PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Ecology
Telephone: 360-407-6121

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Wells
Source: Department of Health
Telephone: 360-236-3148
Group A and B well locations.

Water Well Listing
Source: Public Utility District
Telephone: 206-779-7656
A listing of water well locations in Kitsap County.

Ecology Well Logs
Source: Department of Ecology
Telephone: 360-407-7294
Point geodatabase with a record for each Ecology well report. Points are located by quarter quarter section centroid. Points contain all well report types including water wells, resource protection wells, and decommissioned wells.

OTHER STATE DATABASE INFORMATION

Oil and Gas Well Listing
Source: Department of Natural Resources
Telephone: 360-902-1450
Locations that represent oil and gas test well sites in Washington State from 1890 to present.

RADON

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Parametrix, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

1.0 Purpose:

The Limited Subsurface Investigation activities were conducted in an effort to characterize site conditions with respect to potential historical petroleum releases at the Property addressed as 400 Washington Street (et al), Vancouver, Washington. The soil removal activities were conducted to remove petroleum-impacted soils identified during the Limited Subsurface Investigation.

2.0 Background:

Point Source Solutions completed a Phase I Environmental Site Assessment on the Property in August 2015 (Project Number WA150806-1). Below is an excerpt from the Phase I report.

The following evidence of recognized environmental conditions as defined in ASTM Practice E 1527-13 was identified during the site reconnaissance.

- *The Property has a long history of automotive related use including repair, fueling, and wrecking. Features observed inside the main building include multiple former in-ground hydraulic hoist locations and a former sump that had been filled with concrete. Much of the floor surface could not be observed due to the presence of vehicles, equipment, and stored materials. This assessment has revealed no record of soil sampling associated with the decommissioning of hoists or sumps on the Property.*

- *The DOE files for the Property document the removal of two underground storage tanks from the Property. These are identified as a 300-gallon waste-oil tank removed in 1993 and a 2000-gallon gasoline tank removed in 1990. Documentation of soil sampling conducted during the decommissioning activities is limited. Based upon this lack of documentation, PNG Environmental conducted subsurface investigations in 1997 and 1998 in the vicinity of each of the former UST locations. PNG also advanced a single boring on a portion of the Property formerly occupied by a wrecking yard. No significant release was identified by PNG. While environmental risk associated with these two USTs appears to have been adequately addressed, a comprehensive investigation was not conducted to determine whether additional USTs were present on the Property. A 1949 Sanborn map depicts a gasoline station at the southeast corner of the central section of the Property. The USTs addressed in earlier investigations were not located in this area. Sanborn maps also indicate that the existing main building was previously heated with steam, and a boiler is depicted in the former St. Elmo Hotel building which previously occupied the north section of the Property. Point Source also observed an abandoned flue in the basement of the main building. This information may indicate the past or current presence of a heating oil UST. Neither of the previously identified USTs contained heating oil. Large portions of the central and south sections of the Property were previously occupied by auto wrecking operations. Only a single boring was advanced by PNG to address this past use. Several adjoining properties were previously occupied by service stations.*

- *DOE files indicate that automotive fluids were dumped into a catch basin connected to a drywell, and that the drywell also received discharge from a wash pad. The drywell was reported to have been removed along with several tons of impacted soils. Documentation of the cleanup efforts is minimal. Based upon photographs contained in*

the DOE file, however, this release and associated cleanup appears to be associated with a different property that was under the same ownership as the Property at that time. It appears that the information regarding the drywell was placed into the wrong file, and that this issue does not pertain to the Property.

3.0 Scope of Work:

At the request of Hurley Development, the following Scope of Work was completed:

- Conduct a geophysical survey of the Property;
- Request public utility location services for the work area;
- Provide soil boring notification to WADOE and pay applicable fees;
- Advance soil borings at former hoist and sump locations inside the existing repair shop;
- Advance a soil boring adjacent to the drywell on the central lot;
- Advance three soil borings in the sidewalk near the southeast corner of the existing repair shop (identified as a potential former UST area);
- Advance a soil boring in the existing auto repair shop storage yard (disturbed soil zone in the former vehicle wash area);
- Collect near-surface soil composite samples on the south lot (former auto wrecking yard);
- Collect a minimum of one soil sample from each boring;
- Submit all soil samples for TPH analysis;
- Order additional laboratory analysis if indicated by initial TPH results;
- Advance additional borings and collect additional samples if indicated by initial findings;
- Obtain approval from Waste Management to dispose impacted soils at the Hillsboro Landfill;
- Oversee soil removal activities;
- Collect confirmation soil samples;
- Prepare a report documenting the soil removal activities.

4.0 Site Description:

The Property is located in Vancouver, Washington, and is identified as Clark County Tax Account Numbers 48320000, 48360000, 48370000, 48380000, 48390000, 48420000, 48430000, 48400000, 48455000, and 48460000 in the SW ¼ of Section 27, T2N, R1E totaling approximately 1.54 acres. The Property occupies portions of three separate city blocks. For the purposes of this report, parcel numbers 48320000, 48360000 and 48370000 are identified as the north section of the Property; parcel numbers 48380000, 48390000, 48420000 and are identified as the central section of the Property; and 48400000, 48455000 and 48460000 are identified as the south section of the Property. Addresses associated with the north section include 400 and 412 Washington Street, Vancouver, Washington. Addresses associated with the central section include 300 Washington Street and 210 W 3rd Street. No address has been assigned to any of the

parcels on the south section of the Property. The Property is zoned City Center (CX) by the City of Vancouver.

The building on the north section of the Property is a single-story concrete block structure encompassing approximately 475 square-feet. Finishing materials include suspended ceiling panels and carpet. The structure was used for storage at the time of this assessment. This section of the Property was surrounded by security fencing. The building on the central section of the Property consists of poured concrete and concrete block exterior walls on a concrete slab foundation. Portions of the exterior are coated with stucco. A mezzanine level apartment is present in the east part of the building, and a storage mezzanine is present in the west portion. The structure also contains a partial basement that is unfinished. The interior is divided into various automotive service areas, a woodworking shop, restrooms, offices, storage areas, and a paint booth. Finishing materials include carpet and vinyl flooring, suspended ceiling panels, acoustical ceiling tiles, wood paneling, and plaster. Natural gas suspended unit heaters were observed. An abandoned flue is present in the basement. An abandoned floor drain sump and several abandoned hydraulic hoists were observed in the auto service areas. The area to the north of the building is used as a fenced storage yard for vehicles and equipment. The south section of the Property consists of a paved parking lot with no structural development. The Property is served by public water and sewer.

According to a well log search conducted on the Washington Department of Ecology (WADOE) website, groundwater has been encountered at 10 to 28 feet below ground surface on nearby properties. The water-bearing units within the area are comprised of alluvium. No on-site water wells or springs were observed during the Property reconnaissance.

Based on a review of the Vancouver, Washington Quadrangle 7.5 minute series topographic map, groundwater flow in the Property vicinity is likely influenced by the Columbia River which is located approximately 600 feet mile south of the Property at its closest point. The Property does not overlie a sole source aquifer.

Soils encountered during this investigation include gravels and sands. Large voids and some evidence of construction debris were encountered in several of the borings and during excavation.

Groundwater was not encountered to the maximum explored depth of 17 feet below ground surface.

5.0 Field Work:

5.1 Limited Subsurface Investigation:

On September 14 and 15, 2015 a geophysical survey of the Property was conducted by Pacific Geophysics. The purpose of the survey was to search for abandoned underground storage tanks (USTs), disturbed soil zones that may indicate past UST locations, drywells, and other automotive service related infrastructure, and to clear boring locations for buried utilities and other obstructions. No abandoned USTs were identified. A disturbed soil zone was identified at a location consistent with the former service station. A disturbed soil zone was identified in the storage yard on the central parcel. According to on-site personnel, this area was previously excavated for

archeological purposes. This area was also previously used as a wash area for new and used cars. One drywell was identified on the north section of the Property. Boring locations were cleared within the disturbed soil zones, adjacent to the drywell, and inside the automotive repair shop adjacent to the sump and each of the abandoned hoists. A copy of the geophysical survey is included in Appendix B.

On September 28 through September 30, 2015 Point Source advanced 14 borings on the Property and collected samples from each boring. An additional sample was collected from the sediment within the drywell.

- Borings SB1 through SB8 were advanced to a depth of 10 feet bgs adjacent to each of the abandoned hoists inside the auto shop.
- Boring SB9 was advanced to a depth of 5 feet adjacent to the sump inside the auto shop.
- Borings SB10 through SB12 were advanced to a depth of 12 feet within the disturbed soil zone believed to be the former location of gasoline station USTs.
- Boring SB13 was advanced to a depth of 12 feet within the disturbed soil zone in the former car washing area.
- Boring SB14 was advanced to a depth of 13 feet adjacent to the drywell
- A sediment sample was collected from near the bottom of the drywell at a depth of 9 feet.

A total of 14 discrete soil samples were collected from the borings at terminal depth and all were submitted for laboratory analysis. One drywell content sample was also submitted.

On October 2, 2015 two near surface soil composite samples were collected. These were collected from south section of the Property (former wrecking yard, current parking lot). This area was divided into two roughly equal parts (identified as Comp North and Comp South). Near surface soils were collected at eight evenly spaced sample points within each of the two areas. The material was then composited into a single sample for each area and submitted for laboratory analysis.

On October 26 and 27, 2015 eight additional borings were advanced in the vicinity of two of the abandoned hoists. These borings were placed around the two easternmost hoist systems to delineate the extent of petroleum impacted soils identified in earlier samples.

- Borings SB15 and SB17 were advanced to depths of 13 feet and 15.5 feet bgs immediately adjacent to borings SB1 and SB3 (petroleum impacted soils above MTCA Method A cleanup levels were identified in the samples from SB1 and SB3). The purpose of SB15 and SB17 was to delineate the vertical extent of the identified impact.

- Borings SB16 and SB18 through SB22 were advanced to depths of 12 to 14 feet approximately 8 feet to the north, south, east, and west of the borings where petroleum impact was identified. The purpose of these borings was to delineate the lateral extent of the identified impact.

A total of 12 discrete soil samples were collected from these borings and all were submitted for analysis

On November 6, 2015 one additional boring (SB23) was advanced to a depth of 12 feet bgs. This boring was placed approximately 2 feet south of boring SB18. SB18 was intended to define the southern extent of the impacted soil associated with the easternmost hoist system. Because the concentration of petroleum in the sample from SB18 was significantly higher than the cleanup level, an additional boring was necessary to define the southern extent. Due to the building footing, SB23 could not be placed more than 2 feet south of SB18. One discrete soil sample was collected from a depth of 12 feet and was submitted for laboratory analysis.

Boring and surface sample locations are identified on the Sample Location Diagrams identified as Figures 2 and 3.

5.2: Soil Removal:

Approval was obtained from Waste Management for disposal of impacted soils at Hillsboro Landfill (Waste Management Soil Profile Number 122221OR). Tapani Underground began soil removal on July 26, 2016. The concrete floor and hoist infrastructure were removed prior to the arrival of Point Source personnel. The hoist cylinders were staged on site for recycling. The first (east) excavation was located in the vicinity of borings SB1 and SB18 where up to 14,000 mg/kg TPH-Dx had been detected. This excavation was approximately 14 feet wide by 17 feet long, with a depth of 15 feet bgs. Three soil samples were collected from the bottom of the excavation, and ten soil samples were collected at various depths from the excavation sidewalls. This excavation was backfilled on the following day (July 27, 2016) based upon favorable laboratory results. The second (west) excavation was located in the vicinity of borings SB3 and SB15 where up to 18,300 mg/kg TPH-Dx had been detected. The west excavation was approximately 11 feet wide by 14 feet long, with an initial depth of 16 feet bgs. Three soil samples were collected from the bottom of the excavation, and ten soil samples were collected at various depths from the excavation sidewalls. Laboratory results received the following day (July 28, 2016) indicated that impacted soils remained in the bottom of the exaction at its north end. The north end of the excavation was advanced to a depth of 17 feet bgs and a soil sample (SE13-S2-17) was collected at that depth. Based upon the analytical results for Sample SE13-S2-17, the west excavation was backfilled.

A total of 327.73 tons of impacted soils were transported to and disposed at Hillsboro Landfill. Copies of soil disposal documentation are included in Appendix C.

6.0 Sample Methodology:

6.1 Pre-Excavation Borings and Composite Sampling:

All samples from the soil borings were collected via direct-push Geoprobe tooling. Borings SB13 and SB14 were advanced by Point Source using a truck-mounted probe rig. Borings SB10 through SB12 were advanced by Soil Solutions using an electric jackhammer. These borings were advanced within the public right-of-way and required special bonding permitting specific to the City of Vancouver. The remaining borings were advanced by Point Source using an electric jackhammer. The sampling equipment

was decontaminated via detergent and water followed by a water rinse after collection of each sample. A stainless steel trowel and stainless steel mixing bowl were used to collect the near surface composite samples. Samples were placed in laboratory provided 4-ounce jars with Teflon lined lids. Samples were chilled to approximately 4 degrees centigrade immediately after collection. A clean pair of disposable nitrile gloves was worn during the collection of each sample in order to prevent cross-contamination.

6.2 Post-Excavation Soil Sampling:

Soil samples were collected from the bottom and sidewalls of the excavation. The soils were brought to the surface via the excavator bucket. Samples were placed in laboratory provided 4-ounce jars with Teflon lined lids. Samples were chilled to approximately 4 degrees centigrade immediately after collection. A clean pair of disposable nitrile gloves was worn during the collection of each sample in order to prevent cross-contamination.

The samples collected during this investigation were each assigned a unique sample identification number. The first character in the sample identification number indicates the media (S for soil). The following character indicates the type of sample (B for boring, E for excavation). The last characters indicate the depth, in feet below ground surface, at which the sample was collected.

A total of 28 discrete soil samples from borings, 27 discrete soil samples from the excavations, and two composite samples were submitted to Wy'East Environmental Sciences in Portland, Oregon. Analysis included NWTPH-HCID, TPH-Dx, TPH-Gx, PAHs (EPA Method 8270), VOCs (EPA Method 8260), and total cadmium, chromium, and lead. The soil boring sample with the highest concentration of TPH-Dx was also submitted to Apex Laboratories in Tigard, Oregon for PCB analysis. All excavation soil samples in which TPH-DX was detected were also submitted to Apex Laboratories for PCB and RCRA 8 metals analysis.

The Chain of Custody forms and laboratory analytical reports from this investigation are contained in Appendix A.

7.0 Sample Results:

Sample results are presented in the following tables.

TABLE 1: Soil Sample Results (Soil Borings)

8.0 Conclusions:

8.1 Limited Subsurface Investigation

The following conclusions are based on the results of the Environmental Subsurface Investigation performed at 400 Washington Street (et al), Vancouver, Washington.

- This investigation revealed concentrations of up to 18,000 mg/kg oil-range petroleum hydrocarbons in the subsurface soils adjacent to the two easternmost hoist systems on the Property. The WADOE MTCA Method A Cleanup level for this contaminant is 2,000 mg/kg. Based upon discussions with the laboratory chemist, the proximity to abandoned vehicle hoists, and lack of significant concentrations of constituents; the contamination appeared to be from hydraulic oil.

- Lead was detected in two samples at up to 4.26 mg/kg which is below the MTCA Method A cleanup level.

- Bromochloromethane was also detected (concentrations up to 0.073 mg/kg) in two of the samples. This compound is not listed in MTCA Method A. Bromochloromethane was manufactured to be used in fire suppression systems. Its presence may be the result of an historic fire on the Property.

- PCBs were detected in one sample at 0.038 mg/kg which is below the MTCA Method A cleanup level.

- Oil range petroleum hydrocarbons were detected in other areas of the Property, but all were detected at concentrations below the cleanup level, with the exception of the sample collected from the sediment inside the drywell. Oil was not detected in the sample collected from the boring adjacent to the drywell. The drywell content sample revealed a concentration of 2,200 mg/kg and this is not considered abnormal for a parking lot drywell.

Based upon the data collected during the subsurface investigation, the maximum vertical extent of soil with concentrations above the cleanup level is approximately 15 feet below grade. The estimated maximum lateral extent is less than 400 square feet. Based on these values, it is estimated that less than 250 cubic yards of soil impacted above the cleanup level is present beneath the building.

8.2 Soil Removal

All of the identified hoists have been removed from the Property. Based upon the confirmation soil samples, all of the soils impacted above MTCA Method A Cleanup levels in the vicinity of the two leaking hoists have been successfully removed, with the exception of a small pocket at the south end of the east excavation represented by sample S3-S1-15. The combined concentration of heavy oil and diesel range petroleum hydrocarbons in this sample is 2081 mg/kg which slightly exceeds the MTCA Method Cleanup Level (2,000 mg/kg). Further excavation in the vicinity of S3-S1-15 was not possible as this area is directly beneath the exterior wall of the building.

9.0 Recommendations:

No further investigation or soil removal is recommended. If the ownership of the property wishes to have Washington Department of Ecology issue a determination regarding the cleanup activities, the owner must enroll in the Voluntary Cleanup Program.

10.0 Limitations:

This Limited Subsurface Investigation and Soil Removal for the Property addressed as 400 Washington Street (et al), Vancouver, Washington, is intended for the exclusive use of Hurley Development or entities specified by Hurley Development.

The conclusions contained within this report are based upon site conditions present at the time of this investigation.

Point Source Solutions has performed this investigation in accordance with applicable regulations and generally accepted practices of reputable environmental professionals. This report is based upon observations made directly by representatives of Point Source Solutions as well as information provided by others. Although we have no reason to believe that the information provided to us by others and subsequently included in the report is not accurate, we cannot be held responsible for inaccuracies that may have been reported to us.

LABORATORY REPORTS

CHAIN OF CUSTODY

10/2/15

Point Source Solutions
10445 SW Canyon Rd Suite 115
Portland, OR 97214

Re: WA150806-1A

Dear Point Source Solutions

Enclosed are the results of analysis for samples received by the laboratory on 10/1/2015
The results related only to the samples included in this report.
The project was assigned a report number of 85279

If you have any questions concerning this report, please feel free to contact us.

Sincerely,

C.Y Chan

CY Chan
QA Officer

Report Narrative

Method: PAH-8270SIM **Report No.** 85279
Client: Point Source Solutions **Date:** 10/9/2015

Sample Condition
Sample was analyzed for PAH. Sample was received in acceptable condition

Sample Temperature
Sample arrived within acceptable temperature range

Sample Hold time
Sample was analyzed within Hold Time

Initial Calibration
All criteria were within acceptable limits

Continuing Calibration Check (CCV)
All criteria were within method limits except those qualified in the body of the Report

Method Blank
Method Blank meets method limits except those qualified in the body of the Report

Laboratory Control Sample (LCS)
All criteria were within method limits except those qualified in the body of the Report

Duplicate Sample
There was no duplicate run with this sample

Matrix Spike
All Spikes were within limits
All Spike Duplicates were within limits

Matrix Spike Duplicate (RPD)
Matrix Spike Duplicate were within limits

Non-Conformance
No non-conformances were associated with this request except noticed below
Sample container was opened prior to PAH analysis

2415 SE 11th Ave.

Report Narrative

Method: 8260
Client: Point Source Solutions

Report No. 85279
Date: 10/13/2015

Sample Condition
Sample was analyzed for 8260. Sample was received in acceptable condition

Sample Temperature
Sample(s) arrived within acceptable temperature range

Sample Hold time
Sample was analyzed within hold time

Initial Calibration
All criteria were within acceptable limits

Continuing Calibration Check (CCV)
All criteria were within method limts. Any exceptions are qualified in the body of the report

Method Blank
Method Blank meets method limt. Any exceptions are qualified in the body of the report

Laboratory Control Sample (LCS)
All criteria were within method limts, Any exceptions are qualified in the body of the report

Duplicate Sample
No Duplicate was run on this batch

Matrix Spike
All criteria were within method limts

Matrix Spike Duplicate
All criteria were within method limts

Non-Conformance
No non-conformances were associated with this request except noticed below
Sample jar was opened prior to 8260 analysis

8260 Qualifiers
*Surrogate 1,2-dichloroethane-d4 fails high may be due to interferrence.

Re: WA150806-1A

Dear Point Source Solutions

Enclosed are the results of analysis for samples received by the laboratory on 10/2/2015
The results related only to the samples included in this report.
The project was assigned a report number of 85288

If you have any questions concerning this report, please feel free to contact us.

Sincerely,

C.Y Chan

Re: 300 Washington St

Dear Point Source Solutions

Enclosed are the results of analysis for samples received by the laboratory on 11/6/2015
The results related only to the samples included in this report.
The project was assigned a report number of 85413

If you have any questions concerning this report, please feel free to contact us.

Sincerely,

C.Y Chan

CY Chan
QA Officer

Client: Point Source Solutions **Date:** 11/6/2015

Sample Condition

1 Sample(s) were analyzed for NWTPH-Dx. Sample(s)were received in acceptable condition

Sample Temperature

Sample(s) arrived within acceptable temperature range

Sample Hold time

Sample(s) were analyzed within hold time

Initial Calibration

All criteria were within acceptable limits

Continuing Calibration Check (CCV)

All criteria were within method limits

Method Blank

Method Blank meets method limit

Laboratory Control Sample (LCS)

All criteria were within method limits

Duplicate Sample

All criteria were within method limits

Matrix Spike

All criteria were within method limits

Matrix Spike Duplicate

No Matrix Spike Duplicate was run on this batch

Non-Conformance

No non-conformances were associated with this request except noticed below

Point Source Solutions, LLC	Project: **General**	
2419 SE 11th Avenue	Project Number: 300 Washington St./WA 1508	**Reported:**
Portland, OR 97214	Project Manager: Jeff Jackman	10/20/15 12:07

Notes and Definitions

Qualifiers:

C-07	Extract has undergone Sulfuric Acid Cleanup by EPA 3665A, Sulfur Cleanup by EPA 3660B, and Florisil Cleanup by EPA 3620B in order to minimize matrix interference.
Q-38	Oven outside of control limits during drying step.
S-03	Reextraction and analysis, or analysis of laboratory duplicate, confirms surrogate failure due to sample matrix effect.

Notes and Conventions:

DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis. Results listed as 'wet' or without 'dry'designation are not dry weight corrected.
RPD	Relative Percent Difference
MDL	If MDL is not listed, data has been evaluated to the Method Reporting Limit only.
WMSC	Water Miscible Solvent Correction has been applied to Results and MRLs for volatiles soil samples per EPA 8000C.
Batch QC	Unless specifically requested, this report contains only results for Batch QC derived from client samples included in this report. All analyses were performed with the appropriate Batch QC (including Sample Duplicates, Matrix Spikes and/or Matrix Spike Duplicates) in order to meet or exceed method and regulatory requirements. Any exceptions to this will be qualified in this report. Complete Batch QC results are available upon request. In cases where there is insufficient sample provided for Sample Duplicates and/or Matrix Spikes, a Lab Control Sample Duplicate (LCS Dup) is analyzed to demonstrate accuracy and precision of the extraction and analysis.
Blank Policy	Apex assesses blank data for potential high bias down to a level equal to ½ the method reporting limit (MRL), except for conventional chemistry and HCID analyses which are assessed only to the MRL. Sample results flagged with a B or B-02 qualifier are potentially biased high if they are less than ten times the level found in the blank for inorganic analyses or less than five times the level found in the blank for organic analyses. For accurate comparison of volatile results to the level found in the blank; water sample results should be divided by the dilution factor, and soil sample results should be divided by 1/50 of the sample dilution to account for the sample prep factor. Results qualified as reported below the MRL may include a potential high bias if associated with a B or B-02 qualified blank. B and B-02 qualifications are not applied to J qualified results reported below the MRL.
---	QC results are not applicable. For example, % Recoveries for Blanks and Duplicates, % RPD for Blanks, Blank Spikes and Matrix Spikes, etc.
***	Used to indicate a possible discrepancy with the Sample and Sample Duplicate results when the %RPD is not available. In this case, either the Sample or the Sample Duplicate has a reportable result for this analyte, while the other is Non Detect (ND).

Portland, OR 97214	Project Manager: Jeff Jackman	10/28/15 16:16

Notes and Definitions

Qualifiers:

C-07	Extract has undergone Sulfuric Acid Cleanup by EPA 3665A, Sulfur Cleanup by EPA 3660B, and Florisil Cleanup by EPA 3620B in order to minimize matrix interference.
P-09	Due to weathering and/or the presence of an unknown mixture of PCB Congeners, the pattern does not match the standard used for calibration. Results are Estimated and based on the closest matching Aroclor.
Q-38	Oven outside of control limits during drying step.
R-02	The Reporting Limit for this analyte has been raised to account for interference from coeluting organic compounds present in the sample.

Notes and Conventions:

DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis. Results listed as 'wet' or without 'dry'designation are not dry weight corrected.
RPD	Relative Percent Difference
MDL	If MDL is not listed, data has been evaluated to the Method Reporting Limit only.
WMSC	Water Miscible Solvent Correction has been applied to Results and MRLs for volatiles soil samples per EPA 8000C.
Batch QC	Unless specifically requested, this report contains only results for Batch QC derived from client samples included in this report. All analyses were performed with the appropriate Batch QC (including Sample Duplicates, Matrix Spikes and/or Matrix Spike Duplicates) in order to meet or exceed method and regulatory requirements. Any exceptions to this will be qualified in this report. Complete Batch QC results are available upon request. In cases where there is insufficient sample provided for Sample Duplicates and/or Matrix Spikes, a Lab Control Sample Duplicate (LCS Dup) is analyzed to demonstrate accuracy and precision of the extraction and analysis.
Blank Policy	Apex assesses blank data for potential high bias down to a level equal to ½ the method reporting limit (MRL), except for conventional chemistry and HCID analyses which are assessed only to the MRL. Sample results flagged with a B or B-02 qualifier are potentially biased high if they are less than ten times the level found in the blank for inorganic analyses or less than five times the level found in the blank for organic analyses. For accurate comparison of volatile results to the level found in the blank; water sample results should be divided by the dilution factor, and soil sample results should be divided by 1/50 of the sample dilution to account for the sample prep factor. Results qualified as reported below the MRL may include a potential high bias if associated with a B or B-02 qualified blank. B and B-02 qualifications are not applied to J qualified results reported below the MRL.
---	QC results are not applicable. For example, % Recoveries for Blanks and Duplicates, % RPD for Blanks, Blank Spikes and Matrix Spikes, etc.
***	Used to indicate a possible discrepancy with the Sample and Sample Duplicate results when the %RPD is not available. In this case, either the Sample or the Sample Duplicate has a reportable result for this analyte, while the other is Non Detect (ND).

Report Narrative

Method: NWTHP-Dx **Report No.** 86384

Client: Point Source Solutions **Date:** 7/26/2016

Sample Condition

13 Sample(s) were analyzed for NWTPH-Dx. Sample(s)were received in acceptable condition

Sample Temperature

Sample(s) arrived within acceptable temperature range

Sample Hold time

Sample(s) were analyzed within hold time

Initial Calibration

All criteria were within acceptable limits

Continuing Calibration Check (CCV)

All criteria were within method limits

Method Blank

Method Blank meets method limit

Laboratory Control Sample (LCS)

All criteria were within method limits

Duplicate Sample

All criteria were within method limits

Matrix Spike

All criteria were within method limits

Matrix Spike Duplicate

No Matrix Spike Duplicate was run on this batch

Non-Conformance

No non-conformances were associated with this request except noticed below

PAH LABORATORY REPORT

Point Source Solutions
10445 SW Canyon Rd Suite 115
Portland, OR 97214

PROJECT NAME:	400 Washington St	**C.O.C. NUMBER:**	86384
SITE LOCATION:	400 Washington St	**REPORT DATE:**	7/29/16
PROJECT NUMBER:	WA 150806 - 1A	**EXTRACT. DATE:**	7/26/16
RUN DATE:	7/28/16	**ACQ. ON:**	28Jul2016 2:15pm
FIELD ID:	SE1-S1-15	**LAB ID:**	K6967

Analytical Method: EPA 8270-SIM **Preparation Method: EPA 3545A**
Analyte: Polynuclear Aromatic Hydrocarbon (PAH's) in Soil (calculated on a dry-weight basis)

Compound	Sample (mg/Kg)	Quant. Limit (mg/Kg)	Qualifier	Dilution
Naphthalene	ND	0.05		1
Acenaphthylene	ND	0.1		1
Acenaphthene	ND	0.1		1
Fluorene	ND	0.1		1
Phenanthrene	ND	0.1		1
Anthracene	ND	0.1		1
Fluoranthene	ND	0.1		1
Pyrene	ND	0.1		1
Benzo(a)anthracene	ND	0.1		1
Chrysene	ND	0.1		1
Benzo(b,k)Fluoranthene	ND	0.2		1
Benzo(a)pyrene	ND	0.1		1
Indeno(1,2,3-cd)pyrene	ND	0.1		1
Dibenzo(a,h)anthracene	ND	0.1		1
Benzo(ghi)perylene	ND	0.1		1

Surrogate:	Percent Recovery
2-Fluorobiphenyl	**109**
p-Terphenyl-d14	**147**

Client: Point Source Solutions **Date:** 7/28/2016

Sample Condition
Sample was analyzed for PAH. Sample was received in acceptable condition

Sample Temperature
Sample arrived within acceptable temperature range

Sample Hold time
Sample was analyzed within Hold Time

Initial Calibration
All criteria were within acceptable limits

Continuing Calibration Check (CCV)
All criteria were within method limits except those qualified in the body of the Report

Method Blank
Method Blank meets method limits except those qualified in the body of the Report

Laboratory Control Sample (LCS)
All criteria were within method limits except those qualified in the body of the Report

Duplicate Sample
There was no duplicate run with this sample

Matrix Spike
All Spikes were within limits
All Spike Duplicates were within limits

Matrix Spike Duplicate (RPD)
Matrix Spike Duplicate were within limits

Non-Conformance
No non-conformances were associated with this request except noticed below

Report Narrative

Method: 8260
Client: Point Source Solutions

Report No. 86384
Date: 8/1/2016

Sample Condition
Sample was analyzed for 8260. Sample was received in acceptable condition

Sample Temperature
Sample(s) arrived within acceptable temperature range

Sample Hold time
Sample was analyzed within hold time

Initial Calibration
All criteria were within acceptable limits

Continuing Calibration Check (CCV)
All criteria were within method limts. Any exceptions are qualified in the body of the report

Method Blank
Method Blank meets method limt. Any exceptions are qualified in the body of the report

Laboratory Control Sample (LCS)
All criteria were within method limts, Any exceptions are qualified in the body of the report

Duplicate Sample
No Duplicate was run on this batch

Matrix Spike
1compounds of Matrix Spike were outside method limts as flagged in the MS QC report

Matrix Spike Duplicate
All criteria were within method limts

Non-Conformance
No non-conformances were associated with this request except noticed below

8260 Qualifiers

h - CCV fails this compound high, result should be considered an estimate but ND is not invalidated
l - LCS fails this compound high, result is not invalidated

Sample Condition Check List

Customer Name : paint source 86384 — COC # : 86384

Method of Delivery: courier (client) other _____

Type of ice: (Ice) Blue None — Cooler Temperatures 2.5

Matrix : (Soil) Water Other_____

	Yes	No	NA	Comments
Relinquish signed on Chain of Custody.	/			*
Received by signed on Chain of Custody.	/			*
Chain of Custody filled out.	/			*
Were samples Arrived within Hold Time.	/			*
Rush Trun Around Time Requested. *If yes, how many days* ____	24			*
Temperatures measured and written in correct place on COC.	/			*
Correct containers used.	/			*
Sufficient Volume.	/			*
ID on COC and Sample labels match.	/			*
Duplicate jars and vials labeled with a, b, c, d etc.	24			*
All tests logged in checked against the COC.	/			*
The COC scanned into the main office computer.	/			*

FOR WATER SAMPLES:

Trip Blank: Yes No Waiver on file — Submitted by: _____

	Yes	No	Comments
Was sufficient volume provided for analysis.			*
Was sufficient volume provided for QC samples (at least two).			*
HCL Preserved vials.			*
HCL LOT Number: _____			
Were duplicate jars and vials labeled with a, b, c, d etc.			*
Headspace in VOA Vials (>6mm).			*

Client Notification/Resolution: _____

RE: General 2016 / [none]

Enclosed are the results of analyses for work order A6G1051, which was received by the laboratory on 7/28/2016 at 1:45:00PM.

