PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Ecology
Telephone: 360-407-6121

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Telephone: 360-407-7294
Point geodatabase with a record for each Ecology well report. Points are located by quarter quarter section centroid. Points contain all well report types including water wells, resource protection wells, and decommissioned wells.

OTHER STATE DATABASE INFORMATION

Oil and Gas Well Listing
Source: Department of Natural Resources
Telephone: 360-902-1450
Locations that represent oil and gas test well sites in Washington State from 1890 to present.

RADON

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Parametrix, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

Parametrix was retained by the Washington State Department of Transportation to perform a Phase I Environmental Site Assessment (ESA) on two properties located generally to the east of Interstate 5, south of the railway, and north of SE Columbia Way in Vancouver, Washington (Figure 1). The Phase I ESA focused on partial areas of the properties that may be acquired as part of the Interstate Bridge Replacement (IBR) Program. The subject property consists of the parcels identified as IBR-38279930 and IBR-47600000. Based on the findings of this investigation, Parametrix concluded the following:

1. The subject property includes two separate Clark County Tax Lots: 38279930 and 47600000. It currently includes a gravel access road, a fence, and graveled surface area. The vicinity of the subject property includes Interstate 5, a rail line, open park space, and a former electrical substation. No buildings are located within the partial areas of the parcels that may be acquired as part of the IBR Program.
2. A review of Sanborn Fire Insurance maps and historical aerial photographs indicated that a variety of small commercial structures were present on, and in the vicinity of, the subject property from prior to 1884 until sometime between 1951 and 1960. A structure noted as "gasoline and oil" was present in 1928 but was not noted in 1911 or in 1949. The area was vacant after completion of a cloverleaf off-ramp for Interstate 5 circa 1960. The gasoline and oil structure presents a historical recognized environmental condition, but is unlikely to be a current recognized environmental condition (REC) due to the natural attenuation of petroleum constituents.
3. Because buildings are not located in the partial areas of the parcels that may be acquired as part of the IBR Program, lead-based paint and asbestos-containing materials are not expected to be present on the subject property.
4. The subject property is not listed on any regulatory database that would indicate a past or current release or storage of hazardous materials. A review of regulatory information indicated that several nearby sites were identified in the regulatory record databases. However, based on regulatory status and distance from the subject property, none of the sites identified represent a REC to the subject property.
5. No evidence of significant use or storage of hazardous substances and/or petroleum products was noted on or near the subject property. No evidence of distressed vegetation, spills or releases, dry wells, or other indications of environmental concern was identified during the site reconnaissance. These conditions are not considered RECs for the subject property.
6. An on-site reconnaissance and interview were not conducted with a property representative to identify any potential environmental conditions and to address information data gaps during the Phase I ESA process. The lack of a property owner or representative interview and the lack of a full on-site reconnaissance represent data gaps in accordance with ASTM Standard E1527-21. However, the information obtained for the Phase I ESA, including regulatory database and historical documentation, was deemed sufficient.

Based upon the conclusions of this investigation of the subject property, Parametrix offers the following recommendations:

1. No further assessment of environmental conditions on the subject property, including the partial areas of the parcels that may be acquired as part of the IBR Program, is recommended at this time.

1. INTRODUCTION

Parametrix was retained by the Washington State Department of Transportation (WSDOT) to perform a Phase I Environmental Site Assessment (ESA) on two properties located generally to the east of Interstate 5, south of the rail line, and north of SE Columbia Way in Vancouver, Washington (herein referred to as the subject property) (Figure 1). The subject property is located in Clark County, Washington, and consists of two parcels included in the Interstate Bridge Replacement (IBR) Program. The property identifiers, tax lot IDs, and street addresses for each parcel is listed below, and the configuration of the properties is shown in Figure 2.

- IBR-38279930 38279930 No address
- IBR-47600000 47600000 No address

It is our understanding that WSDOT may pursue acquisition of a portion of the parcels making up the subject property as part of the IBR Program. The proposed acquisition areas are shown on Figure 2. The Phase I ESA focused primarily on the partial areas of each parcel that may be acquired as part of the IBR Program and assessed the potential for recognized environmental conditions on the acquisition areas from the larger property and adjacent or nearby properties.

This Phase I ESA includes a review of available documentation pertaining to the subject property, a site reconnaissance, and a review of pertinent public agency documents. The Phase I ESA consisted of two distinct tasks: (1) a review of documents and oral information (if available), and (2) a site examination. Conclusions and recommendations within this report are based solely on observed evidence and data collected during the performance of this assessment.

1.1 Purpose

The Phase I ESA was conducted in general accordance with American Society for Testing Materials (ASTM) Standard E1527-21, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*, which defines the generally accepted industry practices and procedures currently applicable at the time and place of this study (ASTM 2021). The Phase I ESA is intended to permit the user to satisfy the requirements to qualify for the bona fide prospective purchaser limitation under the Comprehensive Environmental Response, Compensation, and Liability Act, and as such constitutes "all appropriate inquiries in the previous ownership and uses of the property consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601 (35)(B).

The purpose of this Phase I ESA is to identify recognized environmental conditions (RECs) on or near the subject property. The term "recognized environmental conditions" is defined in ASTM Standard E1527-21 as:

> "…(1) the presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* due to a *release* to the *environment*; (2) the likely presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* due to a *release* or likely *release* to the *environment*; or (3) the presence of *hazardous substances* or *petroleum products* in, on, or at

> the *subject property* under conditions that pose a *material threat* of a future *release* to the *environment*."

In accordance with ASTM Standard E1527-21, some RECs may be further defined as historical recognized environmental conditions (HRECs) or controlled recognized environmental conditions (CRECs).

An HREC is defined as:

> "…*a past release* of any *hazardous substances* or *petroleum products* that has occurred in connection with the *property* and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the *property* to any required controls."

A CREC is defined as:

> "…*a recognized environmental condition* resulting from a past *release of hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority, with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls."

This Phase I ESA endeavors to identify RECs, HRECs, and/or CRECs at the subject property.

1.2 Significant Assumptions

This assessment was conducted in accordance with generally accepted industry practices and procedures within the scope of work authorized at the time and place of this study. Parametrix's observations are limited to those areas to which it had access on the subject property.

Phase I ESA methodology included viewing accessible areas of the subject property from public right-of-way, as on-site access was not available. In addition, an interview was not able to be conducted with a property representative to identify any potential environmental conditions during the Phase I ESA process. Unless otherwise stated, no other exceptions to the guidelines presented in ASTM E1527-21 were made during completion of this Phase I ESA.

1.3 Limitations

The findings, conclusions, and recommendations presented in this report are based on site conditions and the best available information known or made available by regulators, other consultants, or other sources at the time of the investigation. Parametrix conducted a diligent search and investigation in compliance with prevailing standards of the profession; however, certain adverse conditions may exist at the site not detected at the time of the investigation.

