Before 1977, paint commonly contained lead, which is considered to cause human health problems if ingested. Based on the age of the buildings (constructed between 1960 and 1994), there is potential for lead-based paint (LBP) to have been used in the construction of the buildings. No buildings are present on the subject property.

3.3.3 Polychlorinated Biphenyls

Transformers can potentially contain polychlorinated biphenyls (PCBs). Based on the age of the buildings (constructed between 1960 and 1994), there is some potential for PCBs to have been used in the construction of the buildings (primarily used in lighting and electrical equipment). No buildings are present on the subject property.

3.3.4 Radon

Radon is a naturally occurring radioactive gas formed by the decay of uranium in some rocks and soil. The adverse health effects associated with radon gas depends upon various factors such as the concentration of the gas and exposure duration. The potential concentration of radon gas within a building depends on subsurface soil conditions, the integrity of the building's foundation, the existence of a basement or crawl space (primary areas of concern), and the building's ventilation.

Clark County is located in the Federal EPA Radon Zone 1, indicating that the indoor average radon level is greater than 4 picocuries per liter. The Washington Department of Health has identified the radon risk in the area of the subject property as Medium. Based on this limited information, there is a some potential that radon is an environmental concern at the property. However, no buildings are located within the partial areas of the parcels that may be acquired as part of the IBR Program.

4. FILE REVIEW

In accordance with ASTM Standard E1527-21, inquiries and review of previous investigations for the subject property and a review of regulatory files for the subject property or adjacent properties may be conducted to further evaluate environmental conditions on the property or adjacent properties and to fill in data gaps where applicable. Previous investigations and file reviews are summarized below.

4.1 Previous Investigations

Based on regulatory information from EDR and Ecology, the subject property is not listed on any regulatory database. No previous investigations of the subject property, including the partial areas of the parcels that may be acquired as part of the IBR Program, were identified during the course of this Phase I ESA.

4.2 Adjacent and Nearby Properties File Review

Several adjacent and nearby properties were listed on environmental databases, as described in Section 3. Sufficient site-specific information was available through review of the EDR report, as well as online Ecology files, to develop an opinion on the potential for these properties to have affected the subject property. Therefore, a specific file review (physical review at Ecology) was not required beyond those completed during the course of this Phase I ESA. Specific information on the nature of release, types of contaminants, media impacted, and the potential to have affected the subject property or otherwise caused environmental concern is provided in Section 3.

5. SITE EXAMINATION

Parametrix conducted a site examination of the subject property from public right of way on September 19, 2023. The site examination consisted of observing the areas immediately surrounding the subject property, providing observations of the general environmental conditions on the subject property, and visually assessing the subject property and adjacent properties for evidence of hazardous materials. The site examination focused on partial areas of the parcels that may be acquired as part of the IBR Program. Photographs of the subject property taken during the site walk are included in Appendix D.

5.1 Subject Property

The subject property includes shoreline and submerged areas within and adjacent to the Columbia River. Improvements on the subject property are limited to a sewer outfall and spillway on the shoreline and piles for a former wharf in the submerged area. The partial areas of the parcels that may be acquired as part of the IBR Program are limited to vegetated shoreline areas.

No evidence of USTs, ASTs, or other indications of environmental significance were observed on the exterior portions of the property. In addition, no evidence of significant storage or spills of hazardous substances and/or petroleum products was observed on the subject property. No evidence of staining, adverse odors, or other indications of potential releases was observed. In general, no RECs or other adverse environmental conditions were identified associated with the subject property. Table 2 summarizes the observed conditions.

Table 2. Subject Property Observed Conditions

IBR ID	Address	Area	Current Use (determined through visual observation)	Site Examination Observations
IBR-47590000	None	0.06 acres	Sewer outfall and spillway	Sewer outfall, spillway and piles present
IBR-502280000	None	0.22 acres	Sewer outfall and spillway	Vegetated shoreline, sewer outfall, spillway and piles present

5.2 Adjacent Properties

The shoreline to the west is under the Interstate Bridge and consists of vegetation, a pedestrian walkway, and SE Columbia Way. The pedestrian walkway and SE Columbia Way is also present to the north of the subject property. A wharf for pedestrian traffic is present to the east of the subject property; the wharf is in poor condition and is not accessible in the overwater portions of the wharf. A building has recently been demolished at the eastern adjacent parcel and demolition debris is still present.