Thank you for using Apex Labs. We appreciate your business and strive to provide the highest quality services to the environmental industry.

If you have any questions concerning this report or the services we offer, please feel free to contact me by email at: DAuvil@apex-labs.com, or by phone at 503-718-2323.

Notes and Definitions

Qualifiers:

C-07	Extract has undergone Sulfuric Acid Cleanup by EPA 3665A, Sulfur Cleanup by EPA 3660B, and Florisil Cleanup by EPA 3620B in order to minimize matrix interference.

Notes and Conventions:

DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis. Results listed as 'wet' or without 'dry'designation are not dry weight corrected.
RPD	Relative Percent Difference
MDL	If MDL is not listed, data has been evaluated to the Method Reporting Limit only.
WMSC	Water Miscible Solvent Correction has been applied to Results and MRLs for volatiles soil samples per EPA 8000C.
Batch QC	Unless specifically requested, this report contains only results for Batch QC derived from client samples included in this report. All analyses were performed with the appropriate Batch QC (including Sample Duplicates, Matrix Spikes and/or Matrix Spike Duplicates) in order to meet or exceed method and regulatory requirements. Any exceptions to this will be qualified in this report. Complete Batch QC results are available upon request. In cases where there is insufficient sample provided for Sample Duplicates and/or Matrix Spikes, a Lab Control Sample Duplicate (LCS Dup) is analyzed to demonstrate accuracy and precision of the extraction and analysis.
Blank Policy	Apex assesses blank data for potential high bias down to a level equal to ½ the method reporting limit (MRL), except for conventional chemistry and HCID analyses which are assessed only to the MRL. Sample results flagged with a B or B-02 qualifier are potentially biased high if they are less than ten times the level found in the blank for inorganic analyses or less than five times the level found in the blank for organic analyses. For accurate comparison of volatile results to the level found in the blank; water sample results should be divided by the dilution factor, and soil sample results should be divided by 1/50 of the sample dilution to account for the sample prep factor. Results qualified as reported below the MRL may include a potential high bias if associated with a B or B-02 qualified blank. B and B-02 qualifications are not applied to J qualified results reported below the MRL.
---	QC results are not applicable. For example, % Recoveries for Blanks and Duplicates, % RPD for Blanks, Blank Spikes and Matrix Spikes, etc.
***	Used to indicate a possible discrepancy with the Sample and Sample Duplicate results when the %RPD is not available. In this case, either the Sample or the Sample Duplicate has a reportable result for this analyte, while the other is Non Detect (ND).

Re: WA150806-1A

Dear Point Source Solutions

Enclosed are the results of analysis for samples received by the laboratory on 7/27/2016
The results related only to the samples included in this report.
The project was assigned a report number of 86387

If you have any questions concerning this report, please feel free to contact us.

Sincerely,

C.Y Chan

CY Chan
QA Officer

Report Narrative

Method: 8260
Client: Point Source Solutions

Report No. 86387
Date: 8/1/2016

Sample Condition
Sample was analyzed for 8260. Sample was received in acceptable condition

Sample Temperature
Sample(s) arrived within acceptable temperature range

Sample Hold time
Sample was analyzed within hold time

Initial Calibration
All criteria were within acceptable limits

Continuing Calibration Check (CCV)
All criteria were within method limts. Any exceptions are qualified in the body of the report

Method Blank
Method Blank meets method limt. Any exceptions are qualified in the body of the report

Laboratory Control Sample (LCS)
All criteria were within method limts, Any exceptions are qualified in the body of the report

Duplicate Sample
No Duplicate was run on this batch

Matrix Spike
1compounds of Matrix Spike were outside method limts as flagged in the MS QC report

Matrix Spike Duplicate
All criteria were within method limts

Non-Conformance
No non-conformances were associated with this request except noticed below

8260 Qualifiers

h - CCV fails this compound high, result should be considered an estimate but ND is not invalidated
l - LCS fails this compound high, result is not invalidated

Notes and Definitions

Qualifiers:

C-07	Extract has undergone Sulfuric Acid Cleanup by EPA 3665A, Sulfur Cleanup by EPA 3660B, and Florisil Cleanup by EPA 3620B in order to minimize matrix interference.

Notes and Conventions:

DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis. Results listed as 'wet' or without 'dry'designation are not dry weight corrected.
RPD	Relative Percent Difference
MDL	If MDL is not listed, data has been evaluated to the Method Reporting Limit only.
WMSC	Water Miscible Solvent Correction has been applied to Results and MRLs for volatiles soil samples per EPA 8000C.
Batch QC	Unless specifically requested, this report contains only results for Batch QC derived from client samples included in this report. All analyses were performed with the appropriate Batch QC (including Sample Duplicates, Matrix Spikes and/or Matrix Spike Duplicates) in order to meet or exceed method and regulatory requirements. Any exceptions to this will be qualified in this report. Complete Batch QC results are available upon request. In cases where there is insufficient sample provided for Sample Duplicates and/or Matrix Spikes, a Lab Control Sample Duplicate (LCS Dup) is analyzed to demonstrate accuracy and precision of the extraction and analysis.
Blank Policy	Apex assesses blank data for potential high bias down to a level equal to ½ the method reporting limit (MRL), except for conventional chemistry and HCID analyses which are assessed only to the MRL. Sample results flagged with a B or B-02 qualifier are potentially biased high if they are less than ten times the level found in the blank for inorganic analyses or less than five times the level found in the blank for organic analyses. For accurate comparison of volatile results to the level found in the blank; water sample results should be divided by the dilution factor, and soil sample results should be divided by 1/50 of the sample dilution to account for the sample prep factor. Results qualified as reported below the MRL may include a potential high bias if associated with a B or B-02 qualified blank. B and B-02 qualifications are not applied to J qualified results reported below the MRL.
---	QC results are not applicable. For example, % Recoveries for Blanks and Duplicates, % RPD for Blanks, Blank Spikes and Matrix Spikes, etc.
***	Used to indicate a possible discrepancy with the Sample and Sample Duplicate results when the %RPD is not available. In this case, either the Sample or the Sample Duplicate has a reportable result for this analyte, while the other is Non Detect (ND).

Re: WA150806-1A

Dear Point Source Solutions

Enclosed are the results of analysis for samples received by the laboratory on 7/28/2016
The results related only to the samples included in this report.
The project was assigned a report number of 86392

If you have any questions concerning this report, please feel free to contact us.

Sincerely,

C.Y Chan

CY Chan
QA Officer

Report Narrative

Method: NWTHP-Dx **Report No.** 86392

Client: Point Source Solutions **Date:** 7/28/2016

Sample Condition

2 Sample(s) were analyzed for NWTPH-Dx. Sample(s)were received in acceptable condition

Sample Temperature

Sample(s) arrived within acceptable temperature range

Sample Hold time

Sample(s) were analyzed within hold time

Initial Calibration

All criteria were within acceptable limits

Continuing Calibration Check (CCV)

All criteria were within method limits

Method Blank

Method Blank meets method limit

Laboratory Control Sample (LCS)

All criteria were within method limits

Duplicate Sample

All criteria were within method limits

Matrix Spike

All criteria were within method limits

Matrix Spike Duplicate

No Matrix Spike Duplicate was run on this batch

Non-Conformance

No non-conformances were associated with this request except noticed below

Appendix A. Geophysical Survey Methods

Introduction

Pacific Geophysics used a Geometrics G-858 recording magnetometer at two locations near the intersection of W 4th Street and Washington Street in Vancouver, Washington, for Point Source Solutions. The purpose of the survey was to detect possible underground storage tanks (USTs) related to buildings that formerly occupied one area, and to detect possible gasoline storage tanks related to a former gasoline station at the other area. In addition, ground penetrating radar (GPR) was used to scan the subsurface at one location for a disturbed soil zone that could represent a UST excavation, scan one area for a possible dry well, clear a proposed boring location near a possible drywell and clear borings near several decommissioned hydraulic hoists in an automobile garage.

No USTs were detected as a result of the surveys. Two possible disturbed soil zones were found and marked. Nine borings were cleared.

This report includes descriptions of the site, the scope of work, the equipment and methodology and the results of the survey.

Site Description

Figure 1 is an Index Map that shows the location of the two Sites. Two large buildings occupied the eastern half of the North Area. The former gasoline station occupied the SE corner of the building located in the South Area. The sidewalks along the properties of interest were included in the fieldwork.

Surface objects created magnetic interference that limited the effectiveness of all the metal-detecting instruments. These objects included the buildings, yard lights and chain-link fences surrounding the parking lots, cars parked along the sidewalks, metal signs, dumpsters, a large storage trailer, etc. The magnetometer data were unusable within about 5 feet of all metallic surface objects.

Scope of Work

The goal of the survey was to detect possible USTs on the two Sites, to detect possible UST excavations at one location, to scan one area for possible drywells, and to clear several proposed boring locations.

Jeff Mann and Nikos Tzetos of Pacific Geophysics conducted the survey for Mr. Jeff Jackman of Point Source Solutions (PSS) on September 14 - 15, 2015. This report was written by Jeff Mann, reviewed by Nikos Tzetos and emailed to Mr. Jeff Jackman on September 22, 2015.

Geophysical Equipment and Survey Procedures

General Procedures:

A magnetometer is the first instrument used to investigate a site for subsurface ferrous metallic objects because it enables the operator to rapidly scan the subsurface. Data are collected across an accurately measured survey grid established on the site. For larger areas, where it would be difficult to set up an accurate survey grid, the magnetometer can be coupled to a GPS antenna.

Upon completing the data acquisition phase of the survey, a contour map of the earth's local magnetic field is produced. Small, hand-held metal detectors are then used to more thoroughly investigate the magnetic anomalies detected with the magnetometer. These instruments are excellent at detecting and characterizing buried metal objects; however, they do not record data, and are not adequate to survey large areas.

Ground Penetrating Radar (GPR) is usually the last method used to investigate a site for buried metallic objects. The shape of radar reflections produced by buried objects may assist in the interpretation of magnetic anomalies.

Magnetic Survey:

At this site, a Geometrics G-858-G Portable Cesium Magnetometer was used to acquire the magnetic data. Magnetic data were collected along an orthogonal survey grid established over the survey area with measuring tapes. For most UST or pit surveys a line spacing of 5-feet is used. Data points along lines are spaced about 1-foot apart at normal walking speed. Data collected along sidewalks are usually spaced 2 ½ feet apart.

A colored contour map showing the earth's local magnetic field was created in the field. Magnetic anomalies higher in amplitude than the normal local magnetic background are shown in red, and are usually found over areas where ferrous objects are located below the sensor. The objects may be surface objects such as manholes or other surface features, or buried objects of interest, such as USTs, drums, pipes and debris. Magnetic anomalies at or below the amplitude of the local magnetic field are shown in blue, and are caused by ferrous objects located above the sensor, such as buildings, poles, chain-link fences and other surface objects.

Surface objects including buildings, cars, and fences can produce significant magnetic interference that can conceal buried objects of interest.

Hand-held instruments:

An Aqua-Tronics A6 Tracer and a Schonstedt GA92XTd magnetic gradiometer are used to locate and investigate the anomalies detected by the magnetometer. These instruments can pinpoint the peaks and troughs of the anomalies, and in many cases determine if an object is linear (pipe or utility) or three-dimensional (UST). Because they are small, they may be used to scan areas inaccessible to the recording magnetometer. Neither records data.

The transmitter unit of a Radio Detection RD8000 PDL pipe and cable detector may be used to electrically charge an accessible metal pipe or utility. The charged object can then be "traced" using the receiver unit. The receiver can also detect some metallic features indirectly, using the system's "radio" function.

Ground Penetrating Radar:

Following the hand-held instrument survey, a GSSI SIR-2000 GPR system coupled to a 270 or 400 MHz antenna may be used to investigate suspicious magnetic anomalies. Radar reflections across the anomalies may give clues to the size and shape of the buried metallic objects producing them. Objects themselves are not actually seen. Under some conditions, a 900 MHz antenna may be used to investigate shallow features and small pipes. This antenna has greater resolution but less power so it cannot penetrate to depths of more than 2 or 3 feet. Because of its smaller aperture the signal may be able to pass between strands of rebar depending on their spacing.

The collection of radar data is very time consuming and the data may be ambiguous; therefore, GPR is not a cost-effective method to "blindly" scan a site for buried metallic objects. Radar is, however, one of the only methods capable of detecting non-metallic features, including PVC and clay pipes, septic tanks, drywells, trenches and excavations.

GPR data may be collected on a grid when searching for non-conductive features like UST pits or pipes.

GPR is used in borehole clearance surveys: parallel traverses in orthogonal directions are taken and the profiles are inspected in the field. Boreholes may be moved to clear locations, based on the interpretation of the radar data.

Additional information regarding these instruments, methods, surveys and limitations with references can be found in the Appendix.

Results

The two figures that follow were contoured using a contour interval of 250 nT. Blue contours are generally caused by ferrous objects situated above the magnetometer sensor. Red contours are produced by ferrous objects below the sensor, including surface features and buried objects. USTs produce red-colored contours.

North Area - Figure 2 shows the magnetic data collected across the North Area. Six magnetic anomalies were investigated using a Schonstedt Magnetic Gradiometer and an AquaTronics Tracer metal detector.

Anomalies A and B appeared to be caused by small, non-3D objects. Anomalies C and D are probably caused by the chain-link fence and sections of reinforced concrete sidewalk. Anomaly E is comprised of 3 individual points all in a line. They may be related to the wall of one of the former buildings. Anomaly F is located near a possible drywell. The peak of the anomaly is several feet south of a manhole cover. A small "bump" in the asphalt coincides with the anomaly. GPR data were collected across the anomaly but no recognizable objects were detected. The object could be a cut-off fence post.

A proposed boring location was cleared several feet south of the manhole cover. It could not be determined if the manhole cover was for a city sewer or drywell. No obvious outflow pipes were visible.

South Area – Figure 3 shows the magnetic data collected at the South Area. A former gasoline station was located at the SE corner of the present building. Magnetic data were collected part way into the street near the former gas station. No evidence of a gasoline tank or the gas station was seen.

All of the magnetic anomalies in this area can be attributed to visible surface features including the building, a chain-link fence, storage trailer, boat and trailer, metal poles, etc. No USTs were detected.

Three circular metal plates seen on the surface in the parking lot north of the building covered buried water valves used for cleaning vehicles. The area near the valves was uneven and depressed. Reportedly this area contained at one time a small historic dump site. GPR data were collected across the area west of the three valves in an effort to detect a possible drywell used to collect wash water. No drywell was detected; however, the area appeared to be relatively more disturbed than the surrounding area. The west edge of the disturbed zone could not be determined because of cars parked along that side of the parking lot.

GPR was also used to scan the subsurface under the sidewalk south of the building, near the former gasoline station, and also where access was available inside the building adjacent to that sidewalk. Access was limited to several narrow aisles.

A relatively more disturbed soil zone was seen under the E-W sidewalk. This area was cleared of underground obstructions.

Hoists – GPR and an RD8000PDL pipe and cable detector were used to clear 9 proposed boring locations inside the automobile garage located in the western half of the building occupying the South Area. The locations were near decommissioned hydraulic hoists. One hole was located near a former sump.

Conclusion

No USTs were detected at either location.

A disturbed soil zone was found under the uneven, depressed area north of the building in the South Area. No obvious drywell was seen in the radar data. A second disturbed soil zone was detected under the sidewalk near the former gasoline station.

Nine proposed borings located near decommissioned hydraulic hoists were cleared of underground obstructions using metal detectors and GPR.

Limitations

The conclusions presented in this report were based upon widely accepted geophysical principles, methods and equipment. This survey was conducted with limited knowledge of the site, the site history and the subsurface conditions.

The goal of near-surface geophysics is to provide a rapid means of characterizing the subsurface using non-intrusive methods. Conclusions based upon these methods are generally reliable; however, due to the inherent ambiguity of the methods, no single

interpretation of the data can be made. As an example, rocks and roots produce radar reflections that may appear the same as pipes and tanks.

Under reasonable site conditions, geophysical surveys are good at detecting changes in the subsurface caused by manmade objects or changes in subsurface conditions, but they are poor at identifying those objects or subsurface conditions.

Objects of interest are not always detectable due to surface and subsurface conditions. The deeper an object is buried, the more difficult it is to detect, and the less accurately it can be located.

The only way to see an object is to physically expose it.

Appendix A. Geophysical Survey Methods

Small disturbances in the Earth's local magnetic field are called "magnetic anomalies". These may be caused by naturally occurring features such as metallic mineral ore bodies, or from manmade features such as metal buildings, vehicles, fences, and underground storage tanks. The magnetometer only detects changes produced by ***ferrous*** objects. Aluminum and brass are non-ferrous metals and cannot be detected using a magnetometer.

A magnetometer is an electronic instrument designed to detect small changes in the Earth's local magnetic field. Over the years, different technologies have been used in magnetometers. The Geometrics G-858 Portable Cesium Magnetometer used to collect magnetic data for Pacific Geophysics uses one of the most recent methods to detect magnetic anomalies. A detailed discussion describing the method this unit uses is available at Geometrics.com.

This magnetometer enables the operator to collect data rapidly and continuously rather than the older instruments that collected data at discreet points only. The G-858 is carried by hand across the site. The sensor is carried at waist level. Typically, individual data points collected at normal walking speed are about 6" apart along survey lines usually 5 feet apart, depending on the dimensions of the target objects.

It is critical to know the exact location of each data point so that if an anomaly is detected it can be accurately plotted on a magnetic contour map. At most small sites, data are collected along straight, parallel survey lines set up on the site before the data collection stage begins. For very large, complex sites, the G-858 can be connected to a Global Positioning System (GPS) antenna which allows the operator to collect accurately located data without establishing a survey grid. With GPS, data are collected and positioned wherever the operator walks. A limitation using GPS is that the GPS antenna must have line of sight with the GPS satellites. Data can be mislocated if the GPS antenna is under trees or near tall buildings.

Data are stored in the unit's memory for later downloading and processing. A magnetic contour map of the data is plotted in the field. Geographical features are plotted on the map. Magnetic anomalies appearing to be caused by objects of interest are then investigated on the site using several small hand-held metal detectors. If an object appears to be a possible object of interest, it may be investigated with ground-penetrating radar (GPR).

Magnetic contour maps may be printed in color in order to highlight anomalies caused by ferrous objects located under the magnetic sensor. Usually, ferrous objects situated below the sensor produce magnetic "highs" and anomalies located above the sensor produce magnetic "lows". Magnetic highs are of interest to the operator since most objects of interest are located underground.

Depending on the orientation, shape and mass of a metallic object, a high/low pair of magnetic anomalies may be present. In the northern hemisphere the magnetic low is located north of the object and the magnetic high toward the south. The object producing the anomaly is located part way between the high and the low anomalies.

Magnetometer surveys have limitations. Magnetometers only detect objects made of ferrous (iron-containing) metal. Large, ferrous objects (buildings, cars, fences, etc.)

within several feet of the magnetometer create interference that may hide the anomaly produced by a nearby object of interest.

Ground Penetrating Radar

A Geophysical Survey Systems, Inc. (GSSI) SIR-2000 GPR system coupled to a 270-MHz GSSI antenna is used to obtain the radar data for our surveys.

The 270-MHz radar antenna used for the surveys is designed to transmit and receive electromagnetic energy. EM energy is transmitted into the material the antenna passes over. A portion of that energy is reflected back to the antenna and amplified. Reflections are displayed in real-time in a continuous cross section. Reflections are produced where there is a sufficient electrical contrast between two materials. Changes in the electrical properties (namely the dielectric constant) that produce radar reflections include the moisture content, porosity, mineralogy, and texture of the material. Metallic objects of interest exhibit a strong electrical contrast with the surrounding material and thus produce relatively strong reflections. Non-metallic objects of interest (septic tanks, cesspools, dry wells, PVC and clay tile pipes) are not always good reflectors.

Radar data are ambiguous. It can be difficult to distinguish the reflection produced by an object of interest from the reflection caused by some natural feature. Rocks or tree roots have reflections that appear similar to reflections from pipes. In concrete investigations reflections produced by metal rebar look exactly like those from electrical conduit or post-tension cables. Objects with too small an electrical contrast may produce no reflections at all and may be missed.

In addition to interpreting ambiguous data, radar has several limitations that cannot be controlled by the operator. The radar signal is severely attenuated by electrically conductive material, including wet, clay-rich soil and reinforced concrete. The quality of the data is affected by the surface conditions over which the antenna is pulled. Ideally the antenna should rest firmly on a smooth surface. Rough terrain and tall grass reduce the quality of radar data.

It is the job of an experienced interpreter to examine the GPR profiles and deduce if reflections are from objects of interest. A GPR interpreter cannot see underground, but can only interpret reflections based on experience.

The only way to truly identify an object is to excavate.

Hand-held Metal detectors

Two small, non-recording metal detectors are used to locate suspect magnetic anomalies detected using the G-858 Magnetometer in order to determine the likely cause of the anomaly. First, the magnetic contour map and a Schonstedt Magnetic Gradiometer are used to locate the center of the magnetic anomalies.

Once the anomaly is located an Aqua-Tronics Tracer is used to determine if the object producing the anomaly is a possible object of interest. Most anomalies are at least in part produced by features observed on the ground surface.

Schonstedt Magnetic Gradiometer: This magnetometer has two magnetic sensors separated vertically by 10”. The magnetic field surrounding a ferrous object is strongest near the object and decreases rapidly as the distance increases. If the

magnitude measured by the sensor located in the tip of the Schonstedt is very high, and the magnetic field measured by the sensor located farther up the shaft of the Schonstedt is low, there is a large vertical magnetic gradient and the instrument responds with a loud whistle indicating the object is near the surface. If there is a small difference in the magnitudes measured by the two sensors, the object is deeper. The instrument responds with a softer tone. A discussion of this instrument is available at Schonstedt.com.

Aqua-Tronics A-6 Tracer: The Aqua-Tronics A-6 Tracer uses a different method of detecting metallic objects. This instrument measures the electrical conductivity of a metal object. It is capable of detecting any electrically conductive metal, including non-ferrous aluminum and brass. The Tracer is capable of detecting three-dimensional objects as well as pipes.

The Tracer consists of a transmitter coil and a receiver coil. In the absence of any electrically conductive material in the vicinity of the Tracer, the electromagnetic field around each coil is balanced.

Basically the electromagnetic field produced by the transmitter induces an electric current into the area surrounding the instrument. Nearby conductive objects distort the EM field. The balance between the two coils is disturbed and the instrument produces an audible tone and meter indication.

Only questions with a "Yes" response in Section D on the EZ Profile™ form (page 1) need to be answered here.

1. EPA Hazardous Waste
   a. Please list all USEPA listed and characteristic waste code numbers:

   b. Is the material subject to the Alternative Debris standards (40 CFR 268.45)? ❑ Yes ❑ No
   c. Is the material subject to the Alternative Soil standards (40 CFR 268.49)? → If Yes, complete question 4. ❑ Yes ❑ No
   d. Is the material exempt from Subpart CC Controls (40 CFR 264.1083)? ❑ Yes ❑ No
      → If Yes, please check **one** of the following:
      ❑ Waste meets LDR or treatment exemptions for organics (40 CFR 264.1082(c)(2) or (c)(4))
      ❑ Waste contains VOCs that average <500 ppmw (CFR 264.1082(c)(1)) – will require annual update.
2. State Hazardous Waste → Please list all state waste codes: _____
3. For material that is Treated, Delisted, or Excluded → Please indicate the category, below:
   ❑ Delisted Hazardous Waste ❑ Excluded Waste under 40 CFR 261.4 → Specify Exclusion: _____
   ❑ Treated Hazardous Waste Debris ❑ Treated Characteristic Hazardous Waste → If checked, complete question 4.
4. Underlying Hazardous Constituents → Please list all Underlying Hazardous Constituents:

PCB (0.038 mg/kg)

5. Industries regulated under Benzene NESHAP include petroleum refineries, chemical manufacturing plants, coke by-product recovery plants, and TSDFs.
   a. Are you a TSDF? → If yes, please complete Benzene NESHAP questionnaire. If not, continue. ❑ Yes ❑ No
   b. Does this material contain benzene? ❑ Yes ❑ No
      1. If yes, what is the flow weighted average concentration? _____ ppmw
   c. What is your facility's current total annual benzene quantity in Megagrams? ❑ <1 Mg ❑ 1–9.99 Mg ❑ ≥10 Mg
   d. Is this waste soil from a remediation? ❑ Yes ❑ No
      1. If yes, what is the benzene concentration in remediation waste? _____ ppmw
   e. Does the waste contain >10% water/moisture? ❑ Yes ❑ No
   f. Has material been treated to remove 99% of the benzene or to achieve <10 ppmw? ❑ Yes ❑ No
   g. Is material exempt from controls in accordance with 40 CFR 61.342? ❑ Yes ❑ No
      → If yes, specify exemption: _____
   h. Based on your knowledge of your waste and the BWON regulations, do you believe that this waste stream is subject to treatment and control requirements at an off-site TSDF? ❑ Yes ❑ No
6. 40 CFR 63 GGGGG → Does the material contain <500 ppmw VOHAPs at the point of determination? ❑ Yes ❑ No
7. CERCLA or State-Mandated clean up → Please submit the Record of Decision or other documentation with process information to assist others in the evaluation for proper disposal. A "Determination of Acceptability" may be needed for CERCLA wastes not going to a CERCLA approved facility.
8. NRC or state regulated radioactive or NORM Waste → Please identify Isotopes and pCi/g: _____

1.0 Purpose:

This Limited Subsurface Investigation was conducted in an effort to characterize site conditions with respect to potential historical petroleum releases at the Property addressed as 400 Washington Street (et al), Vancouver, Washington.

2.0 Background:

Point Source Solutions completed a Phase I Environmental Site Assessment on the Property in August 2015 (Project Number WA150806-1). Below is an excerpt from the Phase I report.

The following evidence of recognized environmental conditions as defined in ASTM Practice E 1527-13 was identified during the site reconnaissance.

- *The Property has a long history of automotive related use including repair, fueling, and wrecking. Features observed inside the main building include multiple former in-ground hydraulic hoist locations and a former sump that had been filled with concrete. Much of the floor surface could not be observed due to the presence of vehicles, equipment, and stored materials. This assessment has revealed no record of soil sampling associated with the decommissioning of hoists or sumps on the Property.*

- *The DOE files for the Property document the removal of two underground storage tanks from the Property. These are identified as a 300-gallon waste-oil tank removed in 1993 and a 2000-gallon gasoline tank removed in 1990. Documentation of soil sampling conducted during the decommissioning activities is limited. Based upon this lack of documentation, PNG Environmental conducted subsurface investigations in 1997 and 1998 in the vicinity of each of the former UST locations. PNG also advanced a single boring on a portion of the Property formerly occupied by a wrecking yard. No significant release was identified by PNG. While environmental risk associated with these two USTs appears to have been adequately addressed, a comprehensive investigation was not conducted to determine whether additional USTs were present on the Property. A 1949 Sanborn map depicts a gasoline station at the southeast corner of the central section of the Property. The USTs addressed in earlier investigations were not located in this area. Sanborn maps also indicate that the existing main building was previously heated with steam, and a boiler is depicted in the former St. Elmo Hotel building which previously occupied the north section of the Property. Point Source also observed an abandoned flue in the basement of the main building. This information may indicate the past or current presence of a heating oil UST. Neither of the previously identified USTs contained heating oil. Large portions of the central and south sections of the Property were previously occupied by auto wrecking operations. Only a single boring was advanced by PNG to address this past use. Several adjoining properties were previously occupied by service stations.*

- *DOE files indicate that automotive fluids were dumped into a catch basin connected to a drywell, and that the drywell also received discharge from a wash pad. The drywell was reported to have been removed along with several tons of impacted soils. Documentation of the cleanup efforts is minimal. Based upon photographs contained in the DOE file, however, this release and associated cleanup appears to be associated*

with a different property that was under the same ownership as the Property at that time. It appears that the information regarding the drywell was placed into the wrong file, and that this issue does not pertain to the Property.

3.0 Scope of Work:

At the request of Hurley Development, the following Scope of Work was completed:

- Conduct a geophysical survey of the Property;
- Request public utility location services for the work area;
- Provide soil boring notification to WADOE and pay applicable fees;
- Advance soil borings at former hoist and sump locations inside the existing repair shop;
- Advance a soil boring adjacent to the drywell on the central lot;
- Advance three soil borings in the sidewalk near the southeast corner of the existing repair shop (identified as a potential former UST area);
- Advance a soil boring in the existing auto repair shop storage yard (disturbed soil zone in the former vehicle wash area);
- Collect near-surface soil composite samples on the south lot (former auto wrecking yard);
- Collect a minimum of one soil sample from each boring;
- Submit all soil samples for TPH analysis;
- Order additional laboratory analysis if indicated by initial TPH results;
- Advance additional borings and collect additional samples if indicated by initial findings;
- Prepare a report documenting the findings.

