Updated Date: 12/17/2002
Decode for NarcdID: Contamination
NARR Comments: (12/5/2001 DGA/SRS) Dry-cleaning facilities have operated at the site since the mid-1970s. A preliminary environmental assessment in November 1994 identified four floor drains within the facility, three of which yielded a positive reading on a photoionization detector. In August 1995, four Geoprobe borings were advanced at the site to see if PCE had been released to the soil or groundwater. PCE was detected in soil gas (up to 75 ppm) and groundwater (up to 780 ug/L) in all four boreholes. It appears that PCE may have been released down the floor drains at the site, leaking into the soil through cracks in the sanitary sewer lines. Tidal fluctuations in the shallow groundwater may have spread the contaminants across the site. Hayden Island Cleaners applied to DEQ's Dry Cleaner Program in January 1997, and was accepted in February 1997.

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: The City of Portland owns four deep production wells on Hayden Island, two of which are within 600 feet of the site. Since 1988, Bull Run water has been provided for residents and businesses on Hayden and Tomahawk Islands, and the wells are currently designated for backup fire suppression only. Three of the four wells are contaminated with low levels of TCE and PCE; however, the contamination is thought to be unrelated to Hayden Island Cleaners. Because of the site's proximity to the Columbia River, surface water was another potential pathway of concern. But the contamination does not appear to have reached either the river or the deeper aquifer.

NARR Comments: (12/5/2001 DGA/SRS) DEQ retained Jacobs Engineering to conduct an expanded Preliminary Assessment (XPA) at the site in August 1997. As part of the XPA, three monitoring wells were installed, and soil and groundwater samples collected. PCE was detected in soil samples (up

HAYDEN ISLAND CLEANERS (Continued) **S104329423**

to 267 ug/kg) and groundwater samples (up to 1,230 ug/L) from all three wells. The XPA report was completed in June 1998. DEQ retained Ecology & Environment (E&E) to follow up with a focused Site Investigation in August 1998. Additional groundwater monitoring wells were installed at the site and on adjacent properties. In addition, a pumping test was conducted at the secondary municipal wells (backup fire suppression wells) to determine if there was any connection between the shallow and deep aquifers. No connection was established. The Site Investigation report was completed in March 1999. In May 1999, DEQ injected Hydrogen Releasing Compound (HRC) into the shallow groundwater to accelerate the natural biodegradation of the PCE. Monitoring over the next couple of years showed that the HRC was successful in stimulating degradation of the PCE. DEQ formally notified the site owners and operators in December 2001 that no further cleanup of the site was necessary.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

BRAZIER FOREST INDUSTRIES (Continued) **1000443358**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CANOE BAY - CONTAMINATED SEDIMENT (Continued) **S105807718**

Alias Name: Inland Sea Maritime Group
Alias Name: Heisley Marine Corp.
Alias Name: Grandma's Cove
Alias Name: Schooner Creek Boat Works

Hazardous Release:
Substance ID.: 121634
Haz Release ID: 387346
Qty Released: Unknown
Date Released: Unknown
Update Date: 09/08/2009
Update By: SFORTUN
Substance Code: 7429-90-5
Substance Name: ALUMINUM
Substance Abbrev.: Not reported
Substance Alias ID: 319250
Sub Alias Name: AL
Substance Alias ID: 319251
Sub Alias Name: ALUMINIUM
Sampling Result ID: 349624
Feature Id: 0
Hazard Release Id: 387346
Medium: 701
Substance Abbrev.: 0
Unit Code: 7
Observation: True
Owner Operator: False
Lab Data: True
Sample Depth: 0-6 inches
Start Date: 10/28/2008
End Date: Not reported
Min Concentration: Not reported
Max Concentration: 11500.00
Sample Comment: 11500 ppm aluminum in Canoe bay sediments at sampling points CB05SD and CB06SD. Aluminum concentrations in Columbia River background sediments generally ranged from 2750 ppm (CR01SD) to 5540 ppm (CR04SD).

Substance Abbrev.: Not reported
Substance Category ID: 8497
Substance Category: Semi-volatiles

CANOE BAY - CONTAMINATED SEDIMENT (Continued) **S105807718**

Category Level: Not reported
Created By: Not reported
Created Date: 12/17/2002
Substance Category ID: 8497
Substance Category: Semi-volatiles
Category Level: Not reported
Created By: Not reported
Created Date: 12/17/2002
Substance Alias ID: 316950
Sub Alias Name: BENZO(def)PHENANTHRENE
Sampling Result ID: 337911
Feature Id: 0
Hazard Release Id: 379451
Medium: 701
Substance Abbrev.: 0
Unit Code: 8
Observation: False
Owner Operator: False
Lab Data: True
Sample Depth: 0-7 feet
Start Date: 01/14/2002
End Date: 01/14/2002
Min Concentration: .00
Max Concentration: 54.00
Sample Comment: 54 ppb in Canoe Bay sediment composites (two 2-core composites)
Detected in analytical method blank at 3.4 ppb

Updated By: SFORTUN
Updated Date: 04/23/2010
Decode for NarcdID: Contamination
NARR Comments: Sediments: Sediments directly beneath a Schooner Creek Boat Works dock and adjacent to the shoreline are contaminated with PCBs, PAHs, phthalates, PCP, phenols, DDTs, chlordane, metals (arsenic, cadmium, copper, selenium, zinc), and relatively low concentrations of diesel fuel and oil. The source and full vertical and horizontal extent of sediment contamination have not been defined. Upland Areas: A sample of residual paint dust collected at the boat repair facility contained PAHs, di-n-butyl phthalate, chloroform, methylene chloride, light aromatic hydrocarbons, and TCLP-extractable barium, cadmium, and lead. Paint dust residues have been observed on graveled surfaces at Schooner Creek Boat Works, and other boat repair wastes have been observed on Canoe Bay's steep southwest embankment at the boat works. Stained soils and stressed vegetation have also been documented at the boat works site. Chemical residues (30 - 60 sq ft area) and stressed vegetation were also observed on the southern portion of the lot west of the boat works, prior to Schooner Creek Boat Works occupying the site. Most of the western lot is now used for automobile storage, although a portion is used for boat storage. DEQ photographed small areas of stressed vegetation along Schooner Creek Boat Works' north fence line during an April 2001 multi-media inspection. (5/15/04 JLS/VCP) Waste materials, (e.g. broken glass, electrical casings) that apparently resulted from historical dumping by unknown parties are present along the shoreline. Waste material remaining at this time appear to be present primarily on land owned by the Oregon Division of State Lands. A private and City outfall

CANOE BAY - CONTAMINATED SEDIMENT (Continued) **S105807718**

discharge stormwater to Canoe Bay in the vicinity of the ramp to the docks. (9/9/09, smf) Samplings from an October 2008 EPA Site Insection detected elevated concentrations of metals (especially cadmium) in Canoe Bay sediments in the southern half of the bay. Elevated concentrations of TBT were detected in sediments at the boat dock, as well as in surface soils at the Schooner Creek Boatworks stormwater outfall just westr of the boat dock. Elevated concentrations of several metals were detected in surface soils along the southwest side of Canoe Bay, and in stormwater discharging from outfalls on the northeast and south sides of the bay.

NARR Comments: Canoe Bay is a 7.6-acre rectangular embayment of the Columbia River along the central north side of Hayden Island. The river is located to the northeast; Hayden Island Mobile Home Community is on the east side of the bay; Schooner Creek Boat Works, an automobile storage lot and paved boat storage area, and North Hayden Island Drive are along the southwestern edge of the bay. Schooner Creek Boat Works operates from a concrete tilt-up building constructed in 1989. A small scrub-shrub palustrine wetlands area is immediately northwest of the

CANOE BAY - CONTAMINATED SEDIMENT (Continued) **S105807718**

bay. A Burlington Northern Santa Fe Railroad right-of-way and tressel are about 675 feet northwest of the bay. Jantzen Beach Shopping Center is between 1,506 and 3,761 feet southeast of the bay. Interstate Highway 5 and the I-5 Interstate Bridge over the Columbia River are located about 4,210 feet southeast of the bay.

Updated By: JSUTTER
Updated Date: 11/21/2011
Decode for NarcdID: Project Issues Summary
NARR Comments: Contaminants were discovered in Canoe Bay sediments beneath a Schooner Creek Boat Works dock when preparing for maintenance dredging of the bay sediments. Levels of PCBs, DDTs, PAHs, and metals (arsenic, cadmium, copper, selenium, and zinc) in sediment samples exceed DEQ's Level II Ecological Risk Assessment Baseline Screening Levels for freshwater sediments. The contamination could represent a significant threat to T&E salmonids in the bay, migratory waterfowl and songbirds that visit the bay, wildlife in nearby wetlands, as well as a potential threat to people and wildlife who consume impacted fish. The sources and full vertical and horizontal extent of contamination have not been defined. A previous boat works operation at the site is known to have left behind chemical residues and stressed vegetation. However, since Schooner Creek Boat Works began operating along the southern end of the bay in 1999, DEQ has received at least 74 Pollution Complaints from nearby residents about its operations. An April 2001 DEQ site inspection confirmed some of the complaint allegations; DEQ documented evidence of stressed vegetation and boat works wastes migrating to Canoe Bay. Paint dust from the boat works was analyzed and found to contain leachable metals, phthalates, light aromatic hydrocarbons, chlorinated hydrocarbons, and relatively high concentrations of PAHs. DEQ files also contain similar complaints about activities at Schooner Creek Boat Works' previous operating location along N Marine Dr. There is no record of Pollution Complaints against the site's previous boat builder (Heisley Marine). Aerial photos and material identified along the shoreline suggest that historical dumping of waste materials may have taken place in the past, resulting in an accumlation of materials in a shoreline area on property owned by the State.

