Created Date: 12/17/2002
Substance Alias ID: 317438
Sub Alias Name: BENZ(a)PHENANTHRENE
Substance Alias ID: 317439
Sub Alias Name: BENZPHENANTHRENE,1,2-
Substance Alias ID: 317440
Sub Alias Name: DIBENZONAPHTHALENE,1,2,5,6-
Sampling Result ID: 349658
Feature Id: 0
Hazard Release Id: 379454
Medium: 700
Substance Abbrev.: 0
Unit Code: 8
Observation: True
Owner Operator: False
Lab Data: True
Sample Depth: 0-6 inches
Start Date: 10/28/2008
End Date: Not reported
Min Concentration: Not reported
Max Concentration: 110.00
Sample Comment: 110 ppb chrysene in surface soils at Schooner Creek stormwater outfall at SO04SS. 44 ppb in surface soils at City of Portland stormwater outfall SO05SS.
Last Update By: SFORTUN

End Date: Not reported

CANOE BAY - CONTAMINATED SEDIMENT (Continued) **S105807718**

Min Concentration: Not reported
Max Concentration: 61.00
Sample Comment: 61 ppb chrysene in surface soils at CB04SS. 34 ppb in soils at CB05SS.
Last Update By: SFORTUN
Update Date: 09/14/2009
Decode for MediumID: Soil
Sampling Result ID: 337914
Feature Id: 0
Hazard Release Id: 379454
Medium: 701
Substance Abbrev.: 0
Unit Code: 8
Observation: False
Owner Operator: False
Lab Data: True
Sample Depth: 0-7 feet
Start Date: 01/14/2002
End Date: 01/14/2002
Min Concentration: .00
Max Concentration: 43.00
Sample Comment: 43 ppb chrysene in Canoe Bay sediments (0-6 inches) at CB13SD. 29 ppb at CB14SD. 24 ppb in Canoe Bay sediment samples - one core and two 2-core composites Detected in analytical method blank at 1.7 ppb. 36 ppb in Columbia River sediments at CR04SD.

Decode for NarcdID: Contamination
NARR Comments: Sediments: Sediments directly beneath a Schooner Creek Boat Works dock and adjacent to the shoreline are contaminated with PCBs, PAHs, phthalates, PCP, phenols, DDTs, chlordane, metals (arsenic, cadmium, copper, selenium, zinc), and relatively low concentrations of diesel fuel and oil. The source and full vertical and horizontal extent of sediment contamination have not been defined. Upland Areas: A sample of residual paint dust collected at the boat repair facility contained PAHs, di-n-butyl phthalate, chloroform, methylene chloride, light aromatic hydrocarbons, and TCLP-extractable barium, cadmium, and lead. Paint dust residues have been observed on graveled surfaces at Schooner Creek Boat Works, and other boat repair wastes have been observed on Canoe Bay's steep southwest embankment at the boat works. Stained soils and stressed vegetation have also been documented at the boat works site. Chemical residues (30 - 60 sq ft area) and stressed vegetation were also observed on the southern portion of the lot west of the boat works, prior to Schooner Creek Boat Works occupying the site. Most of the western lot is now used for automobile storage, although a portion is used for boat storage. DEQ photographed small areas of stressed vegetation along Schooner Creek Boat Works' north fence line during an April 2001 multi-media inspection. (5/15/04 JLS/VCP) Waste materials, (e.g. broken glass, electrical casings) that apparently resulted from historical dumping by unknown parties are present along the shoreline. Waste material remaining at this time appear to be present primarily on land owned by the Oregon Division of State Lands. A private and City outfall discharge stormwater to Canoe Bay in the vicinity of the ramp to the docks. (9/9/09, smf) Samplings from an October 2008 EPA Site Insection detected elevated concentrations of metals (especially cadmium) in Canoe Bay sediments in the southern half of the bay. Elevated concentrations of TBT were detected in sediments at the boat dock, as well as in surface soils at the Schooner Creek Boatworks stormwater outfall just westr of the boat dock. Elevated concentrations of several metals were detected in surface soils along the southwest side of Canoe Bay, and in stormwater discharging from outfalls on the northeast and south sides of the bay.

NARR Comments: Canoe Bay is a 7.6-acre rectangular embayment of the Columbia River along the central north side of Hayden Island. The river is located to the northeast; Hayden Island Mobile Home Community is on the east side of the bay; Schooner Creek Boat Works, an automobile storage lot and paved boat storage area, and North Hayden Island Drive are along the southwestern edge of the bay. Schooner Creek Boat Works operates from a concrete tilt-up building constructed in 1989. A small scrub-shrub palustrine wetlands area is immediately northwest of the bay. A Burlington Northern Santa Fe Railroad right-of-way and tressel are about 675 feet northwest of the bay. Jantzen Beach Shopping Center is between 1,506 and 3,761 feet southeast of the bay. Interstate Highway 5 and the I-5 Interstate Bridge over the Columbia River are located about 4,210 feet southeast of the bay.

Created Date: 12/17/2002
Updated By: JSUTTER
Updated Date: 11/21/2011
Decode for NarcdID: Project Issues Summary
NARR Comments: Contaminants were discovered in Canoe Bay sediments beneath a Schooner Creek Boat Works dock when preparing for maintenance dredging of the bay sediments. Levels of PCBs, DDTs, PAHs, and metals (arsenic, cadmium, copper, selenium, and zinc) in sediment samples exceed DEQ's Level II Ecological Risk Assessment Baseline Screening Levels for freshwater sediments. The contamination could represent a significant threat to T&E salmonids in the bay, migratory waterfowl and songbirds that visit the bay, wildlife in nearby wetlands, as well as a potential threat to people and wildlife who consume impacted fish. The sources and full vertical and horizontal extent of contamination have not been defined. A previous boat works operation at the site is known to have left behind chemical residues and stressed vegetation. However, since Schooner Creek Boat Works began operating along the southern end of the bay in 1999, DEQ has received at least 74 Pollution Complaints from nearby residents about its operations. An April 2001 DEQ site inspection confirmed some of the complaint allegations; DEQ documented evidence of stressed vegetation and boat works wastes migrating to Canoe Bay. Paint dust from the boat works was analyzed and found to contain leachable metals, phthalates, light aromatic hydrocarbons, chlorinated hydrocarbons, and relatively high concentrations of PAHs. DEQ files also contain similar complaints about activities at Schooner Creek Boat Works' previous operating location along N Marine Dr. There is no record of Pollution Complaints against the site's previous boat builder (Heisley Marine). Aerial photos and material identified along the shoreline suggest that historical dumping of waste materials may have taken place in the past, resulting in an accumlation of materials in a shoreline area on property owned by the State.

Decode for NarcdID: Land Use (Current/Reasonably Likely)
NARR Comments: Land on the southeast side of Canoe Bay is zoned for low-density residential use, while land on the southwest side of the bay is zoned for industrial use. The entire bay and its shoreline lie within a City of Portland Environmental Conservation Overlay Zone. A small scrub-shrub palustrine wetland sits just west of the bay, and most of the Columbia River's south shoreline downstream from the site is tidal riverine wetlands. Metro has mapped land west of the BNSF Railroad right-of-way as important riparian corridor and wildlife habitat of concern.

Updated Date: 11/21/2011
Decode for NarcdID: Manner of Release
NARR Comments: Undefined at this time. Recent boat manufacturing and repair activities by Schooner Creek Boat Works could be a source but significant efforts have been completed by the facility to manage stormwater and current stormwater discharge is meeting permit benchmarks. A city storm drain also discharges to the bay near the Boat Works' stormwater outfall and may be contributing road-related contamination. A previous yacht builder at the site (Heisley Marine) is known to have left behind chemical residues and stressed vegetation prior to Schooner Creek Boat Works' arrival at the site. The detections of DDTs and chlordane in sediments suggest that deposits of riverborne sediments could also be a source, as could be an outfall from the Columbia Blvd. Sewage Treatment Plant to the Columbia River, located about 500 to 700 feet northeast of (downstream from) the bay. Part of the bay also appears to have been backfilled since the 1970s, possibly with Columbia River dredgings, so the bay's backfill may also have contained contaminants. Historical dumping of wastes over the shoreline appears to have resulted in an accumulation of waste materials that appears to have resulted in elevated PCBs and metals on the shoreline. Contaminants associated with the shoreline waste materials appear to have resulted in a localized area of contaminated sediment.

Decode for NarcdID: Project Activity Status
NARR Comments: A site screening was completed in September 2002. An Expanded Preliminary Assessment of the Schooner Creek Boat Works site is recommended. Further samplings of sediment and upland soils are needed to define the full extent and character of local contaminants. Site owner, Inland Sea Maritime Group, completed sediment and shoreline sampling at the site which is documented in a January 2004 report. (9/8/09, smf) Ecology and Environment, Inc. conducted a federal Site Inspection of Canoe Bay for EPA during October 2008, issuing its report in August 2009. E&E sampled and analyzed: sediments from Canoe Bay and nearby in the Columbia River; stormwater and stormwater sediments from stormwater outfalls emptying into Canoe Bay; and uplands surface soils from along the southwest edge of Canoe Bay.

NARR Comments: Canoe Bay provides seasonal habitat for migratory waterfowl and migratory songbirds, which feed in and around the bay. The bay has been defined as Critical Habitat for Snake R. spring/summer chinook (Threatened species), Snake River fall chinook (Threatened species), and Snake River sockeye salmon (Endangered species) [58 FR 68543, 12/28/93]. A small wetlands area is also located immediately upland from the bay's west shoreline. Metro considers much of Hayden Island west of the BNSF Railroad right-of-way important riparian corridor and wildlife habitat of concern, The City of Portland has a community water supply well less than 1,000 feet SSE of the site.

NARR Comments: Site Assessment recommends a high-priority further investigation to determine the full nature and extent of Canoe Bay sediment contamination near SCBW's dock. Because hazardous substances have been released at the site, and concentrations of these substances in sediment are above threshold risk values for aquatic life, it is further recommended that the site be proposed for addition to DEQ's

CANOE BAY - CONTAMINATED SEDIMENT (Continued) **S105807718**

Confirmed Release List and Inventory. (12/6/02 JMA/VCP) Received Intent to Participate in DEQ's Voluntary Cleanup Program in December 2002. Sediment sampling work plan submitted March 2003. DEQ approved with comments provided May 2003. Response to comments submitted June 2003. DEQ acknowledgement provided July 2003. Sediment sampling conducted October 2003. (3/1/04 JLS/CU&ER) Sediment sampling report submitted January 2004. Meeting/site visit held February 2004. (5/17/04 JLS/VCP) DEQ comments on report provided March 2004. Revised report submitted April 2004. DEQ approval with clarification provided May 2004. (11/12/04 JLS/CU&LW) DEQ coordinating with City of Portland, Division of State Lands (DSL) and ISMG on next steps. (11/7/05 JLS/CU&LW) DEQ preparing memo documenting issues and priorities November 2005. (6/23/09 SAM/SAS)EPA completed a preliminary assessment-March 7,2008- and determined additional site investigation is warranted. (11/22/10 SAM/SAS) In late August 2010, after completing a Site Investigation, EPA determined that the site was a low priority for additional federal action and referred the site back to DEQ for state follow-up. [6/8/11] DEQ prioritized shoreline debris pile cleanup and outfall soil cleanup as primary actions warranted at the site. [6/11/12] In Fall, 2011, ISMG/SCBW proposed conducting shoreline stabilization to maintain stability for upland infrastructure and incorporate capping of the debris pile and immediately adjacent contamination. Additional shoreline data was collected in February 2012 to help assess shoreline options and a feasibility study was drafted in May 2012. FS completed in June 2012. Staff report on proposed shoreline stablization action issued for public comment in July 2012. ROD issued August 2012. Consent Judgement covering DEQ oversight of remedial action and settlement for contamination in Canoe Bay issued for public comment in September 2012. Negotiations with City of Portland for development permit to cover action in the environmental zone adjacent to Canoe Bay completed in Spring 2013. Consent Judgment with DEQ finalized in July 2013. Remedial Design workplan and associated reports submitted in November 2012. Revised documents, based on DEQ comment and modifications to address City permitting requirements, submitted June 2013. Shoreline stabilization and capping, and habitat improvement work completed August through November 2013. Project completion report submitted February 2014 and approved March 6, 2014. O&M to establish vegetation on the bank in progress. Certificate of Completion and NFA letter issued May 2014. (JLS 5/19/14) Annual monitoring reports submitted 2015, 2016, and 2017. (10/9/19 KJD/VCP) A sediment sampling event was performed in 2019 to evaluate the effectiveness of the remedy. Overall, the shoreline stabilization and capping components appear to have been effective in reducing contaminated material entering the bay.

HARBOR OIL INC. (Continued) **1000302670**

involving screening, filtering, and heating. Oil trucks cleaned on-site generating wastewater with approximately 5% trichloroethylene (TCE). TCE was vaporized, condensed, and reused. Waste TCE, waste oil sludge stored in drums and tanks. Surface runoff may have contributed to a major fish kill in Force Lake in March 1974. Runoff collection system installed since then, consisting of an oil/water separator. Suspect past operating practices and frequent spills as potential problems. A major fire in 1979 destroyed the facility and was reported to have caused oil and other contaminants to pour across the site and into the wetlands west and south of the site, however, records for this are mostly anecdotal. The TCE used to clean out tank trucks has been found in low concentrations in surface water at the southwest (lowest) end of the site, and has entered the environment. Comprehensive sampling in 1990 showed high levels of oil in site soils and low levels of chlorinated VOCs in deep groundwater (100 ft. depth), although these same VOCs appear to be widespread in groundwater in the immediate site vicinity. Off-site sampling in 1994 showed significant oil contamination in shallow wetland soils, and this contamination is likely to have originated from past releases at the site. Sampling by EPA's contractor in 2000 on behalf of EPA Region 10 has confirmed the presence and extent of contamination originating from past site operations. (12/27/06 MDK/CU&ER) Site added to NPL in 2001. Efforts by EPA to negotiate a cleanup order is on-going (2001 - 2006).

NARR Comments: (1/27/10 MDK/CU&ER) Site investigation activities were conducted in 2007 and 2008. Draft HHRA and ERA reports were submitted to EPA and then provided to DEQ and stakeholders. Draft Remedial Investigation Report submitted. DEQ provided comments on the HHRA and ERA in November 2009, and then comments on the VG responses to the consolidated EPA comments on January 14, 2010. Risk Assessment have been revised in accordance with US EPA comments, and US EPA has responded to DEQ, Portland BES, and other stakeholder comments. Draft risk assessments are expected to be finalized in accordance with US EPA comments early 2012 and proposed plan Spring 2012.

NARR Comments: The site is located within 100 feet of Force Lake to the southwest and the Columbia River 1000 feet to the north. A drainage system of buried tiles drains the lake through the adjacent wetland marsh, west and south where it is pumped into the Columbia Slough. The wetlands associated with Force Lake support great blue heron nesting areas, and the City of Portland considers this wetlands area, as well as the lake, to be a sensitive environment. Site is now largely paved and the berm on the western edge of the property leveled off in 2011 dring site modifications

NARR Comments: (5/29/01 MDK/SRP) There is no evidence that historical releases from the Harbor Oil site were followed by any remedial actions, and recent sampling shows that significant hydrocarbon contamination remains on-site and in the wetlands area. The primary issue of concern at this site is the effect from past releases on ecologically sensitive wetlands associated with Force Lake. An RP notice letter was sent in January 2000 requesting committment to perform an RI/FS and pay DEQ oversight. The RP did not commit to RI/FS and payment of oversight, and site was referred to EPA for further site assessment. Field work for the EPA Site Inspection was conducted July 31 - August 4, 2000. A summary report was released November 2000. EPA determined that the site qualified for listing on the NPL. (6/30/03 MDK/C&ER) The draft PA/SI was released on February 2, 2003. October 2001 letter from Gov. Kitzhaber supports proposed NPL listing. (6/5/14 GMW/SAS) EPA proposed the site for the NPL in 2002. The site was listed on the NPL in 2003, and subsequent investigation and risk assessment work has been conducted under EPA oversight. In June 2014, following a notice in the Federal Register and soliciting public comment, EPA delisted Harbor Oil from the NPL.

NARR Comments: [June 2014] EPA declared the property a Superfund (NPL) site in 2003 at the request of DEQ, which wanted EPA to use Superfund law to bring responsible parties to the table. Harbor Oil ceased operating in 1999. In 2012, EPA s project manager for the site indicated that EPA believed the property posed no unacceptable risk to people or wildlife, despite its Superfund designation.

 On June 5, 2014, EPA removed Harbor Oil from the NPL.

Hazardous Waste Summary:

Waste Code: D007
Waste Description: Chromium

Waste Code: D008
Waste Description: Lead

HARBOR OIL INC. (Continued) **1000302670**

Waste Code: D018
Waste Description: Benzene

Waste Code: D039
Waste Description: Tetrachloroethylene

Waste Code: D040
Waste Description: Trichlorethylene

Waste Code: F001
Waste Description: The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichlorethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F002
Waste Description: The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: K001
Waste Description: Bottom Sediment Sludge From The Treatment Of Wastewaters From Wood Preserving Processes That Use Creosote And/Or Pentachlorophenol.

Waste Code: K049
Waste Description: Slop Oil Emulsion Solids From The Petroleum Refining Industry.

HARBOR OIL INC. (Continued) **1000302670**

Waste Code: K051
Waste Description: Api Separator Sludge From The Petroleum Refining Industry.

Waste Code: K052
Waste Description: Tank Bottoms (Leaded) From The Petroleum Refining Industry.

Waste Code: NONE
Waste Description: None

Waste Code: P030
Waste Description: Cyanides (Soluble Cyanide Salts), Not Otherwise Specified

Waste Code: U019
Waste Description: Benzene (I,T)

Waste Code: U051
Waste Description: Creosote

Waste Code: U061
aste Description: Benzene, 1,1'-(2,2,2-Trichloroethylidene)Bis[4-Chloro- (Or) Ddt

Waste Code: U112
Waste Description: Acetic Acid, Ethyl Ester (I) (Or) Ethyl Acetate (I)

Waste Code: U117
Waste Description: Ethane, 1,1'-Oxybis-(I) (Or) Ethyl Ether (I)

Waste Code: U159
Waste Description: 2-Butanone (I,T) (Or) Methyl Ethyl Ketone (Mek) (I,T)

Waste Code: U226
Waste Description: Ethane, 1,1,1-Trichloro- (Or) Methyl Chloroform

Waste Code: U228
Waste Description: Ethene, Trichloro- (Or) Trichloroethylene

Waste Code: U239
Waste Description: Benzene, Dimethyl- (I,T) (Or) Xylene (I)

Waste Code: U242
Waste Description: Not Defined

NARR Comments:	[1/6/15 SA/SAM] See ECSI#127 for site history-The following text is from ECSI #127: James River characterized soil and groundwater contamination associated with the three major UST areas across the site, and excavated and aerated soils from leaking USTs in the late 1980s. DEQ's UST Section issued an NFA letter for the gasoline UST area in 1996, but referred all other UST issues to Site Assessment in 1997, since the remaining USTs did not contain motor fuels or waste

FLINT GROUP NORTH AMERICA CORP (Continued) **S108659827**

oils. Site Assessment recommended a remedial investigation (RI) covering the entire facility(including this property), to determine the extent, magnitude, and sources of chlorinated solvents, BTEX, and metals in shallow soil and groundwater.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Department of Ecology. The system contains key information for each facility/site that is currently, or has been, of interest to the departments air quality, dam safety, hazardous waste, toxic cleanup, and water quality programs.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

NARR Comments: RP moving aggressively to remove free product from ground and define extent of plume. 10/20/93 - RP is continuing independent cleanup. (10/25/93 GMW/SAS) Further action letter sent. (11/10/97 LSK) Site re-evaluated as part of review of all sites within the Columbia Slough Study Area. PAE recommended, under medium priority. (4/13/99 ACV/VCP) RP entered the Voluntary Cleanup Program in January 1999 to obtain DEQ review of existing file information. RP has conducted independent groundwater investigation and product recovery. DEQ file memo expected in April 1999. (1/7/00 ACV/VCP) VCP coordinated review of all UST and cleanup issues in 1999, and issued an NFA for environmental issues (with UST concurrence) in January 2000.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Updated Date: 12/17/2002
Decode for NarcdID: Contamination
NARR Comments: (4/29/97 GMW/SAS) Throughout this facility's history, many hazardous-material releases have been documented from spills and wastewater discharges, USTs, above-ground tanks, and an underground pipeline. See the project file for more detail on these releases. Although most releases have involved alcohols and related solvents, the main contaminants of concern are chlorinated solvents, BTEX, and metals. Chlorinated solvents above drinking-water standards were

JAMES RIVER CORP. - NORTH PORTLAND (Continued) **S108660100**

detected in deep wells on-site in the late 1980s and early 1990s. All of the UST issues other than the <quot>gasoline tank area<quot> have been referred from the UST Section to Site Assessment.

NARR Comments: Soil, surface water, and groundwater contamination could threaten the Oregon Slough portion of the Columbia River. James River uses three on-site wells (screened in the deeper, semi-confined aquifer) for industrial water supply; until about 1989, these wells supplied

JAMES RIVER CORP. - NORTH PORTLAND (Continued) **S108660100**

drinking water for site employees.

Updated By: Not reported
Updated Date: 12/17/2002
Decode for NarcdID: Remedial Action
NARR Comments: (4/29/97 GMW/SAS) James River has characterized soil and groundwater contamination associated with the three major UST areas across the site, and excavated and aerated soils from leaking USTs in the late 1980s. DEQ's UST Section issued an NFA letter for the gasoline UST area in 1996, but has referred all other UST issues to Site Assessment, since the remaining USTs did not contain motor fuels or waste oils. Site Assessment recommends a remedial investigation (RI) covering the entire facility, to determine the extent, magnitude, and sources of chlorinated solvents, BTEX, and metals in shallow soil and groundwater. The RI should also attempt to find the source(s) of chlorinated solvents in deep groundwater beneath the site. Further action at the site is a medium priority. The site should be added to the Site Response Waiting List, and to the Confirmed Release List & Inventory. (3/8/99 MTP/SAS) Findings of Federal Preliminary Assessment support medium ranking of site.