The services provided under this contract, as described in this report, include professional opinions and judgments based on data collected. These services have been provided according to generally accepted engineering practices. The opinions and conclusions contained in this report are typically based on information obtained from the following:

- Observations and measurements made by Parametrix field staff.
- Contacts and discussions with regulatory agencies and others.
- Review of available hazardous substance or solid waste lists.
- Opinions and judgments of Parametrix based on the information available.

In the professional judgment of Parametrix, the services performed pursuant to the scope of services are an adequate basis to collect data for a preliminary evaluation of the site and upon which to draw the conclusions stated in this report.

2. SUBJECT PROPERTY DESCRIPTION

The following sections summarize the location, characteristics, and physical setting of the subject property.

2.1 Location

The subject property includes two commercial parcels located generally to the south of the BNSF Railway tracks, directly east of Interstate 5, and north of SE Columbia Way in Vancouver, Washington. The Phase I ESA focused on the subject property, which consists of the entirety of one parcel and the partial area of a second parcel that may be acquired as part of the IBR Program, as detailed in Table 1, below. The site location is shown on Figure 1, the Site Vicinity Map. The boundary of the subject property is shown on Figure 2.

2.2 Site and Vicinity Characteristics

Characteristics of the subject property, including the partial areas of the parcels that may be acquired as part of the IBR Program, are summarized in Table 1.

Table 1. Subject Property Characteristics

IBR ID	Address	Owner	Total Area	Potential Acquisition Area	Current Use (determined through visual observations)
IBR-38279930	None available	Burlington Northern Inc.	0.02 acres	Full parcel, 747 square feet	Gravel surface, vehicle parking, and pedestrian access
IBR-47600000	None available	Burlington Northern Inc.	0.14 acres	Partial parcel, 3,299 square feet	Gravel surface, vehicle access to rail line, and parking

The subject property is bounded to the north by parks and the BNSF rail line; to the east by open space for the Fort Vancouver Waterfront; to the south by a former electrical substation and SE Columbia Way; and to the west by Interstate 5 (see Figure 2).

2.3 Physical Setting

The subject property is located in the Portland Basin, which marks the northern terminus of the Willamette Lowland in Oregon (DNR n.d.). The northern portion of the basin is known for its low topographic relief, with the subject property at an elevation of approximately 38 feet above mean sea level. The Portland Basin is bounded by the Cascade Range to the east and the Coast Range to the west.

Geologic processes in the Portland Basin consist of volcanism, sedimentation, and cataclysmic flood deposits in both fluvial and marine depositional environments. The subject property lies on what is mapped as coarse-grained Missoula flood deposits, cobbly, sandy gravel deposited by the Missoula floods (Wells et al. 2020). Surface soils consist of gravelly loam.

The topography in the vicinity of the subject property is a consistent slope, rising with distance from the Columbia River. The anticipated groundwater gradient is to the south toward the Columbia River. Depth to groundwater adjacent to the northern portion of the subject property was approximately 20 feet below ground surface (Swanson et al. 1995).

2.4 Current Use of the Subject Property

The subject property includes a gravel access road and graveled open area generally used for vehicle parking and pedestrian walkway. The proposed acquisition area includes the entirety of parcel 38279930 and the southern half of parcel 47600000 (see Figure 2).

2.5 Descriptions of Improvements on the Subject Property

The subject property includes a gravel roadway, gravel parking, and a chain link fence with gate. No buildings or other significant structures are located on the partial areas of the parcels that may be acquired as part of the IBR Program.

2.6 Environmental Liens

An environmental lien is defined by ASTM as a charge, security, or encumbrance upon title to a property to secure the payment of a cost, damage, obligation, or duty arising out of response actions, cleanup, or other remediation of hazardous substances or petroleum products. No evidence of environmental liens was identified during the course of the Phase I ESA process. However, a formal title search was not completed as part of the scope of work.

3. RECORDS REVIEW

The purpose of the records review task was to gather environmental data on the subject property prior to the site examination. The information review consisted of two subtasks: (1) a review of regulatory databases to find sites, including and close to the subject property, listed by federal and State of Washington agencies and (2) a compilation of historical uses of the subject property and site vicinity properties to determine whether past operations pose an environmental risk to the subject property.

The Environmental Data Resources (EDR) report (EDR 2023a) is a summary of state and federal database searches for sites of possible environmental concern. The information review enabled Parametrix personnel to characterize the types of activities performed at the site, identify data gaps prior to the site examination, and facilitate recognition of discrepancies between reported and observed data. Data gaps identified during the document review were addressed by interviewing knowledgeable personnel, observations during the site examination, or additional detailed investigation.

It should be noted that the information supplied by EDR is reported as Parametrix received it. EDR, in turn, reports information as it is provided in various government databases. It is not possible for either Parametrix or EDR to verify the accuracy or completeness of information contained in these databases. However, the use of and reliance on this information is a generally accepted practice in the conduct of environmental due diligence. The following sections present information from the document review.

3.1 Standard Environmental Record Sources

The following section summarizes information collected from records maintained by the U.S. Environmental Protection Agency (EPA) and the Washington State Department of Ecology (Ecology). The information includes details on sites identified in regulatory databases within recommended ASTM search distances. A complete listing of the databases reviewed is included in the EDR Radius Map™ Report (Appendix A).

3.1.1 Review of Washington State Department of Ecology Databases

The following sections summarize the most relevant information obtained from the EDR report regarding sites identified within the ASTM E1527-21 search radii from the following databases. Additional information regarding these sites was reviewed on Ecology's Integrated Site Information System website to supplement data gaps in the EDR report. Relevant database listings from Ecology include the following:

- Underground Storage Tank (UST) List
- Leaking Underground Storage Tank (LUST) List
- Confirmed and Suspected Cleanup Site List (CSCSL)
- CSCSL – No Further Action (NFA)

- SPILLS
- Voluntary Cleanup Program (VCP)
- Independent Cleanup Report (ICR)
- Landfill and/or Solid Waste Disposal Site Lists (SWF/LF)
- Brownfields

3.1.1.1 Underground Storage Tank List

The Ecology UST List identifies registered USTs, which are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data were obtained from Ecology's UST Site/Tank Report database.

Information contained in the EDR report indicates that the subject property is not listed as a UST site. Three UST sites are located within 0.25 miles of the subject property.

- The Hannah Motor Company sites (300 Washington and 400 Washington) are located 0.119 miles northwest of the subject property. The 300 Washington site is also listed on the LUST, CSCSL, and CSCSL-NFA databases. Two USTs, one on each property, were formerly present but have been removed (UST Site IDs 10252 and 9879, Appendix E). The UST on 300 Washington was identified as a LUST, but has been identified as cleaned up and in compliance by Ecology.
- The City of Vancouver right-of-way site (101 5th Street) is located approximately 0.226 miles north of the subject property. This site is reported to have three UST tanks where closure is currently in progress (UST Site ID 620233, Appendix E). All three USTs contained leaded gasoline. No active tanks are reported.
- The Capital Tackel Mfg site (404 W 4th Street) is located approximately 0.236 miles northwest of the subject property. This site is reported with having one former UST tank that was closed in November 2004 (UST Site ID 618940, Appendix E). No active tanks are reported.