Decode for NarcdID: Land Use (Current/Reasonably Likely)
NARR Comments: Land on the southeast side of Canoe Bay is zoned for low-density residential use, while land on the southwest side of the bay is zoned for industrial use. The entire bay and its shoreline lie within a City of Portland Environmental Conservation Overlay Zone. A small scrub-shrub palustrine wetland sits just west of the bay, and most of the Columbia River's south shoreline downstream from the site is tidal riverine wetlands. Metro has mapped land west of the BNSF Railroad right-of-way as important riparian corridor and wildlife habitat of concern.

Decode for NarcdID: Manner of Release
NARR Comments: Undefined at this time. Recent boat manufacturing and repair activities by Schooner Creek Boat Works could be a source but significant efforts have been completed by the facility to manage stormwater and current stormwater discharge is meeting permit benchmarks. A city storm drain also discharges to the bay near the Boat Works' stormwater outfall and may be contributing road-related contamination. A previous yacht builder at the site (Heisley Marine) is known to have left behind chemical residues and stressed vegetation prior to Schooner Creek Boat Works' arrival at the site. The detections of DDTs and chlordane in sediments suggest that deposits of riverborne sediments could also be a source, as could be an outfall from the Columbia Blvd. Sewage Treatment Plant to the Columbia River, located about 500 to 700 feet northeast of (downstream from) the bay. Part of the bay also appears to have been backfilled since the 1970s, possibly with Columbia River dredgings, so the bay's backfill may also have contained contaminants. Historical dumping of wastes over the shoreline appears to have resulted in an accumulation of waste materials that appears to have resulted in elevated PCBs and metals on the shoreline. Contaminants associated with the shoreline waste materials appear to have resulted in a localized area of contaminated sediment.

NARR Comments: A site screening was completed in September 2002. An Expanded Preliminary Assessment of the Schooner Creek Boat Works site is recommended. Further samplings of sediment and upland soils are needed to define the full extent and character of local contaminants. Site owner, Inland Sea Maritime Group, completed sediment and shoreline sampling at the site which is documented in a January 2004 report. (9/8/09, smf) Ecology and Environment, Inc. conducted a federal Site Inspection of Canoe Bay for EPA during October 2008, issuing its report in August 2009. E&E sampled and analyzed: sediments from Canoe Bay and nearby in the Columbia River; stormwater and stormwater sediments from stormwater outfalls emptying into Canoe Bay; and uplands surface soils from along the southwest edge of Canoe Bay.

NARR Comments: Canoe Bay provides seasonal habitat for migratory waterfowl and migratory songbirds, which feed in and around the bay. The bay has been defined as Critical Habitat for Snake R. spring/summer chinook (Threatened species), Snake River fall chinook (Threatened species),

CANOE BAY - CONTAMINATED SEDIMENT (Continued) **S105807718**

and Snake River sockeye salmon (Endangered species) [58 FR 68543, 12/28/93]. A small wetlands area is also located immediately upland from the bay's west shoreline. Metro considers much of Hayden Island west of the BNSF Railroad right-of-way important riparian corridor and wildlife habitat of concern, The City of Portland has a community water supply well less than 1,000 feet SSE of the site.

NARR Comments: Site Assessment recommends a high-priority further investigation to determine the full nature and extent of Canoe Bay sediment contamination near SCBW's dock. Because hazardous substances have been released at the site, and concentrations of these substances in sediment are above threshold risk values for aquatic life, it is further recommended that the site be proposed for addition to DEQ's Confirmed Release List and Inventory. (12/6/02 JMA/VCP) Received Intent to Participate in DEQ's Voluntary Cleanup Program in December 2002. Sediment sampling work plan submitted March 2003. DEQ approved with comments provided May 2003. Response to comments submitted June 2003. DEQ acknowledgement provided July 2003. Sediment sampling conducted October 2003. (3/1/04 JLS/CU&ER) Sediment sampling report submitted January 2004. Meeting/site visit held February 2004. (5/17/04 JLS/VCP) DEQ comments on report provided March 2004. Revised report submitted April 2004. DEQ approval with clarification provided May 2004. (11/12/04 JLS/CU&LW) DEQ coordinating with City of Portland, Division of State Lands (DSL) and ISMG on next steps. (11/7/05 JLS/CU&LW) DEQ preparing memo documenting issues and priorities November 2005. (6/23/09 SAM/SAS)EPA completed a preliminary assessment-March 7,2008- and determined additional site investigation is warranted. (11/22/10 SAM/SAS) In late August 2010, after completing a Site Investigation, EPA determined that the site was a low priority for additional federal action and referred the site back to DEQ for state follow-up. [6/8/11] DEQ prioritized shoreline debris pile cleanup and outfall soil cleanup as primary actions warranted at the site. [6/11/12] In Fall, 2011, ISMG/SCBW proposed conducting shoreline stabilization to maintain stability for upland infrastructure and incorporate capping of the debris pile and immediately adjacent contamination. Additional shoreline data was collected in February 2012 to help assess shoreline options and a feasibility study was drafted in May 2012. FS completed in June 2012. Staff report on proposed shoreline stablization action issued for public comment in July 2012. ROD issued August 2012. Consent Judgement covering DEQ oversight of remedial action and settlement for contamination in Canoe Bay issued for public comment in September 2012. Negotiations with City of Portland for development permit to cover action in the environmental zone adjacent to Canoe Bay completed in Spring 2013. Consent Judgment with DEQ finalized in July 2013. Remedial Design workplan and associated reports submitted in November 2012. Revised documents, based on DEQ comment and modifications to address City permitting requirements, submitted June 2013. Shoreline stabilization and capping, and habitat improvement work completed August through November 2013. Project completion

CANOE BAY - CONTAMINATED SEDIMENT (Continued) **S105807718**

report submitted February 2014 and approved March 6, 2014. O&M to establish vegetation on the bank in progress. Certificate of Completion and NFA letter issued May 2014. (JLS 5/19/14) Annual monitoring reports submitted 2015, 2016, and 2017. (10/9/19 KJD/VCP) A sediment sampling event was performed in 2019 to evaluate the effectiveness of the remedy. Overall, the shoreline stabilization and capping components appear to have been effective in reducing contaminated material entering the bay.

NARR Comments: [Oct. 2019] In May 2014, DEQ made a conditional no further action determination for the site, with the NFA conditioned on maintenance of the engineered cap placed along the shoreline covering the debris pile area and the stormwater outfall discharge area. EPA followed up in February 2015 with its own determination of <quot>no further remedial action planned<quot> at the site. A sediment sampling event was performed in 2019 to evaluate the effectiveness of the remedy. Overall, the shoreline stabilization and capping components appear to have been effective in reducing contaminated material entering the bay.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

State and tribal institutional control / engineering control registries

WA INST CONTROL: Institutional Control Site List

The Environmental Covenants Registry is a list of sites that have implemented institutional controls as part of the remedy. Institutional controls are administrative or legal measures used to prevent activities that may compromise the integrity of a cleanup action. They are meant to prevent exposure to contamination remaining on site. Institutional controls may include environmental covenants (also known as "deed restrictions"), zoning restrictions, public health advisories, or other administrative tools. The most common institutional control is an environmental covenant. Environmental covenants are legal recorded documents that typically limit certain uses of the property, such as: Drilling a water supply well on the property. Disturbing pavement covering contaminated areas. Residential use of the property.

Date of Government Version: 04/10/2023

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS TSCA: PFAS Manufacture and Imports Information

EPA issued the Chemical Data Reporting (CDR) Rule under the Toxic Substances Control Act (TSCA) and requires chemical manufacturers and facilities that manufacture or import chemical substances to report data to EPA. EPA publishes non-confidential business information (non-CBI) and includes descriptive information about each site, corporate parent, production volume, other manufacturing information, and processing and use information.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS ATSDR: PFAS Contamination Site Location Listing

PFAS contamination site locations from the Department of Health & Human Services, Center for Disease Control & Prevention. ATSDR is involved at a number of PFAS-related sites, either directly or through assisting state and federal partners. As of now, most sites are related to drinking water contamination connected with PFAS production facilities or fire training areas where aqueous film-forming firefighting foam (AFFF) was regularly used.

PFAS WQP: Ambient Environmental Sampling for PFAS

The Water Quality Portal (WQP) is a part of a modernized repository storing ambient sampling data for all environmental media and tissue samples. A wide range of federal, state, tribal and local governments, academic and non-governmental organizations and individuals submit project details and sampling results to this public repository. The information is commonly used for research and assessments of environmental quality.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

COUNTY RECORDS

KING COUNTY:

WA LF KING: Abandoned Landfill Study in King County

The King County Abandoned Landfill Survey was conducted from October through December 1984 by the Health Department's Environmental Health Division at the request of the King County Council. The primary objective of the survey was to determine if any public health problems existed at the predetermined 24 sites.