NARR Comments: (11/92 LSK) Washwater containing oil waste (< 1% PCP) from McCormick & Baxter (ECSI #74) spread on Union Pacific RR land from approximately 1957 to 1977; DEQ was unable to identify specific areas where the disposal occurred. EPA determined that no further federal action was needed at the site in 1984; DEQ recommends no further state action as well.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 09/19/2023

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

WA INST CONTROL: Institutional Control Site List

The Environmental Covenants Registry is a list of sites that have implemented institutional controls as part of the remedy. Institutional controls are administrative or legal measures used to prevent activities that may compromise the integrity of a cleanup action. They are meant to prevent exposure to contamination remaining on site. Institutional controls may include environmental covenants (also known as "deed restrictions"), zoning restrictions, public health advisories, or other administrative tools. The most common institutional control is an environmental covenant. Environmental covenants are legal recorded documents that typically limit certain uses of the property, such as: Drilling a water supply well on the property. Disturbing pavement covering contaminated areas. Residential use of the property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

HIST FTTS INSP: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing

A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

NY MANIFEST: Facility and Manifest Data

Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

Date of Government Version: 12/31/2019

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

North Map:	14842111 VANCOUVER, WA
Version Date:	2020

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

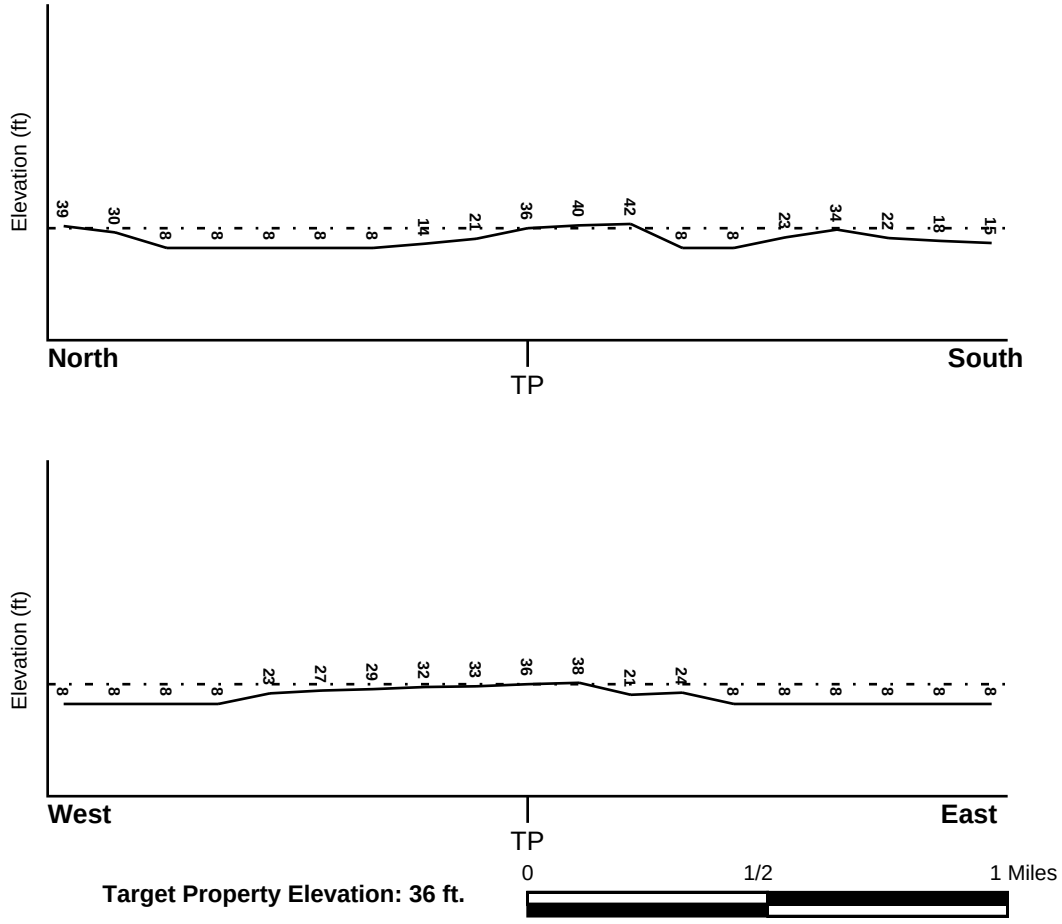
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
53011C0481D	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type

53011C0477D	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
PORTLAND	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Pilchuck

Soil Surface Texture: sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	11 inches	sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.3 Min: 6.1
2	11 inches	59 inches		Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.3 Min: 6.1

Soil Map ID: 2

Soil Component Name: Water

Soil Surface Texture: sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class:

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

DEQ SITE ASSESSMENT PROGRAM - STRATEGY RECOMMENDATION

Site Name: Hayden Island Landfill

Site CERCLIS Number: none

DEQ ECSI Number: 1559

Site Address: North Hayden Island Dr.
Portland, OR 97217

Recommendation By: Gil Wistar, Voluntary Cleanup and Site Assessment Section, DEQ Northwest Region

Approved By: Michael E. Rosen, Manager, Voluntary Cleanup and Site Assessment Section, DEQ Northwest Region

Date: November 25, 1994

Background: Not much is known about this unpermitted landfill. It was located in a seasonal lake basin on Hayden Island and probably operated between about 1950 and the early 1970s, when it was covered with a 7 to 8-foot layer of clean fill. All information presented here about the landfill is based on subsurface activities at a former ARCO service station, 1305 N. Hayden Island Dr., built on the eastern end of the old landfill (See attached figure; a consultant for ARCO estimated the landfill's areal extent based on historical aerial photographs, and outlined it by hand on a map in the LUST file; this is the origin of the attached diagram.)

The ARCO facility began operations in 1971 with the installation of six USTs, including a 550-gallon waste oil tank. A July 1989 site investigation consisting of four soil borings and four separate monitoring wells showed gasoline contamination in both soil and groundwater beneath the site. The borings also revealed a layer of landfill debris beneath the cover. Groundwater occurred at a depth of about 25 feet below ground surface, and its flow direction varied, due to the uneven nature of landfill materials and fluctuations in the level of the surrounding Columbia River.

Based on the discovery of gasoline contamination, DEQ requested a

Corrective Action Plan (CAP) from ARCO in October 1989. In March 1990, ARCO proposed a pump-and-treat system consisting of one recovery well, an air-stripping tower, and discharge of treated groundwater to the Columbia River under a 1500J NPDES permit. After LUST approval and issuance of the NPDES permit, the system began treating groundwater in August 1990. Only a month later, however, ARCO decided to stop pumping due to tower fouling from iron bacteria and silt. Samples of groundwater collected at the time contained 120 ppm iron, and later tests showed up to 753 ppm iron in shallow groundwater. After system modifications to eliminate silt entrapment, groundwater treatment resumed in March 1991. Once again because of interference from landfill leachate metals, this system was shut down, this time for good, in May 1991.

ARCO then decided to close down the service station, and removed all underground tanks from the site in July 1991. Tank excavations showed the landfill debris layer to have a consistent thickness of between 5 and 7 feet. This debris was contaminated with gasoline; there was also a very small area of staining around the waste oil tank's fill pipe. A worst-case sample of this dirty soil contained chlorinated solvents such as PCE and TCE, in the 50-500 ppb range. ARCO overexcavated in this area and collected confirmation samples showing they had remediated TPHs to below LUST matrix levels. Confirmation analyses did not include volatile organic compounds.

Because gasoline contamination extended into the loosely consolidated fill and rubbish above the water table, ARCO proposed a vapor extraction system to remediate hydrocarbons in the vicinity of the tank pits. DEQ accepted this plan, but also requested that ARCO conduct a more thorough site characterization and evaluate other groundwater treatment schemes that might remove benzene effectively, despite the presence of dissolved metals. ARCO agreed, but stated that they faced a number of obstacles towards these ends, including: 1) existence of the landfill; 2) the presence of an upgradient former service station on what is now the Jantzen Beach shopping center to the south; and 3) the unwillingness of Jantzen Beach owners to grant access to the property for drilling a well.

As a result of ongoing DEQ concerns, Brown & Caldwell (B&C) submitted a modified CAP in August 1992. In this document, B&C argued that ARCO had removed as much soil as was practical during the tank removal, had demonstrated that landfill leachate had caused groundwater treatment to fail, and stated its opinion that based on the site's location, residual levels of benzene in groundwater posed no threat to human health or the environment. B&C therefore recommended no further action. The owner of the site, Hillman Properties, from whom ARCO had

leased the site, hired Applied Geotechnical, Inc. (AGI) to review the CAP. AGI disagreed that the high iron content was sufficient reason to abandon groundwater treatment, but did concur with B&C's contention that the landfill and benzene contamination probably posed no health or environmental threat. AGI concluded that at a minimum, DEQ should require ongoing well monitoring. DEQ did require continued monitoring, and also suggested in an October 1992 meeting that ARCO perform a Technical Feasibility Study (TFS) if it desired site closure from the LUST section.

In June 1993, B&C completed a TFS, which concluded that it was not possible to remediate benzene in groundwater without first removing dissolved metals. ARCO maintained that it had no responsibility for the metals, and that it made no sense to proceed with remediation until DEQ addressed the landfill issue. LUST has requested more detail from ARCO, which in any case continues to sample on and off-site wells for TPH and BTEX. It is likely that the LUST section will continue to require regular monitoring as a part of "conditional closure"; the LUST file is still open and active.

The highest groundwater concentrations among samples collected on and off the former ARCO site (1989 to 1994) are as follows:

COMPOUND	CONC. (ppb)	MCL (ppb)
Benzene	530	5
Toluene	6	1,000
Ethylbenzene	2	700
Xylene	7	10,000
Arsenic	344	50
Beryllium	24	4
Cadmium	34	5
Chromium	566	100
Lead	550	5-15 at tap
Mercury	1	2

Although there are no known domestic or industrial wells on Hayden Island, the table includes drinking water standards as a guide to the extent of contamination in shallow groundwater. The 1981 Pacific Coast Ecological Inventory produced by the U.S. Fish & Wildlife Service shows no sensitive ecological environments along the Columbia River for at least 5 miles downstream of the site.

References: Site Assessment has reviewed the following references in the preparation of this strategy recommendation:

*NWR LUST file #26-89-149, which contains a variety of consultant reports, correspondence, notes, and memoranda about the former ARCO service station at 1305 N. Hayden Island Dr.

Recommendation/Action: Information about the old Hayden Island landfill site came to light as a result of the investigation at a former ARCO station, which was located at the eastern edge of the landfill. Groundwater samples from eight monitoring wells at this end of the landfill contained dissolved metals that are most likely a result of leachate percolating through unknown solid wastes in the vadose zone and contaminating groundwater. The source of benzene was leakage from underground tanks at the former ARCO service station.

The landfill was capped with a 7 to 8-foot layer of soil prior to the site's development, which now encompasses portions of the Jantzen Beach retail center, a hotel complex, and a trailer park. Potential pathways of exposure appear limited to groundwater and surface water, assuming a hydrological connection between groundwater and the surrounding Columbia River. As stated above, there are no known groundwater receptors on the island, and no sensitive aquatic environments identified in the immediately downstream reaches of the Columbia River. Nonetheless, dissolved metals and other as yet unidentified hazardous substances could leach into the river.

Because more information is needed about the landfill and its level of contamination, Site Assessment recommends that affected property owners characterize contamination in and below the former landfill. Alternatively, a preliminary assessment should be completed to investigate the site's history and evaluate potential exposure pathways, under low priority.

The Hayden Island Landfill site should be placed on the Confirmed Release List, due to the detection of heavy metals well above typical background concentrations.

Referrals Within or Outside DEQ: This site was referred to Site Assessment from the LUST section of DEQ.

Other: This site is currently listed on DEQ's ECSI database; it will be updated with information contained in this decision document, and to reflect Site Assessment's decision for further action at the site.

State of Oregon
Department of Environmental Quality Memorandum

Date: April 3, 2017

To: FILE

Through: **Kevin Parrett**

From: Robert Williams
Northwest Region

Subject: Hayden Island - Umatilla Property, ECSI # 6128; Staff Memorandum in support of a No Further Action determination

This document presents the basis for the Oregon Department of Environmental Quality's (DEQ's) recommended No Further Action (NFA) determination for the Hayden Island - Umatilla Property, in Portland. As discussed in this report, contaminant concentrations in soil, groundwater, and soil gas are below acceptable risk levels. Groundwater contamination at the site is below risk-based concentrations assuming groundwater is not used for consumption.

The proposed CNFA determination meets the requirements of Oregon Administrative Rules Chapter 340 Division 122, Sections 010 to 0140; and ORS 465.200 through 465.455.

The proposal is based on information documented in the administrative record for this site. A copy of the administrative record index is presented at the end of this report.

1. BACKGROUND

Site location.
The site's location can be described as follows:
- Address: 1445 and 1463 N Hayden Island Dr., Portland, Oregon.
- Latitude 45.6143 deg. North, -122.6822 deg. longitude West
- Tax lots 200 and 100, respectively, Township 2 North, Range 1 East, Section 34

Site setting.
The project includes two adjacent properties at 1445 and 1463 N Hayden Island Dr. The 1445 property is 0.76 acres in size and the 1463 property is 0.77 acres. The 1463 property is covered by a commercial building and associated parking on the south. The 1445 property is currently vacant. A bank building was removed from the western half of the property and a paved parking lot remains on the east side. Both properties front on Hayden Island Drive with a large, busy commercial area to the south, a mobile home park to the north, and vacant commercial properties to the east. The I-5 freeway is 1000 feet to the east. The property is currently zoned by the City of Portland as general commercial (CG). See Figure 1 for the site location.

Physical setting.
The site is just north of the center of Hayden Island in the Columbia River. The topography is flat and the elevation is approximately 20 feet above sea level. The main channel of the Columbia River is just over 500 feet north of the site. Subsurface material encountered below asphalt and base gravel was medium-grained sand. At depths as little as 5 feet below ground surface (bgs) fill material consisting of paper, glass, wood, brick, plastic and metal, was found at depths up to 18 feet bgs. Groundwater was first encountered between 14 and 25 feet bgs during drilling. The assumed groundwater flow direction is northerly, towards the Columbia River.

Site history.
The properties are located on the old unregulated Hayden Island Landfill which was located in a seasonal lake basin and probably operated between 1950 and 1970, when it was reportedly covered by a 7- to 8-foot layer of clean fill prior to development. The greater Hayden Island Landfill is assigned DEQ Environmental Cleanup Site Investigation (ECSI) #1559.

2. BENEFICIAL LAND AND WATER USE DETERMINATIONS

Land use.
The current zoning of the properties is general commercial (CG). This zoning allows a full range of retail and service businesses with a local or regional market. Industrial uses are allowed but are limited in size to avoid conflicts. There is a residential trailer park to the north but commercial land use is expected to remain along Hayden Island Drive for the foreseeable future.

Groundwater use.
The trailer park property manager and a representative of the park owner, reported that no irrigation or drinking water wells are located at the park. Water for the trailer park and local businesses are all provided water by the Portland Water Bureau which primarily receives water from the Bull Run watershed. The City of Portland is expected to supply water for the property for the foreseeable future. The Oregon Water Resources Department (OWRD) database was searched for local wells and indicates there are potentially five or more water wells on Hayden Island. The well locations were either unknown or not near the site. Completion depths ranged from 80 to 300 feet and well uses included industrial and irrigation use.

A search of the OWRD water rights database indicated that the City of Portland owns water rights (Certificates #67339 and 67341) on the Island. The current City water rights were formerly held by the Hayden Island Corporation and were transferred to the City of Portland in 1989. The Portland Water Bureau was contacted to obtain additional information about the water rights. Doug Wise with the Water Bureau noted that the City does have two water wells (associated with the water rights) on the Island; however, they have not operated the wells since obtaining the rights. Mr. Wise stated that due to delivery and distribution issues, there are no current plans to use the wells. The wells are located approximately 0.4 miles west of the site on tax lots 00900 and 01100.

Surface water use.
The Columbia River is 500 feet north of the site and has many uses including irrigation, industrial, and drinking water.

Stormwater at the properties has been discharged to the local Portland stormwater system in the past. The local system appears to discharge to the river. The City of Portland will require that new development at the site use a lined stormwater swale to manage stormwater. In heavy stormwater events the future swale will overflow to the city system.

3. INVESTIGATION AND CLEANUP WORK

A Phase I Environmental Site Assessment (ESA) dated October 30, 2015 identified the potential presence of landfill material beneath the Site and an area of apparent surface petroleum staining on the western side of the 1445 parcel. This surface staining appeared to be associated with recent building demolition services. A Phase II ESA was conducted in two phases for the two properties. The work was designed to help provide due diligence relative to the presence of the historic landfill. Additional subjects of investigation included a former transformer pad and two utility vaults.

In December 2015 six push probe borings were completed on the 1445 property and in August 2016 four borings were completed on the 1463 property. On the 1445 property seven soil samples were retained for analysis and on the 1463 property four samples were analyzed. Four grab groundwater samples were collected from each property. No wells were installed. See Figure 2 for soil, groundwater, and soil gas probe sample locations. The stained-soil observed during the Phase I ESA could not be located during later site investigation. The transformer and pad were removed during demolition of the bank building on 1445 and Boring B4 was located adjacent to the former pad. No signs of contamination were observed and sample results from this boring did not detect petroleum.

Selected soil and groundwater samples were analyzed for gasoline-range, diesel- and oil-range hydrocarbons using NWTPH methods; Resource Conservation and Recovery Act (RCRA) 8 metals (arsenic, barium, cadmium, chromium, lead, mercury, silver and selenium) VOCs, polynuclear aromatic hydrocarbons (PAHs) and polychlorinated biphenyls (PCBs).

In January 2017 a confined space methane survey was completed in the 1463 lot building which includes a Plaid Pantry convenience store and a Car Toys car audio store. Subgrade methane measurements were also collected from eight feet below the ground surface in four sample points with two each per lot.

Nature and extent of contamination.
The contaminants of interest (COIs) for the Site include gasoline-, diesel-, and heavy oil-range petroleum hydrocarbons, metals, VOCs, and PAHs. The principle affected media, across the entire site, is groundwater. Contamination in soil appears to be incidental. Details for contamination on each parcel are presented below.

1445 Parcel:
Soil - Diesel-range petroleum hydrocarbons were detected in soil samples at concentrations ranging from 6.49 to 11.4 milligrams per kilogram (mg/kg). Oil-range petroleum hydrocarbons were detected in two soil samples at concentrations ranging from 17.4 to 22.2 mg/kg. Arsenic, barium, chromium, lead and mercury were detected in at least one of two soil samples analyzed

for metals at concentrations consistent with background for the region. No gasoline-range petroleum hydrocarbons, VOCs, PAHs, or PCBs were detected in the soil samples.

Groundwater - Gasoline-range petroleum hydrocarbons were detected in two of the four groundwater samples at concentrations ranging from 122 to 250 micrograms per liter (µg/L). Diesel-range petroleum hydrocarbons were detected in all four groundwater samples ranging from 298 to 664 µg/L. Oil-range hydrocarbons were found in all four groundwater samples, ranging from 741 to 1,800 µg/L. Elevated arsenic, barium, cadmium, chromium, lead, silver, and mercury were detected in groundwater samples. Several petroleum-related VOCs including sec-butylbenzene, chlorobenzene, 2-chlorotoluene, 1,4-dichlorobenzene, n-propylbenzene and 1,2,4-trimethylbenzene were detected in each of the three groundwater samples submitted for analysis. Fifteen distinct PAHs were detected in all three groundwater samples submitted for analysis. No PCBs were detected in groundwater samples.

Soil Gas – Soil gas methane was measured in two points. Methane levels were between 0.0 and 0.3% and below the action level of 1.25% by volume.

1463 Parcel:
Soil - Arsenic, barium, chromium and lead were detected in one sample at concentrations consistent with background. No gasoline, diesel-, oil-range petroleum hydrocarbons were detected in the soil samples.

Groundwater – Diesel-range petroleum hydrocarbons were detected in three of the four groundwater samples ranging from 145 to 595 µg/L Gasoline-range petroleum hydrocarbons were not detected. Oil-range petroleum hydrocarbons were detected in two samples between 287-703 µg/L. Elevated arsenic, barium, chromium, and lead were detected in groundwater samples. The VOC (cis-1,2-dichloroethene) was detected at one point while PAHs and PCBs were not detected in the groundwater.

Soil Gas – confined space, indoor air methane was surveyed in the building on the 1463 lot and soil gas methane was measured in two points. Methane levels were between 0.0 and 0.3% and below the action level of 1.25% by volume.

4. RISK EVALUATION

Conceptual site model.
Hayden Island Landfill refuse was identified below the site via subsurface investigations. Widespread groundwater contamination appears to have resulted from leaching of landfill waste. Potential human receptors include adults in an occupational scenario and in a construction/excavation worker scenario. Ecological receptors are not anticipated since there is no ecological habitat within the site boundaries.

Human health exposure pathways include: soil ingestion, dermal contact, and inhalation for construction/excavation workers; volatilization to outdoor air and vapor intrusion into buildings for occupational workers. Leaching to groundwater is not considered a complete exposure pathway since there are no known domestic supply wells in the immediate vicinity of the site.

To evaluate human exposure to residual chemical contamination requires an assessment of the type and extent of that exposure. This is based on current and reasonably likely future site use. DEQ publishes risk-based concentrations (RBCs) for contaminants commonly encountered, for different types of exposure scenarios. These RBCs are conservative estimates of protective levels of contaminants in soil, groundwater and air. Table 1 shows potential exposure pathways and receptors for this site. Based on this, applicable RBCs are identified and used for risk screening.

Table 1. Identification of applicable RBCs, based on pertinent pathways and receptors

Pathway	Receptor	Applicable RBC?	Basis for selection/exclusion
SOIL			
Ingestion, dermal contact, and inhalation	Residential	No	See Note 1.
	Urban residential	Yes	
	Occupational	Yes	
	Construction worker	Yes	
	Excavation worker	Yes	
Volatilization to outdoor air	Residential	No	See Note 1.
	Urban residential	Yes	
	Occupational	Yes	
Vapor intrusion into buildings	Residential	No	See Note 1.
	Urban residential	Yes	
	Occupational	Yes	
Leaching to groundwater	Residential	No	See Note 2.
	Urban residential	Yes	
	Occupational	No	
GROUNDWATER			
Ingestion and inhalation from tap water	Residential	No	See Note 3.
	Urban residential	No	
	Occupational	No	
Volatilization to outdoor air	Residential	No	See Note 1.
	Urban residential	Yes	
	Occupational	Yes	
Vapor intrusion into buildings	Residential	No	See Note 1.
	Urban residential	Yes	
	Occupational	Yes	
Groundwater in excavation	Construction and excavation worker	No	See Note 4.

Notes:

1. Although the site is a non-residential facility, there is a residential area north of the site. Because of the site's urban setting, urban residential exposure is assumed rather than general residential exposure.
2. Groundwater is not used for drinking. This pathway is therefore not considered, in accordance with Section B.3.2.4 of DEQ's RBDM guidance.
3. City water is provided. Local groundwater is not currently used for drinking water and is not likely to be used for this purpose in the future.
4. Groundwater is found from approximately 14-25 feet below ground surface. Construction and excavation work are generally limited to a depth of approximately 15 feet. Risk of construction and excavation workers to contaminated groundwater has therefore not been evaluated.

Contaminant concentrations.
The contaminants of interest (COIs) for the Site include gasoline-, diesel-, and heavy oil-range petroleum hydrocarbons, metals, VOCs, and PAHs. Tables 2-7 present concentrations of each detected contaminant along with applicable RBCs for all sample points. Chemical classes with no detections are not shown in tables.

None of the COIs detected in soil exceeded urban residential, occupational, construction or excavation worker RBCs. The concentration of arsenic in three soil samples exceeded the residential, urban residential, and occupational RBC for soil ingestion, dermal contact, and inhalation; however, the detected concentrations (2.51, 5.93 and 3.11 mg/kg) are below the default background soil metal concentrations for the Portland Basin (8.8 mg/kg). See Tables 2 and 3.

Based on the site CSM, the use of groundwater at the Site for drinking water purposes is not expected. With the removal of the residential and occupational groundwater ingestion pathway, none of the COIs detected in groundwater exceed RBCs. If the ingestion pathway becomes applicable, hydrocarbons, metals, VOCs, and PAHs would exceed RBCs. See Tables 3-7.

Human health risk.
Very little contamination was found in site soil; it appears to be residual contamination from imported landfill cover soil. Groundwater contamination appears to have been caused by leaching of the subsurface landfill waste. Based on the beneficial land and water use determinations and the conceptual site model, none of the detected contaminants exceed any risk-based concentrations.

Methane detected in confined spaces within the 1463 building and in subsurface borings from both properties was far below the action level of 1.25% by volume.

