Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington

METRO BUICK OLDS VANCOUVER (Continued) **1000365623**

Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Hazardous Waste Summary:

Waste Code: D001
Waste Description: Ignitable Waste

Waste Code: D002
Waste Description: Corrosive Waste

Waste Code: D003
Waste Description: Reactive Waste

Waste Code: D005
Waste Description: Barium

Waste Code: D006
Waste Description: Cadmium

Waste Code: D008
Waste Description: Lead

Waste Code: D009
Waste Description: Mercury

Waste Code: D011
Waste Description: Silver

Waste Code: D039
Waste Description: Tetrachloroethylene

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F004
Waste Description: The Following Spent Nonhalogenated Solvents: Cresols, Cresylic Acid, And Nitrobenzene; And The Still Bottoms From The Recovery Of These Solvents; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: P105
Waste Description: Sodium Azide

BOISE WHITE PAPER LLC (Continued) **1000378977**

Waste Code: U001

NARR Comments: This unregulated landfill was located in a seasonal lake basin and probably operated between 1950 and 1970, when it was covered by a 7 to 8-foot layer of clean fill. An ARCO facility that opened in 1971 at the eastern edge of the former landfill initiated an investigation in 1989 that showed gasoline contamination in groundwater. Borings also revealed a layer of landfill debris beneath clean fill. DEQ's LUST program (file #26-89-0149) requested a Corrective Action Plan from ARCO, leading to pump-and-treat remediation that began operating 8/90. Groundwater samples from eight monitoring wells contained dissolved metals, which are most likely a result of leachate

HAYDEN ISLAND LANDFILL (Continued) **S103842510**

percolating through unknown solid wastes in the unsaturated zone. Because of system fouling from these metals, the treatment program was shut down in May 1991.

Decode for NarcdID: Remedial Action
NARR Comments: In June 1993, ARCO concluded that it was not possible to remediate benzene in groundwater without first removing dissolved metals. ARCO maintained that it had no responsibility for the metals. The LUST section may continue to require regular monitoring as a part of <quot>conditional closure.<quot> Potential pathways of exposure appear limited to groundwater and surface water. Because more information is needed about the landfill and its levels of contamination, Site Assessment recommends that affected property owners characterize contamination in and below the former landfill. Otherwise, a PA should be completed to investigate the site's history and to evaluate potential exposure pathways, under a low priority. Confined space methane testing was performed by PBS for the Hayden's Corner property. The only significant methane was found at two bathroom floor drains where the likely source was sewer gas. Three soil gas samples were collected from borings around the former ARCO site as part of the investigation of the Hayden's Corner property (ECSI #5711). Methane at 2% was found near the former waste oil but this could have been from residual petroleum contamination. Other samples showed only trace methane.

NARR Comments: [April 2017] This unregulated landfill was located in a seasonal lake basin and probably operated between 1950 and 1970, when it was covered by a 7 to 8-foot layer of clean fill. An ARCO facility that opened in 1971 at the eastern edge of the former landfill initiated an investigation in 1989 that showed gasoline contamination in groundwater. High concentrations of metals were also found. Borings revealed a layer of landfill debris beneath clean fill. The Hayden's Corner property (former ARCO site) was split off from the greater

HAYDEN ISLAND LANDFILL (Continued) **S103842510**

landfill site with a separate ECSI number (#5711). Another site was investigated in the Hayden Island Landfill area in 2016/17 (1445 and 1463 N. Hayden Island Drive). These properties' recent use was commercial, and not expected to lead to contamination. Groundwater below the properties is contaminated with TPH and metals, particularly arsenic, barium, lead, silver, and mercury.

NARR Comments: Methane and other atmospheric gases were measured in confined spaces inside the site buildings using a handheld meter in May 2011. Methane at levels from 1.5 to 5.5% was detected at the drains of two restrooms. This could be related to sewer gas from leaking drain traps. Little or no methane was detected in any other confined space locations within the buildings. In May 2012 three borings were arrayed around the property and one included the location of a former leaking waste oil tank from the prior gas station. Borings were sampled for methane using a handheld meter as well as summa canister sampling. VOCs samples were also collected using a summa. The maximum methane detection was around 2% in one hole (near the former waste oil tank) and near zero in other holes. Various VOCs (largely associated with petroleum) were found at generally low concentrations. No VOCs were found at concentrations greater than commercial risk-based concentrations. In July 2012 a plumber was hired by site owner to inspect and correct any problems with the bathroom drains/traps. No Further Action determination in August 2012. The determination applies only to the immediate Hayden's Corner site and not to the greater Hayden Island Landfill (ECSI #1559).

NARR Comments: An ARCO service station that operated on the property starting in 1971 initiated an investigation in 1989 that showed gasoline contamination in groundwater. Borings also revealed a layer of landfill debris beneath clean fill. The property is apparently located within the footprint of the former Hayden Island Landfill, an unregulated landfill that was located in a seasonal lake basin and probably operated between 1950 and 1970, when it was covered by a 7 to 8-foot layer of clean fill. DEQ's LUST program (file #26-89-0149) requested a Corrective Action Plan from ARCO, leading to pump-and-treat remediation that began operating 8/90. Groundwater samples from eight monitoring wells contained dissolved metals, which are most likely a result of landfill leachate percolating through unknown solid wastes in the unsaturated zone. Because of system fouling from these metals, the treatment program was shut down in May 1991. The ARCO station recieved a No Further Action determination in 1998 with the exception that the determination did not apply to other contaminants found at the site related to the greater Hayden Island Landfill.

Decode for NarcdID: General Site Description
NARR Comments: The site is just north of the center of Hayden Island in the Columbia River. The topography is flat and the elevation is approximately 20 feet above of sea level. The main channel of the Columbia River is just over 500 feet north of the site. Subsurface material encountered below asphalt and base gravel was medium-grained sand. At depths as little as 5 feet below ground surface (bgs) fill material consisting of paper, glass, wood, brick, plastic and metal, was encountered and found at depths up to 18 feet bgs.

NARR Comments: (November 2016 RKW) Phase II investigation including sampling of soil and shallow groundwter. Minor diesel and oil contamination was found in soil on the 1445 lot. Groundwater below the site contains widespread petroleum, metals (arsenic, barium, cadmium, lead, silver, and mercury), minor VOCs and PAHs. Follow-up investigation for methane (landfill gas) was undertaken in January 2017 using handheld Landtec instrument. Samples from two boring on each property and from interior confined spaces in the 1463 building. No significant levels

HAYDEN ISLAND - UMATILLA PROPERTY (Continued) **S118869506**

of methane were detected. NFAs for both properties were dated April 4, 2017.

NARR Comments: The properties are located on the old unregulated Hayden Island Landfill which was located in a seasonal lake basin and probably operated between 1950 and 1970, when it was covered by a 7 to 8-foot layer of clean fill prior to development.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: This site, the location of a former US Bank branch (since demolished) is situated on top of the abandoned Hayden Island Landfill (ECSI #1559). The site is currently owned by Umatilla, Inc. Belmar Properties, the owners of an adjacent property, are proposing to purchase the site. Belmar has applied to DEQ's Voluntary Cleanup Program to obtain a No Further Action determination for the site. These properties recent landuse was commercial and not expected to lead to contamination. Groundwater below the properties is contaminated with TPH and metals, particularly arsenic, barium, lead, silver, and mercury. Groundwater contaminatinon is thought to be associated with the former landfill.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.
OSHA ESTABLISHMENT
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 06/22/2023
Date Data Arrived at EDR: 07/06/2023
Date Made Active in Reports: 07/24/2023
Number of Days to Update: 18

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 06/22/2023
Date Data Arrived at EDR: 07/06/2023

Next Scheduled EDR Contact: 10/09/2023
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994

Data Release Frequency: No Update Planned

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 06/22/2023
Date Data Arrived at EDR: 07/06/2023
Date Made Active in Reports: 07/24/2023

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 03/26/2023
Date Data Arrived at EDR: 03/28/2023
Date Made Active in Reports: 05/30/2023
Number of Days to Update: 63

Next Scheduled EDR Contact: 10/09/2023
Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

State and tribal institutional control / engineering control registries

WA INST CONTROL: Institutional Control Site List

The Environmental Covenants Registry is a list of sites that have implemented institutional controls as part of the remedy. Institutional controls are administrative or legal measures used to prevent activities that may compromise the integrity of a cleanup action. They are meant to prevent exposure to contamination remaining on site. Institutional controls may include environmental covenants (also known as "deed restrictions"), zoning restrictions, public health advisories, or other administrative tools. The most common institutional control is an environmental covenant. Environmental covenants are legal recorded documents that typically limit certain uses of the property, such as: Drilling a water supply well on the property. Disturbing pavement covering contaminated areas. Residential use of the property.