4.0 Site Description:

The Property is located in Vancouver, Washington, and is identified as Clark County Tax Account Numbers 48320000, 48360000, 48370000, 48380000, 48390000, 48420000, 48430000, 48400000, 48455000, and 48460000 in the SW ¼ of Section 27, T2N, R1E totaling approximately 1.54 acres. The Property occupies portions of three separate city blocks. For the purposes of this report, parcel numbers 48320000, 48360000 and 48370000 are identified as the north section of the Property; parcel numbers 48380000, 48390000, 48420000 and are identified as the central section of the Property; and 48400000, 48455000 and 48460000 are identified as the south section of the Property. Addresses associated with the north section include 400 and 412 Washington Street, Vancouver, Washington. Addresses associated with the central section include 300 Washington Street and 210 W 3rd Street. No address has been assigned to any of the parcels on the south section of the Property. The Property is zoned City Center (CX) by the City of Vancouver.

The building on the north section of the Property is a single-story concrete block structure encompassing approximately 475 square-feet. Finishing materials include suspended ceiling panels and carpet. The structure was used for storage at the time of this

assessment. This section of the Property was surrounded by security fencing. The building on the central section of the Property consists of poured concrete and concrete block exterior walls on a concrete slab foundation. Portions of the exterior are coated with stucco. A mezzanine level apartment is present in the east part of the building, and a storage mezzanine is present in the west portion. The structure also contains a partial basement that is unfinished. The interior is divided into various automotive service areas, a woodworking shop, restrooms, offices, storage areas, and a paint booth. Finishing materials include carpet and vinyl flooring, suspended ceiling panels, acoustical ceiling tiles, wood paneling, and plaster. Natural gas suspended unit heaters were observed. An abandoned flue is present in the basement. An abandoned floor drain sump and several abandoned hydraulic hoists were observed in the auto service areas. The area to the north of the building is used as a fenced storage yard for vehicles and equipment. The south section of the Property consists of a paved parking lot with no structural development. The Property is served by public water and sewer.

According to a well log search conducted on the Washington Department of Ecology (WADOE) website, groundwater has been encountered at 10 to 28 feet below ground surface on nearby properties. The water-bearing units within the area are comprised of alluvium. No on-site water wells or springs were observed during the Property reconnaissance.

Based on a review of the Vancouver, Washington Quadrangle 7.5 minute series topographic map, groundwater flow in the Property vicinity is likely influenced by the Columbia River which is located approximately 600 feet mile south of the Property at its closest point. The Property does not overlie a sole source aquifer.

Soils encountered during this investigation include gravels and sands. Large voids and some evidence of construction debris were encountered in several of the borings.

Groundwater was not encountered to the extent of the exploration borings – 14.5 feet below ground surface.

5.0 Field Work:

On September 14 and 15, 2015 a geophysical survey of the Property was conducted by Pacific Geophysics. The purpose of the survey was to search for abandoned underground storage tanks (USTs), disturbed soil zones that may indicate past UST locations, drywells, and other automotive service related infrastructure, and to check boring locations for buried utilities and other obstructions. No abandoned USTs were identified. A disturbed soil zone was identified at a location consistent with the former service station. A disturbed soil zone was identified in the storage yard on the central parcel. According to on-site personnel, this area was previously excavated for archeological purposes. This area was also previously used as a wash area for new and used cars. One drywell was identified on the north section of the Property. Boring locations were cleared within the disturbed soil zones, adjacent to the drywell, and inside the automotive repair shop adjacent to the sump and each of the abandoned hoists. A copy of the geophysical survey is included in Appendix B.
On September 28 through September 30, 2015 Point Source advanced 14 borings on the Property and collected samples from each boring. An additional sample was collected from the sediment within the drywell.

- Borings SB1 through SB8 were advanced to a depth of 10 feet bgs adjacent to each of the abandoned hoists inside the auto shop.
- Boring SB9 was advanced to a depth of 5 feet adjacent to the sump inside the auto shop.
- Borings SB10 through SB12 were advanced to a depth of 12 feet within the disturbed soil zone believed to be the former location of gasoline station USTs.
- Boring SB13 was advanced to a depth of 12 feet within the disturbed soil zone in the former car washing area.
- Boring SB14 was advanced to a depth of 13 feet adjacent to the drywell
- A sediment sample was collected from near the bottom of the drywell at a depth of 9 feet.

A total of 14 discrete soil samples were collected from the borings at terminal depth and all were submitted for laboratory analysis. One drywell content sample was also submitted.

On October 2, 2015 two near surface soil composite samples were collected. These were collected from south section of the Property (former wrecking yard, current parking lot). This area was divided into two roughly equal parts (identified as Comp North and Comp South). Near surface soils were collected at eight evenly spaced sample points within each of the two areas. The material was then composited into a single sample for each area and submitted for laboratory analysis.

On October 26 and 27, 2015 eight additional borings were advanced in the vicinity of two of the abandoned hoists. These borings were placed around the two easternmost hoist systems to delineate the extent of petroleum impacted soils identified in earlier samples.

- Borings SB15 and SB17 were advanced to depths of 13 feet and 15.5 feet bgs immediately adjacent to borings SB1 and SB3 (petroleum impacted soils above MTCA Method A cleanup levels were identified in the samples from SB1 and SB3). The purpose of SB15 and SB17 was to delineate the vertical extent of the identified impact.

- Borings SB16 and SB18 through SB22 were advanced to depths of 12 to 14 feet approximately 8 feet to the north, south, east, and west of the borings where petroleum impact was identified. The purpose of these borings was to delineate the lateral extent of the identified impact.

A total of 12 discrete soil samples were collected from these borings and all were submitted for analysis

On November 6, 2015 one additional boring (SB23) was advanced to a depth of 12 feet bgs. This boring was placed approximately 2 feet south of boring SB18. SB18 was intended to define the southern extent of the impacted soil associated with the easternmost hoist system. Because the concentration of petroleum in the sample from SB18 was significantly higher than the cleanup level, an additional boring was necessary to define the southern extent. Due to the building footing, SB23 could not be placed more than 2 feet south of SB18.

One discrete soil sample was collected from a depth of 12 feet and was submitted for laboratory analysis.

Sample locations are identified on the Sample Location Diagrams identified as Figures 2 and 3.

6.0 Sample Methodology:

All samples from the soil borings were collected via direct-push Geoprobe tooling. Borings SB13 and SB14 were advanced by Point Source using a truck-mounted probe rig. Borings SB10 through SB12 were advanced by Soil Solutions using an electric jackhammer. These borings were advanced within the public right-of-way and required special bonding permitting specific to the City of Vancouver. The remaining borings were advanced by Point Source using an electric jackhammer. The sampling equipment was decontaminated via detergent and water followed by a water rinse after collection of each sample. A stainless steel trowel and stainless steel mixing bowl were used to collect the near surface composite samples. Soil samples were placed in laboratory provided 4-ounce jars with Teflon lined lids. Samples were chilled to approximately 4 degrees centigrade immediately after collection. A clean pair of disposable nitrile gloves was worn during the collection of each sample in order to prevent cross-contamination.

The samples collected during this investigation were each assigned a unique sample identification number. The first three characters in the sample identification number indicate the boring number (eg SB1). The following two characters indicate the media (soil or water) and order of samples within the boring (eg S1). The last characters indicate the depth, in feet below ground surface, at which the sample was collected.

A total of 28 discrete soil samples and two composite samples were submitted to Wy'East Environmental Sciences in Portland, Oregon. Analysis included NWTPH-HCID, TPH-Dx, TPH-Gx, PAHs (EPA Method 8270), VOCs (EPA Method 8260), and total cadmium, chromium, and lead. The sample with the highest concentration of TPH-Dx was also submitted to Apex Laboratories in Tigard, Oregon for PCB analysis.

The Chain of Custody form and laboratory results from this investigation are contained in Appendix A.

7.0 Sample Results:

Sample results are presented in the following table.

TABLE 1: TPH-HCID/Dx Soil Sample Results

Sample I.D.	Sample Depth (ft.)	TPH-HCID	TPH-Dx	TPH-Gx	PAHs	VOCs	PCBs	Cadmium	Chromium	Lead

Notes:
***Bromochloromethane detected at 0.029 mg/kg in SB1-S1-10, and at 0.073 in SB1-S2-10
ND=Not Detected above laboratory reporting limit
- =Not analyzed

8.0 Conclusions:

The following conclusions are based on the results of the Environmental Subsurface Investigation performed at 400 Washington Street (et al), Vancouver, Washington.

- This investigation has revealed concentrations of up to 18,000 mg/kg oil-range petroleum hydrocarbons in the subsurface soils adjacent to the two easternmost hoist systems on the Property. The WADOE MTCA Method A Cleanup level for this contaminant is 2,000 mg/kg. Based upon discussions with the laboratory chemist, the proximity to abandoned vehicle hoists, and lack of significant concentrations of constituents; the contamination appears to be limited to hydraulic oil.

- Lead was detected in two samples and is well below the MTCA Method A cleanup level.

- Bromochloromethane was also detected (concentrations up to 0.073 mg/kg) in two of the samples. This compound is not listed in MTCA Method A. Bromochloromethane was manufactured to be used in fire suppression systems. Its presence may be the result of an historic fire on the Property.

- PCBs were detected in one sample at a low concentration (0.038 mg/kg) which is well below the MTCA Method A cleanup level.

- Oil range petroleum hydrocarbons were detected in other areas of the Property, but all were detected at concentrations below the cleanup level, with the exception of the sample collected from the sediment inside the drywell. Oil was not detected in the sample collected from the boring adjacent to the drywell. The drywell content sample revealed a concentration of 2,200 mg/kg and this is not considered abnormal for a parking lot drywell.

Based upon the data collected during this investigation, the maximum vertical extent of soil with concentrations above the cleanup level is approximately 15 feet below grade. The estimated maximum lateral extent is less than 400 square feet. Based on these values, it is estimated that less than 250 cubic yards of soil impacted above the cleanup level is present beneath the building.

9.0 Recommendations:

Point Source recommends that the soils impacted at concentrations above the MTCA Method A Cleanup Level of 2,000 mg/kg oil range petroleum hydrocarbons be excavated and disposed at an approved facility. Confirmation samples should be collected from within the resulting excavation to ensure successful remediation. It should be noted that it may be possible to leave some of the impacted soil in place with input from WADOE under MTCA Method B. This option, however, would require further data collection and evaluation to calculate a site specific cleanup level subject to regulatory approval. The time requirements and costs to achieve regulatory approval for leaving soil in place above the MTCA Method A cleanup level are unknown at this time.

10.0 Limitations:

This Limited Subsurface Investigation for the Property addressed as 400 Washington Street (et al), Vancouver, Washington, is intended for the exclusive use of Hurley Development or entities specified by Hurley Development.

The conclusions contained within this report are based upon site conditions present at the time of this investigation.

Point Source Solutions has performed this investigation in accordance with applicable regulations and generally accepted practices of reputable environmental professionals. This report is based upon observations made directly by representatives of Point Source Solutions as well as information provided by others. Although we have no reason to believe that the information provided to us by others and subsequently included in the report is not accurate, we cannot be held responsible for inaccuracies that may have been reported to us.

Sample Condition

6 Sample(s) were analyzed for NWTPH-Dx. Sample(s)were received in acceptable condition

Sample Temperature

Sample(s) arrived within acceptable temperature range

Sample Hold time

Sample(s) were analyzed within hold time

Initial Calibration

All criteria were within acceptable limits

Continuing Calibration Check (CCV)

All criteria were within method limits

Method Blank

Method Blank meets method limit

Laboratory Control Sample (LCS)

All criteria were within method limits

Duplicate Sample

All Duplicates were within limits except: Duplicate Diesel of J1385, due to sample inhomogeneity.

Matrix Spike

All criteria were within method limits

Matrix Spike Duplicate

No Matrix Spike Duplicate was run on this batch

Non-Conformance

No non-conformances were associated with this request except noticed below

Report Narrative

Method: 8260
Client: Point Source Solutions

Report No. 85279
Date: 10/13/2015

Sample Condition
Sample was analyzed for 8260. Sample was received in acceptable condition

Sample Temperature
Sample(s) arrived within acceptable temperature range

Sample Hold time
Sample was analyzed within hold time

Initial Calibration
All criteria were within acceptable limits

Continuing Calibration Check (CCV)
All criteria were within method limts. Any exceptions are qualified in the body of the report

Method Blank
Method Blank meets method limt. Any exceptions are qualified in the body of the report

Laboratory Control Sample (LCS)
All criteria were within method limts, Any exceptions are qualified in the body of the report

Duplicate Sample
No Duplicate was run on this batch

Matrix Spike
All criteria were within method limts

Matrix Spike Duplicate
All criteria were within method limts

Non-Conformance
No non-conformances were associated with this request except noticed below
Sample jar was opened prior to 8260 analysis

8260 Qualifiers

Re: WA150806-1A

Dear Point Source Solutions

Enclosed are the results of analysis for samples received by the laboratory on 10/2/2015
The results related only to the samples included in this report.
The project was assigned a report number of 85288

If you have any questions concerning this report, please feel free to contact us.

Sincerely,

C.Y Chan

CY Chan
QA Officer

Re: 300 Washington St

Dear Point Source Solutions

Enclosed are the results of analysis for samples received by the laboratory on 10/26/2015
The results related only to the samples included in this report.
The project was assigned a report number of 85373

If you have any questions concerning this report, please feel free to contact us.

Sincerely,
C.Y. Chan

Notes and Definitions

Qualifiers:

C-07	Extract has undergone Sulfuric Acid Cleanup by EPA 3665A, Sulfur Cleanup by EPA 3660B, and Florisil Cleanup by EPA 3620B in order to minimize matrix interference.
Q-38	Oven outside of control limits during drying step.
S-03	Reextraction and analysis, or analysis of laboratory duplicate, confirms surrogate failure due to sample matrix effect.

Notes and Conventions:

DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis. Results listed as 'wet' or without 'dry'designation are not dry weight corrected.
RPD	Relative Percent Difference
MDL	If MDL is not listed, data has been evaluated to the Method Reporting Limit only.
WMSC	Water Miscible Solvent Correction has been applied to Results and MRLs for volatiles soil samples per EPA 8000C.
Batch QC	Unless specifically requested, this report contains only results for Batch QC derived from client samples included in this report. All analyses were performed with the appropriate Batch QC (including Sample Duplicates, Matrix Spikes and/or Matrix Spike Duplicates) in order to meet or exceed method and regulatory requirements. Any exceptions to this will be qualified in this report. Complete Batch QC results are available upon request. In cases where there is insufficient sample provided for Sample Duplicates and/or Matrix Spikes, a Lab Control Sample Duplicate (LCS Dup) is analyzed to demonstrate accuracy and precision of the extraction and analysis.
Blank Policy	Apex assesses blank data for potential high bias down to a level equal to ½ the method reporting limit (MRL), except for conventional chemistry and HCID analyses which are assessed only to the MRL. Sample results flagged with a B or B-02 qualifier are potentially biased high if they are less than ten times the level found in the blank for inorganic analyses or less than five times the level found in the blank for organic analyses. For accurate comparison of volatile results to the level found in the blank; water sample results should be divided by the dilution factor, and soil sample results should be divided by 1/50 of the sample dilution to account for the sample prep factor. Results qualified as reported below the MRL may include a potential high bias if associated with a B or B-02 qualified blank. B and B-02 qualifications are not applied to J qualified results reported below the MRL.
---	QC results are not applicable. For example, % Recoveries for Blanks and Duplicates, % RPD for Blanks, Blank Spikes and Matrix Spikes, etc.
***	Used to indicate a possible discrepancy with the Sample and Sample Duplicate results when the %RPD is not available. In this case, either the Sample or the Sample Duplicate has a reportable result for this analyte, while the other is Non Detect (ND).

Notes and Definitions

Qualifiers:

C-07	Extract has undergone Sulfuric Acid Cleanup by EPA 3665A, Sulfur Cleanup by EPA 3660B, and Florisil Cleanup by EPA 3620B in order to minimize matrix interference.
P-09	Due to weathering and/or the presence of an unknown mixture of PCB Congeners, the pattern does not match the standard used for calibration. Results are Estimated and based on the closest matching Aroclor.
Q-38	Oven outside of control limits during drying step.
R-02	The Reporting Limit for this analyte has been raised to account for interference from coeluting organic compounds present in the sample.

Notes and Conventions:

DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis. Results listed as 'wet' or without 'dry'designation are not dry weight corrected.
RPD	Relative Percent Difference
MDL	If MDL is not listed, data has been evaluated to the Method Reporting Limit only.
WMSC	Water Miscible Solvent Correction has been applied to Results and MRLs for volatiles soil samples per EPA 8000C.
Batch QC	Unless specifically requested, this report contains only results for Batch QC derived from client samples included in this report. All analyses were performed with the appropriate Batch QC (including Sample Duplicates, Matrix Spikes and/or Matrix Spike Duplicates) in order to meet or exceed method and regulatory requirements. Any exceptions to this will be qualified in this report. Complete Batch QC results are available upon request. In cases where there is insufficient sample provided for Sample Duplicates and/or Matrix Spikes, a Lab Control Sample Duplicate (LCS Dup) is analyzed to demonstrate accuracy and precision of the extraction and analysis.
Blank Policy	Apex assesses blank data for potential high bias down to a level equal to ½ the method reporting limit (MRL), except for conventional chemistry and HCID analyses which are assessed only to the MRL. Sample results flagged with a B or B-02 qualifier are potentially biased high if they are less than ten times the level found in the blank for inorganic analyses or less than five times the level found in the blank for organic analyses. For accurate comparison of volatile results to the level found in the blank; water sample results should be divided by the dilution factor, and soil sample results should be divided by 1/50 of the sample dilution to account for the sample prep factor. Results qualified as reported below the MRL may include a potential high bias if associated with a B or B-02 qualified blank. B and B-02 qualifications are not applied to J qualified results reported below the MRL.
---	QC results are not applicable. For example, % Recoveries for Blanks and Duplicates, % RPD for Blanks, Blank Spikes and Matrix Spikes, etc.
***	Used to indicate a possible discrepancy with the Sample and Sample Duplicate results when the %RPD is not available. In this case, either the Sample or the Sample Duplicate has a reportable result for this analyte, while the other is Non Detect (ND).

Appendix A. Geophysical Survey Methods

Introduction

Pacific Geophysics used a Geometrics G-858 recording magnetometer at two locations near the intersection of W 4th Street and Washington Street in Vancouver, Washington, for Point Source Solutions. The purpose of the survey was to detect possible underground storage tanks (USTs) related to buildings that formerly occupied one area, and to detect possible gasoline storage tanks related to a former gasoline station at the other area. In addition, ground penetrating radar (GPR) was used to scan the subsurface at one location for a disturbed soil zone that could represent a UST excavation, scan one area for a possible dry well, clear a proposed boring location near a possible drywell and clear borings near several decommissioned hydraulic hoists in an automobile garage.

No USTs were detected as a result of the surveys. Two possible disturbed soil zones were found and marked. Nine borings were cleared.

This report includes descriptions of the site, the scope of work, the equipment and methodology and the results of the survey.

Site Description

Figure 1 is an Index Map that shows the location of the two Sites. Two large buildings occupied the eastern half of the North Area. The former gasoline station occupied the SE corner of the building located in the South Area. The sidewalks along the properties of interest were included in the fieldwork.

Surface objects created magnetic interference that limited the effectiveness of all the metal-detecting instruments. These objects included the buildings, yard lights and chain-link fences surrounding the parking lots, cars parked along the sidewalks, metal signs, dumpsters, a large storage trailer, etc. The magnetometer data were unusable within about 5 feet of all metallic surface objects.

Scope of Work

The goal of the survey was to detect possible USTs on the two Sites, to detect possible UST excavations at one location, to scan one area for possible drywells, and to clear several proposed boring locations.

Jeff Mann and Nikos Tzetos of Pacific Geophysics conducted the survey for Mr. Jeff Jackman of Point Source Solutions (PSS) on September 14 - 15, 2015. This report was written by Jeff Mann, reviewed by Nikos Tzetos and emailed to Mr. Jeff Jackman on September 22, 2015.

Geophysical Equipment and Survey Procedures

General Procedures:

A magnetometer is the first instrument used to investigate a site for subsurface ferrous metallic objects because it enables the operator to rapidly scan the subsurface. Data are collected across an accurately measured survey grid established on the site. For larger areas, where it would be difficult to set up an accurate survey grid, the magnetometer can be coupled to a GPS antenna.

Upon completing the data acquisition phase of the survey, a contour map of the earth's local magnetic field is produced. Small, hand-held metal detectors are then used to more thoroughly investigate the magnetic anomalies detected with the magnetometer. These instruments are excellent at detecting and characterizing buried metal objects; however, they do not record data, and are not adequate to survey large areas.

Ground Penetrating Radar (GPR) is usually the last method used to investigate a site for buried metallic objects. The shape of radar reflections produced by buried objects may assist in the interpretation of magnetic anomalies.

Magnetic Survey:

At this site, a Geometrics G-858-G Portable Cesium Magnetometer was used to acquire the magnetic data. Magnetic data were collected along an orthogonal survey grid established over the survey area with measuring tapes. For most UST or pit surveys a line spacing of 5-feet is used. Data points along lines are spaced about 1-foot apart at normal walking speed. Data collected along sidewalks are usually spaced 2 ½ feet apart.

A colored contour map showing the earth's local magnetic field was created in the field. Magnetic anomalies higher in amplitude than the normal local magnetic background are shown in red, and are usually found over areas where ferrous objects are located below the sensor. The objects may be surface objects such as manholes or other surface features, or buried objects of interest, such as USTs, drums, pipes and debris. Magnetic anomalies at or below the amplitude of the local magnetic field are shown in blue, and are caused by ferrous objects located above the sensor, such as buildings, poles, chain-link fences and other surface objects.

Surface objects including buildings, cars, and fences can produce significant magnetic interference that can conceal buried objects of interest.

Hand-held instruments:

An Aqua-Tronics A6 Tracer and a Schonstedt GA92XTd magnetic gradiometer are used to locate and investigate the anomalies detected by the magnetometer. These instruments can pinpoint the peaks and troughs of the anomalies, and in many cases determine if an object is linear (pipe or utility) or three-dimensional (UST). Because they are small, they may be used to scan areas inaccessible to the recording magnetometer. Neither records data.

The transmitter unit of a Radio Detection RD8000 PDL pipe and cable detector may be used to electrically charge an accessible metal pipe or utility. The charged object can then be "traced" using the receiver unit. The receiver can also detect some metallic features indirectly, using the system's "radio" function.

Ground Penetrating Radar:

Following the hand-held instrument survey, a GSSI SIR-2000 GPR system coupled to a 270 or 400 MHz antenna may be used to investigate suspicious magnetic anomalies. Radar reflections across the anomalies may give clues to the size and shape of the buried metallic objects producing them. Objects themselves are not actually seen. Under some conditions, a 900 MHz antenna may be used to investigate shallow features and small pipes. This antenna has greater resolution but less power so it cannot penetrate to depths of more than 2 or 3 feet. Because of its smaller aperture the signal may be able to pass between strands of rebar depending on their spacing.

The collection of radar data is very time consuming and the data may be ambiguous; therefore, GPR is not a cost-effective method to "blindly" scan a site for buried metallic objects. Radar is, however, one of the only methods capable of detecting non-metallic features, including PVC and clay pipes, septic tanks, drywells, trenches and excavations.

GPR data may be collected on a grid when searching for non-conductive features like UST pits or pipes.

GPR is used in borehole clearance surveys: parallel traverses in orthogonal directions are taken and the profiles are inspected in the field. Boreholes may be moved to clear locations, based on the interpretation of the radar data.

Additional information regarding these instruments, methods, surveys and limitations with references can be found in the Appendix.

Results

The two figures that follow were contoured using a contour interval of 250 nT. Blue contours are generally caused by ferrous objects situated above the magnetometer sensor. Red contours are produced by ferrous objects below the sensor, including surface features and buried objects. USTs produce red-colored contours.

North Area - Figure 2 shows the magnetic data collected across the North Area. Six magnetic anomalies were investigated using a Schonstedt Magnetic Gradiometer and an AquaTronics Tracer metal detector.

Anomalies A and B appeared to be caused by small, non-3D objects. Anomalies C and D are probably caused by the chain-link fence and sections of reinforced concrete sidewalk. Anomaly E is comprised of 3 individual points all in a line. They may be related to the wall of one of the former buildings. Anomaly F is located near a possible drywell. The peak of the anomaly is several feet south of a manhole cover. A small "bump" in the asphalt coincides with the anomaly. GPR data were collected across the anomaly but no recognizable objects were detected. The object could be a cut-off fence post.

A proposed boring location was cleared several feet south of the manhole cover. It could not be determined if the manhole cover was for a city sewer or drywell. No obvious outflow pipes were visible.

South Area – Figure 3 shows the magnetic data collected at the South Area. A former gasoline station was located at the SE corner of the present building. Magnetic data were collected part way into the street near the former gas station. No evidence of a gasoline tank or the gas station was seen.

All of the magnetic anomalies in this area can be attributed to visible surface features including the building, a chain-link fence, storage trailer, boat and trailer, metal poles, etc. No USTs were detected.

Three circular metal plates seen on the surface in the parking lot north of the building covered buried water valves used for cleaning vehicles. The area near the valves was uneven and depressed. Reportedly this area contained at one time a small historic dump site. GPR data were collected across the area west of the three valves in an effort to detect a possible drywell used to collect wash water. No drywell was detected; however, the area appeared to be relatively more disturbed than the surrounding area. The west edge of the disturbed zone could not be determined because of cars parked along that side of the parking lot.

GPR was also used to scan the subsurface under the sidewalk south of the building, near the former gasoline station, and also where access was available inside the building adjacent to that sidewalk. Access was limited to several narrow aisles.

A relatively more disturbed soil zone was seen under the E-W sidewalk. This area was cleared of underground obstructions.

Hoists – GPR and an RD8000PDL pipe and cable detector were used to clear 9 proposed boring locations inside the automobile garage located in the western half of the building occupying the South Area. The locations were near decommissioned hydraulic hoists. One hole was located near a former sump.

Conclusion

No USTs were detected at either location.

A disturbed soil zone was found under the uneven, depressed area north of the building in the South Area. No obvious drywell was seen in the radar data. A second disturbed soil zone was detected under the sidewalk near the former gasoline station.

Nine proposed borings located near decommissioned hydraulic hoists were cleared of underground obstructions using metal detectors and GPR.

Limitations

The conclusions presented in this report were based upon widely accepted geophysical principles, methods and equipment. This survey was conducted with limited knowledge of the site, the site history and the subsurface conditions.

The goal of near-surface geophysics is to provide a rapid means of characterizing the subsurface using non-intrusive methods. Conclusions based upon these methods are generally reliable; however, due to the inherent ambiguity of the methods, no single

interpretation of the data can be made. As an example, rocks and roots produce radar reflections that may appear the same as pipes and tanks.

Under reasonable site conditions, geophysical surveys are good at detecting changes in the subsurface caused by manmade objects or changes in subsurface conditions, but they are poor at identifying those objects or subsurface conditions.

Objects of interest are not always detectable due to surface and subsurface conditions. The deeper an object is buried, the more difficult it is to detect, and the less accurately it can be located.

The only way to see an object is to physically expose it.

Appendix A. Geophysical Survey Methods

Small disturbances in the Earth's local magnetic field are called "magnetic anomalies". These may be caused by naturally occurring features such as metallic mineral ore bodies, or from manmade features such as metal buildings, vehicles, fences, and underground storage tanks. The magnetometer only detects changes produced by ***ferrous*** objects. Aluminum and brass are non-ferrous metals and cannot be detected using a magnetometer.

A magnetometer is an electronic instrument designed to detect small changes in the Earth's local magnetic field. Over the years, different technologies have been used in magnetometers. The Geometrics G-858 Portable Cesium Magnetometer used to collect magnetic data for Pacific Geophysics uses one of the most recent methods to detect magnetic anomalies. A detailed discussion describing the method this unit uses is available at Geometrics.com.

This magnetometer enables the operator to collect data rapidly and continuously rather than the older instruments that collected data at discreet points only. The G-858 is carried by hand across the site. The sensor is carried at waist level. Typically, individual data points collected at normal walking speed are about 6" apart along survey lines usually 5 feet apart, depending on the dimensions of the target objects.

It is critical to know the exact location of each data point so that if an anomaly is detected it can be accurately plotted on a magnetic contour map. At most small sites, data are collected along straight, parallel survey lines set up on the site before the data collection stage begins. For very large, complex sites, the G-858 can be connected to a Global Positioning System (GPS) antenna which allows the operator to collect accurately located data without establishing a survey grid. With GPS, data are collected and positioned wherever the operator walks. A limitation using GPS is that the GPS antenna must have line of sight with the GPS satellites. Data can be mislocated if the GPS antenna is under trees or near tall buildings.

Data are stored in the unit's memory for later downloading and processing. A magnetic contour map of the data is plotted in the field. Geographical features are plotted on the map. Magnetic anomalies appearing to be caused by objects of interest are then investigated on the site using several small hand-held metal detectors. If an object appears to be a possible object of interest, it may be investigated with ground-penetrating radar (GPR).

Magnetic contour maps may be printed in color in order to highlight anomalies caused by ferrous objects located under the magnetic sensor. Usually, ferrous objects situated below the sensor produce magnetic "highs" and anomalies located above the sensor produce magnetic "lows". Magnetic highs are of interest to the operator since most objects of interest are located underground.

Depending on the orientation, shape and mass of a metallic object, a high/low pair of magnetic anomalies may be present. In the northern hemisphere the magnetic low is located north of the object and the magnetic high toward the south. The object producing the anomaly is located part way between the high and the low anomalies.

Magnetometer surveys have limitations. Magnetometers only detect objects made of ferrous (iron-containing) metal. Large, ferrous objects (buildings, cars, fences, etc.)

within several feet of the magnetometer create interference that may hide the anomaly produced by a nearby object of interest.

Ground Penetrating Radar

A Geophysical Survey Systems, Inc. (GSSI) SIR-2000 GPR system coupled to a 270-MHz GSSI antenna is used to obtain the radar data for our surveys.