Unless otherwise noted, the mere presence of a UST near a site does not, in itself, constitute a REC. Where available, other information was reviewed regarding the presence of a UST including the age of the facility, proximity to the subject property, and known releases or spills. UST sites which have had known releases are discussed in Section 3.1.1.2 below.

3.1.1.2 Leaking Underground Storage Tank List

The LUST Incident Report contains an inventory of reported LUST incidents. The data were obtained from Ecology's LUST Database List. The subject property is not listed as a LUST site.

Five LUST sites were identified within 0.5 miles of the subject property. The following LUST sites were located within 0.25 miles of the subject property:

- The Hannah Motor Company site (300 Washington) is located 0.119 miles northwest of the subject property. This site is also listed on the LUST, CSCSL, and CSCSL-NFA databases and has been assigned Ecology Facility Site ID 12126843. One LUST was formerly present but has

been removed. Ecology identifies that this LUST has been cleaned up and complies with the Model Toxics Control Act. Based on the distance from the subject property and the regulatory status of the site, the facility does not represent a potential REC to the subject property.

Based on the distance from the subject property (over 0.25 miles from the subject property), remediation, and regulatory status (NFA determinations), the remainder of the LUSTs sites do not represent potential RECs to the subject property, including the partial areas of the parcels that may be acquired as part of the IBR Program.

3.1.1.3 Confirmed and Suspected Contaminated Sites List

The state hazardous waste sites records are the states' equivalent to the Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS). These sites may or may not already be listed on the federal CERCLIS List. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data were obtained from Ecology's CSCSL.

Nineteen CSCSL sites were identified within 1 mile of the subject property. Of the 19 sites, two are located within 0.25 miles of the subject property. The remainder of the sites do not represent potential RECs for the subject property based on distance from the subject property, understood extent of contamination, and/or regulatory status of the site.

- The Hannah Motor Company site (300 Washington) is located 0.119 miles northwest of the subject property. This site is also listed on the UST, LUST, and CSCSL-NFA databases and has been assigned Ecology Facility Site ID 12126843. A site investigation in 2015 identified petroleum contaminated soil (diesel and oil-range) at estimated depths of up to 15 feet below ground surface due to former hydraulic oil releases from vehicle hoists and residual diesel impacts within an on-site drywell. Lead and polychlorinated biphenyls (PCBs)were also detected in soil at concentrations less than the screening levels. Based on these soil data, the site was assigned Facility Site ID Number 12126843 (Cleanup Site IDs 7922 and 13035). Based on the distance, the shallow depth of impacts, and the lack of evidence of a major hazardous materials release, the facility is not a REC to the subject property.
- The Vancouver Red Lion Hotel site (100 Columbia Street) is located 0.101 miles west of the subject property. This site is also listed on the SPILLS database. The site has confirmed total petroleum hydrocarbon, metals, and polycyclic aromatic hydrocarbon contamination due to previous industrial activities. Ecology assigned Facility Site ID 15891 to this site. Site remediation is currently underway. Based on the distance and understood groundwater flow direction at the site, the facility is not considered a REC to the subject property.

A subset of the CSCSL is the CSCSL-NFA. The database contains information about sites previously on the CSCSL that have received an NFA determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when cleanup activities are completed. Instead, a NFA code is entered based upon the type of NFA determination the site received.

One CSCSL-NFA site was identified within 0.25 miles of the subject property and an additional four CSCSL-NFA sites were identified within 0.5 miles of the subject property. Based on the distance from subject property and NFA determinations, none of the identified sites appear to represent RECs to the subject property, including the partial areas of the parcels that may be acquired as part of the IBR Program, unless specifically noted otherwise in another section.

3.1.1.4 SPILLS Database

This database provides a comprehensive list of reported spills. The subject property is not listed as a SPILLS site.

3.1.1.5 Voluntary Cleanup Program

This database provides a listing of sites that have entered either the VCP or its predecessor, the Independent Remedial Action Program.

One VCP site is reported within 0.5 miles of the subject property. The site has received an NFA determination from Ecology. Based on distance from the subject property and current regulatory status, this VCP site does not represent a REC to the subject property.

3.1.1.6 Independent Cleanup Report

These are remedial action reports Ecology has received from either the owner or operator of the site. These actions have been conducted without department oversight or approval and are not under an order or decree.

The subject property is not listed as an ICR site. Three ICR sites are reported within 0.5 miles of the subject property and are either discussed above in other sections or do not represent a REC to the subject property based on distance and regulatory status.

3.1.1.7 Solid Waste Facilities/Landfill

The SWF/LF records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data were obtained from Ecology's Solid Waste Facilities List.

The subject property is not listed as a SWF/LF site. No SWF/LF sites were reported within 0.5 miles of the subject property.

3.1.1.8 Brownfields List

The Brownfields List is a database of sites that Ecology considers brownfields or that have received financial or technical assistance for cleanup. A brownfield is "a real property where expansion or redevelopment is complicated by actual or perceived environmental contamination." The subject property is not listed as State Brownfields site. No State Brownfields sites were reported within 0.5 miles of the subject property.

3.1.2 Environmental Protection Agency Databases

The EPA administers several programs designed to protect the environment and monitor the generation, storage, treatment, and disposal of hazardous substances. The following sections summarize the most relevant information obtained from the EDR report regarding sites identified within the ASTM E1527-21 search radii from the following databases:

- National Priorities List (NPL)
- CERCLIS List
- Corrective Action Report (CORRACTS) List
- RCRA
- Resource Conservation and Recovery Act Information (RCRAInfo) List
- Emergency Response Notification System (ERNS) List
- U.S. Brownfields List

3.1.2.1 NPL List

The NPL identifies priority hazardous waste sites for remedial actions under the EPA Superfund program. Information contained in the EDR report indicates that the subject property is not listed as an NPL site. No NPL sites are listed within 1 mile of the subject property.

3.1.2.2 CERCLIS List

The EPA's CERCLIS List identifies sites that may potentially pose a threat to the environment or the health of the general public.

Information contained in the EDR report indicates that the subject property is not listed as a CERCLIS site. No CERCLIS sites were identified within 0.5 miles of the subject property.

The EPA also publishes the CERCLIS-NFRAP List that identifies CERCLIS sites that have been designated "no further remedial action planned" (NFRAP) and that have been removed from the CERCLIS List. Information contained in the EDR report indicates that the subject property is not listed as a CERCLIS-NFRAP site. No CERCLIS-NFRAP site were identified within 0.5 miles of the subject property.

3.1.2.3 CORRACTS List

The CORRACTS List identifies hazardous waste handlers with a history of RCRA corrective action activity. This list shows which corrective action events have occurred for every hazardous waste handler that has had corrective action activity due to improper procedures or handling.

Information contained in the EDR report indicates that the subject property is not listed as a CORRACTS site. No CORRACTS sites are listed within 1 mile of the subject property.

