Any contractor hired to perform assessment, decommissioning, or cleanup activity must be a DEQ Licensed HOT Contractor. Licensed contractors are required to have insurance and certify that their projects meet criteria established by DEQ. After the project has been certified, the Department may audit the cleanup. Audits typically take place within two years of completion of the project and involve a detailed review of the cleanup project. Exceptions to the two-year time frame could occur when major problems are noted with a contractor's work. When a cleanup has been improperly certified, the DEQ will require the contractor and the client to resolve the outstanding issues and to re-certify the cleanup.

Projects requiring long term monitoring, treatment, or engineering controls are encouraged to enter into a technical assistance agreement to complete a cleanup that meets the standards of Oregon Revised Statute (ORS) 465.315. For information regarding complex site cleanup, please visit DEQ's web site, http://www.deq.state.or.us/lq/tanks/hot/index.htm.

Property owners must register their project certification with DEQ. This is accomplished by sending the certification and the report on the cleanup to DEQ with a $200 registration fee. Once the DEQ receives this information, it registers the certification and sends a letter acknowledging receipt of this information. This usually occurs within two weeks of receiving all of the required information.

Your efforts to protect and clean up the environment are appreciated. If you have any questions about the regulations or your cleanup project, please call your licensed HOT Services Provider.

Sincerely,

Bruce Gilles, Manager
HOT Program

Enclosures

Frequently Asked Questions:
For more information on any of the information provided below please visit:
http://www.deq.state.or.us/lq/tanks/hot/homeowners.htm

Q: Do I have to clean up the contamination right now?

A: Consideration should be given to the liabilities associated with leaving contamination in place. Petroleum contaminated soil and groundwater has the ability to migrate onto neighboring properties and may adversely affect human health and the environment. Without a full assessment of the heating oil tank release that includes appropriate sampling and analysis of all affected media (such as soil and/or groundwater), it is impossible to determine the level of risk associated with the contamination.

Q: What are my responsibilities right now?

A: Oregon rules require you to take **immediate action** to prevent any further release of heating oil into the environment by pumping out all heating oil from your abandoned or unused underground heating oil tanks. In addition, rules require the responsible person to submit a written initial cleanup report within 45 days after the Department is notified of the release.

Oregon law states that you must disclose that contaminated soil and/or groundwater is present on your property to prospective buyers of the property.

Q: What options do I have for cleanup and what are the consequences associated with each type of cleanup?

A: Soil Matrix - A soil matrix cleanup involves the removal of most, if not all, of the contaminated soil at a cleanup site. DEQ prefers this type of cleanup as it represents the least amount of risk to human health and the environment.

Generic Remedy – This cleanup option involves property where some low-level contamination remains at the site. This may involve some soil removal to achieve the requirements. Although contamination remains on your property, the extent and magnitude of the contamination is considered to be protective of human health and the environment if the area of contamination is not disturbed. Future purchasers of the property must be informed that petroleum contamination above cleanup levels remains on the site.

Risk Based Closure – This cleanup option is typically used when removal of contamination may undermine the foundation of the house, or when costs to remove contamination are prohibitive. A more extensive investigation and evaluation must show that the contamination can remain without posing a risk to human health and the environment. As with the Generic Remedy cleanup option, future purchasers of the property must be informed that petroleum contamination above cleanup levels remains on the site.

DEQ recommends discussing cleanup options with DEQ HOT licensed Service Providers. If you have any questions regarding this letter or your HOT cleanup, please contact HOT Program staff at 503-667-8414, extension 55026.

Appendix F. Staff Resumes

Kelly Carini

SCIENTIST

Years of Experience: 10 ■ Years with Parametrix: 6 ■ Education: Bachelor of Arts, Environmental Studies, UNC Chapel Hill, 2009

Kelly is an environmental scientist with the ability to address a broad range of environmental site and subsurface investigation tasks. She is proficient in regulatory compliance and due diligence, with experience conducting Phase I and II ESAs, visual site inspections, and sampling and analysis of subsurface soil and groundwater. She also has experience with climate change analysis, state and federal level permit documentation, and species surveys that support NEPA and Endangered Species Act work.

Select Project Experience

Interstate Bridge Replacement Program | Portland, OR–Vancouver, WA

Oregon/Washington Department of Transportation

Kelly conducted Phase I environmental site assessments in accordance with ASTM E1527-21 and regulatory guidelines. The work required specialized historic research, regulatory database reviews, site reconnaissance, and environmental risk evaluation to identify potentially recognized environmental concerns.

Data Centers | Eastern OR

Confidential Client

Kelly conducted this Phase I environmental site assessment as part of due diligence efforts for large tracts of land being considered for future development. Additionally, she completed soil sampling to assess the presence of pesticides because of historical agricultural activity on the site. The investigation included collecting soil samples using a direct-push probe and hand auguring. Kelly also performed air corrosion testing to assess the amount of corrosive materials in the ambient air onsite.

Southwest Corridor Final EIS Phase 2 | Portland, OR

Metro Regional Government

Kelly performed hazardous materials surveys and contributed to the hazardous materials technical report for the final EIS. She assessed impacts of the project on existing soil and groundwater contamination in the area, as well as the risk of property acquisition, based on historical use of each full or partial property acquisition for the project.

Earthquake Ready Burnside Bridge NEPA | Portland, OR

Multnomah County

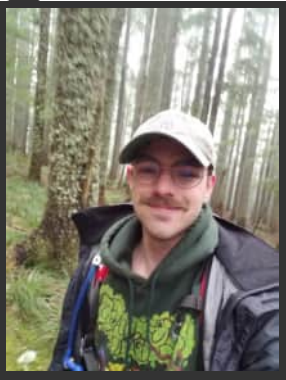
Kelly performed hazardous materials surveys for properties in Oregon and contributed to the hazardous materials technical report for the draft EIS. The impacts of the project on existing soil and groundwater contamination in the area and how the impacts differed by alternative were assessed. In addition, Kelly assessed potential climate change impacts of various alternatives and summarized them in a technical report.

TCE Cleanup Project | Vancouver, WA

Port of Vancouver

As a project scientist, Kelly has performed an array of tasks including sampling (soil, groundwater), data collection and analysis, remedial system maintenance, and performance assessment and reporting.

Phase 1 ESA Chevron | Portland, OR



TriMet

Kelly performed a Phase I ESA for completion of due diligence a high-risk developed property for acquisition. Kelly assessed the risk associated with the acquisition of the property based on historical land use, environmental database research, and on-site reconnaissance and developed a plan for subsurface investigation.

Phase I Environmental Assessments | Covington, WA

City of Covington

Kelly performed Phase I ESAs for completion of due diligence for several tracts of land for future development. Kelly assessed the risk associated with the acquisition of the properties based on historical land use, environmental database research, and on-site reconnaissance.

Kevin Kuester

SCIENTIST I

Years of Experience: 4 ■ Years with Parametrix: 1 ■ Education: BA, Biology, University of Portland, 2021

Kevin is a biologist and wetland scientist with 4 years of experience in environmental sciences. His work has included environmental monitoring of various sites, including manufacturing, distribution, transportation, and mining facilities. He has conducted environmental sampling of both groundwater and air to monitor environmental compliance.

Selected Project Experience

Interstate Bridge Replacement Program | Portland, OR–Vancouver, WA

Oregon/Washington Department of Transportation

Kevin conducted Phase I environmental site assessments in accordance with ASTM E1527-21 and regulatory guidelines. The work required specialized expertise in historic research, regulatory database reviews, site reconnaissance, and environmental risk evaluation to identify potentially recognized environmental concerns.

Wetland Delineation

City of Troutdale, OR

Kevin conducted an on-site wetland delineation to comply with United States Army Corps of Engineers guidelines. He prepared all relevant reports for submittal to state and federal agencies, and prepared similar reports for other clients in Washington and Oregon.

Stormwater Monitoring

Confidential Clients

Kevin conducted on-site stormwater compliance assessments for various sites throughout Oregon. He tested stormwater discharge for environmental compliance, applying his certification as erosion and sedimental control lead for the states of Washington and Oregon.

Emissions Testing

Confidential Clients

Kevin conducted emissions testing to maintain manufacturing air quality standards in the states of Oregon and New Mexico.

Groundwater Monitoring

Various Clients

At various contaminated sites throughout Oregon, Kevin conducted groundwater sampling. He prepared reports with contamination levels for submittal to state and federal agencies.

Biological Surveys

Various Clients

Kevin conducted baseline biological surveys to assess the presence of state and federally listed species in the states of Oregon, Washington, Arizona, and Nevada. He prepared reports for submittal to federal and state agencies.

Marissa Ward

Environmental Planner II

Years of Experience: 5 ■ Years with Parametrix: 1 ■ Education: Environmental Studies, Boise State University, 2019 ■ Licenses and Certifications: 40-Hour HAZWOPER, Basic Wetland Delineation, Highway Traffic Noise: Basic Acoustics - National Highway Institute

Marissa is an experienced NEPA professional. She specializes in compliance regulations, traffic noise analysis, wetland delineations, GIS mapping, GPS operations, technical writing, and conducting field surveys including research, sampling, photography, and documentation. Marissa also coordinates with local, state, and federal agencies. Her project experience includes public infrastructure, including the Washington Department of Transportation Department, Idaho Transportation Department, and local highway districts, as well as private enterprise.

Selected Project Experience

Interstate Bridge Replacement Program | Portland, OR–Vancouver, WA
Oregon/Washington Department of Transportation
Marissa conducted Phase I environmental site assessments in accordance with ASTM E1527-21 and regulatory guidelines. This work required specialized expertise in historic research, regulatory database reviews, site reconnaissance, and environmental risk evaluation to identify potentially recognized environmental concerns.

Airport Way Phase 2-2 | Kitsap County, WA
Port of Bremerton
Marissa completed a categorical exclusion for this new roadway construction project for the Washington Department of Transportation (WSDOT). She oversaw all figures, documented agency coordination, and ensured that technical reports and related materials were well-organized and prepared for submission to WSDOT. Additionally, Marissa conducted a hazardous materials assessment following WSDOT guidelines. This included completing historic and regulatory database reviews and performing an environmental risk evaluation to identify potential recognized environmental concerns.

SH-44 Corridor Preservation Study | Ada County, ID
Idaho Transportation Department
Marissa collaborated with a team to complete a categorical exclusion for improvements along a 5.6-mile corridor. Her responsibilities included managing all figures, documenting coordination with agencies, and ensuring that the technical reports and related materials were organized and ready for submission to the Idaho Transportation Department.

Access to Opportunity | Ada County, ID
Idaho Transportation Department
Collaborating with a team, Marissa completed a categorical exclusion for roadway and pedestrian improvements along 12 roads. Her specific responsibilities included field survey and wetland delineation documentation. She also oversaw all figures, documented coordination with agencies, and ensured that the technical reports and related materials were organized and ready for submission to the Idaho Transportation Department.

Bennett Road Landfill | Elmore County, ID
Elmore County, Idaho
Marissa collaborated with a team to complete a conditional use permit as well as a SEPA checklist reviewing the existing environmental conditions at an expanding landfill within the Elmore County area.

Eastside Arterial Progressive Design-Build Improvements | Deschutes County, OR
City of Redmond, OR
This project is developing alternatives and final design of a new arterial road to increase connectivity and safety for expected future growth. The route traverses an area alongside Redmond's airport. Marissa prepared documentation for a NEPA categorical exclusion that met Federal Aviation Administration requirements.

Ustick; Can ADA to Owyhee Storm | Canyon County, ID
City of Nampa
Marissa completed an environmental scan memo for a document reviewing the National Wetland Inventory, Underground Storage Tank Database, Idaho National Register of Historic Places, and current Threatened and Endangered Species list. A memo will be prepared to document the results of the scan and identify any potential concerns.

Marty Marrs

STAFF ROLE

Years of Experience: 3 ■ Years with Parametrix: 1 ■ Education: BS, Natural Resource, 2022 | AS, Business Administration, 2007 ■ Certifications: Certified Erosion and Sediment Control Lead, 40-Hour HAZWOPER

Marty believes that everyone, regardless of socioeconomic status, should have access to clean water. To live this passion through her work, she pursued a degree in natural resources, choosing a focus on the human dimensions of natural resource management. This includes considering both how socioeconomic factors influence our natural resources, and how our natural resources play a role in the lives of individuals from different backgrounds. Marty's passion for clean water has led to a career focus in stormwater management and permitting. Her superpower is her ability to step back and truly listen to her clients to understand their "why" – how they see the issue at hand – and collaborating with them to develop solutions that empower them. For example, when a client is fined by a governing body, Marty helps the client consider options that are within their control. She helps clients and regulators find common ground and meet in the middle. Another way that Marty applies her passion for balancing the needs of people and nature is by addressing environmental justice during NEPA- and SEPA-related analyses.

Select Project Experience

Interstate Bridge Replacement Program | Portland, OR–Vancouver, WA

Washington State Department of Transportation

This bi-state program will result in a new I-5 bridge across the Columbia River between Washington and Oregon and includes multiple connected transportation facilities. Marty is assisting with writing environmental site assessment phase II reports and public comment coding, which involves replying to comments related to hazardous material concerns.

South Fork Avenue Extension | North Bend, WA

City of North Bend

For this roadway extension project, Parametrix evaluated the potential for the project to encounter hazardous materials during construction. Marty wrote the hazardous materials technical report for this project, summarizing field findings and complying with applicable regulatory requirements.

Tillamook Co Stormwater Compliance

County of Tillamook

The Parametrix team is providing support for the county's stormwater 1200Z permit requirements. Marty communicates directly with the client on stormwater-related issues, assists in sampling coordination events, and ensures project discharge monitoring reports (DMRs) are submitted on time.

Data Center Siting Study | Eastern OR

Confidential Client

The Parametrix team is providing technical due diligence services for a number of data center siting studies across the western US. Marty is working as part of the team that is preparing Phase I environmental site assessments for this client.

Stormwater Management for Shipping Centers | Various OR Locations

Confidential Client

In previous employment, Marty served as the Oregon State stormwater lead for her firm's major confidential shipping client. She communicated directly with the client on stormwater-related issues and ensured the project discharge monitoring reports, or DMRs, complied with Oregon DEQ requirements.

NEPA and FERC Resource Reports | Various North America Locations

Confidential Client

In previous employment, Marty assisted in writing various resource reports for NEPA and FERC clients. Her experience includes resource reporting for both Socioeconomics and Land Use.

Monitoring and Engineering for Closed Landfill | Tillamook, OR

Tillamook County

Parametrix has been providing monitoring and reporting services to the county for more than 10 years to support solid waste and stormwater permits. Since joining Parametrix, Marty has focused on the stormwater permitting aspects of the project, including data management, reporting to the Oregon DEQ, and writing the Scope of Practice, or SOP, for the state's 1200-Z stormwater permit. Marty also helped facilitate communications between the county and DEQ. She met with the DEQ representative to let them know that the county is working with us to meet permit requirements and to find out what DEQ needs to see in upcoming actions and documentation.

Shira DeGrood, RG

PHASE I/PHASE II ENVIRONMENTAL SITE ASSESSMENTS

Years of Experience: 20 ■ Years with Parametrix: 2 ■ Education: BS, Microbiology, MS, Soils and Biogeochemistry ■ Registrations: Registered Geologist, ID, OR ■ Certifications: 40-hour OSHA, Transportation Worker Identification Credential

Shira is experienced in environmental work and project management including due diligence (Phase I and Phase II assessments), contaminated site assessment and remediation. She has provided technical allocation for complex sediment superfund sites and has performed assessment, source control, and remediation of soil, groundwater, and sediment. Shira has diverse experience in project and site management of remedial investigations in soil, groundwater, and sediment, soil vapor characterization, in-situ and ex-situ remediation of soil and groundwater, feasibility studies, storm water/sediment source control evaluations, aquifer flow tests, and NPDES permitting.

Select Project Experience

Interstate Bridge Replacement Program | Portland, OR–Vancouver, WA)

Oregon/Washington Department of Transportation

Shira led a team in performing Phase I environmental site assessments (ESAs) for 136 properties to support the proposed replacement of the I-5 bridge. She performed assessments and delivered reports within 2 months of kick-off. This programmatic effort included development of site-specific templates, standardization of practices between authors, technical review of reports, and consistency review between reports, health and safety planning, and site access planning. Each Phase I ESA included a site visit, review of environmental databases and historical records, assessments of previous site investigation/remediation activities, and owner interviews.

Data Center Technical Due Diligence | Boardman, OR

Confidential Client

Shira provided technical review and oversight of the Phase I ESA for this project. The ESA involved a site visit, a review of environmental databases and historical records, and an owner interview.

Data Center Campus | Hermiston, OR

Kimley-Horn and Associates

Shira provided technical review and oversight of the Phase I ESA for this project. Work included a site visit, review of environmental databases and historical records, historical air quality review and owner interview. Shira also provided additional review and oversight related to adjacent sites with gravel quarries and unknown surface impacts.

Lakeland Hills Pump Station Facility Replacement | Auburn, WA

King County

Shira provided technical oversight of a Phase I ESA for a pump station expansion. The ESA involved a site visit, a review of environmental databases and historical records, and an owner interview.

Remedial System Evaluation and Further Site Investigation at Former Bulk Terminal | McMinnville, OR

Confidential Client

Shira led technical services on this former bulk. As the primary contact with the ODEQ project manager, she implemented a 5-year review to evaluate the current remedial action. Site investigation activities included drilling using MIHPT and UVOST technologies and groundwater monitoring. Shira identified that LNAPL was still present in areas outside of the treatment area and developed a conceptual site model to assess direct contact and vapor intrusion risks to adjacent residential properties. She identified an adjacent site as a source of remaining LNAPL in the western portion of the site.

Reeder Road Culvert Replacement Services | Portland, OR

Multnomah County

Shira performed a clean fill determination and a hazardous material corridor survey for a road reconstruction/culvert replacement project. She reviewed construction documents and coordinated with engineers to develop decision units, a sampling plan, and an analytical program. She collected samples from each unit and coordinated with the laboratory. Shira also assessed laboratory and field data and wrote a memorandum describing methods, results, conclusions, and recommendations.

Source Identification of Sediment Contamination | Portland, OR

Confidential Clients

Shira wrote expert reports to support allocation of cleanup efforts in the Willamette River. The reports assessed potential sources of contamination, such as current and previous site ownership and operations, potential contaminants associated with the site operations, pathways for contaminants to reach river sediments, and mass balance calculations. Also performed fingerprinting of PCBs, dioxins/furans, and co-contaminants using multivariate statistics to provide another line of evidence of contamination sources.

Whitney Withrow, PMP

Senior Planner

Years of Experience: 11 ■ Years with Parametrix: 1 ■ Education: BA, Environmental Biology, William Penn University, 2009 | Military Geological Engineering (Grad Cert), Missouri University of Science and Technology, 2017 ■ Licenses and Certifications: Project Management Professional (PMP), OSHA-30 Construction Safety, 40-Hour HAZWOPER, eRailSafe, DOT/IATA Hazmat Shipping

Whitney is an environmental and project management professional (PMP) with over 11 years of experience in project management, process improvement, and environmental compliance. She possesses a strong background in technical requirement identification, statistical analysis, and interagency coordination, actively maintaining partnerships with local, state, federal, and international organizations. Drawing from her extensive military experience, she offers expertise in operational planning, organizational change management, and strategic development. Her environmental qualifications include in-depth knowledge of the National Environmental Policy Act (NEPA) process, as well as conducting Phase I and Phase II environmental site assessments (ESAs) and environmental assessments (EAs).

Selected Project Experience

Interstate Bridge Replacement Program | Portland, OR–Vancouver, WA)

Oregon/Washington Department of Transportation

Whitney is the task manager responsible for leading and coordinating a technical team through the Phase I ESA process, ensuring compliance with ASTM E1527-21 and relevant regulatory guidelines. She has provided technical review, feedback, and support to maintain quality and consistency throughout the assessment process.

Phase II Site Investigations | Multiple Locations in the U.S.

Private Clients

Whitney managed drilling subcontractors during subsurface investigations using Direct Push Technology (DPT), overseeing the collection and field screening of continuous-core soil samples for volatile organic compounds (VOCs), as well as groundwater and soil-gas sampling. She provided technical guidance and on-site supervision for vapor pin installations and sub-slab assemblies to support TO-15 indoor/ambient air sampling and acrylate (PV2011/PV2026) air and sub-slab sampling. Whitney also conducted senior-level review of a site management plan for a Point of Entry Treatment (POET) system, with an emphasis on PFAS analysis and adherence to regulatory compliance standards.

Incident Response and Recovery Team | Multiple Locations in the U.S.

Private Clients

Whitney contributed to emergency response operations for train derailments, oil spills, and pipeline releases. She documented incident details, coordinated on-site activities, managed contractors, and oversaw first responder operations. Whitney also ensured regulatory compliance through waste tracking and safety oversight. Additional responsibilities included installing monitoring wells and collecting soil and groundwater samples for environmental assessment.

CERCLA Project Coordinator / On-Site Field Operations Manager | Stibnite, ID

Perpetua Resources

Whitney led field operations under the Administrative Settlement Agreement and Order on Consent for TCRA Round 1, overseeing remediation activities at four project sites during the summer of 2023. She managed project submittal schedules to ensure compliance with directives from the U.S. Environmental Protection Agency (EPA) and U.S. Forest Service (USFS). Whitney directed removal actions involving the excavation and on-site disposal of over 350,000 tons of contaminated sediment and mine waste from streambanks and floodplains to reduce environmental risks and restore impacted areas.