The 270-MHz radar antenna used for the surveys is designed to transmit and receive electromagnetic energy. EM energy is transmitted into the material the antenna passes over. A portion of that energy is reflected back to the antenna and amplified. Reflections are displayed in real-time in a continuous cross section. Reflections are produced where there is a sufficient electrical contrast between two materials. Changes in the electrical properties (namely the dielectric constant) that produce radar reflections include the moisture content, porosity, mineralogy, and texture of the material. Metallic objects of interest exhibit a strong electrical contrast with the surrounding material and thus produce relatively strong reflections. Non-metallic objects of interest (septic tanks, cesspools, dry wells, PVC and clay tile pipes) are not always good reflectors.

Radar data are ambiguous. It can be difficult to distinguish the reflection produced by an object of interest from the reflection caused by some natural feature. Rocks or tree roots have reflections that appear similar to reflections from pipes. In concrete investigations reflections produced by metal rebar look exactly like those from electrical conduit or post-tension cables. Objects with too small an electrical contrast may produce no reflections at all and may be missed.

In addition to interpreting ambiguous data, radar has several limitations that cannot be controlled by the operator. The radar signal is severely attenuated by electrically conductive material, including wet, clay-rich soil and reinforced concrete. The quality of the data is affected by the surface conditions over which the antenna is pulled. Ideally the antenna should rest firmly on a smooth surface. Rough terrain and tall grass reduce the quality of radar data.

It is the job of an experienced interpreter to examine the GPR profiles and deduce if reflections are from objects of interest. A GPR interpreter cannot see underground, but can only interpret reflections based on experience.

The only way to truly identify an object is to excavate.

Hand-held Metal detectors

Two small, non-recording metal detectors are used to locate suspect magnetic anomalies detected using the G-858 Magnetometer in order to determine the likely cause of the anomaly. First, the magnetic contour map and a Schonstedt Magnetic Gradiometer are used to locate the center of the magnetic anomalies.

Once the anomaly is located an Aqua-Tronics Tracer is used to determine if the object producing the anomaly is a possible object of interest. Most anomalies are at least in part produced by features observed on the ground surface.

Schonstedt Magnetic Gradiometer: This magnetometer has two magnetic sensors separated vertically by 10". The magnetic field surrounding a ferrous object is strongest near the object and decreases rapidly as the distance increases. If the

magnitude measured by the sensor located in the tip of the Schonstedt is very high, and the magnetic field measured by the sensor located farther up the shaft of the Schonstedt is low, there is a large vertical magnetic gradient and the instrument responds with a loud whistle indicating the object is near the surface. If there is a small difference in the magnitudes measured by the two sensors, the object is deeper. The instrument responds with a softer tone. A discussion of this instrument is available at Schonstedt.com.

Aqua-Tronics A-6 Tracer: The Aqua-Tronics A-6 Tracer uses a different method of detecting metallic objects. This instrument measures the electrical conductivity of a metal object. It is capable of detecting any electrically conductive metal, including non-ferrous aluminum and brass. The Tracer is capable of detecting three-dimensional objects as well as pipes.

The Tracer consists of a transmitter coil and a receiver coil. In the absence of any electrically conductive material in the vicinity of the Tracer, the electromagnetic field around each coil is balanced.

Basically the electromagnetic field produced by the transmitter induces an electric current into the area surrounding the instrument. Nearby conductive objects distort the EM field. The balance between the two coils is disturbed and the instrument produces an audible tone and meter indication.

RE: Early Notice Letter Regarding the Release of Hazardous Substances
Site Name: Hannah Motor Company
Location: 300 Washington Street, Vancouver
Facility Site ID Number: 12126843

To Whom It May Concern:

The Department of Ecology (Ecology) is required to conduct an Initial Investigation, under Chapter 70.105 Revised Code of Washington (RCW), upon receiving a report of release or threatened release of hazardous substance that may pose a threat to human health or the environment.

The Model Toxics Control Act (MTCA, Chapter 70.105D RCW) mandates the Department of Ecology (Ecology) maintain a database of Confirmed or Suspected Contaminated Sites. As a result of the initial investigation conducted by Ecology this property has been added to the database as a State Cleanup Site and assigned a Facility Site Identification number of 12126843. Please note that inclusion in the database does not mean Ecology has determined you to be a potentially liable person.

During the investigation, Ecology found heavy oil contamination at the site in excess of its MTCA Method A Cleanup Level of 2,000 mg/kg. In the future, Ecology may conduct a more detailed inspection of this property known as a site hazard assessment. At that time, Ecology will assess whether action will be needed and establish a priority for the work.

Ecology's policy is to work cooperatively with individuals to accomplish prompt and effective cleanups. However, due to limited resources we are not always able to provide requested assistance. Your cooperation with Ecology in planning or conducting a remedial action is not an admission of guilt or liability. Please be aware of state laws that must be adhered to if you decide to proceed with cleanup work on your own.

Enclosed is a Model Toxics Control Act Cleanup Regulation Focus Sheet. This provides a brief overview of the process for the cleanup of contaminated sites. For additional information regarding each step in the cleanup process and Ecology's Voluntary Cleanup Program, feel free to contact me or Nick Acklam, the Southwest Regional Office Voluntary Cleanup Program Coordinator at 360-407-6347, or visit Ecology's Toxic Cleanup Program website, http://www.ecy.wa.gov/cleanup.html.

Chapter 70.105D RCW and the implementing regulations, Chapter 173-340 WAC which detail these requirements can be found at Ecology's Toxics Cleanup Program website, http://www.ecy.wa.gov/programs/tcp/regs/current_laws_and_rules.html/. If you would like a hard copy of the MTCA regulations, or if you have any questions, please call me at (360) 407-6246. Thank you for your cooperation.

Sincerely,

Kirsten Alvarez

TEMPORARY PERMIT

Interstate Bridge Replacement Project

The Grantor, K2SM INVESTMENTS LLC, grant(s) unto the **Washington State Department of Transportation (WSDOT) and the Oregon Department of Transportation (ODOT) and/or their representatives, collectively working as the Interstate Bridge Replacement Project (IBR)** and its assigns, the right, privilege and permit of ingress and egress over, under, across and upon the hereinafter described lands from the date hereof until December 31, 2023, for the purpose of performing **Phase I Environmental Assessment survey** for highway purposes.

Said lands being situated in Clark County, State of Washington and described as follows:

Said certain parcel of land known as County Assessor's Parcel No. 48420000, 48380000, 48390000 and Property Address 210 W 3RD ST, VANCOUVER, 98660.

It is understood that IBR and its agents will make every effort to minimize the impact on my property, and will ensure that it will be left in as good of condition as when the site delineation commenced.

Dated September 7th, 2023.

Subject: Hannah Motor Company abandoned waste oil tank, Vancouver

Hi all,

This is already a site. Hannah Motor Company/Hannah Mitsubishi. UST #10252, FS#12126843. Jeff Jackman, Point Source Consulting out of Oregon reported this new tank and a new release to ERTS. Jeff explained that a previous release involving hydraulic hoists has been cleaned up to a certain point. The Hannah Motor Company part of the site is awaiting cleanup and the Hannah Mitsubishi part has an NFA. I think I'm going to hand this site off to you all now!

Subject: 30 Day Notice Waiver Request

Hi Brett,

Thank you for your help with this. We are planning to remove the tank and impacted soil on Monday 3/27. A completed notification form is attached. Please let me know if you have questions.

Thanks!

Jeff Jackman
Point Source Solutions

NOTICE OF OVERDUE PAYMENT

You were previously billed for the enclosed regulated underground storage tank(s). Payment is now more than 30 days delinquent. This billing is mandated by the Underground Storage Tank Law, Chapter 90.76 RCW. There is potentially a substantial fine for non-payment of the fee. Any disputes of this billing need to be in writing.

Please send a response or the payment to the Department of Ecology, P.O. Box 47655, Olympia, WA 98504-7655. It is very important to include both the invoice number and site number with remittance.

Temporarily closed tanks are still subject to their annual fees. We must received closure documentation for temporarily and/or permanently closed tanks. Permanently closed tanks that have not been closed in accordance with federal and state regulations are also still subject to their annual fees. If you would like to discuss these matters, please call Lisa Shriver at (360) 407-7203.

RE: Underground Storage Tank Closure
Hannah Mitsubishi
300 Washington Street
Vancouver, Washington 98660
DOE Site ID # 010252

Dear DOE,

Enclosed you will find the following completed forms regarding the above-referenced site:

1) Underground Storage Tank Temporary/Permanent Closure and Site Assessment Notice
2) Underground Storage Tank Permanent Closure/Change-In-Service Checklist
3) Underground Storage Tank Site Check/Site Assessment Checklist

Enviro-Logic's Site Assessment Report was titled "Underground Storage Tank Closure Report" and dated December 1993. This report was sent to and has been received by Patricia Martin in DOE's Southwest Regional Office.

3-17-94
Entered Closure

Please call me if you have any questions (206-253-2991).

Respectfully Submitted,

Bruce Macpherson

PLEASE READ CAREFUL

INSTRUCTIONS

Return this completed form to:

Underground Storage Tank Section
Department of Ecology
P. O. Box 47655
Olympia, WA 98504-7655

This form is to be completed by the Tank Owner and submitted to Ecology within 30 days of tank closure.

Mark the appropriate box(es) for temporary tank closure, permanent tank closure, change-in-service, or site assessment.

Permanent Closure and Change-in-Service require a site assessment be performed.

SITE INFORMATION:

Fill in the site information. Be sure to include the Ecology site ID number. This number may be found on the invoice or permit. Include a contact telephone number so any problems may be resolved quickly.

TANK INFORMATION:

List the tanks that were closed. Please use tank ID numbers and indicate the date of permanent closure. Be sure to attach your Underground Storage Tank Permits for any tanks that are now closed.

UST SYSTEM OWNER/OPERATOR:

Please fill in the owner's/operator's name, address, and telephone number. **Be sure to sign this form.**

TANK CLOSURE/CHANGE-IN-SERVICE PERFORMED BY:

List the closure company. Companies that provide UST services **MUST** be licensed by Ecology. Ask to see their supervisor's license. Make sure the licensed supervisor signs this form.

SITE CHECK/SITE ASSESSMENT CONDUCTED BY:

Fill in the site assessor information for permanent closure or change-in-service. Mark the appropriate box showing whether contamination from the underground tank(s) was or is present at the site. A site check/site assessment **MUST** be conducted by a site assessor who is registered with Ecology.

If contamination at the site is found or suspected, the appropriate Ecology Regional Office must be notified within 24 hours. If the contamination is confirmed, a site characterization report must be submitted to the regional office within 90 days. If contamination is not confirmed, a site assessment report must be submitted to the above address within 30 days.

Tanks exempt from notification requirements are:

Farm or residential tanks, 1100 gallons or less, used to store motor fuel for personal or farm use only. The fuel must not be for resale or used for business purposes.

Tanks used for storing heating oil that is used on the premises where the tank is located.

Tanks with a capacity of 110 gallons or less.

Equipment or machinery tanks such as hydraulic lifts or electrical equipment tanks.

Emergency overflow tanks, catch basins, or sumps.

For more information call toll free in the state of Washington 1-800-826-7716 or (206) 438-7137

UNDERGROUND STORAGE TANK
Permanent Closure/Change-In-Service Checklist

The purpose of this form is to certify the proper closure/change-in-service of underground storage tank (UST) systems. These activities must be conducted in accordance with Chapter 173.360 WAC. Washington State UST rules require the tank owner or operator to notify Ecology in writing 30 days prior to closure or change-in-service of tanks. This must be done by completing the 30 Day Notice form (ECY 010-155).

This Permanent Closure Checklist shall be completed and signed by a **Licensed Decommissioning Supervisor.** The supervisor shall be on site when all tank permanent closure/change-in-service activities are being conducted. The firm which employs the licensed supervisor shall also be licensed by the Washington State Department of Ecology as a **Service Provider.** If any of the activities listed below have been supervised by a different licensed supervisor, a separate checklist must be filled out and signed by the licensed supervisor performing those activities.

For further information about completing this form, please contact the Department of Ecology UST Program.

A separate checklist must be completed for each UST system (tank and associated piping), except that UST systems at one site may be reported together by completing page 2 of this form separately for each system. The completed checklist should be mailed to the following address within 30 days of the completion of the closure or change-in-service.

Site/Business Name: Hannah Mitsubishi

Site Address: 300 Washington Street, (Street) Clark (County)

Vancouver, (City) Wa (State) 98660 (ZIP-Code)

2. TANK PERMANENT CLOSURE/CHANGE-IN-SERVICE PERFORMED BY:

Firm: Enviro-Logic, Inc. License Number: 10616

Address: 4018 NE 112th Avenue, Suite D-3 (Street) (P.O. Box)

Vancouver, (City) Wa (State) 98682 (ZIP-Code)

Telephone: (206) 253-2991

Licensed Supervisor: Bruce Macpherson Decommissioning License Number: W001902

This page must be completed separately for each tank permanently clos ' (decommissioned) or change-in-service at the site. For ad nal tanks you may photocopy this form or to completing.

3. TANK CLOSURE/CHANGE-IN-SERVICE INFORMATION

1. Tank ID Number (as registered with Ecology): 1
2. Year installed: unknown
3. Tank capacity in gallons: 300
4. Date of last use: 10/93
5. Last substance stored: Waste Oil
6. Date of closure/change-in-service: 10/20/93
7. Type of closure: Closure with Tank Removal [X] In-place Closure [ ] Change-in-Service [ ]
8. If in-place closure is used, the tank has been filled with the following substance: NA
9. If change-in-service, indicate new substance stored in tank: NA
10. Local permit(s) (if any) obtained from: Vancouver Fire Dept. #93-20, Vancouver Building Dept. Project #AV932065

Always contact local authorities regarding permit requirements.

11. Has a site assessment been completed? Yes [X] No [ ]

Unless an external release detection system is operating at the time of closure or change in service, and a report is provided as specified in WAC 173-360-390, a site assessment must be conducted. This site assessment must be conducted by a person registered with the Department of Ecology to perform site assessments. Results of the site assessment must be included with the Site Assessment Checklist (ECY 010-158).

4. CHECKLIST

Each item of the following checklist shall be initialed by the **licensed supervisor** whose signature appears below.

	Yes	No	NA*
1. Has all liquid been removed from product lines?	bdm		
2. Has all product piping been capped or removed?	bdm		
3. Have all non-product lines been capped or removed?	bdm		
4. Have all liquid and accumulated sludges been removed from the tank?	bdm		
5. Has the tank been properly purged or inerted?	bdm		
6. Have the drop tube, fill pipe, gauge pipe, pumps and other tank fixtures been removed?	bdm		
7. Have all tank openings been plugged or capped? NOTE: One plug should have 1/8 inch vent hole.	bdm		
8. Have all sludges removed from the tank been designated and disposed of in accordance with the state of Washington's dangerous waste regulations (Chapter 173-303 WAC)?		bdm*	
9. If removed, was tank properly labeled and disposed of in accordance with all applicable local, state and federal regulations?	bdm		

*Item not applicable * Client will dispose of sludge (see closure report).

I hereby certify that I have been the licensed supervisor present on site during the above listed permanent closure activities and to the best of my knowledge they have been conducted in compliance with all applicable state and federal laws, regulations and procedures pertaining to underground storage tanks.

Persons submitting false information are subject to penalties under Chapter 173.360 WAC.

CHECKLIST

Each item of the following checklist shall be initialed by the person registered with the Department of Ecology whose signature appears below.

		YES	NO
1.	The location of the UST site is shown on a vicinity map.	bdm	
2.	A brief summary of information obtained during the site inspection is provided. (see Section 3.2 in site assessment guidance)	bdm	
3.	A summary of UST system data is provided. (see Section 3.1)	bdm	
4.	The soils characteristics at the UST site are described. (see Section 5.2)	bdm	
5.	Is there any apparent groundwater in the tank excavation?		bdm
6.	A brief description of the surrounding land use is provided. (see Section 3.1)	bdm	
7.	Information has been provided indicating the number and types of samples collected, methods used to collect and analyze the samples, and the name and address of the laboratory used to perform the analyses.	bdm	
8.	A sketch or sketches showing the following items is provided:		
	- location and ID number for all field samples collected	bdm	
	- groundwater samples distinguished from soil samples (if applicable)		NA bdm
	- samples collected from stockpiled excavated soil		bdm
	- tank and piping locations and limits of excavation pit	bdm	
	- adjacent structures and streets	bdm	
	- approximate locations of any on-site and nearby utilities	bdm	
9.	If sampling procedures different from those specified in the guidance were used, has justification for using these alternative sampling procedures been provided? (see Section 3.4)	bdm	
10.	A table is provided showing laboratory results for each sample collected including; sample ID number, constituents analyzed for and corresponding concentration, analytical method and detection limit for that method.	bdm	
11.	Any factors that may have compromised the quality of the data or validity of the results are described.	bdm	
12.	*The results of this site check/site assessment indicate that a confirmed release of a regulated substance has occurred.*	bdm

Dear Underground Storage Tank Owner:

We recently received information on the following site and tank(s) which indicates that the tank(s) have been closed:

Site Address: 300 Washington St

Site No: 010252 Tank Ids: 1

Until we receive documentation that the tank(s) have been permanently closed in accordance with federal and state regulations, we are unable to consider them closed for regulatory and billing purposes. If such closure has been completed, please fill out the enclosed form(s) as marked below and return them to our office as soon as possible. We will then be able to correct our records and resolve any outstanding fee payment issues relating to this site.

For tanks closed before March 1, 1991:

_____ Permanent Closure/Change-in-Service Checklist

For tanks closed after March 1, 1991:

✓ Permanent Closure/Change-in-Service Checklist
✓ Site Check/Site Assessment Checklist
✓ One copy of Site Assessment Report, or if contamination is found, a Site Assessment Characterization needs to be sent to your Regional office.

Please complete the forms and return them to:

Washington State Department of Ecology
Underground Storage Tank Section
PO Box 47655
Olympia, WA 98504-7655

Thank you for your cooperation. If you have any questions, please call me at (206) 407-7203.

Sincerely,

Karen G. Backman

Dear Ms. Fleskes,

Enclosed you will find a copy of your letter with reference to an underground storage tank. I assume this letter refers to our waste oil storage tank at 3321 N.E. Auto Mall Drive. The oil in this tank is burned through a waste oil heater used to heat our shop. We burn 100% of this oil.

Our only other tank was at 300 Washington Street, which has been removed by Enviro Logic Inc. If you have not received the removal information yet, I will be happy to furnish copies. 010252

Sincerely,

Bill Houston

February 2, 1994

Hannah Motor Company
P. O. Box 1306
Vancouver WA 98666-1306

Dear Tank Owner:

In April 1993, the Department of Ecology (Ecology) sent out invoices for annual underground storage tank (UST) fees and UST permits. Our records indicate that you have at least one operating UST with no valid permit. ***If you have current permits and this letter has reached you in error, please contact our permit and compliance group at 1-800-826-7716 as soon as possible so we can correct our information.***

Operating an underground storage tank without a valid permit is a violation of Washington State UST regulations, WAC 173-360-130, and could result in a penalty of up to $5000 per day of violation. Any distributor that delivers product to an unpermitted tank is also in violation of the UST regulations.

Ecology is currently offering an amnesty period through February 28, 1994. Owners that come forward and register their site(s) and pay their back tank fees will not be penalized during this time. To avoid financial penalties for operating without a permit, please submit the proper registration and permit paper work by February 28, 1994.

If you are no longer using your UST or have closed it, you need to fill out the proper paper work and return it to Ecology. We need this information to close your tanks in our records.

The necessary forms, and assistance in filling them out, can be requested from our office. If you have any questions, need more information or technical assistance, please call our Southwest Regional Office at 206-586-5571 for Sue Simms or 206-753-3013 for Mark Henderson.

Sincerely,

Carol L. Fleskes

Undergrou Storage Tank Self-Certificatio f Compliance Form 010252

This form must be completed and signed for the underground storage tank identified below to receive a permit from the Department of Ecology. Without a permit, the tank cannot receive product or be operated (in the case of waste oil tanks, the tank cannot have the product removed).

MAIL PERMIT FEES TO CORPORATE OFFICE
P O BOX 1306
VANCOUVER 98666

INFORMATION REGARDING FINANCIAL RESPONSIBILITY:
This must be completed for the Underground Storage Tank Permit to be validated.

1. Mark the box which accurately describes the UST identified by the above Tank ID number:
   - a. ☐ The UST is owned by the state or federal government.
   - b. ☐ The UST stores a non-petroleum hazardous substance.
   - c. ☐ The UST is a deferred tank (listed on page 9 of the guide).
   - d. ☑ None of the above.
2. Financial Responsibility Compliance Category. Enter the appropriate letter from page 6 or 7 of the Self-Certification Guide: D
3. Financial Responsibility Compliance Method(s). Enter the appropriate letter(s) from page 8 of the Self-Certification Guide: C

SWORN STATEMENT:
I hereby swear under penalty of law that, based on my review of the UST Self-Certification Guide and my knowledge of the tank identified by the above Tank ID Number, this tank is in compliance with the applicable state requirements. Also, the information required above regarding financial responsibility requirements has been accurately entered for this tank. I understand that if this is a false statement the permit for the UST may be immediately revoked and I may be subject to penalties under Chapter 173-360 WAC.

RE: Underground Storage Tank (UST) Compliance Schedule

This is for a compliance schedule of your UST system which is not in compliance with the state UST regulations (Chapter 173-360). As we have discussed today, 4-2-92 the area of non-compliance is as follows:

Site Number: 010252 Tank I.D. Numbers /
$195.00 in tank Fees not Paid.

The agreement reached in our conversation is that you will correct the non-compliance by 4-15-92. Based on this agreement, a validated permit is being issued for each UST system discussed. You may sign this permit and display it so that it is clearly visible to your product distributor or waste oil transporter. Be advised that failure to correct the non-compliance by the above date can result in the permit being immediately revoked, as well as administrative enforcement action and penalties under Chapter 90.76.080 RCW.

I have left with you a "Certificate of Compliance" for you to complete and sign when the above-mentioned compliance is achieved. Please complete and submit this certification to Sue Simms, Department of Ecology, Southwest Regional Office, P.O Box 47775, Olympia, WA 98504-7775 after achieving compliance, but no later than seven days after the compliance date noted above.

Sincerely,

Sue L. Simms
UST Inspector
Toxic Cleanup Program
Southwest Regional Office

CERTIFICATE OF UST COMPLIANCE FORM

Please complete and return this form to Sue Simms, Department of Ecology, Southwest Regional Office, P.O. Box 47775, Olympia, Washington 98504-7775 by April 15, 1992

As the legal representative of for the purposes of managing these USTs, I hereby certify that the UST system(s) indicated below are in compliance with the requirements of Chapter 173-360 WAC:

SITE NUMBER	TANK I.D. NUMBER	SIGNATURE
010252	1	

SWORN STATEMENT:

I hereby swear under penalty of law that, based on my knowledge of the UST system(s) identified by the above Tank I.D. Numbers, the UST system or systems are in compliance with the applicable state requirements. I understand that if this is a false statement, the permit for the UST(s) may be immediately revoked and I may be subject to penalties under Chapter 90.76 RCW.

RE: Removal of 2,000-gallon Underground Storage Tank in Vancouver, Washington.

Dear Sir or Madam:

On May 14, 1990, Enviro-Logic, Inc. will be supervising the closure of a 2,000-gallon underground storage tank (registration No. 065000016) previously used to hold unleaded gasoline. The UST is located at 300 Washington Street in Vancouver, Washington (Site No. WAD 981760523). The following procedures will be used during removal of the UST:

1) A backhoe or similar device will excavate the surface materials and expose the tank. A vacuum truck will remove any fluids or sludges remaining in the tank. If necessary, the tank will be washed and triple rinsed on site. Wash and rinse fluids will be vacuum-removed from the tank, and along with the sludges, will be and transported to a USEPA/state approved facility for disposal.

2) Approximately 15 pounds of dry ice will be placed inside the tank per 1000 gallons of tank capacity to minimize explosive potential. Before tank removal, the potential for fire will be evaluated using an combustible-gas indicator. The tanks will be removed within local Fire Department guidelines and when the vapor measurements are below 20 percent of the lower explosive limit (LEL).

3) The tank will be lifted from the pit by a FMC Link-Belt crane or similar heavy equipment. The tank will then be placed on plastic sheets at the site, selectively scraped of dirt, and examined for evidence of pitting, rusting, through-going holes, cracking or evidence of leaking. Particular attention will be paid to seams and points directly below the fill port. Evidence of tank deterioration or leaking will be recorded.

If you have any questions regarding the UST removal procedures, or if we may be of service in any way, please do not hesitate to call.

Sincerely,
ENVIRO-LOGIC, INC.

Vancouver, Washington 98660

Re: Block A Phase II Environmental Assessment—Port of Vancouver USA Terminal 1

Dear Mr. Graves:

On behalf of the Port of Vancouver USA (Port), Maul Foster & Alongi, Inc. (MFA) completed an investigation to assess soil and groundwater for possible impacts related to historical activities at the Terminal 1 Block A property located at 200 Columbia Street in Vancouver, Washington (Block A; see Figure 1). Previous investigations of Block A conducted in 2009, 2015, and 2016 identified soil and groundwater impacts. A test pit investigation conducted by MFA in 2017 north of Block A identified soil impacts and perched groundwater with a sheen. Since these investigations did not include the area now covered by a road in the northern portion of Block A, environmental conditions in that area were a data gap. The purpose of this investigation was to address this data gap and assess whether impacts to soil and groundwater extend into the northern portion of Block A.

EXECUTIVE SUMMARY

The Block A Phase II environmental assessment included collection and laboratory analysis of seven soil samples from three borings, and one groundwater sample from one boring (see Figure 2). Soil sample depths ranged from 2 to 14 feet below ground surface (bgs), and the groundwater sample was collected from 20 to 30 feet bgs.

Soil samples were analyzed for arsenic, barium, cadmium, chromium, lead, mercury, selenium, and silver; gasoline-, diesel-, and oil-range total petroleum hydrocarbons (TPH); polychlorinated biphenyls (PCBs); and polycyclic aromatic hydrocarbons (PAHs). The groundwater sample was analyzed for the same constituents, except that analysis was not conducted for PCBs but was conducted for volatile organic compounds (VOCs).

No indicators of contamination (e.g., petroleum-hydrocarbon-like odors, staining) were observed in the soil borings. The only Washington State Department of Ecology (Ecology) Model Toxics Control Act (MTCA) Method A cleanup level (CUL) exceedance for soil was the 1,160 milligrams per kilogram (mg/kg) lead concentration at boring GP-1 at 11 feet bgs, which exceeds the MTCA Method A CUL of 250 mg/kg (see Table 1). Because of the sample's potential to exceed the toxicity characteristic leaching procedure (TCLP) for lead, it was

analyzed for TCLP lead. The lead TCLP analysis concentration was 0.654 milligram per liter (mg/L), below the U.S. Environmental Protection Agency (USEPA) hazardous waste regulatory level of 5 mg/L. In addition, soil at boring GP-1 at 7 feet bgs was analyzed for lead, to assess the vertical extent of lead impacts. The lead concentration was 46 mg/kg, indicating that the vertical extent of the elevated lead concentration in GP-1 at 11 feet bgs does not exist at shallower depths.

Analysis of the groundwater constituents did not detect Method A CUL exceedances.

Should future development of Block A require excavation of soil at GP-1 at 11 feet bgs, further assessment of the extent of lead in soil is recommended.

FIELDWORK

A scope of work for this assessment was provided to the Port in June 2017[1] and the fieldwork was performed on January 30, 2018. The investigation conducted was consistent with the scope of work, the requirements put forth in Ecology's Guidance on Sampling and Data Analysis Methods,[2] and Ecology's MTCA (Washington Administrative Code [WAC] 173-340).

Prior to the investigation activities, MFA notified the Underground Utility Notification Center and retained a private underground utility-locating contractor (Applied Professional Services, Inc.) to check the proposed boring locations for underground utilities.

Pacific Soil and Water LLC, from Tualatin, Oregon, conducted the drilling, using a truck-mounted Geoprobe™ 6600 drill rig. Three borings (GP-1 through GP-3) were advanced under the observation of an MFA geologist at the locations shown in Figure 2. These locations were selected to provide representative coverage of the northern portion of Block A. MFA collected soil samples, described soil types, and used a photoionization detector (PID) to assess representative soil samples for organic vapors. Observations and sample collection information were recorded on the boring logs provided in Attachment A.

Borings GP-1 and GP-3 were advanced to 15 feet bgs, and GP-2 was advanced to 30 feet bgs for groundwater sample collection. During borehole advancement, continuous soil core was retrieved in 5-foot-long intervals to assess conditions of the excavation depth anticipated for future development and to assess baseline conditions in soil below the future excavation depth. Three soil samples were collected from each boring for potential laboratory analysis, for a total of nine samples. The soil sample depths were selected as described in the scope of work and

[1] MFA. MFA work order authorization for Terminal I Block A Phase II environmental site assessment. Maul Foster & Alongi, Inc., June 23, 2017.

[2] Ecology. Guidance on sampling and data analysis methods. Publication No. 94-49. Washington State Department of Ecology Toxics Cleanup Program, January 1995.

based on field observations, site history, professional judgment, and ability to provide sample material representative of each soil stratigraphic unit encountered in the boring.

Wood fragments having the appearance of manufactured wood chips were observed at approximately 6.5 to 7 feet bgs and scattered throughout 10.8 to 12.2 bgs at boring GP-3. These had no noticeable odor and the PID reading was 0.0 part per million (ppm). GP-1 was the only boring with a PID reading above 0.0 ppm; at 2 feet bgs, the PID reading was 0.3 ppm. Evidence of contamination (hydrocarbon-like odor and staining) was not observed in the soil recovered from the borings of Block A.

GP-2 was selected for reconnaissance groundwater sample collection because of its central location relative to the three borings in Block A. The drilling rig retrieved additional soil core from the 15- to 25-foot depth interval and then pushed without soil collection to 30 feet bgs. A 10-foot-long, temporary polyvinyl chloride, non-pre-packed well screen was placed at the 20- to 30-foot depth interval to facilitate groundwater sample collection. Groundwater was encountered at approximately 21 feet bgs at GP-2. The temporary well was purged of groundwater, using a peristaltic pump. Readings of the purged water quality were recorded during purging, using a water-quality meter to facilitate collection of a sample representative of groundwater and to reduce turbidity caused by drilling and insertion of the screen into the soil. The water quality readings are provided as Attachment B.

Investigation-derived waste generated during the assessment activities included approximately 5 gallons of water and 10 gallons of soil. The water was placed in the Port's holding tank for future disposal. The soil was placed in a labeled, steel, 55-gallon drum near the Block A and Block C parcel boundary.