5. RECOMMENDATION

A No Further Action (NFA) determination is recommended for the Hayden Island - Umatilla Properties, in Portland. Contaminant concentrations in soil, groundwater, and soil gas are all below acceptable risk levels. Groundwater contamination at the site is below risk-based

concentrations assuming groundwater is not used for consumption. The NFA will apply only to the subject site under ECSI 6128 and does not apply to the greater Hayden Island Landfill (ECSI #1559.

The No Further Action determination should be recorded in DEQ's ECSI database (ECSI # 6128).

1 Introduction

Ecology and Environment, Inc., (E & E) was tasked by the United States Environmental Protection Agency (EPA) to provide technical support for completion of a Preliminary Assessment (PA) at the Hayden Island Landfill site which is located in Portland, Oregon. E & E completed PA activities under Technical Direction Document (TDD) Number 07-07-0007, issued under EPA, Region 10, Superfund Technical Assessment and Response Team (START)-3 Contract No. EP-S7-06-02.

The specific goals for the Hayden Island Landfill PA, as identified by the EPA, are:

- Determine the potential threat to public health or the environment posed by the site;
- Determine the potential for a release of hazardous constituents into the environment; and
- Determine the potential for placement of the site on the National Priorities List.

Completion of the PA included reviewing existing site information, collecting receptor information within the range of site influence, determining regional characteristics, and conducting a site visit. This document includes a discussion of background site information (Section 2), a discussion of migration/exposure pathways and potential receptors (targets; Section 3), and a list of pertinent references (Section 4).

2 Site Background

2.1 Site Location

Site Name:	Hayden Island Landfill
CERCLIS ID Number:	ORN001002700
Location:	Portland, Oregon
Latitude:	45° 36' 54.72"
Longitude:	122° 41' 0.9594"
Legal Description:	Township 2 North, Range 1 East, Section 33
County:	Multnomah
Congressional District:	3
Site Owner(s):	1. Jantzen Dynamic Corporation 1405 Jantzen Beach Center Portland, OR 97214 503-286-9103
	2. Thunderbird Hotel, LLC Attn: Howard N. Dietrich, Manager 909 N Hayden Island Drive Portland, OR 97217 503-283-4466
	3. Umatilla, Inc. Attn: Kathryn E. Renard 6933 SE 40th Avenue Portland, OR 97202 503-436-2460
	4. Louise Piacentini Trust 2001 6th Avenue, #2300 Seattle, WA 98121
	5. Oregon Department of Transportation Attn: Jason A. Tell, Manager Highway Division, Region 1 123 NW Flanders Street Portland, OR 97209-4012 503-731-8200
	6. Hayden Island Association* / Hayden Island Mobile Home Owners & Renters Association, Inc. Attn: Pamela Ferguson, President 2270 N Broughton Drive *[no mail]* Portland, OR 97217 503-286-7989

**The Hayden Island Association represents the interests of individual property owners. Without defining the actual boundaries of the landfill, it is not possible to specify individual property owners within the mobile home park.*

2.2 Site Description

The Hayden Island Landfill site is located on the north side of Hayden Island in Portland, Multnomah County, Oregon. Figure 2-1 displays the site and surrounding area. Though the exact boundaries of the site are unknown there are certain landmarks on Hayden Island which bound the site. The south boundary of the site falls in the Jantzen Beach Retail Center footprint. Canoe Bay marks the likely western extent of the landfill while the Columbia River marks the likely northern boundary of the site. To the east of the site are several hotels and their associated parking lots as well as other businesses.

2.3 Ownership History

Because the boundaries of the former Hayden Island Landfill remain largely undefined it is difficult to give accurate ownership history. Currently, multiple tax lots are assumed to be in the footprint of the former landfill. Current owners of these tax lots are listed above.

2.4 Operations and Waste Characteristics

It is believed that between 1950 and 1970 an unpermitted landfill was in operation along the north side of Hayden Island. It is largely unknown what was disposed of at the site, likely household trash, and where the boundaries of the former landfill are. Between 1971 and 1991 a gas station operated on the eastern boundaries of the assumed footprint of the Hayden Island Landfill site.

2.4.1 Sources

The area of the former landfill that operated for nearly 20 years between 1950 and 1970 has been estimated anywhere between 10 and 100 acres. Soil borings completed during previous investigations have shown the debris layer, seemingly household trash, to be roughly 2 feet thick in areas. As a conservative measure, the START assumes an area of 60 acres with a depth of 2 feet (i.e., 193,600 cubic yards). Contaminants associated with this source, because they have been detected in groundwater samples collected from the site, include a total of 13 metals: arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, manganese, mercury, nickel, vanadium and zinc. When the landfill was abandoned, it was covered with 6 to 8 feet of clean fill.

2.5 Previous Investigations

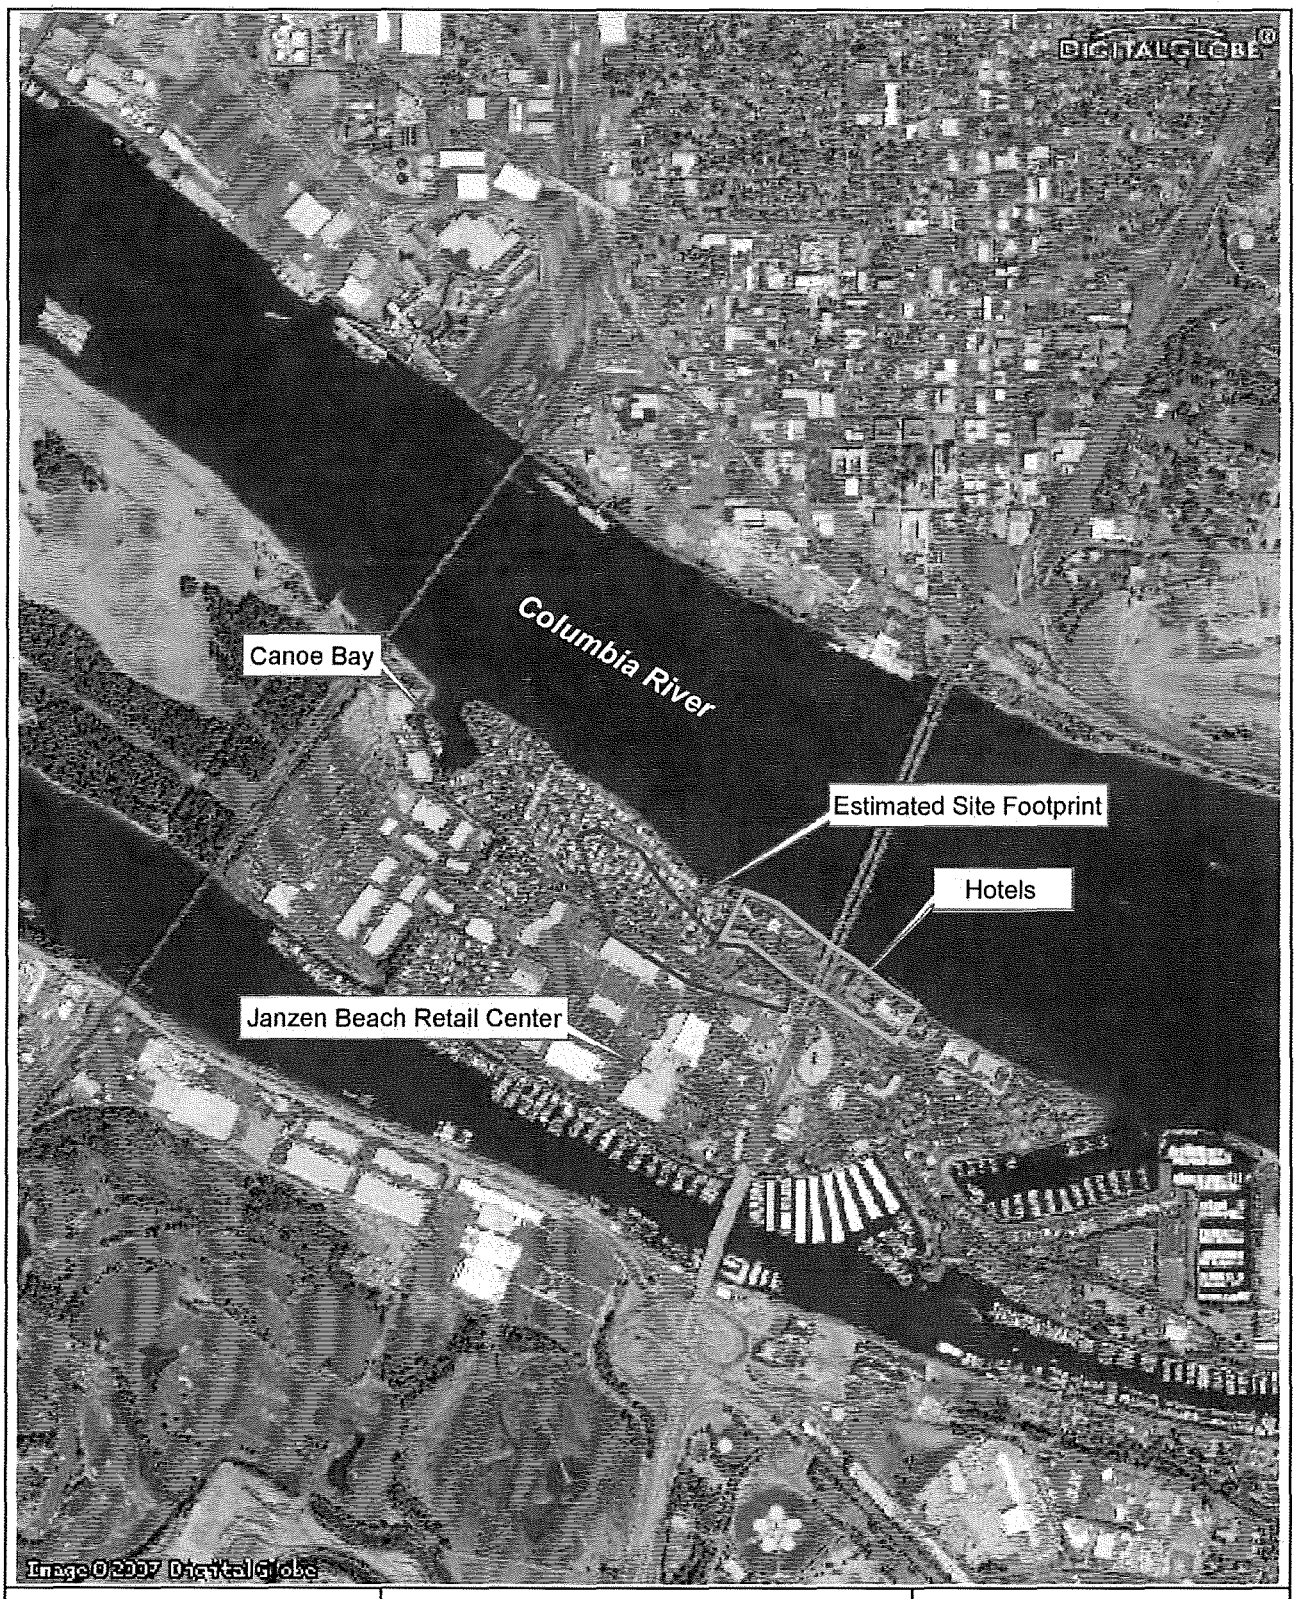
In 1989, in preparation for closing the gas station and decommissioning the Underground Storage Tank (UST), the property owners requested a site investigation be performed. During the investigation benzene, toluene, ethylbenzene, and xylenes (BTEX) contamination was discovered in the soil and groundwater (BCC 1989). In July of 1991 the on-site UST was removed and

contaminated soil was also excavated, treated on-site, and redeposited in the hole. Four vapor extraction wells were installed in May of 1990 in an attempt to remove BTEX contamination from the groundwater. The vapor extraction treatment system was shutdown in June 1991 because of frequent clogging of the system by iron precipitate and iron bacteria (BCC 1992). According to data collected in 1994, during a quarterly groundwater sampling event, BTEX contamination was still present (ODEQ 2007).

In 1992, Heller Real Estate Financial Service, the owner of the Hayden Island RV/Mobile Home Park at that time contracted Environmental Associates, Inc. (EA) to conduct a Phase 1 Environmental Audit in preparation for a Supplemental Environmental Study which was performed at the eastern edge of the Hayden Island Landfill site. According to the Supplemental Environmental Study, household trash was encountered in the soil borings. The trash layer was encountered around 4.5 feet bgs and was roughly 2 feet thick. In addition, metals were encountered in the groundwater (Environmental 1992).

In 1996, a technical review was conducted by Dames and Moore, Inc. for Hayden Corporation doing business as Hillman Properties Northwest, the owner of the Hayden Island RV/Mobile Home Park at the time, that calls into question the validity of the dissolved metals concentrations quoted in the 1992 EA report (DM 1996). This review states that it is highly unlikely that the 1992 groundwater results are representative of the dissolved concentration of metals in the groundwater. It is postulated in the review that the samples were unfiltered, because there is no documentation of sample filtration in the 1992 EA report, and that leaching from suspended sediment artificially raised the dissolved metals concentrations (DM 1996). In 1997 a report was produced by EMCON displaying quarterly groundwater sampling results, spanning 1992 to 1996, at six wells on the eastern border of the Hayden Island Landfill site, near the site of the old gas station. This report was prepared for the Arco Station, and presents the most recent metals concentrations data documenting which samples are filtered and which are unfiltered. Figure 2-2 displays the monitoring well locations and Table 2-1 presents the results of the most recent sampling event at these well locations (Emcon 1997).

2.6 START-3 Site Visit



On December 10, 2007, representatives from EPA, START-3, and ODEQ conducted a site visit to the Hayden Island Landfill site. During the site visit, attempts to find the monitoring wells were unsuccessful. The parking lot of the Thunderbird Hotel had large dips in the asphalt; these dips are believed to be evidence of uneven settling likely caused by the landfill underneath. A drive through the Hayden Island RV/Mobile Home Park and noted several empty lots that may lend themselves well to sampling. No samples or photographs were collected during this visit and no contacts were made to owners of lots on the site.

Table 2-1 October 1996 Groundwater Sample Results

Analyte		W-2 (ppb)	W-3 (ppb)	OS-1 (ppb)	OS-2 (ppb)	OS-3 (ppb)	OS-4 (ppb)

Total Beryllium		ND	ND	ND	ND	13	ND
Total Cadmium		4	ND	ND	ND	9	6
Total Chromium		14	ND	ND	ND	415	96
Cobalt	Dissolved	ND	ND	ND	ND	ND	11
	Total	15	ND	ND	ND	246	70
Total Copper		20	ND	ND	ND	771	166
Iron	Dissolved	39200	40500	19900	50000	58800	37500
	Total	63400	45600	22200	50200	610000	172000
Total Lead		18	3	ND	6	393	85
Manganese	Dissolved	2580	2670	3500	13400	6700	1770
	Total	2900	2810	3670	12500	20000	3250
Total Mercury		ND	ND	ND	ND	1.2	ND
Total Nickel		ND	ND	ND	ND	397	140
Total Vanadium		46	ND	ND	14	1160	287
Total Zinc		123	23	12	36	2840	543
TPH Gasoline		94	117	ND	ND	ND	ND
Benzene		ND	41	ND	ND	ND	7

Key:
ND = Analyte not detected at or above instrument method reporting limit
Ppb = Parts per billion, equivalent to micrograms per Liter (µg/L)
TPH = Total Petroleum Hydrocarbons

Notes:
In analyzing for metals two separate analyses were performed. Dissolved metals were analyzed for in a filtered sample, while the sample used for the total metals analysis contained some suspended particulates.

3 Migration/Exposure Pathways

The following sections describe migration/exposure pathways and potential targets within the site's range of influence (Figure 3-1).

3.1 Ground Water Migration Pathway

The target distance limit (TDL) for the ground water migration pathway is a 4-mile radius that extends from the sources at the site. Figure 3-1 depicts the ground water 4-mile TDL.

3.1.1 Geologic Setting

The Hayden Island Landfill site is located on the north side of Hayden Island in Portland, Oregon in the alluvial flood plain of the Columbia River. The city of Portland lies in a structural basin created by the deformation of the underlying Eocene and Miocene volcanic and sedimentary rocks. The most extensive geologic unit in the basin, the Troutdale Formation, consists of sand and cemented conglomerates and basalt flows up to 900 feet thick. Overlying the Troutdale Formation are unconsolidated sediments consisting of Pleistocene flood deposits, Holocene Columbia alluvium, and flood plain and terrace deposits along major Columbia River tributaries. (McFarland and Morgan 1996)

The net annual precipitation for the site is greater than 42.73 inches (WRCC 2007).

3.1.2 Aquifer Setting

There are eight principal geologic units in the Portland Basin. Four of these units are aquifers: the unconsolidated sedimentary aquifer, the Troutdale Gravel Aquifer, the Troutdale Sandstone Aquifer, and the Sand and Gravel Aquifer. The uppermost geologic unit is the unconsolidated sedimentary aquifer, which consists mostly of catastrophic flood deposits and ranges in thickness from 0 to 199 feet. Most domestic wells in the site area are completed in the unconsolidated sedimentary aquifer (McFarland and Morgan 1996). Aquifers underlaying the unconsolidated sedimentary aquifer are discontinuous and vary greatly in thickness. Confining layers between aquifers also are discontinuous and vary greatly in thickness. Historic well logs representing wells located within 1 mile of the site suggest that a confining layer does not exist in this area of the Portland Basin. Most municipal wells are completed in the Troutdale Gravel Aquifer. Groundwater flow in the unconsolidated sedimentary aquifer and the

Troutdale Gravel Aquifer generally moves northwest. (McFarland and Morgan 1996)

The Hayden Island Landfill site is underlain by fine- to medium-grained dredge sand, construction debris, and other fill material, including foundry sand. Alluvial groundwater underlies the site, with a water table from 21 to 25 feet below ground surface (bgs; Environmental 1992). According to potentiometric surface maps, groundwater flow in this shallow layer is predominantly toward the north-northwest (E & E 2003).

3.1.3 Drinking Water Targets

There are approximately 33 domestic drinking water wells within 4 miles of the Hayden Island Landfill site. The START assumes the wells are screened within the unconsolidated sedimentary aquifer. The total population, based on the average number of persons per household of 2.37 persons in Multnomah County, Oregon, served by the domestic wells is approximately 78.21 (DOC 2001). The nearest drinking water well is between ½ and 1 mile from the site. It is assumed that the Columbia and Willamette Rivers act as hydrologic barriers for the shallow groundwater aquifer in the vicinity of the site. The site does not lie within a Safe Drinking Water act wellhead protection area. Table 3-1 presents the groundwater drinking water population within a 4-mile radius of the site.

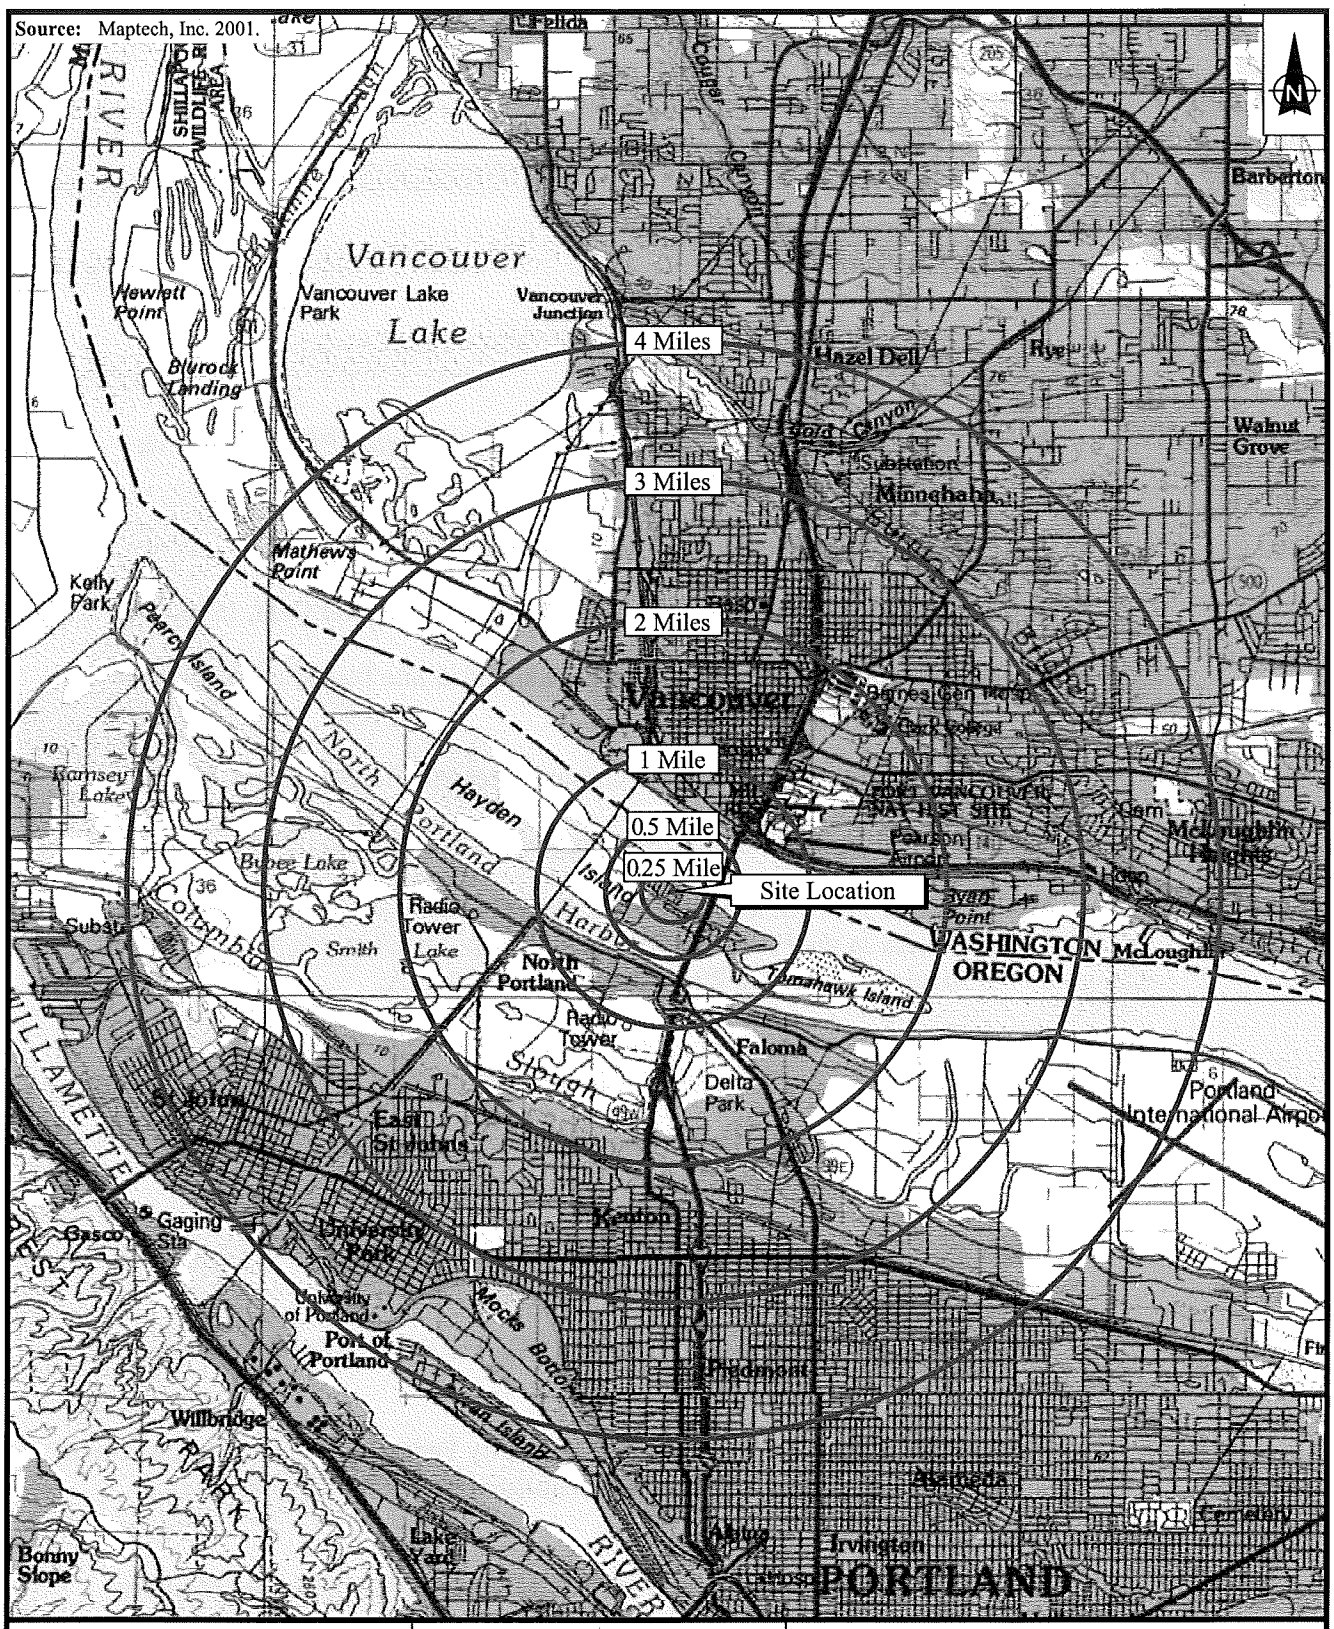
3.2 Surface Water Migration Pathway

The surface water migration pathway is not evaluated because no overland pathway exists.