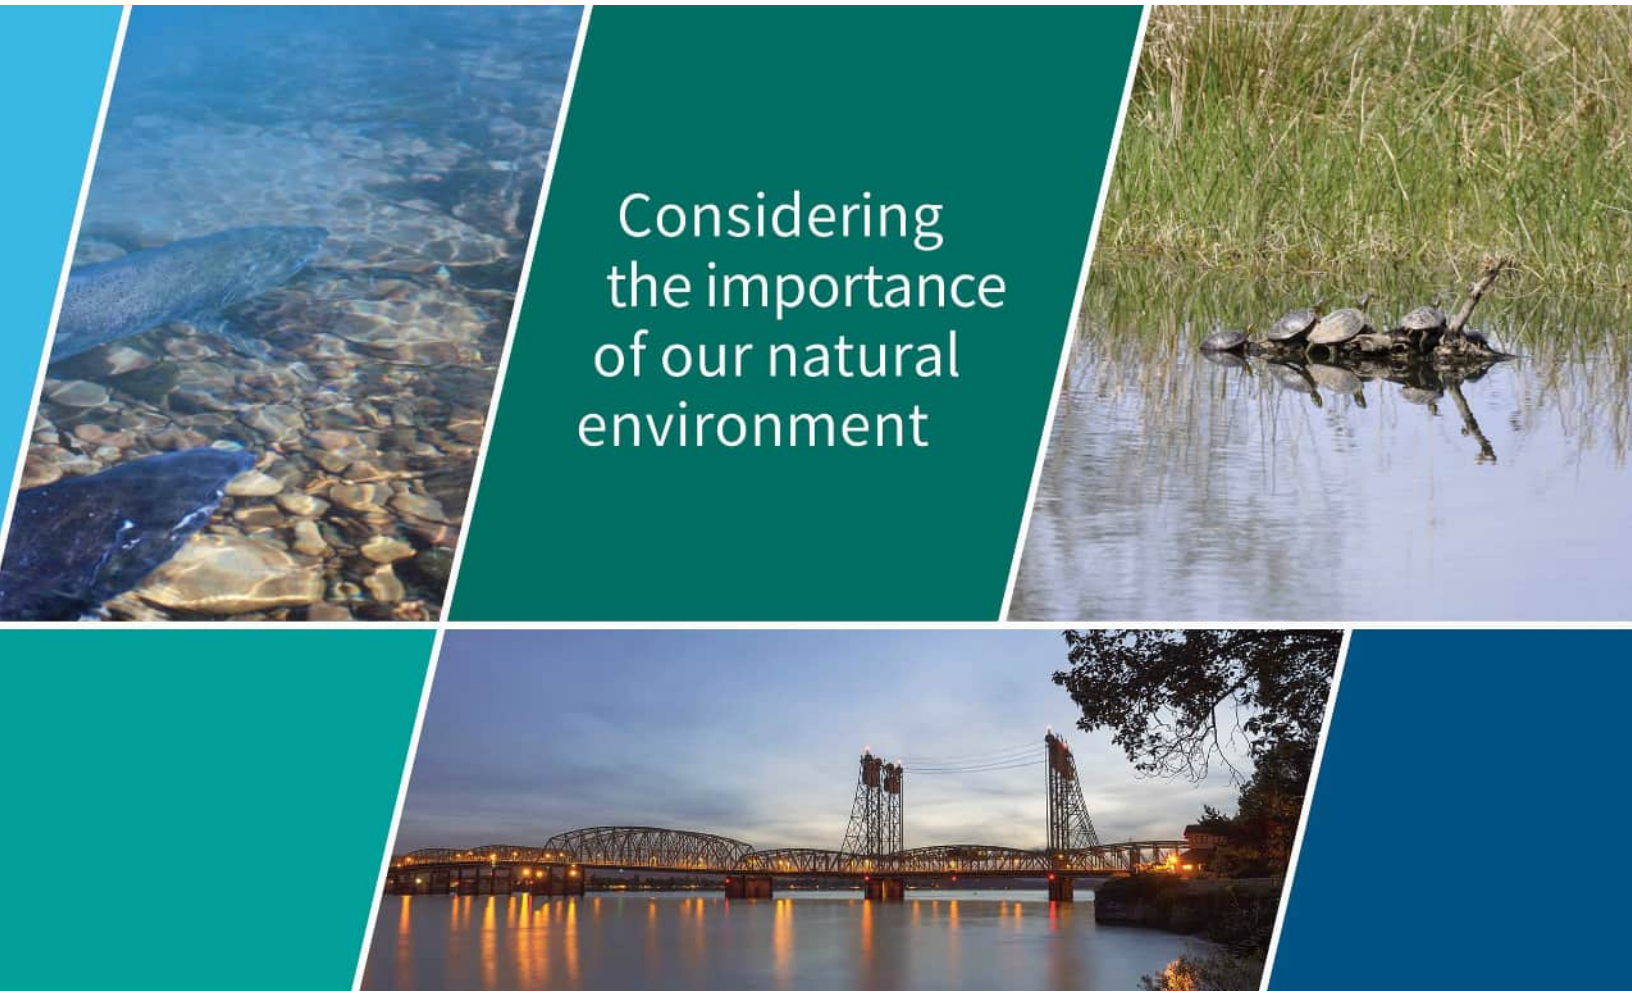
FERC Pipeline Relocation | NV

Private Client

As deputy project manager, Whitney oversaw coordination between subcontractors and team leads throughout the FERC Section 7(c) application process. She managed a detailed project schedule and task tracker to ensure timely deliverables. She also served as a key liaison with Naval Air Station Fallon in support of the Fallon Range Training Complex modernization initiative. Finally, Whitney conducted senior-level reviews of resource reports and led stakeholder meetings to align project goals and regulatory requirements.

Community Water Storage Project EA | Ashburn, VA

Private Client



Whitney led a multidisciplinary team of technical experts through the FEMA

NEPA process to obtain a Finding of No Significant Impact (FONSI) for the transformation of a decommissioned rock quarry into a raw water storage reservoir and the construction of a high-capacity pumping station capable of storing over 1 billion gallons of water offline from the Potomac River. She oversaw the update and reissuance of outdated permits through the Joint Permit Application process, ensuring full regulatory compliance and supporting continued project progression.

Sewer Service Area Pump Station EAs | Norfolk, VA

Private Client

Whitney led and coordinated multiple teams through the Virginia Department of Environmental Quality (VDEQ) EA process, including the preparation of EA documentation, Coastal Zone Management Act (CZMA) Consistency Certification, and Endangered Species Act (ESA) consultation. She oversaw public involvement efforts, including organizing outreach activities and managing responses to public comments, ensuring regulatory compliance and effective stakeholder engagement throughout the review process.

EXECUTIVE SUMMARY

Parametrix was retained by the Oregon Department of Transportation (ODOT) to perform a Phase I Environmental Site Assessment (ESA) on the developed property located at 1702 NW Eleven Mile Avenue in Gresham, Oregon. This property may be acquired as part of the Interstate Bridge Replacement (IBR) Program and is known as IBR-1SE05DA-01300. Based on the findings of this investigation, Parametrix reached the following conclusions:

1. The subject property is located on Multnomah County Tax Lot 1SE05DA-01300. The subject property encompasses an area of approximately 1.5 acres, zoned HI (heavy industrial), and is occupied by a paving company. A single-story maintenance and office building is located near the north end of the subject property, and a covered storage area is located in the southwest corner.The remainder of the subject property consists of open asphalt or graveled equipment storage yard.
2. Based on the historical aerial photograph review, the subject, adjacent, and vicinity properties appear to have been undeveloped in 1935. In 1948, a building is visible on the subject property; the surrounding area appears to be in agricultural use and remains so until 1970. In 1975, the surface of a portion of property to the south appears disturbed, such as would be caused by aggregate mining. In the 1981, the building on the subject property is not visible, apparently razed. The area appears to remain predominately agricultural and suburban residential. In 1990, the adjacent property to the north and areas to the north have been developed for industrial use, including light rail tracks and the Ruby Junction Operations Facility. In 1994, a building is visible near the north end of the subject property, as are two large commercial/industrial sized buildings on the property to the northwest. In 2000, a vehicle wrecking yard is visible on the adjacent property to the west at 1709 NW Eleven Mile Avenue. In 2006, the vehicle wrecking yard at the adjacent property to the west had been replaced by two large buildings, and the property to the south has been developed into what appears to be an aggregate mining and/or aggregate distribution operation. Between 2006 and 2020, the subject, adjacent, and vicinity properties appear to remain in similar uses. No recognized environmental conditions (RECs) associated with historical land use were identified during the historical records review.
3. Based on the age of the building at the subject property, there is low potential for lead-based paint, polychlorinated biphenyls, and asbestos-containing materials to have been used in building materials at the subject property.
4. The subject property is not listed on any regulatory database that would indicate a past or current release or storage of hazardous materials. A review of regulatory information indicated that several nearby sites were identified in the regulatory record databases. However, based on regulatory status and distance from the subject property, none of the sites identified appear to present a REC to the subject property.

[redacted]

6. An interview was not conducted with a property representative to identify any potential environmental conditions and to address information data gaps during the Phase I ESA process. The lack of a property owner or representative interview represents a data gap in accordance with ASTM Standard E1527-21. However, the information obtained for the Phase I ESA, including regulatory database and historical documentation, was deemed sufficient to draw conclusions of potential environmental conditions with the subject property.

[redacted]

1. INTRODUCTION

Parametrix was retained by the Oregon Department of Transportation (ODOT) to perform a Phase I Environmental Site Assessment (ESA) on the developed property located at 1702 NW Eleven Mile Avenue in Gresham, Oregon (herein referred to as the subject property) (Figure 1). The subject property consists of Tax Lot ID# 1S3E05DA-01300 in Multnomah County, Oregon. It is our understanding that ODOT may pursue acquisition of the subject property as part of the Interstate Bridge Replacement (IBR) Program. The subject property is identified as IBR-1S3E05DA-01300 (Figure 2).

This Phase I ESA includes a review of available documentation pertaining to the subject property, a limited site reconnaissance, and a review of pertinent public agency documents. The ESA consists of two distinct tasks: (1) a review of documents and of oral information, and (2) a site examination. Conclusions and recommendations within this report are based solely on observed evidence and data collected during the performance of this assessment.

1.1 Purpose

The Phase I ESA was conducted in general accordance with ASTM Standard E1527-21, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, which defines the generally accepted industry practices and procedures currently applicable at the time and place of this study (ASTM 2021). The Phase I ESA is intended to permit the user to satisfy the requirements to qualify for the bona fide prospective purchaser limitation under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), and as such constitutes "all appropriate inquiries in the previous ownership and uses of the property consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601 (35)(B).

The purpose of this Phase I ESA is to identify recognized environmental conditions (RECs) on or near the subject property. The term *recognized environmental conditions* is defined in ASTM Standard E1527-21 as:

> "…(1) the presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* due to a *release* to the *environment*; (2) the likely presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* due to a *release* or likely *release* to the *environment*; or (3) the presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* under conditions that pose a *material threat* of a future *release* to the *environment*."

In accordance with ASTM Standard E1527-21, some RECs may be further defined as historical recognized environmental conditions (HRECs) or controlled recognized environmental conditions (CRECs).

An HREC is defined as:

> "…*a past release of any hazardous substances* or *petroleum* products that has occurred in connection with the *property* and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the *property* to any required controls."

A CREC is defined as:

> "…a *recognized environmental condition* resulting from a past *release of hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority, with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls."

This Phase I ESA endeavors to identify all RECs, HRECs, and/or CRECs at the subject property.

1.2 Significant Assumptions

This assessment was conducted in accordance with generally accepted industry practices and procedures within the scope of work authorized at the time and place of this study. Parametrix's observations are limited to those areas to which it had access on the subject property.

An interview was not conducted with a property representative to identify any potential environmental conditions and to address information data gaps during the Phase I ESA process. The lack of a property owner or representative interview represents a data gap in accordance with ASTM Standard E1527-21.

Unless otherwise stated, no other exceptions to the guidelines presented in ASTM E1527-21 were made during completion of this Phase I ESA.

1.3 Limitations

The findings, conclusions, and recommendations presented in this report are based on site conditions and the best available information known or made available by regulators, other consultants, or other sources at the time of the investigation. Parametrix conducted a diligent search and investigation in compliance with prevailing standards of the profession; however, certain adverse conditions may exist at the subject property not detected at the time of the investigation.

The services provided under this contract, as described in this report, include professional opinions and judgments based on data collected. These services have been provided according to generally accepted engineering practices. The opinions and conclusions contained in this report are typically based on information obtained from the following:

- Observations and measurements made by Parametrix field staff.
- Contacts and discussions with regulatory agencies and others.

- Review of available hazardous substance or solid waste lists.
- Opinions and judgments of Parametrix based on the information available.

In the professional judgment of Parametrix, the services performed pursuant to the scope of services are an adequate basis to collect data for a preliminary evaluation of the subject property and upon which to draw the conclusions stated in this report.

2. SUBJECT PROPERTY DESCRIPTION

2.1 Location

The subject property is located at 1702 NW Eleven Mile Avenue in Gresham, Oregon. The subject property includes Multnomah County Tax Lot 1S3E05DA-01300 and is identified as IBR-1S3E05DA-01300. The site location is shown on Figure 1, the Site Vicinity Map.

The subject property is approximately 1.5 acres in area located to the south of an industrial property followed by the Ruby Junction Operations Facility, east of NW Eleven Mile Avenue, north of an aggregate mining operation, and west of the Gresham Fairview Trail. According to the Multnomah County Assessment office, Rick P. Saran is the current owner of the subject property. The site location is shown on Figure 1, the Site Vicinity Map. The boundary of the subject property is shown on Figure 2.

2.2 Site and Vicinity Characteristics

The subject property consists of an approximately 1.5-acre parcel with an approximately 1,470-square-foot shop near the north end of the property. Asphalt paved areas are present along the western and southern site boundary and adjacent to the shop. Ground surface of the remainder of the subject property consists of gravel. The subject property is located in an industrial area.

The subject property is located to the south of an undeveloped parcel, followed by an auto shop and then by the Ruby Junction Operations Facility, east of NW Eleven Mile Avenue, north of an aggregate mining operation, and west of the Gresham Fairview Trail (Figure 2). A street-sweeping company operates in the parcel west of the subject property.

2.3 Physical Setting

The subject property is located in the Portland Basin, which marks the northern terminus of the Willamette Lowland in Oregon (DNR 2023). The northern portion of the basin is known for its low topographic relief, with the subject property at an elevation of approximately 267 feet above mean sea level. The Portland Basin is bounded by the Cascade Range to the east and the Coast Range to the west.

The surface geology in this area is identified as coarse-grained Missoula flood deposits, which includes boulders and cobbly, sandy gravels which were deposited by the Missoula floods as they spilled into the Portland Basin from the Columbia Gorge (Wells et al. 2020). Surface soils consist of silty sands (Mult 61962, Appendix E; OWRD 2023).

The topography in the vicinity of the subject property is a consistent slope, rising with distance from the Columbia River. The anticipated groundwater gradient is to the north toward the Columbia River. A static groundwater level of 17 feet below ground surface was documented on July 18, 2000, in a geotechnical hole approximately 150 feet north of the subject property.

2.4 Current Use of the Subject Property

The subject property is approximately 1.5 acres and is zoned HI (heavy industrial). It is used for equipment storage and equipment maintenance by Eastside Paving. The subject property is currently owned by Rick P. Suran.

2.5 Descriptions of Improvements on the Subject Property

There is a 1,470-square-foot single-story building located near the north end of the property, which is used for office space and for equipment maintenance. The northwest portion of the property is paved.An asphalt pad is also present adjacent to the western site boundary and under an open-sided storage shed in the southwest portion of the subject property. The remainder of the site is covered with gravel. Asphaltic and graveled areas are used for parking vehicles and heavy equipment such as compactors, excavators, pavers, trucks, and asphalt sealant delivery trucks. The property is also used to store miscellaneous items such as empty drums and totes, tires, and other equipment and materials.

2.6 Environmental Liens

An environmental lien is defined by ASTM as a charge, security, or encumbrance upon title to a property to secure the payment of a cost, damage, obligation, or duty arising out of response actions, cleanup, or other remediation of hazardous substances or petroleum products. No evidence of environmental liens against the subject property was identified during the course of this Phase I ESA.

3. RECORDS REVIEW

The purpose of the records review task was to gather environmental data on the subject property prior to the site examination. The information review consisted of two subtasks: a review of various lists and files published by federal and State of Oregon agencies; and a compilation of historical uses of the site and site vicinity, to determine if past operations pose an environmental risk to the subject property. Information for agency file review is based, in part, on a report provided by Environmental Data Resources (EDR; EDR 2023a). The EDR report is included in Appendix A.

The EDR report is a summary of state and federal database searches for sites of possible environmental concern. The information review enabled Parametrix personnel to characterize the types of activities performed at the site, identify data gaps prior to the site examination, and facilitate recognition of discrepancies between reported and observed data. Data gaps identified during the document review were addressed by interviewing knowledgeable personnel (when available), observations during the site examination, or by additional detailed investigation.

It should be noted that this information is reported as Parametrix received it from EDR, which in turn reports information as it is provided in various government databases. It is not possible for either Parametrix or EDR to verify the accuracy or completeness of information contained in these databases. However, the use of and reliance on this information is a generally accepted practice in the conduct of environmental due diligence. The following sections present information from the document review.

3.1 Standard Environmental Record Sources

The following section summarizes information collected from records maintained by the U.S. Environmental Protection Agency (EPA) and the Oregon Department of Environmental Quality (DEQ). The information includes details on sites identified in regulatory databases within recommended ASTM search distances. A complete listing of the databases reviewed is included in the EDR Radius Map™ Report (Appendix A).

3.1.1 Review of Oregon Department of Environmental Quality Databases

The following sections summarize the most relevant information obtained from the EDR Radius Map™ Report regarding sites identified within the ASTM E1527-21 search radii from the following databases. Additional information regarding these sites was reviewed on the DEQ Environmental Cleanup Site Information Database website (DEQ n.d.a) and the DEQ LUST Cleanup Site Database website (DEQ n.d.b.) to supplement data gaps in the EDR report. A complete listing of the databases reviewed is included in the EDR report. Relevant database listings from DEQ include:

- DEQ Underground Storage Tank (UST) List
- DEQ Leaking Underground Storage Tank (LUST) List

- DEQ Environmental Cleanup Site Information (ECSI) List
- DEQ Confirmed Release (CRL) List
- DEQ Brownfields List
- DEQ Engineering or Institutional Controls
- DEQ Solid Waste Facilities (SWF/LF) List
- DEQ Spill Data List

3.1.1.1 DEQ Underground Storage Tank List

The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data was obtained from the DEQ UST List.

Information contained in the EDR report indicates that the subject property is not listed as a UST site. One UST sites was identified within 0.25 miles of the subject property.

- The Gresham Sanitary Service site (2131 NW Birdsdale Av.) is located approximately 0.25 miles north of the subject property. According to DEQ records, two USTs were removed. This site is not included on the DEQ LUST list.

Unless otherwise noted, the presence of a UST on and/or near a site does not, in itself, constitute a REC. Where available, other information was reviewed regarding the presence of a UST such as the age of the facility, proximity to the subject property, and known releases or spills. UST sites that have had known releases are discussed in Section 3.1.1.2 below.

3.1.1.2 DEQ Leaking Underground Storage Tank List

The Leaking Underground Storage Tank (LUST) Incident Reports contain an inventory of reported LUST incidents. The data was obtained from the DEQ LUST Database List.

Information contained in the EDR report indicates that the subject property is not listed as a LUST site.

Fourteen LUST sites were identified within 0.5 miles of the subject property, nine of which are identified as heating oil tank (HOT) sites. The two LUST sites are located in near proximity to the subject property (within approximately 0.125 miles) and are discussed below:

- The HOT site at 1843 NW Eleven Mile Avenue (LUST #26-91-0398) is located approximately 0.1 miles north of the subject property. The petroleum release was reported to DEQ in 1991. Eight yards of petroleum-contaminated soil (PCS) was removed; groundwater was not encountered in the remedial excavation. At the time, a pocket of approximately 108 cubic yards of PCS remained in place. DEQ issued a conditional closure letter for this HOT on March 11, 1992 (Appendix E). However, this site is not considered a REC to the subject property based on distance from the subject property, the type of contaminant (heavy oil), and because groundwater was not encountered during removal of PCS.

- The TriMet HOT site at 2005 NW Eleven Mile Avenue (LUST # 26-12-1437) is located approximately 0.2 miles north of the subject property. The petroleum release was reported to DEQ in 2012. According to DEQ records, a Soil Matrix Cleanup was performed, and contractor cleanup certification was issued. DEQ issued a cleanup closure letter on January 30, 2013 (Appendix E).

Nine of the LUST sites located between 0.125 miles and 0.5 miles from the subject property have received no further action (NFA) determinations or, in the case of heating oil tanks, closure letters from DEQ. The three sites with open DEQ LUST folders had no reported groundwater impacts and are located at least 0.3 miles from the subject property.

Based on DEQ information indicating LUST site closure activities, a lack of reported groundwater impact, and/or distance, none of the identified LUST sites referenced above appear to represent a REC to the subject property.

3.1.1.3 DEQ Environmental Cleanup Site Information List

The ECSI identifies and tracks known or potentially contaminated sites within Oregon and is the state's equivalent to CERCLIS. The Confirmed Release List (CRL) is a subset of the ECSI and includes sites that have known releases of hazardous substances. The Voluntary Cleanup Program (VCP) database is a list of sites that have been entered into the DEQ voluntary cleanup program and are undergoing cleanup. The subject property is not identified on the ECSI, CRL or VCP databases.

Eleven ECSI sites were identified within 1 mile of the subject property. Of these, three are located within 0.5 miles of the subject property:

- The MAACO Auto Paint site (2441 NW Eleven Mile Avenue; ECSI 132) is located approximately 0.4 miles north of the subject property. The site listed in the ECSI database. DEQ records indicate solvents were alleged to have been dumped on the site. DEQ collected soil samples and based on the detection of low concentrations of petroleum, volatile organic compounds, and naphthalene in soil, made a determination that no further action was required. An NFA was not provided in available records.
- The Obrist & Cunningham site (935 SE 202nd Avenue; ECSI 4237) is located approximately 0.5 miles north of the subject property. The site is listed in the ESCI, VCP, AIRS, HSIS, and UIC databases. According to DEQ records, soil samples collect from drywells showed the presence of petroleum and lead. Following a cleanup, DEQ issued an NFA determination on December 13, 2005 (Appendix E).
- The Gresham Sand & Gravel site (1339 NW Eastwood Road; ECSI 1407) is located approximately 0.3 miles southwest of the subject property. The site is listed in the ECSI database. A former landfill, according to DEQ records the site was investigated following a report of employee health concerns following exposure to sump material. Due to a low concentration of identified contaminants in surface water samples, DEQ issued an NFA determination for the site on September 30, 1993 (Appendix E).

None of the other eight identified ECSI sites are located within 0.5 miles of the subject property. The remaining ECSI sites are located at sufficient distances and/or cleanup activities have been completed so that they do not appear to represent RECs to the subject property.

3.1.1.4 Solid Waste Facilities/Landfill

The Solid Waste Facilities/Landfill (SWF/LF) records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data were obtained from DEQ's Solid Waste Facilities List.

The subject property is not listed as a SWF/LF site. One SWF/LF site was identified within 0.5 miles of the subject property:

The Gresham Sanitary Service facility (2131 NW Birdsdale Avenue) is located approximately 0.25 miles north of the subject property and is listed on the SWF/LF, AST, HSIS, and UIC databases. According to DEQ records, the facility operates as a garbage transfer station. Garbage and recycling are received and processed for offsite disposal. The facility is not permitted to accept hazardous waste, lead acid batteries, asbestos, computers, and most computer monitors. Based on this site not being listed on regulatory cleanup databases, a restriction on acceptance of hazardous wastes, the absence of on-site disposal of wastes, and distance, this facility does not appear to be a REC to the subject property.

3.1.1.5 SPILLS Database

The database provides a comprehensive list of reported spills. The subject property is not listed as a SPILLS site.

3.1.1.6 DEQ Brownfields List

The Brownfields database lists sites of real property where expansion or redevelopment is complicated by actual or perceived environmental contamination. The subject property is not listed as a DEQ Brownfield. One DEQ Brownfields site was identified within 1 mile of the subject property.

- The Lot 5 Vance Landfill site (1541 SE 190th Avenue; ECSI 5780) is located approximately 0.5 miles west of the subject property and is listed in the ECSI, VCP, SPILLS, and Brownfields databases. DEQ records indicate that, ending in 1978 or 1979, the site received municipal garbage and yard debris transferred from and adjacent property (Gresham Sand & Gravel). Methane and hydrogen sulfide are the contaminants of concern. Site screening was recommended by DEQ in 2013 (Appendix E), but DEQ has not issued an NFA for this site.

Based upon distance and the identified contaminants, this site does not appear to be a REC to the subject property.

3.1.1.7 DEQ Engineering/Institutional Controls

DEQ maintains records for sites with implemented engineering controls and/or institutional controls. The subject property is not included in records of sites with Engineering/Institutional Controls, per DEQ. No cleanup sites within 1 mile require DEQ Engineering/Institutional Controls, per DEQ.

3.1.2 Environmental Protection Agency Database Review

The EPA administers several programs designed to protect the environment and monitor the generation, storage, treatment, and disposal of hazardous substances. The following sections summarize the most relevant information obtained from the EDR report regarding sites identified within ASTM E1527-21 search radii from the following databases. A complete listing of the databases reviewed is included in the EDR report.