SITE GEOLOGY AND HYDROGEOLOGY

Consistent with previous investigations at Terminal 1, geologic units encountered in the soil borings consisted of gravelly and sandy fill overlying sandy and silty soil units. Typically, gravelly silt and silty gravel fill was observed from the surface to approximately 8 feet bgs. Fill consisting of sand with silt was generally observed from approximately 8 feet bgs to 25 feet bgs, the maximum depth explored. Silt and sandy silt were observed beneath the sandy fill in two borings (GP-2 and GP-3) at approximately 11 feet bgs. These finer-grained silty units were interpreted to be native soil units.

Groundwater was encountered at approximately 21 feet bgs. Based on groundwater monitoring conducted at Terminal 1, groundwater is inferred to flow to the north and northwest, away from the Columbia River, approximately 400 feet southwest of Block A.

ANALYTICAL METHODS

Of the nine soil samples collected for potential laboratory analysis, six were initially selected (two from each boring) to represent the stratigraphic units encountered in the borings at depths that may require excavation (assumed to be 14 feet or less) during future development of Block B. The soil samples, together with the one groundwater sample, were submitted under chain-of-custody protocols to Apex Laboratories, LLC, in Portland, Oregon.

The six soil samples were initially analyzed for the following constituents:

- Diesel- and oil-range TPH by method Northwest Total Petroleum Hydrocarbons (NWTPH)-Dx
- Gasoline-range TPH by method NWTPH-Gx
- Total metals by USEPA Method 6020 for arsenic, barium, cadmium, chromium, lead, mercury, selenium, and silver
- PCBs by USEPA Method 8082A

Initial analysis of two samples (GP-1 at 2 feet and 11 feet bgs) detected diesel- and oil-range TPH in soil. These two samples were subsequently analyzed for PAHs by USEPA Method 8270D.

Initial analysis of sample GP-1 at 11 feet bgs resulted in a lead concentration in exceedance of the MTCA Method A CUL and with the potential to exceed the TCLP criterion for lead. This sample was subsequently analyzed for TCLP lead by USEPA Method 6020. Additionally, a sample from GP-1 at 7 feet bgs was analyzed for total lead by USEPA Method 6020 to assess the vertical extent of the elevated lead concentration found in sample GP-1 at 11 feet bgs.

The groundwater sample was analyzed for the following constituents:

- Diesel- and oil-range TPH by method NWTPH-Dx
- Gasoline-range TPH by method NWTPH-Gx
- Total metals by USEPA Method 6020 for arsenic, barium, cadmium, chromium, lead, mercury, selenium, and silver
- VOCs by USEPA Method 8260B
- PAHs by USEPA Method 8270D

See Attachment C for the laboratory analytical reports and Attachment D for the data validation memorandum. The data are considered acceptable for their intended use, with the appropriate data qualifiers assigned.

Consistent with WAC 173-340-708(8), mixtures of carcinogenic PAHs (cPAHs) are considered as single hazardous substances in the evaluation of compliance with MTCA CULs, such that the toxicity of a particular congener is expressed relative to the most toxic congener (benzo(a)pyrene). The toxicity of cPAHs as a group was assessed using a toxic equivalency approach. Each congener in the group is assigned a toxic equivalency factor (TEF) corresponding to the toxicity of that congener relative to the toxicity of benzo(a)pyrene. For example, a congener that is equal in toxicity to benzo(a)pyrene would have a TEF of 1. Similarly, a congener that is half as toxic as benzo(a)pyrene would have a TEF of 0.5, and so on. Multiplying the concentration of a congener by its TEF produces the concentration for that congener that is equivalent in toxicity to the benzo(a)pyrene concentration, known as the toxicity equivalent concentration (TEC). Computing the TEC for each congener (Ci in the equation below) in a sample, followed by summing all TEC values, results in a single cPAH total TEC (i.e., cPAH TTEC) that can be compared to the MTCA CUL. The following formula represents the summation approach:

$$\text{cPAH TTEC} = \sum_{i=1}^{k} \text{Ci x TEFi}$$

Naphthalene, 1-methylnaphthalene, and 2-methylnaphthalene were summed to compare to the MTCA Method A CUL for naphthalenes. Consistent with Ecology's Implementation Memorandum No. 4,[3] the diesel- and oil-range TPH results were summed for a total detection value and were calculated as follows:

- Diesel and oil results qualified as non-detect and flagged with a "U" are used in the total calculation at one-half the associated value.

RESULTS

The sections below summarize the soil and groundwater analytical results and screening against MTCA CULs presented in Tables 1 and 2. MTCA Method A CULs are for unrestricted land use, as noted on Tables 1 and 2. Results are screened against MTCA Method B CULs only when MTCA Method A CULs are not available.

[3] Ecology. Memorandum (re: determining compliance with Method A cleanup levels for diesel and heavy oil) to file. Implementation memorandum no. 4. Prepared by T. Nord, Washington State Department of Ecology, June 2004.

Soil

The following metals were detected in one or more soil samples: arsenic, barium, cadmium, chromium, lead, mercury, and silver. Of these, only lead in one sample—from GP-1 at 11 feet bgs—exceeded the MTCA Method A CUL of 250 mg/kg, with a concentration of 1,160 mg/kg. The lead TCLP analysis concentration for GP-1 at 11 feet bgs was 0.654 mg/L, below the USEPA hazardous waste regulatory level of 5 mg/L for lead. The concentration for total lead from GP-1 at 7 feet bgs was 46 mg/kg, indicating that the vertical extent of the elevated lead concentration in sample GP-1 at 11 feet bgs does not exist at shallower depths.

Each soil sample was analyzed for PCBs; there were no detections.

Gasoline-range TPH were not detected in any of the samples.

Diesel-range TPH was detected only in sample GP-1 at 11 feet bgs (68 mg/kg). Oil-range TPH was detected only in sample GP-1 at 2 feet bgs (90.6 mg/kg). The individual results and the calculated diesel + oil TPH results for these two samples were below the MTCA Method A CUL of 2,000 mg/kg.

The two soil samples with detections of TPH (GP-1 at 2 feet and 11 feet bgs) were also analyzed for PAHs. Several PAHs were detected in each sample, but these detections did not exceed the MTCA Method A and B CULs, and the cPAH TTEC did not exceed MTCA Method A CULs.

Groundwater

The following total metals were detected in the groundwater sample from GP-2: arsenic, barium, chromium, lead, and selenium. None of these exceeded the MTCA Method A CULs.

Gasoline-range TPH, diesel-range TPH, oil-range TPH, and VOCs were not detected in the groundwater sample.

Multiple PAHs were detected in the groundwater sample, but none of the detections exceeded the MTCA Method A CULs or the Method B CULs used when a Method A CUL was not available.

CONCLUSIONS

The Phase II environmental assessment of Block A resulted in the following conclusions:

- No major indicators of contamination (petroleum hydrocarbon-like odors, staining) were observed in the soil borings. Wood fragments were observed in GP-3, but there were no hydrocarbon-like odors or elevated PID readings associated with the wood.

- The MTCA Method A CUL exceedance for lead in soil sample GP-1 at 11 feet bgs is limited in vertical extent, since lead did not exceed the CUL in the shallower samples at 2 feet and 7 feet bgs. In addition, the lead TCLP analysis concentration for GP-1 at 11 feet bgs was below the USEPA hazardous waste regulatory level.
- Groundwater was present at approximately 21 feet bgs.
- Analysis of the groundwater constituents did not detect Method A CUL exceedances.
- Overall, widespread contamination with the potential to impact future redevelopment was not encountered during the assessment.

RECOMMENDATIONS

The results of the Block A Phase II environmental assessment provide the basis for the following recommendations:

- Further assessment of the extent of lead in soil should future development of Block A require excavation of soil at GP-1 at 11 feet bgs.
- No additional groundwater sampling in Block A.

Sincerely,

Maul Foster & Alongi, Inc.

NOTES:

Calculated sums use the highest non-detect value when all constituents are non-detect. When detect and non-detect values are summed, one-half the non-detect value is used. Where all results are non-detect, the highest non-detect value is used.

Detected results are indicated by bold font.

Results that exceed cleanup levels are shaded. Non-detect results are not evaluated against cleanup criteria. Results are evaluated against MTCA B cleanup levels only when MTCA A levels are not available.

-- = not analyzed.

cPAH TTEC = carcinogenic PAH total toxic equivalent concentration. Non-detect results treated as one-half according to Washington State Department of Ecology Implementation Memorandum #10 (Evaluating the Human Health Toxicity of Carcinogenic PAHs (cPAHs) Using Toxicity Equivalency Factors (TEFs). April 20, 2015.

ft bgs = feet below ground surface.

J = result is an estimated value.

mg/kg = milligrams per kilogram.

mg/L = milligrams per liter.

MTCA A = Model Toxics Control Act Method A, unrestricted land use.

MTCA B = Model Toxics Control Act Method B, lower of carcinogen or noncarcinogen value.

ND = not detected.

NV = no value.

PAH = polycyclic aromatic hydrocarbon.

PCB = polychlorinated biphenyl.

TCLP = Toxicity Characteristic Leaching Procedure.

TPH = total petroleum hydrocarbons.

U = result is non-detect at the method reporting limit.

[a]TCLP maximum concentration for toxicity characteristic, 40 CFR 261.24.

[b]Value is for chromium III.

[c]The sum of naphthalene, 1-methylnaphthalene, and 2-methylnaphthalene. One half of the method reporting limit used for non-detect results.

[d]MTCA cleanup level is for gasoline-range organics with no detectable benzene present.

[e]Diesel + Oil = sum of diesel-range hydrocarbons and oil-range hydrocarbons; half of the method reporting limit is used when results are not detected.

Diesel + Oil[d]	500	NV	300 U

NOTES:

Calculated sums use the highest non-detect value when all constituents are non-detect. When detect and non-detect values are summed, one-half the non-detect value is used.

Detected results are indicated by bold font.

Results that exceed cleanup levels are shaded. Non-detect results are not evaluated against cleanup criteria. Results are evaluated against MTCA B cleanup levels only when MTCA A levels are not available.

cPAH TTEC = carcinogenic PAH total toxic equivalent concentration. Non-detect results treated as one-half according to Washington State Department of Ecology Implementation Memorandum #10 (Evaluating the Human Health Toxicity of Carcinogenic PAHs (cPAHs) Using Toxicity Equivalency Factors (TEFs). April 20, 2015.

ft bgs = feet below ground surface.

J = result is an estimated value.

MTCA A = Model Toxics Control Act Method A.

MTCA B = Model Toxics Control Act Method B, lower of carcinogen or noncarcinogen value.

ND = not detected.

NV = no value.

PAH = polycyclic aromatic hydrocarbon.

TPH = total petroleum hydrocarbon.

U = result is non-detect at the method reporting limit.

ug/L = micrograms per liter.

VOC = volatile organic compound.

[a]Value is for chromium III.

[b]The sum of naphthalene, 1-methylnaphthalene, and 2-methylnaphthalene. One half of the method reporting limit used for non-detect results.

[c]MTCA cleanup level is for gasoline-range organics with no detectable benzene present.

[d]Diesel + Oil = sum of diesel-range hydrocarbons and oil-range hydrocarbons; half of the method reporting limit is used when results are not detected.

RE: A8A0991 - 9085.10.07

Thank you for using Apex Laboratories. We greatly appreciate your business and strive to provide the highest quality services to the environmental industry.

Enclosed are the results of analyses for work order A8A0991, which was received by the laboratory on 1/31/2018 at 10:37:00AM.

If you have any questions concerning this report or the services we offer, please feel free to contact me by email at: pnerenberg@apex-labs.com, or by phone at 503-718-2323.

This Final Report is the official version of the data results for this sample submission, unless superseded by a subsequent, labeled amended report.

All other deliverables derived from this data, including Electronic Data Deliverables (EDDs), CLP-like forms, client requested summary sheets, and all other products are considered secondary to this report.

ANALYTICAL CASE NARRATIVE

Work Order: A8A0991

Amended Report Revision 1:

This report supersedes all previous reports.

Analysis of TCLP lead on GP1-S-11.0 and total lead on GP1-S-7.0 were added after the previous report version had been completed.

AMENDED REPORT

Maul Foster & Alongi, INC.	Project: **POV-Block A**	
2001 NW 19th Ave, STE 200	Project Number: **9085.10.07**	Report ID:
Portland, OR 97209	Project Manager: **David Weatherby**	**A8A0991 - 050818 0340**

QUALIFIER DEFINITIONS

Client Sample and Quality Control (QC) Sample Qualifier Definitions:

A-01	Rerun for MRL.
C-07	Extract has undergone Sulfuric Acid Cleanup by EPA 3665A, Sulfur Cleanup by EPA 3660B, and Florisil Cleanup by EPA 3620B in order to minimize matrix interference.
F-11	The hydrocarbon pattern indicates possible weathered diesel, or a contribution from a related component.
M-05	Estimated results. Peak separation for structural isomers is insufficient for accurate quantification.
P-10	Result estimated due to the presence of multiple PCB Aroclors and/or matrix interference.
Q-03	Spike recovery and/or RPD is outside control limits due to the high concentration of analyte present in the sample.
Q-04	Spike recovery and/or RPD is outside control limits due to a non-homogeneous sample matrix.
Q-05	Analyses are not controlled on RPD values from sample and duplicate concentrations that are below 5 times the reporting level.
Q-16	Reanalysis of an original Batch QC sample.
Q-19	Blank Spike Duplicate (BSD) sample analyzed in place of Matrix Spike/Duplicate samples due to limited sample amount available for analysis.
Q-42	Matrix Spike and/or Duplicate analysis was performed on this sample. % Recovery or RPD for this analyte is outside laboratory control limits. (Refer to the QC Section of Analytical Report.)
Q-54	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by +2%. The results are reported as Estimated Values.
Q-54a	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by +9%. The results are reported as Estimated Values.
Q-56	Daily CCV/LCS recovery for this analyte was above the +/-20% criteria listed in EPA 8260C
R-02	The Reporting Limit for this analyte has been raised to account for interference from coeluting organic compounds present in the sample.
S-05	Surrogate recovery is estimated due to sample dilution required for high analyte concentration and/or matrix interference.
S-06	Surrogate recovery is outside of established control limits.
TCLP	This batch QC sample was prepared with TCLP or SPLP fluid from preparation batch 8050398.

Apex Laboratories

Philip Nerenberg

Philip Nerenberg, Lab Director

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Apex Laboratories, LLC

503-718-2323
EPA ID: OR01039

AMENDED REPORT

Maul Foster & Alongi, INC.	Project: **POV-Block A**	
2001 NW 19th Ave, STE 200	Project Number: **9085.10.07**	Report ID:
Portland, OR 97209	Project Manager: **David Weatherby**	**A8A0991 - 050818 0340**

REPORTING NOTES AND CONVENTIONS:

Abbreviations:

DET Analyte DETECTED at or above the detection or reporting limit.

ND Analyte NOT DETECTED at or above the detection or reporting limit.

NR Result Not Reported

RPD Relative Percent Difference

Detection Limits: Limit of Detection (LOD)

Limits of Detection (LODs) are normally set at a level of one half the validated Limit of Quantitation (LOQ).
If no value is listed ('-----'), then the data has not been evaluated below the Reporting Limit.

Reporting Limits: Limit of Quantitation (LOQ)

Validated Limits of Quantitation (LOQs) are reported as the Reporting Limits for all analyses where the LOQ, MRL, PQL or CRL are requested. The LOQ represents a level at or above the low point of the calibration curve, that has been validated according to Apex Laboratories' comprehensive LOQ policies and procedures.

Reporting Conventions:

Basis: Results for soil samples are generally reported on a 100% dry weight basis.
The Result Basis is listed following the units as " dry", " wet", or " " (blank) designation.

" dry" Sample results and Reporting Limits are reported on a dry weight basis. (i.e. "ug/kg dry")
See Percent Solids section for details of dry weight analysis.

" wet" Sample results and Reporting Limits for this analysis are normally dry weight corrected, but have not been modified in this case.

" " Results without 'wet' or 'dry' designation are not normally dry weight corrected. These results are considered 'As Received'.

QC Source: In cases where there is insufficient sample provided for Sample Duplicates and/or Matrix Spikes, a Lab Control Sample Duplicate (LCS Dup) may be analyzed to demonstrate accuracy and precision of the extraction batch.

Miscellaneous Notes:

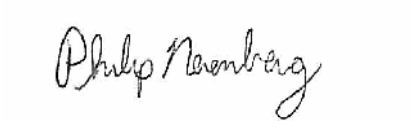
" --- " QC results are not applicable. For example, % Recoveries for Blanks and Duplicates, % RPD for Blanks, Blank Spikes and Matrix Spikes, etc.

" *** " Used to indicate a possible discrepancy with the Sample and Sample Duplicate results when the %RPD is not available. In this case, either the Sample or the Sample Duplicate has a reportable result for this analyte, while the other is Non Detect (ND).

Blanks:

Standard practice is to evaluate the results from Blank QC Samples down to a level equal to ½ the Reporting Limit (RL).
-For Blank hits falling between ½ the RL and the RL (J flagged hits), the associated sample and QC data will receive a 'B-02' qualifier.
-For Blank hits above the RL, the associated sample and QC data will receive a 'B' qualifier, per Apex Laboratories' Blank Policy.
For further details, please request a copy of this document.

Apex Laboratories



Philip Nerenberg, Lab Director

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Apex Laboratories, LLC

12232 S.W. Garden Place
Tigard, OR 97223
503-718-2323
EPA ID: OR01039

AMENDED REPORT

Maul Foster & Alongi, INC.	Project: **POV-Block A**	
2001 NW 19th Ave, STE 200	Project Number: **9085.10.07**	Report ID:
Portland, OR 97209	Project Manager: **David Weatherby**	**A8A0991 - 050818 0340**

REPORTING NOTES AND CONVENTIONS (Cont.):

Blanks (Cont.):

Sample results flagged with a 'B' or 'B-02' qualifier are potentially biased high if the blank results are less than ten times the level found in the blank for inorganic analyses, or less than five times the level found in the blank for organic analyses.

'B' and 'B-02' qualifications are only applied to sample results detected above the Reporting Level.

Preparation Notes:

Mixed Matrix Samples:

Water Samples:

Water samples containing significant amounts of sediment are decanted or separated prior to extraction, and only the water portion analyzed, unless otherwise directed by the client.

Soil and Sediment Samples:

Soil and Sediment samples containing significant amounts of water are decanted prior to extraction, and only the solid portion analyzed, unless otherwise directed by the client.

Sampling and Preservation Notes:

Certain regulatory programs, such as National Pollutant Discharge Elimination System (NPDES), require that activities such as sample filtration (for dissolved metals, orthophosphate, hexavalent chromium, etc.) and testing of short hold analytes (pH, Dissolved Oxygen, etc.) be performed in the field (on-site) within a short time window. In addition, sample matrix spikes are required for some analyses, and sufficient volume must be provided and billable site specific QC requested, if this is required. All regulatory permits should be reviewed to ensure that these requirements are being met. Data users should be aware of which regulations pertain to the samples they submit for testing. If related sample collection activities are not approved for a particular regulatory program, results should be considered estimates. Apex Laboratories will qualify these analytes according to the most stringent requirements, however results for samples that are for non-regulatory purposes may be acceptable.

Samples that have been filtered and preserved at Apex Laboratories per client request are listed in the preparation section of the report with the date and time of filtration listed.

DATA VALIDATION MEMORANDUM

DATA QUALITY ASSURANCE/QUALITY CONTROL REVIEW

PROJECT NO. 9085.10.07 | MAY 11, 2018 | PORT OF VANCOUVER

Maul Foster & Alongi, Inc. (MFA) conducted an independent review of the quality of analytical results for groundwater and soil samples collected at the Port of Vancouver Block A property on January 30, 2018.

Apex Laboratories, LLC (Apex) performed the analyses. Apex report A8A0991, issued on May 8, 2018, was reviewed. The analyses performed and samples analyzed are listed below. Samples submitted on hold are also indicated below.

Analysis	Reference
Diesel- and Oil-Range-Hydrocarbons	NWTPH-Dx
Gasoline-Range Hydrocarbons	NWTPH-Gx
Polychlorinated Biphenyls as Aroclors	USEPA 8082A
Semivolatile Organic Compounds	USEPA 8270D
TCLP Metals	USEPA 1311/6020A
Total Metals	USEPA 6020A
Volatile Organic Compounds	USEPA 8260C

NWTPH = Northwest Total Petroleum Hydrocarbons.
TCLP = toxicity characteristic leaching procedure.
USEPA = U.S. Environmental Protection Agency.

Samples Analyzed	
Report A8A0991	
GP1-S-2.0	GP2-W-26.0
GP1-S-7.0	GP3-S-4.0
GP1-S-11.0	GP3-S-6.5 (hold)
GP2-S-2.5	GP3-S-14.0
GP2-S-8.0 (hold)	Trip Blank (hold)
GP2-S-13.0	-

DATA QUALIFICATIONS

Analytical results were evaluated according to applicable sections of USEPA procedures (USEPA, 2017a,b) and appropriate laboratory and method-specific guidelines (Apex, 2016; USEPA, 1986).

Data validation procedures were modified, as appropriate, to accommodate quality-control requirements for methods not specifically addressed by the USEPA procedures (e.g., NWTPH-Dx).

The NWTPH-Dx diesel-range hydrocarbon result for sample GP1-S-11.0 was flagged by Apex because of a chromatographic pattern that resembled either weathered diesel or contribution from a related component. Qualification was not required.

Apex noted that USEPA Method 8082A samples and associated batch quality control samples had been processed with sulfuric acid cleanup by USEPA Method 3665A, sulfur cleanup by USEPA Method 3660B, and florisil cleanup by USEPA Method 3620B. No action was required.

In report A8A0991, Apex flagged some USEPA Method 8270D results because of insufficient chromatographic peak separation. Results are considered estimated, and have been qualified by the reviewer with "J" in the following table:

Report	Sample	Component	Units	Original Result	Qualified Result
A8A0991	GP1-S-2.0	Benzo(a)anthracene	ug/kg	39.2	39.2 J
		Benzo(b)fluoranthene		53.5	53.5 J
		Chrysene		56.4	56.4 J
	GP1-S-11.0	Benzo(a)anthracene		5.41	5.41 J
		Benzo(b)fluoranthene		8.90	8.90 J
		Chrysene		6.33	6.33 J
	GP2-W-26.0	Benzo(a)anthracene	ug/L	0.0338	0.0338 J
		Benzo(b)fluoranthene		0.0778	0.0778 J
		Benzo(k)fluoranthene		0.0367	0.0367 J
		Chrysene		0.0437	0.0437 J

ug/kg = micrograms per kilogram.
ug/L = micrograms per liter.

The data are considered acceptable for their intended use, with the appropriate data qualifiers assigned.

HOLDING TIMES, PRESERVATION, AND SAMPLE STORAGE

Holding Times

Extractions and analyses were performed within the recommended holding time criteria.

Preservation and Sample Storage

The samples were preserved and stored appropriately.

BLANKS

Method Blanks

Laboratory method blank analyses were performed at the required frequencies. For purposes of data qualification, the method blanks were associated with all samples prepared in the

analytical batch. All laboratory method blank samples were non-detect to method reporting limits (MRLs).

Trip Blanks

A trip blank sample was submitted to Apex on hold. Analysis was not required, as the associated sample, GP2-W-26.0, was analyzed for USEPA Method 8260C and was non-detect for all volatile organic compounds.

Equipment Rinsate Blanks

Equipment rinsate blanks were not submitted for this sampling event.

SURROGATE RECOVERY RESULTS

The samples were spiked with surrogate compounds to evaluate laboratory performance on individual samples. The laboratory appropriately documented and qualified surrogate outliers.

The USEPA Method 8270D percent recovery results for surrogates nitrobenzene-d5 and 2-fluorobiphenyl were below the lower percent recover acceptance limit of 44 percent, at 36 percent and 39 percent, respectively, for sample GP2-W-26.0. The remaining four surrogates had acceptable percent recoveries; thus, no associated sample results were qualified.

All remaining surrogate recoveries were within acceptance limits.

MATRIX SPIKE/MATRIX SPIKE DUPLICATE RESULTS

Matrix spike/matrix spike duplicate (MS/MSD) results are used to evaluate laboratory precision and accuracy. NWTPH-Dx batch 8020338 quality control results were flagged to indicate that batch precision had been evaluated with a laboratory control sample/laboratory control sample duplicate (LCS/LCSD) pair. The remaining MS/MSD samples were extracted and analyzed at the required frequency.

When MS/MSD percent recoveries and relative percent differences (RPDs) were outside acceptance limits because of high concentrations of analyte in the sample, and MS/MSD exceedances were flagged by the laboratory because of high concentrations of analyte or dilutions performed, no qualifications were made by the reviewer.

The USEPA Method 6020A batch 8020624 MS (8020624-MS2) exceeded the upper percent recovery acceptance limit of 125 percent for barium and chromium, at 131 percent and 408 percent, respectively, and exceeded the lower percent recovery acceptance limit of 75 percent for lead, at 60.9 percent. The MS had been prepared with a sample from an unrelated project, and a second MS prepared with project sample GP2-S-13.0 had acceptable percent recoveries; thus, no results were qualified.

All recoveries were within acceptance limits for percent recovery and RPDs.

LABORATORY DUPLICATE RESULTS

Duplicate results are used to evaluate laboratory precision. All duplicate samples were extracted and analyzed at the required frequency. Laboratory duplicate results within five times the MRL were not evaluated for precision.

The USEPA Method 8270D batch 8020650 laboratory duplicate exceeded several RPD control limits of 30 percent. The reviewer confirmed that all laboratory duplicate results were less than five times the MRL; thus, no results were qualified.

All remaining laboratory duplicate RPDs were within acceptance limits.

LABORATORY CONTROL SAMPLE/LABORATORY CONTROL SAMPLE DUPLICATE RESULTS

An LCS/LCSD is spiked with target analytes to provide information on laboratory precision and accuracy. The LCS/LCSD samples were extracted and analyzed at the required frequency.

The USEPA Method 8260C batch 8011218 LCS exceeded the upper percent recovery acceptance limit of 120 percent for bromomethane and carbon tetrachloride, at 129 percent and 122 percent, respectively. The associated sample results were non-detect; thus, no results were qualified.

All remaining LCS/LCSD results were within acceptance limits for percent recovery and RPD.

FIELD DUPLICATE RESULTS

Field duplicate samples measure both field and laboratory precision. Field duplicate samples were not submitted for analysis.

CONTINUING CALIBRATION VERIFICATION RESULTS

Continue calibration verification (CCV) results are used to demonstrate instrument precision and accuracy through the end of the sample batch. CCV results were not reported. Some USEPA Method 8260C batch quality control sample results were flagged because of association with CCV results that exceed the 20 percent drift acceptance criterion. The USEPA Method 8260C states that CCV percent drift acceptance criterion must be met for more than 20 percent of the compounds included in the initial calibration. When at least 80 percent of the compounds have met acceptance criteria, non-detects may be reported for compounds that exceed acceptance limits if the laboratory demonstrates that quantitation limit sensitivity can still be achieved; detected compounds with CCV percent drift exceedances may be reported as estimated values. The reviewer took no action based on quality control sample flags for CCV exceedances when quality control results met acceptance criteria.

REPORTING LIMITS

Apex used routine reporting limits for non-detect results, except for samples requiring dilutions because of high analyte concentrations and/or matrix interferences.

The USEPA Method 8270D dibenzofuran reporting limit was raised for sample GP1-S-11.0 because of matrix interference. No additional action was required.

DATA PACKAGE

The data packages were reviewed for transcription errors, omissions, and anomalies.

A trip blank was submitted with sample delivery group A8A0991; however, the trip blank sample was not recorded on the chain of custody (COC). Instructions for trip blank analysis were recorded in the special instructions section of the COC. The reviewer notified the sampler that all samples should be recorded on the COC; no additional action was required.

Based on NWTPH-Dx detected results, USEPA Method 8270D analysis was added to samples GP1-S-2.0 and GP1-S-11.0 by the MFA project manager after samples were received by Apex. No action was required by the reviewer.

No additional issues were found.

December 27, 2019
Project No. 9085.10.12

Matt Graves, LG
Port of Vancouver USA
3103 Northwest Lower River Road
Vancouver, Washington 98660

Re: Terminal 1 October 2019 Groundwater Monitoring

Dear Mr. Graves:

In October 2019, on behalf of the Port of Vancouver (Port), Maul Foster & Alongi, Inc. (MFA) completed groundwater monitoring at the Terminal 1 property located at 200 Columbia Street in Vancouver, Washington (Terminal 1) (see Figure 1). The purpose of this investigation was to gather supplemental data to assist the Port with planning related to future redevelopment of Terminal 1. MFA collected groundwater samples from six monitoring wells to support evaluation of potential seasonal variability in groundwater quality.

Previous investigations at Terminal 1 include Ecology & Environment, Inc.'s subsurface investigation conducted in November 2008, and Hahn and Associates, Inc.'s (HAI) initial and follow-up soil and groundwater investigations in 2015 and 2016 (E&E, 2009; HAI, 2016). MFA conducted subsurface investigations at Block D in 2017 and 2018 (MFA, 2017d, 2018e); Block B in 2017 and 2018 (MFA, 2017b, 2018b); and Blocks A and C in 2018 (MFA, 2018a,d). HAI collected groundwater samples from monitoring wells MW-1-37 through MW-5-34 in June 2015 and February 2016 (a groundwater analytical data table from these sampling events is included as Attachment A). MFA collected groundwater samples from these wells in November 2016, February 2017, February 2018, and February 2019 (MFA, 2017c, 2018c, 2019). Monitoring well MW-6-30 was installed in Block C in July 2018 and sampled in August 2018 (MFA, 2018d). All groundwater analytical data from MFA's groundwater sampling events to date are included in Table 1, including the August 2018 event at MW-6-30.

One detection of total chromium in a groundwater sample collected by HAI from well MW-2-40 in June 2015 led to the addition of hexavalent chromium analysis during subsequent groundwater sampling events. The Washington State Model Toxics Control Act (MTCA) Method A groundwater cleanup level (CUL) for unrestricted land use for hexavalent chromium is 48 ug/L. Since MFA began sampling in 2016, hexavalent chromium was detected once at a concentration of 5 ug/L. Because of the lack of frequent detections of hexavalent chromium in groundwater at Terminal 1, including a single detection much less than the MTCA CUL, groundwater was not analyzed for hexavalent chromium during the October 2019 sampling event.