Date of Government Version: 04/30/1985

TACOMA/PIERCE COUNTY:

WA LF TACOMA/PIERCE: Closed Landfill Survey
Following numerous requests for information about closed dumpsites and landfills in Pierce County, the Tacoma-Pierce County Health Department decided to conduct a study on the matter. The aim of the study was to evaluate public health risks associated with the closed dumpsites and landfills, and to determine the need, if any, for further investigations of a more detailed nature. The sites represent all of the known dumpsites and landfills closed after 1950.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Version Date:	2020

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

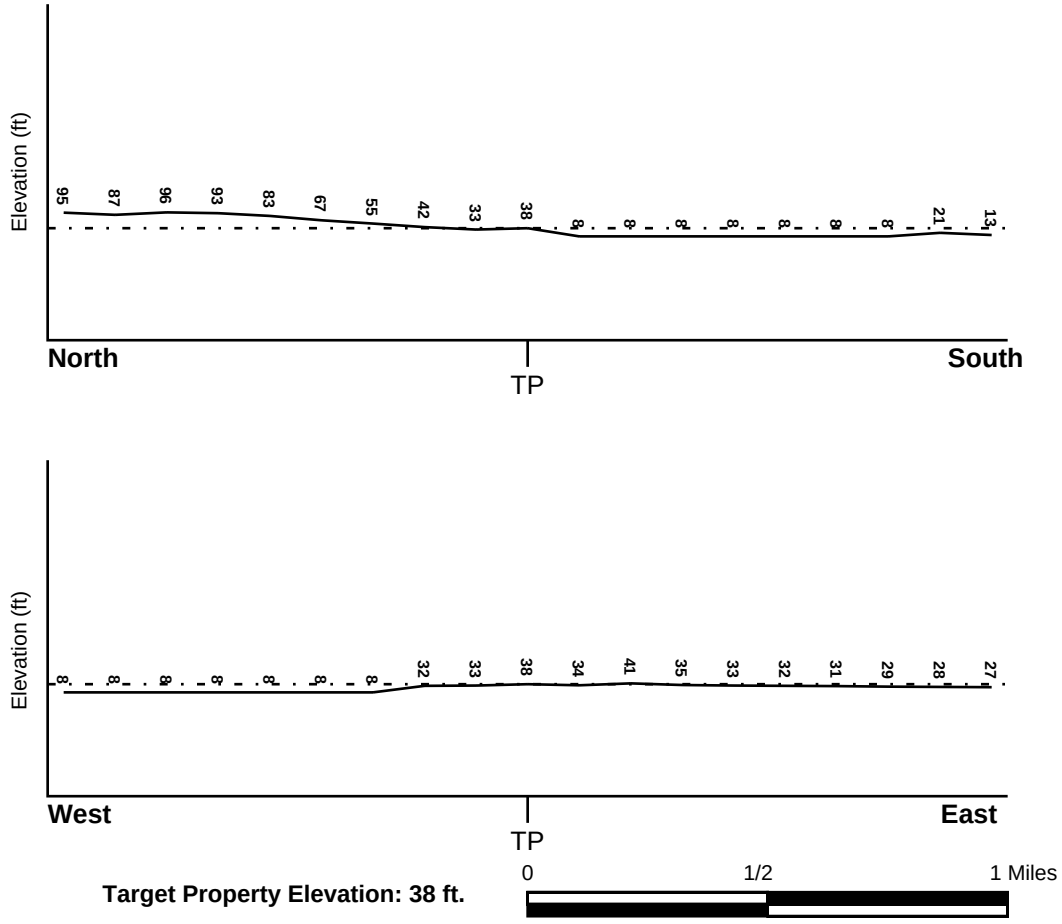
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 38 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
53011C0481D	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type

53011C0482D	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
PORTLAND	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
F478	1/4 - 1/2 Mile NNW	Not Reported
K667	1/4 - 1/2 Mile North	SSW
1G	1/4 - 1/2 Mile North	SSW
2G	1/4 - 1/2 Mile NNW	Not Reported

For additional site information, refer to Physical Setting Source Map Findings.

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Fill land

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches	variable	Not reported	Not reported	Max: Min:	Max: Min:

Soil Map ID: 2

Soil Component Name: Lauren

Soil Surface Texture: gravelly loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Ecology
Telephone: 360-407-6121

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Wells
Source: Department of Health
Telephone: 360-236-3148
Group A and B well locations.

Water Well Listing
Source: Public Utility District
Telephone: 206-779-7656
A listing of water well locations in Kitsap County.

Ecology Well Logs
Source: Department of Ecology
Telephone: 360-407-7294
Point geodatabase with a record for each Ecology well report. Points are located by quarter quarter section centroid. Points contain all well report types including water wells, resource protection wells, and decommissioned wells.

OTHER STATE DATABASE INFORMATION

Oil and Gas Well Listing
Source: Department of Natural Resources
Telephone: 360-902-1450
Locations that represent oil and gas test well sites in Washington State from 1890 to present.

RADON

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Parametrix, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

Institutional and Engineering Controls

Indicate whether Institutional Controls are required	
Categories of Controls	
Additional Institutional Controls Information	**Benzene was detected in soil vapor sample SV-3 in exceedance of MTCA Method B Sub-Slab Soil Gas Screening Levels. Further evaluation is necessary to determine whether or not this screening level exceedance presents an actual risk to human health. 1,3-Butadiene was detected above the MTCA Method B Sub-Slab Soil Gas Screening Level in two of three soil vapor samples collected at the South Site. Further evaluation is necessary to determine whether or not this screening level exceedance presents an actual risk to human health. This potential risk could be mitigated through the installation of vapor mitigation systems beneath newly constructed buildings. The source of the 1,3 butadiene remains unknown.**
Address of Data Source (URL if available)	
Are Institutional Controls in Place	**No**

Additional Property Attributes

Property Highlights	**A geophysical survey of the South Site did not identify any underground structures or USTs, except for concrete/rebar debris. Soil borings GP-S-1 and GP-S-4, located on the western boundary of the South Site, did not contain elevated petroleum constituent concentrations. Lead and PAH TEQ detected in sample GP-S-2-0-3 at the South Site exceeded their MTCA Method A CUL. Benzene was detected in soil vapor sample SV-3 in exceedance of MTCA Method B Sub-Slab Soil Gas Screening Levels. Further evaluation is necessary to determine whether or not this screening level exceedance presents an actual risk to human health. 1,3-Butadiene was detected above the MTCA Method B Sub-Slab Soil Gas Screening Level in two of three soil vapor samples collected at the South Site. Further evaluation is necessary to determine whether or not this screening level exceedance presents an actual risk to human health. This potential risk could be mitigated through the installation of vapor mitigation systems beneath newly constructed buildings. The source of the 1,3-butadiene remains unknown.** **Former Use: Historical documents indicate that the Property was developed with single-family residences by 1890 and remained exclusively in residential use until the 1940s, with the exception of the southeastern corner of the Property, which was occupied by the Vancouver Soda Water Works by 1907. The northwestern area of the Property was in commercial use as a welding shop by 1949. The Property was in exclusively commercial use since at least the 1960s, with historical businesses including potato chip manufacturing, storage, auto repair, fishing tackle manufacturing, and other retail and office uses. The Property has been in use as a parking lot or has been a vacant lot with no structures since at least 2005. The City of Vancouver purchased the Property in 2010.**

CERTIFICATION

The technical material and data contained in this document were prepared under the supervision and direction of the undersigned. We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the *all appropriate inquiries* in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

Parametrix was retained by the Washington State Department of Transportation to perform a Phase I Environmental Site Assessment (ESA) on three contiguous parcels located generally to the east of Interstate 5, north of the Columbia River, south of E Evergreen Boulevard, and west of E Reserve Street in Vancouver, Washington (Figure 1). The Phase I ESA focused on partial areas of the properties that may be acquired as part of the Interstate Bridge Replacement (IBR) Program. The subject property consists of the parcels identified as IBR-38279914, IBR-38279927, and IBR-38279935. Based on the findings of this investigation, Parametrix concluded the following:

1. The subject property includes three separate Clark County Tax Lots: 38279914, 38279927, and 38279935. It currently includes the Fort Vancouver National Historic Site and Old Apple Tree Park. The subject property contains multiple historical buildings, a pedestrian overpass, Pearson Air Museum, the visitor center, the Discovery Historic Loop Trail, Pearson Field landing strip, and asphalt parking lots. The subject property is bisected by SE Columbia Way, the BNSF railway, State Route 14, and E 5th Street. The subject property is bounded to the north by parks and schools; to the east by residences and Pearson Field; to the south by the Columbia River, a former electrical substation, and restaurants; and to the west by Interstate 5 and downtown Vancouver.
2. A review of Sanborn Fire Insurance maps and historical aerial photographs indicated that the subject property was operated as Fort Vancouver before 1884. Sometime between 2006 and 2011, U.S. Army operations were discontinued on the subject property and the Discovery Historic Loop Trail was constructed. No evidence of recognized environmental conditions (RECs) were identified on the subject property, including the partial areas of the parcels that may be acquired as part of the IBR Program, during the historical aerial review.
3. Based on the age of the buildings, there is potential for lead-based paint or asbestos-containing materials and polychlorinated biphenyls (PCBs) to have been used in construction of the buildings and electrical equipment. However, none of the buildings are located within the partial areas of the parcels that may be acquired as part of the IBR Program.
4. The subject property includes one site that is listed on a regulatory database (the Vancouver Barracks Western Portion/South Barracks/Columbia River MRS site, Washington State Department of Ecology (Ecology) Facility Site ID 23074). After a survey for the potential presence of unexploded ordinance or munitions constituents, a No Further Action determination was issued by Ecology. Based on the investigation findings and regulatory status of the site, the facility does not represent a potential REC to the subject property.
5. A review of regulatory information indicated that several nearby sites were identified in the regulatory record databases. However, based on regulatory status and distance from the subject property, none of the sites identified appear to present a REC to the subject property.