No evidence of significant staining or stressed vegetation was noted on the ground surface on assessable properties adjacent to the site. No evidence of the storage of chemical or hazardous materials was identified on visible areas of adjacent properties.

6. INTERVIEW

An interview was not able to be conducted with a property representative to identify any potential environmental conditions and to address information data gaps during the Phase I ESA process. The lack of a property owner or representative interview represents a data gap in accordance with ASTM Standard E1527-21.

7. CONCLUSIONS

Based on the findings of this investigation, Parametrix concluded the following:

1. The subject property is located adjacent to the SE Columbia Way and the Interstate Bridge in Vancouver, Washington, and includes Clark County parcels 47590000 and 502280000. Both parcels are owned by Clark Public Utilities. The subject property encompasses an area of 0.28 acres and includes a sewer outfall and spillway located on shoreline portions of the subject property and piles for a former wharf on submerged portions of the subject property. The remainder of shoreline portions of the subject property are undeveloped and vegetated. The vicinity of the subject property includes public walkways and roads, an unused building (former substation), and an abandoned restaurant that is currently undergoing redevelopment.
2. A review of historical aerial photographs and Sanborn Fire Insurance maps indicated that a ferry landing and former wharf were located in the submerged portion of the subject property and a hotel was present in the upland portion of the subject property by the early 1900s. The ferry and hotel were removed prior to 1928 and the wharf was removed prior to 1975. No other operations were identified on the subject property. No evidence of RECs was identified on the subject property during the historical photograph and Sanborn Fire Insurance map review.
3. The upland portion of the subject property currently includes a sewer outfall and spillway and is otherwise undeveloped. Based on the operational use history, the potential that hazardous building materials (asbestos, LBP, or PCBs) are present at the subject property is low.
4. The subject property is not listed on any regulatory database that would indicate a past or current release or storage of hazardous materials. A review of regulatory information indicated that several nearby sites were identified in the regulatory record databases. However, based on regulatory status and distance from the subject property, none of the sites identified represent a REC to the subject property.
5. No evidence of significant use or storage of hazardous substances and/or petroleum products was noted on or near the subject property. No evidence of distressed vegetation, spills or releases, dry wells, or other indications of environmental concern was identified during the site reconnaissance. No evidence of RECs was identified during the site examination.
6. An interview was not able to be conducted with a property representative to identify any potential environmental conditions and to address information data gaps during the Phase I ESA process. The lack of a property owner or representative interview represents a data gap in accordance with ASTM Standard E1527-21. However, the information obtained for the Phase I ESA, including regulatory database and historical documentation, was deemed sufficient to evaluate potential environmental conditions on the partial acquisition areas of the subject property.

8. RECOMMENDATIONS

Based upon the conclusions of this investigation of the subject property, Parametrix offers the following recommendations.

1. No further assessment of environmental conditions on the subject property, including the partial areas of the parcels that may be acquired as part of the IBR Program, is recommended at this time.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of state- and tribal (Superfund) equivalent sites

WA HSL: The Hazardous Sites List is a subset of the CSCSL Report. It includes sites which have been assessed and ranked using the Washington Ranking Method (WARM).

A review of the WA HSL list, as provided by EDR, and dated 02/23/2023 has revealed that there is 1 WA

HSL site within approximately 1 mile of the target property.

Lists of state- and tribal hazardous waste facilities

OR ECSI: The Environmental Cleanup Site Information System records information about sites in Oregon that may be of environmental interest. The data come from the Department of Environmental Quality.

A review of the OR ECSI list, as provided by EDR, and dated 03/01/2023 has revealed that there are 5 OR ECSI sites within approximately 1 mile of the target property.

WA CSCSL: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Ecology's Confirmed & Suspected Contaminated Sites List.

A review of the WA CSCSL list, as provided by EDR, and dated 04/10/2023 has revealed that there are 19 WA CSCSL sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

WA CSCSL NFA: The data setcontains information about sites previously on the Confirmed and Suspected Contaminated Sites list that have received a No Further Action (NFA) determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when cleanup activities are completed. Instead a No Further Action code is entered based upon the type of NFA determination the site received.