3.3 Soil Exposure Pathway

The soil exposure pathway is evaluated based on the threat to resident and nearby populations from soil contamination within the first two feet of the surface. Because the landfill is covered by 6 to 8 feet of clean fill, the soil exposure pathway is not evaluated.

3.4 Air Migration Pathway



The air migration pathway was not evaluated because there exists 6 to 8 feet of clean fill over the landfill debris that acts as a barrier to the contamination becoming airborne.

3-1 Ground Water Drinking Water Population by Distance Ring

Distance Ring (miles)	Number of Wells	Population
On-Site	0	0
0 – ¼	0	0
¼ – ½	0	0
½ – 1	3	7
1 – 2	4	9
2 – 3	17	40
3 – 4	9	21
TOTAL	**33**	**78**

Source: (OWRD 2008; DOC 2001)

Note: Population is based on the average number of persons per household for Multnomah, Oregon of 2.37 people. Number of people per distance ring are rounded to the nearest integer.

EXECUTIVE SUMMARY

Parametrix was retained by the Oregon Department of Transportation (ODOT) to perform a Phase I Environmental Site Assessment (ESA) on the developed property located at N Center Avenue in Portland, Oregon (Figure 1). This property may be acquired as part of the Interstate Bridge Replacement (IBR) Program and is known as IBR-2N1E34C-00601. Based on the findings of this investigation, Parametrix reached the following conclusions:

1. The subject property is located on Multnomah County Tax Lot 2N1E34C-00601. The subject property encompasses an area of approximately 0.02 acres (858 square feet) and is zoned for commercial use. The site is developed with a commercial billboard.
2. Based on the historical review, the subject property existed as undeveloped land in 1935. At this time, the Jantzen Beach Amusement Park operated on the adjacent properties to the south and west. As the amusement park expanded, the subject property eventually became developed as part of a larger parking lot for the amusement park. The subject property remained in this use as properties in the area became developed with commercial businesses and restaurants. The current billboard structure appears to have been constructed in the 1990s.

   The amusement park closed in the late 1960s. Around the same time, a filling station appeared on the Conoco property located 150 feet northwest of the subject property. Interstate 5 was constructed to the east in the mid- to late 1950s and the Jantzen Beach Center shopping mall was constructed in the early 1970s on the former Jantzen Beach Amusement Park site. Recognized environmental conditions (RECs) associated with historical land use were not identified.
3. Based on the uncertain date of construction and the nature of the billboard structure on the subject property, there is some limited potential for lead-based paint (LBP) and asbestos-containing materials (ACM) to have been used at the subject property.
4. No evidence of significant use or storage of hazardous substances and/or petroleum products was noted on or near the subject property. No evidence of distressed vegetation, spills or releases or other indications of environmental concern was identified during the site reconnaissance.
5. The subject property is not listed on any state regulatory database that would indicate a past or current release or storage of hazardous materials.
6. A review of regulatory information indicated that several adjacent or nearby sites were identified in the regulatory record databases. Soil and groundwater contamination has been documented on the former Conoco gas station site located 150 feet to the north. There has been no documented migration of contamination onto the subject property from this site. None of the identified sites appear to present a REC to the subject property.
7. An on-site reconnaissance and interview were not conducted with a property representative to identify any potential environmental conditions and to address information data gaps during the Phase I ESA process. The lack of a property owner or representative interview and

the lack of a full on-site reconnaissance represent data gaps in accordance with ASTM Standard E1527-21. However, the information obtained for the Phase I ESA, including regulatory database and historical documentation, was deemed sufficient.

Based upon the conclusions of this investigation of the subject property, Parametrix offers the following recommendation:

1. No further investigation of environmental conditions on the subject property is recommended at this time.
2. If applicable, complete a limited hazardous materials building survey if the billboard is to be removed. The survey should identify hazardous materials such as LBP and ACM.

1. INTRODUCTION

Parametrix was retained by the Oregon Department of Transportation (ODOT) to perform a Phase I Environmental Site Assessment (ESA) on the developed property located at N Center Avenue in Portland, Oregon (herein referred to as the subject property) (Figure 1). The subject property consists of Tax Lot ID# 2N1E34C-00601 in Multnomah County, Oregon. It is our understanding that ODOT may pursue acquisition of the subject property as part of the Interstate Bridge Replacement (IBR) Program. The subject property is identified as IBR-2N1E34C-00601 (Figure 2).

This Phase I ESA includes a review of available documentation pertaining to the subject property, a site reconnaissance, and a review of pertinent public agency documents. The ESA consists of two distinct tasks: (1) a review of documents and of oral information, and (2) a site examination. Conclusions and recommendations within this report are based solely on observed evidence and data collected during the performance of this assessment.

1.1 Purpose

The Phase I ESA was conducted in general accordance with American Society for Testing Materials (ASTM) Standard E1527-21, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, which defines the generally accepted industry practices and procedures currently applicable at the time and place of this study (ASTM 2021). The Phase I ESA is intended to permit the user to satisfy the requirements to qualify for the bona fide prospective purchaser limitation under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), and as such constitutes "all appropriate inquiries in the previous ownership and uses of the property consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601 (35)(B).

The purpose of this Phase I ESA is to identify recognized environmental conditions (RECs) on or near the subject property. The term recognized environmental conditions is defined in ASTM Standard E1527-21 as:

> "…(1) the presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* due to a *release* to the *environment*; (2) the likely presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* due to a *release* or likely *release* to the *environment*; or (3) the presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* under conditions that pose a *material threat* of a future *release* to the *environment*."

In accordance with ASTM Standard E1527-21, some RECs may be further defined as historical recognized environmental conditions (HRECs) or controlled recognized environmental conditions (CRECs).

An HREC is defined as:

> "…*a past release of any hazardous substances* or *petroleum* products that has occurred in connection with the *property* and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the *property* to any required controls."

A CREC is defined as:

> "…a *recognized environmental condition* resulting from a past *release of hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority, with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls."

This Phase I ESA endeavors to identify all RECs, HRECs, and/or CRECs at the subject property.

1.2 Significant Assumptions

This assessment was conducted in accordance with generally accepted industry practices and procedures within the scope of work authorized at the time and place of this study. Parametrix observations are limited to those areas to which it had access on the subject property.

Phase I ESA methodology included viewing accessible areas of the subject property from public right-of-way, as on-site access was not available. In addition, an interview was not able to be conducted with a property representative to identify any potential environmental conditions during the Phase I ESA process. Unless otherwise stated, no other exceptions to the guidelines presented in ASTM E1527-21 were made during completion of this Phase I ESA.

1.3 Limitations

The findings, conclusions, and recommendations presented in this report are based on site conditions and the best available information known or made available by regulators, other consultants, or other sources at the time of the investigation. Parametrix conducted a diligent search and investigation in compliance with prevailing standards of the profession; however, certain adverse conditions may exist at the site not detected at the time of the investigation.

The services provided under this contract, as described in this report, include professional opinions and judgments based on data collected. These services have been provided according to generally accepted engineering practices. The opinions and conclusions contained in this report are typically based on information obtained from the following:

- Observations and measurements made by Parametrix field staff.
- Contacts and discussions with regulatory agencies and others.
- Review of available hazardous substance or solid waste lists.
- Opinions and judgments of Parametrix based on the information available.

In the professional judgment of Parametrix, the services performed pursuant to the scope of services are an adequate basis to collect data for a preliminary evaluation of the site and upon which to draw the conclusions stated in this report.

2. SUBJECT PROPERTY DESCRIPTION

2.1 Location

The subject property is located near N Center Avenue (non-addressed) in Portland, Oregon. The subject property includes Multnomah County Tax Lot 2N1E34C-00601 and is identified as IBR-2N1E34C-00601.

The subject property is a 0.02-acre property located west of Interstate 5 and east of N Center Avenue. According to the Multnomah County Assessment office, Buena-Hayden LLC is the current owner of the subject property. The site location is shown on Figure 1. The boundary of the subject property is shown on Figure 2.

2.2 Site and Vicinity Characteristics

The subject property consists of a developed property occupied by a commercial billboard. The 0.02-acre (858 square foot) lot consists of the billboard surrounded by manicured landscaping and a small portion of the parking lot and curbing for the adjacent restaurant building to the southwest. It is currently owned by Buena-Hayden LLC. The property is located in a fully developed commercial area of the Jantzen Beach area of North Portland.

The subject property is located to the east of N Center Avenue and west of the Interstate 5 freeway. The subject property is bounded to the north, south and west by commercial businesses and restaurants and to the east by Interstate 5 (Figure 2).

2.3 Physical Setting

The subject property is located in the Portland Basin, which marks the northern terminus of the Willamette Lowland in Oregon (DNR n.d.). The northern portion of the basin is known for its low topographic relief, with the subject property at an elevation of approximately 35 feet above mean sea level. The Portland Basin is bound by the Cascade Range to the east and the Coast Range to the west.

Geologic processes in the Portland Basin consist of volcanism, sedimentation, and cataclysmic flood deposits in both fluvial and marine depositional environments. The subject property lies on what is mapped as fine-grained Holocene alluvium consisting of sand and silty sand deposited by the Columbia River (Wells et al. 2020)

The topography in the vicinity of the subject property is a consistent slope, rising with distance from the Columbia River. Based on the results of groundwater studies on nearby properties, the anticipated groundwater gradient is to the south toward the North Portland Harbor, which is a narrow reach of the Columbia River between Hayden Island and North Portland. Groundwater has been encountered at 13 to 35 feet below ground surface on nearby properties.

2.4 Current Use of the Subject Property

The subject property is developed with a commercial building that is currently the site of a McDonald's restaurant. The subject property is zoned by the City of Portland as Commercial Employment (CE).

2.5 Descriptions of Improvements on the Subject Property

The subject property is developed with a commercial billboard supported by two steel columns embedded in the ground. A small portion of the site is paved with a short section of concrete curbing.

2.6 Environmental Liens

An environmental lien is defined by ASTM as a charge, security, or encumbrance upon title to a property to secure the payment of a cost, damage, obligation, or duty arising out of response actions, cleanup, or other remediation of hazardous substances or petroleum products. No evidence of environmental liens against the subject property was identified during the course of this Phase I ESA.

3. RECORDS REVIEW

The purpose of the records review task was to gather environmental data on the subject property prior to the site examination. The information review consisted of two subtasks: a review of various lists and files published by federal and State of Oregon agencies; and a compilation of historical uses of the site and site vicinity, to determine if past operations pose an environmental risk to the subject property. Information for agency file review is based, in part, on a report provided by Environmental Data Resources (EDR). The EDR report is included in Appendix A.

The Environmental Data Resources report (EDR 2023a) is a summary of state and federal database searches for sites of possible environmental concern. The information review enabled Parametrix personnel to characterize the types of activities performed at the site, identify data gaps prior to the site examination, and facilitate recognition of discrepancies between reported and observed data. Data gaps identified during the document review were addressed by interviewing knowledgeable personnel, observations during the site examination, or by additional detailed investigation.

It should be noted that this information is reported as Parametrix received it from EDR, which in turn reports information as it is provided in various government databases. It is not possible for either Parametrix or EDR to verify the accuracy or completeness of information contained in these databases. However, the use of and reliance on this information is a generally accepted practice in the conduct of environmental due diligence. The following sections present information from the document review.

3.1 Standard Environmental Record Sources

The following section summarizes information collected from records maintained by the U.S. Environmental Protection Agency (EPA) and the Oregon Department of Environmental Quality (DEQ). The information includes details on sites identified in regulatory databases within recommended ASTM search distances. A complete listing of the databases reviewed is included in the EDR Radius Map™ Report (Appendix A).

3.1.1 Review of Oregon Department of Environmental Quality Databases

The following sections summarize the most relevant information obtained from the EDR Radius Map™ Report regarding sites identified within the ASTM E1527-21 search radii from the following databases. Additional information regarding these sites was reviewed on DEQ's Environmental Cleanup Site Information Database (DEQ n.d.a) and Leaking Underground Storage Tank Cleanup Site Database (DEQ n.d.b.) to supplement data gaps in the EDR report. A complete listing of the databases reviewed is included in the EDR report. Relevant database listings from DEQ include:

- DEQ Underground Storage Tank (UST) List
- DEQ Leaking Underground Storage Tank (LUST) List

- DEQ Environmental Cleanup Site Information (ECSI) List
- Spill Database (SPILLS)
- Solid Waste Facilities (SWF/LF) List
- DEQ Confirmed Release List (CRL)
- DEQ Brownfields List
- DEQ Drycleaners List
- DEQ Engineering or Institutional Controls

3.1.1.1 Department of Environmental Quality Underground Storage Tank List

The UST database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data was obtained from the DEQ UST List.

Information contained in the EDR report indicates that the subject property is not listed as a UST site. Six UST sites were identified within 0.25 miles of the subject property. One of the sites (Conoco Phillips Company) is located 200 feet northwest of the subject property and is discussed below under Section 3.1.1.2 as a LUST site.

The remaining five UST sites identified in the EDR report appear to be at sufficient distances from the subject property and/or cleanup activities have been completed so that they do not appear to represent a REC to the subject property.

3.1.1.2 Department of Environmental Quality Leaking Underground Storage Tank List

The LUST) Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data was obtained from the DEQ LUST Database List.

Information contained in the EDR report indicates that the subject property is not listed as a LUST site.

Ten LUST sites were identified within 0.25 miles of the subject property. One of the sites (Conoco Phillips Company) is located 150 feet northwest of the subject property and is discussed below.

- Conoco Phillips Company (12205 N Center Avenue), is located 150 feet northwest of the subject property (tax lot 00602). The site was assigned DEQ LUST file numbers 26-90-0055 and 26-94-0063. The property was a service station from 1967 through 2007. The earlier petroleum release was reported in 1990 which involved the removal of 750 cubic yards of petroleum-contaminated soil. The site was closed under the Soil Matrix rules and was issued a No Further Action (NFA) letter from DEQ.

  A second petroleum release was reported in 1994 during upgrades to the UST system. Groundwater monitoring between 2000 and 2011 showed groundwater flow directions toward the south to southwest. Between 2004 and 2006, five air-sparge and three vapor extraction wells were installed and operated until 2007.

Based on final compliance sampling, residual contamination in soil did not exceed any risk-based concentrations for occupational property use. Residual contamination in groundwater exceeded risk-based concentrations for vapor intrusion into buildings (benzene) and groundwater in excavation (total gasoline and benzene). Minor migration of contaminants was reported onto properties adjacent to the Conoco site to the east and south (tax lots 00603 and 00604). No contaminant migration was documented onto the subject property (tax lot 00601). No groundwater users were identified within 0.25 miles of the subject property.

In July 2011, three soil gas samples were collected on the Conoco property. No analytes were detected that exceeded risk-based concentrations for soil vapor. In 2010, the existing commercial building was constructed on the Conoco property which included a vapor barrier and a passive ventilation system. Vapor sampling within the ventilation system did not detect any petroleum. DEQ issued an NFA letter for the site in October 2012.

Based on DEQ information indicating site closure activities have been completed or other supplemental information, the identified site discussed above does not appear to represent a REC to the subject property. In addition, the remaining nine LUST sites identified in the EDR report appear to be at sufficient distances from the subject property and/or cleanup activities have been completed so that they do not appear to represent a REC to the subject property.

3.1.1.3 Department of Environmental Quality Environmental Cleanup Site Information List

The ECSI identifies and tracks known or potentially contaminated sites within Oregon and is the state's equivalent to the Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS). The CRL is a subset of the ECSI and includes sites that have known releases of hazardous substances. The Voluntary Cleanup Program (VCP) database is a list of sites that have been entered into the DEQ voluntary cleanup program and are undergoing cleanup. The subject property is not identified on the ECSI, CRL or VCP databases.

Twenty-six ECSI, CRL, or VCP sites were identified within 1 mile of the subject property. Of these, one site is located within 0.25 miles north of the subject property. This site is discussed below.

The remaining ECSI, CRL, and VCP sites are located at sufficient distances and/or cleanup activities have been completed so that they do not appear to represent RECs to the subject property.

- The Hayden Island Landfill ECSI site (ECSI #1559) is located 1,200 feet north of the subject property.

  The Hayden Island Landfill was located in a seasonal lake basin on Hayden Island and appears to have operated between about 1950 and the early 1970s, when it was covered with a 7 to 8-foot layer of clean fill. All information known about the landfill is based on subsurface activities at a former ARCO service station, 1305 N Hayden Island Dr., built on the eastern end of the old landfill.

  The landfill debris was found to be 5 to 7 feet thick, beneath 7 to 8 feet of cover. Groundwater was documented at a depth of about 25 feet below ground surface, and its flow direction

varied, due to the heterogenous nature of landfill materials and fluctuations in the level of the surrounding Columbia River.

A groundwater pump and treat system began treating gasoline-contaminated groundwater on the site in 1990. The system quickly became fouled from iron bacteria and silt, which was attributed to leachate from the buried landfill debris. The treatment system was decommissioned. Soil gas sampling on the ARCO site showed traces of volatile organic compounds and methane, but nothing above action levels.

The Oregon DEQ Site Assessment Section recommended that affected property owners characterize contamination in and below the former landfill, but it is low priority. There has been no organized assessment of the former Hayden Island Landfill by Oregon DEQ.

Given the extensive groundwater monitoring completed on the Conoco property to the northwest of the subject property between 1996 and 2008 (see Section 3.1.1.2; LUST #26-94-0063) which did not identify any suspected contaminants from off-site sources, the presence of the Hayden Island Landfill site is not considered a REC to the subject property.

3.1.1.4 SPILLS Database

This database provides a comprehensive list of reported spills. The subject property is not listed as a SPILLS site.

3.1.1.5 Solid Waste Facilities/Landfill

The SWF/LF records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data were obtained from Oregon's Solid Waste Facilities List Solid Waste Facilities List.

The subject property is not listed as a SWF/LF site. One SWF/LF site (Diversified Marine) was reported within 0.5 miles of the subject property and based on a review of regulatory status, investigation and cleanup actions conducted, and/or distance from the subject property; the SWF/LF site does not appear to represent a REC to the subject property.

3.1.1.6 Department of Environmental Quality Brownfields List

The Brownfields database lists sites of real property where expansion or redevelopment is complicated by actual or perceived environmental contamination. One DEQ Brownfields site was identified within 1 mile of the subject property. The site (Hayden's Corner, ECSI #5711) is discussed in Section 3.1.1.3.

3.1.1.7 Department of Environmental Quality Drycleaner List

The drycleaner database is a listing of former or current drycleaners in Oregon. One DEQ drycleaner site (Safe Dry Cleaners) was identified within 0.125 miles of the subject property. The site is located at a sufficient distance from the subject property so that it does not appear to represent a REC to the subject property.

3.1.1.8 Department of Environmental Quality Engineering/Institutional Controls

DEQ maintains two databases for sites with implemented engineering controls and/or institutional controls. No sites with engineering or institutional controls were identified within 1 mile of the subject property.

3.1.2 Environmental Protection Agency Database Review

The EPA administers several programs designed to protect the environment and monitor the generation, storage, treatment, and disposal of hazardous substances. The following sections summarize the most relevant information obtained from the EDR report regarding sites identified within ASTM E1527-21 search radii from the following databases. A complete listing of the databases reviewed is included in the EDR report.

- National Priorities List (NPL)
- Superfund Enterprise Management System (SEMS) List
- RCRA Corrective Action Report (CORRACTS) List
- Resource Conservation and Recovery Information System (RCRIS) List
- Emergency Response Notification System (ERNS) List
- U.S. Brownfields List

3.1.2.1 National Priorities List

The NPL identifies priority hazardous waste sites for remedial actions under the EPA Superfund program. The EDR report indicates that the subject property is not listed as an NPL site. No NPL sites were identified within 1 mile of the subject property.

3.1.2.2 Superfund Enterprise Management System List

The EPA publishes a list of sites that may potentially pose a threat to the environment or the health of the general public. This list is known as the SEMS list (formerly the CERCLIS list). Information contained in the EDR report indicates the subject property is not listed as a SEMS site. No SEMS sites were identified within 1 mile of the subject property.

The EPA also publishes the SEMS- No Further Remedial Action Planned (NFRAP) list, which are SEMS sites that have been designated “no further remedial action planned” and have been removed from the SEMS list. Information contained in the EDR report indicated that the subject property is not listed as a SEMS-NFRAP site. One SEMS- NFRAP site (Diversified Marine) was identified within 1 mile of the subject property. The site is located at a sufficient distance and/or cleanup activities have been completed so that it does not appear to represent REC to the subject property.

3.1.2.3 Corrective Action Report Review

The CORRACTS identifies hazardous waste handlers with corrective action activity. Information contained in the EDR report indicates the subject property is not listed as a CORRACTS site. No CORRACTS sites are listed within 1 mile of the subject property.

3.1.2.4 Resource Conservation and Recovery Information System List

The RCRIS list includes selective information on sites which generate, transport, store, treat, and/or dispose of hazardous waste as defined by RCRA. Information contained in the EDR report indicates the subject property is not listed as a RCRIS site. One small quantity generator site and two very small quantity generator sites are listed within 0.25 miles of the subject property. The sites are located at sufficient distances so that they do not appear to represent RECs to the subject property.

The EPA also regulates the management of hazardous waste at Transportation, Storage, and Disposal (TSD) facilities. Information contained in the EDR report indicates the subject property is not listed as a RCRIS-TSD site. No RCRIS-TSD sites were identified within 0.5 miles of the subject property.