- National Priorities List (NPL)
- Superfund Enterprise Management System (SEMS) List
- Resource Conservation and Recovery Act (RCRA) Corrective Action Report (CORRACTS) List
- Resource Conservation and Recovery Information System (RCRIS) List
- Emergency Response Notification System (ERNS) List
- U.S. Brownfields List

3.1.2.1 NPL

The National Priorities List (NPL) identifies priority hazardous waste sites for remedial actions under the EPA Superfund program. The EDR report indicates that the subject property is not listed as an NPL site. No NPL sites were identified within 1 mile of the subject property, and no de-listed NPL sites were identified within 0.5 miles of the subject property.

3.1.2.2 SEMS List

The EPA publishes a list of sites that may potentially pose a threat to the environment or the health of the general public. This list is known as the SEMS list (formerly the CERCLIS list). Information contained in the EDR report indicates the subject property is not listed as a SEMS site. One SEMS site was identified by EDR in the database search for potential RECs potentially impacting the subject property.

- The Columbia Slough is listed as a SEMS-ARCHIVE and AOCONCERN. The Columbia Slough, located approximately 2.25 miles north of the subject property, is an ongoing, long term remediation site. Based on information in the EDR report, a pond adjacent to Fairview Creek is a potential pollution source of Fairview Creek and therefore to the Columbia Slough. The pond beside Fairview Creek is located approximately 0.25 miles northeast from and cross gradient of the subject property. The Columbia Slough is not a confirmed source of contamination to

the subject property and the Columbia Slough is greater than 0.5 miles from the subject property and is not a REC to the subject property.

The EPA also publishes the SEMS-NFRAP list, which are SEMS sites that have been designated "no further remedial action planned" (NFRAP) and have been removed from the SEMS list. Information contained in the EDR report indicated that the subject property is not listed as a SEMS-NFRAP site. No SEMS-NFRAP sites were identified within 1 mile of the subject property.

3.1.2.3 CORRACTS Review

The CORRACTS report identifies hazardous waste handlers with corrective action activity. Information contained in the EDR report indicates the subject property is not listed as a CORRACTS site. No CORRACTS sites are listed within 1 mile of the subject property.

3.1.2.4 Resource Conservation and Recovery Information System List

The RCRIS list includes selective information on sites which generate, transport, store, treat, and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Information contained in the EDR report indicates the subject property is not listed in the RCRIS database.

Three RCRIS sites are listed within 0.25 miles of the subject property. All three sites are not located adjacent to the subject and are not listed as a RCRA TSD sites or sites undergoing corrective action.

The EPA also regulates the management of hazardous waste at Transportation, Storage, and Disposal (TSD) facilities. Information contained in the EDR report indicates the subject property is not listed as a RCRIS-TSD site. No RCRIS-TSD sites were identified within 0.5 miles of the subject property.

Based upon distance and regulatory status, the three identified RCRIS listed sites do not appear to be potential RECs to the subject property.

3.1.2.5 ERNS List

The ERNS is a national database containing information from spill reports made to federal authorities. Information contained in the EDR report indicates the subject property is not listed as an ERNS site.

3.1.2.6 U.S. Brownfields List

The EPA's U.S. Brownfields list identifies Brownfields properties addressed by Cooperative Agreement Recipients and Brownfields properties addressed by Targeted Brownfields Assessments. The EDR report indicates the subject property is not listed as a U.S. Brownfields site. No U.S. Brownfield sites were identified within 0.5 miles of the subject property.

3.1.3 Other Databases

3.1.3.1 EDR Proprietary Databases

EDR Historical Auto Stations

Historical auto stations are identified on a proprietary database maintained by EDR. Information contained in the EDR report indicates the subject property is not listed as a historical auto station. Information contained in the EDR report indicates that there are no historical auto stations sites listed within 0.125 miles of the subject property.

EDR Manufactured Gas List

Former manufactured gas plant (coal gas) sites are identified on the Manufactured Gas database. Information contained in the EDR report indicates the subject property is not listed as a manufactured gas plant site and no manufactured gas plants are listed within 1 mile of the subject property.

EDR Historical Cleaners

Historical cleaners are identified on a proprietary database maintained by EDR. Information contained in the EDR report indicates that there are no historical cleaner sites within 0.125 miles of the subject property.

3.1.4 Orphan Site List

Orphan sites are sites for which mapping information is not detailed adequately to plot the location of the site, or for which there is no known responsible party or the responsible party is unwilling or unable to pay for cleanup. The orphan site list and available mapping information were reviewed by Parametrix.

Six orphan sites were identified by EDR in the vicinity of the subject property. These sites are located at sufficient distances and/or cleanup activities have been completed so that they do not appear to represent RECs to the subject property.

3.1.5 Vapor Encroachment

ASTM Standard E1527-21 defines vapor migration as “the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface.” The recognition of vapor migration as a possible REC may require incorporation of new types of controls and restrictions to address this contamination pathway.

The subject property and adjacent sites were reviewed in an effort to determine if vapor migration has, or has the potential to have, occurred at the site, or from adjacent properties.

No properties were identified in the near vicinity that have confirmed releases of volatile contaminants in soil or groundwater that have not been sufficiently addressed or would otherwise present a potential impact to the subject property.

3.2 Historical Use Information

The objective of the historical use information review is to develop a history of the previous uses of the subject property and surrounding area that helps to identify the likelihood of past uses having led to RECs in connection with the subject property. Parametrix requested Sanborn Fire Insurance Maps (EDR 2023b) and historical aerial photographs (EDR 2023c) for review.

3.2.1 Certified Sanborn Maps™ Fire Insurance Map Review

Fire insurance maps in the EDR Certified Sanborn Map Report showing the vicinity of the subject property were requested to establish historical business operations at the subject property and adjacent properties. This report (Appendix B) certifies that the complete holdings of the Sanborn Library, LLC collection were searched and, based on client-supplied subject property information, fire insurance maps covering the subject property were not found.

3.2.2 Historical Aerial Photograph Review

Historical aerial photographs of the subject property area were obtained from EDR in the EDR Aerial Photo Decade Package. Aerial photographs for the years 1935, 1948, 1951, 1955, 1960, 1970, 1975, 1981, 1990, 1994, 2000, 2006, 2009, 2012, 2016, and 2020 were examined. Copies of the aerial photographs are included in Appendix C. Observations are listed below.

1935	The subject property appears to be undeveloped and partially tree-covered. Most adjacent properties appear to be undeveloped; some are covered by trees, and some are cleared and used for farming. Roads border the east and west sides of the subject property.
1948	A building is visible near the northwest corner of the subject property. Farmhouses are visible to the east, west, and north. Residential buildings and farms are visible in the vicinity.
1951–1955	The subject property and adjacent, and nearby properties appear similar to the previous aerial photograph.
1960–1970	The subject property appears similar to the previous to the previous aerial photographs. The property to the west of the west adjacent property appears disturbed, such as is created by aggregate mining.
1975	This aerial photograph is not of a high enough resolution to discern minor changes in land use. The subject and adjacent properties appear to be similar to the previous aerial photographs.

1981	The building in the near the northwest portion of the subject property is no longer visible. Many of the adjacent and vicinity properties have been developed for residential use, including the adjacent property to the north. The adjacent property to the west appears undeveloped. Dense residential development is visible to the southeast, beyond the rural property adjacent to the subject property. The adjacent property to the south appears disturbed, such as is created by aggregate mining.
1990	The subject property appears to be similar to the previous aerial photograph. Two buildings are visible on the adjacent property to the north. Commercial and industrial development, including the Ruby Junction Operations Facility, are visible several hundred feet to the north. Water has filled the aggregate operation west of the adjacent property to the west.
1994	A building is visible on the north end of the subject property. Adjacent properties appear similar to the previous aerial photograph.
2000	The subject property appears to be similar to the previous aerial photograph. Several dozen vehicles are visible on the adjacent property to the west.
2006	The subject property appears similar to the previous aerial photograph, except for an extension of the building eastward. Muddy surface water is visible on the adjacent property to the south. The large quantity of vehicles on the adjacent property to the west are no longer visible, replaced by three commercial sized buildings. Another building is visible on the property to the north. The Ruby Junction Operations Facility has expanded to the southward, a few hundred feet from the subject property.
2009–2012	The subject and adjacent properties appear similar to the previous aerial photograph. Several trucks are visible on the subject property.
2016	The subject, adjacent, and vicinity properties appear similar to the previous aerial photograph. Light rail tracks associated with the Ruby Junction Operations Facility are visible northwest of the subject property. It appears that water is covering a portion of the adjacent property to the south.
2020	The subject and adjacent properties appear similar to the previous aerial photograph.

Based on the historical aerial photograph review, the subject, adjacent, and vicinity properties appear undeveloped in 1935. In 1948, a building is visible on the subject property; the area appears to be in agricultural use and remains so until 1970. In 1975, the surface of a portion of property to the south appears disturbed, with no buildings visible. In the 1981, the building on the subject property is not visible and the property appears undeveloped with many trees. The area appears to remain predominately agricultural and rural residential, except dense residential development is visible to the east, beyond the rural property adjacent to the subject property. In 1990, there are two buildings

visible on the adjacent property to the north. Commercial and industrial buildings are visible nearby to the north, including the Ruby Junction Operations Facility. In 1994, a building is visible near the north end of the subject property, as are two large commercial/industrial sized buildings on the property to the northwest. In 2000, several dozen vehicles are visible on the adjacent property to the west. In 2006, the vehicles present in 2000 have been replaced by two large buildings. The property to the south has been developed into what appears to be an aggregate mining and/or distribution operation and muddy surface water is visible near the common property line with the subject property. Between 2006 and 2020, the subject, adjacent, and vicinity properties appear to remain in similar uses.

3.2.3 Local Agency Records

Information from local agencies was reviewed for environmental significance as described in the following sections.

3.2.3.1 City of Gresham

A review of permits for environmental significance (i.e., septic tank, stormwater, dry wells, and/or USTs or aboveground storage tanks [ASTs]) was completed. No septic, and/or UST or ASTs permit records were recorded online with the Gresham Map records for the subject property.

3.2.3.2 Multnomah County

Based on information from the Multnomah County Tax Assessor's Office, the subject property is known as tax lot 1SE05DA-013000 and is approximately 1.5 acres in area. It is listed by Multnomah County as being owned by the Rick P. Suran. The subject property is currently used for maintenance and storage of equipment and vehicles related to asphaltic paving.

3.3 Additional Environmental Information

The following sections provide a summary of additional environmental information obtained for the site.

3.3.1 Asbestos

The manufacture of most asbestos-containing materials (ACM) was banned by the EPA by 1979. Prior to this, asbestos was a common constituent of numerous building materials, including floor and ceiling tiles, caulking, pipe insulation, roofing materials, and exterior siding.

Based on the age of building at the subject property (constructed in 1992), there is a low potential for ACM building materials to have been used at the subject property.

3.3.2 Lead-Based Paint

Before 1977, paint commonly contained lead which is considered to cause human health problems if ingested or inhaled.

Based on the age of building at the subject property (constructed in 1992), there is a low potential for lead-based paint (LBP) containing building materials to have been used at the subject property.

3.3.3 Polychlorinated Biphenyls

Polychlorinated biphenyl (PCB) manufacturing was banned in 1979. Transformers and electrical lighting equipment can potentially contain PCBs. No transformers were observed on the subject property. Based upon the age of the building (constructed in 1992), there is a low potential for PCBs to have been used in building materials at the subject property.

3.3.4 Radon

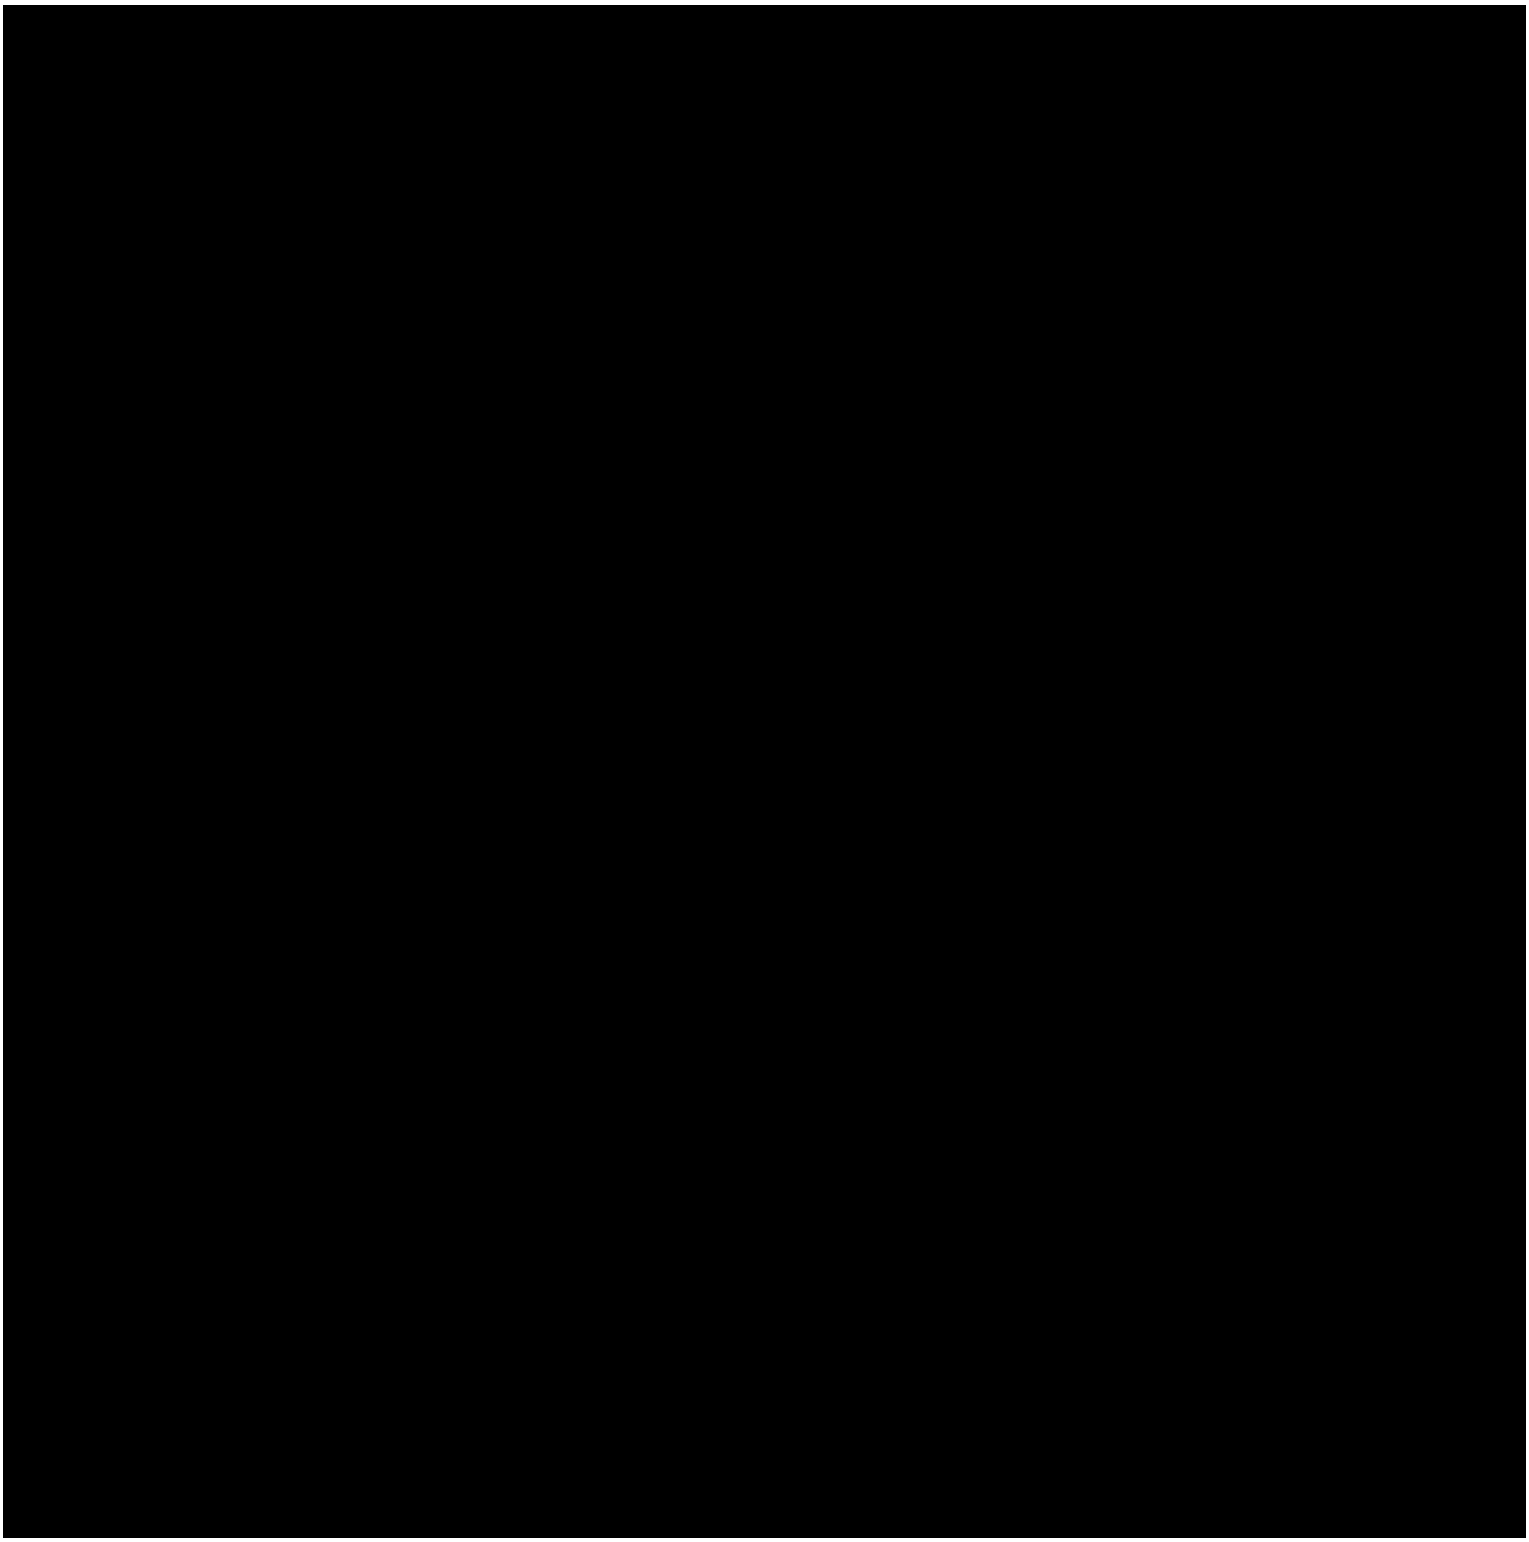
Radon is a naturally occurring radioactive gas formed by the decay of uranium in some rocks and soil. The adverse health effects associated with radon gas depends upon various factors, such as the concentration of the gas, and exposure duration. The potential concentration of radon gas within a building depends on subsurface soil conditions, the integrity of the building's foundation, the existence of a basement or crawl space (primary areas of concern), and the building's ventilation.

Multnomah County ZIP code 97030 is located in the Federal EPA Radon Zone 2. The Zone 2 indoor average radon level predicted from 2 to 4 picocuries per liter (pCi/L), reported as a moderate risk of radon elevation. The EPA Action Level for radon is 4 pCi/L. Based on this limited information, radon likely does not represent an environmental concern at the property.

4. FILE REVIEW

In accordance with ASTM Standard E1527-21, inquiries and review of previous investigations for the subject property, and a review of regulatory files for the subject property or adjacent properties may be conducted to further evaluate environmental conditions on the property or adjacent properties, and to fill in data gaps where applicable. Previous investigations and file reviews are summarized below.

4.1 Previous Investigations



Based on regulatory information from DEQ, the subject property is not listed on any regulatory databases. No previous investigations of the subject property were identified during the course of this Phase I ESA.

4.2 Adjacent and Nearby Properties File Review

Several adjacent and nearby properties were listed on environmental databases, as described in Section 3. Sufficient site-specific information was available through review of the EDR report, as well as online DEQ files, to develop an opinion on the potential for these properties to have affected the subject property. Therefore, a specific file review (physical review at DEQ) was not required, beyond those completed during the course of this Phase I ESA. Specific information on the nature of release, types of contaminants, media impacted, and the potential to have affected the subject property or otherwise caused environmental concern is provided in Section 3.

5. SITE EXAMINATION

[redacted]

6. INTERVIEWS

An interview was not conducted with a property representative to identify any potential environmental conditions and to address information data gaps during the Phase I ESA process. The lack of a property owner or representative interview represents a data gap in accordance with ASTM Standard E1527-21.

7. CONCLUSIONS

Based on the findings of this investigation, Parametrix reached the following conclusions:

1. The subject property is located on Multnomah County Tax Lot 1SE05DA-01300. The subject property encompasses an area of approximately 1.5 acres, zoned HI (heavy industrial), and is occupied by a paving company. A single-story maintenance and office building is located near the north end of the subject property, and a covered storage area is located in the southwest corner. The remainder of the subject property consists of open asphalt or graveled equipment storage yard.
2. Based on the historical aerial photograph review, the subject, adjacent, and vicinity properties appear to have been undeveloped in 1935. In 1948, a building is visible on the subject property; the surrounding area appears to be in agricultural use and remains so until 1970. In 1975, the surface of a portion of property to the south appears disturbed, such as would be caused by aggregate mining. In the 1981, the building on the subject property is not visible, apparently razed. The area appears to remain predominantly agricultural and suburban residential. In 1990, the adjacent property to the north and areas to the north have been developed for industrial use, including light rail tracks and the Ruby Junction Operations Facility. In 1994, a building is visible near the north end of the subject property, as are two large commercial/industrial sized buildings on the property to the northwest. In 2000, a vehicle wrecking yard is visible on the adjacent property to the west at 1709 NW Eleven Mile Avenue. In 2006, the vehicle wrecking yard at the adjacent property to the west has been replaced by two large buildings, and the property to the south has been developed into what appears to be an aggregate mining and/or aggregate distribution operation. Between 2006 and 2020, the subject, adjacent, and vicinity properties appear to remain in similar uses. No RECs associated with historical land use were identified during the historical records review.
3. Based on the age of the building at the subject property, there is low potential LBP, PCBs, and ACM to have been used in building materials at the subject property.
4. The subject property is not listed on any regulatory database that would indicate a past or current release or storage of hazardous materials. A review of regulatory information indicated that several nearby sites were identified in the regulatory record databases. However, based on regulatory status and distance from the subject property, none of the sites identified appear to present a REC to the subject property.

6. An interview was not conducted with a property representative to identify any potential environmental conditions and to address information data gaps during the Phase I ESA process. The lack of a property owner or representative interview represents a data gap in accordance with ASTM Standard E1527-21. However, the information obtained for the Phase I ESA, including regulatory database and historical documentation, was deemed sufficient to draw conclusions of potential environmental conditions with the subject property.

8. RECOMMENDATIONS

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL ---------- National Priority List
Proposed NPL ---------- Proposed National Priority List Sites
NPL LIENS ---------- Federal Superfund Liens

Lists of Federal Delisted NPL sites

Delisted NPL ---------- National Priority List Deletions

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY ---------- Federal Facility Site Information listing
SEMS ---------- Superfund Enterprise Management System

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS ---------- Corrective Action Report

Lists of Federal RCRA TSD facilities

RCRA-TSDF ---------- RCRA - Treatment, Storage and Disposal

Lists of Federal RCRA generators

RCRA-LQG ---------- RCRA - Large Quantity Generators
RCRA-SQG ---------- RCRA - Small Quantity Generators

Federal institutional controls / engineering controls registries

LUCIS ---------- Land Use Control Information System
US ENG CONTROLS ---------- Engineering Controls Sites List
US INST CONTROLS ---------- Institutional Controls Sites List

Federal ERNS list

ERNS ---------- Emergency Response Notification System

EXECUTIVE SUMMARY

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes

available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 04/26/2023 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
COLUMBIA SLOUGH Site ID: 1000493 EPA Id: ORD980723076	PORTLAND RD	NE 1/4 - 1/2 (0.291 mi.)	0 8	

Lists of Federal RCRA generators

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 03/06/2023 has revealed that there is 1 RCRA-VSQG site within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

ECSI: The Environmental Cleanup Site Information System records information about sites in Oregon that may be of environmental interest. The data come from the Department of Environmental Quality.