[redacted]

Based upon the conclusions of this investigation of the subject property, Parametrix offers the following recommendations:

1. No further assessment of environmental conditions on the subject property, including the partial areas of the parcels that may be acquired as part of the IBR Program, is recommended at this time.

1. INTRODUCTION

Parametrix was retained by the Washington State Department of Transportation (WSDOT) to perform a Phase I Environmental Site Assessment (ESA) on three contiguous parcels located generally to the east of Interstate 5, north of the Columbia River, south of E Evergreen Blvd, and west of E Reserve St in Vancouver, Washington (herein referred to as the subject property) (Figure 1). The subject property is located in Clark County, Washington, and consists of three parcels included in the Interstate Bridge Replacement (IBR) Program. The property identifiers, tax lot IDs, and street addresses for each of the three parcels are listed below, and the configuration of the properties is shown in Figure 2.

- IBR-38279914 38279914 1105 E 5th Street
- IBR-38279927 38279927 No address
- IBR-38279935 38279935 112 SE Columbia Way

It is our understanding that WSDOT may pursue acquisition of a portion of the parcels making up the subject property as part of the IBR Program. The proposed acquisition areas are shown on Figure 2. The Phase I ESA focused primarily on the partial areas of each parcel that may be acquired as part of the IBR Program and assessed the potential for recognized environmental conditions on the acquisition areas from the larger property and adjacent or nearby properties.

This Phase I ESA includes a review of available documentation pertaining to the subject property, a site reconnaissance, and a review of pertinent public agency documents. The Phase I ESA consisted of two distinct tasks: (1) a review of documents and oral information (if available), and (2) a site examination. Conclusions and recommendations within this report are based solely on observed evidence and data collected during the performance of this assessment.

1.1 Purpose

The Phase I ESA was conducted in general accordance with ASTM Standard E1527-21, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*, which defines the generally accepted industry practices and procedures currently applicable at the time and place of this study. The Phase I ESA is intended to permit the user to satisfy the requirements to qualify for the bona fide prospective purchaser limitation under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), and as such constitutes "all appropriate inquiries in the previous ownership and uses of the property consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601 (35)(B).

The purpose of this Phase I ESA is to identify Recognized Environmental Conditions (RECs) on or near the subject property. The term Recognized Environmental Conditions is defined in ASTM Standard E1527-21 as:

> "…(1) the presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* due to a *release* to the *environment*; (2) the likely presence of *hazardous substances*

> or *petroleum products* in, on, or at the *subject property* due to a *release* or likely *release* to the *environment*; or (3) the presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* under conditions that pose a *material threat* of a future *release* to the *environment*."

In accordance with ASTM Standard E1527-21, some RECs may be further defined as historical recognized environmental conditions (HRECs) or controlled recognized environmental conditions (CRECs).

An HREC is defined as:

> "…*a past release* of any *hazardous substances* or *petroleum products* that has occurred in connection with the *property* and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the *property* to any required controls."

A CREC is defined as:

> "…*a recognized environmental condition* resulting from a past *release of hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority, with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls."

This Phase I ESA endeavors to identify RECs, HRECs, and/or CRECs at the subject property.

1.2 Significant Assumptions

This assessment was conducted in accordance with generally accepted industry practices and procedures within the scope of work authorized at the time and place of this study. Parametrix's observations are limited to those areas to which it had access on the subject property.

Phase I ESA methodology included viewing accessible areas of the subject property on foot. An interview was not able to be conducted with a property representative to identify any potential environmental conditions during the Phase I ESA process. Unless otherwise stated, no other exceptions to the guidelines presented in ASTM E1527-21 were made during completion of this Phase I ESA.

1.3 Limitations

The findings, conclusions, and recommendations presented in this report are based on site conditions and the best available information known or made available by regulators, other consultants, or other sources at the time of the investigation. Parametrix conducted a diligent search and investigation in compliance with prevailing standards of the profession; however, certain adverse conditions may exist at the site not detected at the time of the investigation.

The services provided under this contract, as described in this report, include professional opinions and judgments based on data collected. These services have been provided according to generally accepted engineering practices. The opinions and conclusions contained in this report are typically based on information obtained from the following:

- Observations and measurements made by Parametrix field staff.
- Contacts and discussions with regulatory agencies and others.
- Review of available hazardous substance or solid waste lists.
- Opinions and judgments of Parametrix based on the information available.

In the professional judgment of Parametrix, the services performed pursuant to the scope of services are an adequate basis to collect data for a preliminary evaluation of the site and upon which to draw the conclusions stated in this report.

2. SUBJECT PROPERTY DESCRIPTION

The following sections summarize the location, characteristics, and physical setting of the subject property.

2.1 Location

The subject property includes three contiguous parcels located generally to the east of Interstate 5, north of the Columbia River, south of E Evergreen Boulevard, and west of E Reserve Street in Vancouver, Washington. The Phase I ESA focused on the subject property, which consists of partial areas of the three parcels that may be acquired as part of the IBR Program, as detailed in Table 1. The site location is shown on Figure 1, the Site Vicinity Map. The boundary of the subject property is shown on Figure 2 and additional details of the acquisition areas are provided in Figures 3 and 4.

The proposed acquisition areas include the following (see Figures 2 through 4):

- Waterfront: approximately 500-foot by 20-foot rectangle north of SE Columbia Way
- Old Apple Tree Park: approximately 10,500-square-foot polygon within the park
- Village: approximately 475-foot length with variable width (ranging from 0 to 7 feet) north of State Route (SR) 14
- South Barracks: approximately 40-foot by 3-foot triangle at the northwest corner of South Barracks area

2.2 Site and Vicinity Characteristics

Characteristics of the subject property, including the partial areas of the parcels that may be acquired as part of the IBR Program, are summarized in Table 1.

Table 1. Subject Property Characteristics

IBR ID	Address	Owner	Total Area (acres)	Potential Acquisition Area (square feet)	Current Use (determined through visual observations)
IBR-38279914	1105 E 5th St	National Park Service	192	10,129	Fort Vancouver National Historic Site, including Visitor Center, Fort Vancouver, East Barracks, Pearson Air Museum, and Fort Vancouver Waterfront

IBR ID	Address	Owner	Total Area (acres)	Potential Acquisition Area (square feet)	Current Use (determined through visual observations)
IBR-38279927	None	National Park Service	2.0	7,655	Fort Vancouver National Historic Site, Discovery Historic Loop Trail
IBR-38279935	112 SE Columbia Way	City of Vancouver	1.2	10,655	Old Apple Tree Park and Discovery Historic Loop Trail

The subject property is bounded to the north by public parks and public schools; to the east by Pearson Field, commercial properties, and residential properties; to the south by the Columbia River; and to the west by Interstate 5 (Figure 2). The subject property is bisected by SE Columbia Way, the BNSF Railway, SR 14, and E 5th Street.

2.3 Physical Setting

The subject property is located in the Portland Basin, which marks the northern terminus of the Willamette Lowland in Oregon (DNR n.d.). The northern portion of the basin is known for its low topographic relief. The elevation of the subject property ranges from approximately 20 feet above mean sea level at the southern property boundary to approximately 110 feet above mean sea level at the northern property boundary. The Portland Basin is bounded by the Cascade Range to the east and the Coast Range to the west.

Geologic processes in the Portland Basin consist of volcanism, sedimentation, and cataclysmic flood deposits in both fluvial and marine depositional environments. The subject property lies on what is mapped as coarse-grained Missoula flood deposits, cobbly, sandy gravel deposited by the Missoula floods (Wells et al. 2020). Surface soils consist of gravelly loam.

The topography in the vicinity of the subject property is a consistent slope, rising with distance from the Columbia River. The depth to groundwater increases with distance from the Columbia River and the anticipated groundwater gradient is to the south toward the Columbia River. The southern boundary of the subject property is anticipated to be within the hyporheic zone for the Columbia River with a groundwater elevation is generally equivalent to the Columbia River elevation, approximately 6 feet below ground surface (bgs). Depth to groundwater adjacent to the northern portion of the subject property was approximately 90 feet bgs (Swanson et al. 1995).