3.1.2.5 ERNS List

The ERNS is a national database containing information from spill reports made to Federal authorities. Information contained in the EDR report indicates the subject property is not listed as an ERNS site.

3.1.2.6 U.S. Brownfields List

The EPA's U.S. Brownfields List identifies brownfields properties addressed by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. The EDR report indicates the subject property is not listed as a U.S. Brownfields site. No U.S. Brownfield sites were identified within 0.5 miles of the subject property.

3.1.3 Other Databases

The following sections include other databases identified in the EDR report that may be relevant to assessing potential environmental liability or environmental issues at the subject property.

3.1.3.1 EDR Proprietary Databases

EDR has conducted research on the occurrence of historical business practices that may constitute a REC to properties. The database was developed from data found in historical city directories and contains information on over 100,000 former gas stations, manufactured gas plants, and dry cleaners. Due to the nature of these businesses, the sites have the potential for soil and groundwater contamination to have occurred.

EDR Historical Auto Stations

Historical auto stations are identified on a proprietary database maintained by EDR. Information contained in the EDR report indicates the subject property is not listed as a historical auto station and one historical auto station is listed within 0.125 miles of the subject property. The site (Conoco Phillips Company) is discussed in Section 3.1.1.2 of this report.

EDR Manufactured Gas List

Former manufactured gas plant (coal gas) sites are identified on the Manufactured Gas database. Information contained in the EDR report indicates the subject property is not listed as a manufactured gas plant site and no manufactured gas plants are listed within 1 mile of the subject property.

EDR Historical Dry Cleaners

Historical cleaners are identified on a proprietary database maintained by EDR. Information contained in the EDR report indicates that there are no historical cleaner sites within 0.125 miles of the subject property.

3.1.4 Orphan Site List

Orphan sites are sites for which mapping information is not detailed adequately to plot the location of the site, or for which there is no known responsible party or the responsible party is unwilling or unable to pay for cleanup. The orphan site list and available mapping information were reviewed by Parametrix. Ten orphan sites were identified by EDR in the vicinity of the subject property. One of the sites (Hayden Island Landfill) is discussed in Section 3.1.1.3 of this report. The remaining nine orphan sites identified are located at sufficient distances and/or cleanup activities have been completed so that they do not appear to represent RECs to the subject property.

3.1.5 Vapor Encroachment

ASTM Standard E1527-21 defines vapor migration as “the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface." The recognition of vapor migration as a possible REC may require incorporation of new types of controls and restrictions to address this contamination pathway.

The subject property and adjacent sites were reviewed in an effort to determine if vapor migration has, or has the potential to have, occurred at the site, from adjacent properties. Based on the information reviewed, the subject property is not identified as a potential vapor intrusion site.

No properties were identified in the near vicinity which have confirmed releases of volatile contaminants in soil or groundwater which have not been sufficiently addressed or would otherwise present a potential impact to the subject property.

3.2 Historical Use Information

The objective of the historical use information review is to develop a history of the previous uses of the subject property and surrounding area that helps to identify the likelihood of past uses having led to RECs in connection with the subject property. Parametrix researched the historical land use, occupancy, and ownership of the subject property and adjacent properties to evaluate historical uses that are known to be associated with RECs. Historical records reviewed include Sanborn Fire Insurance maps (EDR 2023b) and aerial photographs (EDR 2023c).

3.2.1 Certified Sanborn Maps™ Fire Insurance Map Review

Fire insurance maps in the EDR Certified Sanborn Map Report showing the vicinity of the subject property were requested to establish historical business operations at the subject property and adjacent properties. Sanborn Fire Insurance maps from the years 1950, 1952 and 1969 were examined. A copy of the Certified Sanborn Map Report is included in Appendix B. Observations are provided below.

1950	The subject property is undeveloped land on the east side of the Jantzen Beach Amusement Park (labeled "Hayden Island Amusement – Jantzen Beach Park"). N Denver Avenue (Highway 99) is located 50 feet to the east. Adjacent parcels are also undeveloped land. Amusement park attractions are located 300 feet west (bowling alley, restaurants, arcades) and 400 feet south (swimming pools, changing rooms, concessions).
1952	There are no changes from the previous map.
1969	Interstate 5 appears to the east (labeled NE Union Avenue), replacing Highway 99. The interstate right of way extends up to the subject property. There are no other changes from the previous map.

3.2.2 Historical Aerial Photograph Review

Historical aerial photographs of the subject property area were obtained from EDR. Aerial photographs for the years 1935, 1948, 1951, 1955, 1960, 1970, 1975, 1981, 1990, 1994, 2000, 2006, 2011, 2014, 2017 and 2020 were examined. Copies of the aerial photographs are included in Appendix C. Observations are listed below.

1935	The subject property is undeveloped land and sparsely vegetated with a narrow trail or footpath crossing on or near the subject property. The access road to the amusement park from Highway 99 (50 feet to the east) runs near the northeast corner of the subject property. Highway 99E is adjacent to the east and the Jantzen Beach Amusement Park is located to the south and west, across an area of undeveloped land. Other adjacent properties are undeveloped land.
1948–1955	Buildings appear to the east of the subject property, across Highway 99E. Additional tree growth appears on and around the subject property.

1960	The subject property is part of a large parking lot that extends to the north, west and south. Interstate 5 appears adjacent to the east, in the place of Highway 99E.
1970	A building appears on the adjacent property to the north and the former Conoco gas station appears to the northwest.
1975–1990	The current building appears adjacent to the southwest of the subject property. The Jantzen Beach Amusement Park has been removed and replaced by the Jantzen Beach Center (shopping mall).
1994–2006	The billboard appears on the subject property. Adjacent property use remains unchanged.
2011	The Unocal gas station to the northwest has been removed and replaced with the current commercial building.
2014–2020	The adjacent building to the north has been replaced with the current building. The subject property and surrounding area appear to be developed similar to current conditions.

Based on the historical review, the subject property existed as undeveloped land in 1935, at which time, the Jantzen Beach Amusement Park operated on the adjacent properties to the south and west. As the amusement park expanded, the subject property eventually became developed as part of a larger parking lot for the amusement park. The subject property remained in this use as properties in the area became developed with commercial businesses and restaurants. The current billboard structure appears to have been constructed in the 1990s.

The amusement park closed in the late 1960s. Around the same time, a filling station appeared on the Conoco property 150 feet northwest of the subject property.

Interstate 5 was constructed to the east in the mid- to late 1950s and the Jantzen Beach Center shopping mall was constructed in the early 1970s on the former Jantzen Beach Amusement Park site.

No RECs were identified in association with historical land use.

3.2.3 Local Agency Records

Information from local agencies was reviewed for environmental significance as described in the following sections.

3.2.3.1 City of Portland

A review of permits for environmental significance (i.e., septic tank, stormwater, dry wells, and/or USTs or aboveground storage tanks [ASTs]) was completed. No evidence of significant use or storage of hazardous substances and/or petroleum products was noted on the subject property. No building and plumbing permits records were recorded online with the Portland Maps records for the subject

property. None of the permits provided information of environmental significance. No records of USTs or ASTs were recorded.

3.2.3.2 Multnomah County

Based on information from the Multnomah County Tax Assessor's Office, the subject property is known as Tax Lot #2N1E34C-00601 and is approximately 0.02 acres (858 square feet) in size. It is listed by Multnomah County as being owned by Buena-Hayden LLC. The subject property is zoned CE and is currently used for a billboard structure.

3.3 Additional Environmental Information

The following sections provide a summary of additional environmental information obtained for the site.

3.3.1 Asbestos

The manufacture of most asbestos-containing materials (ACM) was banned by the EPA by 1979. Prior to this, asbestos was a common constituent of numerous building materials, including floor and ceiling tiles, caulking, pipe insulation, roofing materials, and exterior siding.

Due to the uncertain date of construction of the billboard structure on the subject property, there is some limited potential for ACM to have been used at the subject property.

3.3.2 Lead-Based Paint

Before 1977, paint commonly contained lead which is considered to cause human health problems if ingested. Due to the uncertain date of construction of the billboard structure on the subject property, there is some limited potential for lead-based paint (LBP) to have been used at the subject property.

3.3.3 Polychlorinated Biphenyls (PCBs)

Transformers can potentially contain polychlorinated biphenyls (PCBs). There are no transformers or buildings on the subject property, therefore, there is low potential for PCBs to have been used at the subject property.

3.3.4 Radon

Radon is a naturally occurring radioactive gas formed by the decay of uranium in some rocks and soil. The adverse health effects associated with radon gas depends upon various factors, such as the concentration of the gas, and exposure duration. The potential concentration of radon gas within a building depends on subsurface soil conditions, the integrity of the building's foundation, the existence of a basement or crawl space (primary areas of concern), and the building's ventilation.

Multnomah County ZIP code 97217 is located in the Federal EPA Radon Zone 2. The Zone 2 indoor average radon level predicted from 2 to 4 picocuries per liter (pCi/L), reported as a moderate risk of radon elevation. The EPA Action Level for radon is 4 pCi/L. Based on this limited information, radon likely does not represent an environmental concern at the property.

4. FILE REVIEW

In accordance with ASTM Standard E1527-21, inquiries and review of previous investigations for the subject property, and a review of regulatory files for the subject property or adjacent properties may be conducted to further evaluate environmental conditions on the property or adjacent properties, and to fill in data gaps where applicable. Previous investigations and file reviews are summarized below.

4.1 Previous Investigations

Based on regulatory information from DEQ, the subject property is not listed on any regulatory databases. No previous investigations of the subject property were identified during the course of this Phase I ESA.

4.2 Adjacent and Nearby Properties File Review

Several nearby properties were listed on environmental databases, as described in Section 3. Sufficient site-specific information was available through review of the EDR report, as well as online DEQ files, to develop an opinion on the potential for these properties to have affected the subject property. Therefore, a specific file review (physical review at DEQ) was not required, beyond those completed during the course of this Phase I ESA. Specific information on the nature of release, types of contaminants, media impacted, and the potential to have affected the subject property or otherwise caused environmental concern is provided in Section 3.

5. SITE EXAMINATION

Parametrix conducted a site examination of the subject property from public right-of-way on September 14, 2023. The site examination consisted of observing the areas immediately surrounding the subject property, providing observations of the general environmental conditions on the subject property, and visually assessing the subject property and adjacent properties for evidence of hazardous materials. Photographs of the subject property taken during the site walk are included in Appendix D.

5.1 Subject Property

The subject property includes a developed property occupying a total of 0.02 acres (858 square feet). The property is currently owned by Buena-Hayden LLC. All observations were taken from the public right-of-way.

The property is developed with a billboard surrounded by manicured landscaping and a small portion of the parking lot and curbing for the adjacent restaurant building to the southwest. The topography of the property was observed to be generally level.

No evidence of USTs, ASTs, or other indications of environmental significance were observed on the subject property. In addition, no evidence of significant storage or spills of hazardous substances and/or petroleum products was observed on the subject property. No evidence of staining, adverse odors, or other indications of potential releases was observed. In general, no RECs or other adverse environmental conditions were identified associated with the subject property.

The lack of access to the subject property and a full site examination represents a data gap in accordance with ASTM Standard E1527-21.

5.2 Adjacent Properties

The vicinity of the subject property is significantly developed with commercial businesses and public roadways. Adjacent properties were examined from public areas for the presence of environmental conditions which have the potential to impact the subject property.

The subject property is located to east of N Center Avenue and west of Interstate 5. The subject property is bounded to the north, west and south by commercial businesses and restaurants, and to the east by Interstate 5 (Figure 2).

No evidence of significant staining or stressed vegetation was noted on the ground surface on assessable properties adjacent to the site. No evidence of the storage of chemical or hazardous materials identified on visible areas of adjacent properties.

6. INTERVIEWS

An interview was not able to be conducted with a property representative to identify any potential environmental conditions and to address information data gaps during the Phase I ESA process. The lack of a property owner or representative interview represents a data gap in accordance with ASTM Standard E1527-21.

7. CONCLUSIONS

Based on the findings of this investigation, Parametrix concluded the following:

1. The subject property is located on Multnomah County Tax Lot 2N1E34C-00601. The subject property encompasses an area of approximately 0.02 acres (858 square feet) and is zoned for commercial use. The site is developed with a commercial billboard.
2. Based on the historical review, the subject property existed as undeveloped land in 1935. At this time, the Jantzen Beach Amusement Park operated on the adjacent properties to the south and west. As the amusement park expanded, the subject property eventually became developed as part of a larger parking lot for the amusement park. The subject property remained in this use as properties in the area became developed with commercial businesses and restaurants. The current billboard structure appears to have been constructed in the 1990s.

   The amusement park closed in the late 1960s. Around the same time, a filling station appeared on the Conoco property located 150 feet northwest of the subject property. Interstate 5 was constructed to the east in the mid- to late 1950s and the Jantzen Beach Center shopping mall was constructed in the early 1970s on the former Jantzen Beach Amusement Park site. RECs associated with historical land use were not identified.
3. Based on the uncertain date of construction and the nature of the billboard structure on the subject property, there is some limited potential for LBP and ACM to have been used at the subject property.
4. No evidence of significant use or storage of hazardous substances and/or petroleum products was noted on or near the subject property. No evidence of distressed vegetation, spills or releases or other indications of environmental concern was identified during the site reconnaissance.
5. The subject property is not listed on any state regulatory database that would indicate a past or current release or storage of hazardous materials.
6. A review of regulatory information indicated that several adjacent or nearby sites were identified in the regulatory record databases. Soil and groundwater contamination has been documented on the former Conoco gas station site located 150 feet to the north. There has been no documented migration of contamination onto the subject property from this site. None of the identified sites appear to present a REC to the subject property.
7. An on-site reconnaissance and interview were not conducted with a property representative to identify any potential environmental conditions and to address information data gaps during the Phase I ESA process. The lack of a property owner or representative interview and the lack of a full on-site reconnaissance represent data gaps in accordance with ASTM Standard E1527-21. However, the information obtained for the Phase I ESA, including regulatory database and historical documentation, was deemed sufficient.

8. RECOMMENDATIONS

Based upon the conclusions of this investigation of the subject property, Parametrix offers the following recommendations.

1. No further investigation of environmental conditions on the subject property is recommended at this time.
2. If applicable, complete a limited hazardous materials building survey if the billboard is to removed. The survey should identify hazardous materials such as LBP and ACM.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal Delisted NPL sites

Delisted NPL: The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may deleted from the NPL where no further response is appropriate.

A review of the Delisted NPL list, as provided by EDR, and dated 04/26/2023 has revealed that there is 1 Delisted NPL site within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
HARBOR OIL INC. EPA ID:: ORD071803985 Site ID:: 1000442	***AKA CHEMPRO OF OREGO***	***WSW 1/2 - 1 (0.717 mi.)***	***40***	***374***

Lists of Federal sites subject to CERCLA removals and CERCLA orders

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities,

private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 04/26/2023 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 04/26/2023 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Lists of Federal RCRA generators

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/06/2023 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

EPA ID:: ORD987187341

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 03/06/2023 has revealed that there are 2 RCRA-VSQG sites within approximately 0.25 miles of the target property.

WA CSCSL: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Ecology's Confirmed & Suspected Contaminated Sites List.

A review of the WA CSCSL list, as provided by EDR, and dated 04/10/2023 has revealed that there are 3 WA CSCSL sites within approximately 1 mile of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected

listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

Environmental Interest/Information System:
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

NARR Comments: (12/5/2001 DGA/SRS) Dry-cleaning facilities have operated at the site since the mid-1970s. A preliminary environmental assessment in November 1994 identified four floor drains within the facility, three of which yielded a positive reading on a photoionization detector. In August 1995, four Geoprobe borings were advanced at the site to see if PCE had been released to the soil or groundwater. PCE was detected in soil gas (up to 75 ppm) and groundwater (up to 780 ug/L) in all four boreholes. It appears that PCE may have been released down the floor drains at the site, leaking into the soil through cracks in the sanitary sewer lines. Tidal fluctuations in the shallow groundwater may have spread the contaminants across the site. Hayden Island Cleaners applied to DEQ's Dry Cleaner Program in January 1997, and was accepted in February 1997.

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: The City of Portland owns four deep production wells on Hayden Island, two of which are within 600 feet of the site. Since 1988, Bull Run water has been provided for residents and businesses on Hayden and Tomahawk Islands, and the wells are currently designated for backup fire suppression only. Three of the four wells are contaminated with low levels of TCE and PCE; however, the contamination is thought to be unrelated to Hayden Island Cleaners. Because of the site's proximity to the Columbia River, surface water was another potential pathway of concern. But the contamination does not appear to have reached either the river or the deeper aquifer.

NARR Comments: (12/5/2001 DGA/SRS) DEQ retained Jacobs Engineering to conduct an expanded Preliminary Assessment (XPA) at the site in August 1997. As part of the XPA, three monitoring wells were installed, and soil and groundwater samples collected. PCE was detected in soil samples (up to 267 ug/kg) and groundwater samples (up to 1,230 ug/L) from all three wells. The XPA report was completed in June 1998. DEQ retained Ecology & Environment (E&E) to follow up with a focused Site Investigation in August 1998. Additional groundwater monitoring wells were installed at the site and on adjacent properties. In addition, a pumping test was conducted at the secondary municipal wells (backup fire suppression wells) to determine if there was any connection between the shallow and deep aquifers. No connection was established. The Site Investigation report was completed in March 1999. In May 1999, DEQ injected Hydrogen Releasing Compound (HRC) into the shallow groundwater to accelerate the natural biodegradation of the PCE. Monitoring over the next couple of years showed that the HRC was successful in stimulating degradation of the PCE. DEQ formally notified the site owners and operators in December 2001 that no further cleanup of the site was necessary.

Environmental Interest/Information System:
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

NARR Comments: This unregulated landfill was located in a seasonal lake basin and probably operated between 1950 and 1970, when it was covered by a 7 to 8-foot layer of clean fill. An ARCO facility that opened in 1971 at the eastern edge of the former landfill initiated an investigation in 1989 that showed gasoline contamination in groundwater. Borings also revealed a layer of landfill debris beneath clean fill. DEQ's LUST program (file #26-89-0149) requested a Corrective Action Plan from ARCO, leading to pump-and-treat remediation that began operating 8/90. Groundwater samples from eight monitoring wells contained dissolved metals, which are most likely a result of leachate percolating through unknown solid wastes in the unsaturated zone. Because of system fouling from these metals, the treatment program was shut down in May 1991.

NARR Comments: In June 1993, ARCO concluded that it was not possible to remediate benzene in groundwater without first removing dissolved metals. ARCO maintained that it had no responsibility for the metals. The LUST section may continue to require regular monitoring as a part of <quot>conditional closure.<quot> Potential pathways of exposure appear limited to groundwater and surface water. Because more information is needed about the landfill and its levels of contamination, Site Assessment recommends that affected property owners characterize contamination in and below the former landfill. Otherwise, a PA should be completed to investigate the site's history and to evaluate potential exposure pathways, under a low priority. Confined space methane testing was performed by PBS for the Hayden's Corner property. The only significant methane was found at two bathroom floor drains where the likely source was sewer gas. Three

HAYDEN ISLAND LANDFILL (Continued) **S103842510**

soil gas samples were collected from borings around the former ARCO site as part of the investigation of the Hayden's Corner property (ECSI #5711). Methane at 2% was found near the former waste oil but this could have been from residual petroleum contamination. Other samples showed only trace methane.

NARR Comments: [April 2017] This unregulated landfill was located in a seasonal lake basin and probably operated between 1950 and 1970, when it was covered by a 7 to 8-foot layer of clean fill. An ARCO facility that opened in 1971 at the eastern edge of the former landfill initiated an investigation in 1989 that showed gasoline contamination in groundwater. High concentrations of metals were also found. Borings revealed a layer of landfill debris beneath clean fill. The Hayden's Corner property (former ARCO site) was split off from the greater landfill site with a separate ECSI number (#5711). Another site was investigated in the Hayden Island Landfill area in 2016/17 (1445 and 1463 N. Hayden Island Drive). These properties' recent use was commercial, and not expected to lead to contamination. Groundwater below the properties is contaminated with TPH and metals, particularly arsenic, barium, lead, silver, and mercury.

NARR Comments: Methane and other atmospheric gases were measured in confined spaces inside the site buildings using a handheld meter in May 2011. Methane at levels from 1.5 to 5.5% was detected at the drains of two restrooms. This could be related to sewer gas from leaking drain traps. Little or no methane was detected in any other confined space locations within the buildings. In May 2012 three borings were arrayed around the property and one included the location of a former leaking waste oil tank from the prior gas station. Borings were sampled for methane using a handheld meter as well as summa canister sampling. VOCs samples were also collected using a summa. The maximum methane detection was around 2% in one hole (near the former waste oil tank) and near zero in other holes. Various VOCs (largely associated with petroleum) were found at generally low concentrations. No VOCs were found at concentrations greater than commercial risk-based concentrations. In July 2012 a plumber was hired by site owner to inspect and correct any problems with the bathroom drains/traps. No Further Action determination in August 2012. The determination applies only to the immediate Hayden's Corner site and not to the greater Hayden Island Landfill (ECSI #1559).

NARR Comments: An ARCO service station that operated on the property starting in 1971 initiated an investigation in 1989 that showed gasoline contamination in groundwater. Borings also revealed a layer of landfill debris beneath clean fill. The property is apparently located within the footprint of the former Hayden Island Landfill, an unregulated landfill that was located in a seasonal lake basin and probably operated between 1950 and 1970, when it was covered by a 7 to 8-foot layer of clean fill. DEQ's LUST program (file #26-89-0149) requested a Corrective Action Plan from ARCO, leading to pump-and-treat remediation that began operating 8/90. Groundwater samples from eight monitoring wells contained dissolved metals, which are most likely a result of landfill leachate percolating through unknown solid wastes in the unsaturated zone. Because of system fouling from these metals, the treatment program was shut down in May 1991. The ARCO station recieved a No Further Action determination in 1998 with the exception that the determination did not apply to other contaminants found at the site related to the greater Hayden Island Landfill.

Decode for NarcdID: General Site Description
NARR Comments: The site is just north of the center of Hayden Island in the Columbia River. The topography is flat and the elevation is approximately 20 feet above of sea level. The main channel of the Columbia River is just over 500 feet north of the site. Subsurface material encountered below asphalt and base gravel was medium-grained sand. At depths as little as 5 feet below ground surface (bgs) fill material consisting of paper, glass, wood, brick, plastic and metal, was encountered and found at depths up to 18 feet bgs.

NARR Comments: (November 2016 RKW) Phase II investigation including sampling of soil and shallow groundwter. Minor diesel and oil contamination was found in soil on the 1445 lot. Groundwater below the site contains widespread petroleum, metals (arsenic, barium, cadmium, lead, silver, and mercury), minor VOCs and PAHs. Follow-up investigation for methane (landfill gas) was undertaken in January 2017 using handheld Landtec instrument. Samples from two boring on each property and from interior confined spaces in the 1463 building. No significant levels of methane were detected. NFAs for both properties were dated April 4, 2017.

NARR Comments: This site, the location of a former US Bank branch (since demolished) is situated on top of the abandoned Hayden Island Landfill (ECSI #1559). The site is currently owned by Umatilla, Inc. Belmar Properties, the owners of an adjacent property, are proposing to purchase the site. Belmar has applied to DEQ's Voluntary Cleanup Program to obtain a No Further Action determination for the site. These properties recent landuse was commercial and not expected to lead to contamination. Groundwater below the properties is contaminated with TPH and metals, particularly arsenic, barium, lead, silver, and mercury. Groundwater contaminatinon is thought to be associated with the former landfill.