Date of Government Version: 04/10/2023

Last EDR Contact: 06/22/2023
Next Scheduled EDR Contact: 10/09/2023
Data Release Frequency: Quarterly

WA PTAP: PTAP Site Listing

A list of sites accepted into the Petroleum Technical Assistance Program. The Petroleum Technical Assistance Program (PTAP) expands the state's ability to respond to the high customer demand to clean up petroleum contaminated sites. Under the PTAP, the Pollution Liability Insurance Agency (PLIA) may provide informal site-specific technical consultations and issue written opinion letters to persons conducting independent remedial actions at qualifying petroleum cleanup sites. PLIA may provide these services under the authority of RCW 70.149.040(9) and the Model Toxics Control Act (MTCA), Chapter 70.149 RCW and Chapter 173-340 WAC.

Date of Government Version: 01/31/2023

Last EDR Contact: 05/10/2023
Next Scheduled EDR Contact: 08/21/2023
Data Release Frequency: Varies

Lists of state and tribal brownfield sites

OR BROWNFIELDS: Brownfields Projects

Brownfields investigations and/or cleanups that have been conducted in Oregon.

Date of Government Version: 02/01/2023
Date Data Arrived at EDR: 02/08/2023
Date Made Active in Reports: 05/02/2023
Number of Days to Update: 83

Source: Department of Environmental Quality
Telephone: 503-229-6801
Last EDR Contact: 05/09/2023
Next Scheduled EDR Contact: 08/21/2023
Data Release Frequency: Annually

WA BROWNFIELDS: Brownfields Sites Listing

A listing of brownfields sites included in the Confirmed & Suspected Sites Listing. Brownfields are abandoned, idle or underused commercial or industrial properties, where the expansion or redevelopment is hindered by real or perceived contamination. Brownfields vary in size, location, age, and past use -- they can be anything from a five-hundred acre automobile assembly plant to a small, abandoned corner gas station.

Date of Government Version: 04/10/2023

Data Release Frequency: Quarterly

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS ATSDR: PFAS Contamination Site Location Listing

PFAS contamination site locations from the Department of Health & Human Services, Center for Disease Control & Prevention. ATSDR is involved at a number of PFAS-related sites, either directly or through assisting state and federal partners. As of now, most sites are related to drinking water contamination connected with PFAS production facilities or fire training areas where aqueous film-forming firefighting foam (AFFF) was regularly used.

PFAS WQP: Ambient Environmental Sampling for PFAS

The Water Quality Portal (WQP) is a part of a modernized repository storing ambient sampling data for all environmental media and tissue samples. A wide range of federal, state, tribal and local governments, academic and non-governmental organizations and individuals submit project details and sampling results to this public repository. The information is commonly used for research and assessments of environmental quality.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

COUNTY RECORDS

KING COUNTY:

WA LF KING: Abandoned Landfill Study in King County

The King County Abandoned Landfill Survey was conducted from October through December 1984 by the Health Department's Environmental Health Division at the request of the King County Council. The primary objective of the survey was to determine if any public health problems existed at the predetermined 24 sites.

Date of Government Version: 04/30/1985
Date Data Arrived at EDR: 11/07/1994
Date Made Active in Reports: N/A

SEATTLE COUNTY:

WA LF SEATTLE CITY: Abandoned Landfill Study in the City of Seattle

The Seattle Abandoned Landfill Survey was conducted in June and July of 1984 by the Health Department's Environmental Health Division at the request of the Mayor's Office. The primary objective of the survey was to determine if any public health problems existed at the predetermined 12 sites.

Date of Government Version: 07/30/1984
Date Data Arrived at EDR: 11/07/1994
Date Made Active in Reports: N/A

TACOMA/PIERCE COUNTY:

WA LF TACOMA/PIERCE: Closed Landfill Survey
Following numerous requests for information about closed dumpsites and landfills in Pierce County, the Tacoma-Pierce County Health Department decided to conduct a study on the matter. The aim of the study was to evaluate public health risks associated with the closed dumpsites and landfills, and to determine the need, if any, for further investigations of a more detailed nature. The sites represent all of the known dumpsites and landfills closed after 1950.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

North Map:	14842111 VANCOUVER, WA
Version Date:	2020

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

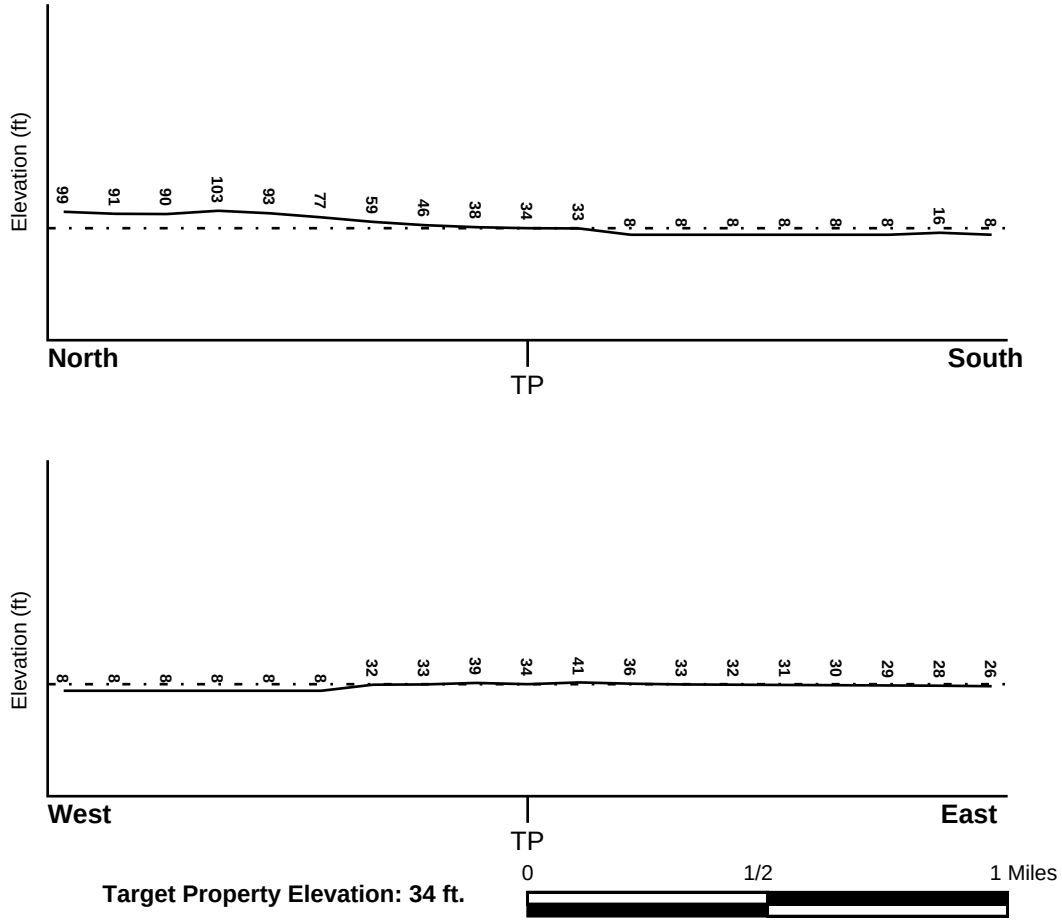
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 34 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

53011C0482D	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
PORTLAND	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

2G	1/4 - 1/2 Mile NW	Not Reported

For additional site information, refer to Physical Setting Source Map Findings.

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Lauren

Soil Surface Texture: gravelly loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity	
	Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	micro m/sec	Soil Reaction (pH)
1	0 inches	5 inches		gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.3 Min: 6.1
2	5 inches	33 inches		very gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.3 Min: 6.1
3	33 inches	44 inches		very gravelly coarse sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.3 Min: 6.1

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
4	44 inches	59 inches	very gravelly loamy coarse sand	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.3 Min: 6.1

Soil Map ID: 2

Soil Component Name: Fill land

Soil Surface Texture: variable

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Ecology
Telephone: 360-407-6121

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Wells
Source: Department of Health
Telephone: 360-236-3148
Group A and B well locations.

Water Well Listing
Source: Public Utility District
Telephone: 206-779-7656
A listing of water well locations in Kitsap County.