2.4 Current Use of the Subject Property

The subject property includes the Fort Vancouver National Historic Site. Most of the site is open space. Developed areas include the historical Fort Vancouver, historical East Barracks, Pearson Air Museum,

the visitor center, Old Apple Tree Park, the Discovery Historic Loop Trail, Pearson Field landing strip, and associated parking lots and paved roads.

2.5 Descriptions of Improvements on the Subject Property

The subject property includes multiple historical buildings, Pearson Air Museum, the visitor center, and asphalt parking lots.

No buildings or other significant structures are located on the partial areas of the parcels that may be acquired as part of the IBR Program.

2.6 Environmental Liens

An environmental lien is defined by ASTM as a charge, security, or encumbrance upon title to a property to secure the payment of a cost, damage, obligation, or duty arising out of response actions, cleanup, or other remediation of hazardous substances or petroleum products. No evidence of environmental liens was identified during the course of the Phase I ESA process. However, a formal title search was not completed as part of the scope of work.

3. RECORDS REVIEW

The purpose of the records review task was to gather environmental data on the subject property prior to the site examination. The information review consisted of two subtasks: (1) a review of regulatory databases to find sites, including and close to the subject property, listed by federal and State of Washington agencies and (2) a compilation of historical uses of the subject property and site vicinity properties to determine whether past operations pose an environmental risk to the subject property.

The Environmental Data Resources (EDR) report (EDR 2023a) is a summary of state and federal database searches for sites of possible environmental concern. The information review enabled Parametrix personnel to characterize the types of activities performed at the site, identify data gaps prior to the site examination, and facilitate recognition of discrepancies between reported and observed data. Data gaps identified during the document review were addressed by interviewing knowledgeable personnel, observations during the site examination, or by additional detailed investigation.

It should be noted that the information supplied by EDR is reported as Parametrix received it. EDR, in turn, reports information as it is provided in various government databases. It is not possible for either Parametrix or EDR to verify the accuracy or completeness of information contained in these databases. However, the use of and reliance on this information is a generally accepted practice in the conduct of environmental due diligence. The following sections present information from the document review.

3.1 Standard Environmental Record Sources

The following section summarizes information collected from records maintained by the U.S. Environmental Protection Agency (EPA) and the Washington State Department of Ecology (Ecology). The information includes details on sites identified in regulatory databases within recommended ASTM search distances. A complete listing of the databases reviewed is included in the EDR Radius Map™ Report (Appendix A).

3.1.1 Review of Washington State Department of Ecology Databases

The following sections summarize the most relevant information obtained from the EDR report regarding sites identified within the ASTM E1527-21 search radii from the following databases. Additional information regarding these sites was reviewed on Ecology's Integrated Site Information System website to supplement data gaps in the EDR report. Relevant database listings from Ecology include the following:

- Underground Storage Tank (UST) List
- Leaking Underground Storage Tank (LUST) List
- Confirmed and Suspected Cleanup Site List (CSCSL)

- CSCSL – No Further Action (NFA)
- SPILLS
- Voluntary Cleanup Program (VCP)
- Independent Cleanup Report (ICR)
- Landfill and/or Solid Waste Disposal Site Lists (SWF/LF)
- Brownfields

3.1.1.1 Underground Storage Tank List

The Ecology UST List identifies registered USTs, which are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data were obtained from Ecology's UST Site/Tank Report database.

Information contained in the EDR report indicates that the subject property is not listed as a UST site. Two UST sites are located within 0.25 miles of the subject property.

- The Hannah Motor Company sites (300 Washington and 400 Washington) are located 0.179 miles west of the subject property. The 300 Washington site is also listed on the LUST, CSCSL, CSCSL-NFA, and ASBESTOS databases. Two USTs, one on each property, were formerly present but have been removed (UST Site IDs 10252 and 9879, Appendix E). The UST on 300 Washington was identified as a LUST but has been identified as cleaned up and in compliance by Ecology.
- The City of Vancouver right-of-way site (101 5th Street) is located approximately 0.224 miles west of the subject property. This site is reported to have three UST tanks where closure is currently in progress (UST Site ID 620233, Appendix E). All three USTs contained leaded gasoline. No active tanks are reported.

Unless otherwise noted, the mere presence of a UST near a site does not, in itself, constitute a REC. Where available, other information was reviewed regarding the presence of a UST including the age of the facility, proximity to the subject property, and known releases or spills. UST sites which have had known releases are discussed in Section 3.1.1.2 below.

3.1.1.2 Leaking Underground Storage Tank List

The LUST Incident Report contains an inventory of reported LUST incidents. The data were obtained from Ecology's LUST Database List. The subject property is not listed as a LUST site.

Five LUST sites were identified within 0.5 miles of the subject property. The following LUST sites were located within 0.25 miles of the subject property:

- The Hannah Motor Company site (300 Washington) is located 0.179 miles west of the subject property. This site is also listed on the LUST, CSCSL, CSCSL-NFA, and ASBESTOS databases and has been assigned Ecology Facility Site ID 12126843. One LUST was formerly present but has been removed. Ecology identifies that this LUST has been cleaned up and complies with

the Model Toxics Control Act. Based on the distance from the subject property and the regulatory status of the site, the facility does not represent a potential REC to the subject property.

Based on the distance from the subject property (over 0.25 miles from the subject property), remediation, and regulatory status (NFA determinations), the remainder of the LUSTs sites do not represent potential RECs to the subject property, including the partial areas of the parcels that may be acquired as part of the IBR Program.

3.1.1.3 Confirmed and Suspected Contaminated Sites List

The state hazardous waste sites records are the states' equivalent to the Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS). These sites may or may not already be listed on the federal CERCLIS List. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data were obtained from Ecology's CSCSL.

Eighteen CSCSL sites were identified within 1 mile of the subject property. Of the 19 sites, two are located within 0.25 miles of the subject property. The remainder of the sites do not represent potential RECs for the subject property based on distance from the subject property, understood extent of contamination, and/or regulatory status of the site.

- The Hannah Motor Company site (300 Washington) is located 0.179 miles west of the subject property. This site is also listed on the UST, LUST, CSCSL-NFA, and ASBESTOS databases and has been assigned Ecology Facility Site ID 12126843. A site investigation in 2015 identified petroleum-contaminated soil (diesel and oil-range) at estimated depths of up to 15 feet bgs due to former hydraulic oil releases from vehicle hoists and residual diesel impacts within an on-site drywell. Lead and polychlorinated biphenyls (PCBs) were also detected in soil at concentrations less than the screening levels. Based on these soil data, the site was assigned Facility Site ID Number 12126843 (Cleanup Site IDs 7922 and 13035). Based on the distance, the shallow depth of impacts, and the lack of evidence of a major hazardous materials release, the facility is not a REC to the subject property.
- The Vancouver Red Lion Hotel site (100 Columbia Street) is located 0.201 miles southwest of the subject property. This site is also listed on the SPILLS, ASBESTOS, and National Pollutant Discharge Elimination System databases. The site has confirmed total petroleum hydrocarbon, metals, and polycyclic aromatic hydrocarbon contamination due to previous industrial activities. Ecology assigned Facility Site ID 15891 to this site. Site remediation is currently underway. Based on the distance and understood groundwater flow direction at the site, the facility is not considered a REC to the subject property.

A subset of the CSCSL is the CSCSL-NFA. The database contains information about sites previously on the CSCSL that have received an NFA determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when cleanup activities are completed. Instead, a NFA code is entered based upon the type of NFA determination the site received.

One CSCSL-NFA site was identified within 0.25 miles of the subject property and an additional four CSCSL-NFA sites were identified within 0.5 miles of the subject property. Based on the distance from subject property and NFA determinations, none of the identified sites appear to represent RECs to the subject property, including the partial areas of the parcels that may be acquired as part of the IBR Program, unless specifically noted otherwise in another section.

3.1.1.4 SPILLS Database

This database provides a comprehensive list of reported spills. The subject property is not listed as a SPILLS site.

3.1.1.5 Voluntary Cleanup Program

This database provides a listing of sites that have entered either the VCP or its predecessor, the Independent Remedial Action Program.

One VCP site is reported within approximately 0.5 miles of the subject property. The site has received an NFA determination from Ecology. Based on distance from the subject property and current regulatory status, this VCP site does not represent a REC to the subject property.

3.1.1.6 Independent Cleanup Report

These are remedial action reports Ecology has received from either the owner or operator of the site. These actions have been conducted without department oversight or approval and are not under an order or decree.

The subject property is not listed as an ICR site. Three ICR sites are reported within approximately 0.5 miles of the subject property and are either discussed above in other sections or do not represent a REC to the subject property based on distance and regulatory status.

3.1.1.7 Solid Waste Facilities/Landfill

The SWF/LF records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data were obtained from Ecology's Solid Waste Facilities Handbook.

The subject property is not listed as a SWF/LF site. No SWF/LF sites were reported within 0.5 miles of the subject property.

3.1.1.8 Brownfields List

The Brownfields List is a database of sites that Ecology considers brownfields or that have received financial or technical assistance for cleanup. A brownfield is a real property where expansion or redevelopment is complicated by actual or perceived environmental contamination. The subject property is not listed as State Brownfields site. No State Brownfields sites were reported within 0.5 miles of the subject property.