3.1.2.4 RCRA Generators List

RCRAInfo is the EPA's comprehensive information system, providing access to data supporting the RCRA of 1976 and the Hazardous and Solid Waste Amendments of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by RCRA.

Conditionally exempt small quantity generators generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Very small quantity generators generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators generate more than 1,000 kg of hazardous waste, or more than 1 kg of acutely hazardous waste per month. Non-generators (NonGen/No Longer Regulated) do not presently generate hazardous waste.

Information contained in the EDR report indicates that the subject property is not listed in any RCRA database.

Six RCRA NonGen/No Longer Regulated sites are listed within 0.25 miles of the subject property.[1] None of these sites are adjacent to the subject property and based on a review of the regulatory status of these sites, none of these sites represent RECs to the subject property. The Hannah Motor Company and Red Lion sites were listed for compliance violations and are further explained in Section 3.1.1.3.

The EPA also regulates the management of hazardous waste at transportation, storage, and disposal facilities (TSDF). Information contained in the EDR report indicates the subject property is not listed as a TSDF site. No TSDF sites were identified within 0.5 miles of the subject property.

3.1.2.5 ERNS List

The ERNS List is a national database containing information from spill reports made to federal authorities. Information contained in the EDR report indicates that no ERNS sites are listed within 1 mile of the subject property.

3.1.2.6 U.S. Brownfields List

The EPA's U.S. Brownfields List identifies brownfield properties addressed by Cooperative Agreement Recipients or by Targeted Brownfields Assessments. The EDR report indicates the subject property is not listed as a U.S. Brownfields site. Four U.S. Brownfields sites are listed within 0.5 miles of the subject property (see EPA brownfield summary, Appendix E), including:

- The South of Railroad site (tax lots 48850000 and 48840000) is located 0.158 miles northwest of the subject property. The property was occupied by an asphalt paving plant from the 1940s through the early 1970s, causing petroleum-contaminated soil. Based on the distance and

[1] The EDR incorrectly mapped the Vancouver Port of Terminal 1 site east of Interstate 5. This site is located at 300 W Columbia Way.

understood groundwater flow direction at the site, the facility is not considered a REC to the subject property.

- The 400 Columbia Street and 318 W 4th Street site is located 0.190 miles northwest of the subject property. No evidence of significant petroleum or hazardous substance releases were observed on site. Based on the distance and understood groundwater flow direction at the site, the facility is not considered a REC to the subject property.
- The South of City Hall site is located 0.236 miles northwest of the subject property. A Phase I and a Phase II environmental site assessment were performed at this site in 2016 and 2017, respectively. Benzene and 1,3-butadiene were detected above the Model Toxics Control Act Method B sub-slab soil gas screening levels (Appendix E). Based on this information, the distance and understood groundwater flow direction at the site, the facility is not considered a REC to the subject property.
- The West of City Hall site is located 0.282 miles northwest of the subject property. No evidence of significant petroleum or hazardous substance releases were observed on site. Based on the distance and understood groundwater flow direction at the site, the facility is not considered a REC to the subject property.

3.1.3 Other Databases

The following sections include other databases identified in the EDR report that may be relevant to assessing potential environmental liability or environmental issues at the subject property.

3.1.3.1 EDR Proprietary Databases

EDR has conducted research on the occurrence of historical business practices that may constitute a REC to properties. The database was developed from data found in historical city directories and contains information on over 100,000 former gas stations, manufactured gas plants, and dry cleaners. Due to the nature of these businesses, the sites have the potential for soil and groundwater contamination to have occurred.

EDR Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. The listings reviewed include, but were not limited to, gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, and/or service station.

Unless otherwise noted, the mere presence of historical auto stations near a site does not, in itself, constitute a REC.

A review of the EDR Historical Auto Stations list, as provided by, indicated that there are no EDR Historical Auto Stations sites within 0.125 miles of the subject property.

EDR Manufactured Gas List

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800s to 1950s to produce a gas that could be distributed and used as fuel. Many of the by-products of the gas production, such as coal tar (oily waste containing volatile and nonvolatile chemicals), sludges, oils, and other compounds, are potentially hazardous to human health and the environment. The by-products from this process were frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

One former manufactured gas site is listed 0.693 miles northwest of the subject property. Based on the distance and understood groundwater flow direction at the site, the facility is not considered a REC to the subject property.

EDR Historical Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry-cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to, dry cleaners, cleaners, laundries, laundromats, cleaning/laundry businesses, wash and/or dry businesses.

Unless otherwise noted, the mere presence of a historical dry cleaner near a site does not, in itself, constitute a REC. The identified sites do not appear to represent a REC to the subject property.

A review of the EDR Historical Dry Cleaner list, as provided by EDR, indicated that there are no EDR Historical Dry Cleaner sites within 0.125 miles of the subject property.

3.1.4 Orphan Site List

Orphan sites are those for which mapping information is not detailed enough to plot the location of the site, or for which there is no known responsible party, or the responsible party is unwilling or unable to pay for cleanup. Based on a review of the information for and location of the orphan sites, none appear to represent a potential REC to the subject property.

3.1.5 Vapor Encroachment

ASTM Standard E1527-21 defines vapor migration as "the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface." The recognition of vapor migration as a possible REC may require incorporation of new types of controls and restrictions to address this contamination pathway.

The subject property and adjacent sites were reviewed in an effort to determine whether vapor migration has, or has the potential to have, occurred at the site, from adjacent properties. Based on the information reviewed, the subject property is not identified as a potential vapor intrusion site. There is no known presence of USTs on the subject property or adjacent properties.

3.2 Historical Use Information

The objective of the historical use information review is to develop a history of the previous uses of the subject property and surrounding area to help identify the likelihood that past uses have led to RECs in connection with the subject property. Parametrix researched the historical land use, occupancy, and ownership of the subject property and adjacent properties to evaluate historical uses that are known to be associated with RECs. Historical records reviewed include the EDR Certified Sanborn® Map Report (EDR 2023b) and the EDR Aerial Photo Decade Package (EDR 2023c).

3.2.1 Certified Sanborn® Map Report

Parametrix requested Sanborn Fire Insurance maps from EDR to help identify past land uses. Sanborn Fire Insurance maps from the years 1884, 1888, 1890, 1892, 1907, 1911, 1928, 1949, and 1966 were examined. A copy of the Certified Sanborn Map Report is included in Appendix B. Observations are listed below.