Ecology Well Logs
Source: Department of Ecology
Telephone: 360-407-7294
Point geodatabase with a record for each Ecology well report. Points are located by quarter quarter section centroid. Points contain all well report types including water wells, resource protection wells, and decommissioned wells.

OTHER STATE DATABASE INFORMATION

Oil and Gas Well Listing
Source: Department of Natural Resources
Telephone: 360-902-1450
Locations that represent oil and gas test well sites in Washington State from 1890 to present.

RADON

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Parametrix, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

General Awareness Information Pamphlet for Lead Contaminated Soils at Decision Unit Northeast 1 (DU-NE-1), Fort Vancouver National Historic Site

The Site

DU-NE-1 is situated within the northwestern portion of FOVA along McClellan Rd. DU-NE-1 includes the area surrounding Buildings 989, 991, and 993 (Exhibit 1).

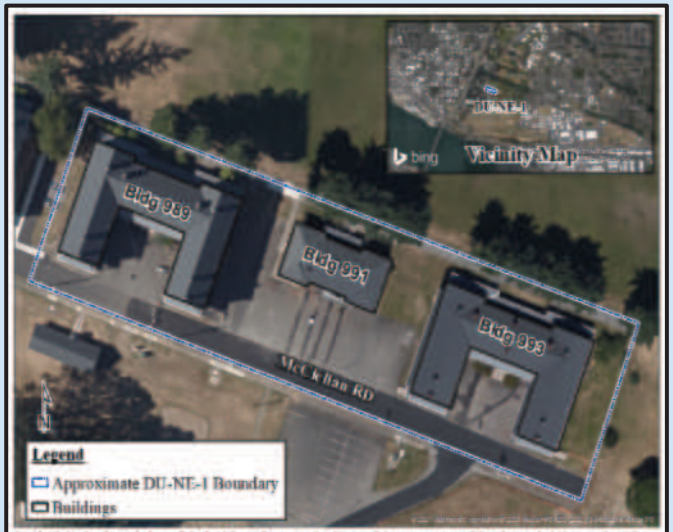

Exhibit 1. Decision Unit Northeast-1, Fort Vancouver National Historic Site.

Constituent of Concern

Several investigations have been performed identifying lead in soil as a constituent of concern in DU-NE-1. Lead causes diseases affecting the central and peripheral nervous system, the kidneys, and blood. Specific routes of exposure for lead include inhalation, ingestion and dermal contact. Symptoms that a person may exhibit when exposed to lead include eye irritation, insomnia, nausea, malnutrition, constipation, colic, anemia, abdominal pain, hypotension, paralysis of ankles and/or wrists, and severe agitation of pre-existing gout conditions.

Remedy

A Non-Time Critical Removal Action (NTCRA) to address lead concentrations above the Remedial Action Objective (RAO) of 410 milligrams per kilogram was completed in 2021. At the conclusion of NTRCA activities, soil with lead concentrations greater than the RAO were removed to a depth of 12-inches in DU-NE-1, except were excavation may have impacted historically significant features. Lead concentrations in soils left in place below the excavation depth exhibited concentrations above the RAO. Remaining soils with lead concentrations above the RAO were capped with a geotextile fabric demarcation layer and 12-inches of soil. Areas where excavation would have impacted historically significant features were capped with a geotextile fabric demarcation layer and 6-inches of mulch. Exhibit 2 identifies capped areas and where concentrations of lead remain in-place greater than the RAO.

Exhibit 2. Post-Removal Action Site Conditions, DU-NE-1 at FOVA.

Controls

FOVA has instituted Land Use Control measures to mitigate visitor (including child and adult) and site worker (i.e., adult) exposure to lead concentrations in soils greater than the RAO that have been left in-place and capped. FOVA's current land use is that of a national park and significant historical resource. Current land use includes recreation (walking, running, cycling, picnicking, etc.), interpretive/educational programming, and resource preservation. As such, the FOVA Master Plan includes inherent controls such as unauthorized dig restrictions. Additionally, all contaminated soils currently within the site boundary are capper, either by a demarcation layer and fill material or an impervious surface. Additional site restrictions are identified within the relevant documents available for review from the NPS.

Responsible Personnel

FOVA Maintenance Division is responsible for the implementation and ongoing maintenance of the facility Master Plan and the Land Use Control Implementation Plan. The FOVA Facility Manager can be reached at:

FOVA Park Headquarters

EXECUTIVE SUMMARY

Parametrix was retained by the Washington State Department of Transportation (WSDOT) to perform a Phase I Environmental Site Assessment (ESA) on two contiguous vacant commercial properties located to the west of Washington Street, south of West 5th Street, and east of Columbia Street in Vancouver, Washington (Figure 1). The Phase I ESA focused on partial areas of the properties that may be acquired as part of the Interstate Bridge Replacement (IBR) Program. The subject property consists of the parcels identified as IBR-48320000 and IBR-48350000. Based on the findings of this investigation, Parametrix concluded the following:

1. The subject property includes two separate Clark County Tax Lots: 48320000 and 48350000. The lots are currently an active construction site with a six-story building being constructed. The vicinity of the subject property is developed with commercial and light-industrial properties. No buildings are located within the partial areas of the parcels that may be acquired as part of the IBR Program.
2. A review of Sanborn maps indicated that dwellings and a hotel occupied the site of the subject property from 1888 to 1911. A review of historical aerial photographs indicated that multiple commercial buildings were present on the subject property from 1936 to 1970. From 1970 to 2020, the subject property only had one commercial building, and it was operated as a car lot. The area transitioned from primarily rural vegetated land to residential and industrial/commercial in the 1940s and continued to see significant development until present day. No evidence of recognized environmental conditions (RECs) was identified on the subject property, including the partial areas of the parcels that may be acquired as part of the IBR Program, during the historical aerial review.
3. Due to the nature of the subject property (active construction site), there is a low potential for lead-based paint (LBP) or asbestos-containing materials (ACM) to be present on the subject property.
4. A review of regulatory database information indicated that the subject property is listed on the underground storage tank (UST) database. Information reviewed indicated that one UST used to store unleaded gasoline was installed on the property in December 1964, and it was removed in August 1996. There is no record of any leaks associated with this UST, and it appears that the file was closed in accordance with Washington Department of Ecology (Ecology) regulations.
5. A review of regulatory information indicated that several nearby sites were identified in the regulatory record databases. However, based on regulatory status and distance from the subject property, none of the sites identified appears to present a REC to the subject property.
6. No evidence of significant use or storage of hazardous substances and/or petroleum products was noted on or near the subject property. No evidence of distressed vegetation, spills or releases, dry wells, or other indications of environmental concern was identified during the site reconnaissance.
7. An interview was not conducted with a property representative to identify any potential environmental conditions and to address information data gaps during the Phase I ESA process. The lack of a property owner or representative interview represents a data gap in

accordance with ASTM Standard E1527-21. However, the information obtained for the Phase I ESA, including regulatory database and historical documentation, was deemed sufficient.

Based upon the conclusions of this investigation of the subject property, Parametrix offers the following recommendations:

1. No further assessment of environmental conditions on the subject property, including the partial areas of the parcels that may be acquired as part of the IBR Program, is recommended at this time.

1. INTRODUCTION

Parametrix was retained by the Washington State Department of Transportation (WSDOT) to perform a Phase I Environmental Site Assessment (ESA) on two contiguous properties located to the west of Washington Street, south of West 5th Street, and east of Columbia Street in Vancouver, Washington (herein referred to as the subject property) (Figure 1). The subject property is currently an active construction site. The subject property is located in Clark County, Washington, and consists of two parcels included in the Interstate Bridge Replacement (IBR) Program. The property identifiers, tax lot IDs, and street addresses for the two parcels are listed below, and the configuration of the properties is shown in Figure 2.

- IBR-48320000 48320000 412 Washington Street
- IBR-48350000 48350000 210 W 4th Street

It is our understanding that WSDOT may pursue acquisition of a portion of the parcels making up the subject property as part of the IBR Program. The proposed acquisition areas are shown on Figure 2. The Phase I ESA focused primarily on the partial areas of each parcel that may be acquired as part of the IBR Program and assessed the potential for recognized environmental conditions on the acquisition areas from the larger property and adjacent or nearby properties.

This Phase I ESA includes a review of available documentation pertaining to the subject property, a site reconnaissance, and a review of pertinent public agency documents. The Phase I ESA consisted of two distinct tasks: (1) a review of documents and of oral information (if available), and (2) a site examination. Conclusions and recommendations within this report are based solely on observed evidence and data collected during the performance of this assessment.