A review of the WA CSCSL NFA list, as provided by EDR, and dated 04/10/2023 has revealed that there are 5 WA CSCSL NFA sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/06/2023 has revealed that there are 3 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

VANCOUVER PORT OF TE EPA ID:: WAH000052684	300 W COLUMBIA WAY	ESE 1/8 - 1/4 (0.206 mi.)	C14	111

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 03/30/2023 has revealed that there is 1 PFAS ECHO site within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Property Number: 48850000, 48840000
Parcel size: 0.75
Latitude: 45.623235
Longitude: -122.674823
HCM Label: Not reported
Map Scale: Not reported
Point of Reference: Not reported
Highlights: Former Use: The Property is in a commercial area at the southern edge of downtown Vancouver. It is bounded by Columbia Street to the east, Esther Street to the west, Columbia Way to the south and an active BNSF right-of-way to the north. The center of the Property is located approximately 600 feet north of the Columbia River, 700 feet west of Interstate Highway 5, and 500 feet south of Vancouver City Hall. The Property includes portions of two tax lots as well as interlaying property to which no tax number has been assigned. The Property was occupied by an asphalt paving plant from the 1940s through the early 1970s. Since the late 1970s, the Property has been vacant, or used for surface parking. The asphalt paving plant is the suspected source of petroleum contamination observed in soil during a recent sewer force main installation project on the Property. Asphalt plant operations ended nearly 20 years prior to current (City of Vancouver) and most recent previous (ANT, LLC) ownership of Property.

Point of Reference: Not reported
hlights: Former Use: The 1.53-acre Property is comprised of four tax lots located in downtown Vancouver.. A 10,625 square-foot commercial building, known as the Webber Machine Works building, is located in the northeast corner of the Property. The remainder of the Property is in use as an asphalt paved parking lot. The Property is zoned for commercial use. REC #1: Records show that the Property was historically occupied by light industrial operations and fuel dispensing facilities. No evidence of a significant release associated with these historical Property uses was identified. REC #2: A release was reported during decommissioning activities (Cleanup Site ID 11159, LUST ID 2453) in 1992. No evidence of significant petroleum or hazardous substance releases was observed during the drilling of soil or soil vapor borings or reflected in laboratory testing of soil samples collected. REC #3: Ecology records indicate the presence of a gasoline UST on the site. It is unknown if this UST has been removed. No evidence of significant petroleum or hazardous substance releases was observed during drilling or reflected in laboratory testing of soil or soil vapor samples collected. REC #4: Historical city directory information indicates the Interstate Fuel Company was located adjacent south of the Property (north of the railroad right-of-way) in 1966. No evidence of significant petroleum

400 COLUMBIA ST AND 318 W 4TH ST (Continued) **1024079349**

operty Description: The 1.53-acre Property is comprised of four tax lots located in downtown Vancouver.. A 10,625 square-foot commercial building, known as the Webber Machine Works building, is located in the northeast corner of the Property. The remainder of the Property is in use as an asphalt paved parking lot. The Property is zoned for commercial use. REC #1: Records show that the Property was historically occupied by light industrial operations and fuel dispensing facilities. No evidence of a significant release associated with these historical Property uses was identified. REC #2: A release was reported during decommissioning activities (Cleanup Site ID 11159, LUST ID 2453) in 1992. No evidence of significant petroleum or hazardous substance releases was observed during the drilling of soil or soil vapor borings or reflected in laboratory testing of soil samples collected. REC #3: Ecology records indicate the presence of a gasoline UST on the site. It is unknown if this UST has been removed. No evidence of significant petroleum or hazardous substance releases was observed during drilling or reflected in laboratory testing of soil or soil vapor samples collected. REC #4: Historical city directory information indicates the Interstate Fuel Company was located adjacent south of the Property (north of the railroad right-of-way) in 1966. No evidence of significant petroleum or hazardous substance releases was observed or reflected in laboratory testing of soil samples collected.