FIELD ACTIVITIES

MFA conducted the groundwater monitoring at the six monitoring wells on October 28 and October 29, 2019. The wells were initially opened to allow the water level to equilibrate with the ambient air pressure, followed by measurement of the static water level, using a water level indicator. The water levels were measured from the north side of the casing and were recorded on the water field sampling data sheets, which are included as Attachment B.

Each monitoring well was purged of groundwater before it was sampled. The MW-1-37, MW-3-35, and MW-6-30 well casings were purged using low-flow purging methods with a peristaltic pump and dedicated tubing. Low-flow purging was not implemented at MW-2-40 because the well did not yield sufficient groundwater to permit sustained pumping of groundwater from the well. Instead, a new, disposable plastic bailer was used, and MW-2-40 was purged dry after removal of about 1.3 pore volumes of groundwater. Low flow purging was not implemented at wells MW-4-34 and MW-5-35 because the groundwater levels were below the depth capability of the peristaltic pump. The two wells were purged dry using a new, disposable plastic bailer at each well. Approximately two pore volumes were removed from wells MW-4-34 and MW-5-35.

Water quality parameter measurements were collected during low-flow and bailer purging with a flow-through cell and an in-line, multiprobe meter at approximately three- to five-minute intervals. Water levels were also measured during purging to monitor drawdown. Parameter measurements recorded during purging included purge volume, water level, temperature, specific conductivity, dissolved oxygen, pH, oxygen reduction potential, and turbidity.

Once monitoring parameters had stabilized, sampling was conducted using the peristaltic pump at MW-1-37, MW-3-35, and MW-6-30. At MW-2-40, MW-4-34, and MW-5-35, sampling was conducted with a disposable bailer upon sufficient recharge of groundwater into the well casing.

Laboratory-supplied containers appropriate for the analytical suite were properly filled, labeled, capped, and preserved consistent with method requirements. The sample bottles were then transferred to a chilled cooler for shipment to Apex Laboratories, LLC, in Portland, Oregon, under standard chain-of-custody procedures.

Approximately 10 gallons of purge water and decontamination water were generated during the monitoring event. The waste was disposed of at the Port's aboveground storage tank beneath the West 26th Avenue overpass in Vancouver, Washington.

ANALYTICAL WORK

The groundwater samples were analyzed for the following:

- Diesel- and oil-range total petroleum hydrocarbons (TPH) by method Northwest (NW) TPH-Dx
- Gasoline-range TPH by method NWTPH-Gx
- Priority pollutant 13 total and dissolved metals by U.S. Environmental Protection Agency (USEPA) Method 6020
- Polycyclic aromatic hydrocarbons (PAHs) by USEPA Method 8270D
- Volatile organic compounds by USEPA 8260B

Groundwater analytical laboratory results are included as Attachment C. Results are compared to the Washington State MTCA Method A groundwater CULs for unrestricted land use or, if Method A CULs are not available, to Method B CULs. The data are considered acceptable for their intended use, with the appropriate data qualifiers assigned (see Attachment D for the data validation memorandum).

Consistent with Washington Administrative Code 173-340-708(8), mixtures of carcinogenic PAHs (cPAHs) are considered as single hazardous substances in evaluation of compliance with CULs such that the toxicity of a particular congener is expressed relative to the most toxic congener (benzo(a)pyrene). The toxicity of cPAHs as a group was assessed using a toxic equivalency approach. Each congener in the group is assigned a toxic equivalency factor (TEF) corresponding to the toxicity of that congener relative to the toxicity of benzo(a)pyrene. For example, a congener that is equal in toxicity to benzo(a)pyrene would have a TEF of 1. Similarly, a congener that is half as toxic as benzo(a)pyrene would have a TEF of 0.5, and so on. Multiplying the concentration of a congener by its TEF produces the concentration for that congener that is equivalent in toxicity to the benzo(a)pyrene concentration, known as the toxicity equivalent concentration (TEC). Computing the TEC for each congener (Ci in the equation below) in a sample, followed by summing all TEC values, results in a single cPAH total TEC (i.e., cPAH TTEC) that can be compared to the CUL. The following formula represents the summation approach:

$$\text{cPAH TTEC} = \sum_{i=1}^{k} \text{Ci x TEFi}$$

cPAH TTECs were qualified and calculated as follows:

- Congeners qualified as non-detect and flagged with a "U" are used in the TTEC calculation at one-half the associated value.

- Congeners qualified as estimated and flagged with a "J" are used without modification in the TTEC calculation.
- Typically, if all congeners in a chemical group are undetected, the group sum is reported as undetected; however, based on the limited data set for Terminal 1, this action was not completed.

Naphthalene, 1-methylnaphthalene, and 2-methylnaphthalene were summed to compare to the MTCA Method A CUL for naphthalenes.

Consistent with Ecology Implementation Memorandum No. 4 (Ecology, 2004), the diesel- and oil-range TPH results were summed for a total detection value and were calculated as follows:

- Diesel and oil results qualified as non-detect and flagged with a "U" are used in the total calculation at one-half the associated value.
- Diesel and oil results qualified as estimated and flagged with a "J" are used in the total calculation without modification.

RESULTS

Table 1 provides the analytical results for the sampling events conducted from November 2016 through October 2019. Water level and groundwater elevation data for these events are provided in Table 2.

Groundwater Flow Direction

During the October 2019 sampling event, groundwater was encountered in the monitoring wells at approximately 25 to 29 feet below the top of casing (see Table 2). The groundwater level surface shown on Figure 2 indicates that the dominant groundwater flow direction (as indicated with arrows on the figure) is north-northeast, away from the Columbia River. The groundwater elevation at MW-3-35 is less than at MW-4-34, indicating a slight groundwater flow gradient south toward the Columbia River in the southeast portion of the property. A similar groundwater flow direction was documented during the February 2019 monitoring event.

During the February 2018 sampling event, the groundwater flow direction was south-southeast, toward the Columbia River. During the monitoring events conducted in November 2016 and February 2017, the groundwater flow direction was north-northwest, away from the Columbia River.

This variability in groundwater flow direction may be a function of the Columbia River surface water elevation. At a high river stage, groundwater at Terminal 1 likely is recharged by the

Columbia River and flows north. At low river stage, groundwater at Terminal 1 flows south and discharges to the Columbia River.

Petroleum Hydrocarbons

The following is a summary of the October 2019 results:

- Gasoline-range TPH was detected only at MW-3-35 at a concentration less than the CUL.
- Diesel-range TPH was detected only at MW-3-35 at a concentration greater than the CUL.
- Oil-range TPH was detected only at MW-1-37 at a concentration greater than the CUL.
- The sum of the diesel- and oil-range hydrocarbon concentrations[1] exceeded the CUL at MW-1-37 and MW-3-35.

The following is a summary of the complete dataset, including sampling conducted by HAI in June 2015 and February 2016 and sampling conducted by MFA from November 2016 to October 2019:

- At MW-1-37, after a period of non-detections, oil was detected in October 2019.
- At MW-2-40, detections of diesel have been sporadic; diesel was detected in 2015, 2017, and February 2019 but not in 2016, 2018, or October 2019. Oil was detected at a maximum concentration in November 2016, decreased in 2017, and has not been detected since then.
- At MW-3-35, detections of gasoline and diesel have also been sporadic. Gasoline and diesel exceeded the CULs in 2015 and February 2016, were not detected in November 2016, were detected at generally increasing concentrations from February 2017 to February 2019, and decreased in concentration in October 2019. Oil was detected once in February 2018 at a concentration greater than the CUL.
- At MW-4-34, petroleum hydrocarbons have not been detected.
- At MW-5-35, oil was detected once in February 2018 at a concentration greater than the CUL.

[1] Note that oil-range TPH were not actually detected at MW-2-40 and MW-3-35. The sum of the diesel- and oil-range TPH uses half the reporting limit for non-detected results, which was the case for the oil-range TPH in this instance.

- At MW-6-30, oil was detected once in August 2018 at a concentration greater than the CUL.

The sporadic nature of detections and CUL exceedances may be related to the groundwater flow direction relative to contaminated soil that may be acting as a source of groundwater contamination.

- When groundwater beneath Terminal 1 was flowing toward the Columbia River in February 2018, CUL exceedances occurred at the downgradient well MW-3-35 but not at the upgradient well MW-2-40.
- Conversely, when groundwater beneath Terminal 1 was flowing north, away from the Columbia River, CUL exceedances occurred at downgradient well MW-2-40 but not at the upgradient well MW-3-35.

Primary Pollutant Metals

Of the listed 13 priority pollutant metals, only arsenic was detected at a concentration greater than its CUL, at MW-1-37, MW-4-34, and MW-5-35. All other metals either were not detected or were detected below the CULs (Table 1).

The 2016 to 2019 data include total and dissolved arsenic concentration CUL exceedances at MW-1-37 through MW-5-35. This is consistent with the HAI 2015 and 2016 investigations, which included total arsenic CUL exceedances at the same wells (HAI, 2016). At MW-5-35, a slight increase in concentration is apparent. No trend in concentration is apparent at MW-1-37, MW-2-40, MW-3-35, and MW-4-34. To date, total and dissolved arsenic have not been detected at MW-6-30.

Volatile Organic Compounds

Only acetone at MW-2-40 and naphthalene at MW-3-35 were detected at concentrations less than the CULs during the October 2019 sampling event (Table 1). The naphthalene concentration exceeded the CUL at MW-3-35 during the February 2019 sampling event. This CUL exceedance corresponds with the highest gasoline- and oil-range TPH concentrations detected in February 2019 at MW-3-35.

Polycyclic Aromatic Hydrocarbons

PAHs were detected at MW-1-37, MW-3-35 (MW-3-35 and MW-3-35-DUP), MW-4-34, and MW-6-30 during the October 2019 sampling event. The dibenzofuran detection at MW-3-35 exceeded the CUL; the concentration appears to fluctuate consistent with gasoline- and oil-range TPH concentrations at MW-3-35. Prior CUL exceedances include benzo(a)pyrene and the cPAH TTEC in February 2019 at MW-2-40, the cPAH TTEC in February 2018 at MW-3-35, and naphthalenes in February 2019 at MW-3-35.

SUMMARY

CUL exceedances in the October 2019 groundwater samples collected at Terminal 1 are limited to the combined diesel- and oil-range hydrocarbons from MW-1-37 and MW-3-35; arsenic from MW-1-37, MW-4-34, and MW-5-35; and dibenzofuran from MW-3-35. These exceedances were generally consistent with previous monitoring events. The groundwater flow direction beneath Terminal 1 appears to fluctuate from discharging to the Columbia River (February 2018) to flowing away from the Columbia River (November 2016, February 2017, and October 2019). The fluctuations in flow direction may account for the spatial and temporal fluctuations of diesel- and oil-range hydrocarbon CUL exceedances at MW-2-40 and MW-3-35.

Sincerely,

Maul Foster & Alongi, Inc.

Naphthalenes[f]	160	ND	ND	ND	ND	ND	ND	ND	ND
cPAH TTEC[g]	0.1	ND	ND	ND	ND	ND	ND	ND	ND

NOTES:
Shading indicates CUL exceedance.
-- = not analyzed.
cPAH = carcinogenic polycyclic aromatic hydrocarbon.
CUL = cleanup level.
ft bgs = feet below ground surface.
J = estimated result.
MTCA = Model Toxics Control Act.
ND = not detected above method reporting limit.
NV = no value.
TTEC = total toxicity equivalent concentration.
U = not detected at or above method reporting limit.
ug/L = micrograms per liter.
UJ = estimated, non-detect.
[a]MTCA A CUL unless no value, then lowest of MTCA B carcinogenic/noncarcinogenic.
[b]MTCA CUL, no detectable benzene.
[c]Diesel + Oil = sum of diesel-range hydrocarbons and oil-range hydrocarbons; half of the reporting limit is used when results are not detected.
[d]Analyte is evaluated against MTCA A CUL as constituent of naphthalenes. MTCA B CUL is not applicable.
[e]Analyte is evaluated against MTCA A CUL as constituent of cPAH TTEC. MTCA B CUL is not applicable.
[f]The sum of naphthalene, 1-methylnaphthalene, and 2-methylnaphthalene, with half the reporting limit value for non-detect results.
[g]The sum of the seven defined cPAHs, with half the reporting limit used for non-detect results.

Table 2
Groundwater Elevations
Port of Vancouver Terminal 1
Vancouver, Washington

Location	TOC Reference Elevation (feet)	Date	Water Level (feet below TOC)	Water Level Elevation (feet)
MW-1-37	29.06	11/28/2016	20.76	8.30
		02/23/2017	16.94	12.12
		02/14/2018	20.34	8.72
		02/21/2019	22.34	6.72

Notes:

bgs = below ground surface
bold - detected concentration
Color = concentrations exceeding one or more cleanup levels.
EPA = Environmental Protection Agency
J - Estimated value
PAHs = polyaromatic hydrocarbons
TEF = Toxicity Equivalency Factor
U = Not detected
µg/L = micrograms per liter
VOCs = volatile organic compounds

1 = MTCA Cleanup Regulation, Method A Cleanup Levels, Table 720-1 of Section 900 of Chapter 173-340 of the Washington Administrative Code, revised November 2007.
2 = MTCA Cleanup Regulation, Method B Cleanup Levels, Table 720-1 of Section 900 of Chapter 173-340 of the Washington Administrative Code, revised November 2007.
3 = Guidance for Evaluating Soil Vapor Intrusion in Washington State: Investigation and Remedial Action, Review Draft October 2009, updated April 6, 2015.
4 = Ecology and Environment, Inc. November 2008 temporary well point location.
5 = Equipment blank collected upon groundwater sample collection at the MW-5-34 well location, prior to sampling MW-4-34.
6 = TEF values calculated as described in WAC 173-340-708(8); When the individual PAH concentration was reported as non-detected, then the TEF was multiplied by half the Reporting Level
F-13 = The chromatographic pattern does not resemble the fuel standard used for quantitation.
F-17 = No fuel pattern detected. The Diesel result represents carbon range C12 to C24, and the Oil result represents >C24 to C40.
H = Sample was analyzed outside of the recommended hold time.

RE: A9J1033 - POV-Terminal 1 - 9085.10.12

Thank you for using Apex Laboratories. We greatly appreciate your business and strive to provide the highest quality services to the environmental industry.

Enclosed are the results of analyses for work order A9J1033, which was received by the laboratory on 10/29/2019 at 12:45:00PM.

If you have any questions concerning this report or the services we offer, please feel free to contact me by email at: pnerenberg@apex-labs.com, or by phone at 503-718-2323.

Please note: All samples will be disposed of within 30 days of sample receipt, unless prior arrangements have been made.

Cooler Receipt Information

(See Cooler Receipt Form for details)

Cooler #1	0.3 degC	Cooler #2	0.1 degC
Cooler #3	1.9 degC		

This Final Report is the official version of the data results for this sample submission, unless superseded by a subsequent, labeled amended report.
All other deliverables derived from this data, including Electronic Data Deliverables (EDDs), CLP-like forms, client requested summary sheets, and all other products are considered secondary to this report.

QUALIFIER DEFINITIONS

Client Sample and Quality Control (QC) Sample Qualifier Definitions:

Apex Laboratories

F-12	The result for this hydrocarbon range is primarily due to the presence of individual analyte peaks in the quantitation range. No fuel pattern detected.
F-17	No fuel pattern detected. The Diesel result represents carbon range C12 to C24, and the Oil result represents >C24 to C40.
M-05	Estimated results. Peak separation for structural isomers is insufficient for accurate quantification.
Q-01	Spike recovery and/or RPD is outside acceptance limits.
Q-05	Analyses are not controlled on RPD values from sample and duplicate concentrations that are below 5 times the reporting level.
Q-16	Reanalysis of an original Batch QC sample.
Q-19	Blank Spike Duplicate (BSD) sample analyzed in place of Matrix Spike/Duplicate samples due to limited sample amount available for analysis.
Q-42	Matrix Spike and/or Duplicate analysis was performed on this sample. % Recovery or RPD for this analyte is outside laboratory control limits. (Refer to the QC Section of Analytical Report.)
Q-54	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by +11.7%. The results are reported as Estimated Values.
Q-54a	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by +4.3%. The results are reported as Estimated Values.
Q-54b	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by +5.1%. The results are reported as Estimated Values.
Q-54c	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by +6.9%. The results are reported as Estimated Values.
Q-56	Daily CCV/LCS recovery for this analyte was above the +/-20% criteria listed in EPA 8260C
T-02	This Batch QC sample was analyzed outside of the method specified 12 hour tune window. Results are estimated.

REPORTING NOTES AND CONVENTIONS:

Abbreviations:

DET Analyte DETECTED at or above the detection or reporting limit.

ND Analyte NOT DETECTED at or above the detection or reporting limit.

NR Result Not Reported

RPD Relative Percent Difference. RPDs for Matrix Spikes and Matrix Spike Duplicates are based on concentration, not recovery.

Detection Limits: Limit of Detection (LOD)

Limits of Detection (LODs) are normally set at a level of one half the validated Limit of Quantitation (LOQ).
If no value is listed ('-----'), then the data has not been evaluated below the Reporting Limit.

Reporting Limits: Limit of Quantitation (LOQ)

Validated Limits of Quantitation (LOQs) are reported as the Reporting Limits for all analyses where the LOQ, MRL, PQL or CRL are requested. The LOQ represents a level at or above the low point of the calibration curve, that has been validated according to Apex Laboratories' comprehensive LOQ policies and procedures.

Reporting Conventions:

Basis: Results for soil samples are generally reported on a 100% dry weight basis.
The Result Basis is listed following the units as " dry", " wet", or " " (blank) designation.

" dry" Sample results and Reporting Limits are reported on a dry weight basis. (i.e. "ug/kg dry")
See Percent Solids section for details of dry weight analysis.

" wet" Sample results and Reporting Limits for this analysis are normally dry weight corrected, but have not been modified in this case.

" " Results without 'wet' or 'dry' designation are not normally dry weight corrected. These results are considered 'As Received'.

QC Source:

In cases where there is insufficient sample provided for Sample Duplicates and/or Matrix Spikes, a Lab Control Sample Duplicate (LCS Dup) may be analyzed to demonstrate accuracy and precision of the extraction batch.

Non-Client Batch QC Samples (Duplicates and Matrix Spike/Duplicates) may not be included in this report. Please request a Full QC report if this data is required.

Miscellaneous Notes:

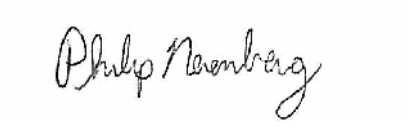
" --- " QC results are not applicable. For example, % Recoveries for Blanks and Duplicates, % RPD for Blanks, Blank Spikes and Matrix Spikes, etc.

" *** " Used to indicate a possible discrepancy with the Sample and Sample Duplicate results when the %RPD is not available. In this case, either the Sample or the Sample Duplicate has a reportable result for this analyte, while the other is Non Detect (ND).

Blanks:

Standard practice is to evaluate the results from Blank QC Samples down to a level equal to ½ the Reporting Limit (RL).
-For Blank hits falling between ½ the RL and the RL (J flagged hits), the associated sample and QC data will receive a 'B-02' qualifier.
-For Blank hits above the RL, the associated sample and QC data will receive a 'B' qualifier, per Apex Laboratories' Blank Policy.
For further details, please request a copy of this document.

Apex Laboratories



Philip Nerenberg, Lab Director

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Apex Laboratories, LLC

Portland, OR 97209	Project Manager: **David Weatherby**	**A9J1033 - 11 13 19 1613**

REPORTING NOTES AND CONVENTIONS (Cont.):

Blanks (Cont.):

Sample results flagged with a 'B' or 'B-02' qualifier are potentially biased high if the sample results are less than ten times the level found in the blank for inorganic analyses, or less than five times the level found in the blank for organic analyses.

'B' and 'B-02' qualifications are only applied to sample results detected above the Reporting Level.

Preparation Notes:

Mixed Matrix Samples:

Water Samples:

Water samples containing significant amounts of sediment are decanted or separated prior to extraction, and only the water portion analyzed, unless otherwise directed by the client.

Soil and Sediment Samples:

Soil and Sediment samples containing significant amounts of water are decanted prior to extraction, and only the solid portion analyzed, unless otherwise directed by the client.

Sampling and Preservation Notes:

Certain regulatory programs, such as National Pollutant Discharge Elimination System (NPDES), require that activities such as sample filtration (for dissolved metals, orthophosphate, hexavalent chromium, etc.) and testing of short hold analytes (pH, Dissolved Oxygen, etc.) be performed in the field (on-site) within a short time window. In addition, sample matrix spikes are required for some analyses, and sufficient volume must be provided, and billable site specific QC requested, if this is required. All regulatory permits should be reviewed to ensure that these requirements are being met.

Data users should be aware of which regulations pertain to the samples they submit for testing. If related sample collection activities are not approved for a particular regulatory program, results should be considered estimates. Apex Laboratories will qualify these analytes according to the most stringent requirements, however results for samples that are for non-regulatory purposes may be acceptable.

Samples that have been filtered and preserved at Apex Laboratories per client request are listed in the preparation section of the report with the date and time of filtration listed.

Apex Laboratories maintains detailed records on sample receipt, including client label verification, cooler temperature, sample preservation, hold time compliance and field filtration. Data is qualified as necessary, and the lack of qualification indicates compliance with required parameters.

LABORATORY ACCREDITATION INFORMATION

TNI Certification ID: OR100062 (Primary Accreditation) - EPA ID: OR01039

All methods and analytes reported from work performed at Apex Laboratories are included on Apex Laboratories' ORELAP Scope of Certification, with the exception of any analyte(s) listed below:

Apex Laboratories

Matrix	Analysis	TNI_ID	Analyte	TNI_ID	Accreditation

All reported analytes are included in Apex Laboratories' current ORELAP scope.

Secondary Accreditations

Apex Laboratories also maintains reciprocal accreditation with non-TNI states (Washington DOE), as well as other state specific accreditations not listed here.

Subcontract Laboratory Accreditations

Subcontracted data falls outside of Apex Laboratories' Scope of Accreditation.
Please see the Subcontract Laboratory report for full details, or contact your Project Manager for more information.

Field Testing Parameters

Results for Field Tested data are provded by the client or sampler, and fall outside of Apex Laboratories' Scope of Accreditation.

DATA VALIDATION MEMORANDUM

DATA QUALITY ASSURANCE/QUALITY CONTROL REVIEW

PROJECT NO. 9085.10.12 | NOVEMBER 22, 2019 | PORT OF VANCOUVER

Maul Foster & Alongi, Inc. (MFA) conducted an independent review of the quality of analytical results for groundwater samples collected at the Port of Vancouver Terminal 1. The samples were collected on October 28 and 29, 2019.

Apex Laboratories, LLC (Apex) performed the analyses. Apex report A9J1033 was reviewed. The analyses performed and samples analyzed are listed below. Samples submitted on hold are also indicated.

Analysis	Reference
Diesel- and Oil-Range Hydrocarbons	NWTPH-Dx
Gasoline-Range Hydrocarbons	NWTPH-Gx
Polycyclic Aromatic Hydrocarbons	USEPA 8270D-SIM
Total and Dissolved Priority Pollutant Metals	USEPA 6020A
Volatile Organic Compounds	USEPA 8260C

NWTPH = Northwest Total Petroleum Hydrocarbons.
SIM = selected ion monitoring.
USEPA = U.S. Environmental Protection Agency.

Samples Analyzed	
Report A9J1033	
MW-1-37	MW-5-35
MW-2-40	MW-6-30
MW-3-35	MW-3-35-DUP
MW-4-34	Trip Blank (hold)

DATA QUALIFICATIONS

Analytical results were evaluated according to applicable sections of U.S. Environmental Protection Agency (USEPA) procedures (USEPA, 2017a,b) and appropriate laboratory and method-specific guidelines (Apex, 2018; USEPA, 1986).

In report A9J1033, all detected NWTPH-Dx diesel-range hydrocarbon results were flagged by Apex, based on chromatographic patterns that did not resemble the chromatographic patterns of the fuel standards used for quantitation. The results were reported as diesel-range hydrocarbons instead of a specific fuel; thus, qualification was not required.

In report A9J1033, Apex flagged all detected NWTPH-Gx gasoline-range hydrocarbon results, based on the presence of individual analyte peaks within the gasoline hydrocarbon quantitation

range. Apex noted that no fuel pattern had been detected. The results were reported as gasoline-range hydrocarbons instead of a specific fuel; thus, qualification was not required.

In report A9J1033, Apex flagged some USEPA Method 8270D-SIM results as estimated because of insufficient chromatographic peak separation. The results have been qualified by the reviewer with "J" as estimated.

Report	Sample	Component	Original Result (ug/L)	Qualified Result (ug/L)
A9J1033	MW-1-37	Benzo(b)fluoranthene	0.0702	0.0702 J

NOTES:
J = result is estimated.
ug/L = micrograms per liter.

Total and dissolved metals results were compared. Dissolved results greater than associated total results were not qualified if the relative percent difference (RPD) was less than 20 percent. Qualification was required for the following based on dissolved metals results that were greater than the associated total metals results.

Report	Sample	Component	Original Result (ug/L)	Qualified Result (ug/L)
A9J1033	MW-2-40	Total Arsenic	3.01	3.01 J
		Dissolved Arsenic	4.16	4.16 J
		Total Nickel	1.08	1.08 J
		Dissolved Nickel	1.78	1.78 J
		Total Zinc	4.00 U	4.00 UJ
		Dissolved Zinc	9.12	9.12 J
	MW-3-35	Total Zinc	9.08	9.08 J
		Dissolved Zinc	12.7	12.7 J
	MW-3-35-DUP	Total Zinc	9.01	9.0 J
		Dissolved Zinc	16.4	16.4 J
	MW-6-30	Total Zinc	4.00 U	4.00 UJ
		Dissolved Zinc	10.7	10.7 J

NOTES:
J = result is estimated.
U = result is non-detect.
ug/L = micrograms per liter.

Data validation procedures were modified, as appropriate, to accommodate quality-control requirements for methods not specifically addressed by the USEPA procedures (e.g., NWTPH-Dx).

The data are considered acceptable for their intended use, with the appropriate data qualifiers assigned.

HOLDING TIMES, PRESERVATION, AND SAMPLE STORAGE

Holding Times

Extractions and analyses were performed within the recommended holding time criteria.

Preservation and Sample Storage

The samples were preserved and stored appropriately.

BLANKS

Method Blanks

Laboratory method blank analyses were performed at the required frequencies. For purposes of data qualification, the method blanks were associated with all samples prepared in the analytical batch. All laboratory method blanks were non-detect to reporting limits for all target analytes.

Trip Blanks

Report A9J1033 states that a trip blank sample was submitted to Apex on hold. Samples could not be evaluated for trip contamination.

Equipment Rinsate Blanks

Equipment rinsate blanks were not required for this sampling event, as samples were collected with single-use equipment.

SURROGATE RECOVERY RESULTS

The samples were spiked with surrogate compounds to evaluate laboratory performance on individual samples. All surrogate percent recoveries were within acceptance limits.

MATRIX SPIKE/MATRIX SPIKE DUPLICATE RESULTS

Matrix spike/matrix spike duplicate (MS/MSD) results are used to evaluate laboratory precision and accuracy. All MS/MSD samples were extracted and analyzed at the required frequency. Where MS/MSD analyses were not performed because of insufficient sample volume, batch precision and accuracy were evaluated with laboratory control sample (LCS)/laboratory control sample duplicate (LCSD) and/or laboratory duplicate samples.

According to report A9J1033, the USEPA Method 8260C batch 9101746 MS exceeded upper percent recovery acceptance limits for 1,1-dichloropropane and o-xylene, at 126 percent and 123 percent, respectively. The sample used to prepare the MS was non-detect; thus, qualification was not required.

According to report A9J1033, the USEPA Method 8260C batch 9101792 MS exceeded the upper percent recovery acceptance limit of 126 percent for dibromochloromethane at 127 percent. The reviewer confirmed that the MS had been prepared with a sample from an unrelated project; thus, the sample matrix may not represent the project sample matrices reported in A9J1033. No qualification was required.

All remaining MS/MSD results were within acceptance limits for percent recovery and RPDs.

LABORATORY DUPLICATE RESULTS

Duplicate results are used to evaluate laboratory precision. All duplicate samples were extracted and analyzed at the required frequency. Laboratory duplicate results within five times the reporting limit were not evaluated for precision.

In report A9J1033, Apex flagged a NWTPH-Gx and USEPA Method 8260C batch 9101792 laboratory duplicate (9101792-DUP2) because of analysis outside of the recommended 12-hour tune window. The laboratory duplicate was prepared with a sample from an unrelated project and the remaining batch quality control were analyzed within the tune window; thus, qualification was not required.

All remaining laboratory duplicate RPDs were within acceptance limits.

LABORATORY CONTROL SAMPLE/LABORATORY CONTROL SAMPLE DUPLICATE RESULTS

An LCS/LCSD is spiked with target analytes to provide information on laboratory precision and accuracy. The LCS/LCSD samples were extracted and analyzed at the required frequency.

Report A9J1033 states that the USEPA Method 8260C batch 9101746 LCS exceeded upper percent recovery acceptance limits of 120 percent for 2,2-dichloropropane, at 125 percent. The associated sample results were non-detect; thus, qualification was not required.

Report A9J1033 states that the USEPA Method 8260C batch 9101792 LCS exceeded upper percent recovery acceptance limits of 120 percent for bromoform, bromomethane, and dibromochloromethane ranging from 124 percent to 132 percent. The associated sample results were non-detect; thus, qualification was not required.

All remaining LCS/LCSD results were within acceptance limits for percent recovery and RPD.

FIELD DUPLICATE RESULTS

Field duplicate samples measure both field and laboratory precision. According to report A9J1033, one field duplicate (MW-3-35/MW-3-35-DUP) was submitted for analysis. MFA uses acceptance criteria of 100 percent RPD for results that are less than five times the reporting limit, or 50 percent RPD for results that are greater than five times the reporting

limit. Non-detect data are not used in the evaluation of field duplicate results. All field duplicate results met the RPD acceptance criteria.

CONTINUING CALIBRATION VERIFICATION RESULTS

Continuing calibration verification (CCV) results are used to demonstrate instrument precision and accuracy through the end of the sample batch. CCV results were not reported; however, Apex flagged sample results associated with CCV results that did not meet acceptance criteria. The reviewer took no action based on quality-control sample flags for CCV exceedances when quality-control results met acceptance criteria.