1884	Several small structures are located on the subject property. A ferry landing and the Vancouver City Flour Mills is present south of the subject property. Additional small buildings are located east and north of the subject property. No information is available for parcels west of the subject property.
1888	Minor changes in structures are present at the subject property and adjacent parcels to the north and east. Additional buildings are present to the west of the subject property.
1890	No change is evident on the subject property. A hotel is now present west of the subject property. Minor changes in structures have occurred east of the subject property.
1892	Several buildings have been removed from the subject property. No changes are evident in adjacent properties.
1907–1911	A rail line has been constructed north of the subject property. New buildings have been constructed on the subject property. A planked incline to a ferry and a hotel has been constructed west of the subject property. The southern adjacent flour mill has been removed.
1928	The structures on the subject property have changed. A structure noted as “gasoline and oil” is present in the vicinity of the subject property. The adjacent hotel and ferry landing have been removed. A P.E.P Co. electrical substation and associated structures have been constructed to the south of the subject property. A sand and gravel dock for the Minsinger Sand & Gravel Co. is also located to the east of the subject property. The eastern span of the Interstate Bridge has been constructed to the southwest of the subject property.
1949	The previous buildings have been removed from the subject property and a police station is now present. No change is evident on the subject property. A road (current SE Columbia Way) has been constructed south of the subject property. An

auto shop and a tractor yard are located west of the subject property. A machine shop is located east of the subject property.

1966 The police station has been removed from the subject property. A second span of the Interstate Bridge has been constructed and a cloverleaf off-ramp has been constructed. All adjacent structures have been removed, except for the electrical substation.

Based on the Sanborn Fire Insurance maps, the subject property was contained a variety of structures, which likely supported nearby mills, ferry traffic, and rail transit. The subject property was vacant beginning sometime between 1949 and 1966. An electrical substation was present to the south of the subject property beginning sometime between 1911 and 1928. Gasoline and oil storage may have occurred circa 1928, which may present an HREC.

No other evidence of RECs was identified on the subject property, including the partial areas of the parcels that may be acquired as part of the IBR Program, during the historical Sanborn® Map review.

3.2.2 Historical Aerial Photograph Review

Historical aerial photographs of the subject property area were obtained from EDR in the EDR Aerial Photo Decade Package. Aerial photographs for the years 1936, 1948, 1951, 1960, 1970, 1975, 1981, 1990, 1994, 2000, 2006, 2011, 2014, 2017, and 2020 were examined. Copies of the aerial photographs are included in Appendix C. Observations are listed below.

1936 Structures are present in the subject property and the rail line is present immediately north of the subject property. The first span of the Interstate Bridge is present. Additional structures are present on the parcel to the south (the current Clark Public Utilities Residential Conservation Services building).

1948 Fewer structures are present on the subject property and darker land, potentially disturbed soil, is present in the eastern portion of the subject property. Current SE Columbia Way has been constructed south of the subject property.

1951 Little to no change is evident on the subject property or surrounding properties.

1960–1981 The western span of the Interstate Bridge has been constructed and a cloverleaf off-ramp have been constructed west, east, and north of the subject property. No structures are present on the subject property.

1990–1994 The cloverleaf off-ramp has been removed and replaced with a northbound connector ramp to current State Route 14.

2000–2020 Minor changes to vegetation are present on the subject property, but no changes in structures are evident on the subject property or surrounding properties.

Based on the aerial photograph history, the subject property contained buildings from prior to 1936 until sometime between 1951 and 1960. After the cloverleaf was constructed for Interstate 5 circa 1960, the subject property appears unused.

No evidence of RECs was identified on the partial areas of the parcels that may be acquired as part of the IBR Program during the historical photograph review.

3.2.3 Local Agency Records

Information from local agencies was reviewed for environmental significance as described in the following sections.

3.2.3.1 Clark County

Based on information from the Clark County Tax Assessor's Office, the subject property consists of the following tax lots:

- IBR-38279930 38279930 No address
- IBR-47600000 47600000 No address

The subject property is currently owned by Burlington Northern, Inc. and contains a gravel access road within a fence and graveled surface area. No buildings are present on the subject property.

Clark County property records indicate that no permits have been issued for the subject property.

3.3 Additional Environmental Information

The following sections provide a summary of additional environmental information obtained for the site.

3.3.1 Asbestos

The manufacture of most asbestos-containing materials (ACM) was banned by the EPA by 1979. Prior to this, asbestos was a common constituent of numerous building materials, including floor and ceiling tiles, caulking, pipe insulation, roofing materials, and exterior siding.

No buildings are present on the subject property and ACM is not expected on the subject property.

3.3.2 Lead-Based Paint

Before 1977, paint commonly contained lead, which can cause human health problems if ingested. No buildings are present on the subject property and lead-based paint is not expected on the subject property.

3.3.3 Polychlorinated Biphenyls

Transformers can potentially contain polychlorinated biphenyls (PCBs). No buildings are present on the subject property and PCB-containing electrical equipment is not expected on the subject property.

3.3.4 Radon

Radon is a naturally occurring radioactive gas formed by the decay of uranium in some rocks and soil. The adverse health effects associated with radon gas depends upon various factors such as the concentration of the gas and exposure duration. The potential concentration of radon gas within a building depends on subsurface soil conditions, the integrity of the building's foundation, the existence of a basement or crawl space (primary areas of concern), and the building's ventilation.

Clark County ZIP code 98661 is located in the Federal EPA Radon Zone 1, indicating that the indoor average radon level is greater than 4 picocuries per liter. The Washington Department of Health has identified the radon risk in the area of the subject property as Medium. Based on this limited information, there is a potential that radon is an environmental concern at the property. However, no buildings are located within the partial areas of the parcels that may be acquired as part of the IBR Program.

4. FILE REVIEW

In accordance with ASTM Standard E1527-21, inquiries and review of previous investigations for the subject property and a review of regulatory files for the subject property or adjacent properties may be conducted to further evaluate environmental conditions on the property or adjacent properties and to fill in data gaps where applicable. Previous investigations and file reviews are summarized below.

4.1 Previous Investigations

Based on regulatory information from EDR and Ecology, the subject property is not listed on any regulatory database. No previous investigations of the subject property, including the partial areas of the parcels that may be acquired as part of the IBR Program, were identified during the course of this Phase I ESA.

4.2 Adjacent and Nearby Properties File Review

Several adjacent and nearby properties were listed on environmental databases, as described in Section 3. Sufficient site-specific information was available through review of the EDR report, as well as online Ecology files, to develop an opinion on the potential for these properties to have affected the subject property. Therefore, a specific file review (physical review at Ecology) was not required beyond those completed during the course of this Phase I ESA. Specific information on the nature of release, types of contaminants, media impacted, and the potential to have affected the subject property or otherwise caused environmental concern is provided in Section 3.

5. SITE EXAMINATION

Parametrix conducted a site examination of the subject property from public right-of-way on September 29, 2023. The site examination consisted of observing the areas immediately surrounding the subject property, providing observations of the general environmental conditions on the subject property, and visually assessing the subject property and adjacent properties for evidence of hazardous materials. The site examination focused on partial areas of the parcels that may be acquired as part of the IBR Program. Photographs of the subject property taken during the site walk are included in Appendix D.

5.1 Subject Property

The subject property includes two parcels that include a fenced gravel access road to the adjacent rail line and a gravel surface area. The partial areas of the parcels that may be acquired as part of the IBR Program are limited to graveled areas.