1.1 Purpose

The Phase I ESA was conducted in general accordance with American Society for Testing Materials (ASTM) Standard E1527-21, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM 2021), which defines the generally accepted industry practices and procedures currently applicable at the time and place of this study. The Phase I ESA is intended to permit the user to satisfy the requirements to qualify for the bona fide prospective purchaser limitation under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), and as such constitutes "all appropriate inquiries in the previous ownership and uses of the property consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601 (35)(B).

The purpose of this Phase I ESA is to identify Recognized Environmental Conditions (RECs) on or near the subject property. The term Recognized Environmental Conditions is defined in ASTM Standard E1527-21 as:

> "…(1) the presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* due to a *release* to the *environment*; (2) the likely presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* due to a *release* or likely *release* to the

> *environment*; or (3) the presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* under conditions that pose a *material threat* of a future *release* to the *environment*."

In accordance with ASTM Standard E1527-21, some RECs may be further defined as historical recognized environmental conditions (HRECs) or controlled recognized environmental conditions (CRECs).

An HREC is defined as:

> "…*a past release* of any *hazardous substances* or *petroleum products* that has occurred in connection with the *property* and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the *property* to any required controls."

A CREC is defined as:

> "…*a recognized environmental condition* resulting from a past *release of hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority, with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls."

This Phase I ESA endeavors to identify RECs, HRECs, and/or CRECs at the subject property.

1.2 Significant Assumptions

This assessment was conducted in accordance with generally accepted industry practices and procedures within the scope of work authorized at the time and place of this study. Parametrix's observations are limited to those areas to which it had access on the subject property.

Phase I ESA methodology included viewing accessible areas of the subject property from public right-of-way, as on-site access was not available. In addition, an interview was not able to be conducted with a property representative to identify any potential environmental conditions during the Phase I ESA process. Unless otherwise stated, no other exceptions to the guidelines presented in ASTM E1527-21 were made during completion of this Phase I ESA.

1.3 Limitations

The findings, conclusions, and recommendations presented in this report are based on site conditions and the best available information known or made available by regulators, other consultants, or other sources at the time of the investigation. Parametrix conducted a diligent search and investigation in compliance with prevailing standards of the profession; however, certain adverse conditions may exist at the site not detected at the time of the investigation.

The services provided under this contract, as described in this report, include professional opinions and judgments based on data collected. These services have been provided according to generally

accepted engineering practices. The opinions and conclusions contained in this report are typically based on information obtained from the following:

- Observations and measurements made by Parametrix field staff.
- Contacts and discussions with regulatory agencies and others.
- Review of available hazardous substance or solid waste lists.
- Opinions and judgments of Parametrix based on the information available.

In the professional judgment of Parametrix, the services performed pursuant to the scope of services are an adequate basis to collect data for a preliminary evaluation of the site and upon which to draw the conclusions stated in this report.

2. SUBJECT PROPERTY DESCRIPTION

The following sections summarize the location, characteristics, and physical setting of the subject property.

2.1 Location

The subject property includes two contiguous vacant parcels located generally to the west of Washington Street, south of West 5th Street, and east of Columbia Street in Vancouver, Washington. The Phase I ESA focused on the subject property, which consists of partial areas of the two parcels that may be acquired as part of the IBR Program, as detailed in the table below. The site location is shown on Figure 1, the Site Vicinity Map. The boundary of the subject property is shown on Figure 2.

2.2 Site and Vicinity Characteristics

Characteristics of the subject property, including the partial areas of the parcels that may be acquired as part of the IBR Program, are summarized in Table 2-1.

Table 2-1. Subject Property Characteristics

IBR ID	Address	Owner	Total Area	Potential Acquisition Area	Current Use (determined through visual observations)
IBR-48320000	412 Washington Street	Hurley Development LLC	0.72 acres	1,076 square feet	Active construction site with six-story building being constructed
IBR-48350000	210 W 4th Street	Ten Talents Investments 9 LLC	0.2 acres	917 square feet	Active construction site with six-story building being constructed

The subject property is bounded to the north by commercial/industrial property, to the east by Washington Street followed by commercial and industrial development, to the south by commercial development, and to the west by commercial and vacant vegetated land (see Figure 2).

2.3 Physical Setting

The subject property is located in the Portland Basin, which marks the northern terminus of the Willamette Lowland in Oregon (DNR n.d.). The northern portion of the basin is known for its low topographic relief, with the subject property at an elevation of approximately 41 feet above mean sea level. The Portland Basin is bound by the Cascade Range to the east and the Coast Range to the west.

Geologic processes in the Portland Basin consist of volcanism, sedimentation, and cataclysmic flood deposits in both fluvial and marine depositional environments. The subject property lies on what is

mapped as coarse-grained Missoula flood deposits, cobbly, sandy gravel deposited by the Missoula floods (Wells et al. 2020). Surface soils consist of gravelly loam.

The topography in the vicinity of the subject property is a consistent slope, rising with distance from the Columbia River. Depth to groundwater is expected to vary seasonally; however, nearby well logs indicate groundwater has been encountered anywhere from 20 to 35 feet below ground surface.

2.4 Current Use of the Subject Property

The subject property is currently an active construction site. The proposed acquisition area includes the western portion of parcels 48320000 and 48350000 and an eastern portion of parcel 48320000 (see Figure 2).

2.5 Descriptions of Improvements on the Subject Property

The subject property is currently an active construction site with a fence surrounding the subject property. No buildings or other significant structures are located on the partial areas of the parcels that may be acquired as part of the IBR Program.

2.6 Environmental Liens

The American Society for Testing Materials (ASTM) defines an environmental lien as a charge, security, or encumbrance upon title to a property to secure the payment of a cost, damage, obligation, or duty arising out of response actions, cleanup, or other remediation of hazardous substances or petroleum products. No evidence of environmental liens was identified during the course of the Phase I ESA process. However, a formal title search was not completed as part of the scope of work.

3. RECORDS REVIEW

The purpose of the records review task was to gather environmental data on the subject property prior to the site examination. The information review consisted of two subtasks: (1) a review of regulatory databases to find sites, including and close to the subject property, listed by federal and State of Washington agencies and (2) a compilation of historical uses of the subject property and site vicinity properties to determine if past operations pose an environmental risk to the subject property.

The Environmental Data Resources (EDR) report (EDR 2023a) is a summary of state and federal database searches for sites of possible environmental concern. The information review enabled Parametrix personnel to characterize the types of activities performed at the site, identify data gaps prior to the site examination, and facilitate recognition of discrepancies between reported and observed data. Data gaps identified during the document review were addressed by interviewing knowledgeable personnel, observations during the site examination, or by additional detailed investigation.

It should be noted that the information supplied by EDR is reported as Parametrix received it. EDR, in turn, reports information as it is provided in various government databases. It is not possible for either Parametrix or EDR to verify the accuracy or completeness of information contained in these databases. However, the use of and reliance on this information is a generally accepted practice in the conduct of environmental due diligence. The following sections present information from the document review.

3.1 Standard Environmental Record Sources

The following section summarizes information collected from records maintained by the U.S. Environmental Protection Agency (EPA) and the Washington State Department of Ecology (Ecology). The information includes details on sites identified in regulatory databases within recommended ASTM search distances. A complete listing of the databases reviewed is included in the EDR Radius Map™ Report (Appendix A).

3.1.1 Review of Washington State Department of Ecology Databases

The following sections summarize the most relevant information obtained from the EDR report regarding sites identified within the ASTM E1527-21 search radii from the following databases. Additional information regarding these sites was reviewed on Ecology's Integrated Site Information System (ISIS) website to supplement data gaps in the EDR report. Relevant database listings from Ecology include the following:

- Underground Storage Tank (UST) List
- Leaking Underground Storage Tank (LUST) List
- Confirmed and Suspected Cleanup Site List (CSCSL)
- Confirmed and Suspected Cleanup Site List – No Further Action (CSCSL-NFA)
- SPILLS

- Voluntary Cleanup Program (VCP)
- Independent Cleanup Report (ICR)
- Landfill and/or Solid Waste Disposal Site Lists (SWF/LF)
- Brownfields

3.1.1.1 Underground Storage Tank List

The Ecology UST List identifies registered USTs, which are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data were obtained from Ecology's UST Site/Tank Report database.