REPORTING LIMITS

Apex used routine reporting limits for non-detect results, except for samples requiring dilutions because of high analyte concentrations and/or matrix interferences.

DATA PACKAGE

The data packages were reviewed for transcription errors, omissions, and anomalies.

In report A9J1033, Apex noted on the cooler receipt form that limited sample volume was received in the hydrochloric acid-preserved container received for sample MW-2-40. The associated NWTPH-Dx results were reported with raised reporting limits. No action was required.

According to report A9J1033, a sample collection date, matrix, and the number of containers were not provided on the chain of custody for the trip blank. The sampler was notified. No additional action was required.

No additional issues were found.

Report
Phase II Environmental Site Assessment
Block 10 Property
Vancouver, WA
AECOM Job No. 60607784

Dear Mr. Loos:

This report presents the results of the AECOM limited soil and groundwater assessment performed at the Block 10 property located at Washington Street and West 8th Street in Vancouver, WA. The investigation was performed in conformance with our Phase II ESA proposal dated October 10, 2019.

We trust this report meets your requirements. If you have any questions or require additional information, please feel free to contact us.

Very truly yours,

AECOM Corporation

David Raubvogel, LHG
Senior Geologist

1. Introduction

AECOM Technical Services, Inc. (AECOM) was retained by Holland Partner Group (Holland) to perform a Phase II Environmental Site Assessment (ESA) of the Block 10 Property located northwest of the intersection of Washington Street and West 8th Street in Vancouver, WA (Figure 1). AECOM performed a Phase I ESA of the property as part of the acquisition due diligence and several recognized environmental conditions (RECs) were identified which warranted additional assessment. The Phase II ESA was conducted in accordance with the scope of work presented in our proposal to Holland dated October 10, 2019. This report presents background information regarding the subject property, the purpose and scope of the subsurface investigation, and our findings and conclusions.

1.1 Site Description and Setting

The subject property is known as Block 10 and is located to the northwest of the intersection of Washington Street and West 8th Street, Vancouver, Clark County, Washington (Figure 1). The subject property is bordered to the north by West 9th Street followed by the Riverview Bank office building. It is bounded to the east by Washington Street and retail storefronts, to the south by West 8th Street and multi-story office and apartment buildings, and to the west by Columbia Street and multi-family residential apartments (Figure 2). Land use in the site vicinity consists of multi-family residential and commercial properties.

The subject property consists of a 0.96-acre vacant parcel that is presently used for parking and construction material storage. It is covered by gravel and landscaped areas. The property gradient slopes to the southwest. The south half of the property is enclosed by fencing for vehicle parking and materials storage (Figure 2).

The subject property is located in the southeast quadrant of Section 51, Township 2 North, Range 1 East, Vancouver, Clark County, Washington (Figure 1, USGS, 2014). The subject property lies at an elevation of approximately 55 feet above mean sea level (msl). The nearest surface waterbody is the Columbia River located approximately 2,000 feet southwest of the subject property.

1.2 Phase I ESA (AECOM 2019)

AECOM performed a Phase I ESA at the subject property in August 2019 (AECOM, 2019). Historical research indicated that the subject property had been developed with residences by at least the late 1880's. Other historical uses of the property have included printing, cabinet shop operations, machine shop, auto service, garage, gasoline service station and a distribution/trucking warehouse. By 1994, the subject property had been cleared and was vacant land. Selected historical features of potential concern are depicted on Figure 3. The property is presently a vacant lot that is partially covered by gravel and landscaped areas and is being used for vehicle parking and construction materials storage. Old concrete building foundations were evident along the northern property boundary.

A previous Phase I ESA (Environment First, 1992) that was performed for General Brewing Company included the subject property. The report indicated that a Fuel Shack and two underground storage tanks (USTs), a 12,000-gallon diesel and 500-gallon motor oil were located on the subject property (Figure 3). The Washington Department of Ecology (Ecology) reported removal of USTs associated with the General Brewery Company property, no site-specific decommissioning information regarding these tanks was identified.

The historic site uses have the potential to have released petroleum products and other hazardous chemicals at the site and were considered a REC. The former gas station likely had multiple USTs (diesel and gasoline) and it was not known if the tanks had been removed/decommissioned. Other service station features may also remain (e.g., heating oil tank, hydraulic hoists, oil/water separator, etc.). These potential features were also considered to be a REC.

1.3 Geotechnical Report (Terra Associates 2019)

A geotechnical investigation was conducted at the site that included four borings (B-1 through B-4) completed to between 51 to 61 feet below ground surface (bgs). The soils consisted of about 6 to 11 feet of silty sand to silty gravel fill overlying coarse sand and gravel with varying amounts of silt, silty fine to coarse sand and silty fine to coarse gravel. The fill contained scattered debris consisting of brick, wood and trace amounts of metal debris.

Groundwater was encountered at about 50 to 55 feet bgs. A 2-inch diameter monitoring well was constructed in Boring B-2 that was screened from 50 to 60 feet bgs.

2. Objectives and Scope

The primary objectives of the Phase II ESA were to:

1) Assess if any former gas station features (e.g., USTs and piping) and other potential USTs associated with the historic site uses are still present beneath the subject property;
2) Assess baseline soil and groundwater conditions at the subject property; and
3) Assess the groundwater quality beneath the property.

To accomplish these objectives, AECOM implemented the following scope of work:

- Reviewed the TA geotechnical borings field screening results.
- Conducted a geophysical survey across the entire site using ground penetrating radar (GPR) and inductive methods to assess for UST locations, other service station and underground features. The proposed boring locations were also assessed for any underground utilities.
- Collected a groundwater sample from existing monitoring well B-2 on December 3, 2019.
- Advanced eight Geoprobe soil borings (SB-1 through SB-8) to 15 feet bgs for the collection of soil analytical samples.
- Analyzed select soil samples and the groundwater sample for volatile organic compounds (VOCs) by U.S. Environmental Protection Agency (EPA) Method 8260C, gasoline range hydrocarbons by method NWTPH-Gasoline extended (Gx), and diesel range petroleum hydrocarbons by NWTPH-Diesel extended (Dx). Select samples were also analyzed for RCRA metals by method 6020 by Fremont Analytical of Seattle, WA; and
- Prepared this report presenting our findings and conclusions regarding the environmental testing conducted by AECOM. The geotechnical report associated with this investigation was prepared by TA under a separated cover.

3. Methods of Investigation

3.1 Geophysical Survey

A geophysical survey was performed over the entire parcel on October 29, 2019. AECOM retained Ground Penetrating Radar Systems, Inc. (GPRS) to perform GPR and electromagnetic (EM) surface geophysical surveys to evaluate if historic gas station features such as USTs and hoists were still present as well as other subsurface features. The geophysical survey entailed marking out a grid and running the GPR and EM instruments over the survey lines. All of the proposed boring locations were also surveyed to clear these locations prior to drilling. The GPRS, Inc. geophysical survey report is provided in Appendix A and the geophysical anomalies identified during this work are depicted on Figure 3.

3.2 Sample Location Rationale

The boring locations are shown on Figure 3 and were placed to obtain soil quality data where potential areas of concern were identified during the Phase I ESA (AECOM 2019) and also the geophysical survey described above.

Borings SB-1 through SB-3 were located in the vicinity of the former gas station, SB-4 through SB-6 were situated in the area of the former auto service and garage, SB-7 was located at a former auto service facility, and SB-8 was located in the area of the former fuel shack/UST area. Existing monitoring well B-2 is located in the vicinity of the former gas station near the southwestern corner of the property (Figure 3).

3.3 Drilling and Soil and Groundwater Sampling Procedures

Prior to performing the drilling, the public one-call utility locate was initiated and the specific boring locations were additionally cleared by GPRS using GPR and EM methods. Holocene Drilling, a Washington licensed driller, provided the drilling and sampling services on December 2 and 3, 2019. Photographs of the drilling operation are provided in Appendix C. Geoprobe hydraulic direct push drilling methods were used to advance borings SB-1 through SB-8. Soil samples were collected continuously using a Geoprobe 5-foot macro sampler. All of the borings were completed to a depth of 15 feet bgs. The boring logs are provided in Appendix B. During the geotechnical investigation, sample logging and environmental field screening was performed by TA. Gregory Drilling advanced the four geotechnical borings B-1 through B-4 (Figure 3) using mud rotary and hollow stem auger drilling methods. Soil samples were collected from those borings using SPT sampling methods on a 5-foot interval.

Soil samples were visually inspected and logged for lithologic description and were field screened for evidence of contamination (e.g., staining, sheen and/or discoloration) and unusual odors (e.g., slight, moderate, or strong petroleum hydrocarbon odors). Headspace measurements for organic vapors in soil samples were made in the field using a photo ionization detector (PID) with a standard 10.6 electron volt lamp. The highest PID reading was recorded for each headspace sample. Volatile organics samples were collected using a 5-gram (g) EnCore® sampler (EPA Method 5035). Soil samples were transferred to appropriate laboratory provided sample containers. Each sample was properly labeled with a unique sample identification number, placed in a cooler with ice, and submitted to the laboratory for analysis. Chain-of-custody forms were completed and signed by the field representative and accompanied the samples to the laboratory.

Groundwater was not encountered in the Geoprobe borings. During the geotechnical investigation, a monitoring well was installed in boring B-2 and was screened from 50 to 60 feet bgs. A no purge groundwater sample was collected from well B-2 on December 3, 2019 using a disposable polyethylene bailer. Depth to groundwater was measured at 51.65 feet and other field monitoring parameters were recorded on the form that is presented in Appendix B. The groundwater sample was transferred directly into laboratory provided sample containers. The sample was placed in a cooler with ice and submitted to the laboratory for analysis. Chain-of-custody forms were completed and signed by the field representative and accompanied the samples to the laboratory.

3.4 Analytical Methods and Applicable Cleanup Levels

The soil and groundwater samples were submitted for analysis to Fremont Analytical, an Ecology-accredited laboratory located in Seattle, WA. The analytical program included VOCs by Method 8260C and gasoline- and diesel/heavy oil-range petroleum hydrocarbons by NWTPH-Gx and Dx, respectively. A select number of soil samples were also analyzed for RCRA Metals. The soil analytical results are summarized in Table 1 and the groundwater analytical results in Table 2, along with their respective Ecology Model Toxic Control Act (MTCA) Method A or B cleanup levels. The lowest cleanup level for each compound was used for comparison. The MTCA Method A or B values used were obtained from Ecology's CLARC Database (Ecology 2019). The laboratory analytical reports are provided in Appendix D. An AECOM project chemist reviewed all of the analytical data and no data usability issues were identified.

4. Investigation Findings

4.1 Subsurface Conditions

The subject property area is underlain by approximately 6 to 12 feet of fill material characterized by brown dense silty fine to coarse sands with varying amounts of gravel and miscellaneous debris (e.g, wood, brick, metal and concrete). The fill is underlain by alluvial deposits (Pleistocene outburst flood deposits) consisting of grey to brown silty gravel and interbedded sands to 61 feet, the total depth explored during the geotechnical investigation (TA, 2019). During

AECOM's and TA field screening, no odors or staining were noted in the soils and no PID readings above 0.0 part per million (ppm) were apparent.

Groundwater was encountered in geotechnical borings during drilling between 50 to 55 feet bgs with the exception of B-4, which was only completed to 51.5 feet bgs. The static groundwater level was measured in monitoring well B-2 on December 3, 2019 at 51.65 feet bgs.

4.2 Soil and Groundwater Analytical Results

Selected soil samples from the borings were submitted to the laboratory for chemical analysis and the results are summarized in Table 1. Only one boring, SB-4, had detectable concentrations of petroleum hydrocarbons. Gasoline range petroleum hydrocarbons were detected in soil samples collected from 6 feet bgs (79.6 milligrams per kilogram [mg/kg]) and 11 feet bgs (7.15 mg/kg) at concentrations below the applicable MTCA Method A cleanup level of 100 mg/kg. Diesel and heavy oil range petroleum were not detected in the samples and no VOCS were detected above the laboratory detection limits (Table 1). No elevated RCRA metal concentrations were detected in any of the soil samples.

Gasoline, diesel and heavy oil range petroleum hydrocarbons were not detected in the groundwater sample collected from B-2. Chloroform (1.36 micrograms per liter [µg/L]) and lead (4.66 µg/L) were detected below their respective MTCA cleanup levels (Table 2).

4.3 Conclusions and Recommendations

AECOM has drawn the following conclusions based on the results of the Phase II ESA conducted at Block 10 in Vancouver, WA:

4.3.1 Subsurface Conditions and Geophysical Survey

Subsurface soils generally consisted of between 6 to 12 feet of fill material characterized by silty sands with various amounts of gravel and debris (e.g., wood, bricks, metal, etc.). The fill material is underlain by outburst flood deposits characterized by dense sandy gravel and silty sands. Groundwater was not encountered in any of the environmental borings (SB-1 to SB-8) that were completed to 15 feet bgs. The geotechnical borings encountered groundwater between approximately 50 to 60 feet in depth.

The geophysical survey was performed over the entire parcel to assess if historic gas station features and other underground features associated with historic site uses remained at the site. The geophysical survey identified numerous apparent utilities, old building foundations and other unknow piping, although no USTs or automotive hoists were identified by the survey (Appendix A). The key results are depicted on Figure 3.

4.3.2 Soil

The borings completed as part of this investigation did not identify any evidence of contamination during field screening (Appendix B). The fill soils were noted to have miscellaneous debris consisting of wood, bricks, metal and concrete. Gasoline range petroleum hydrocarbons were encountered in one boring (SB-4) at 6 to 11 feet bgs, but the concentrations were below the applicable MTCA Method A cleanup level. Based on these findings, the site soils appear to be impacted by petroleum hydrocarbons over a limited area. No elevated VOCs or RCRA metals (e.g., in excess of background) were detected. During the site redevelopment earthwork, soils in the vicinity of SB-4 would generally fall within Ecology's Soil Category 2 and/or 3 for best management practices (Ecology 2011) requiring disposal at a landfill facility such as Allied Waste Subtitle D landfill or a Category 2 disposal facility site such as Cadman Class 2 landfill.

4.3.3 Groundwater

Shallow groundwater was not encountered in any of the borings. Groundwater was noted between 50 to 60 feet in the geotechnical borings. Geotechnical boring B-2 was converted into a monitoring well that is screened from 50 to 60 feet bgs A groundwater sample was collected from B-2 and petroleum hydrocarbons were not detected. Only

one VOC, chloroform (1.36 µg/L) was detected, with a concentration well below the applicable MTCA cleanup level. Total lead was detected at a concentration of 4.66 µg/L, which is similarly below its applicable MTCA cleanup level. Based on these findings, the groundwater quality beneath the subject property does not appear to be impacted by the historic gas station (Figure 3). No on-site evidence of groundwater contamination was identified during this investigation.

4.3.4 Recommendations

AECOM understands that the site redevelopment plan will require lowering of the site grade for the proposed building foundation. As a contingency, it is advised to prepare a Construction Contingency/Soil Management Plan (CC/SMP) to address the management of environmental issues that could be encountered during redevelopment activities (e.g., isolated contaminated soils found beneath former buildings, piping, etc.). Activities that have the potential to expose environmental concerns at the site include installation of the shoring system, foundation excavation, tieback drilling, installation of utilities, and other activities that will cause a disturbance to soil. No additional assessment is presently advised.

GPRS SUBSURFACE SCANNING SOLUTIONS

October 29, 2019

AECOM
Attn: David Raubvogel
Site: 801 Columbia St. Vancouver, WA 98660

We appreciate the opportunity to provide this report for our work completed on 10/29/19 at the above address in Vancouver, WA.

PURPOSE

The purpose of this project was to search for any utilities and underground storage tanks (UST's) or UST-related piping remaining on the property.

EQUIPMENT

- **400 MHz GPR Antenna.** The antenna is mounted in a stroller frame that rolls over the surface. The surface needs to be reasonably smooth and unobstructed in order to obtain readable scans. Obstructions such as curbs, landscaping, and vegetation will limit the feasibility of GPR. The data is displayed on a screen and marked in the field in real-time. GPR works by sending pulses of energy into a material and recording the strength and the time required for the return of the reflected signal. Reflections are produced when the energy pulses enter into a material with different electrical properties from the material it left. The strength of the reflection is determined by the contrast in signal speed between the two materials. The total depth achieved can be as much as 8' or more with this antenna but can vary widely depending on the conductivity of the materials. Depths provided should always be treated as estimates as their accuracy can be affected by multiple factors. For more information, please visit: Link
- **Electromagnetic Pipe Locator.** The EM locator can detect the electromagnetic fields from live power or radio frequency signals. It can also be used in conjunction with a transmitter to connect directly to accessible, metallic pipes, risers, or tracer wires. A current is sent through the pipe or tracer wire at a specific frequency and the resulting EM field can then be detected by the receiver. The receiver is moved over the surface without coming in contact with the ground so it is not affected by terrain. Depths provided should always be treated as estimates as their accuracy can be affected by multiple factors. Depths achieved can be as much as 20' depending on the type of signal being traced or methods used. For more information, please visit: Link
- **Magnetometer.** The magnetometer detects the magnetic field of a ferromagnetic object. It responds to the difference in the magnetic field between two sensors. It is interpreted in the field by listening to changes in frequency as emitted by a speaker on the device. For more information, please visit: Link

PROCESS

The EM pipe locator was used to connect to accessible, traceable pipes that may be tank-related such as vent pipes or product lines. A current is induced onto the pipe which creates an electromagnetic field that can be traced using the receiver. We can then attempt to trace these pipes to their origin or endpoint and paint or flag their locations.

Initial GPR scans were collected in order to evaluate the data and calibrate the equipment. Based on these findings, a scanning strategy is formed, typically consisting of scanning the entire area in a grid with 3'-5' scan spacing in order to locate any potential UST's that may remain at the site. The GPR data is interpreted in real-time and anomalies in the data are located and marked on the surface along with their depths using spray paint, pin flags, etc. Depths are dependent on the dielectric of the materials being scanned so depth accuracy can vary throughout a site. Relevant scan examples were saved and will be provided in this report.

LIMITATIONS

Please keep in mind that there are limitations to any subsurface investigation. The equipment may not achieve maximum effectiveness due to soil conditions, above ground obstructions, reinforced concrete, and a variety of other factors. No subsurface investigation or equipment can provide a complete image of what lies below. Our results should always be used in conjunction with as many methods as possible including consulting existing plans and drawings, exploratory excavation or potholing, visual inspection of above-ground features, and utilization of services such as One Call/811.

At this site, our scans were limited by poor soil conditions, curbs, landscaping, planter boxes, parked vehicles, stacked building materials, and storage containers.

FINDINGS

We found that the soil allowed for maximum GPR depth penetration of 4' in most areas. We were able to locate utilities such as storm drains using either the GPR or RD. We were not able to locate any power, sewer, gas, communication, or water lines in the area. We couldn't locate these utilities due to poor soil conditions and limited or no access to these lines. Without access to these lines, we couldn't confirm their identity and therefore may have marked them out in pink paint as an unknown line. After completing the full scan of the scan area, no aboveground indications (such as vent pipes, fill ports, etc.), GPR or magnetometer data typical of a UST were observed on site. Additionally, we were not able to observe any GPR data consistent with the excavation and removal of a UST.

The following pages will provide photos and further explanation of our findings.

CLOSING

GPRS, Inc. has been in business since 2001, specializing in underground storage tank location, concrete scanning, utility locating, and shallow void detection for projects throughout the United States. I encourage you to visit our website (www.gprsinc.com) and contact any of the numerous references listed.

In summary, we located all possible utilities found on-site and did a thorough investigation with GPR and a magnetometer to see if there were any USTs or evidence of a UST being previously removed and found neither.

GPRS appreciates the opportunity to offer our services, and we look forward to continuing to work with you on future projects. Please feel free to contact us for additional information or with any questions you may have regarding this report.

Signed,

NATE FLEMING
PROJECT MANAGER | PORTLAND, OR

RE: Holland Vancouver Block 10
Work Order Number: 1912050

December 11, 2019

Attention David Raubvogel:

Fremont Analytical, Inc. received 21 sample(s) on 12/4/2019 for the analyses presented in the following report.

Diesel and Heavy Oil by NWTPH-Dx/Dx Ext.
Gasoline by NWTPH-Gx
Mercury by EPA Method 7471
Sample Moisture (Percent Moisture)
Total Metals by EPA Method 200.8
Total Metals by EPA Method 6020B
Volatile Organic Compounds by EPA Method 8260D

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

Brianna Barnes
Project Manager

Case Narrative

WO#: **1912050**
Date: **12/11/2019**

CLIENT: AECOM
Project: Holland Vancouver Block 10

I. SAMPLE RECEIPT:
Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:
Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report ("mg/kg-dry" or "ug/kg-dry").

Matrix Spike (MS) and MS Duplicate (MSD) samples are tested from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. The sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:
Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

Qualifiers:

* - Flagged value is not within established control limits
B - Analyte detected in the associated Method Blank
D - Dilution was required
E - Value above quantitation range
H - Holding times for preparation or analysis exceeded
I - Analyte with an internal standard that does not meet established acceptance criteria
J - Analyte detected below Reporting Limit
N - Tentatively Identified Compound (TIC)
Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria (<20%RSD, <20% Drift or minimum RRF)
S - Spike recovery outside accepted recovery limits
ND - Not detected at the Reporting Limit
R - High relative percent difference observed

Acronyms:

%Rec - Percent Recovery
CCB - Continued Calibration Blank
CCV - Continued Calibration Verification
DF - Dilution Factor
HEM - Hexane Extractable Material
ICV - Initial Calibration Verification
LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
MB or MBLANK - Method Blank
MDL - Method Detection Limit
MS/MSD - Matrix Spike / Matrix Spike Duplicate
PDS - Post Digestion Spike
Ref Val - Reference Value
RL - Reporting Limit
RPD - Relative Percent Difference
SD - Serial Dilution
SGT - Silica Gel Treatment
SPK - Spike
Surr - Surrogate

EXECUTIVE SUMMARY

Parametrix was retained by the Washington State Department of Transportation (WSDOT) to conduct a Phase I Environmental Site Assessment (ESA) on the subject property, which consists of two contiguous parcels located at 904 E 35th Street in Vancouver, Washington (Figure 1). These parcels may be acquired as part of the Interstate Bridge Replacement (IBR) Program and are known as IBR-15080000 and IBR-15095000. Based on the findings of this investigation, Parametrix concluded the following:

1. The subject property is located at 904 E 35th Street in Vancouver, Washington, and is identified as tax parcels 15080000 and 15095000. The subject property is owned by Elizabeth and Daniel Schaub. The subject property encompasses an area of 0.17 acres including one residential building and a detached garage. The vicinity of the subject property is developed residential properties, with an Interstate 5 (I-5) on-ramp and I-5 located across E Frontage Road east of the subject property.
2. Clark County records state that the "Actual Year Built" of the residential building on the subjected property was 1930. The subject property is two property tax parcels encompassing an area of approximately 0.17 acres. Based upon historical aerial photographs, the subject property has remained similar since 1948 and the adjacent and vicinity properties have remained residential, except for the construction of I-5 to the east. No evidence of recognized environmental conditions (RECs) were identified on the subject property during the review of historical photographs and Sanborn maps.
3. The residential building was constructed in 1930 and the detached garage prior to 1948. Based on the age of the buildings, there is a potential that hazardous materials (asbestos-containing materials [ACM], lead-based paint [LBP], and/or polychlorinated biphenyls [PCBs]) are present at the subject property.
4. The subject property is not listed on any regulatory database that would indicate a past or current release or storage of hazardous materials. A review of regulatory information indicated that several nearby sites were identified in the regulatory record databases. However, based on the information reviewed, none of the sites identified represent a REC to the subject property.

[redacted]

6. Other than the UST, no other evidence of significant use or storage of hazardous substances and/or petroleum products was noted on or near the subject property. No evidence of distressed vegetation, spills or releases, dry wells, or other indications of environmental concern was identified during the site reconnaissance. The presence of the heating oil UST is a moderate environmental concern, but because there are no known releases and because of current use at the property, does represent a REC in connection with the subject property.

Based upon the conclusions of this investigation of the subject property, Parametrix offers the following recommendations:

1. If the buildings are to be demolished, a hazardous building materials survey should be completed. If hazardous materials (ACM. LBP, or PCBs) are found, they should handled, managed, and disposed of in accordance with local, State, and Federal regulations.
2. Once the heating oil UST is no longer in use (presumably after acquisition) it should be properly decommissioned in accordance with local and State heating oil tank requirements, including confirmation sampling to determine whether past releases have occurred and to guide potential mitigation efforts, if any.
3. No further assessment of environmental conditions on the subject property is recommended at this time.

1. INTRODUCTION

Parametrix was retained by the Washington State Department of Transportation (WSDOT) to perform a Phase I Environmental Site Assessment (ESA) on the developed property located at 904 E 35th Street in Vancouver, Washington (herein referred to as the subject property) (Figure 1). The subject property consists of Clark County Washington tax parcels 15080000 and 15095000. It is our understanding that WSDOT may pursue acquisition of the subject property as part of the Interstate Bridge Replacement (IBR) Program. The subject property is identified as IBR-15080000 and 15095000 (Figure 2).

This Phase I ESA includes a review of available documentation pertaining to the subject property, a site reconnaissance, and a review of pertinent public agency documents. The Phase I ESA consisted of two distinct tasks: (1) a review of documents and of oral information (if available), and (2) a site examination. Conclusions and recommendations within this report are based solely on observed evidence and data collected during the performance of this assessment.

1.1 Purpose

The Phase I ESA was conducted in general accordance with American Society for Testing Materials (ASTM) Standard E1527-21, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*, which defines the generally accepted industry practices and procedures currently applicable at the time and place of this study (ASTM 2021). The Phase I ESA is intended to permit the user to satisfy the requirements to qualify for the bona fide prospective purchaser limitation under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), and as such constitutes "all appropriate inquiries in the previous ownership and uses of the property consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601 (35)(B).

The purpose of this Phase I ESA is to identify recognized environmental conditions (RECs) on or near the subject property. The term recognized environmental conditions is defined in ASTM Standard E1527-21 as:

> "…(1) the presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* due to a *release* to the *environment*; (2) the likely presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* due to a *release* or likely *release* to the *environment*; or (3) the presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* under conditions that pose a *material threat* of a future *release* to the *environment*."

In accordance with ASTM Standard E1527-21, some RECs may be further defined as historical recognized environmental conditions (HRECs) or controlled recognized environmental conditions (CRECs).

An HREC is defined as:

> "…*a past release* of any *hazardous substances* or *petroleum products* that has occurred in connection with the *property* and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the *property* to any required controls."

A CREC is defined as:

> "…*a recognized environmental condition* resulting from a past *release of hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority, with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls."

This Phase I ESA endeavors to identify RECs, HRECs, and/or CRECs at the subject property.

1.2 Significant Assumptions

This assessment was conducted in accordance with generally accepted industry practices and procedures within the scope of work authorized at the time and place of this study. Parametrix's observations are limited to those areas to which it had access on the subject property.

Phase I ESA methodology included viewing accessible areas of the subject property on foot. Unless otherwise stated, no exceptions to the guidelines presented in ASTM E1527-21 were made during completion of this Phase I ESA.

1.3 Limitations

The findings, conclusions, and recommendations presented in this report are based on site conditions and the best available information known or made available by regulators, other consultants, or other sources at the time of the investigation. Parametrix conducted a diligent search and investigation in compliance with prevailing standards of the profession; however, certain adverse conditions may exist at the subject property not detected at the time of the investigation.

The services provided under this contract, as described in this report, include professional opinions and judgments based on data collected. These services have been provided according to generally accepted engineering practices. The opinions and conclusions contained in this report are typically based on information obtained from the following:

- Observations and measurements made by Parametrix field staff.
- Contacts and discussions with regulatory agencies and others.
- Review of available hazardous substance or solid waste lists.
- Opinions and judgments of Parametrix based on the information available.

In the professional judgment of Parametrix, the services performed pursuant to the scope of services are an adequate basis to collect data for a preliminary evaluation of the subject property and upon which to draw the conclusions stated in this report.

2. SUBJECT PROPERTY DESCRIPTION

The following sections summarize the location, characteristics, and physical setting of the subject property.

2.1 Location

The subject property is an approximately 0.17-acre parcel located at 904 E 35th Street in Vancouver, Washington. It is located west of E Frontage Road adjacent to the 39th Street southbound on-ramp to Interstate 5 (I-5), north of East 35th Street, south of East 36th Street, and east of I Street. Based on Clark County Tax Assessment records, Elizabeth and Danial Schaub are the current owners of the subject property. The subject property is shown on Figure 1. The boundary of the subject property and key features are shown on Figure 2.

2.2 Site and Vicinity Characteristics

The subject property includes a two-story 1,014-square-foot residential building with a 780-square-foot unfinished basement. There is a 704-square-foot detached garage on the subject property north of the residential building. Clark County records indicated the residential building was constructed in 1930. The detached garage was constructed between 1935 and 1948.

The vicinity of the subject property is developed for residential use with commercial properties approximately 0.25 miles to the west. Properties in the direct vicinity are residential use with I-5 to the east (Figure 2).

2.3 Physical Setting

The subject property is located in the Portland Basin, which marks the northern terminus of the Willamette Lowland in Oregon (DNR n.d.). The northern portion of the basin is known for its low topographic relief, with the subject property at an elevation of approximately 207 feet above mean sea level. The Portland Basin is bounded by the Cascade Range to the east and the Coast Range to the west.

Geologic processes in the Portland Basin consist of volcanism, sedimentation, and cataclysmic flood deposits in both fluvial and marine depositional environments. The subject property lies on what is mapped as coarse-grained Missoula flood deposits, cobbly, sandy gravel deposited by the Missoula floods (Wells et al. 2020). Surface soils consist of sandy loam.

The topography in the vicinity of the subject property is a consistent slope, rising with distance from the Columbia River. The anticipated groundwater gradient is to the south toward the Columbia River. Based upon regional data, groundwater is anticipated to be 22 feet below ground surface at the subject property (Swanson and McCarley 1995S).

2.4 Current Use of the Subject Property

The buildings on the subject property are currently used as a single-family residence and detached garage.

2.5 Descriptions of Improvements on the Subject Property

Based on Clark County property assessment records, the subject property includes one 0.11-acre parcel and one 0.06-acre parcel, totaling approximately 0.17 acres in area. The subject property includes a two-story 1,014-square-foot residential building with a 780-square-foot unfinished basement. There is a currently a 704-square-foot detached garage on the subject property north of the residential building. A concrete walkway is located between the front porch of the residential building and the city sidewalk on East 35th Street.