Point of Reference: Entrance Point of a Facility or Station
Highlights: A geophysical survey of the South Site did not identify any underground structures or USTs, except for concrete/rebar debris. Soil borings GP-S-1 and GP-S-4, located on the western boundary of the South Site, did not contain elevated petroleum constituent concentrations. Lead and PAH TEQ detected in sample GP-S-2-0 -3 at the South Site exceeded their MTCA Method A CUL. Benzene was detected in soil vapor sample SV-3 in exceedance of MTCA Method B Sub-Slab Soil Gas Screening Levels. Further evaluation is necessary to determine whether or not this screening level exceedance presents an actual risk to human health. 1,3-Butadiene was detected above the MTCA Method B Sub-Slab Soil Gas Screening Level in two of three soil vapor samples collected at the South Site. Further evaluation is necessary to determine whether or not this screening level exceedance presents an actual risk to human health. This potential risk could be mitigated through the installation of vapor mitigation systems beneath newly constructed buildings. The source of the 1,3 butadiene remains unknown. Former Use: Historical documents indicate that the Property was developed with single-family residences by 1890 and remained exclusively in residential use until the 1940s, with the exception of the southeastern corner of the Property, which was occupied by the Vancouver Soda Water Works by 1907. The northwestern area of the Property was in commercial use as a welding shop by 1949. The Property was in exclusively commercial use since at least the 1960s, with historical businesses including potato chip manufacturing, storage, auto repair, fishing tackle manufacturing, and other retail and office uses. The Property has been in use as a parking lot or has been a vacant lot with no structures since at least 2005. The City of Vancouver purchased the Property in 2010.

Property Description:	Historical documents indicate that the Property was developed with single-family residences by 1890 and remained exclusively in residential use until the 1940s, with the exception of the southeastern corner of the Property, which was occupied by the Vancouver Soda Water Works by 1907. The northwestern area of the Property was in commercial use as a welding shop by 1949. The Property was in exclusively commercial use since at least the 1960s, with historical businesses including potato chip manufacturing, storage, auto repair, fishing tackle manufacturing, and other retail and office uses. The Property has been in use as a parking lot or has been a vacant lot with no structures since at least 2005. The City of Vancouver purchased the Property in 2010.

HCM Label:	Address Matching-House Number
Map Scale:	Not reported
Point of Reference:	Entrance Point of a Facility or Station
Highlights:	A geophysical survey of the South Site did not identify any underground structures or USTs, except for concrete/rebar debris. Soil borings GP-S-1 and GP-S-4, located on the western boundary of the South Site, did not contain elevated petroleum constituent concentrations. Lead and PAH TEQ detected in sample GP-S-2-0 -3 at the South Site exceeded their MTCA Method A CUL. Benzene was detected in soil vapor sample SV-3 in exceedance of MTCA Method B Sub-Slab Soil Gas Screening Levels. Further evaluation is necessary to determine whether or not this screening level exceedance presents an actual risk to human health. 1,3-Butadiene was detected above the MTCA Method B Sub-Slab Soil Gas Screening Level in two of three soil vapor samples collected at the South Site. Further evaluation is necessary to determine whether or not this screening level exceedance presents an actual risk to human health. This potential risk could be mitigated through the installation of vapor mitigation systems beneath newly constructed buildings. The source of the 1,3 butadiene remains unknown. Former Use: Historical documents indicate that the Property was developed with single-family residences by 1890 and remained exclusively in residential use until the 1940s, with the exception of the southeastern corner of the Property, which was occupied by the Vancouver Soda Water Works by 1907. Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Name:	WEST OF CITY HALL
Address:	503 AND 615 W 6TH STREET AND 400 ESTHER STREET
Recipient name:	City of Vancouver
Grant type:	Assessment
Region:	10
Property Number:	Not reported
Parcel size:	3.1
Latitude:	45.624711
Longitude:	-122.676451
HCM Label:	Address Matching-House Number
Map Scale:	Not reported
Point of Reference:	Entrance Point of a Facility or Station
Highlights:	Soil and soil vapor samples were collected from the West Site to evaluate the potential for human health risk from historical operations on and in the vicinity of the site. No soil sample concentrations detected on the West Site exceeded MTCA Method A CULs for soil. Former Use: Historical documents indicate that the Property was developed with single-family residences by 1890 and remained in residential use until approximately 1907 when commercial development began. Records show that historical Property uses included offices and commercial development, including an automotive repair shop in the early 1990s. Since approximately 2000, a warehouse in the western area of the Property has been the only building on the Property. The eastern area of the Property has been a paved parking lot since the late 2000s. The City of Vancouver acquired the Property through bankruptcy in 2010.