Information contained in the EDR report indicates that the subject property is listed as a UST site. Two UST sites are located within 0.125 miles of the subject property. Sites not discussed below are either addressed later in this document or do not represent a REC based on distance from the subject property:

- The subject property is located at the former site of the Hannah Motor Company (400 Washington Street). This site is reported with having one decommissioned tank used to store unleaded gasoline, and no active tanks are reported. The tank status is listed as "Removed" in the WA DOE Cleanup and Tank Search website. Based on the current regulatory status of the site, the site does not represent a REC to the subject property.
- The Hannah Motor Company site (300 Washington Street) is located 357 feet southeast of the subject property. The facility is listed in the LUST, UST, CSCSL NFA and ASBESTOS databases, and it was a former automotive-related facility with two underground storage tanks on-site. All underground storage tanks have been removed, and the facility has been closed. No indication of release from the underground storage tanks was found. In 2015, a subsurface investigation report was conducted. The investigation revealed that soils adjacent to a hoist system on the property contained up to 18,000 mg/kg oil-range petroleum hydrocarbons, well above the Model Toxics Control Act (MTCA) Method A cleanup level of 2,000 mg/kg (Point Source Solutions 2015). The recommendation from this report was to excavate impacted soil and dispose of it at an approved facility. The site status is listed as "Cleanup Started" in the Ecology Cleanup and Tank Search website. Based on the current regulatory status of the site and its distance from the subject property, the site does not represent a REC to the subject property.
- The Capital Tackel Mfg site (404 West 4th Street) is located 518 feet west of the subject property. The site is reported with having one decommissioned tank, and no active tanks are reported. The tank status is listed as "Removed" in the Ecology Cleanup and Tank Search website. Based on the current regulatory status of the site, the site does not represent a REC to the subject property.
- The Admiral Distributing site (301 West 5th Street) is located 593 feet west of the subject property. The site is reported with having one decommissioned tank used to store leaded gasoline, and no active tanks are reported. The tank status is listed as "Removed" in Ecology Cleanup and Tank Search website. Based on the current regulatory status of the site, the site does not represent a REC to the subject property.

Unless otherwise noted, the mere presence of a UST near a site does not, in itself, constitute a REC. Where available, other information was reviewed regarding the presence of a UST including the age of the facility, its proximity to the subject property, and known releases or spills. UST sites which have had known releases are discussed in Section 3.1.1.2 below.

3.1.1.2 Leaking Underground Storage Tank List

The LUST Incident Report contains an inventory of reported leaking UST incidents. The data were obtained from Ecology's LUST Database List. The subject property is not listed as a LUST site.

Five LUST sites were identified within 0.5 miles of the subject property:

- The Hannah Motor Company site (300 Washington Street PO Box 1306) is located 357 feet southeast of the subject property. The facility is listed in the LUST, UST, CSCSL NFA, and ASBESTOS databases, and it was a former automotive-related facility with two underground storage tanks on-site. As noted above, based on the current regulatory status of the site and its distance from the subject property, the facility is not a REC to the subject property.
- The Christensen Family site (415 W 6th Street) is located approximately 0.12 miles northwest of the subject property, and it is listed in the LUST, UST, CSCSL, ICR, and RCRA NONGEN/NLR databases. Petroleum-related soil and groundwater contamination is suspected on the property, and the site status is listed as "Cleanup Started" on the Ecology Cleanup and Tank Search website. Based on the distance from the subject property, the facility is not considered a REC to the subject property.
- The Metro Buick Olds site (904 Washington Street) is located approximately 0.27 miles north-northeast of the subject property, and it is listed in the LUST, UST, ICR, CSCSL NFA, and RCRA NONGEN/NLR databases. Petroleum-related soil contamination was present at the site. In 2020, a Phase II ESA was conducted at the site. No on-site evidence of groundwater contamination was identified, and some soil contamination was found over a limited area (AECOM 2020). The site status is listed as "No Further Action" (NFA) on the Ecology Cleanup and Tank Search website. Based on the distance from the subject property and the regulatory status of the site, the facility is not considered a REC to the subject property.
- The Vancouver Barracks site (Hathaway Road Bldg 404) is located approximately 0.34 miles northeast of the subject property, and it is listed in the LUST, UST, and CSCSL NFA databases. The site is listed with having three tanks removed in July 2002. However, per communication with Mr. Paul Turner with Ecology, the clean-up report was received sometime in 1991 or 1992, and the database information is incorrect. Based on the distance from the subject property and the regulatory status of the site, this site does not represent a REC to the subject property.
- The US DOT Federal Highway Admin Vancouver site (610 East 5th Street) is located approximately 0.38 miles northeast of the subject property. The site is listed in the LUST, UST, CSCSL NFA, ASBESTOS, and RCRA NONGEN/NLR databases. The site is listed with having one steel tank, which was removed from the site in August 1996. Petroleum-related soil contamination was present at the site. The site status is listed as "No Further Action" on the Ecology Cleanup and Tank Search website. Based on the NFA determination and the remedial activities on the site, the facility is not a REC to the subject property.

3.1.1.3 Confirmed and Suspected Contaminated Sites List

The state hazardous waste sites records are the states' equivalent to the Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS). These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data were obtained from Ecology's Confirmed and Suspected Contaminated Sites List (CSCSL).

Twenty-one CSCSL sites were identified within 1 mile of the subject property. Of the 21 sites, only three are located within 0.25 miles of the subject property, two of which are discussed earlier in Section 3. None of the CSCSL sites identified represents a potential REC for the subject property based on distance from the subject property, understood extent of contamination, and/or regulatory status of the site.

- The Vancouver Port of Red Lion Hotel site (100 Columbia Street) is located 0.19 miles south of the subject property, and it is listed in the CSCSL, SPILLS, and ASBESTOS databases. The site has confirmed chromium, cadmium, arsenic, lead, and benzo(a)pyrene contamination in soil and suspected contamination to groundwater. Investigation of the extent of contamination and remediation are ongoing. In 2018, a Phase II ESA was conducted at the site, and the conclusion was that no major indicators of contamination were observed in soil borings in Block B (Maul Foster Alongi 2018; included in Appendix E). In 2019, a Groundwater Monitoring Report was prepared for the site. The report indicated that diesel and oil range hydrocarbons, arsenic, and dibenzofuran were detected in levels that exceed MTCA Method A cleanup levels in groundwater monitoring wells spread across the subject property. Another conclusion was that the dominant groundwater flow direction is north-northeast, away from the Columbia River. It is noted in the report that the groundwater flow appears to fluctuate toward and away from the Columbia River at different times of the year, and this may account for the spatial and temporal fluctuations of diesel and oil-range hydrocarbon clean-up level exceedances in monitoring wells on the eastern portion of the subject property (Maul Foster Alongi 2019; included in Appendix E). Based on the distance from the subject property, the site does not represent a REC to the subject property.

A subset of the CSCSL is the CSCSL-NFA. The database contains information about sites previously on the CSCSL that have received an NFA determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when clean-up activities are completed. Instead, an NFA code is entered based upon the type of NFA determination the site received. One CSCSL NFA site, the Hannah Motor Company site (300 Washington Street), was identified within 0.25 miles of the subject property. It is discussed earlier in Section 3.

Six additional CSCSL-NFA sites are reported within approximately 0.5 miles of the subject property. Based on the distance from the subject property, continued cleanup efforts, and NFA determinations, none of the identified sites appears to represent RECs to the subject property, including the partial areas of the parcels that may be acquired as part of the IBR Program, unless specifically noted otherwise in another section.

3.1.1.4 SPILLS Database

This database provides a comprehensive list of reported spills. The subject property is not listed as a SPILLS site.

3.1.1.5 Voluntary Cleanup Program

This database provides a listing of sites that have entered either the VCP or its predecessor, the Independent Remedial Action Program.

One VCP site is reported within approximately 0.5 miles of the subject property:

- The Vancouver City Brewery Blocks site (400 W 8th Street) is located 0.22 miles northwest of the subject property. The site was listed as NFA-Voluntary Cleanup Review in August 1999.

Based on a review of regulatory status (NFA determination), investigation and cleanup actions conducted, and/or distance from the subject property, the VCP site does not represent a REC to the subject property.

3.1.1.6 Independent Cleanup Report

These are remedial action reports Ecology has received from either the owner or operator of the site. These actions have been conducted without department oversight or approval and are not under an order or decree.

The subject property is not listed as an ICR site; however, the Hannah Mitsubishi property 357 feet southeast of the subject property is listed in the ICR database (Tax Lot ID 48430000). Two additional ICR sites are reported within approximately 0.5 miles of the subject property, and they are either discussed above in other sections, or they do not represent a REC to the subject property based on distance and/or regulatory status.

3.1.1.7 Solid Waste Facilities/Landfill

The Solid Waste Facilities/Landfill (SWF/LF) records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data were obtained from Ecology's Solid Waste Facilities Handbook.