2.6 Environmental Liens

An environmental lien is defined by ASTM as a charge, security, or encumbrance upon title to a property to secure the payment of a cost, damage, obligation, or duty arising out of response actions, cleanup, or other remediation of hazardous substances or petroleum products. No evidence of environmental liens was identified during the course of the Phase I ESA process. However, a formal title search was not completed as part of the scope of work.

3. RECORDS REVIEW

The purpose of the records review task was to gather environmental data on the subject property prior to the site examination. The information review consisted of two subtasks: (1) a review of regulatory databases to find sites, including and close to the subject property, listed by federal and State of Washington agencies and (2) a compilation of historical uses of the subject property and site vicinity properties to determine if past operations pose an environmental risk to the subject property.

Information for agency database review is based, in part, on a report provided by Environmental Data Resources (EDR). The EDR report (EDR 2023a) is a summary of state and federal database searches for sites of possible environmental concern and is included in Appendix A. Historical information is based on review of historical Sanborn Fire Insurance Maps (EDR 2023b; Appendix B), and aerial photos (EDR 2023c; Appendix C).

The information review enabled Parametrix personnel to characterize the types of activities performed at the site and identify data gaps prior to the site examination, and it facilitated recognition of discrepancies between reported and observed data. Data gaps identified during the document review were addressed by interviewing knowledgeable personnel, making observations during the site examination, or performing an additional detailed investigation.

It should be noted that the information supplied by EDR is reported as Parametrix received it. EDR, in turn, reports information as it is provided in various government databases. It is not possible for either Parametrix or EDR to verify the accuracy or completeness of information contained in these databases. However, the use of and reliance on this information is a generally accepted practice in the conduct of environmental due diligence. The following sections present information from the document review.

3.1 Standard Environmental Record Sources

The following section summarizes information collected from records maintained by the U.S. Environmental Protection Agency (EPA) and the Washington State Department of Ecology (Ecology). The information includes details on sites identified in regulatory databases within recommended ASTM search distances. A complete listing of the databases reviewed is included in the EDR Radius Map™ Report (Appendix A).

3.1.1 Review of Washington State Department of Ecology Databases

The following sections summarize the most relevant information obtained from the EDR report regarding sites identified within the ASTM E1527-21 search radii from the databases listed below. Additional information regarding these sites was reviewed on Ecology's Integrated Site Information System (ISIS) website to supplement data gaps in the EDR report. Relevant database listings from Ecology include the following:

- Underground Storage Tank (UST) List
- Leaking Underground Storage Tank (LUST) List

- Confirmed and Suspected Cleanup Site List (CSCSL)
- Confirmed and Suspected Cleanup Site List – No Further Action (CSCSL-NFA)
- SPILLS
- Voluntary Cleanup Program (VCP)
- Independent Cleanup Report (ICR)
- Landfill and/or Solid Waste Disposal Site Lists (SWF/LF)
- Brownfields

3.1.1.1 Underground Storage Tank List

The Ecology UST List identifies registered USTs, which are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data were obtained from Ecology's online Cleanup and Tank Search database. When unregulated USTs were included in Ecology's regulated tank documents, these USTs were included in this report.

Information contained in the EDR report indicates that the subject property is not listed as a UST site and no UST sites are located within 0.125 miles of the subject property.

Four UST sites were included in the EDR report within 0.5 miles of the subject property. Parametrix identified a fifth UST site and is included in the list below:

- ARCO #5739 site (3817 Main Street) is located approximately 0.3 miles north-northwest of the subject property and is listed in Ecology's UST database. Four USTs are identified as operational. Six USTs have been removed. No release of petroleum from a UST has been reported at this site.
- The Main Street Chevron site, formally 76 24-hour Food Mart, (3901 Main Street) is located approximately 0.3 miles north-northwest of the subject property. Two USTs are identified as operational.
- The First United Methodist Church site (401 East 33rd Avenue) is located approximately 0.3 miles west-southwest of the subject property and is listed in the UST database. One UST was identified as "Closed in Place." Ecology was unable to provide any other information about this UST. No release of petroleum from a UST has been reported at this site.
- The Memorial Urgent Care/Vancouver Memorial Hospital site (3400 Main Street) is located approximately 0.3 miles west-southwest of the subject property. According to Ecology, one regulated UST is listed as operational. Two unregulated heating oil USTs are also on the site; the status of these two USTs is identified as "Exempt."
- The Vancouver District Site 40001D site, (4200 Main Street) is located approximately 0.4 miles northwest of the subject property and is listed in Ecology's UST database. Two vehicle fuel USTs are identified as operational. Eight USTs have been removed (see Section 3.1.1.3 below for cleanup status).

Unless otherwise noted, the mere presence of a UST near a site does not, in itself, constitute a REC. Where available, other information was reviewed regarding the presence of a UST including the age of the facility, proximity to the subject property, and known releases or spills. UST sites that have had known releases are discussed in Section 3.1.1.2 below.

3.1.1.2 Leaking Underground Storage Tank List

The LUST Incident Report contains an inventory of reported leaking UST incidents. The data were obtained from Ecology's LUST Database List. The subject property is not listed as a LUST site.

Two LUST sites were identified within 0.5 miles of the subject property:

- The Main Street Chevron site, formally 76 24-hour Food Mart, site (3901 Main Street) is located approximately 0.3 miles north-northwest of the subject property and is listed in the LUST, UST, CSCSL, VCP, ICR, and CSCSL-NFA databases. Two USTs are identified as operational. Six USTs have been removed. A petroleum release was identified on the property and remediated. The facility received a No Further Action (NFA) determination from Ecology dated September 18, 1998. Based on the distance and gradient (cross-gradient) from the subject property and the regulatory status of the site, this facility does not represent a REC to the subject property.
- The Memorial Urgent Care site (3400 Main Street) is located approximately 0.3 miles west-southwest of the subject property and is listed in the CSCSL, LUST, and UST databases. One regulated UST is listed as operational. Two unregulated heating oil USTs are also located on the site. A petroleum release from a UST was identified on the property in 1992. Soil was the only identified contaminated media. The current status of the LUST is Cleanup Started. Based on the distance from the subject property, lack of groundwater contamination reported, and the regulatory status of the site, the facility does not represent a REC to the subject property.

3.1.1.3 Confirmed and Suspected Contaminated Sites List

The state hazardous waste sites records are the states' equivalent to the Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS). These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data were obtained from Ecology's CSCSL.

A subset of the CSCSL is the CSCSL-NFA. The database contains information about sites previously on the CSCSL that have received an NFA determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when cleanup activities are completed. Instead, an NFA code is entered based upon the type of NFA determination the site received.

Thirteen CSCSL sites were identified within 1 mile of the subject property. Of those sites, none are located within 0.25 miles of the subject property.

Three CSCSL/CSCSL-NFA sites are reported within approximately 0.5 miles of the subject property and are discussed below:

- The Main Street Chevron site, formally 76 24-hour Food Mart, (3901 Main Street) is located approximately 0.3 miles north-northwest of the subject property and is listed in the LUST, UST, CSCSL, VCP, ICR and CSCSL-NFA databases. The facility received an NFA determination from Ecology dated September 18, 1998. Based on the distance from the subject property and the regulatory status of the site, this facility does not represent a REC to the subject property.
- The Memorial Urgent Care/ Vancouver Memorial Hospital site (3400 Main Street) is located approximately 0.3 miles west-southwest of the subject site and is listed in the CSCSL, LUST, and UST databases. A petroleum release from a UST was identified on the property in 1992. Soil was the only reported contaminated media. The current status of the LUST is Cleanup Started. Based on the distance from the subject property, no report of groundwater contamination, and the regulatory status of the site, the facility does not represent a REC to the subject property.
- WSDOT District 4 Facility (4200 Main Street) is located approximately 0.4 miles northwest of the subject property and is listed in the CSCSL and RCRA NonGen/NLR databases. The site had confirmed contamination of groundwater. An NFA was issued in 1996. Based on the distance from the subject property, cross gradient groundwater flow, and the regulatory status of the site, the facility does not represent a REC to the subject property.

Based on the distance from subject property and NFA determinations, none of the identified sites appear to represent RECs to the subject property, unless specifically noted otherwise in another section.

3.1.1.4 SPILLS Database

This database provides a comprehensive list of reported spills. The subject property is not listed as a SPILLS site.

3.1.1.5 Voluntary Cleanup Program

This database provides a listing of sites that have entered either the VCP or its predecessor, the Independent Remedial Action Program.

The subject property is not listed as a VCP site. No VCP sites are listed within 0.125 miles of the subject property.

One VCP site is reported within 0.5 miles of the subject property:

- The Main Street Chevron site, formally 76 24-hour Food Mart, (3901 Main Street) is located within 0.5 miles north-northwest of the subject property and is listed in the LUST, UST, CSCSL, VCP, ICR and CSCSL-NFA databases. Ecology lists the site as a “canceled” VCP site. A NFA was issued by Ecology for the site September 18, 1998. Refer to LUST List in Section 3.1.1.2 above for more details.

This site does not represent a REC to the subject property based on cleanup actions, regulatory status, and distance from the subject property.

3.1.1.6 Independent Cleanup Report

These are remedial action reports that Ecology has received from either the owner or operator of the site. These actions have been conducted without department oversight or approval and are not under an order or decree.

The subject property is not listed as an ICR site. No ICR sites are listed within 0.125 miles of the subject property. Two ICR sites, Main Street Chevron and Vancouver Memorial Hospital, (3400 Main Street and 3910 Main Street) are reported within 0.5 miles of the subject property and are discussed in Section 3.1.1.2 above. Neither of the sites represent a REC to the subject property based on distance and regulatory status.

3.1.1.7 Solid Waste Facilities/Landfill

The SWF/LF records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data were obtained from Ecology's Solid Waste Facilities Database.

The subject property is not listed as a SWF/LF site. No SWF/LF sites were reported within 0.5 miles of the subject property.

3.1.1.8 Brownfields List

The Brownfields List is a database of sites that Ecology considers brownfields or that have received financial or technical assistance for assessment and/or cleanup. A brownfield is "a real property where expansion or redevelopment is complicated by actual or perceived environmental contamination." The subject property is not listed as a brownfield site and there are no sites listed within 0.5 miles of the subject property.

3.1.2 Environmental Protection Agency Databases

The EPA administers several programs designed to protect the environment and monitor the generation, storage, treatment, and disposal of hazardous substances. The following sections summarize the most relevant information obtained from the EDR report regarding sites identified within the ASTM E1527-21 search radii from the following databases:

- National Priorities List (NPL)
- CERCLIS List
- Corrective Action Report (CORRACTS) List
- RCRA
- Resource Conservation and Recovery Act Information (RCRAInfo) List
- Emergency Response Notification System (ERNS) List

- U.S. Brownfields List

3.1.2.1 National Priorities List

The NPL identifies priority hazardous waste sites for remedial actions under the EPA Superfund program. Information contained in the EDR report indicates that the subject property is not listed as an NPL site. One NPL sites was identified within 1 mile of the subject property.

- The Vancouver Water Station #1 site (E Reserve and NE Fourth Plain Boulevard) is a City of Vancouver drinking water well located approximately 1 mile southeast of the subject property. In 1988, tetrachloroethylene was detected in well water. Following remedial actions, the site was delisted from the NPL in 2018. Ecology confirmed that the site remains delisted.

This site does not represent a REC to the subject property based on distance and regulatory status.

3.1.2.2 Comprehensive Environmental Response, Compensation, and Liability Information System List

The EPA's CERCLIS List identifies sites that may potentially pose a threat to the environment or the health of the general public.

Information contained in the EDR report indicates that the subject property is not listed as a CERCLIS site. No CERCLIS sites were listed within 0.5 miles of the subject property.

The EPA also publishes the CERCLIS-NFRAP List that identifies CERCLIS sites that have been designated "no further remedial action planned" (NFRAP) and that have been removed from the CERCLIS List. Information contained in the EDR report indicates that the subject property is not listed as a CERCLIS-NFRAP site. No CERCLIS-NFRAP sites were listed within 0.5 miles of the subject property.

3.1.2.3 Corrective Action Report List

The CORRACTS List identifies hazardous waste handlers with a history of RCRA corrective action activity. This list shows which corrective action events have occurred for every hazardous waste handler that has had corrective action activity due to improper procedures or handling.

Information contained in the EDR report indicates that the subject property is not listed as a CORRACTS site. No CORRACTS sites were listed within 1 mile of the subject property.

3.1.2.4 Resource Conservation and Recovery Act Generators List

RCRAInfo is EPA's comprehensive information system, providing access to data supporting RCRA and the Hazardous and Solid Waste Amendments of 1984. The database includes selective information on sites that generate, transport, store, treat and/or dispose of hazardous waste as defined by RCRA.

Conditionally exempt small quantity generators generate less than 100 kilograms (kg) of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Very small quantity generators generate between 100 and 1,000 kg of hazardous waste per month. Large quantity generators

generate more than 1,000 kg of hazardous waste, or more than 1 kg of acutely hazardous waste per month. Non-generating and no longer regulated (NonGen/NLR) do not presently generate hazardous waste.

Information contained in the EDR report indicates that the subject property is not listed in any RCRA database.

One RCRA NonGen/NLR site (Goodwin Acid Drum) is listed within 0.25 miles of the subject property. However, the location for the site appears to be an EDR mapping error; 2100 Goodwin Road in Vancouver, Washington is located approximately 10 miles east of the subject property, outside the area of assessment. Therefore, this site is not considered a REC to the subject property.

EPA also regulates the management of hazardous waste at transportation, storage, and disposal facilities (TSDF). Information contained in the EDR report indicates the subject property is not listed as a TSDF site. No TSDF sites were identified within 0.5 miles of the subject property.

3.1.2.5 Emergency Response Notification System List

The ERNS List is a national database containing information from spill reports made to federal authorities. Information contained in the EDR report indicates that no ERNS sites are listed within 1 mile of the subject property.

3.1.2.6 U.S. Brownfields List

The EPA's U.S. Brownfields List identifies brownfield properties addressed by Cooperative Agreement Recipients or by Targeted Brownfields Assessments. The EDR report indicates the subject property is not listed as a U.S. Brownfields site. One U.S. Brownfields site was listed within 0.5 miles of the subject property.

- The CRC site (3600 O Street) is located approximately 0.3 miles east of the subject property. The City of Vancouver used an EPA Brownfields Assessment grant to perform Phase I and Phase II ESAs of the site. Based upon distance from the subject property, the site does not represent a REC to the subject property.

3.1.3 Other Databases

The following sections include other databases identified in the EDR report that may be relevant to assessing potential environmental liability or environmental issues at the subject property.

3.1.3.1 Environmental Data Resources Proprietary Databases

EDR has conducted research on the occurrence of historical business practices that may constitute a REC to properties. The database was developed from data found in historical city directories and contains information on over 100,000 former gas stations, manufactured gas plants, and dry cleaners. Due to the nature of these businesses, the sites have the potential for soil and groundwater contamination to have occurred.

EDR Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. The listings reviewed include, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, and/or service station.

A review of the EDR Historical Auto Stations list, as provided by EDR, indicated that there are no EDR Historical Auto Stations sites within 0.125 miles of the subject property.

EDR Manufactured Gas List

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800s to 1950s to produce a gas that could be distributed and used as fuel. Many of the by-products of the gas production, such as coal tar (oily waste containing volatile and nonvolatile chemicals), sludges, oils, and other compounds, are potentially hazardous to human health and the environment. The by-products from this process were frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

No manufactured gas sites are listed within 1 mile of the subject property.

EDR Historical Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry-cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to, dry cleaners, cleaners, laundries, laundromats, cleaning/laundry businesses, wash and/or dry businesses.

A review of the EDR Historical Dry Cleaner list, as provided by EDR, has revealed that there are no Historical Dry Cleaner sites within 0.125 miles of the subject property.

Construction Permits

EDR provides a list of construction related permits, e.g. electrical, plumbing and mechanical. Permits for the subject and adjacent properties are reviewed for information that may relate to a potential REC, such as a heating oil tank.

A review of construction permits issued for the subject property revealed that a permit for a residential oil furnace was issued on April 25, 2001, indicating that a fuel tank was presumably on the site. Further information related to the heating oil tank was obtained from the property owners and is presented in Section 6.

3.1.4 Orphan Site List

Orphan sites are those for which mapping information is not detailed enough to plot the location of the site, or for which there is no known responsible party, or whose responsible party is unwilling or unable to pay for cleanup. Based on a review of the information for and location of the orphan sites, none appear to represent a potential REC to the subject property.

3.1.5 Vapor Encroachment

ASTM Standard E1527-21 defines vapor migration as “the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface." The recognition of vapor migration as a possible REC may require incorporation of new types of controls and restrictions to address this contamination pathway.

The subject property and adjacent sites were reviewed in an effort to determine if vapor migration has, or has the potential to have, occurred at the site, and/or from adjacent properties. No properties were identified in the near vicinity which have confirmed releases of volatile contaminants in soil or groundwater which have not been sufficiently addressed or would otherwise present a potential impact to the subject property.

There is a heating oil UST on the subject property. However, there is no reported release from the UST. Based on the information reviewed, it does not appear that the heating oil tank, or any other conditions at the subject property, would be expected to cause vapor intrusion issues at the subject property.

3.2 Historical Use Information

The objective of the historical use information review is to develop a history of the previous uses of the subject property and surrounding area to help identify the likelihood that past uses have led to RECs in connection with the subject property. Parametrix researched the historical land use, occupancy, and ownership of the subject property and adjacent properties to evaluate historical uses that are known to be associated with RECs. Historical records reviewed include the EDR Certified Sanborn® Map Report (EDR 2023b) and the EDR Aerial Photo Decade Package (EDR 2023c).

3.2.1 Certified Sanborn® Map Report

Fire insurance maps in the EDR Certified Sanborn Map Report showing the vicinity of the subject property were requested to establish historical business operations at the subject property and adjacent properties. Copies of the 1928, 1949, and 1966 Certified Sanborn maps are included in Appendix B. Observations are listed below.

1928 The lot at the subject property is depicted as approximately 0.11 acres, extending from I Street to E Frontage Road that bisects the city block north to south. No buildings are depicted on the subject property, nor on any other parcel on the entire

city block. The approximately 0.11-acre parcel is depicted north of the subject property on the east half of the city block, with the 50-foot lot ends facing I Street and E Frontage Road that bisects the city block north to south.

1949 The parcel at the subject property is depicted as approximately 0.23 acres and includes the 0.11-acre lot to the north of the subject property identified in the 1929 Sanborn Map. Two residential buildings with attached garages are depicted on the subject property.

1966 The subject property has been divided north to south (the current 900 and 904 E 35th Street addresses are depicted as separate parcels). The subject property is the eastern lot of the divided lot. The previously depicted attached garage is no longer depicted on the subject property. The vacant 0.11-acre lot north of the subject property in the 1949 Sanborn Map has been divided in half north to south into two 0.06-acre lots with the eastern 0.06-acre lot (tax lot 15095000) depicted as part of the subject property. The attached garage depicted in the 1949 map is not depicted in the 1966 map. A detached garage is depicted north of the residential building.

3.2.2 Historical Aerial Photograph Review

Historical aerial photographs of the subject property area were obtained from EDR in the EDR Aerial Photo Decade Package. Aerial photographs for the years 1935, 1948, 1951, 1960, 1970, 1975, 1981, 1990, 1994, 2000, 2006, 2011, 2015, and 2019 were examined. Copies of the aerial photographs are included in Appendix C. Between 1935 and 1969 the original parcel was divided in half, east to west, and a half lot was added to the north. Observations are listed below.

1935 Two buildings (east and west sides of the lot) are visible on the subject property, which is consistent with the 1949 Sanborn Map, which depicts two dwellings with attached garages on an approximately 0.23-acre lot at the parcel. Attached garages are visible as part of both residential buildings. The residential building on the west side of the depicted lot is currently 900 E 35th Street (and not part of the subject property). The residential building on the east side of the lot is currently 904 E 35th Street, (a portion of the current subject property). A residential building is visible on the property to the south of the subject property. The vicinity is primarily vacant land, with several houses visible to the south, north, and west of the subject property. Roads are visible to the north, west, east, and south of the subject property.

1948 The subject property appears similar to the previous aerial photograph. Another building is visible north of the 904 E 35th Street residential building (this building is not depicted in the 1949 Sanborn Map but is depicted as a garage on the 1966 Sanborn Map). The vicinity surrounding the subject property is partially developed, with residential buildings visible on the adjacent properties to the north, south, and west.

1951	The subject property appears similar to the previous aerial photograph. Many of the previously undeveloped plots near the subject property now have a residential building visible on the properties.
1960	The subject property appears similar to the previous aerial photograph. A residential building is visible on the property west of the subject property. Most lots in the vicinity have been developed. I-5 is visible to the east of the adjacent property east of the subject property. Except for I-5, the vicinity appears to remain residential.
1970–1975	The subject property and surrounding area appears similar to the previous aerial photograph. Note that these photographs are low resolution, restricting visual assessment.
1981	The extension of the 39th Street southbound on-ramp to I-5 is visible to the east of the subject property. The eastern half of the block was razed to facilitate construction of the on-ramp extension. E Frontage Road behind (east) the subject property is still visible and separates the subject property and the extended 39th Street on-ramp.
1990-2019	The subject property and adjacent areas appear similar to the previous aerial photograph. The 2000 aerial photograph is low resolution, restricting a visual examination.

Based on the aerial photographic history, the subject property was developed before 1935 with two residential buildings. A newer building is visible north of the 904 E 35th Street residential building in the 1948 aerial photograph. Note: Based on the 1966 Sanborn Map, the 0.23-acre lot was divided in half north to south with a 0.06-acre lot added to the north of each lot, creating the current 0.17-acre lot at the subject property.

The subject property appears similar between 1948 and 2019. The area appears to have remained residential use since developed with no significant changes, except for the construction of I-5 between 1951 and 1960 and, later, the extension of the 39th Street southbound I-5 on-ramp between 1975 and 1981. No evidence of RECs was identified on the subject property during the historical photograph review.

3.2.3 Local Agency Records

Information from local agencies was reviewed for environmental significance as described in the following sections.

3.2.3.1 Clark County

Based on information from the Clark County Property Information Center, the subject property is comprised of tax lot 15080000, approximately 0.11 acres in size, and tax lot 1509500, approximately 0.06 acres. The subject property is approximately 0.17 acres in area. The subject property is currently owned by Elizabeth and Daniel Schaub and is used as a residence.

A review of permits for environmental significance (i.e., septic tank, stormwater, dry wells, aboveground storage tanks [ASTs] and/or USTs) was completed. No permits of environmental significance were identified.

3.3 Additional Environmental Information

The following sections provide a summary of additional environmental information obtained for the site.

3.3.1 Asbestos

The manufacture of most asbestos-containing materials (ACM) was banned by the EPA by 1979. Prior to this, asbestos was a common constituent of numerous building materials, including floor and ceiling tiles, caulking, pipe insulation, roofing materials, and exterior siding.

Based on the age of the buildings (constructed prior to 1979), there is potential for ACM to have been used in the construction of the buildings.

3.3.2 Lead-Based Paint

Before 1977, paint commonly contained lead, which is considered to cause human health problems if inhaled when disturbed and/or ingested. Based on the age of the buildings (constructed prior to 1977), there is potential for lead-based paint (LBP) to have been used in the construction of the buildings.

3.3.3 Polychlorinated Biphenyls

Polychlorinated biphenyl (PCB) production was banned in the United States in 1979. Based upon the age of the buildings (constructed before 1979), there is potential for PCBs to have been used in the construction of the buildings (primarily used in lighting and electrical equipment).

3.3.4 Radon

Radon is a naturally occurring radioactive gas formed by the decay of uranium in some rocks and soil. The risk of adverse health effects associated with radon gas depends upon various factors such as the concentration of the gas and exposure duration. The potential concentration of radon gas within a building depends on subsurface soil conditions, the integrity of the building's foundation, the existence of a basement or crawl space (primary areas of concern), and the building's ventilation.

Clark County is located in Federal EPA Radon Zone 1. Based on this limited information, radon may represent an environmental concern at the subject property.

4. FILE REVIEW

In accordance with ASTM Standard E1527-21, inquiries and review of previous investigations for the subject property and a review of regulatory files for the subject property or adjacent properties may be conducted to further evaluate environmental conditions on the property or adjacent properties and to fill in data gaps where applicable. Previous investigations and file reviews are summarized below.

4.1 Previous Investigations

Based on regulatory information from EDR and Ecology, the subject property is not listed on any regulatory database. No previous investigations of the subject property were identified during the course of this Phase I ESA.

4.2 Adjacent and Nearby Properties File Review

Several nearby properties were listed on environmental databases, as described in Section 3. Sufficient site-specific information was available through review of the EDR report, as well as online Ecology files, to develop an opinion on the potential for these properties to have affected the subject property. Therefore, a specific file review (physical review at Ecology) was not required beyond those completed during the course of this Phase I ESA. Specific information on the nature of release, types of contaminants, media impacted, and the potential to have affected the subject property or otherwise caused environmental concern is provided in Section 3.

5. SITE EXAMINATION

Parametrix conducted a site examination of the subject property from public right-of-way on September 21, 2023. The site examination consisted of observing the areas immediately surrounding the subject property, providing observations of the general environmental conditions on the subject property, and visually assessing the subject property and adjacent properties for evidence of hazardous materials. Photographs of the subject property taken during the site walk are included in Appendix D.

5.1 Subject Property

The subject property is Clark County tax parcels 1508000 and 15095000 and is approximately 0.17 acres in area. The subject property is owned by Elizabeth and Daniel Schaub and is occupied by a single-family residential building and a detached garage in the backyard. A review of historical aerial photographs indicates that the residential building was constructed before 1935. Clark County records list the construction date as 1930. A detached garage is visible in the 1948 and subsequent historical aerial photographs. The current residential building appears to have been the first development on the subject property.

A fill-pipe for an in-service heating oil UST was observed on the subject property near the east property line adjacent to E Frontage Road A product supply line supplying the furnace was observed in the basement. With the exception of the known heating oil system, no evidence of significant storage or spills of hazardous substances and/or petroleum products was observed on the subject property. No evidence of staining, adverse odors, or other indications of potential releases was observed. In general, no RECs or other adverse environmental conditions were identified associated with the subject property.

5.2 Adjacent Properties

The vicinity of the subject property is developed for residential use for approximately a 0.25-mile radius, except for I-5 and the 39th Street southbound on-ramp, across an E Frontage Road directly to the east of the subject property (Figure 2).

Adjacent properties were examined from public right-of-way areas for the presence of environmental conditions which have the potential to impact the subject property. Based on the limited observations made from the public right-of-way, no evidence of significant use or storage of hazardous substances and/or petroleum products, distressed vegetation, surface staining or other RECs on adjacent properties was observed.

6. INTERVIEW

7. CONCLUSIONS

Based on the findings of this investigation, Parametrix concluded the following:

1. The subject property is located at 904 E 35th Street in Vancouver, Washington, and is identified as tax parcels 15080000 and 15095000. The subject property is owned by Elizabeth and Daniel Schaub. The subject property encompasses an area of 0.17 acres including one residential building and a detached garage. The vicinity of the subject property is developed residential properties, with an I-5 on-ramp and I-5 located across E Frontage Road east of the subject property.
2. Clark County records state that the "Actual Year Built" of the residential building on the subjected property was 1930. The subject property is two property tax parcels encompassing an area of approximately 0.17 acres. Based upon historical aerial photographs, the subject property has remained similar since 1948 and the adjacent and vicinity properties have remained residential, except for the construction of I-5 to the east. No evidence of RECs were identified on the subject property during the review of historical photographs and Sanborn maps.
3. The residential building was constructed in 1930 and the detached garage prior to 1948. Based on the age of the buildings, there is a potential that hazardous materials (ACM, LBP, and/or PCBs) are present at the subject property.
4. The subject property is not listed on any regulatory database that would indicate a past or current release or storage of hazardous materials. A review of regulatory information indicated that several nearby sites were identified in the regulatory record databases. However, based on the information reviewed, none of the sites identified represent a REC to the subject property.

[redacted]

6. Other than the UST, no other evidence of significant use or storage of hazardous substances and/or petroleum products was noted on or near the subject property. No evidence of distressed vegetation, spills or releases, dry wells, or other indications of environmental concern was identified during the site reconnaissance. The presence of the heating oil UST is a moderate environmental concern, but because there are no known releases and because of current use at the property, does represent a REC in connection with the subject property.

8. RECOMMENDATIONS

Based upon the conclusions of this investigation of the subject property, Parametrix offers the following recommendations.

1. If the buildings are to be demolished, a hazardous building materials survey should be completed. If hazardous materials (ACM. LBP, or PCBs) are found, they should handled, managed, and disposed of in accordance with local, State, and Federal regulations.
2. Once the heating oil UST is no longer in use (presumably after acquisition) it should be properly decommissioned in accordance with local and State heating oil tank requirements, including confirmation sampling to determine whether past releases have occurred and to guide potential mitigation efforts, if any.
3. No further assessment of environmental conditions on the subject property is recommended at this time.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal Delisted NPL sites

Delisted NPL: The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may deleted from the NPL where no further response is appropriate.

A review of the Delisted NPL list, as provided by EDR, and dated 04/26/2023 has revealed that there is 1 Delisted NPL site within approximately 1 mile of the target property.

Lists of state- and tribal (Superfund) equivalent sites

HSL: The Hazardous Sites List is a subset of the CSCSL Report. It includes sites which have been assessed and ranked using the Washington Ranking Method (WARM).

A review of the HSL list, as provided by EDR, and dated 02/23/2023 has revealed that there is 1 HSL site within approximately 1 mile of the target property.

Lists of state- and tribal hazardous waste facilities

CSCSL: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Ecology's Confirmed & Suspected Contaminated Sites List.

A review of the CSCSL list, as provided by EDR, and dated 04/10/2023 has revealed that there are 12 CSCSL sites within approximately 1 mile of the target property.

CSCSL NFA: The data set contains information about sites previously on the Confirmed and Suspected Contaminated Sites list that have received a No Further Action (NFA) determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when cleanup activities are completed. Instead a No Further Action code is entered based upon the type of NFA determination the site received.

A review of the CSCSL NFA list, as provided by EDR, and dated 04/10/2023 has revealed that there is 1 CSCSL NFA site within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/06/2023 has revealed that there is 1 RCRA NonGen / NLR site within approximately 0.25 miles of the target property.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

GOODWIN RD ACID DRUM (Continued) **1000199877**

corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