All observations were taken from the public right-of-way. No evidence of USTs, aboveground storage tanks, or other indications of environmental significance were observed on the exterior portions of the property. In addition, no evidence of significant storage or spills of hazardous substances and/or petroleum products was observed on the subject property. No evidence of staining, adverse odors, or other indications of potential releases was observed. In general, no RECs or other adverse environmental conditions were identified associated with the subject property. Table 2 summarizes the observed conditions. The lack of access to the subject property and a full site examination represents a data gap in accordance with ASTM Standard E1527-21.

Table 2. Subject Property Observed Conditions

IBR ID	Address	Acres	Current Use (determined through visual observation)	Site Examination Observations
IBR-38279930	None available	0.02 acres	Unused	Gravel surface area, used for parking vehicles and for pedestrian access to nearby Discovery Historic Loop Trail
IBR-47600000	None available	0.14 acres	Burlington Northern railroad access road	Fenced gravel access road

5.2 Adjacent Properties

The vicinity of the subject property is generally open and undeveloped. A railroad is north of the subject property. Interstate 5 and an off-ramp from Interstate 5 to State Route 14 is located to the west. A former transformer substation is located south of the subject property. The remainder of areas in the vicinity of the subject property are undeveloped and are part of the Fort Vancouver National

Historic Site. No evidence of significant staining or stressed vegetation was noted on the ground surface on assessable properties adjacent to the site. No evidence of the storage of chemical or hazardous materials was identified on visible areas of adjacent properties.

6. INTERVIEW

An interview was not able to be conducted with a property representative to identify any potential environmental conditions and to address information data gaps during the Phase I ESA process. The lack of a property owner or representative interview represents a data gap in accordance with ASTM Standard E1527-21.

7. CONCLUSIONS

Based on the findings of this investigation, Parametrix concluded the following:

1. The subject property includes two separate Clark County Tax Lots: 38279930 and 47600000. It currently includes a gravel access road, a fence, and graveled surface area. The vicinity of the subject property includes Interstate 5, a rail line, open park space, and a former electrical substation. No buildings are located within the partial areas of the parcels that may be acquired as part of the IBR Program.
2. A review of Sanborn Fire Insurance maps and historical aerial photographs indicated that a variety of small commercial structures were present on, and in the vicinity of, the subject property from prior to 1884 until sometime between 1951 and 1960. A structure noted as "gasoline and oil" was present in 1928 but was not noted in 1911 or in 1949. The area was vacant after completion of a cloverleaf off-ramp for Interstate 5 circa 1960. The gasoline and oil structure presents an HREC, but is unlikely to be a REC due to the natural attenuation of petroleum constituents.
3. Because buildings are not located in the partial areas of the parcels that may be acquired as part of the IBR Program, lead-based paint or ACM are not expected to be present on the subject property.
4. The subject property is not listed on any regulatory database that would indicate a past or current release or storage of hazardous materials. A review of regulatory information indicated that several nearby sites were identified in the regulatory record databases. However, based on regulatory status and distance from the subject property, none of the sites identified represent a REC to the subject property.
5. No evidence of significant use or storage of hazardous substances and/or petroleum products was noted on or near the subject property. No evidence of distressed vegetation, spills or releases, dry wells, or other indications of environmental concern was identified during the site reconnaissance. These conditions are not considered RECs for the subject property.
6. An on-site reconnaissance and interview were not conducted with a property representative to identify any potential environmental conditions and to address information data gaps during the Phase I ESA process. The lack of a property owner or representative interview and the lack of a full on-site reconnaissance represent data gaps in accordance with ASTM Standard E1527-21. However, the information obtained for the Phase I ESA, including regulatory database and historical documentation, was deemed sufficient.

8. RECOMMENDATIONS

Based upon the conclusions of this investigation of the subject property, Parametrix offers the following recommendations.

1. No further assessment of environmental conditions on the subject property, including the partial areas of the parcels that may be acquired as part of the IBR Program, is recommended at this time.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of state- and tribal (Superfund) equivalent sites

WA HSL: The Hazardous Sites List is a subset of the CSCSL Report. It includes sites which have been assessed and ranked using the Washington Ranking Method (WARM).

A review of the WA HSL list, as provided by EDR, and dated 02/23/2023 has revealed that there is 1 WA

HSL site within approximately 1 mile of the target property.

Lists of state- and tribal hazardous waste facilities

OR ECSI: The Environmental Cleanup Site Information System records information about sites in Oregon that may be of environmental interest. The data come from the Department of Environmental Quality.

A review of the OR ECSI list, as provided by EDR, and dated 03/01/2023 has revealed that there are 5 OR ECSI sites within approximately 1 mile of the target property.

WA CSCSL: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Ecology's Confirmed & Suspected Contaminated Sites List.

A review of the WA CSCSL list, as provided by EDR, and dated 04/10/2023 has revealed that there are 19 WA CSCSL sites within approximately 1 mile of the target property.

WA CSCSL NFA: The data setcontains information about sites previously on the Confirmed and Suspected Contaminated Sites list that have received a No Further Action (NFA) determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when cleanup activities are completed. Instead a No Further Action code is entered based upon the type of NFA determination the site received.

A review of the WA CSCSL NFA list, as provided by EDR, and dated 04/10/2023 has revealed that there are 6 WA CSCSL NFA sites within approximately 0.5 miles of the target property.

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/06/2023 has revealed that there are 6 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 03/30/2023 has revealed that there is 1 PFAS ECHO site within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the

environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Address:	TAX LOT 48850000 & 48840000 & INTERLAYING AREA
Recipient name:	City of Vancouver
Grant type:	Assessment
Region:	10
Property Number:	48850000, 48840000
Parcel size:	0.75
Latitude:	45.623235
Longitude:	-122.674823
HCM Label:	Not reported
Map Scale:	Not reported
Point of Reference:	Not reported
Highlights:	Former Use: The Property is in a commercial area at the southern edge of downtown Vancouver. It is bounded by Columbia Street to the east, Esther Street to the west, Columbia Way to the south and an active BNSF right-of-way to the north. The center of the Property is located approximately 600 feet north of the Columbia River, 700 feet west of Interstate Highway 5, and 500 feet south of Vancouver City Hall. The Property includes portions of two tax lots as well as interlaying property to which no tax number has been assigned. The Property was occupied by an asphalt paving plant from the 1940s through the early 1970s. Since the late 1970s, the Property has been vacant, or used for surface parking. The asphalt paving plant is the suspected source of petroleum contamination observed in soil during a recent sewer force main installation project on the Property. Asphalt plant operations ended nearly 20 years prior to current (City of Vancouver) and most recent previous (ANT, LLC) ownership of Property.