Narrative:
NARR ID: 5743043
NARR Code: Contamination
Created By: JWAGGY
Created Date: 03/02/2003
Updated By: SFORTUN
Updated Date: 09/11/2009
Decode for NarcdID: Contamination
NARR Comments: (2/24/03 SMF/SAP) DEQ received four pollution complaints, (between 1991 - 1999) alleging that ongoing activities at the Former Schooner Creek Boat Works site were contaminating the Columbia River and nearby properties. Two other pollution complaints, received in May 1990 and March 1999, described oil sheens and petroleum odors from unknown sources on the Columbia River near the Former Schooner Creek Boat Works. Although the release characteristics were similar to those described in pollution complaints against the boat works site, there is no information to indicate that the source(s) of these petroleum releases were ever determined. A number of other potential sources are found in the immediate vicinity of the Former Schooner Creek Boat Works site. See DEQ January 24, 2003, Strategy Recommendation for specific pollution complaint history. (8/11/03 AC/C&ER) Site tested for VOCs, petroleum hydrocarbons and metals. Diesel, oil and lead were detected at concentrations above background. Sediment and groundwater have not been tested. (9/10/09;smf) EPA completed an SI of the site in August 2009. Site soils and Columbia River (North Portland Harbor / Oregon Slough)

1610 NORTH PIER 99 ST. (Continued) **S106655861**

sediments were sampled and analyzed for metals, SVOCs, organo-chlorine pesticides, PCBs, and tributyltin in October 2008. EPA's data indicates that site soils are contaminated with metals, PAHs, PCBs, DDT, phthalates, and tributyltin at concentrations that represent a potential risk to on-site workers, to the adjoining residents, to on-site plants and wildlife, and to nearby aquatic life. Sediments in the site's boat dock area are contaminated with metals, PAHs, and DDT at concentrations that represent potential toxic and bioaccumulative threats to aquatic life.

NARR Comments: The subject site is an approximate 1 acre parcel in North Portland, along the western edge of the Interstate Highway (I-5) bridge over North Portland Harbor. The site has been the location of boat building, repair, and machine shop activities since about 1937. Schooner Creek Boat Works, a boat building and repair business, began operating at the site in 1989, but relocated its operations about 1 mile northwest, to the north shore of Hayden Island, In July 2000. However, it continued to lease the site through December 2001. DEQ s Northwest Region (NWR) Hazardous Waste program first referred the site to Site Assessment in April 2002 for investigation of a pollution complaint. Mermaid Marine had recently begun leasing the site, but became involved in an extensive cleanup of wastes and debris that Schooner Creek Boat Works allegedly left behind when they vacated the site.

NARR Comments: Existing information suggests that site soils and nearby Columbia River Sediments may be contaminated with copper oxide, paint thinner, and heavier petroleum constituents such as polynuclear aromatic hydrocarbons (PAHs). Considering the types of activities conducted at the site, and the length of time that these activities were

1610 NORTH PIER 99 ST. (Continued) **S106655861**

conducted, other potential site contaminants might include: Organotins, other potential toxic metals (such as arsenic, lead, cadmium, chromium, mercury, and zinc), volatile organic contaminants (VOCs), semi-volatile organic contaminants (SVOCs), and possibly polychlorinated biphenyls (PCBs). (9/11/09; smf) A 2008/2009 EPA SI found that site soils are contaminated with metals, PAHs, phthalates, PCBs, DDT, and tributyltin at concentrations that represent potential risks to on-site workers, adjoining residents, on-site plants and wildlife, and nearby aquatic life. Sediments in the site's boat dock area are contaminated with metals, PAHs, and DDT at concentrations that represent potential toxic and bioaccumulative risks to aquatic life.

NARR Comments: (Also known as 1601 N Marine Dr.; formerly 1523 N Marine Dr.) Located on the south shore of Oregon Slough (the Columbia River, North Portland Harbor), south of Hayden Island, beneath and west of the southbound lane of Interstate Highway 5. Site addresses: 1) 1610 N Pier 99 Street, Portland, OR, 97217 (which the Post Office doesn't recognize, hence no 4 digit tail code); 2) 1601 N Marine Drive, Portland, OR 97217-7801; 3) 1523 N Marine Drive, Portland, OR 97217-7801 (neither address 2 nor 3 is recognized by the Tax Office, but are recognized as separate addresses by the US Post Office). The 1601 address appears on a small building immediately west of the site of concern.

NARR Comments: (9/10/09;smf) EPA completed an SI of the site in August 2009. Site soils and Columbia River (North Portland Harbor / Oregon Slough) sediments were sampled and analyzed for metals, SVOCs, organo-chlorine pesticides, PCBs, and tributyltin in October 2008. EPA's data indicates that site soils are contaminated with metals, PAHs, PCBs, DDT, phthalates, and tributyltin at concentrations that represent a potential risk to on-site workers, to the adjoining residents, to on-site plants and wildlife, and to nearby aquatic life. Sediments in the site's boat dock area are contaminated with metals, PAHs, and DDT at concentrations that represent potential toxic and bioaccumulative threats to aquatic life.

Updated Date: 11/27/2013
Decode for NarcdID: Pathways & Other Hazards
NARR Comments: The site is located in a narrow, isolated strip of industrial properties on the south bank of North Portland Harbor, along North Marine Drive. The area between North Portland Harbor on the north, I-5 on the east, Columbia Slough on the south, and a Burlington Northern Santa Fe Railroad right-of-way on the west comprises Peninsula Drainage District #1. The entire site lies within the Columbia River s 100-year flow zone, so flood waters could mobilize any surface contamination at the site. The nearest residence evidently shares the same tax lot as the site. North Portland Harbor and I-5 should limit potential exposures for most upland residences, except for potential exposures at the on-site residence. There are approximately 200 houseboats moored along the north shore of the North Portland Harbor, within .5 mile of the site. It is unclear if site contaminants would significantly affect residents at the nearby houseboats. The Multnomah County Fairgrounds and Exposition Center lied southwest of the site, directly across North Marine Drive. East Delta Park, a municipal park, lies about .25 mile south-southeast of the site. The Portland International Raceway lies about .5 mile south-southwest of the site. Heron Lakes Golf Club, a municipal golf course, lies about .25 mile southwest of the site. In addition, Jantzen Beach Supercenter shopping center lies directly across North Portland Harbor from the site. In August 2001, Metro hired a consultant to advance five pushprobe soil borings 100 to 200 feet

1610 NORTH PIER 99 ST. (Continued) **S106655861**

south of the site. These borings encountered groundwater at 7 to 16 feet below ground surface (bgs), suggesting that any potential contaminants at the boat yard site could represent a threat to nearby drinking water wells, and that potential shallow groundwater contamination could represent a threat to aquatic life in North Portland Harbor. Wetlands areas directly to the south of the site attract populations of sensitive wildlife species to the area. A major heronry is also located about 1 mile from the site. Site contaminants could represent a threat to sensitive wildlife and plant species within the drainage district. Along the 1610 North Pier 99 Street site, the Columbia River provides migratory and rearing habitat for twelve sensitive anadromous fish species.

Decode for NarcdID: Remedial Action
NARR Comments: (2/24/03 SMF/SAP) The site has a lengthy operational history, and DEQ has received multiple complaints alleging releases or improper handling of hazardous substances at the site. A high priority is assigned for conducting an Expanded Preliminary Assessment (XPA) of the site. Site soils, groundwater, and nearby Columbia River sediments should be sampled for toxic metals, VOCs, SVOCs, and PCBs to determine if past activities may have significantly contaminated the site and surrounding environment. (8/21/03 AC/C&ER) A preliminary investigation confirms the presence of petroleum hydrocarbons and metals in site soils. Site sediment must still be evaluated. [10/21/13 SA/SAM] A Site inspection Report was prepared in 2009. Sample results for the sediment samples collected from below the Pier 99 docks indicated the presence of one TAL metal at a significant concentration with respect to background concentration. No organotins, pesticides/PCBs, SVOCs were detected at significant concentrations with respect to background concentrations. Site soils contained sources of CERCLA hazardous substances. EPA completed an EE/CA on June 13, 2013. The site was divided up into 4 operable units: - Operable Unit 1 Bank Area - Operable Unit 2 Eastern Solid Waste Storage Area (Eastern Unimproved Area) - Operable Unit 3 Gravel Filter Area and Upland Boat Maintenance Repair Area - Operable Unit 4 Former Crane Area Based on the results of this EE/CA, the recommended removal actions for the Site are OU3 Gravel Filter Removal and stormwater Pipe Removal and OU1 Bank Stabilization(which included some debris removal and sand blast grit removal). The OU 2 elevated area coresponded with the OU3 discharge area and is addressed in this action. An OU 4 data gap investigation indicate that removal is not needed for the former crane area soil or groundwater at the site. Onsite work by EPA started Sept 1, 2013. For more details, visit http://www.epaosc.org/site/site_profile.aspx?site_id=8650 By 10/10/2013 all initial removal and restoration activities at the Pier 99 site were completed. [6/26/14 SA/SAM] Additonal removal at two locations(REX-16 and RAC-2) will occur in June 2014. EPA will perform a one-year monitoring and maintenance review. [10/22/14 SA/SAM]Additional removal was completed at the burn area on June 30 and July 2, 2014. As much as 3.5 feet of ashy soil was removed along a 15 foot length at the base of the slope. Because a significant

1610 NORTH PIER 99 ST. (Continued) **S106655861**

portion of the bank was exposed during the excavation, EPA agreed that further excavation could jeopardize the stability of the bank, and excavation could be stopped. The area at the toe of the slope was reinforced with Envirlok vegetated sand bags installed at approximately a 1:1 slope. The two foot soil cover requirement was met at the toe of the bank, but could not be met further up the bank on the steep slope. Up the slope only 18-20inches of soil cover was placed. The EPA will require Post-Removal Site Controls, including monthly inspections, prohibit any activity that damages or disturbs the integrity of the cover and restoring the integrity of the cover if it is jeopardized in any way. [5/19/20 SA/SAM] The 2015 Monitoring report(year 2), indicated bank conditions were stable; grass covered the bank and no ground distrubances occured. 2016 and 2020 monitoring reports demonstrated the bank continues to be covered with grass. Based on review of the previous removal action and project files, the DEQ Cleanup program is concerned that sediment adjacent to the North Pier 99 site has not been adequately characterized and may be contaminated above levels of concern to human health and the environment. In particular, there is no data for Columbia River sediments between the bank and the area sampled near the docks.

NARR Comments: The nearest residence evidently shares the same tax lot as the site. North Portland Harbor and I-5 should limit potential exposures for most upland residences, except for potential exposures at the on-site residence. There are approximately 200 houseboats moored along the north shore of the North Portland Harbor, within 0.5 mile of the site. Nearly 80% of these are located either directly across the harbor, or downstream from the boat works site. The Multnomah County Fairgrounds and Exposition Center lies southwest of the site, directly across North Marine Drive. East Delta Park, a municipal park, lies about 0.25 mile south-southeast of the site. The Portland International Raceway lies about .5 mile south-southwest of the site. Heron Lakes Golf Club, a municipal golf course, lies about 0.25 mile southwest of the site. In addition, the Jantzen Beach Supercenter (shopping center) lies directly across North Portland Harbor from the site. In August 2001, Metro hired a consultant to advance five pushprobe soil borings 100 to 200 feet south of the site. These borings encountered groundwater at 7 to 16 feet below ground surface (bgs), suggesting that any potential contaminants at the boat yard site could represent a threat to nearby drinking water wells, and that potential shallow groundwater contamination could represent a threat to aquatic life in North Portland Harbor. City records indicate that the on-site residence is serviced by the Portland municipal water supply. The city also has supplemental supply wells along the Columbia River south shore, 6 to 11 miles east of the site, as well as four supplemental supply wells on Hayden Island. Two of the Hayden Island wells lie about 1,200 feet north of the site, directly across North Portland Harbor. The nearest municipal water supply wells lie across North Portland Harbor, a 1,000-foot-wide, 20 30 foot deep channel of the Columbia River, and may be about 225 250

1610 NORTH PIER 99 ST. (Continued) **S106655861**

feet deep, so it remains unclear if site contaminants represent a significant threat to the city drinking water supply. OWRD also has records of three community or group-domestic wells, one public water supply well, and five domestic wells within 1.25 miles of the site.

Updated By: CHARMAN
Updated Date: 01/13/2010
Decode for NarcdID: Contamination
NARR Comments: Stormwater quality data collected twice since June 2002 indicate that the facility meets DEQ's stormwater benchmark values, although concentrations of copper and zinc in site stormwater exceeded the National Recommended Water Quality Criteria's respective Freshwater Critical Maximum Concentrations, DEQ's respective Freshwater Acute Toxicity Criteria, and DEQ's Level II Ecological Risk Assessment Screening Benchmark Values for freshwater aquatic life. Between 1990 and 2001, DEQ received nine Pollution Complaints and six Spill Reports associated with potential hazardous substance releases at the Diversified Marine facility, or petroleum sheens present on the river directly adjacent to the facility. Five of the Pollution Complaints and one of the Spill Reports involved fugitive dust emissions associated with sandblasting operations at the site. There is concern that sandblasting of boat hulls at the site could have released paint chips and toxic metals at concentrations that could represent a threat to the river s aquatic life, or otherwise accumulated in the river s sediments. Two other Spill Reports and another Pollution Complaint involved petroleum sheens of unknown origin on North Portland Harbor adjacent to the site. One additional 1998 Spill Report and simultaneous Pollution Complaint were associated with a petroleum release at the site that drained across N Marine Drive onto state highway property located 200 yards from the site. Diversified Marine s record of Pollution Complaints and Spill Reports suggests that on-site activities could have contaminated site soils and nearby Columbia River sediments with any of a variety of boat building, maintenance, and repair related contaminants, including toxic metals and paint chips containing toxic metals such as copper oxide, organotins, lead, cadmium, chromium, mercury, and zinc; petroleum constituents such as BTEX (benzene, toluene, ethylbenzene, toluene) and polynuclear aromatic hydrocarbons (PAHs); and other potential organic contaminants such as, phthalates, pentachlorophenol, chlorinated solvents, and possibly polychlorinated biphenyls (PCBs). (1/13/10 CWH/CU) The march 2009 Preliminary Assessment produced by Ecology and Environment for EPA Region 10 noted that, based on comparison to immediate upstream sediments, that the sediment sample (CR05SD) collected just downstream/adjacent to DMI <quot>indicates that DMI is contributing to copper, lead, and zinc contamination in the river.<quot> DEQ feels it is important to note that with the exception of copper, none of the detected metals, while elevated locally, exceed DEQ freshwater sediment SLVs. It is also important to note that the CR05SD sample was collected at a location that was not near where DMI stormwater runoff or working areas might be expected to be impacted.Similarly, PAH sediment data for CR05SD shows locally elevated concentrations of PAHs, but none above DEQ SLVs. PCBs were

S S LEADER AT DIVERSIFIED MARINE (Continued) **S108659504**

non-detect for CR05SD, but detection limits (41-45 ppb) were above DEQ SLVs. To summarize - the CR05SD sediment sample collected on behalf of EPA in October 2008 does indicate releases are likely to have occurred from the DMI site, but there were no samples collected in locations that would be suspected as release points.

NARR Comments: The subject site is an approximate 0.8 acre parcel in North Portland, on the south shore of North Portland Harbor, about 500 feet west of the Interstate Highway 5 (I-5) bridge over North Portland Harbor. Work is performed within an onshore building, on vessels moored at the site, and in a 200-ton floating dry dock at the site. North Marine Drive and North Pier 99 Street are located along the site s southern boundary. A paved parking lot for the Multnomah County Fairgrounds and Exposition Center lies directly across North Marine Drive, 100 to 300 feet south and southwest of the site. Hayden Island is across North Portland Harbor, about 1,000 feet north of the site.

Decode for NarcdID: Project Issues Summary
NARR Comments: Although DEQ has records of known and suspected hazardous substance releases at the site, there is no indication that environmental sampling has ever been conducted at the site. Because of an abundance of nearby receptors (nearby wetlands, community drinking water wells, Critical Habitat for Threatened and Endangered fish), a high priority has been assigned to conducting an expanded Preliminary Assessment of the site.

Decode for NarcdID: Site Location
NARR Comments: Street address has also been listed as 1801 - 1809 N Pier 99 Street, in tax records. The site is bounded on the north by North Portland Harbor (also called Oregon Slough; a channel of the Columbia River located south of Hayden Island), and on the east by the Former Schooner Creek Boat Works site (ECSI #3526). Hayden Island lies about 1,000 feet north of the site. The Interstate Highway 5 bridge over North Portland Harbor is located about 500 feet east of the site.

NARR Comments: Fugitive dust emissions associated with sandblasting of boat hulls at the site could have released paint chips and toxic metals at concentrations that could represent a threat to the river s aquatic life, or otherwise accumulated in the river s sediments. Petroleum sheens of unknown origin have been reported on North Portland Harbor adjacent to the site. A historic petroleum release at the site was also reported to have drained across N Marine Drive onto state highway property located 200 yards from the site. Since Diversified

S S LEADER AT DIVERSIFIED MARINE (Continued) **S108659504**

Marine site activities include machine shop activities, bilge removal, and boat and equipment refueling activities, it may not be unreasonable to suspect that some of the petroleum contamination observed in the river channel could have originated from on-site activities. Such releases could represent a threat to the river s aquatic life, or otherwise have accumulated in river sediments.

NARR Comments: A Federal Screening of the site was completed on July 3, 2003. The Strategy Recommendation for that screening recommended that a high priority be assigned to conducting an Expanded Preliminary Assessment (XPA) of the site. There was insufficient information at that time to propose that the site be recommended for addition the DEQ's confirmed Release List (CRL) or Inventory of sites requiring further investigation or cleanup.

NARR Comments: There is concern that site activities may have contributed contaminants to on-site soils and shallow groundwater, as well as in Columbia River surface water and sediments. Soil contaminants could

S S LEADER AT DIVERSIFIED MARINE (Continued) **S108659504**

represent a health threat for on-site workers or utility trench workers. North Portland Harbor (the Columbia River; Oregon Slough) forms the site's northern boundary; the entire site lies within the river's 100-year flood zone. The Columbia River is migratory and rearing habitat for eleven varieties of Threatened or Endangered salmonids. The Columbia Slough lies about 1 mile south of the site. The area between North Portland Harbor on the north, I-5 on the east, Columbia Slough on the south, and a Burlington Northern Santa Fe Railroad right-of-way on the west comprises Peninsula Drainage District No. 1. Most of the drainage district is publicly owned wetlands. Wetlands areas directly south of the site attract populations of sensitive wildlife species to the area. Metro has designated much of Peninsula Drainage District No. 1 as important wetlands or wildlife Habitats of Concern, or regionally significant riparian corridors. Migratory waterfowl and songbirds have been observed within the drainage district, as well as a variety of other sensitive and Threatened and Endangered wildlife species. Sensitive and Threatened plant species may also be present within the wetlands. Site contaminants could represent a threat to sensitive plant and wildlife species within the wetlands. The nearest residence is located on a tax lot at the site's eastern boundary. Other residences are located across I-5, about 0.3 mile east-southeast of the site, and across North Portland Harbor, about 0.4 mile northeast and 0.5 mile north-northwest of the site. Oregon Water Resources Department (OWRD) has records for three community or group-domestic wells, one Public Water Supply well, and five domestic wells within 1.25 mile of the site. The nearest is a 261 foot well installed at Kernan Village in 1958 to supply drinking water for a store, service station, apartment building, and trailer park. The well is believed to be located about 600- to 900 feet south-southwest of the site. Kernan Village no longer exists; its well may now be located either within the current I-5 / North Marine Drive cloverleaf interchange, or within the county fairgrounds paved parking area. It seems unlikely that the well is still being used or even still exists, although OWRD has no record to indicate that the well was formally decommissioned. The City of Portland has supplemental Municipal Supply Wells along the Columbia River south shore, 6- to 11 miles east of the site, as well as four supplemental supply wells on Hayden Island. Two of the Hayden Island wells lie about 1,200 feet north of the site, directly across North Portland Harbor. These wells lie across North Portland Harbor, a 1,000 foot wide, 20- to 30 foot deep branch of the Columbia River, and may be about 225- to 250 feet deep. Several nearby public facilities draw substantial numbers of people to the area. The Multnomah County Fairgrounds and Exposition Center lie southwest of the site, directly across North Marine Drive. East Delta (municipal) Park lies about 0.25 mile south-southeast of the site, across I-5. The Portland International Raceway lies about 0.5 mile south-southwest of the site. Heron Lakes (public) Golf Club lies about 0.25 mile southwest of the site. Jantzen Beach Supercenter shopping center lies directly across North Portland Harbor from the site.

Decode for NarcdID: Remedial Action
NARR Comments: (10/19/04 AC/ER&CU) Site status on hold. Responsible party (RP) unwilling to join the Voluntary Cleanup Program or perform an Expanded Preliminary Assessment (XPA). Principle concern is that potential site contaminants in sediments could pose a threat to Columbia River ecological receptors. Insufficient evidence to require sediment sampling in the Columbia River. Project on hold pending available orphan funds or willing responsible party. [3/20/15 SA/SAM] An Abbriviated Preliminary Assessment was finalized by EPA through its contractor E&E on May 14, 2009. EPA also performed a SI in 2009 at a neighboring property(ECSI#3526 1610 N Pier 99) downstream samples indicates releases are likely to have occurred from the DMI site, but there were no samples collected in locations that would be suspected as release points for this facility. No Further Remedial Action Planned under Federal program was designated in 2010. A Site Investigation is recommended under state supervision.

NARR Comments: Also known as Portmarco, Inc., and Whitecap Cove, Inc. (both active entities, same president, same secretary, same business address, same mailing address) (different registered agent for Whitecap Cove). The company has conducted tug boat and barge building, repair, sandblasting, painting, machine shop, bilge removal, and boat and equipment refueling activities at the site since at least 1990 - possibly as early as 1986. Between 1990 and 2001, DEQ received five Pollution Complaints and one Spill Report about the facility's sandblasting and painting operations, and releases of paint chips to the river. Additional complaints have been received for petroleum flowing southward, off-site from the site, and for petroleum sheens on the river from unknown sources near the facility.

NARR Code: Contamination
Created By: CHARMAN
Created Date: 07/29/2004
Updated By: CHARMAN
Updated Date: 07/29/2004
Decode for NarcdID: Contamination
NARR Comments: Area around site has been extensively investigated and the past activity has not been evaluated as part of DEQ Cleanup program. As part of Columbia Slough Area-wide Discovery Project this site was noted due to the presense of soil borings found in Water Resources Department well log database. Site runoff or subsurface contamination could reach part of Columbia Slough or location wetlands via stormwater drainage system.

NARR Comments: [12/23/2004, BP] As a part of complaint investigation, DEQ has collected three hand-augured soil samples to a depth of 4 feet near the reported spill area. A field visit and lab analyses indicate surface soil contamination with heavy oil-range hydrocarbons at uo to 7,810 ppm at a depth of 1 foot below ground surface, decreasing to

WHITE MARINE SERVICES, INC. (Continued) **S102521499**

247 ppm at a depth of 4 feet.

NARR Comments: [12/23/2004, BP] The neighboring Oregon Waste Management has two off-site monitoring wells on the Marina property as a part of their remedial system. The access to these wells has been, and still is, in litigation. A contractor with Waste Management first observed and reported the spilled drum.