The subject property is not listed as a SWF/LF site. No SWF/LF sites were reported within 0.5 miles of the subject property.

3.1.1.8 Brownfields List

The Brownfields List is a database of sites that Ecology considers brownfields or that have received financial or technical assistance for cleanup. A brownfield is "a real property where expansion or redevelopment is complicated by actual or perceived environmental contamination." The subject property is not listed as State Brownfields site. No State Brownfields sites were reported within 0.5 miles of the subject property.

3.1.2 Environmental Protection Agency Databases

The EPA administers several programs designed to protect the environment and monitor the generation, storage, treatment, and disposal of hazardous substances. The following sections summarize the most relevant information obtained from the EDR report regarding sites identified within the ASTM E1527-21 search radii from the following databases:

- National Priorities List (NPL)
- Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) List
- Corrective Action Report (CORRACTS) List
- Resource Conservation and Recovery Act (RCRA)
- Resource Conservation and Recovery Act Information (RCRAInfo) List
- Emergency Response Notification System (ERNS) List
- U.S. Brownfields List

3.1.2.1 NPL List

The NPL identifies priority hazardous waste sites for remedial actions under the EPA Superfund program. Information contained in the EDR report indicates that the subject property is not listed as an NPL site. No NPL sites are listed within 1 mile of the subject property.

3.1.2.2 CERCLIS List

The EPA's CERCLIS List identifies sites that may potentially pose a threat to the environment or the health of the general public.

Information contained in the EDR report indicates that the subject property is not listed as a CERCLIS site. No CERCLIS sites were identified within 0.5 miles of the subject property.

The EPA also publishes the CERCLIS-NFRAP List that identifies CERCLIS sites that have been designated "no further remedial action planned" (NFRAP) and that have been removed from the CERCLIS List. Information contained in the EDR report indicates that the subject property is not listed as a CERCLIS-NFRAP site. There is one CERCLIS-NFRAP site identified within 0.5 miles of the subject property. This site, the Vancouver Gas Manufacturing Site, is further discussed in Section 3.1.3.1.

3.1.2.3 CORRACTS List

The CORRACTS List identifies hazardous waste handlers with a history of RCRA corrective action activity. This list shows which corrective action events have occurred for every hazardous waste handler that has had corrective action activity due to improper procedures or handling.

Information contained in the EDR report indicates that the subject property is not listed as a CORRACTS site. No CORRACTS sites are listed within 1 mile of the subject property.

3.1.2.4 RCRA Generators List

RCRAInfo is EPA's comprehensive information system, providing access to data supporting Resource the RCRA of 1976 and the Hazardous and Solid Waste Amendments of 1984. The database includes selective information on sites that generate, transport, store, treat, and/or dispose of hazardous waste as defined by RCRA.

Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Very small quantity generators (VSQGs) generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs) generate more than 1,000 kg of hazardous waste, or more than 1 kg of acutely hazardous waste per month. Non-generators (NonGen/NLR) do not presently generate hazardous waste.

Information contained in the EDR report indicates that the subject property is not listed in any RCRA database; however, the Hannah Motor Company property 357 feet southeast is listed as RCRA NONGEN/NLR (Tax Lot ID 48430000). Nine additional RCRA NonGen NLR sites are listed within 0.25 miles of the subject property.

EPA also regulates the management of hazardous waste at transportation, storage, and disposal facilities (TSDF). Information contained in the EDR report indicates the subject property is not listed as a TSDF site. No TSDF sites were identified within 0.5 miles of the subject property.

3.1.2.5 ERNS List

The ERNS List is a national database containing information from spill reports made to federal authorities. Information contained in the EDR report indicates that no ERNS sites are listed within 1 mile of the subject property.

3.1.2.6 U.S. Brownfields List

The EPA's U.S. Brownfields List identifies brownfield properties addressed by Cooperative Agreement Recipients or by Targeted Brownfields Assessments. The EDR report indicates the subject property is not listed as a U.S. Brownfields site. Four U.S. Brownfields sites are listed within 0.5 miles of the subject property:

- The 400 Columbia Street and 318 W 4th Street site is located approximately 216 feet west of the subject property and is known as the Webber Machine Works building. The site was historically occupied by light industrial operations and fuel dispensing facilities. No evidence of a significant release associated with these historical uses was identified. However, a release was reported during decommissioning activities in 1992. No evidence of significant petroleum or hazardous substance releases were observed during the drilling of soil or soil vapor borings or were reflected in laboratory testing of soil samples collected. Based on distance from the subject property and the lack of evidence of a significant release, this site is not considered a REC to the subject property.
- The South of City Hall site (404 W 4th Street and 411 W 5th Street) is located approximately 518 feet west of the subject property. The site was historically developed with single-family

residences by 1890 and remained residential until the 1940s. The site was in commercial use from the 1960s to 2005. Historical businesses included potato chip manufacturing, storage, auto repair, fish tackle manufacturing, and other retail and office uses. The site has been a vacant lot or has been used for parking since at least 2005. Based on distance from the subject property, this site is not considered a REC to the subject property.

- The South of Railroad Tax Lot 48850000 and 48840000 and Interlaying Area site is located approximately 624 feet southwest of the subject property. The site was occupied by an asphalt paving plant from the 1940s through the early 1970s. Since the late 1970s, the site has been vacant or has been used for parking. The site is the suspected source of petroleum contamination observed in soil during a sewer main installation project. A Phase II ESA was conducted at the site in September 2017. No record of this document could be located. Based on distance from the subject property, this site is not considered a REC to the subject property.
- The West of City Hall site (503 and 615 W 6th Street and 400 Esther Street) is located approximately 803 feet west of the subject property. The site was historically developed with single-family residences by 1890, and it remained residential until approximately 1907 when commercial development began. The site was an automotive repair shop in the early 1990s. Soil and vapor samples collected from the site revealed that no sample exceeded MTCA Method A clean up levels for soil. Based on distance from the subject property, this site is not considered a REC to the subject property.

3.1.3 Other Databases

The following sections include other databases identified in the EDR report that may be relevant to assessing potential environmental liability or environmental issues at the subject property.

3.1.3.1 EDR Proprietary Databases

EDR has conducted research on the occurrence of historical business practices that may constitute a REC to properties. The database was developed from data found in historical city directories, and it contains information on over 100,000 former gas stations, manufactured gas plants, and dry cleaners. Due to the nature of these businesses, the sites have the potential for soil and groundwater contamination to have occurred.

EDR Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. The listings reviewed include, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, and/or service station.

Unless otherwise noted, the mere presence of historical auto stations near a site does not, in itself, constitute a REC.

A review of the EDR Historical Auto Stations list, as provided by, indicated that there are two EDR Historical Auto Stations sites within 0.125 miles of the subject property:

- The D & D Union Service site (415 Washington Street) is located 175 feet northwest of the subject property. The site appears to have been active from 1969 to at least 1979 based on the EDR Historical Auto Station database. Based on the lack of any reported releases and the more than 40 years since operations ended, this site is not considered a REC to the subject property.
- The B Mart site (514 Washington Street) is located 320 feet north of the subject property. The site appears to have been active from 1975 to at least 1983 based on the EDR Historical Auto Station database. Based on the lack of any reported releases and the 40 years since operations ended, this site is not considered a REC to the subject property.

EDR Manufactured Gas List

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800s to 1950s to produce a gas that could be distributed and used as fuel. Many of the by-products of the gas production, such as coal tar (oily waste containing volatile and nonvolatile chemicals), sludges, oils, and other compounds, are potentially hazardous to human health and the environment. The by-products from this process were frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

One manufactured gas site is listed within 1 mile of the subject property:

- The Vancouver Gas Manufacturing site (9th and Lincoln Street) is located 0.56 miles northwest of the subject property. No additional information is available. However, based on the distance from the subject property, this site is not considered a REC to the subject property.

EDR Historical Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry-cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to, dry cleaners, cleaners, laundries, laundromats, cleaning/laundry businesses, wash and/or dry businesses.

A review of the EDR Historical Dry Cleaner list, as provided by EDR, has revealed that there are no EDR Historical Dry Cleaner sites within 0.125 miles of the subject property.

3.1.4 Orphan Site List

Orphan sites are those for which mapping information is not detailed enough to plot the location of the site, or for which there is no known responsible party, or the responsible party is unwilling or unable to pay for cleanup. Based on a review of the information for and location of the orphan sites, none appears to represent a potential REC to the subject property.

3.1.5 Vapor Encroachment

ASTM Standard E1527-21 defines vapor migration as “the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface." The recognition of vapor migration as a possible REC may require incorporation of new types of controls and restrictions to address this contamination pathway.