It is bounded by Columbia Street to the east, Esther Street to the west, Columbia Way to the south and an active BNSF right-of-way to the north. The center of the Property is located approximately 600 feet north of the Columbia River, 700 feet west of Interstate Highway 5, and 500 feet south of Vancouver City Hall. The Property includes portions of two tax lots as well as interlaying property to which no tax number has been assigned. The Property was occupied by an asphalt paving plant from the 1940s through the early 1970s. Since the late 1970s, the Property has been vacant, or used for surface parking. The asphalt paving plant is the suspected source of petroleum contamination observed in soil during a recent sewer force main installation project on the Property. Asphalt plant operations ended nearly 20 years prior to current (City of Vancouver) and most recent previous (ANT, LLC) ownership of Property.

nlights: Former Use: The 1.53-acre Property is comprised of four tax lots located in downtown Vancouver.. A 10,625 square-foot commercial building, known as the Webber Machine Works building, is located in the northeast corner of the Property. The remainder of the Property is in use as an asphalt paved parking lot. The Property is zoned for commercial use. REC #1: Records show that the Property was historically occupied by light industrial operations and fuel dispensing facilities. No evidence of a significant release associated with these historical Property uses was identified. REC #2: A release was reported during decommissioning activities (Cleanup Site ID 11159, LUST ID 2453) in 1992. No evidence of significant petroleum or hazardous substance releases was observed during the drilling of soil or soil vapor borings or reflected in laboratory testing of soil samples collected. REC #3: Ecology records indicate the presence of a gasoline UST on the site. It is unknown if this UST has been removed. No evidence of significant petroleum or hazardous

operty Description: The 1.53-acre Property is comprised of four tax lots located in downtown Vancouver.. A 10,625 square-foot commercial building, known as the Webber Machine Works building, is located in the northeast corner of the Property. The remainder of the Property is in use as an asphalt paved parking lot. The Property is zoned for commercial use. REC #1: Records show that the Property was historically occupied by light industrial operations and fuel dispensing facilities. No evidence of a significant release associated with these historical Property uses was identified. REC #2: A release was reported during decommissioning activities (Cleanup Site ID 11159, LUST ID 2453) in 1992. No evidence of significant petroleum or hazardous substance releases was observed during the drilling of soil or soil vapor borings or reflected in laboratory testing of soil samples collected. REC #3: Ecology records indicate the presence of a gasoline UST on the site. It is unknown if this UST has been removed. No evidence of significant petroleum or hazardous substance releases was observed during drilling or reflected in laboratory testing of soil or soil vapor samples collected. REC #4: Historical city directory information indicates the Interstate Fuel Company was located adjacent south of the Property (north of the railroad right-of-way) in 1966. No evidence

400 COLUMBIA ST AND 318 W 4TH ST (Continued) **1024079349**

of significant petroleum or hazardous substance releases was observed or reflected in laboratory testing of soil samples collected.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

US BROWNFIELDS:

Name: SOUTH OF CITY HALL
Address: 404 W 4TH STREET AND 411 W 5TH STREET
Recipient Name: City of Vancouver
Grant type: Assessment
Region: 10
perty Number: 48860000, 48900000, 48852000, 48890000
Parcel size: 1.54
Latitude: 45.6235367
Longitude: -122.5003208
HCM Label: Address Matching-House Number
Map Scale: Not reported
Point of Reference: Entrance Point of a Facility or Station
Highlights: A geophysical survey of the South Site did not identify any underground structures or USTs, except for concrete/rebar debris. Soil borings GP-S-1 and GP-S-4, located on the western boundary of the South Site, did not contain elevated petroleum constituent concentrations. Lead and PAH TEQ detected in sample GP-S-2-0 -3 at the South Site exceeded their MTCA Method A CUL. Benzene was detected in soil vapor sample SV-3 in exceedance of MTCA Method B Sub-Slab Soil Gas Screening Levels. Further evaluation is necessary to determine whether or not this screening level exceedance presents an actual risk to human health. 1,3-Butadiene was detected above the MTCA Method B Sub-Slab Soil Gas Screening Level in two of three soil vapor samples collected at the South Site. Further evaluation is

SOUTH OF CITY HALL (Continued) **1024079555**

necessary to determine whether or not this screening level exceedance presents an actual risk to human health. This potential risk could be mitigated through the installation of vapor mitigation systems beneath newly constructed buildings. The source of the 1,3 butadiene remains unknown. Former Use: Historical documents indicate that the Property was developed with single-family residences by 1890 and remained exclusively in residential use until the 1940s, with the exception of the southeastern corner of the Property, which was occupied by the Vancouver Soda Water Works by 1907. The northwestern area of the Property was in commercial use as a welding shop by 1949. The Property was in exclusively commercial use since at least the 1960s, with historical businesses including potato chip manufacturing, storage, auto repair, fishing tackle manufacturing, and other retail and office uses. The Property has been in use as a parking lot or has been a vacant lot with no structures since at least 2005. The City of Vancouver purchased the Property in 2010.

Property Description:	Historical documents indicate that the Property was developed with single-family residences by 1890 and remained exclusively in residential use until the 1940s, with the exception of the southeastern corner of the Property, which was occupied by the Vancouver Soda Water Works by 1907. The northwestern area of the Property was in commercial use as a welding shop by 1949. The Property was in exclusively commercial use since at least the 1960s, with historical businesses including potato chip manufacturing, storage, auto repair, fishing tackle manufacturing, and other retail and office uses. The Property has been in use as a parking lot or has been a vacant lot with no structures since at least 2005. The City of Vancouver purchased the Property in 2010.

Property Number: Not reported
Parcel size: 3.1
Latitude: 45.624711
Longitude: -122.676451
HCM Label: Address Matching-House Number
Map Scale: Not reported
Point of Reference: Entrance Point of a Facility or Station
Highlights: Soil and soil vapor samples were collected from the West Site to evaluate the potential for human health risk from historical operations on and in the vicinity of the site. No soil sample concentrations detected on the West Site exceeded MTCA Method A CULs for soil. Former Use: Historical documents indicate that the Property was developed with single-family residences by 1890 and remained in residential use until approximately 1907 when commercial development began. Records show that historical Property uses included offices and commercial development, including an automotive repair shop in the early 1990s. Since approximately 2000, a warehouse in the western area of the Property has been the only building on the Property. The eastern area of the Property has been a paved parking lot since the late 2000s. The City of Vancouver acquired the Property through bankruptcy in 2010.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

FINDS:
Registry ID: 110000896950

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste Code: D001
Waste Description: Ignitable Waste

Waste Code: D002
Waste Description: Corrosive Waste

Waste Code: D003
Waste Description: Reactive Waste

Waste Code: D005
Waste Description: Barium

Waste Code: D006
Waste Description: Cadmium

Waste Code: D008
Waste Description: Lead

Waste Code: D009
Waste Description: Mercury

Waste Code: D011
Waste Description: Silver

Waste Code: D039
Waste Description: Tetrachloroethylene

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent

BOISE WHITE PAPER LLC (Continued) **1000378977**

Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F004
Waste Description: The Following Spent Nonhalogenated Solvents: Cresols, Cresylic Acid, And Nitrobenzene; And The Still Bottoms From The Recovery Of These Solvents; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: P105
Waste Description: Sodium Azide