A review of the ECSI list, as provided by EDR, and dated 03/01/2023 has revealed that there are 11 ECSI sites within approximately 1 mile of the target property.

Lists of state and tribal landfills and solid waste disposal facilities

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Department of Environmental Quality's Closure & Regular Solid Waste Active Disposal Permits database.

A review of the SWF/LF list, as provided by EDR, and dated 01/13/2023 has revealed that there is 1 SWF/LF site within approximately 0.5 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/06/2023 has revealed that there are 2 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System:
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GRESHAM SANITARY SERVICE INC (Continued) **1004771372**

Environmental Interest/Information System:
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Updated By: KDANA
Updated Date: 04/17/2013
Decode for NarcdID: Contamination
NARR Comments: A landfill was originally present where the Environmental Services building is now located. The landfill began accepting brush and yard debris in the late 1950s, and later accepted garbage until 1967 or 1968. In 1978 or 1979, most of the garbage was moved to the area now known as the Vance Pit (see ECSI #5780). Samples were taken by DEQ

GRESHAM SAND & GRAVEL (Continued) **S113408865**

staff from the sump area and were analyzed by DEQ's lab for volatile organic compounds, semivolatile compounds, herbicides and total metals. Levels of metals identified in the samples were below DEQ's SOCLEAN levels and appeared to be normal background. Eight organics were identified at low levels. Their association with the landfill is unclear. See the Strategy Recommendation for more information.

NARR Comments: A worker at Gresham Sand & Gravel experienced burning and swelling after handling sediments removed from a sump area in the gravel pit. The sump area is located near and fed by water flowing from the wall of an area of landfill debris known as Vance Pit. A cross-section of the landfill is visible, as gravel pit operations have caused soil from that area to slide. According to a report from the Mine Safety and Health Administration, the worker who experienced the burning and swelling of his hands reported that other workers at the site had complained of headaches and nausea when working around sump material.

Decode for NarcdID: Remedial Action
NARR Comments: DEQ recommended NFA due to the low levels of the contaminants identified. However, the Strategy Recommendation states that the finding of contaminants indicates that there may be a need to address future releases from the landfill and any current or future threats to area groundwater. It was recommended that the area of exposed landfill be covered and erosion in this area prevented.

Created By: Not reported
Created Date: 12/17/2002
Updated By: Not reported
Updated Date: 12/17/2002
Decode for NarcdID: Contamination
NARR Comments: (1/21/92 ALB) The site was picked up from NWR source file review in SAS's 1988 discovery project. Regional personnel responded 6/87 to a complaint of solvent dumping on the site. DEQ collected soil samples from the hole where the disposal was alleged. These samples revealed trace levels of solvent contamination and low levels of diesel/oil contamination and gasoline constituents. Regional staff determined there was no hazardous waste violation. Shortly after the initial complaint response, the business was gutted by a fire. The property was subsequently transferred to new owners and redeveloped. The alley behind MAACO Auto Paint, where the dumping was alleged, was excavated

MAACO AUTO PAINT - GRESHAM (Continued) **S103841472**

to a depth of approximately one foot and paved over and roofed. DEQ did not sample the area after the excavation. The site is currently occupied by Pro-Met Machining Inc.

NARR Comments:	Soil samples from the Old Wash Bay Drywell showed the presence of gasoline, diesel and heavy oil in soils. Soil samples from the parking lot stormwater drywell showed the presence of diesel and heavy oil in soils. Parking lot stormwater drywell analytical results also showed the presence of lead at concentrations that qualified the material as hazardous waste.

NARR Comments: (7/11/05 JMW/SAP) Site entered DEQ's Independent Cleanup Program in July 2005. (10/18/05 MG/ECP) Approximately 45 tons of soil were removed from the old wash bay drywell and disposed of at the Hillsboro Landfill. Approximately 65 tons of soil were removed from the parking lot stormwater drywell and disposed of as hazardous waste. Soil samples collected following the soil removal showed non-detect for all petroleum hydrocarbons on the walls and the floor of both excavations. The parking lot stormwater drywell further showed non-detect for total lead in all samples, except for one result at 4 mg/kg on the west wall of the excavation. Based on report review, DEQ has determined that the Underground Injection Control (UIC) systems have been decommissioned in accordance with regulation. The <quot>Old Wash Bay Drywell<quot> and the <quot>Parking Lot Stormwater Drywell<quot> have been decommissioned and closed. DEQ has issued a Partial NFA for these two UIC's.

NARR Comments: (10/30/12 SMF) Monthly monitoring of soil vapors at eight gas probes on the southern half of Tax Lot 300 (T1S/R3E-S05CA) detected the presence of elevated concentrations of methane in the subsurface during August 2011 through September 2012. Methane soil vapor concentrations at Gas Probes P-1, P-2, P-3, P-4, and P-8 consistently exceeded methane's Upper Explosive Limit (UEL), while methane concentrations at Gas Probe P-7 exceeded methane's UEL more than 50 percent of the time. Methane concentrations at Gas Probes P-5 and P-6 were either non-detect or well-below methane's Lower Explosive Limit (LEL). Hydrogen Sulfide was detected at concentrations of Non-Detect to up to 20 ppm in Gas Probes P-1, P-2, P-3, P-4, and P-8 (August 2011 through September 2012). No Hydrogen Sulfide was detected in soil vapors at Gas Probes P-5, P-6, or P-7.

NARR Comments: According to Robert Pearson with the Gresham Department of Environmental Services, the Vance Pit consists of landfill material removed from the original landfill area where the Environmental Services building is now located. The original landfill began accepting brush and yard debris in the late 1950s. It later accepted garbage from individual residents. In 1967 or 1968, the landfill quit receiving garbage. In 1978 or 1979, most of the garbage was removed to the area now known as the Vance Pit, next to the Gresham Sand & Gravel site (see ECSI #1407).

NARR Comments: (4/9/02 MTP/SAS) DEQ received a complaint in June 2000 alleging improper waste management of automotive-related fluids drained from vehicles at the site. The complaint indicated that gasoline and waste oil were improperly stored in drums and other containers without lids, and that pressure washing occurred at the site without containment, allowing washwater to penetrate the ground. It was reported that these practices had occurred at least since 1994. Staff from DEQ’s Hazardous Waste Section substantiated these allegations during a 3/20/01 site visit. Batteries were observed to be stored on the ground surface, drums were filled with petroleum waste and some were filled with rainwater. Gasoline was stored in open 5-gallon buckets beneath a tarp. A solvent parts washer and drum labeled <quot>used solvent<quot> were observed. Numerous oil-stained soil areas were observed throughout the yard. Partially buried solid waste was observed near the northwest corner of the property, and could be related to the adjacent landfill. An area behind the main shop, where drums were stored and steam cleaning was conducted, appeared to be the most impacted area at the site. Steam cleaning was conducted over bare soil and the wastewater was allowed to infiltrate. It is unclear if runoff from the steam clean area drains to a dry well, reportedly located on the other side of the building near the southeast corner of the property. A catch basin was observed near the southwest area of the site, and appeared to show staining. It is not known if the

BOBS USED FORD CARS & TRUCKS (Continued) **1004771915**

catch basin is connected to the dry well. As a result of the inspection, DEQ issued a Notice of Noncompliance (NON) for three violations, which included failure to make a hazardous waste determination, failure to properly containerize waste, and discharging vehicle parts wash water to shallow soil and groundwater. DEQ requested documentation that all wastes were properly managed and containerized, and that Bob's Ford cease pressure washing until the appropriate wash water management and/or permitting was obtained. Reportedly, limited car washing (<8 cars/month) is occurring at the site but does not appear to require a discharge permit. Bob's Ford has indicated that parts washing will be discontinued until a berm to contain the water is constructed. Following the inspection, disposal documentation received by DEQ indicated that 534 gallons of used oil (flashpoint <200 degrees Fahrenheit) and 133 batteries were removed from the site. It does not appear that any waste characterization sampling was conducted, and it is unclear how used solvent is managed. Based on the potential contamination, the site was referred to DEQ's Site Assessment Program on September 26, 2001.

BOBS USED FORD CARS & TRUCKS (Continued) **1004771915**

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: Possibly overland runoff of impacted surface water to the dry well and possibly shallow groundwater; direct infiltration into relatively permeable site soil. Both surface soil and subsurface soil are likely impacted at the pressure-washing area. Relatively high use of groundwater in the area. The nearest domestic well is 3,000+ feet from the site. Surface water runoff does not appear to be a pathway of concern.

NARR Code: Remedial Action
Created By: Not reported
Created Date: 12/17/2002
Updated By: Not reported
Updated Date: 12/17/2002
Decode for NarcdID: Remedial Action
NARR Comments: Site referred from the Hazardous Waste Program: RCRA non-notifier; improperly managed hazardous wastes in containers; discharging parts washer to shallow soils and groundwater. (4/9/02 MTP/SAS) DEQ has reviewed site information and classified the site as a medium priority for further investigation, including: 1) submission of information to DEQ regarding solvent use, management, and disposal; 2) inspection and sampling of the dry well system to determine the nature of previous discharges into it, and construction details of the dry well and associated drainage system; and 3) sampling to determine the nature and extent of soil contamination, particularly in the former pressure-washing area, and, depending on findings of the dry well evaluation, in the vicinity of the dry well. Based on site observations and supporting photodocumentation, the site should be proposed for listing on the Confirmed Release List (CRL). There is insufficient information to propose the site for listing on the Inventory of Hazardous Substance Sites.

Created Date: 12/17/2002
Updated By: Not reported
Updated Date: 12/17/2002
Decode for NarcdID: Health Threats
NARR Comments: Direct exposure of site visitors or workers to contaminated surface and subsurface soil possible. Permeable site soil and/or the dry well on-site may provide a pathway to groundwater. Groundwater appears to be 50 feet or more deep at the site. The nearest domestic well appears to be about 3,000 feet or more from the site. The Columbia South Shore Wellfield is about 2 miles from the site in a presumed downgradient direction. Ponds associated with Morse Bros. sand and gravel operation are located downgradient of the site and appear to intersect the uppermost groundwater aquifer in the vicinity of the site.

NARR Comments: [10/29/12 SAM/ICP] Contaminants of concern included petroleum compounds, related to the former UST and unknown construction debris fill in the former gravel pit, which may include metals, petroleum, VOCs and methane gas production. Exposure pathways considered relevant to this site were: Subsurface soil dermal contact for construction and excavation workers and subsurface soil leaching to groundwater. Groundwater vapor intrusion, volatilization to outside air, inside air and groundwater in excavation for occupational and construction workers. Methane intrusion above the lower explosive limits. Groundwater is not used on site; the facility and surrounding area is generally supplied by a public drinking water system. Future use of the site is expected to remain light industrial.

NARR Comments: [10/29/12 SAM/ICP] Two Phase I Environmental Site Assessments were

ALEXANDER SERVICES LLC (Continued) **1000439200**

performed on the site in 2005 and 2012. The conclusions from both Phase I documents are similar, noting Recognized Environmental Conditions, including the former 4,000-gallon gas UST, former gravel pit and land filling activities, reported dry wells and a building floor drain near a compressor that may be connected to the dry wells. A Phase II Environmental Site Assessment was performed in August 2012 to provide additional information for the Recognized Environmental Conditions on site. A ground penetrating radar survey was performed to determine locations of onsite dry wells, underground utilities, and the potential buried UST. Subsurface soil, groundwater and soil-gas samples were also collected and analyzed. Subsurface borings indicated the gravel pit was filled with soil, construction debris-including asphalt, and smaller amounts of woody debris. No household or man-made organic items were found in borings in the former gravel pit. Methane was measured with a handheld unit and the report text indicated methane was not observed however, results and supporting documentation was not provided. To ensure correct methods were used DEQ requested additional measurements to support the conclusion that methane is not a concern. Locality of facility was considered the property boundary as groundwater and soil samples at the presumed down gradient side (North) indicate concentrations meet risk-based concentrations or were not detected. Two of the three groundwater samples detected metals, particularly lead (as high as 671ug/L) above risk-based concentrations for occupational ingestion. Groundwater samples with detections above risk-based concentrations were located within the former gravel pit/fill footprint. The expected downgradient boring groundwater concentrations were below detection limits. October 2012- Four additional soil gas measurement points within the former gravel pit were established. Borings were drilled to 5 feet and sealed to ensure no atmospheric gases entered the holes. An initial reading at one boring found methane at 0.3%, which then stabilized down to 0.0% after approximately 5 minutes. All other borings read 0% methane. DEQ Conclusions: An NFA determination is recommended for the Boden/Alexander site based on the following: Soils sampled on-site were protective for occupational and excavation workers. Groundwater is not used on site for any purpose and the nearest registered residential well is approximately 0.25miles away and cross-gradient from the site. In addition, the area is supplied by a public water system. Soil gas concentrations were below occupational risk-based concentrations. One of four methane samples detected concentrations of methane well below DEQ action levels. The other samples did not detect any methane. The site does not contain significant habitat for plants or animals. DEQ concludes that based on the information presented to date and under the current zoning, the Boden Alexander property is currently protective of public health and the environment and requires no further action under the Oregon Environmental Cleanup Law, ORS 465.200 et seq., unless new or previously undisclosed information becomes available.

NARR Comments: [9/28/12 SAM/ICP] In approximately 1948 much of the south and central portion of the property was utilized as a gravel pit. By the 1950s, the gravel pit appeared to be inactive and backfilling may have been started. The former gravel pit appears to have been completely filled by the 1960s. A portion of the current property building was initially constructed in the 1970s with subsequent additions throughout the 1990s. The site has been recently occupied by BodenAlexander, a custom wood display and manufacturing facility.

NARR Comments: (10/2/00 MTP/SAS) DEQ SAS received a complaint in November 1998 alleging improper disposal of hazardous waste to the ground surface. It was alleged that during the preceding year the resident at the site operated a car repair business and used gasoline as a solvent. The waste allegedly was discharged in the vicinity of large trees, approximately 35 feet from the property line.

NARR Comments: (1/5/04 BAG/VCP) Site entered DEQ's Voluntary Cleanup Program in January 2004. (2/5/08 GMW/SAS) Site is not on VCP waiting list, and owner/operator has not applied for Dry Cleaner Program funding. Further investigation is needed, under a medium priority. (6/5/10 MTPugh) ML Commercial Properties entered the VCP for review of recent investigation results and their request for an NFA. Based on our review it appears that the completed site investigations are adequate to assess whether significant releases of dry cleaning related chemicals, such as perchloroethene (PCE) or related decomposition products, have occurred to site soils. In rare instances where contamination was detected in soil, detected concentrations are below applicable risk-based concentrations. Three groundwater samples have been collected at the site from temporary borings. PCE and trichloroethene (TCE) were detected in one of three samples collected from the regional aquifer. Detected concentrations were above risk-based standards for drinking water. In the 2009 Phase II Investigation Report prepared by Partner Engineering and Science, Inc., it is recommended that additional groundwater characterization be conducted to assess the extent of groundwater impacts. Rather than conduct additional groundwater investigation at this time, DEQ recommends that a Beneficial Water Use Determination (BWUD) be completed to assess if groundwater in the vicinity of the site is used for a potable water supply. DEQ completed a cursory review of well log records, and there appear to be a number of potable use wells in the area, but specific locations cannot be determined. In addition, further investigation will be needed to assess the dry wells to verify that they are not significant source areas at the site. Next Steps For reasons discussed above, DEQ will not require additional soil (or soil gas) investigation beneath the dry cleaner operation, at the cess pools/septic system, or current sanitary sewer alignment. However, the presence of two or more dry wells triggers the need for additional work. Existing dry wells need to be registered with DEQ s Underground Injection Control (UIC) Program. They also will need to be evaluated as potential contaminants sources, regardless of whether they are abandoned or will remain operational. This typically involves locating the dry wells, sampling their contents and possibly adjacent or underlying soil, and removal of sediment/contents. DEQ s UIC requirements can be found at: Oregon DEQ: Water Quality - Underground Injection Control (UIC) Program - Home Dave Cole is DEQ s Northwest Region coordinator for UIC registration and will be the lead for dry well work. Dave can be reached at 503 229-6371, and by e-mail at Cole.David@deq.state.or.us.

ROCKWOOD CLEANERS (Continued) **S106123747**

Dave will coordinate with me to determine investigative requirements and to interpret investigation results. DEQ will require a sampling plan for the UIC work. To address the detections of chlorinated hydrocarbons in the regional aquifer, ML Commercial Properties should, at a minimum, complete a BWUD per DEQ guidance available at: http://www.deq.state.or.us/lq/pubs/docs/cu/GuidanceBeneficialWaterUse.pdf ML Commercial Properties may elect to proceed with additional groundwater sampling. If additional groundwater sampling is to be conducted, DEQ requests submittal of a brief work plan. Based on the results of the BWUD and dry well investigation, DEQ will determine whether additional groundwater testing will be required. 12/20/10 Based on the presence of dry wells at the site, DEQ requested additional information regarding their number and location. DEQ and Partner staff conducted a site visit on August 4, 2010. Based on the site visit and subsequent geophysical survey, a total of 23 suspected dry well locations were identified (Figure 2). DEQ requested additional investigation of the six dry wells located around the perimeter of the dry cleaner building (DW-13, DW-14, DW-16, DW-17, DW-22A. DW-22, and DW-23; Figure 2). A camera survey was conducted to assess sediment accumulation in each of the seven dry wells. There was insufficient sediment accumulation to readily collect a sample from any of the seven dry wells; no indication of dry cleaner discharges, such as lint accumulations or discoloration, was observed. No samples were collected and DEQ did not require additional investigation for these seven dry wells. Additional investigation on the remaining sixteen dry wells may be required as part of the pending registration of these dry wells with DEQ s Water Quality Program. The number and location of soil and groundwater samples collected at the site appear sufficient to assess whether significant releases of PCE occurred from historical dry cleaning operations. There is no indication that actionable releases occurred beneath or adjacent to the former dry cleaning area, or that dry cleaning chemicals were released to soil at or near the former cess pool, current sanitary sewer line, or nearby dry wells. Based on historical site use there is no indication that significant quantities of hazardous substances were used in other areas or businesses in the strip mall, although historical environmental testing was largely focused on the dry cleaner. DEQ is not aware of investigations in other site areas. DEQ has determined that a no further action determination (NFA) is warranted for the site. Per DEQ Underground Injection Control rules, existing dry wells at the site need to be registered. This may necessitate additional evaluation of approximately sixteen dry wells that have not yet been evaluated. Additional evaluation may include sampling and analysis of dry well contents or adjacent soil. Further work needed to register all site dry wells will be completed through coordination with DEQ s Water Quality Program.

NARR Comments: (2/27/92 HMS) The property had been the site of an engine-rebuilding business for more than 35 years. Recently, the property owner evicted Rockwood Machine Shop, and current site operations are unknown. A spill of unidentified material, subsequently shown to contain solvents, occurred 8/18/90. Response personnel found two unlabeled 30-gal. drums lying on their sides with their contents spread across asphalt paving. Immediate and subsequent cleanup activities involved removal of spilled liquids and affected asphalt paving, and the excavation of a large volume of soil. Soil samples collected after excavation indicated that no substantial contamination remained from the spill. There may have been other releases in the course of the shop's 35+ years of operation, as evidenced by stained areas on the concrete floor inside the shop building. In addition, the site was not connected to sewer service until 1990, indicating that there may be a drywell or septic system on-site.

ROCKWOOD MACHINE SHOP (Continued) **1000473631**

Decode for NarcdID: General Site Description
NARR Comments: The 1.4-acre commercial property consists of one paved tax lot with one, 11,497 ft2, two-story building located on the southeast corner of the property. The property is bordered by East Burnside Street and MAX light rail to the south, commercial property and residential apartments to the east, residential apartments to the north, and a commercial business to the west. The property is zoned for mixed-use that includes commercial and high-density urban residential. The site is covered in hardscape and therefore no ecological habitat is present on the site. Until the 1950s, historic site use was agricultural that included an outbuilding with hay, grain, and row crops. In 1954, the building that is currently on the property was constructed, and a gravel parking area was installed. Hall Building Supply and the Rockwood Machine Shop began site operations in the mid 1950s. A record and satellite television shop operated on the site for a short time in the 1970s. In 1990, the property was connected to the public sanitary sewer system and in 1994, the property was converted into a restaurant with an asphalt paved parking area. Current use of the site is a multi-tenant Community Center.

NARR Comments: In August of 1990, DEQ was notified of a spill from two, unmarked 30-gallon drums containing carburetor cleaner, or a similar solvent, that was assumed to be associated with the Rockwood Machine Shop. The spill was caused by trespassers, and occurred over a 35-foot by 70-foot asphalt covered area on the northeast side of the building. Between 1990 and 1991, DEQ coordinated the cleanup with the property owners, Pacific Wholesalers, Inc. In total, 27 yd3 of asphalt and 38 yd3 of soil were removed and confirmation samples were collected at the limits of the excavation. Soil removal was completed to at least 4 inches below the asphalt cover, however the final depth of excavation was not documented. Samples collected at the limits of the excavation were all non-detect for volatile organic compounds (VOCs). Groundwater was not encountered during the removal.

NARR Comments: In August of 1990, DEQ was notified of a spill from two, unmarked 30-gallon drums containing carburetor cleaner, or a similar solvent, that was assumed to be associated with the Rockwood Machine Shop. The spill was caused by trespassers, and occurred over a 35-foot by 70-foot asphalt covered area on the northeast side of the building. Between 1990 and 1991, DEQ coordinated the cleanup with the property owners, Pacific Wholesalers, Inc. In total, 27 yd3 of asphalt and 38 yd3 of soil were removed and confirmation samples were collected at the limits of the excavation. Soil removal was completed to at least 4 inches below the asphalt cover, however the final depth of excavation was not documented. Samples collected at the limits of the excavation, were all non-detect for volatile organic compounds (VOCs). Groundwater was not encountered during the removal. In July 1992, the underground HOT was decommissioned by a licensed underground storage tank supervisor. The tank was removed and disposed of along with 16 yd3 of visually-stained soil to a depth of 6.25 feet below the ground surface. Confirmation samples collected from the extent of the excavation were non-detect for total petroleum hydrocarbons (TPH). The site owner at the time did not enter into a cost recovery agreement with DEQ for review. Therefore, DEQ did not evaluate the HOT for a no further action determination.

NARR Comments: (3/13/91 MJM) Site is bounded to the north and east by apartments. It is a commercial site that's accessible to the public. The northern and eastern boundaries are fenced. The soil type is flood gravels; topography is flat. (This information is based on a 12/3/90 site visit.). (6/1/16 RWA) Applicable potential pathways of exposure include: A) Direct contact with contaminated soil to current and future occupational site workers and future construciton and excavation workers.; B) Inhalation of impacted indoor air from VOCs in soil and soil vapor to: current and future occupational site workers; C) Inhalation of impacted outdoor air from VOCs in soil and soil vapor to current and future occupational site workers. Groundwater was not encountered during the heating oil tank decommissioning and removal in 1992, or the spill response excavation in 1990-1991. Drinking water is supplied to the site by the Rockwood Public Utility District. No surface water bodies are on or near the site.