Property Description:	Historical documents indicate that the Property was developed with single-family residences by 1890 and remained in residential use until approximately 1907 when commercial development began. Records show that historical Property uses included offices and commercial development, including an automotive repair shop in the early 1990s. Since approximately 2000, a warehouse in the western area of the Property has been the only building on the Property. The eastern area of the Property has been a paved parking lot since the late 2000s. The City of Vancouver acquired the Property through bankruptcy in 2010.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of

US DOT FEDERAL HIGHWAY ADMIN VANCOUVER (Continued) **1000342734**

events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste Code: D001
Waste Description: Ignitable Waste

Waste Code: D002
Waste Description: Corrosive Waste

Waste Code: D003
Waste Description: Reactive Waste

Waste Code: D005

BOISE WHITE PAPER LLC (Continued) **1000378977**

Waste Description: Barium

Waste Code: D006
Waste Description: Cadmium

Waste Code: D008
Waste Description: Lead

Waste Code: D009
Waste Description: Mercury

Waste Code: D011
Waste Description: Silver

Waste Code: D039
Waste Description: Tetrachloroethylene

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F004
Waste Description: The Following Spent Nonhalogenated Solvents: Cresols, Cresylic Acid, And Nitrobenzene; And The Still Bottoms From The Recovery Of These Solvents; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: P105
Waste Description: Sodium Azide

Waste Code: U001
Waste Description: Acetaldehyde (I) (Or) Ethanal (I)

Waste Code: U037
Waste Description: Benzene, Chloro- (Or) Chlorobenzene

Waste Code: U151
Waste Description: Mercury

Waste Code: U154
Waste Description: Methanol (I) (Or) Methyl Alcohol (I)

Waste Code: U217
Waste Description: Nitric Acid, Thallium(1+) Salt (Or) Thallium(I) Nitrate

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Decode for NarcdID: Contamination
NARR Comments: This unregulated landfill was located in a seasonal lake basin and probably operated between 1950 and 1970, when it was covered by a 7 to 8-foot layer of clean fill. An ARCO facility that opened in 1971 at the eastern edge of the former landfill initiated an investigation in 1989 that showed gasoline contamination in groundwater. Borings also revealed a layer of landfill debris beneath clean fill. DEQ's LUST program (file #26-89-0149) requested a Corrective Action Plan from ARCO, leading to pump-and-treat remediation that began operating 8/90. Groundwater samples from eight monitoring wells contained dissolved metals, which are most likely a result of leachate percolating through unknown solid wastes in the unsaturated zone. Because of system fouling from these metals, the treatment program was shut down in May 1991.

Decode for NarcdID: Remedial Action
NARR Comments: In June 1993, ARCO concluded that it was not possible to remediate benzene in groundwater without first removing dissolved metals. ARCO maintained that it had no responsibility for the metals. The LUST section may continue to require regular monitoring as a part of <quot>conditional closure.<quot> Potential pathways of exposure appear limited to groundwater and surface water. Because more information is needed about the landfill and its levels of contamination, Site Assessment recommends that affected property owners characterize contamination in and below the former landfill. Otherwise, a PA should be completed to investigate the site's history and to evaluate potential exposure pathways, under a low priority. Confined space methane testing was performed by PBS for the Hayden's Corner property. The only significant methane was found at two bathroom floor drains where the likely source was sewer gas. Three

HAYDEN ISLAND LANDFILL (Continued) **S103842510**

soil gas samples were collected from borings around the former ARCO site as part of the investigation of the Hayden's Corner property (ECSI #5711). Methane at 2% was found near the former waste oil but this could have been from residual petroleum contamination. Other samples showed only trace methane.

NARR Comments: [April 2017] This unregulated landfill was located in a seasonal lake basin and probably operated between 1950 and 1970, when it was covered by a 7 to 8-foot layer of clean fill. An ARCO facility that opened in 1971 at the eastern edge of the former landfill initiated an investigation in 1989 that showed gasoline contamination in groundwater. High concentrations of metals were also found. Borings revealed a layer of landfill debris beneath clean fill. The Hayden's Corner property (former ARCO site) was split off from the greater landfill site with a separate ECSI number (#5711). Another site was investigated in the Hayden Island Landfill area in 2016/17 (1445 and 1463 N. Hayden Island Drive). These properties' recent use was commercial, and not expected to lead to contamination. Groundwater below the properties is contaminated with TPH and metals, particularly arsenic, barium, lead, silver, and mercury.