3.1.2 Environmental Protection Agency Databases

The EPA administers several programs designed to protect the environment and monitor the generation, storage, treatment, and disposal of hazardous substances. The following sections summarize the most relevant information obtained from the EDR report regarding sites identified within the ASTM E1527-21 search radii from the following databases:

- National Priorities List (NPL)
- CERCLIS List
- Corrective Action Report (CORRACTS) List
- RCRA
- Resource Conservation and Recovery Act Information (RCRAInfo) List
- Emergency Response Notification System (ERNS) List
- U.S. Brownfields List

3.1.2.1 NPL List

The NPL identifies priority hazardous waste sites for remedial actions under the EPA Superfund program. Information contained in the EDR report indicates that the subject property is not listed as an NPL site. No NPL sites are listed within 1 mile of the subject property.

3.1.2.2 CERCLIS List

The EPA's CERCLIS List identifies sites that may potentially pose a threat to the environment or the health of the general public.

Information contained in the EDR report indicates that the subject property is not listed as a CERCLIS site. No CERCLIS sites were identified within 0.5 miles of the subject property.

The EPA also publishes the CERCLIS-NFRAP List that identifies CERCLIS sites that have been designated "no further remedial action planned" (NFRAP) and that have been removed from the CERCLIS List. Information contained in the EDR report indicates that the subject property is not listed as a CERCLIS-NFRAP site. No CERCLIS-NFRAP site were identified within 0.5 miles of the subject property.

3.1.2.3 CORRACTS List

The CORRACTS List identifies hazardous waste handlers with a history of RCRA corrective action activity. This list shows which corrective action events have occurred for every hazardous waste handler that has had corrective action activity due to improper procedures or handling.

Information contained in the EDR report indicates that the subject property is not listed as a CORRACTS site. No CORRACTS sites are listed within 1 mile of the subject property.

3.1.2.4 RCRA Generators List

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the RCRA of 1976 and the Hazardous and Solid Waste Amendments of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by RCRA.

Conditionally exempt small quantity generators generate less than 100 kilograms (kg) of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Very small quantity generators generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators generate more than 1,000 kg of hazardous waste, or more than 1 kg of acutely hazardous waste per month. Non-generators (NonGen/No Longer Regulated) do not presently generate hazardous waste.

Information contained in the EDR report indicates that the subject property is not listed in any RCRA database.

Four RCRA NonGen/No Longer Regulated sites are listed within 0.25 miles of the subject property. None of these sites are adjacent to the subject property and based on a review of the regulatory status of these sites, none of these sites represent RECs to the subject property. The Hannah Motor Company and Red Lion sites were listed for compliance violations and are further explained in Section 3.1.1.3.

The EPA also regulates the management of hazardous waste at transportation, storage, and disposal facilities (TSDF). Information contained in the EDR report indicates the subject property is not listed as a TSDF site. No TSDF sites were identified within 0.5 miles of the subject property.

3.1.2.5 ERNS List

The ERNS List is a national database containing information from spill reports made to federal authorities. Information contained in the EDR report indicates that no ERNS sites are listed within 1 mile of the subject property.

3.1.2.6 U.S. Brownfields List

The EPA's U.S. Brownfields List identifies brownfield properties addressed by Cooperative Agreement Recipients or by Targeted Brownfields Assessments. The EDR report indicates the subject property is not listed as a U.S. Brownfields site. Four U.S. Brownfields sites are listed within 0.5 miles of the subject property. Of these sites, one is located within 0.25 miles of the subject property. The remainder of the sites do not represent potential RECs for the subject property based on distance from the subject property, understood extent of contamination, and/or regulatory status of the site (see EPA brownfield summary, Appendix E).

- The South of Railroad site (tax lots 48850000 and 48840000) is located 0.245 miles west of the subject property. The property was occupied by an asphalt paving plant from the 1940s through the early 1970s, causing petroleum-contaminated soil. Based on the distance and understood groundwater flow direction at the site, the facility is not considered a REC to the subject property.

3.1.3 Other Databases

The following sections include other databases identified in the EDR report that may be relevant to assessing potential environmental liability or environmental issues at the subject property.

3.1.3.1 EDR Proprietary Databases

EDR has conducted research on the occurrence of historical business practices that may constitute a REC to properties. The database was developed from data found in historical city directories and contains information on over 100,000 former gas stations, manufactured gas plants, and dry cleaners. Due to the nature of these businesses, the sites have the potential for soil and groundwater contamination to have occurred.

EDR Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. The listings reviewed include, but were not limited to, gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, and/or service station.

Unless otherwise noted, the mere presence of historical auto stations near a site does not, in itself, constitute a REC.

A review of the EDR Historical Auto Stations list, as provided by, indicated that there are no EDR Historical Auto Stations sites within 0.125 miles of the subject property.

EDR Manufactured Gas List

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800s to 1950s to produce a gas that could be distributed and used as fuel. Many of the by-products of the gas production, such as coal tar (oily waste containing volatile and nonvolatile chemicals), sludges, oils, and other compounds, are potentially hazardous to human health and the environment. The by-products from this process were frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

One former manufactured gas site is listed 0.770 miles west of the subject property. Based on the distance and understood groundwater flow direction at the site, the facility is not considered a REC to the subject property.

EDR Historical Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry-cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The

categories reviewed included, but were not limited to, dry cleaners, cleaners, laundries, laundromats, cleaning/laundry businesses, wash and/or dry businesses.

A review of the EDR Historical Dry Cleaner list, as provided by EDR, indicated that there are no EDR Historical Dry Cleaner sites within 0.125 miles of the subject property.

3.1.4 Orphan Site List

Orphan sites are those for which mapping information is not detailed enough to plot the location of the site, or for which there is no known responsible party, or the responsible party is unwilling or unable to pay for cleanup. Based on a review of the information for and location of the orphan sites, none appear to represent a potential REC to the subject property.

3.1.5 Vapor Encroachment

ASTM Standard E1527-21 defines vapor migration as "the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface." The recognition of vapor migration as a possible REC may require incorporation of new types of controls and restrictions to address this contamination pathway.

The subject property and adjacent sites were reviewed in an effort to determine whether vapor migration has, or has the potential to have, occurred at the site, from adjacent properties. Based on the information reviewed, the subject property is not identified as a potential vapor intrusion site. There is no known presence of USTs on the subject property or adjacent properties.

3.2 Historical Use Information

The objective of the historical use information review is to develop a history of the previous uses of the subject property and surrounding area to help identify the likelihood that past uses have led to RECs in connection with the subject property. Parametrix researched the historical land use, occupancy, and ownership of the subject property and adjacent properties to evaluate historical uses that are known to be associated with RECs. Historical records reviewed include the EDR Certified Sanborn® Map Report (EDR 2023b) and the EDR Aerial Photo Decade Package (EDR 2023c).

3.2.1 Certified Sanborn® Map Report

Parametrix requested Sanborn Fire Insurance maps from EDR in an effort to help identify past land uses. Sanborn Fire Insurance maps from the years 1884, 1888, 1890, 1892, 1907, 1911, 1928, 1949, and 1966 were examined. A copy of the Certified Sanborn Map Report is included in Appendix B.

1884	The subject property is within the Government Reserve.
1888–1907	The subject property is within the Government Reserve. Several small structures are noted adjacent to Reserve Road.

1911	U.S. Army Stables have been constructed at the southeast corner of E. 5th Street and Reserve Road. The stables include a corral, wagon sheds, harness shop, artillery store, and other structures. The current BNSF Railway has been constructed.
1928–1949	The subject property is identified as U.S. Military Reservation. No structures are noted in this area.
1966	The subject property is identified as U.S. Military Reservation. No structures are noted in this area. Highway 99 and associated off-ramps have been constructed.

Information provided in the Sanborn Fire Insurance maps is limited but confirms that the subject property was operated as Fort Vancouver for the range of time described by the maps.

3.2.2 Historical Aerial Photograph Review

Historical aerial photographs of the subject property area were obtained from EDR in the EDR Aerial Photo Decade Package. Aerial photographs for the years 1936, 1948, 1951, 1960, 1970, 1975, 1981, 1990, 1994, 2000, 2006, 2011, 2014, 2017, and 2020 were examined. Copies of the aerial photographs are included in Appendix C. Observations are listed below and focused on the areas of acquisition, as identified in Section 2.1.

1936	The railroad and E 5th Street are present and bisect the subject property. The eastern portion of the subject property is not shown in this aerial photo. Areas near the Waterfront and Old Apple Tree Park contain several buildings. Disturbed soils and several small houses are present in the Village. In the Southern Barracks area, open land and several larger buildings are present. A rail spur appears to be present east of the Southern Barracks and Village. Commercial buildings are located west of the subject property. Additional large buildings that appear to be barracks or other military buildings, are present north of the subject property.
1948	Current SE Columbia Way and current SR 14 have been constructed and bisect the subject property. A rail spur overpass is present over the current SR 14. Small structures in the Village have been removed and an additional rail line has been constructed in this area. Additional large structures are present in the Southern Barracks. No other changes are evident on the subject property.
1951	Little to no change is evident on the subject property or surrounding properties.
1960	The western span of the Interstate Bridge has been constructed and off-ramps have been constructed adjacent to the SE Columbia Way and Old Apple Tree Park areas. No other changes are evident on the subject property.
1970	Several barrack buildings near the South Barracks have been removed and the area appears vegetated. The rail spur near the Village has been removed. No other changes are evident on the subject property.