NARR Comments: Until the 1950s, historic site use was agricultural that included an outbuilding with hay, grain, and row crops. In 1954, the building that is currently on the property was constructed, and a gravel parking area was installed. Hall Building Supply and the Rockwood Machine Shop began site operations in the mid 1950s. A record and satellite television shop operated on the site for a short time in the 1970s. In 1990, the property was connected to the public sanitary sewer system and in 1994, the property was converted into a restaurant with an asphalt paved parking area. Current use of the site is a multi-tenant Community Center.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: [June 2016] In August 1990, DEQ was notified of a spill from two, unmarked 30-gallon drums containing carburetor cleaner, or a similar solvent, that was assumed to be associated with the Rockwood Machine Shop. The spill was caused by trespassers that occurred over a 35-foot by 70-foot asphalt-covered area on the northeast side of the building. Between 1990 and 1991, DEQ coordinated the cleanup with the property owners that involved the removal and disposal of 27 yd3 of asphalt and 38 yd3 of soil. Confirmation samples were collected at the limits of the excavation and were all non-detect for volatile organic compounds (VOCs).

 In 1992, the on-site heating oil tank was decommisioned and removed from the site. Confirmation samples collected at the extent of the excavation were non-detect for petroleum hydrocarbons.

 Additional investigation was performed in 2016 to address remaining data gaps. A geophysical survey was performed to locate the former septic system, which was used until 1990. No anomolies or the former septic system were found. Soil vapor samples were collected from beneath the existing building and throughout the property. No VOCs were detected in soil vapor samples above applicable risk-based concentrations.

 DEQ issued a no further action (NFA) determination for the site in June 2016. Conditions of the NFA include notification to DEQ prior to excavation and offsite disposal of soil or construction of additional habitable structures on the property.

Environmental Interest/Information System:

OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

NARR Comments:	Fifteen drywells were investigated, their contents removed, and decommissioned. The former drycleaning facility was demolished and 250 cubic yards of PCE-impacted soil beneath the building removed. After soil removal activities, confirmation sampling did not detect contaminants in soil above risk-screening criteria for human health receptors by direct contact or vapor intrusion scenarios. The site does not pose unacceptable risk to human health and the environment from soil. The site has been redeveloped and the location of the new East Multnomah County Courthouse. Low levels of VOCs were initially detected in groundwater in the vicinity of the former dry cleaner facility. A groundwater extraction test well (TW-1) was installed in this area for the courthouse heating-cooling system and to contain any potential contamination present prior to full delineation of the extent. Extracted groundwater was sampled frequently for over a year. Initial low level detections of VOCs in groundwater appear to be related to and localized adjacent to former drywells. A groundwater beneficial use determination did not identify any nearby offsite wells used for drinking water purposes. Groundwater is not consumed onsite and unlikely for the foreseeable future given the area is supplied by a municipal (Rockwood) water supply. There is no unacceptable risk at the site under current conditions.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: DEQ has determined that remedial action to address environmental contamination at the East Multnomah County Courthouse site is complete, and no further action is required. This determination is based on DEQ regulations and the following facts as we now understand them, which are described in more detail in DEQ s Staff Memorandum in support of a No Further Action determination (July 31, 2015). In 2011, Multnomah County entered into a voluntary agreement with the DEQ Cleanup Program for oversight to investigate volatile organic compounds (VOCs) in soil and groundwater attributed to drywells associated with the former dry cleaning facility. Site work included demolishing the dry cleaning building and removal of PCE-impacted soils beneath the building, investigation and removal of 15 drywells, and further delineation and testing of groundwater after initial sampling detected low levels of VOCs. Extracted groundwater was sampled frequently for over a year and no chlorinated VOCs were detected. Initial low level detections of VOCs in groundwater appear to be related to and localized adjacent to former drywells. In conclusion, the site does not pose unacceptable risk to human health and the environment.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS WQP: Ambient Environmental Sampling for PFAS

The Water Quality Portal (WQP) is a part of a modernized repository storing ambient sampling data for all environmental media and tissue samples. A wide range of federal, state, tribal and local governments, academic and non-governmental organizations and individuals submit project details and sampling results to this public repository. The information is commonly used for research and assessments of environmental quality.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

NY MANIFEST: Facility and Manifest Data

Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

Date of Government Version: 01/01/2019
Date Data Arrived at EDR: 10/29/2021
Date Made Active in Reports: 01/19/2022

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

South Map:	14878114 DAMASCUS, OR
Version Date:	2020

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

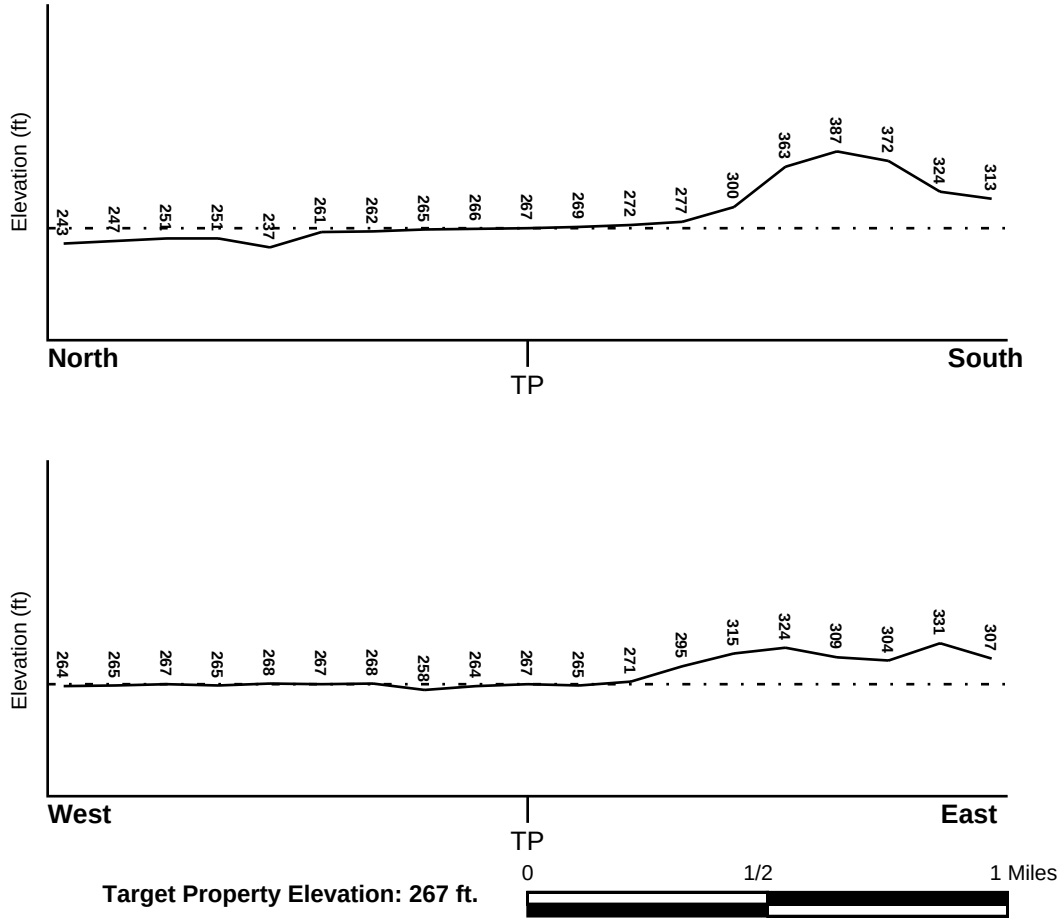
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WNW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
4101830140F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
41051C0218H	FEMA FIRM Flood data
41051C0214H	FEMA FIRM Flood data

41051C0402H	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
CAMAS	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Multnomah

Soil Surface Texture: silt loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity	
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	micro m/sec	Soil Reaction (pH)
1	0 inches	7 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Clean gravels, Poorly Graded Gravel. COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel.	Max: 141 Min: 42	Max: 6.5 Min: 6.1
2	7 inches	38 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Clean gravels, Poorly Graded Gravel. COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel.	Max: 141 Min: 42	Max: 6.5 Min: 6.1

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
3	38 inches	59 inches	very gravelly sand	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Clean gravels, Poorly Graded Gravel. COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel.	Max: 141 Min: 42	Max: 6.5 Min: 6.1

Soil Map ID: 2

Soil Component Name: Pits

Soil Surface Texture: silt loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 3

Soil Component Name: Wapato

Soil Surface Texture: silt loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Poorly drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 15 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetlands Inventory Data
Source: Oregon Geospatial Enterprise Office
Telephone: 503-378-2166

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Parametrix, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

PORTLAND, OR 97232-2168

Re: Trimet
File No.: 26-12-1437

Dear Real Estate Dept-TRIMET:

The Department of Environmental Quality has received a report and Alpha Environmental Services, Inc. certification concerning the heating oil underground storage tank (HOT) assessment and/or cleanup conducted at 2005 NW Eleven Mile Ave, in Gresham, Oregon.

Alpha Environmental Services, Inc. was licensed to provide heating oil tank services and has certified that the cleanup has met the Department's requirements. The Department has registered this report and certification and closed its file on the project.

The decision to register the report and certification and to close the Department's file will no longer apply if new or undisclosed facts show that the project does not comply with the rules governing heating oil tank cleanups.

Please note that you are required by state law (ORS 105.464) to provide potential buyers a disclosure statement that includes information regarding underground storage tanks, HOTs and the environmental conditions on your property.

Accordingly, we recommend that you keep a copy of this letter, the certification and any reports of testing or corrective actions relating to your HOT with the permanent property records.

Your efforts to comply with Oregon's environmental rules and regulations to ensure that your heating oil tank has been adequately addressed have been appreciated. Proper decommissioning and cleanup helps ensure protection of the environment from future heating oil tank leaks and ensures that the heating oil does not adversely impact human health or the environment. If you have any questions, please feel free to contact the HOT Program at (503) 229-6170.

Sincerely,

Kevin Donna for

Michael H Kortenhof, Manager
DEQ Heating Oil Tank Program

DEPARTMENT OF ENVIRONMENTAL QUALITY

March 11, 1992

Mr. Harold Gillis
Pacific First Bank
975 Oak Street Suite 920
EUGENE OR 97401

Re: Heating Oil Tank Release
File No. 26-91-398

The Department of Environmental Quality (Department) has completed its review of the reports prepared by Squier Associates, dated November 7, 1991 and February 4, 1992, concerning the cleanup conducted at 1823 N.W. Eleven-Mile Avenue, in Gresham, Oregon. The Department has determined the cleanup appears to have met the requirements of the Oregon Administrative Rules (OAR) 340-122-205 through 340-122-360 and that no further action is required at this time.

This determination is a result of our evaluation and judgement based on the regulations and facts as we now understand them, including:

1. Contamination from an aboveground storage tank used for heating oil was discovered during removal of the tank. Soil samples were collected to verify and identify the type of contamination using the total petroleum hydrocarbon (TPH) HCID method. Hydrocarbons in the diesel range were identified.

2. Approximately 8 yards of contaminated soil was removed from the excavation and disposed of at the Hillsboro landfill.

3. Groundwater was not encountered in the pit.

4. Confirmatory samples and analysis using the TPH diesel (TPH-D) method identified a pocket of contamination, in excess of the soil matrix standard that was determined appropriate for this site. The pocket of contamination is estimated by Squier Associates to be approximately 108 cubic yards and has a maximum concentration of 4600 parts per million (ppm) TPH.

A pocket of contamination still exists on this property which exceeds the currently required cleanup levels for this site, but which the Department approves leaving pursuant to OAR 340-122-355(4) since the removal of this contamination would endanger structures on the property or be prohibitively expensive, and the contamination does not threaten human health, safety, welfare and the environment.

However, you should be aware that the Department's approval to leave a pocket of contamination is based on the site conditions described in the report as they exist today. Should conditions (i.e. land use) change allowing access to the contamination, you would be responsible for further evaluation of the remaining contamination and any cleanup necessary at that time. You would also be responsible for notifying any potential purchaser of the property about this remaining pocket of contamination.

811 SW Sixth Avenue
Portland, OR 97204-13
(503) 229-5696
TDD (503) 229-6993
DEQ-1

The Department's determination would not be applicable if new or undisclosed facts show that the cleanup does not comply with the referenced rules. The Department's determination also does not apply to any conditions at the site other than the release of the petroleum product specifically addressed in the report. We recommend that a copy of this information be kept with the permanent facility records.

Please note that pursuant to OAR 340-122-360(2), a copy of your report must be retained until ten (10) years after the first transfer of the property.

Your efforts to comply with the regulations to ensure that your facility is adequately cleaned up has been appreciated. Should you have any questions, please feel free to contact me at (503) 229-6931.

Sincerely,

Michael J. Zollitsch

Environmental Cleanup Site Information (ECSI) Database Site Summary Full Report - Details for Site ID 1407, Gresham Sand & Gravel

This report shows data entered as of November 7, 2023 at 7:42:23 PM

This report contains site details, organized into the following sections: 1)Site Photos (appears only if the site has photos); 2)General Site Information; 3) Site Characteristics; 4)Substance Contamination Information; 5) Investigative, Remedial and Administrative Actions; and 6)Site Environmental Controls (i.e., institutional or engineering controls; appears only if DEQ has applied one or more such controls to the site). A key to certain acronyms and terms used in the report appears at the bottom of the page.

Note: DEQ may have posted online documents related to this site. If so, they would be available for viewing or downloading from DEQ's Document Online Records Access (ORA) system. Go to DEQ's Facility Profiler (http://deqhq1.deq.state.or.us/wmdeqaccess/FacilityProfiler.aspx) to see if any documents are available for this site as well as information on what other DEQ programs may be active at this site.

General Site Information

Site ID: 1407	Site Name: Gresham Sand & Gravel	CERCLIS No:	
Address:	1339 NW Eastwood Ave. Gresham 97030		
	County: Multnomah	Region: Northwest	
Other location information:	East of SE 190th Avenue, between about SE Division Street on the south and about SE Yamhill Street on the north.		
Investigation Status:	No further action required		
	Brownfield Site: No NPL Site: No	Orphan Site: No	Study Area: No
Property:	Twnshp/Range/Sect: 1S , 3E , 5	Tax Lots:	
	Latitude: 45.5074 deg. Longitude: -122.4629 deg.	Site Size:	
Other Site Names:	Morse Bros.		

Site Characteristics

General Site Description:	
Site History:	
Contamination Information:	A landfill was originally present where the Environmental Services building is now located. The landfill began accepting brush and yard debris in the late 1950s, and later accepted garbage until 1967 or 1968. In 1978 or 1979, most of the garbage was moved to the area now known as the Vance Pit (see ECSI #5780). Samples were taken by DEQ staff from the sump area and were analyzed by DEQ's lab for volatile organic compounds, semivolatile compounds, herbicides and total metals. Levels of metals identified in the samples were below DEQ's SOCLEAN levels and appeared to be normal background. Eight organics were identified at low levels. Their association with the landfill is unclear. See the Strategy Recommendation for more information.
Manner and Time of Release:	
Hazardous Substances/Waste Types:	unknown
Pathways:	A worker at Gresham Sand & Gravel experienced burning and swelling after handling sediments removed from a sump area in the gravel pit. The sump area is located near and fed by water flowing from the wall of an area of landfill debris known as Vance Pit. A cross-section of the landfill is visible, as gravel pit operations have caused soil from that area to slide. According to a report from the Mine Safety and Health Administration, the worker who experienced the burning and swelling of his hands reported that other workers at the site had complained of headaches and nausea when working around sump material.
Environmental/Health Threats:	No environmentally sensitive areas were identified in the immediate vicinity.
Status of Investigative or Remedial Action:	DEQ recommended NFA due to the low levels of the contaminants identified. However, the Strategy Recommendation states that the finding of contaminants indicates that there may be a need to address future releases from the landfill and any current or future threats to area groundwater. It was recommended that the area of exposed landfill be covered and erosion in this area prevented.
Data Sources:	DEQ Pollution complaint - NWR-1993-0642 - initiated by the U.S. Mine Safety and Health Administration on April 30, 1993.

Key to Certain Acronyms and Terms in this Report:

- **CERCLIS No.:** The U.S. EPA's Hazardous Waste Site identification number, shown only if EPA has been involved at the site.
- **Region**: DEQ divides the state into three regions, Eastern, Northwest, and Western; the regional office shown is responsible for site investigation/cleanup.
- **NPL Site**: Is this site on EPA's National Priority List (i.e., a federal Superfund site)? (Y/N).

- **Orphan Site**: Has DEQ's Orphan Program been active at this site? (Y/N). The Orphan Program uses state funds to clean up high-priority sites where owners and operators responsible for the contamination are absent, or are unable or unwilling to use their own resources for cleanup.

- **Study Area**: Is this site a Study Area? (Y/N). Study Areas are groupings of individual ECSI sites that may be contributing to a larger, area-wide problem. ECSI assigns unique Site ID numbers to both individual sites and to Study Areas.

- **Pathways**: A description of human or environmental resources that site contamination could affect.

- **Lead Pgm**: This column refers to the Cleanup Program affiliation of the DEQ employee responsible for the action shown. SAS or SAP = Site Assessment; VCS or VCP = Voluntary Cleanup; ICP = Independent Cleanup; SRS or SRP = Site Response (enforcement cleanup); ORP = Orphan Program.

For more information on this site contact the Northwest regional office (https://www.oregon.gov/DEQ/Pages/Offices.aspx).

RE: UIC Decommissioning Approval
"Old Wash Bay Drywell", and
"Parking Lot Stormwater Drywell"
935 SE 202nd Avenue
Portland, Oregon 97233
ECSI Site ID No. 4237

Dear Mr. Kim:

The Oregon Department of Environmental Quality (DEQ) has completed a review of the two documents entitled "Soil Matrix Level II Closure Report" dated January, 2005 and submitted to DEQ on your behalf by CAESCO, Inc. These reports were submitted for two decommissioned Underground Injection Control (UIC) systems located on the property at 935 SE 202nd Avenue in Portland, Oregon. These UIC systems were designated as the "Old Wash Bay Drywell" and the "Parking Lot Stormwater Drywell".

DEQ has determined that the UICs have been decommissioned in compliance with the regulations. This determination is based on the regulations and facts as we now understand them, including but not limited to the following:

1. Soil samples from the "Old Wash Bay Drywell" showed the presence of gasoline, diesel and heavy oil fraction hydrocarbons in the subsurface soils. Soil samples from the "Parking Lot Stormwater Drywell" showed the presence of diesel and heavy oil fraction hydrocarbons in the subsurface soils. "Parking Lot Stormwater Drywell" analytical results also showed the presence of lead at concentrations that qualified the material as hazardeous waste.
2. In November, 2004 approximately 45 tons of soil were removed from the "Old Wash Bay Drywell" and disposed of at Hillsboro Landfill. Approximately 65 tons of soil were removed from the "Parking Lot Stormwater Drywell" and disposed of as hazardous waste at the Chemical Waste Management disposal facility in Arlington, Oregon..
3. Subsequently, soil samples collected following soil removal showed non-detect for all petroleum hydrocarbons on the walls and floor of both excavations. "Parking Lot Stormwater Drywell" further showed non-detect for Total Lead in all samples, except for

one result at 4 mg/Kg on the West wall of the excavation. This lead level is well within the range of background levels commonly observed for this heavy metal in this area.

Unless new or previously undisclosed information becomes available, DEQ concludes that the "Old Wash Bay Drywell" and "Parking Lot Stormwater Drywell" UIC's at 935 SE 202nd Avenue have been decommissioned in accordance with Oregon Administrative Rule 340-044-0040. DEQ will update the Environmental Cleanup Site Information System (ECSI) database to reflect this decision and register the two UICs as closed.

If you have any questions about this letter, please contact Mike Greenburg at 503-229-5153.

Sincerely,

Bruce Gilles

Environmental Cleanup Site Information (ECSI) Database Site Summary Full Report - Details for Site ID 5780, Lot 5 Vance Landfill

This report shows data entered as of November 7, 2023 at 7:56:34 PM

This report contains site details, organized into the following sections: 1)Site Photos (appears only if the site has photos); 2)General Site Information; 3) Site Characteristics; 4)Substance Contamination Information; 5) Investigative, Remedial and Administrative Actions; and 6)Site Environmental Controls (i.e., institutional or engineering controls; appears only if DEQ has applied one or more such controls to the site). A key to certain acronyms and terms used in the report appears at the bottom of the page.

Note: DEQ may have posted online documents related to this site. If so, they would be available for viewing or download in DEQ's Facility Profiler (http://deqhq1.deq.state.or.us/fpviewer/EPAUS/Main.aspx?SiteID=126395) to see a site map as well as information on what other DEQ programs may be active at this site.

General Site Information

Site ID: 5780	Site Name: Lot 5 Vance Landfill		CERCLIS No:	
Address:	1541 SE 190th Ave. Gresham 97233			
	County: Multnomah		Region: Northwest	
Other location information:				
Investigation Status:	Suspect site requiring further investigation			
	Brownfield Site: Yes	NPL Site: No	Orphan Site: No	Study Area: No
Property:	Twnshp/Range/Sect: 1S , 3E , 5		Tax Lots: 300	
	Latitude: 45.5091 deg.	Longitude: -122.4693 deg.	Site Size: 19.08 acres	
Other Site Names:	Vance Pit Landfill			

Site Characteristics

General Site Description:	
Site History:	According to Robert Pearson with the Gresham Department of Environmental Services, the Vance Pit consists of landfill material removed from the original landfill area where the Environmental Services building is now located. The original landfill began accepting brush and yard debris in the late 1950s. It later accepted garbage from individual residents. In 1967 or 1968, the landfill quit receiving garbage. In 1978 or 1979, most of the garbage was removed to the area now known as the Vance Pit, next to the Gresham Sand & Gravel site (see ECSI #1407).
Contamination Information:	(10/30/12 SMF) Monthly monitoring of soil vapors at eight gas probes on the southern half of Tax Lot 300 (T1S/R3E-S05CA) detected the presence of elevated concentrations of methane in the subsurface during August 2011 through September 2012. Methane soil vapor concentrations at Gas Probes P-1, P-2, P-3, P-4, and P-8 consistently exceeded methane's Upper Explosive Limit (UEL), while methane concentrations at Gas Probe P-7 exceeded methane's UEL more than 50 percent of the time. Methane concentrations at Gas Probes P-5 and P-6 were either non-detect or well-below methane's Lower Explosive Limit (LEL). Hydrogen Sulfide was detected at concentrations of Non-Detect to up to 20 ppm in Gas Probes P-1, P-2, P-3, P-4, and P-8 (August 2011 through September 2012). No Hydrogen Sulfide was detected in soil vapors at Gas Probes P-5, P-6, or P-7.
Manner and Time of Release:	
Hazardous Substances/Waste Types:	Methane and Hydrogen Sulfide were detected in landfill soil gasses during August 2011 through September 2012.