NARR Comments: Methane and other atmospheric gases were measured in confined spaces inside the site buildings using a handheld meter in May 2011. Methane at levels from 1.5 to 5.5% was detected at the drains of two restrooms. This could be related to sewer gas from leaking drain traps. Little or no methane was detected in any other confined space locations within the buildings. In May 2012 three borings were arrayed around the property and one included the location of a former leaking waste oil tank from the prior gas station. Borings were sampled for methane using a handheld meter as well as summa canister sampling. VOCs samples were also collected using a summa. The maximum methane detection was around 2% in one hole (near the former waste oil tank) and near zero in other holes. Various VOCs (largely associated with petroleum) were found at generally low concentrations. No VOCs were found at concentrations greater than commercial risk-based concentrations. In July 2012 a plumber was hired by site owner to inspect and correct any problems with the bathroom drains/traps. No Further Action determination in August 2012. The determination applies only to the immediate Hayden's Corner site and not to the greater Hayden Island Landfill (ECSI #1559).

NARR ID: 5753951

NARR Comments: An ARCO service station that operated on the property starting in 1971 initiated an investigation in 1989 that showed gasoline contamination in groundwater. Borings also revealed a layer of landfill debris beneath clean fill. The property is apparently located within the footprint of the former Hayden Island Landfill, an unregulated landfill that was located in a seasonal lake basin and probably operated between 1950 and 1970, when it was covered by a 7 to 8-foot layer of clean fill. DEQ's LUST program (file #26-89-0149) requested a Corrective Action Plan from ARCO, leading to pump-and-treat remediation that began operating 8/90. Groundwater samples from eight monitoring wells contained dissolved metals, which are most likely a result of landfill leachate percolating through unknown solid wastes in the unsaturated zone. Because of system fouling from these metals, the treatment program was shut down in May 1991. The ARCO station recieved a No Further Action determination in 1998 with the exception that the determination did not apply to other contaminants found at the site related to the greater Hayden Island Landfill.

Decode for NarcdID: General Site Description
NARR Comments: The site is just north of the center of Hayden Island in the Columbia River. The topography is flat and the elevation is approximately 20 feet above of sea level. The main channel of the Columbia River is just over 500 feet north of the site. Subsurface material encountered below asphalt and base gravel was medium-grained sand. At depths as little as 5 feet below ground surface (bgs) fill material consisting of paper, glass, wood, brick, plastic and metal, was encountered and found at depths up to 18 feet bgs.

NARR Comments: (November 2016 RKW) Phase II investigation including sampling of soil and shallow groundwter. Minor diesel and oil contamination was found in soil on the 1445 lot. Groundwater below the site contains widespread petroleum, metals (arsenic, barium, cadmium, lead, silver, and mercury), minor VOCs and PAHs. Follow-up investigation for methane (landfill gas) was undertaken in January 2017 using handheld Landtec instrument. Samples from two boring on each property and from interior confined spaces in the 1463 building. No significant levels of methane were detected. NFAs for both properties were dated April 4, 2017.

HAYDEN ISLAND - UMATILLA PROPERTY (Continued) **S118869506**

NARR Comments: The properties are located on the old unregulated Hayden Island Landfill which was located in a seasonal lake basin and probably operated between 1950 and 1970, when it was covered by a 7 to 8-foot layer of clean fill prior to development.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: This site, the location of a former US Bank branch (since demolished) is situated on top of the abandoned Hayden Island Landfill (ECSI #1559). The site is currently owned by Umatilla, Inc. Belmar Properties, the owners of an adjacent property, are proposing to purchase the site. Belmar has applied to DEQ's Voluntary Cleanup Program to obtain a No Further Action determination for the site. These properties recent landuse was commercial and not expected to lead to contamination. Groundwater below the properties is contaminated with TPH and metals, particularly arsenic, barium, lead, silver, and mercury. Groundwater contaminatinon is thought to be associated with the former landfill.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each

ALBINA ASPHALT COMPANY - TERMINAL 2 (Continued) **1000118518**

facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER

Hazardous Waste Summary:

Waste Code: D001
Waste Description: Ignitable Waste

Waste Code: D006
Waste Description: Cadmium

Waste Code: D008
Waste Description: Lead

Waste Code: D018
Waste Description: Benzene

Waste Code: D035
Waste Description: Methyl Ethyl Ketone

Waste Code: D039
Waste Description: Tetrachloroethylene

Waste Code: D040
Waste Description: Trichlorethylene

Waste Code: F001
Waste Description: The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichlorethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated

EMERALD SERVICES INC. - VANCOUVER (Continued) **1000388212**

Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.
OSHA ESTABLISHMENT
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include;