1975	The rail overpass at SR 14 has been removed and the remaining rail spur may also have been removed. No other changes are evident on the subject property.
1981	Additional fill has been placed on the shoreline at the Waterfront. No other changes are evident on the subject property. Minor changes to buildings have occurred on properties north and south of the subject property.
1990	Cloverleafs have been added to connect SR 14 and Interstate 5, which has changed the shape of Old Apple Tree Park and the areas adjacent to SE Columbia Way to the current configuration. The previous buildings in the South Barracks have been removed and new buildings (current maintenance department) have been constructed. A walking path has been constructed on the Waterfront.
1994–2006	Little to no change is evident on the subject property or surrounding properties.
2011	The land bridge connecting Old Apple Tree Park to the Discovery Historic Loop Trail has been constructed. Some buildings in the South Barracks have been removed.
2014–2020	Little to no change is evident on the subject property or surrounding properties.

Based on the aerial photograph history, the subject property was an active army base from prior to 1936 until sometime between 2006 and 2011. Army operations on the subject property changed over time. In the early 1900s, the subject property contained many buildings, likely barracks and operations buildings, and appeared to be heavily used. In the late 1900s, most of the buildings on the subject property had been removed. The presence of the Discovery Historic Loop Trail begins circa 2011.

No evidence of RECs was identified on the subject property, including the partial areas of the parcels that may be acquired as part of the IBR Program, during the historical photograph review.

3.2.3 Local Agency Records

Information from local agencies was reviewed for environmental significance as described in the following sections.

3.2.3.1 Clark County

A review of permits for environmental significance (i.e., septic tank, stormwater, dry wells, and/or USTs or aboveground storage tanks) was completed using information provided by the Clark County Tax Assessor's Office. Table 2 summarizes the subject property tax lots, owner, and permits of potential environmental significance:

Table 2. Summary of Permits

IBR ID	Address	Owner	Permits of Potential Environmental Significance	Current Use
IBR-38279914	1105 E 5th St	National Park Service	Demolition permits issued in August 2000 and April 2002	Fort Vancouver Visitor Center, Fort Vancouver, East Barracks, Pearson Air Museum, and Fort Vancouver Waterfront
IBR-38279927	None	National Park Service	None	Fort Vancouver National Historic Site, Discovery Historic Loop Trail
IBR-38279935	112 SE Columbia Way	City of Vancouver	None	Old Apple Tree Park and Discovery Historic Loop Trail

No evidence of RECs was identified.

3.2.3.2 State of Washington Department of Ecology Database

A review of Ecology's Toxics Cleanup database identified two sites in the vicinity of the subject property, as described in detail below. Ecology's site reports are provided in Appendix E.

The Vancouver Barracks site (Ecology Facility Site ID 46955582) is located at Hathaway Road, Building 404, located north of the Southern Barracks. An NFA was issued August 20, 2012; concentrations of petroleum contamination in soil were less than the Model Toxics Control Act screening level. Based on the regulatory status of the site, the facility does not represent a potential REC to the subject property.

The Vancouver Barracks Western Portion/South Barracks/Columbia River MRS site (Ecology Facility Site ID 23074) is located within the subject property. The site was listed due to potential munitions constituents and unexploded ordinance. A survey was conducted in the Southern Barracks area and within the Columbia River and no evidence of munitions was identified. An NFA was issued November 12, 2012. Based on the investigation findings and regulatory status of the site, the facility does not represent a potential REC to the subject property.

3.3 Additional Environmental Information

The following sections provide a summary of additional environmental information obtained for the site.

3.3.1 Asbestos

The manufacture of most asbestos-containing materials (ACM) was banned by the EPA by 1979. Prior to this, asbestos was a common constituent of numerous building materials, including floor and ceiling tiles, caulking, pipe insulation, roofing materials, and exterior siding.

Based on the age of many of the buildings (constructed prior to 1948 with potential subsequent renovations), there is potential for ACM to have been used in the buildings. However, none of the buildings are located within the partial areas of the parcels that may be acquired as part of the IBR Program.

3.3.2 Lead-Based Paint

Before 1977, paint commonly contained lead, which can cause human health problems if ingested. Based on the age of the buildings (constructed prior to 1948 with potential subsequent renovations), there is potential for lead-based paint to have been used in the construction of the buildings. However, none of the buildings are located within the partial areas of the parcels that may be acquired as part of the IBR Program.

3.3.3 Polychlorinated Biphenyls

Transformers can potentially contain PCBs). Based on the age of the buildings (constructed prior to 1948 with potential subsequent renovations), there is some potential for PCBs to have been used in the construction of the buildings (primarily used in lighting and electrical equipment). However, none of the buildings are located within the partial areas of the parcels that may be acquired as part of the IBR Program.

3.3.4 Radon

Radon is a naturally occurring radioactive gas formed by the decay of uranium in some rocks and soil. The adverse health effects associated with radon gas depends upon various factors such as the concentration of the gas and exposure duration. The potential concentration of radon gas within a building depends on subsurface soil conditions, the integrity of the building's foundation, the existence of a basement or crawl space (primary areas of concern), and the building's ventilation.

Clark County ZIP code 98663 is located in the Federal EPA Radon Zone 1, indicating that the indoor average radon level is greater than 4 picocuries per liter. The Washington Department of Health has identified the radon risk in the area of the subject property as Medium. Based on this limited information, there is a potential that radon is an environmental concern at the property. However, none of the buildings are located within the partial areas of the parcels that may be acquired as part of the IBR Program.

4. FILE REVIEW

In accordance with ASTM Standard E1527-21, inquiries and review of previous investigations for the subject property and a review of regulatory files for the subject property or adjacent properties may be conducted to further evaluate environmental conditions on the property or adjacent properties and to fill in data gaps where applicable. Previous investigations and file reviews are summarized below.

4.1 Previous Investigations

Based on regulatory information from EDR and Ecology, the subject property is not listed on any regulatory database. No previous investigations of the subject property, including the partial areas of the parcels that may be acquired as part of the IBR Program, were identified during the course of this Phase I ESA.

4.2 Adjacent and Nearby Properties File Review

Several adjacent and nearby properties were listed on environmental databases, as described in Section 3. Sufficient site-specific information was available through review of the EDR report, as well as online Ecology files, to develop an opinion on the potential for these properties to have affected the subject property. Therefore, a specific file review (physical review at Ecology) was not required beyond those completed during the course of this Phase I ESA. Specific information on the nature of release, types of contaminants, media impacted, and the potential to have affected the subject property or otherwise caused environmental concern is provided in Section 3.

6. INTERVIEW

[redacted]

7. CONCLUSIONS

Based on the findings of this investigation, Parametrix concluded the following:

1. The subject property includes three separate Clark County Tax Lots: 38279914, 38279927, and 38279935. It currently includes the Fort Vancouver National Historic Site and Old Apple Tree Park. The subject property contains multiple historical buildings, a pedestrian overpass, Pearson Air Museum, the visitor center, the Discovery Historic Loop Trail, Pearson Field landing strip, and asphalt parking lots. The subject property is bisected by SE Columbia Way, the BNSF Railway, SR 14, and E 5th Street. The subject property is bounded to the north by parks and schools; to the east by residences and Pearson Field; to the south by the Columbia River, a former electrical substation, and restaurants; and to the west by Interstate 5 and downtown Vancouver.
2. A review of Sanborn Fire Insurance maps and historical aerial photographs indicated that the subject property was operated as Fort Vancouver before 1884. Sometime between 2006 and 2011, U.S. Army operations were discontinued on the subject property and the Discovery Historic Loop Trail was constructed. No evidence of RECs were identified on the subject property, including the partial areas of the parcels that may be acquired as part of the IBR Program, during the historical aerial review.
3. Based on the age of the buildings, there is potential for lead-based paint or ACM, and PCBs to have been used in construction of the buildings and electrical equipment. However, none of the buildings are located within the partial areas of the parcels that may be acquired as part of the IBR Program.
4. The subject property includes one site that is listed on a regulatory database (the Vancouver Barracks Western Portion/South Barracks/Columbia River MRS site, Ecology Facility Site ID 23074). After a survey for the potential presence of unexploded ordinance or munitions constituents, an NFA determination was issued by Ecology. Based on the investigation findings and regulatory status of the site, the facility does not represent a potential REC to the subject property.
5. A review of regulatory information indicated that several nearby sites were identified in the regulatory record databases. However, based on regulatory status and distance from the subject property, none of the sites identified appear to present a REC to the subject property.

[redacted]

8. RECOMMENDATIONS

Based upon the conclusions of this investigation of the subject property, Parametrix offers the following recommendations.

1. No further assessment of environmental conditions on the subject property, including the partial areas of the parcels that may be acquired as part of the IBR Program, is recommended at this time.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of state- and tribal (Superfund) equivalent sites

WA HSL: The Hazardous Sites List is a subset of the CSCSL Report. It includes sites which have been assessed and ranked using the Washington Ranking Method (WARM).