EXECUTIVE SUMMARY

Parametrix was retained by the Oregon Department of Transportation (ODOT) to perform a Phase I Environmental Site Assessment (ESA) on the developed property located at 1806 NW Eleven Mile Avenue in Gresham, Oregon (Figure 1). This property may be acquired as part of the Interstate Bridge Replacement (IBR) Program and is known as IBR-1S3E05DA-01500. Based on the findings of this investigation, Parametrix reached the following conclusions:

1. The subject property is located on Multnomah County Tax Lot 1S3E05DA-01500. The subject property encompasses an area of approximately 0.5 acres and is zoned as heavy industrial. The subject property is developed with what appears to be a residential structure on the western portion of the subject property and three separate garages on along the southern and eastern portions of the property. An online search of the property address indicates that the subject property is occupied by a modified aftermarket performance vehicle shop named Magic City Garage.
2. The subject property and vicinity are "unmapped areas" as indicated by the EDR Sanborn Map search. Based on the historical aerial photograph review, the subject and adjacent properties appear undeveloped in 1935. In 1948, a building is visible on the southwestern portion of the subject property. The surrounding area appears to have been used for agricultural purposes until 1970. The area remains predominantly agricultural and rural residential. Commercial and industrial buildings are visible to the north, including the Ruby Junction Maintenance Facility. Properties to the south appear to have been developed into an aggregate mining and/or distribution operation. Between 2006 and 2020, the subject and adjacent properties appear to remain in similar uses. Recognized environmental conditions (RECs) associated with historical land use were not identified in the historical records reviewed.
3. Based on the age of the buildings located on the subject property, there is a low potential for lead-based paint (LBP), polychlorinated biphenyls (PCBs), and asbestos-containing materials (ACM) to have been used in building materials at the subject property.
4. The subject property is not listed on any regulatory database that would indicate a past or current release or storage of hazardous materials. A review of regulatory information indicated that several nearby sites were identified in regulatory record databases. However, based on regulatory status and distance from the subject property, none of the sites identified appear to represent a REC to the subject property.

[redacted]

[redacted]

Based upon the conclusions of this investigation of the subject property, Parametrix offers the following recommendation:

1. If the building is to be demolished, a hazardous building material survey should be completed. If hazardous materials (ACM, LBP, or PCBs) are found, they should be handled, managed, and disposed of in accordance with local, state, and federal regulations.
2. No further investigation of environmental conditions on the subject property is recommended at this time.

1. INTRODUCTION

Parametrix was retained by the Oregon Department of Transportation (ODOT) to perform a Phase I Environmental Site Assessment (ESA) on the developed property located at 1806 NW Eleven Mile Avenue in Gresham, Oregon (herein referred to as the subject property) (Figure 1). The subject property consists of Tax Lot ID# 1S3E05DA-01500 in Multnomah County, Oregon. It is our understanding that ODOT may pursue acquisition of the subject property as part of the Interstate Bridge Replacement (IBR) Program. The subject property is identified as IBR-1S3E05DA-01500 (Figure 2).

This Phase I ESA includes a review of available documentation pertaining to the subject property, a limited site reconnaissance, and a review of pertinent public agency documents. The ESA consists of two distinct tasks: (1) a review of documents and of oral information, and (2) a site examination. Conclusions and recommendations within this report are based solely on observed evidence and data collected during the performance of this assessment.

1.1 Purpose

The Phase I ESA was conducted in general accordance with ASTM International (ASTM) Standard E1527-21, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, which defines the generally accepted industry practices and procedures currently applicable at the time and place of this study. The Phase I ESA is intended to permit the user to satisfy the requirements to qualify for the bona fide prospective purchaser limitation under the Comprehensive Environmental Response, Compensation, and Liability Act, and as such constitutes "all appropriate inquiries in the previous ownership and uses of the property consistent with good commercial or customary practice" as defined at 42 U.S. Code §9601 (35)(B).

The purpose of this Phase I ESA is to identify recognized environmental conditions (RECs) on or near the subject property. The term "recognized environmental conditions is defined in ASTM Standard E1527-21 as:

> "…(1) the presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* due to a *release* to the *environment*; (2) the likely presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* due to a *release* or likely *release* to the *environment*; or (3) the presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* under conditions that pose a *material threat* of a future *release* to the *environment*."

In accordance with ASTM Standard E1527-21, some RECs may be further defined as historical recognized environmental conditions (HRECs) or controlled recognized environmental conditions (CRECs).

An HREC is defined as:

> "…*a past release of any hazardous substances* or *petroleum* products that has occurred in connection with the *property* and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the *property* to any required controls."

A CREC is defined as:

> "…a *recognized environmental condition* resulting from a past *release of hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority, with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls."

This Phase I ESA endeavors to identify all RECs, HRECs, and/or CRECs at the subject property.

1.2 Significant Assumptions

This assessment was conducted in accordance with generally accepted industry practices and procedures within the scope of work authorized at the time and place of this study. Parametrix observations are limited to those areas to which it had access on the subject property.

Phase I ESA methodology included viewing accessible areas of the subject property from the public right of way, as on-site access was not available. In addition, an interview was not able to be conducted with a property representative to identify any potential environmental conditions during the Phase I ESA process. Unless otherwise stated, no other exceptions to the guidelines presented in ASTM E1527-21 were made during completion of this Phase I ESA.

1.3 Limitations

The findings, conclusions, and recommendations presented in this report are based on site conditions and the best available information known or made available by regulators, other consultants, or other sources at the time of the investigation. Parametrix conducted a diligent search and investigation in compliance with prevailing standards of the profession; however, certain adverse conditions may exist at the subject property not detected at the time of the investigation.

The services provided under this contract, as described in this report, include professional opinions and judgments based on data collected. These services have been provided according to generally accepted engineering practices. The opinions and conclusions contained in this report are typically based on information obtained from the following:

- Observations and measurements made by Parametrix field staff.
- Contacts and discussions with regulatory agencies and others.
- Review of available hazardous substance or solid waste lists.
- Opinions and judgments of Parametrix based on the information available.

In the professional judgment of Parametrix, the services performed pursuant to the scope of services are an adequate basis to collect data for a preliminary evaluation of the subject property and upon which to draw the conclusions stated in this report.

2. SUBJECT PROPERTY DESCRIPTION

2.1 Location

The subject property is located at 1806 NW Eleven Mile Avenue in Gresham, Oregon. The subject property includes Multnomah County Tax Lot 1S3E05DA-01500 and is identified as IBR-1S3E05DA-01500. The site location is shown on Figure 1, the Site Vicinity Map. The boundary of the subject property is shown on Figure 2.

The subject property is approximately 0.5 acres in area located to the south of the Ruby Junction Operations Facility, east of NW Eleven Mile Avenue, north of a residential property followed by vacant land, and west of the Gresham Fairview Trail. According to the Multnomah County Assessment office, VR Group LLC is the current owner of the subject property. The site location is shown on Figure 1, the Site Vicinity Map. The boundary of the subject property is shown on Figure 2.

2.2 Site and Vicinity Characteristics

The subject property consists of an approximately 0.5-acre parcel with three separate garages located along the southern edge of the subject property. A residential property is located at the western edge of the subject property. The subject property is located in a significantly developed commercial and industrial area. An online search of the property address indicates that the subject property is currently occupied by a modified aftermarket performance vehicle shop named Magic City Garage.

The subject property is bounded to the south by a residential property followed by vacant land, to the east by NW Eleven Mile Avenue, to the north by the Ruby Junction Operations Facility, and to the west by the Gresham Fairview Trail (see Figure 2).

2.3 Physical Setting

The subject property is located in the Portland Basin, which marks the northern terminus of the Willamette Lowland in Oregon (DNR n.d.; Swanson et al. 1993). The northern portion of the basin is known for its low topographic relief, with the subject property at an elevation of approximately 266 feet above mean sea level. The Portland Basin is bound by the Cascade Range to the east and the Coast Range to the west.

Geologic processes in the Portland Basin consist of volcanism, sedimentation, and cataclysmic flood deposits in both fluvial and marine depositional environments. The subject property lies on what is mapped as coarse-grained Missoula flood deposits, cobbly, sandy gravel deposited by the Missoula floods (Wells et al. 2020). Surface soils consist of silty loam.

The topography in the vicinity of the subject property is a consistent slope, rising with distance from the Columbia River. The anticipated groundwater gradient is to the north toward the Columbia River. A static groundwater level of 17 feet below ground surface was documented on July 18, 2000, in a

geotechnical hole located approximately 150 feet north of the subject property. An additional static groundwater level of 5.9 feet below ground surface was documented on November 13, 2012, in a geotechnical hole located approximately 80 feet north of the subject property.

2.4 Current Use of the Subject Property

The subject property is a 0.5-acre lot, developed with one residential structure and three separate garages located along the southern edge of the subject property. An online search of the property address indicates that the subject property is currently occupied by a modified aftermarket performance vehicle shop named Magic City Garage.

2.5 Descriptions of Improvements on the Subject Property

No improvements are developed at the subject property.

2.6 Environmental Liens

An environmental lien is defined by ASTM as a charge, security, or encumbrance upon title to a property to secure the payment of a cost, damage, obligation, or duty arising out of response actions, cleanup, or other remediation of hazardous substances or petroleum products. No evidence of environmental liens against the subject property was identified during the course of this Phase I ESA.

3. RECORDS REVIEW

The purpose of the records review task was to gather environmental data on the subject property prior to the site examination. The information review consisted of two subtasks: a review of various lists and files published by federal and State of Oregon agencies; and a compilation of historical uses of the site and site vicinity, to determine whether past operations pose an environmental risk to the subject property. Information for agency file review is based, in part, on a report provided by Environmental Data Resources (EDR). The EDR report is included in Appendix A.

The EDR report is a summary of state and federal database searches for sites of possible environmental concern. The information review enabled Parametrix personnel to characterize the types of activities performed at the site, identify data gaps prior to the site examination, and facilitate recognition of discrepancies between reported and observed data. Data gaps identified during the document review were addressed by interviewing knowledgeable personnel (when available), observations during the site examination, or by additional detailed investigation.

It should be noted that this information is reported as Parametrix received it from EDR, which in turn reports information as it is provided in various government databases. It is not possible for either Parametrix or EDR to verify the accuracy or completeness of information contained in these databases. However, the use of and reliance on this information is a generally accepted practice in the conduct of environmental due diligence. The following sections present information from the document review.

3.1 Standard Environmental Record Sources

The following section summarizes information collected from records maintained by the U.S. Environmental Protection Agency (EPA) and the Oregon Department of Environmental Quality (DEQ). The information includes details on sites identified in regulatory databases within recommended ASTM search distances. A complete listing of the databases reviewed is included in the EDR Radius Map™ Report (Appendix A).

3.1.1 Review of Oregon Department of Environmental Quality Databases

The following sections summarize the most relevant information obtained from the EDR Radius Map™ Report regarding sites identified within the ASTM E1527-21 search radii from the following databases. Additional information regarding these sites was reviewed on the DEQ Environmental Cleanup Site Information Database website (DEQ n.d.a) and the DEQ Leaking Underground Storage Tank (LUST) Cleanup Site Database website (DEQ n.d.b). A complete listing of the databases reviewed is included in the EDR report. Relevant database listings from DEQ include:

- DEQ Underground Storage Tank (UST) List
- DEQ LUST List

- DEQ Environmental Cleanup Site Information (ECSI) List
- Spill Database (SPILLS)
- Solid Waste Facilities (SWF/LF) List
- DEQ Confirmed Release List (CRL)
- DEQ Brownfields List
- DEQ Dry Cleaners List
- DEQ Engineering or Institutional Controls

3.1.1.1 DEQ Underground Storage Tank List

The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data were obtained from the DEQ UST List.

Information contained in the EDR report indicates that the subject property is not listed as a UST site. One UST site was identified within 0.25 miles of the subject property:

- The Gresham Sanitary Service site (2131 NW Birdsdale Avenue) is located approximately 0.25 miles north of the subject property. According to DEQ records, two USTs were removed. This site is not included on the DEQ LUST list.

Unless otherwise noted, the presence of a UST on and/or near a site does not, in itself, constitute a REC. Where available, other information was reviewed regarding the presence of a UST such as the age of the facility, proximity to the subject property, and known releases or spills. UST sites that have had known releases are discussed in Section 3.1.1.2 below.

3.1.1.2 DEQ Leaking Underground Storage Tank List

The LUST Incident Reports contain an inventory of reported LUST incidents. The data were obtained from the DEQ LUST Database List.

Information contained in the EDR report indicates that the subject property is not listed as a LUST site.

Within 0.5 miles of the subject property, 13 LUST sites were identified, 8 of which are heating oil tank (HOT) sites. The 2 LUST sites located in proximity to the subject property (within approximately 0.125 miles) are discussed below:

- The HOT site at 1843 NW Eleven Mile Avenue is located approximately 333 feet northwest of the subject property. The petroleum release was reported to DEQ in 1991. According to the DEQ records, a No Further Action (NFA) determination letter was issued by DEQ on March 11, 1992. Eight yards of petroleum contaminated soil (PCS) was removed; groundwater was not encountered in the remedial excavation. At the time, a pocket of approximately 108 cubic yards of PCS remained in situ. The NFA letter identified the release as from an aboveground heating oil tank.

- The TriMet HOT site at 2005 NW Eleven Mile Avenue is located approximately 0.12 miles northwest of the subject property. The petroleum release was reported to DEQ in 2012. According to DEQ records, a Soil Matrix Cleanup was completed, and contractor cleanup certification was issued. DEQ issued a cleanup closure letter on January 30, 2013 (Note: Beginning in 2000, DEQ began issuing closure letters in lieu of NFAs for HOTs).

Nine of the LUST sites located between 0.125 miles and 0.5 miles from the subject property have received NFAs or, in the case of heating oil tanks, closure letters from DEQ. The two sites with open DEQ LUST folders had no reported groundwater impacts and are located at least 0.3 miles from the subject property. Based on DEQ information indicating LUST site closure activities, a lack of reported groundwater impact and/or distance, none of the identified LUST sites referenced above appear to represent a REC to the subject property.

3.1.1.3 DEQ Environmental Cleanup Site Information List

The ECSI identifies and tracks known or potentially contaminated sites within Oregon and is the state's equivalent to the Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS). The CRL is a subset of the ECSI and includes sites which have known releases of hazardous substances. The Voluntary Cleanup Program (VCP) database is a list of sites that have been entered into the DEQ VCP and are undergoing cleanup. The subject property is not identified on the ECSI, CRL, or VCP databases.

Twelve ECSI and VCP sites were identified within 1 mile of the subject property. Of the 12 sites, three are located within 0.5 miles of the subject property:

- The Gresham Sand & Gravel site (1339 NW Eastwood Avenue) is located approximately 0.3 miles southwest of the subject property. This site is listed in the ECSI database. A former landfill, according to DEQ records, the site was investigated following a report of employee health concerns following exposure to sump material. A DEQ investigation identified low concentrations of contaminants in surface water samples. Based on the results, DEQ issued an NFA determination for the site on September 30, 1993.
- The Maaco Auto Paint site (2441 NW Eleven Mile Avenue) is located approximately 0.35 miles northwest of the subject property. This site is listed in the ECSI database. According to DEQ records, solvents were alleged to have been dumped on the site. DEQ collected soil samples and based upon only trace concentrations of detected petroleum, VOCs, and naphthalene in soil, determined that an NFA was required. No formal NFA determination was issued.
- The Obrist & Cunningham site (935 SE 202nd Avenue) is located approximately 0.42 miles northeast of the subject property. This site is listed in the ECSI, VCP, AIRS, HSIS, and UIC databases. According to DEQ records, soil samples collected from drywells showed the presence of petroleum and lead. Following a cleanup, DEQ issued an NFA determination on December 13, 2005.

None of the other nine identified ECSI and VCP sites are located within 0.5 miles of the subject property.

The remaining ECSI and VCP sites are located at sufficient distances and/or cleanup activities have been completed so that they do not appear to represent RECs to the subject property.

3.1.1.4 SPILLS Database

This database provides a comprehensive list of reported spills. The subject property is not listed as a SPILLS site. No SPILLS sites are listed within 0.5 miles of the subject property.

3.1.1.5 Solid Waste Facilities/Landfill

The Solid Waste Facilities/Landfill (SWF/LF) records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data were obtained from Oregon's Solid Waste Facilities List Solid Waste Facilities List.

The subject property is not listed as a SWF/LF site. One SWF/LF site was identified within 0.5 miles of the subject property:

- The Gresham Sanitary Service site (2131 NW Birdsdale Avenue) is located approximately 0.19 miles northwest of the subject property and is listed on the SWF/LF, AST, HSIS, and UIC databases. According to DEQ records, the facility operates as a garbage transfer station. Garbage and recycling are received and processed for offsite disposal. The facility is not permitted to accept hazardous waste, lead acid batteries, asbestos, computers, and most computer monitors.

Based upon this site not being listed on regulatory cleanup databases, a restriction on acceptance of hazardous wastes, the absence of on-site disposal of wastes, and distance, this facility does not appear to be a REC to the subject property.

3.1.1.6 DEQ Brownfields List

The Brownfields database lists sites of real property where expansion or redevelopment is complicated by actual or perceived environmental contamination. The subject property is not listed as a DEQ Brownfield. One DEQ Brownfields site was identified within 1 mile of the subject property:

The Lot 5 Vance Landfill site (1541 SE 190th Avenue) is located approximately 0.5 miles west of the subject property and is listed in the ECSI, VCP, SPILLS, and Brownfields databases. According to DEQ records, ending in 1978 or 1979 the site received municipal garbage and yard debris transferred from an adjacent property (Gresham Sand & Gravel site). Methane and hydrogen sulfide are the contaminants of concern at the site. DEQ has not issued an NFA for this site. Based upon distance and the identified contaminants, this site does not appear to be a REC to the subject property.

3.1.1.7 DEQ Drycleaner List

The drycleaner database is a listing of former or current drycleaners in Oregon. No DEQ drycleaner sites were identified within 0.125 miles of the subject property.

3.1.1.8 DEQ Engineering/Institutional Controls

DEQ maintains records for sites with implemented engineering controls and/or institutional controls. The subject property is not included in records of sites with Engineering/Institutional Controls, per DEQ. No cleanup sites within 1 mile require DEQ Engineering/Institutional Controls, per DEQ.

3.1.2 Environmental Protection Agency Database Review

The EPA administers several programs designed to protect the environment and monitor the generation, storage, treatment, and disposal of hazardous substances. The following sections summarize the most relevant information obtained from the EDR report regarding sites identified within ASTM E1527-21 search radii from the following databases. A complete listing of the databases reviewed is included in the EDR report.

- National Priorities List (NPL)
- Superfund Enterprise Management System (SEMS) List
- RCRA Corrective Action Report (CORRACTS) List
- Resource Conservation and Recovery Information System (RCRIS) List
- Emergency Response Notification System (ERNS) List
- U.S. Brownfields List

3.1.2.1 NPL List

The NPL identifies priority hazardous waste sites for remedial actions under the EPA Superfund program. The EDR report indicates that the subject property is not listed as an NPL site. No NPL sites were identified within 1 mile of the subject property, and no de-listed NPL sites were identified within 0.5 miles of the subject property.

3.1.2.2 SEMS List

The EPA publishes a list of sites that may potentially pose a threat to the environment or the health of the general public. This list is known as the SEMS list (formerly the CERCLIS list). Information contained in the EDR report indicates the subject property is not listed as a SEMS site. One SEMS site was identified by EDR:

- The Columbia Slough is listed as a SEMS-ARCHIVE and AOCONCERN. The Columbia Slough, located approximately 2.25 miles north of the subject property, is an ongoing, long term remediation site. Decades of direct discharges and upland pollutant runoff have contaminated Columbia Slough sediments. Based on information in the EDR report, a pond adjacent to Fairview Creek is a potential pollution source of Fairview Creek, and, therefore, the Columbia Slough. The pond beside Fairview Creek is located approximately 0.25 miles northeast from and cross gradient of the subject property. The Columbia Slough is not a confirmed source of contamination to the subject property and the Columbia Slough is

greater than 0.5 miles from the proposed area of acquisition. The Columbia Slough issues do not appear to be a REC to the area that may be acquired as part of the IBR program.

The EPA also publishes the SEMS-NFRAP list, which are SEMS sites that have been designated "no further remedial action planned" and have been removed from the SEMS list. Information contained in the EDR report indicated that the subject property is not listed as a SEMS-NFRAP site. No SEMS-NFRAP sites were identified within 1 mile of the subject property.

3.1.2.3 CORRACTS Review

The CORRACTS report identifies hazardous waste handlers with corrective action activity. Information contained in the EDR report indicates the subject property is not listed as a CORRACTS site. No CORRACTS sites are listed within 1 mile of the subject property.

3.1.2.4 Resource Conservation and Recovery Information System List

The RCRIS list includes selective information on sites which generate, transport, store, treat, and/or dispose of hazardous waste as defined by the RCRA. Information contained in the EDR report indicates the subject property is not listed in the RCRIS database.

Three RCRIS sites are listed within 0.25 miles of the subject property. The sites are not located adjacent to the subject property and none of the sites are listed as a RCRA TST site or a site undergoing corrective action.

The EPA also regulates the management of hazardous waste at transportation, storage, and disposal (TSD) facilities. Information contained in the EDR report indicates the subject property is not listed as a RCRIS-TSD site. No RCRIS-TSD sites were identified within 0.5 miles of the subject property.

Based upon distance and regulatory status, the three identified RCRIS listed sites do not appear to be potential RECs to the subject property.

3.1.2.5 ERNS List

The ERNS is a national database containing information from spill reports made to federal authorities. Information contained in the EDR report indicates the subject property is not listed as an ERNS site.

3.1.2.6 US Brownfields List

The EPA's US Brownfields list identifies Brownfields properties addressed by Cooperative Agreement Recipients and Brownfields properties addressed by Targeted Brownfields Assessments. The EDR report indicates the subject property is not listed as a US Brownfields site. No US Brownfield sites were identified within 0.5 miles of the subject property.

3.1.3 Other Databases

The following sections include other databases identified in the EDR report that may be relevant to assessing potential environmental liability or environmental issues at the subject property.

3.1.3.1 EDR Proprietary Databases

EDR has conducted research on the occurrence of historical business practices that may constitute a REC to properties. The database was developed from data found in historical city directories and contains information on over 100,000 former gas stations, manufactured gas plants, and dry cleaners. Due to the nature of these businesses, the sites have the potential for soil and groundwater contamination to have occurred.

EDR Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. The listings reviewed include, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, and/or service station.

Unless otherwise noted, the mere presence of historical auto stations near a site does not, in itself, constitute a REC.

A review of the EDR Historical Auto Stations list, as provided by, indicated that there are no EDR Historical Auto Stations sites within 0.125 miles of the subject property.

EDR Manufactured Gas List

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800s to 1950s to produce a gas that could be distributed and used as fuel. Many of the by-products of the gas production, such as coal tar (oily waste containing volatile and nonvolatile chemicals), sludges, oils, and other compounds, are potentially hazardous to human health and the environment. The by-products from this process were frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

No manufactured gas sites are listed within 1 mile of the subject property.

EDR Historical Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to, dry cleaners, cleaners, laundries, laundromats, cleaning/laundry businesses, wash and/or dry businesses.

A review of the EDR Historical Dry Cleaner list, as provided by EDR, has revealed that there are no EDR Historical Dry Cleaner sites within 0.125 miles of the subject property.

3.1.4 Orphan Site List

Orphan sites are sites for which mapping information is not detailed adequately to plot the location of the site, or for which there is no known responsible party or the responsible party is unwilling or unable to pay for cleanup. The orphan site list and available mapping information were reviewed by Parametrix. Six orphan sites were identified by EDR in the vicinity of the subject property. The six orphan sites identified are located at sufficient distances and/or cleanup activities have been completed so that they do not appear to represent RECs to the subject property.

3.1.5 Vapor Encroachment

ASTM Standard E1527-21 defines vapor migration as "the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface." The recognition of vapor migration as a possible REC may require incorporation of new types of controls and restrictions to address this contamination pathway.

The subject property and adjacent sites were reviewed in an effort to determine whether vapor migration has, or has the potential to have, occurred at the site, or from adjacent properties.

No properties were identified in the near vicinity which have confirmed releases of volatile contaminants in soil or groundwater which have not been sufficiently addressed or would otherwise present a potential impact to the subject property.