NARR Comments: Site is suspected of petroleum releases to the subsurface. As part of Columbia Slough Area-wide Discovery (CSD) Project this site was noted due to the presense of soil borings found in Water Resources Department well log database. Site runoff or subsurface contamination could reach part of Columbia Slough via stormwater piping system. Site has received cleanup of USTs via DEQ UST program (26-92-0348) cited as ending in 1997. However, CSD project found investigation on the site initiated in 2000, in areas away from the main building, to the west.

Updated By: Not reported
Updated Date: 12/17/2002
Decode for NarcdID: Contamination
NARR Comments: (11/20/90 MM) This site includes multiple businesses. Low levels of hazardous substances were identified in soils and groundwater on-site during an environmental audit for a proposed transfer station. One business on-site has free petroleum product floating on groundwater and high concentrations of dissolved volatile organics in groundwater. DEQ's UST program is working with Oregon Waste Systems, Inc. and the truck-stop operator to remediate petroleum problems on-site. The other contaminants present at the site need to be evaluated to determine the need for further assessment or corrective action.

Decode for NarcdID: Hazardous Substance/Waste Types
NARR Comments: Gasoline, diesel, 1,2-dichlorobenzene, 1,1-dichloroethane, PCBs, vinyl chloride, methyl isobutyl ketone, perchloroethene, total xylenes. (11/14/97 LSK) Soil contamination was associated with primarily 5 areas of the site: Rod's Truck Repair, The Merit Truck Stop, areas adjacent to the Peninsula Terminal Railroad, Harbor Oil and Star Oil. At Rod's Truck Repair and Merit Truck Stop, BTEX contamination likely from leaking USTs. There is some floating product in shallow groundwater beneath the Merit Truck Stop site. Petroleum hydrocarbons were found in shallow soils at Star Oil (100 to 2,000 ppm) and Farmers (200 to 5,000 ppm). Harbor Oil is described in a separate file (ECSI#24).

NARR Comments: (11/20/90 MM) Site is located in a light industrial area, and consists of a stockyard, two truck service stations, a card-lock station, a restaurant, railroad tracks and engine barns, and wetlands. Other than workers, the population immediately around the site is low. Land to the south is vacant, to the east and west is industrial. Nearest dense population is one mile south and north across the Slough. The site is on flat land and in the floodplain of the Columbia River. Soils are fine-grained alluvium intermixed with fill consisting of crushed rock, and clayey silt - gravel. Threat or potential threat to surface water - sediments from storm sewer outfalls that enter the Columbia River contained methyl isobutyl ketone (MIBK), 1,2-, 1,3-, and 1,4-dichlorobenzene, Cr, Cd, Zn, Pb,

OREGON WASTE SYSTEMS - PROPOSED TRANSFER STATION (Continued) **S103303248**

Cu, and Ni above background levels. Depth to groundwater varies from ground surface to 15 feet across the site; its uses are unknown. (11/14/97 LSK) The site is located within 1,000 ft. of Force Lake to the southeast and is adjacent to the Oregon Slough to the north. The wetlands associated with Force Lake support great blue heron nesting areas, and the City of Portland considers this wetlands area, as well as the lake, a sensitive environment. Stormwater runoff from some of the site is carried north towards the Oregon Slough by storm drains that run beneath Marine Dr. Some runoff flows south towards Force Lake and area wetlands. Force Lake drains via the North Ditch, which is part of Peninsula Drainage District No. 1. Water in the ditch is routed to the District's main pumping station southwest of the site, where it is pumped into the Columbia Slough. Shallow groundwater north of the railroad flows radially outward in all directions, and south of the railroad flows to Force Lake and the wetlands area. Deep and intermediate groundwater flow is both to the northwest towards the Oregon Slough and Columbia River and to the south away from the river, depending upon the season and river level changes.

STOCKYARDS COMMERCE CENTER (Continued) **S111766402**

Updated By: SMILLER
Updated Date: 04/08/2013
Decode for NarcdID: Remedial Action
NARR Comments: [4/8/13 SA/SAM] Site Investigations and some cleanup has occured on site since approximately 1988; generally focusing on underground storage tank removal and remediation. DEQ Site Assessment recommends the following activities be performed at the site to help clarify site risk and priority for further action. Contaminated soil remained under the Rod s Truck Stop building with issuance of underground storage tank program NFA in 1993. A review of the archived UST file and possible investigation should be completed to determine the risk of contaminated soils for vapor intrusion for petroleum. PCE/TCE samples were collected from shallow groundwater in 1991. Confirmation of PCE/TCE concentrations is recommended to ensure vapor intrusion occupational risk based concentrations are currently met. Potential sources of PCE/TCE in shallow groundwater include remaining soils at Rod s Truck Service and potential spills from Peninsula Railroad Terminal to the south of the Stockyard property. Current site stormwater drainage should be diagramed and determine discharge points for the property. Columbia Slough Sediments- sediment sampling near current and historic stormwater outfalls should be tested for metals, PCBs, PAHs and VOCs. Sediment results should be compared to the average Lower Columbia River concentrations to determine if the sediments are either near average conditions or significantly above average Lower Columbia River sediment conditions. If sediment concentrations are above average, a source control evaluation may need to be performed.

Created Date: 04/12/2012
Updated By: SFORTUN
Updated Date: 04/12/2012
Decode for NarcdID: Health Threats
NARR Comments: Contaminants in site groundwater and stormwater could represent a potential threat to on-site workers, aquatic life in the Columbia River, wildlife and aquatic life in nearby wetlands, and/or other users of groundwater and surface water in the immediate vicinity of the site. Water quality in the Columbia River is already impaired. The Columbia River is used for recreational and commercial fishing, as well as other recreational purposes. It also provides Critical Habitat for threatened and endangered fish species. The river and nearby wetlands also provide important habitat for other sensitive species such as protected migratory bird species, sensitive amphibian, reptile, and plant species, and food resources for sensitive aquatic and terrestrial species.

NARR Comments: [4/8/13 SA/SAM] The site was originally developed in 1908 with the construction of a small hotel and a livestock Exchange Building. The

STOCKYARDS COMMERCE CENTER (Continued) **S111766402**

Portland Union Stockyards was built in about 1910. The stockyards ceased operations in 1980. Site buildings also included Merit USA (Texaco) Truck Stop (built in about 1952), which included two fueling stations, truck scales, and a cafT. Rod s Truck Repair, a commercial gas station and repair shop began operating in the 1980 s. The stockyards were demolished in 1996 and redeveloped in approximately 1997 to its current configuration as light industry and warehousing.

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: [5/22/13 SAM/SA] Soil contact to occupational workers, construction and excavation workers could be a potential pathway of concern. Stormwater and soils could be deposited in nearby wetlands at concentrations that could pose an ecological concern.

Decode for NarcdID: Remedial Action
NARR Comments: [5/22/13 SAM/SA] Prior investigations in the late 1980s/early 1990s found metals, TPH and VOC contamination generally below human health risk based concentrations in site soils and groundwater(except for TCE/PCE which is found in groundwater area wide), but elevated from background concentrations. Sources of the elevated soils are unknown and the true nature and extent of contamination has not been adequately determined. Several spills have occurred on site since 1994 with no record of cleanup provided to DEQ. DEQ Site Assessment recommends the following activities be performed at the site to help clarify site risk and priority for further action. Based on the results of a DEQ site assessment prioritization scoring, the priority for further action is medium. Soils o Prior characterization of waste disposal piles (potential dump area found elevated concentrations of metals. SVOCs were never analyzed, even though PID readings were elevated. SVOCs and metals should be examined further in the waste disposal pile area. o Characterize the full magnitude, nature, and extent of contamination in subsurface soils in the backfilled retention pond. Prior work showed elevated concentrations of petroleum constituents. o Determine if spills were adequately cleaned up; particularly the 1994 diesel spill, 1997 unknown solvent spill and 2005 CCA spill. o Characterize areas where any historic Harbor Oil releases that may have migrated to the site, particularly if a change of land use is considered. Stormwater drainage for the site should be mapped to determine where runoff is directed after entry to the vegetated strip in center of the parking area s southern boundary. If stormwater is directed towards wetlands, additional sediment characterization and source control evaluation may be needed. Groundwater- the southern extent of PCE/TCE groundwater contamination present on the adjacent northern properties (Stockyards Commerce Center #5695) should be defined in the Bulk Transport area.

NARR Comments: Contaminants in site soils groundwater could represent a potential threat to aquatic life in the Columbia River, wildlife and aquatic life in nearby wetlands, and/or other users of groundwater and surface water in the immediate vicinity of the site. Water quality in the Columbia River is already impaired. The Columbia River is used for recreational and commercial fishing, as well as other recreational purposes. It also provides Critical Habitat for threatened and endangered fish species. The river and nearby wetlands also provide important habitat for other sensitive species such as protected migratory bird species, sensitive amphibian, reptile, and plant species, and food resources for sensitive aquatic and terrestrial species.

NARR Comments: [5/22/13 SAM/SA] The property was developed in the 1940 s as an on-site fertilizer yard that received manure produced at the nearby stockyards. J.W. Fertilizer, a commercial fertilizer and soil additive facility was operating on the eastern portion of the site during the 1970 s until 1990. Since about 1995, Bulk Transportation / DTI a chemical transport company uses the site as a satellite trucking terminal. Liquids, gases, chemicals, and hazardous materials are unloaded from rail cars and trucked to their final destination. Other services include product mixing, liquid bulk storage, tank containers, and warehousing. The western portion of the site is an undeveloped 6acre wetland

NARR ID: 5733859
NARR Code: Contamination
Created By: Not reported
Created Date: 12/17/2002
Updated By: GWISTAR
Updated Date: 06/27/2003
Decode for NarcdID: Contamination
NARR Comments: (10/9/1996 DJH/VCS) Site owner Peninsula Terminal Company contacted DEQ in October 1993 regarding their intent to participate in the Voluntary Cleanup Program, and signed a Letter Agreement with DEQ in March 1994 requesting that DEQ review an investigative report prepared for the site by Braun Intertec. There appear to have been a number of small releases of chemicals during off-loading activities at the site. An underground storage tank formerly located near the Locomotive House, and possibly used to store waste oil, was later removed (exact date unknown). Waste oil in the past has been released from the Locomotive House via a drain line.

Updated By: Not reported
Updated Date: 12/17/2002
Decode for NarcdID: Pathways & Other Hazards
NARR Comments: The site is located in an industrial area of north Portland. However, wetlands and a golf course are located a short distance south of the site. Shallow groundwater beneath the site contains low levels of chlorinated solvents, the source of which appears to be off-site. Shallow groundwater is not known to be used for drinking. Access to the site is restricted.

Updated Date: 12/17/2002
Decode for NarcdID: Remedial Action
NARR Comments: (10/9/1996 DJH/VCS) Site owner signed Letter Agreement with DEQ's Voluntary Cleanup Program to review investigation and cleanup documents in March 1994. File review memo requesting additional soil and groundwater sampling at the site was completed in June 1994. DEQ-requested soil and groundwater sampling was completed at the site in August 1995. Based on the results of this work, additional sampling was completed in the transloading area in 1996. Contaminants detected in site soil were below industrial cleanup standards presented in OAR 340-122-045, and no significant impacts to groundwater were observed. DEQ therefore determined on 10/9/96 that no further action was required for the site under an industrial cleanup scenario.

NARR ID: 5733865
NARR Code: Health Threats
Created By: Not reported
Created Date: 12/17/2002
Updated By: Not reported
Updated Date: 12/17/2002
Decode for NarcdID: Health Threats
NARR Comments: Volatile and semi-volatile compounds released to soil at the site, but at concentrations below DEQ soil cleanup levels (OAR 340-122-045) for industrial sites. As long as the site remains in industrial use, soil contamination should pose no significant exposure risks to humans.

Decode for NarcdID: Site History
NARR Comments: The site has been used since at least the early 1900s as a train car switching yard, and for the offloading of materials including coal, cattle, and chemicals. The site is currently used mainly as a switching yard and for some offloading of chemical materials such as plastics, petroleum products, and solvents.

Decode for NarcdID: Contamination
NARR Comments: (5/29/01 MDK/SRP) Waste oil purified and recycled in a process involving screening, filtering, and heating. Oil trucks cleaned on-site generating wastewater with approximately 5% trichloroethylene (TCE). TCE was vaporized, condensed, and reused. Waste TCE, waste oil sludge stored in drums and tanks. Surface runoff may have contributed to a major fish kill in Force Lake in March 1974. Runoff collection system installed since then, consisting of an oil/water separator. Suspect past operating practices and frequent spills as potential problems. A major fire in 1979 destroyed the facility and was reported to have caused oil and other contaminants to pour across the site and into the wetlands west and south of the site, however, records for this are mostly anecdotal. The TCE used to clean out tank trucks has been found in low concentrations in surface water at the southwest (lowest) end of the site, and has entered the environment. Comprehensive sampling in 1990 showed high levels of oil in site soils and low levels of chlorinated VOCs in deep groundwater (100 ft. depth), although these same VOCs appear to be widespread in groundwater in the immediate site vicinity. Off-site sampling in 1994 showed significant oil contamination in shallow wetland soils, and this contamination is likely to have originated from past releases at the site. Sampling by EPA's contractor in 2000 on behalf of EPA Region 10 has confirmed the presence and extent of contamination originating from past site operations. (12/27/06 MDK/CU&ER) Site added to NPL in 2001. Efforts by EPA to negotiate a cleanup order is on-going (2001 - 2006).

NARR Comments: (1/27/10 MDK/CU&ER) Site investigation activities were conducted in 2007 and 2008. Draft HHRA and ERA reports were submitted to EPA and then provided to DEQ and stakeholders. Draft Remedial Investigation Report submitted. DEQ provided comments on the HHRA and ERA in November 2009, and then comments on the VG responses to the consolidated EPA comments on January 14, 2010. Risk Assessment have been revised in accordance with US EPA comments, and US EPA has responded to DEQ, Portland BES, and other stakeholder comments. Draft risk assessments are expected to be finalized in accordance with US EPA comments early 2012 and proposed plan Spring 2012.

NARR Comments: The site is located within 100 feet of Force Lake to the southwest and the Columbia River 1000 feet to the north. A drainage system of buried tiles drains the lake through the adjacent wetland marsh, west and south where it is pumped into the Columbia Slough. The wetlands associated with Force Lake support great blue heron nesting areas, and the City of Portland considers this wetlands area, as well as the lake, to be a sensitive environment. Site is now largely paved and the berm on the western edge of the property leveled off in 2011 dring site modifications

NARR Comments: (5/29/01 MDK/SRP) There is no evidence that historical releases from the Harbor Oil site were followed by any remedial actions, and recent sampling shows that significant hydrocarbon contamination remains on-site and in the wetlands area. The primary issue of concern at this site is the effect from past releases on ecologically sensitive wetlands associated with Force Lake. An RP notice letter was sent in January 2000 requesting committment to perform an RI/FS and pay DEQ oversight. The RP did not commit to RI/FS and payment of oversight, and site was referred to EPA for further site assessment. Field work for the EPA Site Inspection was conducted July 31 - August 4, 2000. A summary report was released November 2000. EPA determined that the site qualified for listing on the NPL. (6/30/03 MDK/C&ER) The draft PA/SI was released on February 2, 2003. October 2001 letter from Gov. Kitzhaber supports proposed NPL listing. (6/5/14 GMW/SAS) EPA proposed the site for the NPL in 2002. The site was listed on the NPL in 2003, and subsequent investigation and risk assessment work has been conducted under EPA oversight. In June 2014, following a notice in the Federal Register and soliciting public comment, EPA delisted Harbor Oil from the NPL.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: [June 2014] EPA declared the property a Superfund (NPL) site in 2003 at the request of DEQ, which wanted EPA to use Superfund law to bring responsible parties to the table. Harbor Oil ceased operating in 1999. In 2012, EPA s project manager for the site indicated that EPA believed the property posed no unacceptable risk to people or wildlife, despite its Superfund designation.

 On June 5, 2014, EPA removed Harbor Oil from the NPL.

Hazardous Waste Summary:

Waste Code: D007
Waste Description: Chromium

Waste Code: D008
Waste Description: Lead

Waste Code: D018
Waste Description: Benzene

Waste Code: D039
Waste Description: Tetrachloroethylene

Waste Code: D040
Waste Description: Trichlorethylene

Waste Code: F001
Waste Description: The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichlorethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F002
Waste Description: The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

HARBOR OIL INC. (Continued) **1000302670**

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: K001
Waste Description: Bottom Sediment Sludge From The Treatment Of Wastewaters From Wood Preserving Processes That Use Creosote And/Or Pentachlorophenol.

Waste Code: K049
Waste Description: Slop Oil Emulsion Solids From The Petroleum Refining Industry.

Waste Code: K051
Waste Description: Api Separator Sludge From The Petroleum Refining Industry.

Waste Code: K052
Waste Description: Tank Bottoms (Leaded) From The Petroleum Refining Industry.

Waste Code: NONE
Waste Description: Not Defined

Waste Code: P030
Waste Description: Cyanides (Soluble Cyanide Salts), Not Otherwise Specified

Waste Code: U019
Waste Description: Benzene (I,T)

Waste Code: U051
Waste Description: Creosote

Waste Code: U061
aste Description: Benzene, 1,1'-(2,2,2-Trichloroethylidene)Bis[4-Chloro- (Or) Ddt

Waste Code: U112
Waste Description: Acetic Acid, Ethyl Ester (I) (Or) Ethyl Acetate (I)

Waste Code: U117
Waste Description: Ethane, 1,1'-Oxybis-(I) (Or) Ethyl Ether (I)

Waste Code: U159
Waste Description: 2-Butanone (I,T) (Or) Methyl Ethyl Ketone (Mek) (I,T)

Waste Code: U226
Waste Description: Ethane, 1,1,1-Trichloro- (Or) Methyl Chloroform

Waste Code: U228
Waste Description: Ethene, Trichloro- (Or) Trichloroethylene

Waste Code: U239
Waste Description: Benzene, Dimethyl- (I,T) (Or) Xylene (I)

Waste Code: U242
Waste Description: Not Defined

NARR Comments: RP moving aggressively to remove free product from ground and define extent of plume. 10/20/93 - RP is continuing independent cleanup. (10/25/93 GMW/SAS) Further action letter sent. (11/10/97 LSK) Site re-evaluated as part of review of all sites within the Columbia Slough Study Area. PAE recommended, under medium priority. (4/13/99

REDDAWAY (Continued) **1000291272**

ACV/VCP) RP entered the Voluntary Cleanup Program in January 1999 to obtain DEQ review of existing file information. RP has conducted independent groundwater investigation and product recovery. DEQ file memo expected in April 1999. (1/7/00 ACV/VCP) VCP coordinated review of all UST and cleanup issues in 1999, and issued an NFA for environmental issues (with UST concurrence) in January 2000.

NARR Comments: [1/6/15 SA/SAM] See ECSI#127 for site history-The following text is from ECSI #127: James River characterized soil and groundwater contamination associated with the three major UST areas across the site, and excavated and aerated soils from leaking USTs in the late 1980s. DEQ's UST Section issued an NFA letter for the gasoline UST area in 1996, but referred all other UST issues to Site Assessment in 1997, since the remaining USTs did not contain motor fuels or waste oils. Site Assessment recommended a remedial investigation (RI) covering the entire facility(including this property), to determine the extent, magnitude, and sources of chlorinated solvents, BTEX, and metals in shallow soil and groundwater.

NARR Comments: 5.2021: They entered program to receive full nfa. DEQ identified one area in need of some additional investigation (flammable liquid and solvent mixing rooms). Also, they need to provide the storm outfalls discharges.-RAH Site investigation completed at former UST solvent area, only. DEQ replying on that report.

rd Class 3 Of The Chemical:	Not reported
Chemical Name:	INK WATER BASED
hysical Description:	LIQUID
se Number:	0009086526

FLINT GROUP NORTH AMERICA CORP (Continued) **S108659827**

acility Id:	007976
ysical State Of The Substance:	2
erage Amount Possessed During The Year Code:	20
ximum Amount Possessed During The Year Code:	20
plicable Unit Of Measure Code:	2
Description Of The Unit Of Measure:	GALLONS
pe Code:	D
Description:	STEEL DRUM
pe Code:	E
Temperature Description:	PLASTIC OR NON-METALLIC DRUM
essure of Code:	1
Pressure Description:	NORMAL PRESSURE
essure of Code:	1
Pressure Description:	NORMAL PRESSURE
Temperature Description:	NORMAL TEMPERATURE
mperature of The Hazardous Substance Code:	4
Temperature Description:	NORMAL TEMPERATURE
mperature of The Hazardous Substance Code:	4
ays Hazardous Substance On Site During Year:	365
The Substance Protected A Trade Secret:	False
otion Of The Max Qnty Code:	1,000-4,999
otion Of The Avg Qnty Code:	1,000-4,999
ost Hazardous Ingridient:	POLY(OXY-1,2-ETHANEDIYL),A-[BIS(1-PHENYL
d Nations/north America 4 Digit Class Number:	Not reported
zard Rank:	1
Ingredient:	Not reported
ubstance Pure:	False
bstance Mix:	True
First Hazardous Class Code For Chemical:	Miscellaneous Hazardous Material
nd Hazardous Class Code For Chemical:	Not reported
Hazardous Class Code For Chemical:	Not reported
zard Class 1 Of The Chemical:	9.0
rd Class 2 Of The Chemical:	Not reported
rd Class 3 Of The Chemical:	Not reported

Additional Chemical:

hemical Is A Toxic 313 Chemical:	N
Pesticide Registration Number:	Not reported
ontains 112R:	N
ontains EHS:	N
ertilizer:	N
esticide:	N

Decode for NarcdID: Contamination
NARR Comments: Sediments: Sediments directly beneath a Schooner Creek Boat Works dock and adjacent to the shoreline are contaminated with PCBs, PAHs, phthalates, PCP, phenols, DDTs, chlordane, metals (arsenic, cadmium, copper, selenium, zinc), and relatively low concentrations of diesel fuel and oil. The source and full vertical and horizontal extent of sediment contamination have not been defined. Upland Areas: A sample of residual paint dust collected at the boat repair facility contained PAHs, di-n-butyl phthalate, chloroform, methylene chloride, light aromatic hydrocarbons, and TCLP-extractable barium, cadmium,

CANOE BAY - CONTAMINATED SEDIMENT (Continued) **S105807718**

and lead. Paint dust residues have been observed on graveled surfaces at Schooner Creek Boat Works, and other boat repair wastes have been observed on Canoe Bay's steep southwest embankment at the boat works. Stained soils and stressed vegetation have also been documented at the boat works site. Chemical residues (30 - 60 sq ft area) and stressed vegetation were also observed on the southern portion of the lot west of the boat works, prior to Schooner Creek Boat Works occupying the site. Most of the western lot is now used for automobile storage, although a portion is used for boat storage. DEQ photographed small areas of stressed vegetation along Schooner Creek Boat Works' north fence line during an April 2001 multi-media inspection. (5/15/04 JLS/VCP) Waste materials, (e.g. broken glass, electrical casings) that apparently resulted from historical dumping by unknown parties are present along the shoreline. Waste material remaining at this time appear to be present primarily on land owned by the Oregon Division of State Lands. A private and City outfall discharge stormwater to Canoe Bay in the vicinity of the ramp to the docks. (9/9/09, smf) Samplings from an October 2008 EPA Site Insection detected elevated concentrations of metals (especially cadmium) in Canoe Bay sediments in the southern half of the bay. Elevated concentrations of TBT were detected in sediments at the boat dock, as well as in surface soils at the Schooner Creek Boatworks stormwater outfall just westr of the boat dock. Elevated concentrations of several metals were detected in surface soils along the southwest side of Canoe Bay, and in stormwater discharging from outfalls on the northeast and south sides of the bay.