Decode for NarcdID: Contamination
NARR Comments: (12/5/2001 DGA/SRS) Dry-cleaning facilities have operated at the site since the mid-1970s. A preliminary environmental assessment in November 1994 identified four floor drains within the facility, three of which yielded a positive reading on a photoionization detector. In August 1995, four Geoprobe borings were advanced at the site to see if PCE had been released to the soil or groundwater. PCE was detected in soil gas (up to 75 ppm) and groundwater (up to 780 ug/L) in all four boreholes. It appears that PCE may have been released down the floor drains at the site, leaking into the soil through cracks in the sanitary sewer lines. Tidal fluctuations in the shallow groundwater may have spread the contaminants across the site. Hayden Island Cleaners applied to DEQ's Dry Cleaner Program in January 1997, and was accepted in February 1997.

NARR Comments: The City of Portland owns four deep production wells on Hayden Island, two of which are within 600 feet of the site. Since 1988, Bull Run water has been provided for residents and businesses on Hayden and Tomahawk Islands, and the wells are currently designated for backup fire suppression only. Three of the four wells are contaminated with low levels of TCE and PCE; however, the contamination is thought to be unrelated to Hayden Island Cleaners. Because of the site's proximity to the Columbia River, surface water was another potential pathway of concern. But the contamination does not appear to have reached either the river or the deeper aquifer.

NARR Comments: (12/5/2001 DGA/SRS) DEQ retained Jacobs Engineering to conduct an expanded Preliminary Assessment (XPA) at the site in August 1997. As part of the XPA, three monitoring wells were installed, and soil and groundwater samples collected. PCE was detected in soil samples (up to 267 ug/kg) and groundwater samples (up to 1,230 ug/L) from all three wells. The XPA report was completed in June 1998. DEQ retained Ecology & Environment (E&E) to follow up with a focused Site Investigation in August 1998. Additional groundwater monitoring wells were installed at the site and on adjacent properties. In addition, a pumping test was conducted at the secondary municipal wells (backup fire suppression wells) to determine if there was any connection between the shallow and deep aquifers. No connection was established. The Site Investigation report was completed in March 1999. In May 1999, DEQ injected Hydrogen Releasing Compound (HRC) into the shallow groundwater to accelerate the natural biodegradation of the PCE. Monitoring over the next couple of years showed that the HRC was successful in stimulating degradation of the PCE. DEQ formally notified the site owners and operators in December 2001 that no

HAYDEN ISLAND CLEANERS (Continued) **S104329423**

further cleanup of the site was necessary.

Updated Date: 04/23/2010
Decode for NarcdID: Contamination
NARR Comments: Sediments: Sediments directly beneath a Schooner Creek Boat Works dock and adjacent to the shoreline are contaminated with PCBs, PAHs, phthalates, PCP, phenols, DDTs, chlordane, metals (arsenic, cadmium, copper, selenium, zinc), and relatively low concentrations of diesel fuel and oil. The source and full vertical and horizontal extent of sediment contamination have not been defined. Upland Areas: A sample of residual paint dust collected at the boat repair facility contained PAHs, di-n-butyl phthalate, chloroform, methylene chloride, light aromatic hydrocarbons, and TCLP-extractable barium, cadmium, and lead. Paint dust residues have been observed on graveled surfaces at Schooner Creek Boat Works, and other boat repair wastes have been observed on Canoe Bay's steep southwest embankment at the boat works. Stained soils and stressed vegetation have also been documented at the boat works site. Chemical residues (30 - 60 sq ft area) and stressed vegetation were also observed on the southern portion of the lot west of the boat works, prior to Schooner Creek Boat Works occupying the site. Most of the western lot is now used for automobile storage, although a portion is used for boat storage. DEQ photographed small areas of stressed vegetation along Schooner Creek Boat Works' north fence line during an April 2001 multi-media inspection. (5/15/04 JLS/VCP) Waste materials, (e.g. broken glass, electrical casings) that apparently resulted from historical dumping by unknown parties are present along the shoreline. Waste material remaining at this time appear to be present primarily on land owned by the Oregon Division of State Lands. A private and City outfall discharge stormwater to Canoe Bay in the vicinity of the ramp to the docks. (9/9/09, smf) Samplings from an October 2008 EPA Site Insection detected elevated concentrations of metals (especially cadmium) in Canoe Bay sediments in the southern half of the bay. Elevated concentrations of TBT were detected in sediments at the boat dock, as well as in surface soils at the Schooner Creek Boatworks stormwater outfall just westr of the boat dock. Elevated concentrations of several metals were detected in surface soils along the southwest side of Canoe Bay, and in stormwater discharging from outfalls on the northeast and south sides of the bay.