3.2 Historical Use Information

The objective of the historical use information review is to develop a history of the previous uses of the subject property and surrounding area that helps to identify the likelihood of past uses having led to RECs for the subject property. Parametrix requested Sanborn Fire Insurance Maps and historical aerial photographs for review.

3.2.1 Certified Sanborn Maps™ Fire Insurance Map Review

Fire insurance maps in the EDR Certified Sanborn Map Report showing the vicinity of the subject property were requested to establish historical business operations at the subject property and adjacent properties. This report (Appendix B) certifies that the complete holdings of the Sanborn Library, LLC collection were searched and, based on client-supplied subject property information, fire insurance maps covering the subject property were not found.

3.2.2 Historical Aerial Photograph Review

Historical aerial photographs of the subject property area were obtained from EDR in the EDR Aerial Photo Decade Package. Aerial photographs for the years 1935, 1948, 1951, 1955, 1960, 1970, 1975, 1981, 1990, 1994, 2000, 2006, 2009, 2012, 2016, and 2020 were examined. Copies of the aerial photographs are included in Appendix C. Observations are listed below.

1935	The subject property appears to be undeveloped, vegetated land. Adjacent properties appear to be undeveloped; some properties are covered by trees, and some are cleared and used for farming. Roads border the subject property to the east and west.
1948–1960	A building associated with the property to the adjacent south is visible on the southwestern portion of the subject property. Farmhouses are visible to the east, west, and north. Residential buildings and farms are visible in the vicinity.
1970–1981	The subject property and surrounding areas appear to be more densely populated with residential and industrial buildings. The building located on the southwestern portion of the subject property is no longer visible. The adjacent property to the west appears to be undeveloped. Dense residential development is visible to the southeast, beyond the rural property located south of the subject property.
1990–2000	Two additional structures (likely garages) are visible on the southern portion of the subject property. Commercial and industrial development, including the Ruby Junction Operations Facility, are visible north of the subject property. A new structure is visible on the property to the adjacent south on the 1994 aerial photograph. Several dozen vehicles are visible on the property to the southwest. The adjacent property to the east remains in rural residential use and properties south of the subject property remain undeveloped.
2006–2020	The previously undeveloped property to the south has been developed into what appears to be an aggregate mining and/or distribution operation. Turbid surface water is visible near the property line between that site and the property to the adjacent south of the subject property. The large quantity of vehicles on the property to the southwest are no longer visible and have been replaced by three commercial buildings. The Ruby Junction Operations Facility has expanded to the south, and now borders the subject property along its northern edge. An additional structure (likely another garage) is visible on the eastern edge of the subject property in the 2006 aerial photograph. By 2016, light rail tracks associated with the Ruby Junction Operations Facility are visible northwest of the subject property. It appears that a body of water is covering a portion of the properties to the south-southwest. This body of water increases in size by the 2020 aerial photograph.

Based on the historical aerial photograph review, the subject and adjacent properties appear undeveloped in 1935. In 1948, a building is visible on the southwestern portion of the subject property. The surrounding area appears to be used for agricultural purposes until 1970. The area appears to remain predominantly agricultural and rural residential. Commercial and industrial buildings are visible to the north, including the Ruby Junction Operations Facility. Properties to the south appear to have been developed into an aggregate mining and/or distribution operation. Between 2006 and 2020, the subject and adjacent properties appear to remain in similar uses.

3.2.3 Local Agency Records

Information from local agencies was reviewed for environmental significance as described in the following sections.

3.2.3.1 City of Gresham

A review of permits for environmental significance (i.e., septic tank, stormwater, dry wells, and/or USTs or aboveground storage tanks [ASTs]) was completed. No building, plumbing, septic and/or UST or ASTs permit records were recorded online with the Gresham Maps records for the subject property.

3.2.3.2 Multnomah County

Based on information from the Multnomah County Tax Assessor's Office, the subject property is known as Tax Lot #1S3E05DA-01500 and is approximately 0.5 acre in size. It is listed by Multnomah County as being owned by VR Group LLC. The subject property is currently used as a residence with garages that possibly serve as a maintenance shop.

3.3 Additional Environmental Information

The following sections provide a summary of additional environmental information obtained for the site.

3.3.1 Asbestos

The manufacture of most asbestos-containing materials (ACM) was banned by the EPA by 1979. Prior to this, asbestos was a common constituent of numerous building materials, including floor and ceiling tiles, caulking, pipe insulation, roofing materials, and exterior siding.

Based on the age of the building at the subject property (constructed in 1988), there is a low potential for ACM to have been used at the subject property.

3.3.2 Lead-Based Paint

Before 1977, paint commonly contained lead which is considered to cause human health problems if ingested or inhaled.

Based on the age of the building at the subject property (constructed in 1988), there is a low potential for lead-based paint containing building materials to have been used at the subject property.

3.3.3 Polychlorinated Biphenyls

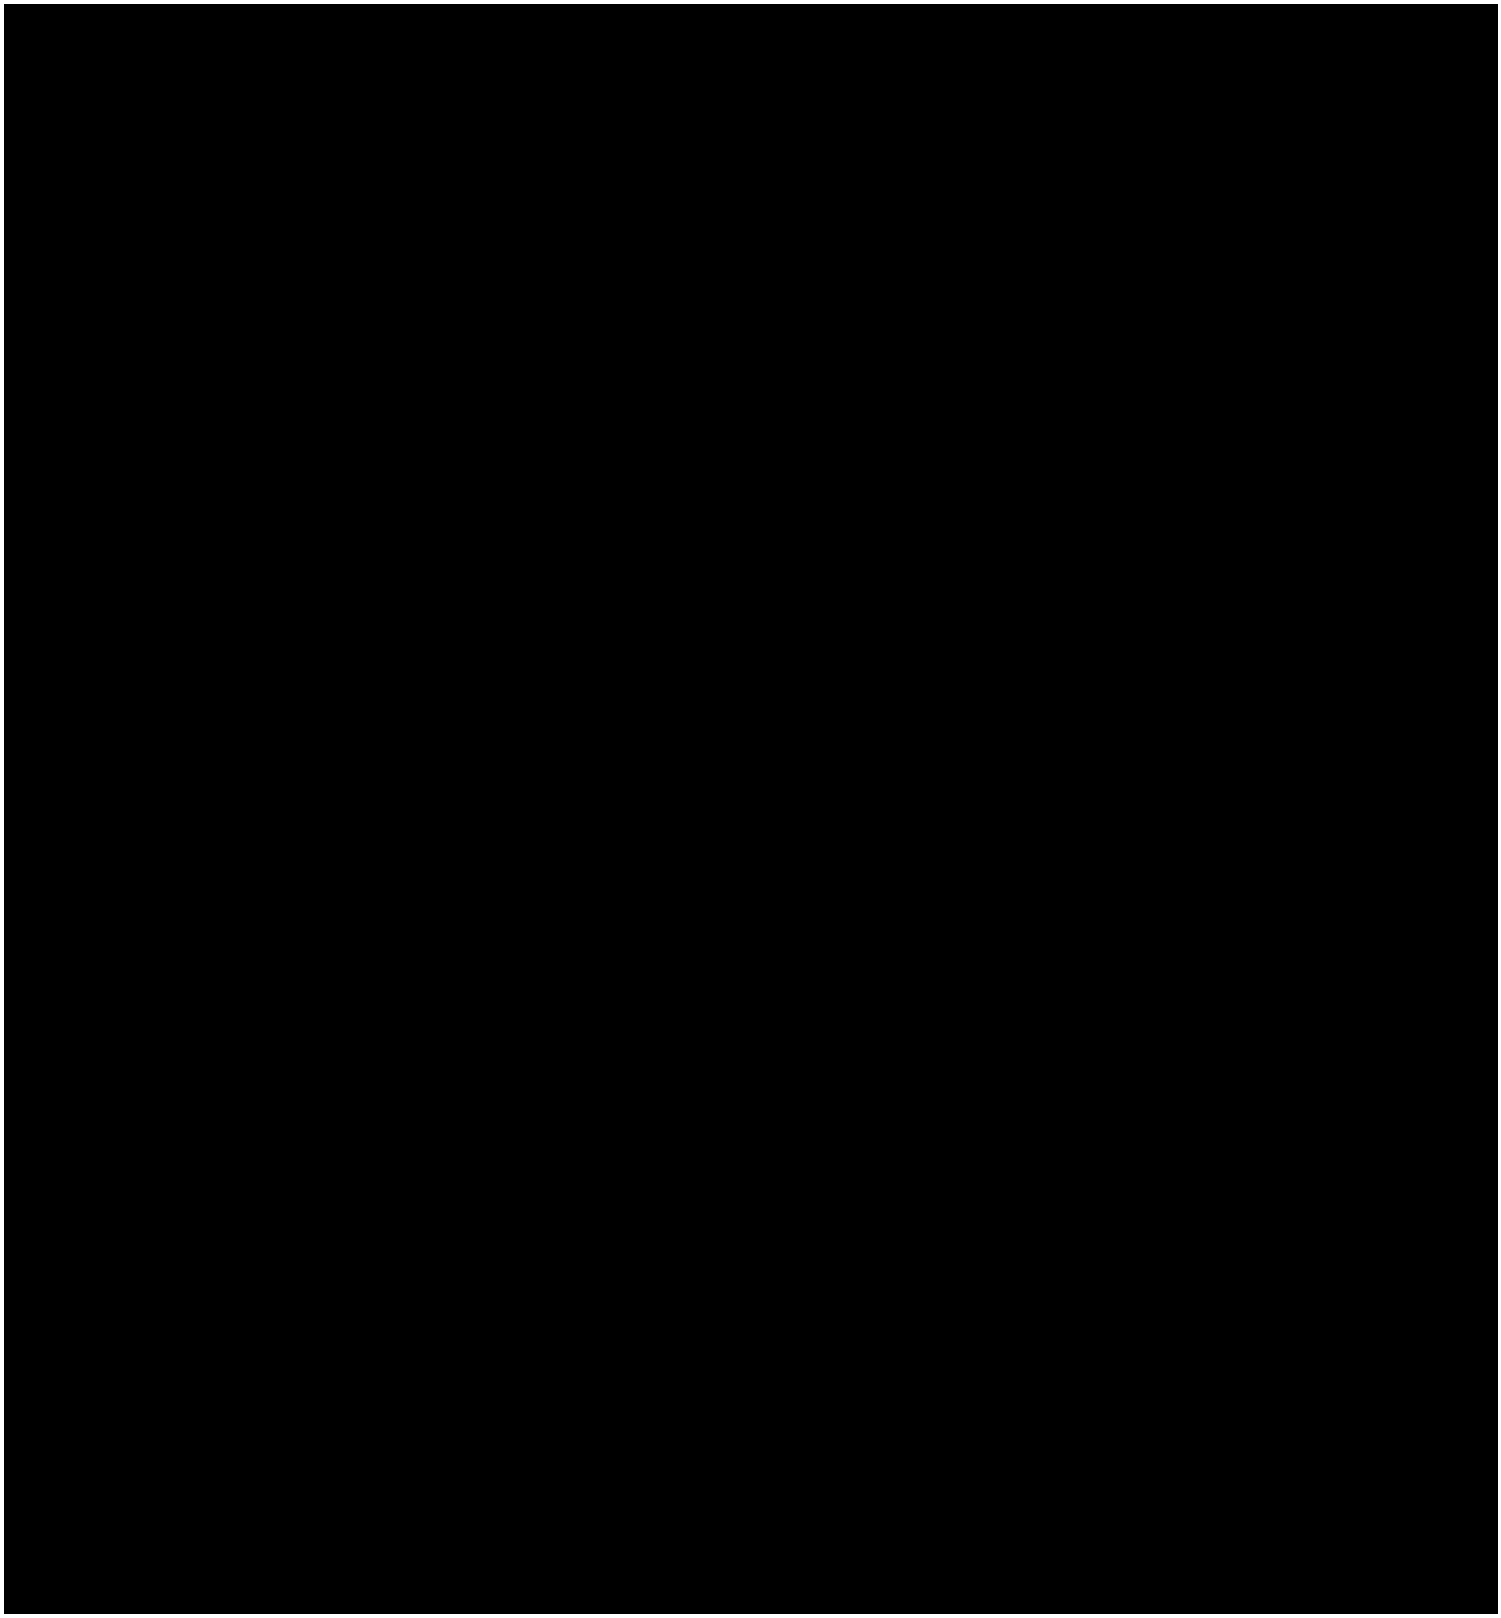
PCB manufacturing was banned in 1979. Transformers and electrical lighting equipment can potentially contain polychlorinated biphenyls (PCBs). No transformers were observed on the subject property. Based on the age of the building at the subject property (constructed in 1988), there is a low potential for PCBs to have been used in building material at the subject property.

3.3.4 Radon

Radon is a naturally occurring radioactive gas formed by the decay of uranium in some rocks and soil. The adverse health effects associated with radon gas depends upon various factors, such as the concentration of the gas, and exposure duration. The potential concentration of radon gas within a building depends on subsurface soil conditions, the integrity of the building's foundation, the existence of a basement or crawl space (primary areas of concern), and the building's ventilation.

Multnomah County ZIP code 97030 is located in the federal EPA Radon Zone 2. The Zone 2 indoor average radon level predicted from 2 to 4 pCi/L, reported as a moderate risk of radon elevation. The EPA Action Level for radon is 4 pCi/L. Based on this limited information, radon likely does not represent an environmental concern at the property.

4. FILE REVIEW



In accordance with ASTM Standard E1527-21, inquiries and review of previous investigations for the subject property, and a review of regulatory files for the subject property or adjacent properties may be conducted to further evaluate environmental conditions on the property or adjacent properties, and to fill in data gaps where applicable. Previous investigations and file reviews are summarized below.

4.1 Previous Investigations

Based on regulatory information from DEQ, the subject property is not listed on any regulatory databases. No previous investigations of the subject property were identified during the course of this Phase I ESA.

4.2 Adjacent and Nearby Properties File Review

Several adjacent and nearby properties were listed on environmental databases, as described in Section 3. Sufficient site-specific information was available through review of the EDR report, as well as online DEQ files, to develop an opinion on the potential for these properties to have affected the subject property. Therefore, a specific file review (physical review at DEQ) was not required, beyond those completed during the course of this Phase I ESA. Specific information on the nature of release, types of contaminants, media impacted, and the potential to have affected the subject property or otherwise caused environmental concern is provided in Section 3.

6. INTERVIEWS

An interview was not able to be conducted with a property representative to identify any potential environmental conditions and to address information data gaps during the Phase I ESA process. The lack of a property owner or representative interview represents a data gap in accordance with ASTM Standard E1527-21.

7. CONCLUSIONS

Based on the findings of this investigation, Parametrix concluded the following:

1. The subject property is located on Multnomah County Tax Lot 1S3E05DA-01500. The subject property encompasses an area of approximately 0.5 acres and is zoned as heavy industrial. The subject property is developed with what appears to be a residential structure on the western portion of the subject property and three separate garages on along the southern and eastern portions of the property. An online search of the property address indicates that the subject property is currently occupied by a modified aftermarket performance vehicle shop named Magic City Garage.
2. The subject property and vicinity are "unmapped areas" as indicated by the EDR Sanborn Map search. Based on the historical aerial photograph review, the subject and adjacent properties appear undeveloped in 1935. In 1948, a building is visible on the southwestern portion of the subject property. The surrounding area appears to have been used for agricultural purposes until 1970. The area remains predominantly agricultural and rural residential. Commercial and industrial buildings are visible to the north, including the Ruby Junction Maintenance Facility. Properties to the south appear to have been developed into an aggregate mining and/or distribution operation. Between 2006 and 2020, the subject and adjacent properties appear to remain in similar uses. RECs associated with historical land use were not identified in the historical records reviewed.
3. Based on the age of the buildings located on the subject property, there is a low potential for LBP, PCBs, and ACM to have been used in building materials at the subject property.
4. The subject property is not listed on any regulatory database that would indicate a past or current release or storage of hazardous materials. A review of regulatory information indicated that several nearby sites were identified in regulatory record databases. However, based on regulatory status and distance from the subject property, none of the sites identified appear to represent a REC to the subject property.

[redacted]

8. RECOMMENDATIONS

Based upon the conclusions of this investigation of the subject property, Parametrix offers the following recommendations.

1. If the building is to be demolished, a hazardous building material survey should be completed. If hazardous materials (ACM, LBP, or PCBs) are found, they should be handled, managed, and disposed of in accordance with local, state, and federal regulations.
2. No further investigation of environmental conditions on the subject property is recommended at this time.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes

available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 04/26/2023 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Lists of Federal RCRA generators

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 03/06/2023 has revealed that there is 1 RCRA-VSQG site within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

ECSI: The Environmental Cleanup Site Information System records information about sites in Oregon that may be of environmental interest. The data come from the Department of Environmental Quality.

A review of the ECSI list, as provided by EDR, and dated 03/01/2023 has revealed that there are 12 ECSI sites within approximately 1 mile of the target property.

Lists of state and tribal landfills and solid waste disposal facilities

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Department of Environmental Quality's Closure & Regular Solid Waste Active Disposal Permits database.

A review of the SWF/LF list, as provided by EDR, and dated 01/13/2023 has revealed that there is 1 SWF/LF site within approximately 0.5 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/06/2023 has revealed that there are 3 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System:
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

B&K CADILLAC SPECIALTIES (Continued) **1000121215**

Hazardous Waste Summary:

e Code: D000
ste Description: Not Defined

e Code: D001
Waste Description: Ignitable Waste

te Code: F002
te Description: The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

e Code: F004
cription: The Following Spent Nonhalogenated Solvents: Cresols, Cresylic Acid, And Nitrobenzene; And The Still Bottoms From The Recovery Of These Solvents; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

GRESHAM SAND & GRAVEL (Continued) **S113408865**

Created By: Not reported
Created Date: 12/17/2002
Updated By: KDANA
Updated Date: 04/17/2013
Decode for NarcdID: Contamination
NARR Comments: A landfill was originally present where the Environmental Services building is now located. The landfill began accepting brush and yard debris in the late 1950s, and later accepted garbage until 1967 or 1968. In 1978 or 1979, most of the garbage was moved to the area now known as the Vance Pit (see ECSI #5780). Samples were taken by DEQ staff from the sump area and were analyzed by DEQ's lab for volatile organic compounds, semivolatile compounds, herbicides and total metals. Levels of metals identified in the samples were below DEQ's SOCLEAN levels and appeared to be normal background. Eight organics were identified at low levels. Their association with the landfill is unclear. See the Strategy Recommendation for more information.

NARR Comments: A worker at Gresham Sand & Gravel experienced burning and swelling after handling sediments removed from a sump area in the gravel pit. The sump area is located near and fed by water flowing from the wall of an area of landfill debris known as Vance Pit. A cross-section of

GRESHAM SAND & GRAVEL (Continued) **S113408865**

the landfill is visible, as gravel pit operations have caused soil from that area to slide. According to a report from the Mine Safety and Health Administration, the worker who experienced the burning and swelling of his hands reported that other workers at the site had complained of headaches and nausea when working around sump material.

NARR Comments: DEQ recommended NFA due to the low levels of the contaminants identified. However, the Strategy Recommendation states that the finding of contaminants indicates that there may be a need to address future releases from the landfill and any current or future threats to area groundwater. It was recommended that the area of exposed landfill be covered and erosion in this area prevented.

NARR Comments:	(1/21/92 ALB) The site was picked up from NWR source file review in SAS's 1988 discovery project. Regional personnel responded 6/87 to a complaint of solvent dumping on the site. DEQ collected soil samples from the hole where the disposal was alleged. These samples revealed trace levels of solvent contamination and low levels of diesel/oil contamination and gasoline constituents. Regional staff determined there was no hazardous waste violation. Shortly after the initial complaint response, the business was gutted by a fire. The property was subsequently transferred to new owners and redeveloped. The alley behind MAACO Auto Paint, where the dumping was alleged, was excavated to a depth of approximately one foot and paved over and roofed. DEQ did not sample the area after the excavation. The site is currently occupied by Pro-Met Machining Inc.

NARR Comments: Soil samples from the Old Wash Bay Drywell showed the presence of gasoline, diesel and heavy oil in soils. Soil samples from the parking lot stormwater drywell showed the presence of diesel and heavy oil in soils. Parking lot stormwater drywell analytical results also showed the presence of lead at concentrations that qualified the material as hazardous waste.

NARR Comments: (7/11/05 JMW/SAP) Site entered DEQ's Independent Cleanup Program in July 2005. (10/18/05 MG/ECP) Approximately 45 tons of soil were removed from the old wash bay drywell and disposed of at the Hillsboro Landfill. Approximately 65 tons of soil were removed from the parking lot stormwater drywell and disposed of as hazardous waste. Soil samples collected following the soil removal showed non-detect for all petroleum hydrocarbons on the walls and the floor of both excavations. The parking lot stormwater drywell further showed non-detect for total lead in all samples, except for one result at 4 mg/kg on the west wall of the excavation. Based on report review, DEQ has determined that the Underground Injection Control (UIC) systems have been decommissioned in accordance with regulation. The <quot>Old Wash Bay Drywell<quot> and the <quot>Parking Lot Stormwater Drywell<quot> have been decommissioned and closed. DEQ has issued a Partial NFA for these two UIC's.

NARR Comments: (10/30/12 SMF) Monthly monitoring of soil vapors at eight gas probes

LOT 5 VANCE LANDFILL (Continued) **S109913235**

on the southern half of Tax Lot 300 (T1S/R3E-S05CA) detected the presence of elevated concentrations of methane in the subsurface during August 2011 through September 2012. Methane soil vapor concentrations at Gas Probes P-1, P-2, P-3, P-4, and P-8 consistently exceeded methane's Upper Explosive Limit (UEL), while methane concentrations at Gas Probe P-7 exceeded methane's UEL more than 50 percent of the time. Methane concentrations at Gas Probes P-5 and P-6 were either non-detect or well-below methane's Lower Explosive Limit (LEL). Hydrogen Sulfide was detected at concentrations of Non-Detect to up to 20 ppm in Gas Probes P-1, P-2, P-3, P-4, and P-8 (August 2011 through September 2012). No Hydrogen Sulfide was detected in soil vapors at Gas Probes P-5, P-6, or P-7.

NARR Comments: According to Robert Pearson with the Gresham Department of Environmental Services, the Vance Pit consists of landfill material removed from the original landfill area where the Environmental Services building is now located. The original landfill began accepting brush and yard debris in the late 1950s. It later accepted garbage from individual residents. In 1967 or 1968, the landfill quit receiving garbage. In 1978 or 1979, most of the garbage was removed to the area now known as the Vance Pit, next to the Gresham Sand & Gravel site (see ECSI #1407).