NARR Comments: Canoe Bay is a 7.6-acre rectangular embayment of the Columbia River along the central north side of Hayden Island. The river is located to the northeast; Hayden Island Mobile Home Community is on the east side of the bay; Schooner Creek Boat Works, an automobile storage lot and paved boat storage area, and North Hayden Island Drive are along the southwestern edge of the bay. Schooner Creek Boat Works operates from a concrete tilt-up building constructed in 1989. A small scrub-shrub palustrine wetlands area is immediately northwest of the bay. A Burlington Northern Santa Fe Railroad right-of-way and tressel are about 675 feet northwest of the bay. Jantzen Beach Shopping Center is between 1,506 and 3,761 feet southeast of the bay. Interstate Highway 5 and the I-5 Interstate Bridge over the Columbia River are located about 4,210 feet southeast of the bay.

Decode for NarcdID: Project Issues Summary
NARR Comments: Contaminants were discovered in Canoe Bay sediments beneath a Schooner Creek Boat Works dock when preparing for maintenance dredging of the bay sediments. Levels of PCBs, DDTs, PAHs, and metals (arsenic, cadmium, copper, selenium, and zinc) in sediment samples exceed DEQ's Level II Ecological Risk Assessment Baseline Screening Levels for freshwater sediments. The contamination could represent a significant threat to T&E salmonids in the bay, migratory waterfowl and songbirds that visit the bay, wildlife in nearby wetlands, as well as a potential threat to people and wildlife who consume impacted fish. The sources and full vertical and horizontal extent of contamination have not been defined. A previous boat works operation at the site is known to have left behind chemical residues and stressed vegetation. However, since Schooner Creek Boat Works began operating along the southern end of the bay in 1999, DEQ has received at least 74 Pollution Complaints from nearby residents about its operations. An April 2001 DEQ site inspection confirmed some of the complaint allegations; DEQ documented evidence of stressed vegetation and boat works wastes migrating to Canoe Bay. Paint dust from the

CANOE BAY - CONTAMINATED SEDIMENT (Continued) **S105807718**

boat works was analyzed and found to contain leachable metals, phthalates, light aromatic hydrocarbons, chlorinated hydrocarbons, and relatively high concentrations of PAHs. DEQ files also contain similar complaints about activities at Schooner Creek Boat Works' previous operating location along N Marine Dr. There is no record of Pollution Complaints against the site's previous boat builder (Heisley Marine). Aerial photos and material identified along the shoreline suggest that historical dumping of waste materials may have taken place in the past, resulting in an accumlation of materials in a shoreline area on property owned by the State.

NARR Comments: Land on the southeast side of Canoe Bay is zoned for low-density residential use, while land on the southwest side of the bay is zoned for industrial use. The entire bay and its shoreline lie within a City of Portland Environmental Conservation Overlay Zone. A small scrub-shrub palustrine wetland sits just west of the bay, and most of the Columbia River's south shoreline downstream from the site is tidal riverine wetlands. Metro has mapped land west of the BNSF Railroad right-of-way as important riparian corridor and wildlife habitat of concern.

NARR Comments: Undefined at this time. Recent boat manufacturing and repair activities by Schooner Creek Boat Works could be a source but significant efforts have been completed by the facility to manage stormwater and current stormwater discharge is meeting permit benchmarks. A city storm drain also discharges to the bay near the Boat Works' stormwater outfall and may be contributing road-related contamination. A previous yacht builder at the site (Heisley Marine) is known to have left behind chemical residues and stressed vegetation prior to Schooner Creek Boat Works' arrival at the site. The detections of DDTs and chlordane in sediments suggest that

CANOE BAY - CONTAMINATED SEDIMENT (Continued) **S105807718**

deposits of riverborne sediments could also be a source, as could be an outfall from the Columbia Blvd. Sewage Treatment Plant to the Columbia River, located about 500 to 700 feet northeast of (downstream from) the bay. Part of the bay also appears to have been backfilled since the 1970s, possibly with Columbia River dredgings, so the bay's backfill may also have contained contaminants. Historical dumping of wastes over the shoreline appears to have resulted in an accumulation of waste materials that appears to have resulted in elevated PCBs and metals on the shoreline. Contaminants associated with the shoreline waste materials appear to have resulted in a localized area of contaminated sediment.

NARR Comments: A site screening was completed in September 2002. An Expanded Preliminary Assessment of the Schooner Creek Boat Works site is recommended. Further samplings of sediment and upland soils are needed to define the full extent and character of local contaminants. Site owner, Inland Sea Maritime Group, completed sediment and shoreline sampling at the site which is documented in a January 2004 report. (9/8/09, smf) Ecology and Environment, Inc. conducted a federal Site Inspection of Canoe Bay for EPA during October 2008, issuing its report in August 2009. E&E sampled and analyzed: sediments from Canoe Bay and nearby in the Columbia River; stormwater

CANOE BAY - CONTAMINATED SEDIMENT (Continued) **S105807718**

and stormwater sediments from stormwater outfalls emptying into Canoe Bay; and uplands surface soils from along the southwest edge of Canoe Bay.

NARR Comments: Canoe Bay provides seasonal habitat for migratory waterfowl and migratory songbirds, which feed in and around the bay. The bay has been defined as Critical Habitat for Snake R. spring/summer chinook (Threatened species), Snake River fall chinook (Threatened species), and Snake River sockeye salmon (Endangered species) [58 FR 68543, 12/28/93]. A small wetlands area is also located immediately upland from the bay's west shoreline. Metro considers much of Hayden Island west of the BNSF Railroad right-of-way important riparian corridor and wildlife habitat of concern, The City of Portland has a community water supply well less than 1,000 feet SSE of the site.

NARR Comments: Site Assessment recommends a high-priority further investigation to determine the full nature and extent of Canoe Bay sediment contamination near SCBW's dock. Because hazardous substances have been released at the site, and concentrations of these substances in sediment are above threshold risk values for aquatic life, it is further recommended that the site be proposed for addition to DEQ's Confirmed Release List and Inventory. (12/6/02 JMA/VCP) Received Intent to Participate in DEQ's Voluntary Cleanup Program in December 2002. Sediment sampling work plan submitted March 2003. DEQ approved with comments provided May 2003. Response to comments submitted June 2003. DEQ acknowledgement provided July 2003. Sediment sampling conducted October 2003. (3/1/04 JLS/CU&ER) Sediment sampling report submitted January 2004. Meeting/site visit held February 2004. (5/17/04 JLS/VCP) DEQ comments on report provided March 2004. Revised report submitted April 2004. DEQ approval with clarification provided May 2004. (11/12/04 JLS/CU&LW) DEQ coordinating with City of Portland, Division of State Lands (DSL) and ISMG on next steps. (11/7/05 JLS/CU&LW) DEQ preparing memo documenting issues and priorities November 2005. (6/23/09 SAM/SAS)EPA completed a preliminary assessment-March 7,2008- and determined additional site investigation is warranted. (11/22/10 SAM/SAS) In late August 2010, after completing a Site Investigation, EPA determined that the site was a low priority for additional federal action and referred the site back to DEQ for state follow-up. [6/8/11] DEQ prioritized shoreline debris pile cleanup and outfall soil cleanup as primary actions warranted at the site. [6/11/12] In Fall, 2011, ISMG/SCBW proposed conducting shoreline stabilization to maintain stability for upland infrastructure and incorporate capping of the debris pile and

CANOE BAY - CONTAMINATED SEDIMENT (Continued) **S105807718**

immediately adjacent contamination. Additional shoreline data was collected in February 2012 to help assess shoreline options and a feasibility study was drafted in May 2012. FS completed in June 2012. Staff report on proposed shoreline stablization action issued for public comment in July 2012. ROD issued August 2012. Consent Judgement covering DEQ oversight of remedial action and settlement for contamination in Canoe Bay issued for public comment in September 2012. Negotiations with City of Portland for development permit to cover action in the environmental zone adjacent to Canoe Bay completed in Spring 2013. Consent Judgment with DEQ finalized in July 2013. Remedial Design workplan and associated reports submitted in November 2012. Revised documents, based on DEQ comment and modifications to address City permitting requirements, submitted June 2013. Shoreline stabilization and capping, and habitat improvement work completed August through November 2013. Project completion report submitted February 2014 and approved March 6, 2014. O&M to establish vegetation on the bank in progress. Certificate of Completion and NFA letter issued May 2014. (JLS 5/19/14) Annual monitoring reports submitted 2015, 2016, and 2017. (10/9/19 KJD/VCP) A sediment sampling event was performed in 2019 to evaluate the effectiveness of the remedy. Overall, the shoreline stabilization and capping components appear to have been effective in reducing contaminated material entering the bay.

NARR Comments: [Oct. 2019] In May 2014, DEQ made a conditional no further action determination for the site, with the NFA conditioned on maintenance of the engineered cap placed along the shoreline covering the debris pile area and the stormwater outfall discharge area. EPA followed up in February 2015 with its own determination of <quot>no further remedial action planned<quot> at the site. A sediment sampling event was performed in 2019 to evaluate the effectiveness of the remedy. Overall, the shoreline stabilization and capping components appear to have been effective in reducing contaminated material entering the bay.

Environmental Interest/Information System:
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

MARKET TRANSPORT LTD (Continued) **1004770051**

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 04/26/2023
Date Data Arrived at EDR: 05/02/2023
Date Made Active in Reports: 05/17/2023
Number of Days to Update: 15

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

State and tribal institutional control / engineering control registries

OR ENG CONTROLS: Engineering Controls Recorded at ESCI Sites

Engineering controls are physical measures selected or approved by the Director for the purpose of preventing or minimizing exposure to hazardous substances. Engineering controls may include, but are not limited to, fencing, capping, horizontal or vertical barriers, hydraulic controls, and alternative water supplies.

Date of Government Version: 03/01/2023
Date Data Arrived at EDR: 03/28/2023

WA INST CONTROL: Institutional Control Site List

The Environmental Covenants Registry is a list of sites that have implemented institutional controls as part of the remedy. Institutional controls are administrative or legal measures used to prevent activities that may compromise the integrity of a cleanup action. They are meant to prevent exposure to contamination remaining on site. Institutional controls may include environmental covenants (also known as "deed restrictions"), zoning restrictions, public health advisories, or other administrative tools. The most common institutional control is an environmental covenant. Environmental covenants are legal recorded documents that typically limit certain uses of the property, such as: Drilling a water supply well on the property. Disturbing pavement covering contaminated areas. Residential use of the property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS NPL: Superfund Sites with PFAS Detections Information

EPA's Office of Land and Emergency Management and EPA Regional Offices maintain data describing what is known about site investigations, contamination, and remedial actions under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) where PFAS is present in the environment.

Date of Government Version: 06/07/2023

PFAS TSCA: PFAS Manufacture and Imports Information

EPA issued the Chemical Data Reporting (CDR) Rule under the Toxic Substances Control Act (TSCA) and requires chemical manufacturers and facilities that manufacture or import chemical substances to report data to EPA. EPA publishes non-confidential business information (non-CBI) and includes descriptive information about each site, corporate parent, production volume, other manufacturing information, and processing and use information.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS ATSDR: PFAS Contamination Site Location Listing

PFAS contamination site locations from the Department of Health & Human Services, Center for Disease Control & Prevention. ATSDR is involved at a number of PFAS-related sites, either directly or through assisting state and federal partners. As of now, most sites are related to drinking water contamination connected with PFAS production facilities or fire training areas where aqueous film-forming firefighting foam (AFFF) was regularly used.

PFAS WQP: Ambient Environmental Sampling for PFAS

The Water Quality Portal (WQP) is a part of a modernized repository storing ambient sampling data for all environmental media and tissue samples. A wide range of federal, state, tribal and local governments, academic and non-governmental organizations and individuals submit project details and sampling results to this public repository. The information is commonly used for research and assessments of environmental quality.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR RECOVERED GOVERNMENT ARCHIVES

Exclusive Recovered Govt. Archives

OR RGA HWS: Recovered Government Archive State Hazardous Waste Facilities List

The EDR Recovered Government Archive State Hazardous Waste database provides a list of SHWS incidents derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the Department of Environmental Quality in Oregon.

Date of Government Version: N/A
Date Data Arrived at EDR: 07/01/2013
Date Made Active in Reports: 01/03/2014
Number of Days to Update: 186

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

NY MANIFEST: Facility and Manifest Data

Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

Date of Government Version: 01/01/2019

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

IBR - 2N1E34C -00601 BUENA-HAYDEN LLC
N CENTER AVE
PORTLAND, OR 97217

TARGET PROPERTY COORDINATES

Latitude (North):	45.610741 - 45° 36' 38.67''
Longitude (West):	122.680016 - 122° 40' 48.06''
Universal Tranverse Mercator:	Zone 10
UTM X (Meters):	524951.0
UTM Y (Meters):	5050631.5
Elevation:	40 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	14878142 PORTLAND, OR
Version Date:	2020

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

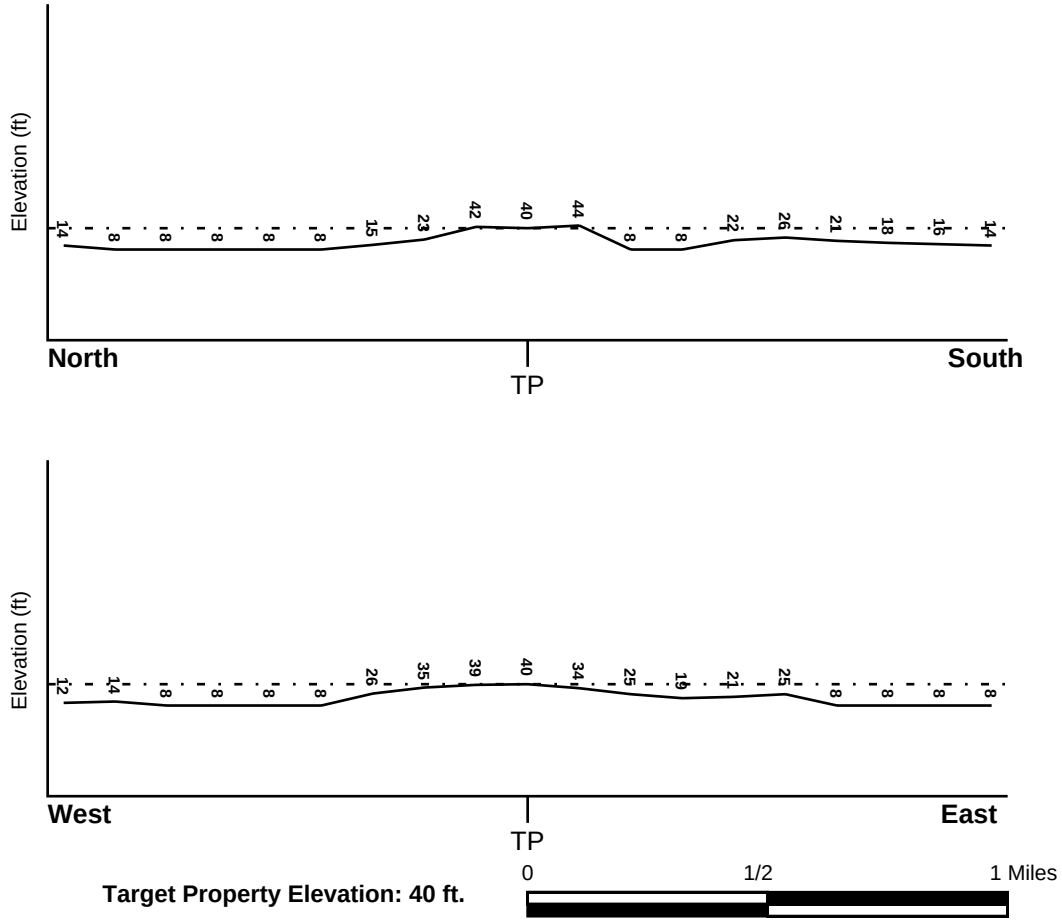
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 40 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
53011C0481D	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
53011C0368D	FEMA FIRM Flood data
53011C0477D	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
PORTLAND	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

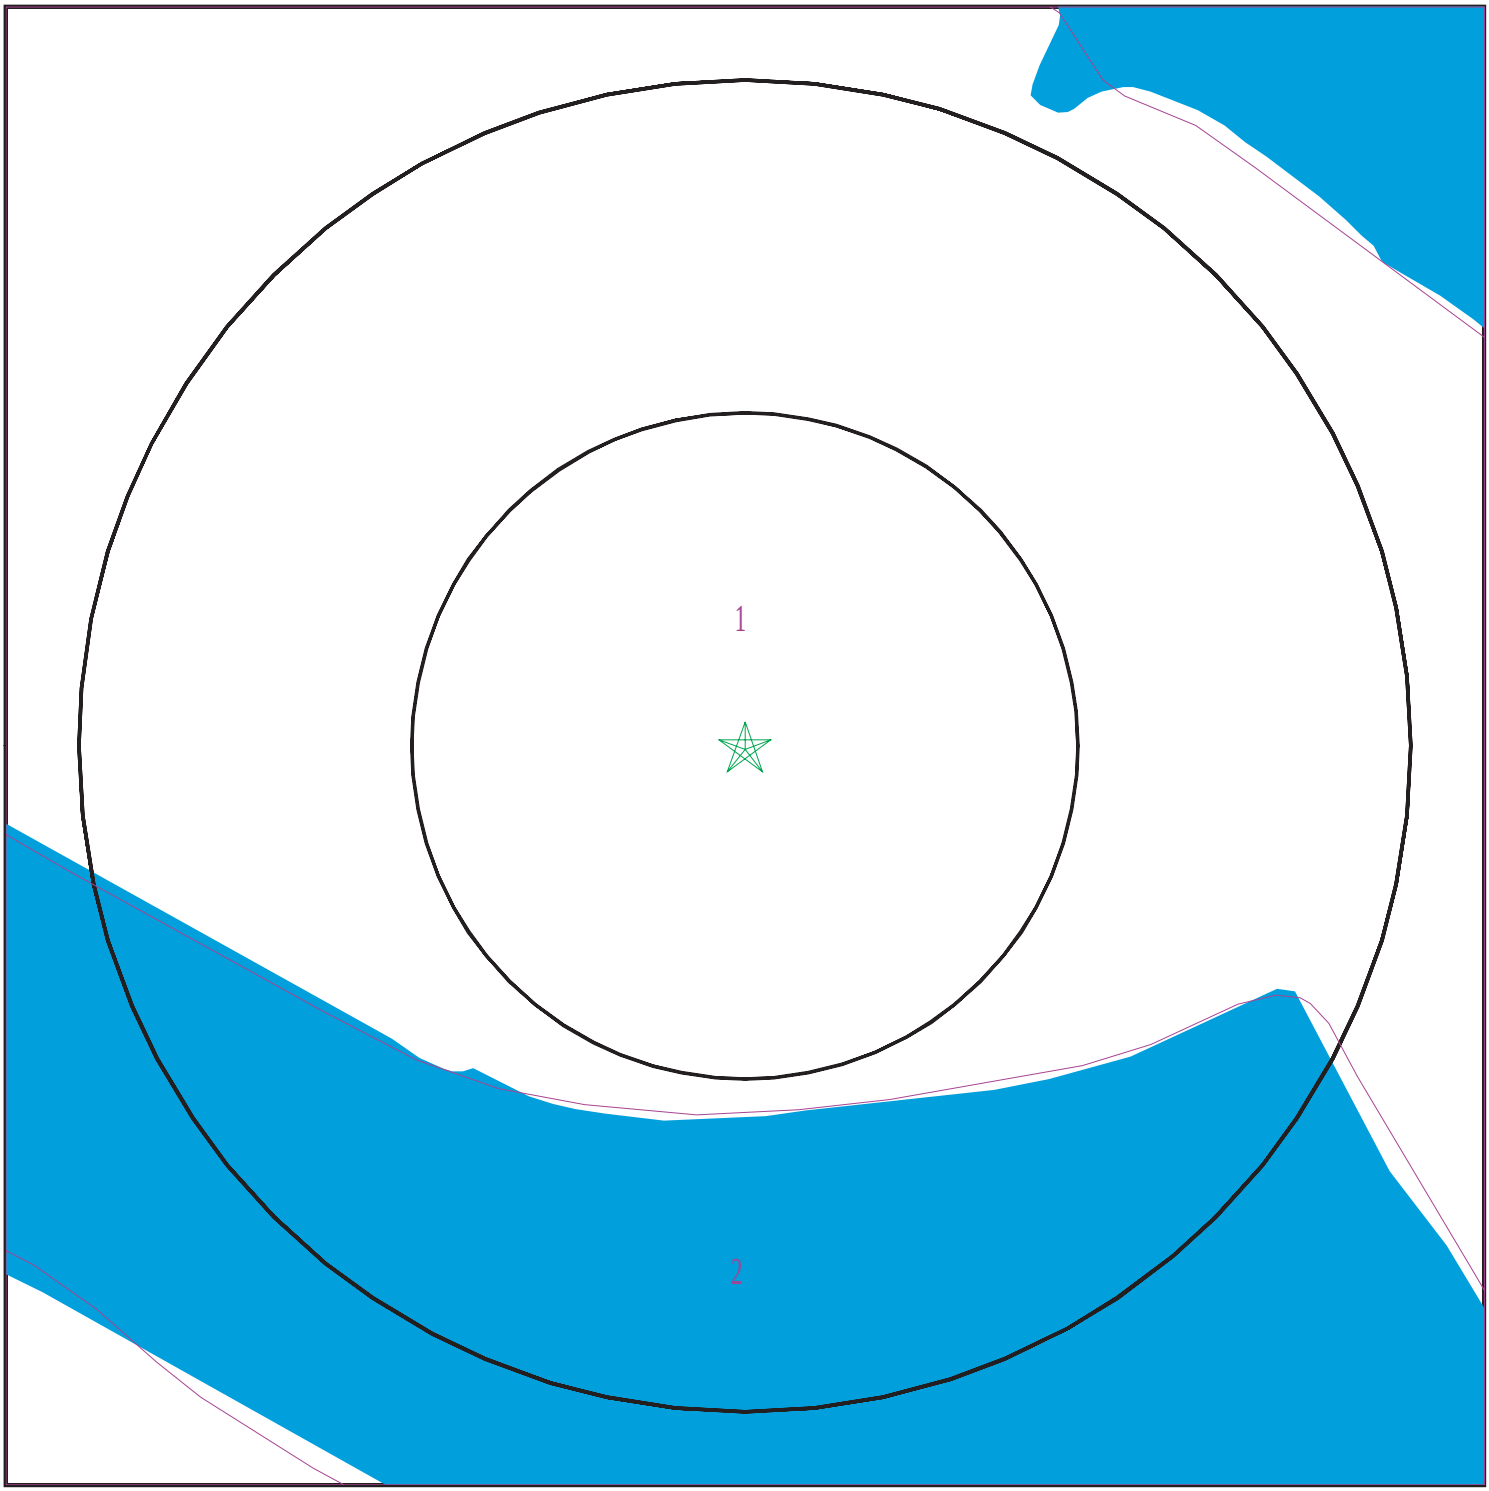
GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY



Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Pilchuck

Soil Surface Texture: sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	11 inches	sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.3 Min: 6.1
2	11 inches	59 inches		Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.3 Min: 6.1

Soil Map ID: 2

Soil Component Name: Water

Soil Surface Texture: sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class:

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetlands Inventory Data
Source: Oregon Geospatial Enterprise Office
Telephone: 503-378-2166

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Parametrix, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.