Waste Code: U001
Waste Description: Acetaldehyde (I) (Or) Ethanal (I)

Waste Code: U037
Waste Description: Benzene, Chloro- (Or) Chlorobenzene

Waste Code: U151
Waste Description: Mercury

Waste Code: U154
Waste Description: Methanol (I) (Or) Methyl Alcohol (I)

Waste Code: U217
Waste Description: Nitric Acid, Thallium(1+) Salt (Or) Thallium(I) Nitrate

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

COLUMBIAN PUBLISHING CO (Continued) **1000108261**

corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

HAYDEN ISLAND LANDFILL (Continued) **S103842510**

Updated Date: 12/17/2002
Decode for NarcdID: Contamination
NARR Comments: This unregulated landfill was located in a seasonal lake basin and probably operated between 1950 and 1970, when it was covered by a 7 to 8-foot layer of clean fill. An ARCO facility that opened in 1971 at the eastern edge of the former landfill initiated an investigation in 1989 that showed gasoline contamination in groundwater. Borings also revealed a layer of landfill debris beneath clean fill. DEQ's LUST program (file #26-89-0149) requested a Corrective Action Plan from ARCO, leading to pump-and-treat remediation that began operating 8/90. Groundwater samples from eight monitoring wells contained dissolved metals, which are most likely a result of leachate percolating through unknown solid wastes in the unsaturated zone. Because of system fouling from these metals, the treatment program was shut down in May 1991.

Decode for NarcdID: Remedial Action
NARR Comments: In June 1993, ARCO concluded that it was not possible to remediate benzene in groundwater without first removing dissolved metals. ARCO maintained that it had no responsibility for the metals. The LUST section may continue to require regular monitoring as a part of <quot>conditional closure.<quot> Potential pathways of exposure appear limited to groundwater and surface water. Because more information is needed about the landfill and its levels of contamination, Site Assessment recommends that affected property owners characterize contamination in and below the former landfill. Otherwise, a PA should be completed to investigate the site's history and to evaluate potential exposure pathways, under a low priority. Confined space methane testing was performed by PBS for the Hayden's Corner property. The only significant methane was found at two bathroom floor drains where the likely source was sewer gas. Three soil gas samples were collected from borings around the former ARCO site as part of the investigation of the Hayden's Corner property (ECSI #5711). Methane at 2% was found near the former waste oil but this could have been from residual petroleum contamination. Other samples showed only trace methane.

Updated By: GWISTAR
Updated Date: 06/21/2017
Decode for NarcdID: Current Site Summary Statement
NARR Comments: [April 2017] This unregulated landfill was located in a seasonal lake basin and probably operated between 1950 and 1970, when it was covered by a 7 to 8-foot layer of clean fill. An ARCO facility that opened in 1971 at the eastern edge of the former landfill initiated an investigation in 1989 that showed gasoline contamination in groundwater. High concentrations of metals were also found. Borings revealed a layer of landfill debris beneath clean fill. The Hayden's Corner property (former ARCO site) was split off from the greater landfill site with a separate ECSI number (#5711). Another site was investigated in the Hayden Island Landfill area in 2016/17 (1445 and 1463 N. Hayden Island Drive). These properties' recent use was commercial, and not expected to lead to contamination. Groundwater below the properties is contaminated with TPH and metals, particularly arsenic, barium, lead, silver, and mercury.

NARR Comments: Methane and other atmospheric gases were measured in confined spaces inside the site buildings using a handheld meter in May 2011. Methane at levels from 1.5 to 5.5% was detected at the drains of two restrooms. This could be related to sewer gas from leaking drain traps. Little or no methane was detected in any other confined space locations within the buildings. In May 2012 three borings were arrayed around the property and one included the location of a former leaking waste oil tank from the prior gas station. Borings were sampled for methane using a handheld meter as well as summa canister sampling. VOCs samples were also collected using a summa. The maximum methane detection was around 2% in one hole (near the former waste oil tank) and near zero in other holes. Various VOCs (largely associated with petroleum) were found at generally low concentrations. No VOCs were found at concentrations greater than commercial risk-based concentrations. In July 2012 a plumber was hired by site owner to inspect and correct any problems with the bathroom drains/traps. No Further Action determination in August 2012. The determination applies only to the immediate Hayden's Corner site and not to the greater Hayden Island Landfill (ECSI #1559).

NARR Comments: An ARCO service station that operated on the property starting in 1971 initiated an investigation in 1989 that showed gasoline contamination in groundwater. Borings also revealed a layer of landfill debris beneath clean fill. The property is apparently located within the footprint of the former Hayden Island Landfill, an unregulated landfill that was located in a seasonal lake basin and probably operated between 1950 and 1970, when it was covered by a 7 to 8-foot layer of clean fill. DEQ's LUST program (file #26-89-0149) requested a Corrective Action Plan from ARCO, leading to pump-and-treat remediation that began operating 8/90. Groundwater samples from eight monitoring wells contained dissolved metals, which are most likely a result of landfill leachate percolating through unknown solid wastes in the unsaturated zone. Because of system fouling from these metals, the treatment program was shut down in May 1991. The ARCO station recieved a No Further Action determination in 1998 with the exception that the determination did not apply to other contaminants found at the site related to the greater Hayden Island Landfill.

Decode for NarcdID: General Site Description
NARR Comments: The site is just north of the center of Hayden Island in the Columbia River. The topography is flat and the elevation is approximately 20 feet above of sea level. The main channel of the Columbia River is just over 500 feet north of the site. Subsurface material encountered below asphalt and base gravel was medium-grained sand. At depths as little as 5 feet below ground surface (bgs) fill material consisting of paper, glass, wood, brick, plastic and metal, was encountered and found at depths up to 18 feet bgs.

NARR Comments: (November 2016 RKW) Phase II investigation including sampling of soil and shallow groundwter. Minor diesel and oil contamination was found in soil on the 1445 lot. Groundwater below the site contains widespread petroleum, metals (arsenic, barium, cadmium, lead, silver, and mercury), minor VOCs and PAHs. Follow-up investigation for methane (landfill gas) was undertaken in January 2017 using handheld

HAYDEN ISLAND - UMATILLA PROPERTY (Continued) **S118869506**

Landtec instrument. Samples from two boring on each property and from interior confined spaces in the 1463 building. No significant levels of methane were detected. NFAs for both properties were dated April 4, 2017.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: This site, the location of a former US Bank branch (since demolished) is situated on top of the abandoned Hayden Island Landfill (ECSI #1559). The site is currently owned by Umatilla, Inc. Belmar Properties, the owners of an adjacent property, are proposing to purchase the site. Belmar has applied to DEQ's Voluntary Cleanup Program to obtain a No Further Action determination for the site. These properties recent landuse was commercial and not expected to lead to contamination. Groundwater below the properties is contaminated with TPH and metals, particularly arsenic, barium, lead, silver, and mercury. Groundwater contaminatinon is thought to be associated with the former landfill.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.
OSHA ESTABLISHMENT
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.