Decode for NarcdID: Contamination
NARR Comments: (4/9/02 MTP/SAS) DEQ received a complaint in June 2000 alleging improper waste management of automotive-related fluids drained from vehicles at the site. The complaint indicated that gasoline and waste oil were improperly stored in drums and other containers without lids, and that pressure washing occurred at the site without containment, allowing washwater to penetrate the ground. It was reported that these practices had occurred at least since 1994. Staff from DEQ's Hazardous Waste Section substantiated these allegations during a 3/20/01 site visit. Batteries were observed to be stored on the ground surface, drums were filled with petroleum waste and some were filled with rainwater. Gasoline was stored in open 5-gallon buckets beneath a tarp. A solvent parts washer and drum labeled <quot>used solvent<quot> were observed. Numerous oil-stained soil areas were observed throughout the yard. Partially buried solid waste was observed near the northwest corner of the property, and could be related to the adjacent landfill. An area behind the main shop, where drums were stored and steam cleaning was conducted, appeared to be the most impacted area at the site. Steam cleaning was conducted over bare soil and the wastewater was allowed to infiltrate. It is unclear if runoff from the steam clean area drains to a dry well, reportedly located on the other side of the building near the southeast corner of the property. A catch basin was observed near the southwest area of the site, and appeared to show staining. It is not known if the catch basin is connected to the dry well. As a result of the inspection, DEQ issued a Notice of Noncompliance (NON) for three violations, which included failure to make a hazardous waste determination, failure to properly containerize waste, and discharging vehicle parts wash water to shallow soil and groundwater. DEQ requested documentation that all wastes were properly managed and containerized, and that Bob's Ford cease pressure washing until the appropriate wash water management and/or permitting was obtained. Reportedly, limited car washing (<8 cars/month) is occurring at the site but does not appear to require a discharge permit. Bob's Ford has indicated that parts washing will be discontinued until a berm to contain the water is constructed. Following the inspection, disposal documentation received by DEQ indicated that 534 gallons of used oil (flashpoint <200 degrees Fahrenheit) and 133 batteries were removed from the site. It does not appear that any waste characterization sampling was conducted, and it is unclear how used solvent is managed. Based on the potential contamination, the site was referred to DEQ's Site Assessment Program on September 26, 2001.

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: Possibly overland runoff of impacted surface water to the dry well and possibly shallow groundwater; direct infiltration into relatively permeable site soil. Both surface soil and subsurface soil are likely impacted at the pressure-washing area. Relatively high use of groundwater in the area. The nearest domestic well is 3,000+ feet from the site. Surface water runoff does not appear to be a pathway of concern.

Decode for NarcdID: Remedial Action
NARR Comments: Site referred from the Hazardous Waste Program: RCRA non-notifier; improperly managed hazardous wastes in containers; discharging parts washer to shallow soils and groundwater. (4/9/02 MTP/SAS) DEQ has reviewed site information and classified the site as a medium priority for further investigation, including: 1) submission of information to DEQ regarding solvent use, management, and disposal; 2) inspection and sampling of the dry well system to determine the nature of previous discharges into it, and construction details of the dry well and associated drainage system; and 3) sampling to

BOBS USED FORD CARS & TRUCKS (Continued) **1004771915**

determine the nature and extent of soil contamination, particularly in the former pressure-washing area, and, depending on findings of the dry well evaluation, in the vicinity of the dry well. Based on site observations and supporting photodocumentation, the site should be proposed for listing on the Confirmed Release List (CRL). There is insufficient information to propose the site for listing on the Inventory of Hazardous Substance Sites.

Updated Date: 12/17/2002
Decode for NarcdID: Health Threats
NARR Comments: Direct exposure of site visitors or workers to contaminated surface and subsurface soil possible. Permeable site soil and/or the dry well on-site may provide a pathway to groundwater. Groundwater appears to be 50 feet or more deep at the site. The nearest domestic well appears to be about 3,000 feet or more from the site. The Columbia South Shore Wellfield is about 2 miles from the site in a presumed downgradient direction. Ponds associated with Morse Bros. sand and gravel operation are located downgradient of the site and appear to intersect the uppermost groundwater aquifer in the vicinity of the site.

NARR Comments: [10/29/12 SAM/ICP] Contaminants of concern included petroleum compounds, related to the former UST and unknown construction debris fill in the former gravel pit, which may include metals, petroleum, VOCs and methane gas production. Exposure pathways considered relevant to this site were: Subsurface soil dermal contact for construction and excavation workers and subsurface soil leaching to groundwater. Groundwater vapor intrusion, volatilization to outside air, inside air and groundwater in excavation for occupational and construction workers. Methane intrusion above the lower explosive limits. Groundwater is not used on site; the facility and surrounding area is generally supplied by a public drinking water system. Future use of the site is expected to remain light industrial.

NARR ID: 5754257
NARR Code: Remedial Action
Created By: SMILLER
Created Date: 10/29/2012
Updated By: SMILLER
Updated Date: 10/30/2012
Decode for NarcdID: Remedial Action
NARR Comments: [10/29/12 SAM/ICP] Two Phase I Environmental Site Assessments were performed on the site in 2005 and 2012. The conclusions from both Phase I documents are similar, noting Recognized Environmental Conditions, including the former 4,000-gallon gas UST, former gravel pit and land filling activities, reported dry wells and a building floor drain near a compressor that may be connected to the dry wells. A Phase II Environmental Site Assessment was performed in August 2012 to provide additional information for the Recognized Environmental Conditions on site. A ground penetrating radar survey was performed to determine locations of onsite dry wells, underground utilities, and the potential buried UST. Subsurface soil, groundwater and soil-gas samples were also collected and analyzed. Subsurface borings indicated the gravel pit was filled with soil, construction debris-including asphalt, and smaller amounts of woody debris. No household or man-made organic items were found in borings in the former gravel pit. Methane was measured with a handheld unit and the report text indicated methane was not observed however, results and supporting documentation was not provided. To ensure correct methods were used DEQ requested additional measurements to support the conclusion that methane is not a concern. Locality of facility was considered the property boundary as groundwater and soil samples at the presumed down gradient side (North) indicate concentrations meet risk-based concentrations or were not detected. Two of the three groundwater samples detected metals, particularly lead (as high as 671ug/L) above risk-based concentrations for occupational ingestion. Groundwater samples with detections above risk-based concentrations

ALEXANDER SERVICES LLC (Continued) **1000439200**

were located within the former gravel pit/fill footprint. The expected downgradient boring groundwater concentrations were below detection limits. October 2012- Four additional soil gas measurement points within the former gravel pit were established. Borings were drilled to 5 feet and sealed to ensure no atmospheric gases entered the holes. An initial reading at one boring found methane at 0.3%, which then stabilized down to 0.0% after approximately 5 minutes. All other borings read 0% methane. DEQ Conclusions: An NFA determination is recommended for the Boden/Alexander site based on the following: Soils sampled on-site were protective for occupational and excavation workers. Groundwater is not used on site for any purpose and the nearest registered residential well is approximately 0.25miles away and cross-gradient from the site. In addition, the area is supplied by a public water system. Soil gas concentrations were below occupational risk-based concentrations. One of four methane samples detected concentrations of methane well below DEQ action levels. The other samples did not detect any methane. The site does not contain significant habitat for plants or animals. DEQ concludes that based on the information presented to date and under the current zoning, the Boden Alexander property is currently protective of public health and the environment and requires no further action under the Oregon Environmental Cleanup Law, ORS 465.200 et seq., unless new or previously undisclosed information becomes available.

Updated By: SMILLER
Updated Date: 09/28/2012
Decode for NarcdID: Site History
NARR Comments: [9/28/12 SAM/ICP] In approximately 1948 much of the south and central portion of the property was utilized as a gravel pit. By the 1950s, the gravel pit appeared to be inactive and backfilling may have been started. The former gravel pit appears to have been completely filled by the 1960s. A portion of the current property building was initially constructed in the 1970s with subsequent additions throughout the 1990s. The site has been recently occupied by BodenAlexander, a custom wood display and manufacturing facility.

NARR Comments: (10/2/00 MTP/SAS) DEQ SAS received a complaint in November 1998 alleging improper disposal of hazardous waste to the ground surface. It was alleged that during the preceding year the resident at the site operated a car repair business and used gasoline as a solvent. The waste allegedly was discharged in the vicinity of large trees, approximately 35 feet from the property line.

ROCKWOOD MACHINE SHOP (Continued) **1000473631**

Updated Date: 06/01/2016
Decode for NarcdID: Contamination
NARR Comments: (2/27/92 HMS) The property had been the site of an engine-rebuilding business for more than 35 years. Recently, the property owner evicted Rockwood Machine Shop, and current site operations are unknown. A spill of unidentified material, subsequently shown to contain solvents, occurred 8/18/90. Response personnel found two unlabeled 30-gal. drums lying on their sides with their contents spread across asphalt paving. Immediate and subsequent cleanup activities involved removal of spilled liquids and affected asphalt paving, and the excavation of a large volume of soil. Soil samples collected after excavation indicated that no substantial contamination remained from the spill. There may have been other releases in the course of the shop's 35+ years of operation, as evidenced by stained areas on the concrete floor inside the shop building. In addition, the site was not connected to sewer service until 1990, indicating that there may be a drywell or septic system on-site.

Decode for NarcdID: General Site Description
NARR Comments: The 1.4-acre commercial property consists of one paved tax lot with one, 11,497 ft2, two-story building located on the southeast corner of the property. The property is bordered by East Burnside Street and MAX light rail to the south, commercial property and residential apartments to the east, residential apartments to the north, and a commercial business to the west. The property is zoned for mixed-use that includes commercial and high-density urban residential. The site is covered in hardscape and therefore no ecological habitat is present on the site. Until the 1950s, historic site use was agricultural that included an outbuilding with hay, grain, and row crops. In 1954, the building that is currently on the property was constructed, and a gravel parking area was installed. Hall Building Supply and the Rockwood Machine Shop began site operations in the mid 1950s. A record and satellite television shop operated on the site for a short time in the 1970s. In 1990, the property was connected to

ROCKWOOD MACHINE SHOP (Continued) **1000473631**

the public sanitary sewer system and in 1994, the property was converted into a restaurant with an asphalt paved parking area. Current use of the site is a multi-tenant Community Center.

NARR Comments: In August of 1990, DEQ was notified of a spill from two, unmarked 30-gallon drums containing carburetor cleaner, or a similar solvent, that was assumed to be associated with the Rockwood Machine Shop. The spill was caused by trespassers, and occurred over a 35-foot by 70-foot asphalt covered area on the northeast side of the building. Between 1990 and 1991, DEQ coordinated the cleanup with the property owners, Pacific Wholesalers, Inc. In total, 27 yd3 of asphalt and 38 yd3 of soil were removed and confirmation samples were collected at the limits of the excavation. Soil removal was completed to at least 4 inches below the asphalt cover, however the final depth of excavation was not documented. Samples collected at the limits of the excavation were all non-detect for volatile organic compounds (VOCs). Groundwater was not encountered during the removal.

spill was caused by trespassers, and occurred over a 35-foot by 70-foot asphalt covered area on the northeast side of the building. Between 1990 and 1991, DEQ coordinated the cleanup with the property owners, Pacific Wholesalers, Inc. In total, 27 yd3 of asphalt and 38 yd3 of soil were removed and confirmation samples were collected at the limits of the excavation. Soil removal was completed to at least 4 inches below the asphalt cover, however the final depth of excavation was not documented. Samples collected at the limits of the excavation, were all non-detect for volatile organic compounds (VOCs). Groundwater was not encountered during the removal. In July 1992, the underground HOT was decommissioned by a licensed underground storage tank supervisor. The tank was removed and disposed of along with 16 yd3 of visually-stained soil to a depth of 6.25 feet below the ground surface. Confirmation samples collected from the extent of the excavation were non-detect for total petroleum hydrocarbons (TPH). The site owner at the time did not enter into a cost recovery agreement with DEQ for review. Therefore, DEQ did not evaluate the HOT for a no further action determination.

NARR Comments: (3/13/91 MJM) Site is bounded to the north and east by apartments. It is a commercial site that's accessible to the public. The northern and eastern boundaries are fenced. The soil type is flood gravels; topography is flat. (This information is based on a 12/3/90 site visit.). (6/1/16 RWA) Applicable potential pathways of exposure include: A) Direct contact with contaminated soil to current and future occupational site workers and future construciton and excavation workers.; B) Inhalation of impacted indoor air from VOCs in soil and soil vapor to: current and future occupational site workers; C) Inhalation of impacted outdoor air from VOCs in soil and soil vapor to current and future occupational site workers. Groundwater was not encountered during the heating oil tank decommissioning and removal in 1992, or the spill response excavation

NARR Comments: [June 2016] In August 1990, DEQ was notified of a spill from two, unmarked 30-gallon drums containing carburetor cleaner, or a similar solvent, that was assumed to be associated with the Rockwood Machine Shop. The spill was caused by trespassers that occurred over a 35-foot by 70-foot asphalt-covered area on the northeast side of the building. Between 1990 and 1991, DEQ coordinated the cleanup with the property owners that involved the removal and disposal of 27 yd3 of asphalt and 38 yd3 of soil. Confirmation samples were collected at

ROCKWOOD MACHINE SHOP (Continued) **1000473631**

the limits of the excavation and were all non-detect for volatile organic compounds (VOCs).

 In 1992, the on-site heating oil tank was decommisioned and removed from the site. Confirmation samples collected at the extent of the excavation were non-detect for petroleum hydrocarbons.

 Additional investigation was performed in 2016 to address remaining data gaps. A geophysical survey was performed to locate the former septic system, which was used until 1990. No anomolies or the former septic system were found. Soil vapor samples were collected from beneath the existing building and throughout the property. No VOCs were detected in soil vapor samples above applicable risk-based concentrations.

 DEQ issued a no further action (NFA) determination for the site in June 2016. Conditions of the NFA include notification to DEQ prior to excavation and offsite disposal of soil or construction of additional habitable structures on the property.

Environmental Interest/Information System:
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Decode for NarcdID: Remedial Action
NARR Comments: (1/5/04 BAG/VCP) Site entered DEQ's Voluntary Cleanup Program in January 2004. (2/5/08 GMW/SAS) Site is not on VCP waiting list, and owner/operator has not applied for Dry Cleaner Program funding. Further investigation is needed, under a medium priority. (6/5/10 MTPugh) ML Commercial Properties entered the VCP for review of recent investigation results and their request for an NFA. Based on our review it appears that the completed site investigations are adequate to assess whether significant releases of dry cleaning related chemicals, such as perchloroethene (PCE) or related decomposition products, have occurred to site soils. In rare instances where contamination was detected in soil, detected concentrations are below applicable risk-based concentrations. Three groundwater samples have been collected at the site from temporary borings. PCE and trichloroethene (TCE) were detected in one of three samples collected from the regional aquifer. Detected concentrations were above risk-based standards for drinking water. In the 2009 Phase II Investigation Report prepared by Partner Engineering and Science, Inc., it is recommended that additional groundwater characterization be conducted to assess the extent of groundwater impacts. Rather than conduct additional groundwater investigation at this time, DEQ recommends that a Beneficial Water Use Determination (BWUD) be completed to assess if groundwater in the vicinity of the site is used for a potable water supply. DEQ completed a cursory review of well log records, and there appear to be a number of potable use wells in the area, but specific locations cannot be determined. In addition, further investigation will be needed to assess the dry wells to verify that they are not significant source areas at the site. Next Steps For reasons discussed above, DEQ will not require

ROCKWOOD CLEANERS (Continued) **S106123747**

additional soil (or soil gas) investigation beneath the dry cleaner operation, at the cess pools/septic system, or current sanitary sewer alignment. However, the presence of two or more dry wells triggers the need for additional work. Existing dry wells need to be registered with DEQ s Underground Injection Control (UIC) Program. They also will need to be evaluated as potential contaminants sources, regardless of whether they are abandoned or will remain operational. This typically involves locating the dry wells, sampling their contents and possibly adjacent or underlying soil, and removal of sediment/contents. DEQ s UIC requirements can be found at: Oregon DEQ: Water Quality - Underground Injection Control (UIC) Program - Home Dave Cole is DEQ s Northwest Region coordinator for UIC registration and will be the lead for dry well work. Dave can be reached at 503 229-6371, and by e-mail at Cole.David@deq.state.or.us. Dave will coordinate with me to determine investigative requirements and to interpret investigation results. DEQ will require a sampling plan for the UIC work. To address the detections of chlorinated hydrocarbons in the regional aquifer, ML Commercial Properties should, at a minimum, complete a BWUD per DEQ guidance available at: http://www.deq.state.or.us/lq/pubs/docs/cu/GuidanceBeneficialWaterUse.pdf ML Commercial Properties may elect to proceed with additional groundwater sampling. If additional groundwater sampling is to be conducted, DEQ requests submittal of a brief work plan. Based on the results of the BWUD and dry well investigation, DEQ will determine whether additional groundwater testing will be required. 12/20/10 Based on the presence of dry wells at the site, DEQ requested additional information regarding their number and location. DEQ and Partner staff conducted a site visit on August 4, 2010. Based on the site visit and subsequent geophysical survey, a total of 23 suspected dry well locations were identified (Figure 2). DEQ requested additional investigation of the six dry wells located around the perimeter of the dry cleaner building (DW-13, DW-14, DW-16, DW-17, DW-22A. DW-22, and DW-23; Figure 2). A camera survey was conducted to assess sediment accumulation in each of the seven dry wells. There was insufficient sediment accumulation to readily collect a sample from any of the seven dry wells; no indication of dry cleaner discharges, such as lint accumulations or discoloration, was observed. No samples were collected and DEQ did not require additional investigation for these seven dry wells. Additional investigation on the remaining sixteen dry wells may be required as part of the pending registration of these dry wells with DEQ s Water Quality Program. The number and location of soil and groundwater samples collected at the site appear sufficient to assess whether significant releases of PCE occurred from historical dry cleaning operations. There is no indication that actionable releases occurred beneath or adjacent to the former dry cleaning area, or that dry cleaning chemicals were released to soil at or near the former cess pool, current sanitary sewer line, or nearby dry wells. Based on historical site use there is no indication that significant quantities of hazardous substances were used in other areas or businesses in the strip mall, although historical environmental testing was largely focused on the dry cleaner. DEQ is not aware of investigations in other site areas. DEQ has determined that a no further action determination (NFA) is warranted for the site. Per DEQ Underground Injection Control rules, existing dry wells at the site need to be registered. This may necessitate additional evaluation of approximately sixteen dry wells that have not yet been evaluated.

ROCKWOOD CLEANERS (Continued) **S106123747**

Additional evaluation may include sampling and analysis of dry well contents or adjacent soil. Further work needed to register all site dry wells will be completed through coordination with DEQ s Water Quality Program.

NARR Comments: Fifteen drywells were investigated, their contents removed, and decommissioned. The former drycleaning facility was demolished and 250 cubic yards of PCE-impacted soil beneath the building removed. After soil removal activities, confirmation sampling did not detect contaminants in soil above risk-screening criteria for human health receptors by direct contact or vapor intrusion scenarios. The site does not pose unacceptable risk to human health and the environment from soil. The site has been redeveloped and the location of the new East Multnomah County Courthouse. Low levels of VOCs were initially detected in groundwater in the vicinity of the former dry cleaner facility. A groundwater extraction test well (TW-1) was installed in this area for the courthouse heating-cooling system and to contain any potential contamination present prior to full delineation of the extent. Extracted groundwater was sampled frequently for over a year. Initial low level detections of VOCs in groundwater appear to be related to and localized adjacent to former drywells. A groundwater beneficial use determination did not identify any nearby offsite wells used for drinking water purposes. Groundwater is not consumed onsite and unlikely for the foreseeable future given the area is supplied by a municipal (Rockwood) water supply. There is no unacceptable risk at the site under current conditions.

NARR Comments: DEQ has determined that remedial action to address environmental

MULTNOMAH COUNTY (Continued) **S110697304**

contamination at the East Multnomah County Courthouse site is complete, and no further action is required. This determination is based on DEQ regulations and the following facts as we now understand them, which are described in more detail in DEQ s Staff Memorandum in support of a No Further Action determination (July 31, 2015). In 2011, Multnomah County entered into a voluntary agreement with the DEQ Cleanup Program for oversight to investigate volatile organic compounds (VOCs) in soil and groundwater attributed to drywells associated with the former dry cleaning facility. Site work included demolishing the dry cleaning building and removal of PCE-impacted soils beneath the building, investigation and removal of 15 drywells, and further delineation and testing of groundwater after initial sampling detected low levels of VOCs. Extracted groundwater was sampled frequently for over a year and no chlorinated VOCs were detected. Initial low level detections of VOCs in groundwater appear to be related to and localized adjacent to former drywells. In conclusion, the site does not pose unacceptable risk to human health and the environment.

Updated By:	KDANA
Updated Date:	12/06/2018
Decode for NarcdID:	Contamination

NARR Comments: (12/06/2018 KPD/VCP) Three groundwater monitoring wells were installed along the edges of the site as part of an environmental assessment in March 1996. Four chlorinated solvents, at a total concentration of 50.6 ppb, were detected in MW-3, along SE Stark Street. The contamination is likely related to a dry cleaners that operated in the area in the 1960s and '70s. The three monitoring wells were resampled as part of a follow-up investigation in March 2017. Only one solvent, PCE, was detected in MW-3, at a concentration of 0.791 ppb. Extensive sampling was conducted at the site in October 2017. Sediment samples were collected from the bottom of 12 UICs (nine dry wells and three septic system seepage pits). Heavy oils were detected, along with elevated concentrations of metals including cadmium and lead. Six subsurface vapor samples were collected around the former dry cleaners site, finding low concentrations of PCE. Twenty surface soil samples were also collected from across the former Fred Meyer site, but no contamination was identified.

NARR Comments: Soils at the site are generally silty, sandy gravels with cobbles and occasional boulders to a maximum explored depth of 45 ft bgs. Groundwater was encountered at an average depth of 35 ft bgs, with an observed gradient to the west. The nearest surface water bodies are rock quarry ponds (half-a-mile to the southeast) and the Salish Ponds (one mile to the east-northeast). A municipal water supply is provided to the area by Rockwood Water PUD.

NARR Comments: (12/06/2018 KPD/VCP) In late 2017, sediments and septic solids were vacuumed out of the nine dry wells and three seepage pits and shipped off-site for disposal. The dry wells and seepage pits were decommissioned by backfilling with CDF in December 2017. A 1,800-gallon steel septic tank was excavated and removed from the site, as was a stormwater sedimentation vault. The three groundwater monitoring wells were decommissioned in October 2018. Approximately 20,000 cubic yards of surface soils are expected to be excavated as part of the development of the site.

Updated Date: 10/17/2018
Decode for NarcdID: Site History
NARR Comments: The site was a rural residential area with up to 11 residences from at least 1935 to 1955. A Fred Meyer shopping and department store was constructed on the large, western tax lot circa 1958. The Rockwood Shopping Center, a multi-tenant commercial building, was constructed on the small, eastern tax lot around the same time. The two buildings were separated by an asphalt parking lot. A dry cleaning facility operated from a storefront at the south end of the Rockwood Shopping Center from at least 1967 to about 1980. The cleaners operated under various names including <quot>Rockwood Coin-Op Dry Cleaner<quot>, <quot>Rockwood Cleaner & Laundry<quot>, and <quot>Laundry Basket Coin-Op<quot>. The Fred Meyer store was vacated in 2005 and razed in 2007. The Gresham Redevelopment Commission purchased the site in March 2010. The northern 4,000 square feet of the Rockwood Shopping Center was demolished shortly thereafter, and the remaining 8,000 sq. ft. building was remodeled into a Community Office Building. Southeast 188th Avenue, extending from Stark Street north to Burnside on the east side of the Community Office Building, was vacated in 2011 and replaced with a new SE 187th Avenue on the west side of the building. The Fred Meyer lot remained vacant until construction of the Rockwood Rising development began in 2018.

NARR Comments: Rockwood Rising is a mixed-use development on the site of a former Fred Meyer store. Nine stormwater dry wells, three septic system seepage pits, two septic tanks, and a stormwater sedimentation vault were present at the site. Sediments and septic solids at the bottom of the dry wells and seepage pits were impacted with heavy oils and elevated concentrations of metals. Between October and December 2017, the sediments and septic solids were vacuumed out and shipped off-site for disposal, and the wells and pits were backfilled.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

State and tribal institutional control / engineering control registries

ENG CONTROLS: Engineering Controls Recorded at ESCI Sites
Engineering controls are physical measures selected or approved by the Director for the purpose of preventing or minimizing exposure to hazardous substances. Engineering controls may include, but are not limited to, fencing, capping, horizontal or vertical barriers, hydraulic controls, and alternative water supplies.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.