The subject property and adjacent sites were reviewed in an effort to determine if vapor migration has, or has the potential to have, occurred at the site, from adjacent properties. Based on the information reviewed, the subject property is not identified as a potential vapor intrusion site. There was a former UST on the subject property; however, the tank was removed and decommissioned in accordance with Washington State regulations, and no releases were reported. In addition, there is no known presence of VOC contamination or other conditions that would suggest potential vapor intrusion issues on the subject property.

3.2 Historical Use Information

The objective of the historical use information review is to develop a history of the previous uses of the subject property and surrounding area to help identify the likelihood that past uses have led to RECs in connection with the subject property. Parametrix researched the historical land use, occupancy, and ownership of the subject property and adjacent properties to evaluate historical uses that are known to be associated with RECs. Historical records reviewed include the EDR Certified Sanborn® Map Report (EDR 2023b) and the EDR Aerial Photo Decade Package (EDR 2023c).

3.2.1 Certified Sanborn® Map Report

Fire insurance maps in the EDR Certified Sanborn Map Report showing the vicinity of the subject property were requested to establish historical business operations at the subject property and adjacent properties. This report (Appendix B) certifies that the complete holdings of the Sanborn Library LLC collection were searched based on client-supplied target property information, and fire insurance maps covering the target property were found for 1888, 1890, 1892, 1907, 1911, 1928, 1949, and 1966. Observations are listed below.

1888 A few structures occupy the subject property, including two dwellings in the northeast, one dwelling in the northwest, and two dwellings in the south-southwest portion of the subject property. There are also two sheds located on the subject property, likely associated with the dwellings. West C Street (present day Columbia Street) is located to the west of the subject property, and present-day Washington Street is located to the east. A planning mill is located to the south.

1890 The subject property and much of the surrounding area appear not to have changed significantly. Vancouver Feed & Livery stable occupies the northeastern corner of the subject property. A new dwelling is added in the southwestern portion of the subject property.

1892 The subject property and much of the surrounding area appear not to have changed significantly. The dwelling in the northwest portion of the subject property has been demolished.

1907 The subject property and much of the surrounding area is more residentially and commercially developed. The Hotel St. Elmo occupies the northwestern corner of the subject property. A printing office occupies the southeastern corner of the subject property. The Feed & Livery stable that occupied the northwestern corner of the subject property has been demolished and now occupies the western portion of the subject property. A plumbing business and a machine shop are located north of the subject property.

1911 The subject property and much of the surrounding area appear not to have changed significantly. A plumbing business is added in the eastern portion of the subject property.

1928 The southwestern portion of the subject property is occupied by a grocery store, an auto storage building, and a tile manufacturer. A garage with a 15-car capacity now occupies the northwestern portion of the subject property. Hotel St. Elmo still occupies the northeastern portion of the subject property. A secondhand furniture store occupies the eastern edge of the subject property. The plumbing business from the 1911 Sanborn is not listed. Two gasoline and oil service stations are located to the east, and a machine shop is located to the west. An auto wrecking yard is located to the south, and an auto repair shop and gasoline and oil service station is located to the north.

1949 The subject property appears not to have changed significantly. The garage that occupied the northwestern corner of the subject property is demolished, and the lot now appears to be used as a used car storage area. A welding shop is present west of the subject property. An additional gasoline and service station is present northwest of the subject property.

1966 The used car storage area in the northwestern portion of the subject property is replaced with a parking lot. The dwelling that was located on the southern portion of the subject property has been demolished and replaced with a parking lot. The tile manufacturer occupies the entire southwestern portion of the subject property.

Historical operations on the subject property include an auto garage, welding shop, and various other facilities. These have some potential to have impacted the subject property, including the known former UST on the property associated with the former auto facility (Hannah Motor Company).Historical businesses identified near the subject property with potential to impact the subject property include a machine shop, gasoline and oil service stations, a welding shop, and auto wrecking yards. However, based on the length of time since the facilities have been present, their location, and no known releases, the potential to have impacted the subject property is low.

3.2.2 Historical Aerial Photograph Review

Historical aerial photographs of the subject property area were obtained from EDR in the EDR Aerial Photo Decade Package. Aerial photographs for the years 1936, 1948, 1951, 1960, 1970, 1975, 1981, 1990, 1994, 2000, 2006, 2011, 2014, 2017, and 2019 were examined. Copies of the aerial photographs are included in Appendix C. Observations are listed below.

1936	The subject property appears commercially developed. Adjacent properties to the north appear both commercially and residentially developed. The vicinity is primarily residential, with several houses visible to the north and northwest of the subject property. Infrastructure likely related to the Port of Vancouver can be seen southwest of the subject property. A road is visible to the east of the subject property (present-day Washington Street).
1948-1951	The subject property remains as it was in the 1935 aerial photograph. Commercial and residential properties are visible to the north and east of the subject property.
1960–1975	Interstate 5 is visible to the east of the subject property. Two buildings that occupied the eastern portion of the subject property are demolished. Additional development is visible in the area, and it appears that some residential properties are transitioning to commercial.
1981–2000	Commercial and residential development is visible to the northwest and northeast of the subject property. The area continues to become more developed with commercial properties.
2006–2017	Additional commercial and residential development is visible in all directions around the subject property. Adjacent properties have also been developed into industrial/commercial facilities, and the direct vicinity appears very similar to present day aerial photographs.
2019	The subject property still contains one commercial building and parking lot; however, current satellite imagery shows the subject property as vacant commercial land covered with dirt.

Based on the aerial photograph history of the subject property, multiple buildings occupied the site. The final building was demolished after 2019. The area transitioned from primarily residential to residential and industrial/commercial in the 1940s and continued to see significant development until present day. No evidence of RECs was identified on the subject property, including the partial areas of the parcels that may be acquired as part of the IBR Program, during the historical photograph review.

3.2.3 Local Agency Records

Information from local agencies was reviewed for environmental significance as described in the following sections.

3.2.3.1 City of Vancouver

A review of permits for environmental significance (i.e., septic tank, stormwater, dry wells, and/or USTs or ASTs) was completed. No evidence of significant use or storage of hazardous substances and/or petroleum products was noted on the subject property. Mechanical, plumbing, and electrical permits are listed for the subject property. No septic and/or UST or AST permit records were listed with Clark County.

3.2.3.2 Clark County

Based on information from the Clark County Tax Assessor's Office, the subject property consists of the following tax lots:

- IBR-48320000 412 Washington Street
- IBR-48350000 210 W 4th Street

IBR-48320000 is currently owned by Hurley Development LLC. IBR-48350000 is currently owned by Ten Talents Investments 9 LLC.

A review of permits for environmental significance (i.e., septic tank, stormwater, dry wells, and/or USTs or ASTs) was completed. No permits of environmental significance were identified.

3.3 Additional Environmental Information

The following sections provide a summary of additional environmental information obtained for the site.

3.3.1 Asbestos

The manufacture of most asbestos-containing materials (ACM) was banned by the EPA by 1979. Prior to this, asbestos was a common constituent of numerous building materials, including floor and ceiling tiles, caulking, pipe insulation, roofing materials, and exterior siding. Based on the nature of the subject property (vacant land), there is low potential for ACM to be present at the subject property.

3.3.2 Lead-Based Paint

Before 1977, paint commonly contained lead which is considered to cause human health problems if ingested. Based on the nature of the subject property (vacant land), there is low potential for lead-based paint (LBP) to be present at the subject property.

3.3.3 Polychlorinated Biphenyls (PCBs)

Transformers can potentially contain polychlorinated biphenyls (PCBs). No pad-mounted transformers are located on the subject property.

Based on the nature of the subject property (vacant land), there is low potential for PCBs to be present on the subject property (primarily used in lighting and electrical equipment).

3.3.4 Radon

Radon is a naturally occurring radioactive gas formed by the decay of uranium in some rocks and soil. The adverse health effects associated with radon gas depend on various factors such as the concentration of the gas and exposure duration. The potential concentration of radon gas within a

building depends on subsurface soil conditions, the integrity of the building's foundation, the existence of a basement or crawl space (primary areas of concern), and the building's ventilation.

Clark County ZIP code 98660 is located in the Federal EPA Radon Zone 1, indicating that the indoor average radon level is greater than 4 pCi/L. The Washington Department of Health has identified the radon risk in the area of the subject property as High. Based on this limited information, there is a potential that radon is an environmental concern at the property.