A review of the WA HSL list, as provided by EDR, and dated 02/23/2023 has revealed that there is 1 WA HSL site within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page

Facility Type: Hazardous Sites List
FSID Number: 5922991
Facility Status: Awaiting Cleanup

Lists of state- and tribal hazardous waste facilities

OR ECSI: The Environmental Cleanup Site Information System records information about sites in Oregon that may be of environmental interest. The data come from the Department of Environmental Quality.

A review of the OR ECSI list, as provided by EDR, and dated 03/01/2023 has revealed that there are 3 OR ECSI sites within approximately 1 mile of the target property.

Size: 1.53 acres
Investigation: No Further Action
State ID Number: 6128

WA CSCSL: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Ecology's Confirmed & Suspected Contaminated Sites List.

A review of the WA CSCSL list, as provided by EDR, and dated 04/10/2023 has revealed that there are 18 WA CSCSL sites within approximately 1 mile of the target property.

Lists of state and tribal leaking storage tanks

WA LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the Department of Ecology's Leaking Underground Storage Tanks Site List.

A review of the WA LUST list, as provided by EDR, has revealed that there are 5 WA LUST sites within approximately 0.5 miles of the target property.

Lists of state and tribal registered storage tanks

WA UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Ecology's Statewide UST Site/Tank Report.

A review of the WA UST list, as provided by EDR, and dated 02/06/2023 has revealed that there are 3 WA UST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

WA ICR: These are remedial action reports Ecology has received from either the owner or operator of the site. These actions have been conducted without department oversight or approval and are not under an order or decree.

A review of the WA ICR list, as provided by EDR, and dated 12/01/2002 has revealed that there are 3 WA ICR sites within approximately 0.5 miles of the target property.

WA CSCSL NFA: The data setcontains information about sites previously on the Confirmed and Suspected Contaminated Sites list that have received a No Further Action (NFA) determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when cleanup activities are completed. Instead a No Further Action code is entered based upon the type of NFA determination the site received.

A review of the WA CSCSL NFA list, as provided by EDR, and dated 04/10/2023 has revealed that there are 6 WA CSCSL NFA sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/06/2023 has revealed that there are 4 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 03/30/2023 has revealed that there is 1 PFAS ECHO site within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Highlights:	Former Use: The Property is in a commercial area at the southern edge of downtown Vancouver. It is bounded by Columbia Street to the east, Esther Street to the west, Columbia Way to the south and an active BNSF right-of-way to the north. The center of the Property is located approximately 600 feet north of the Columbia River, 700 feet west of Interstate Highway 5, and 500 feet south of Vancouver City Hall. The Property includes portions of two tax lots as well as interlaying property to which no tax number has been assigned. The Property was occupied by an asphalt paving plant from the 1940s through the early 1970s. Since the late 1970s, the Property has been vacant, or used

SOUTH OF RAILROAD (Continued) **1024079556**

	for surface parking. The asphalt paving plant is the suspected source of petroleum contamination observed in soil during a recent sewer force main installation project on the Property. Asphalt plant operations ended nearly 20 years prior to current (City of Vancouver) and most recent previous (ANT, LLC) ownership of Property.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

lights: Former Use: The 1.53-acre Property is comprised of four tax lots located in downtown Vancouver.. A 10,625 square-foot commercial building, known as the Webber Machine Works building, is located in the northeast corner of the Property. The remainder of the Property is in use as an asphalt paved parking lot. The Property is zoned for commercial use. REC #1: Records show that the Property was historically occupied by light industrial operations and fuel dispensing facilities. No evidence of a significant release associated with these historical Property uses was identified. REC #2: A release was reported during decommissioning activities (Cleanup Site ID 11159, LUST ID 2453) in 1992. No evidence of significant petroleum or hazardous substance releases was observed during the drilling of soil or soil vapor borings or reflected in laboratory testing of soil samples collected. REC #3: Ecology records indicate the presence of a gasoline UST on the site. It is unknown if this UST has been removed. No evidence of significant petroleum or hazardous substance releases was observed during drilling or reflected in laboratory testing of soil or soil vapor samples collected. REC #4: Historical city directory information indicates the Interstate Fuel Company was located adjacent south of the Property (north of the railroad right-of-way) in 1966. No evidence of significant petroleum or hazardous substance releases was observed or reflected in laboratory testing of soil samples collected.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Recipient name: City of Vancouver
Grant type: Assessment
Region: 10
perty Number: 48860000, 48900000, 48852000, 48890000
Parcel size: 1.54
Latitude: 45.6235367
Longitude: -122.5003208
HCM Label: Address Matching-House Number
Map Scale: Not reported
Point of Reference: Entrance Point of a Facility or Station
Highlights: A geophysical survey of the South Site did not identify any underground structures or USTs, except for concrete/rebar debris. Soil borings GP-S-1 and GP-S-4, located on the western boundary of the South Site, did not contain elevated petroleum constituent concentrations. Lead and PAH TEQ detected in sample GP-S-2-0 -3 at the South Site exceeded their MTCA Method A CUL. Benzene was detected

SOUTH OF CITY HALL (Continued) **1024079555**

in soil vapor sample SV-3 in exceedance of MTCA Method B Sub-Slab Soil Gas Screening Levels. Further evaluation is necessary to determine whether or not this screening level exceedance presents an actual risk to human health. 1,3-Butadiene was detected above the MTCA Method B Sub-Slab Soil Gas Screening Level in two of three soil vapor samples collected at the South Site. Further evaluation is necessary to determine whether or not this screening level exceedance presents an actual risk to human health. This potential risk could be mitigated through the installation of vapor mitigation systems beneath newly constructed buildings. The source of the 1,3 butadiene remains unknown. Former Use: Historical documents indicate that the Property was developed with single-family residences by 1890 and remained exclusively in residential use until the 1940s, with the exception of the southeastern corner of the Property, which was occupied by the Vancouver Soda Water Works by 1907. The northwestern area of the Property was in commercial use as a welding shop by 1949. The Property was in exclusively commercial use since at least the 1960s, with historical businesses including potato chip manufacturing, storage, auto repair, fishing tackle manufacturing, and other retail and office uses. The Property has been in use as a parking lot or has been a vacant lot with no structures since at least 2005. The City of Vancouver purchased the Property in 2010.

SOUTH OF CITY HALL (Continued) **1024079555**

HCM Label:	Address Matching-House Number
Map Scale:	Not reported
Point of Reference:	Entrance Point of a Facility or Station
Highlights:	A geophysical survey of the South Site did not identify any underground structures or USTs, except for concrete/rebar debris. Soil borings GP-S-1 and GP-S-4, located on the western boundary of the South Site, did not contain elevated petroleum constituent concentrations. Lead and PAH TEQ detected in sample GP-S-2-0 -3 at the South Site exceeded their MTCA Method A CUL. Benzene was detected in soil vapor sample SV-3 in exceedance of MTCA Method B Sub-Slab Soil Gas Screening Levels. Further evaluation is necessary to determine whether or not this screening level exceedance presents an actual risk to human health. 1,3-Butadiene was detected above the MTCA Method B Sub-Slab Soil Gas Screening Level in two of three soil vapor samples collected at the South Site. Further evaluation is necessary to determine whether or not this screening level exceedance presents an actual risk to human health. This potential risk could be mitigated through the installation of vapor mitigation systems beneath newly constructed buildings. The source of the 1,3 butadiene remains unknown. Former Use: Historical documents indicate that the Property was developed with single-family residences by 1890 and remained exclusively in residential use until the 1940s, with the exception of the southeastern corner of the Property, which was occupied by the Vancouver Soda Water Works by 1907. The northwestern area of the Property was in commercial use as a welding shop by 1949. The Property was in exclusively commercial use since at least the 1960s, with historical businesses including potato chip manufacturing, storage, auto repair, fishing tackle manufacturing, and other retail and office uses. The Property has been in use as a parking lot or has been a vacant lot with no structures since at least 2005. The City of Vancouver purchased the Property in 2010.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Name:	WEST OF CITY HALL
Address:	503 AND 615 W 6TH STREET AND 400 ESTHER STREET
Recipient name:	City of Vancouver
Grant type:	Assessment
Region:	10
Property Number:	Not reported
Parcel size:	3.1
Latitude:	45.624711
Longitude:	-122.676451
HCM Label:	Address Matching-House Number
Map Scale:	Not reported
Point of Reference:	Entrance Point of a Facility or Station
Highlights:	Soil and soil vapor samples were collected from the West Site to evaluate the potential for human health risk from historical operations on and in the vicinity of the site. No soil sample concentrations detected on the West Site exceeded MTCA Method A CULs for soil. Former Use: Historical documents indicate that the Property was developed with single-family residences by 1890 and remained in residential use until approximately 1907 when commercial development began. Records show that historical Property uses included offices and commercial development, including an automotive repair shop in the early 1990s. Since approximately 2000, a warehouse in the western area of the Property has been the only building on the Property. The eastern area of the Property has been a paved parking lot since the late 2000s. The City of Vancouver acquired the Property through bankruptcy in 2010.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