4. FILE REVIEW

In accordance with ASTM Standard E1527-21, inquiries and review of previous investigations for the subject property and a review of regulatory files for the subject property or adjacent properties may be conducted to further evaluate environmental conditions on the property or adjacent properties and to fill in data gaps where applicable. Previous investigations and file reviews are summarized below.

4.1 Previous Investigations

Based on regulatory information from EDR and Ecology, the subject property is listed on the UST regulatory database. The UST, however, has been removed from the subject property, and there is no record of any prior release at the site. No previous investigations of the subject property, including the partial areas of the parcels that may be acquired as part of the IBR Program, were identified during the course of this Phase I ESA.

4.2 Adjacent Properties File Review

Several adjacent and nearby properties were listed on environmental databases, as described in Section 3. Sufficient site-specific information was available through review of the EDR report, as well as online Ecology files, to develop an opinion on the potential for these properties to have affected the subject property. Therefore, a specific file review (physical review at Ecology) was not required beyond those completed during the course of this Phase I ESA. Specific information on the nature of release, types of contaminants, media impacted, and the potential to have affected the subject property or otherwise caused environmental concern is provided in Section 3.

5. SITE EXAMINATION

Parametrix conducted a site examination of the subject property from public right-of-way on September 19, 2023. The site examination consisted of observing the areas immediately surrounding the subject property, providing observations of the general environmental conditions on the subject property, and visually assessing the subject property and adjacent properties for evidence of hazardous materials. The site examination focused on partial areas of the parcels that may be acquired as part of the IBR Program. Photographs of the subject property taken during the site walk are included in Appendix D.

5.1 Subject Property

The subject property is currently an active construction site, with a fence surrounding all sides of the subject property. The partial areas of the parcels that may be acquired as part of the IBR Program are limited to what will likely be paved and landscaped areas after construction is complete.

All observations were taken from the public right-of-way. No evidence of USTs, ASTs, or other indications of environmental significance were observed on the property. In addition, no evidence of significant storage or spills of hazardous substances and/or petroleum products was observed on the subject property. No evidence of staining, adverse odors, or other indications of potential releases was observed. In general, no RECs or other adverse environmental conditions were identified associated with the subject property. Table 5-1 summarizes the observed conditions.

Table 5-1. Subject Property Observed Conditions

IBR ID	Address	Total Area	Current Use (determined through visual observation)	Site Examination Observations
IBR-48320000	412 Washington Street	0.72 acres	Active construction site with six-story building being constructed	Fenced area surrounds all sides of the subject property
IBR-48350000	210 West 4th Street	0.2 acres	Active construction site with six-story building being constructed	Fenced area surrounds all sides of the subject property

5.2 Adjacent Properties

The vicinity of the subject property is significantly developed with residential properties and commercial buildings. Adjacent properties were examined from public areas for the presence of environmental conditions that have the potential to impact the subject property.

The subject property is bounded to the north by commercial/industrial property, to the east by Interstate 5, to the south by commercial development, and to the west by commercial development. No evidence of significant staining or stressed vegetation was noted on the ground surface on

assessable properties adjacent to the site. No evidence of the storage of chemical or hazardous materials was identified on visible areas of adjacent properties.

6. INTERVIEW

An interview was not able to be conducted with a property representative to identify any potential environmental conditions and to address information data gaps during the Phase I ESA process. The lack of a property owner or representative interview represents a data gap in accordance with ASTM Standard E1527-21.

7. CONCLUSIONS

Based on the findings of this investigation, Parametrix concluded the following:

1. The subject property includes two separate Clark County Tax Lots: 48320000 and 48350000. The lots are currently an active construction site with a six-story building being constructed. The vicinity of the subject property is developed with commercial and light-industrial properties. No buildings are located within the partial areas of the parcels that may be acquired as part of the IBR Program.
2. A review of Sanborn maps indicated that dwellings and a hotel occupied the site of the subject property from 1888 to 1911. A review of historical aerial photographs indicated that multiple commercial buildings were present on the subject property from 1936 to 1970. From 1970 to 2020, the subject property only had one commercial building, and it was operated as a car lot. The area transitioned from primarily rural vegetated land to residential and industrial/commercial in the 1940s and continued to see significant development until present day. No evidence of recognized environmental conditions (RECs) were identified on the subject property, including the partial areas of the parcels that may be acquired as part of the IBR Program, during the historical aerial review.
3. Due to the nature of the subject property (active construction site), there is low potential for LBP or ACM to be present on the subject property.
4. A review of regulatory database information indicated that the subject property is listed on the UST database. Information reviewed indicated that one UST used to store unleaded gasoline was installed on the property in December 1964, and was removed in August 1996. There is no record of any leaks associated with this UST, and it appears that the file was closed in accordance with Ecology regulations.
5. A review of regulatory information indicated that several nearby sites were identified in the regulatory record databases. However, based on regulatory status and distance from the subject property, none of the sites identified appears to present a REC to the subject property.
6. No evidence of significant use or storage of hazardous substances and/or petroleum products was noted on or near the subject property. No evidence of distressed vegetation, spills or releases, dry wells, or other indications of environmental concern was identified during the site reconnaissance.
7. An interview was not conducted with a property representative to identify any potential environmental conditions and to address information data gaps during the Phase I ESA process. The lack of a property owner or representative interview represents a data gap in accordance with ASTM Standard E1527-21. However, the information obtained for the Phase I ESA, including regulatory database and historical documentation, was deemed sufficient.

8. RECOMMENDATIONS

Based upon the conclusions of this investigation of the subject property, Parametrix offers the following recommendations.

1. No further assessment of environmental conditions on the subject property, including the partial areas of the parcels that may be acquired as part of the IBR Program, is recommended at this time.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status

indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 06/22/2023 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Lists of state- and tribal (Superfund) equivalent sites

WA HSL: The Hazardous Sites List is a subset of the CSCSL Report. It includes sites which have been assessed and ranked using the Washington Ranking Method (WARM).

A review of the WA HSL list, as provided by EDR, and dated 02/23/2023 has revealed that there is 1 WA HSL site within approximately 1 mile of the target property.

WA CSCSL: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Ecology's Confirmed & Suspected Contaminated Sites List.

A review of the WA CSCSL list, as provided by EDR, and dated 04/10/2023 has revealed that there are 21 WA CSCSL sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Lists of state and tribal leaking storage tanks

WA LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the Department of Ecology's Leaking Underground Storage Tanks Site List.

A review of the WA LUST list, as provided by EDR, has revealed that there are 5 WA LUST sites within approximately 0.5 miles of the target property.

Lists of state and tribal registered storage tanks

WA UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Ecology's Statewide UST Site/Tank Report.

A review of the WA UST list, as provided by EDR, and dated 02/06/2023 has revealed that there are 9 WA UST sites within approximately 0.25 miles of the target property.

State and tribal institutional control / engineering control registries

WA INST CONTROL: The Environmental Covenants Registry is a list of sites that have implemented institutional controls as part of the remedy. Institutional controls are administrative or legal measures used to prevent activities that may compromise the integrity of a cleanup action. They are meant to prevent exposure to contamination remaining on site. Institutional controls may include environmental covenants (also known as "deed restrictions"), zoning restrictions, public health advisories, or other administrative tools. The most common institutional control is an environmental covenant. Environmental covenants are legal recorded documents that typically limit certain uses of the property, such as: Drilling a water supply well on the property. Disturbing pavement covering contaminated areas. Residential use of the property.

A review of the WA INST CONTROL list, as provided by EDR, and dated 04/10/2023 has revealed that there is 1 WA INST CONTROL site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

WA ICR: These are remedial action reports Ecology has received from either the owner or operator of the site. These actions have been conducted without department oversight or approval and are not under an order or decree.

A review of the WA ICR list, as provided by EDR, and dated 12/01/2002 has revealed that there are 3 WA ICR sites within approximately 0.5 miles of the target property.

WA CSCSL NFA: The data setcontains information about sites previously on the Confirmed and Suspected Contaminated Sites list that have received a No Further Action (NFA) determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when cleanup activities are completed. Instead a No Further Action code is entered based upon the type of NFA determination the site received.

A review of the WA CSCSL NFA list, as provided by EDR, and dated 04/10/2023 has revealed that there are 7 WA CSCSL NFA sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/06/2023 has revealed that there are 10 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 03/30/2023 has revealed that there is 1 PFAS ECHO site within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
VANCOUVER GAS MANUFA	9TH AND LINCOLN STS	WNW 1/2 - 1 (0.550 mi.)	94	634

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 2 EDR Hist Auto sites within approximately 0.125 miles of the target property.