NARR Comments: Canoe Bay is a 7.6-acre rectangular embayment of the Columbia River along the central north side of Hayden Island. The river is located to the northeast; Hayden Island Mobile Home Community is on the east side of the bay; Schooner Creek Boat Works, an automobile storage lot and paved boat storage area, and North Hayden Island Drive are along the southwestern edge of the bay. Schooner Creek Boat Works operates from a concrete tilt-up building constructed in 1989. A small scrub-shrub palustrine wetlands area is immediately northwest of the bay. A Burlington Northern Santa Fe Railroad right-of-way and tressel are about 675 feet northwest of the bay. Jantzen Beach Shopping Center is between 1,506 and 3,761 feet southeast of the bay. Interstate Highway 5 and the I-5 Interstate Bridge over the Columbia River are located about 4,210 feet southeast of the bay.

CANOE BAY - CONTAMINATED SEDIMENT (Continued) **S105807718**

Created Date: 12/17/2002
Updated By: JSUTTER
Updated Date: 11/21/2011
Decode for NarcdID: Project Issues Summary
NARR Comments: Contaminants were discovered in Canoe Bay sediments beneath a Schooner Creek Boat Works dock when preparing for maintenance dredging of the bay sediments. Levels of PCBs, DDTs, PAHs, and metals (arsenic, cadmium, copper, selenium, and zinc) in sediment samples exceed DEQ's Level II Ecological Risk Assessment Baseline Screening Levels for freshwater sediments. The contamination could represent a significant threat to T&E salmonids in the bay, migratory waterfowl and songbirds that visit the bay, wildlife in nearby wetlands, as well as a potential threat to people and wildlife who consume impacted fish. The sources and full vertical and horizontal extent of contamination have not been defined. A previous boat works operation at the site is known to have left behind chemical residues and stressed vegetation. However, since Schooner Creek Boat Works began operating along the southern end of the bay in 1999, DEQ has received at least 74 Pollution Complaints from nearby residents about its operations. An April 2001 DEQ site inspection confirmed some of the complaint allegations; DEQ documented evidence of stressed vegetation and boat works wastes migrating to Canoe Bay. Paint dust from the boat works was analyzed and found to contain leachable metals, phthalates, light aromatic hydrocarbons, chlorinated hydrocarbons, and relatively high concentrations of PAHs. DEQ files also contain similar complaints about activities at Schooner Creek Boat Works' previous operating location along N Marine Dr. There is no record of Pollution Complaints against the site's previous boat builder (Heisley Marine). Aerial photos and material identified along the shoreline suggest that historical dumping of waste materials may have taken place in the past, resulting in an accumlation of materials in a shoreline area on property owned by the State.

NARR Comments: Land on the southeast side of Canoe Bay is zoned for low-density residential use, while land on the southwest side of the bay is zoned for industrial use. The entire bay and its shoreline lie within a City of Portland Environmental Conservation Overlay Zone. A small scrub-shrub palustrine wetland sits just west of the bay, and most of the Columbia River's south shoreline downstream from the site is tidal riverine wetlands. Metro has mapped land west of the BNSF Railroad right-of-way as important riparian corridor and wildlife habitat of concern.

NARR Comments: Undefined at this time. Recent boat manufacturing and repair activities by Schooner Creek Boat Works could be a source but significant efforts have been completed by the facility to manage stormwater and current stormwater discharge is meeting permit benchmarks. A city storm drain also discharges to the bay near the Boat Works' stormwater outfall and may be contributing road-related contamination. A previous yacht builder at the site (Heisley Marine) is known to have left behind chemical residues and stressed vegetation prior to Schooner Creek Boat Works' arrival at the site. The detections of DDTs and chlordane in sediments suggest that deposits of riverborne sediments could also be a source, as could be an outfall from the Columbia Blvd. Sewage Treatment Plant to the Columbia River, located about 500 to 700 feet northeast of (downstream from) the bay. Part of the bay also appears to have been backfilled since the 1970s, possibly with Columbia River dredgings, so the bay's backfill may also have contained contaminants. Historical dumping of wastes over the shoreline appears to have resulted in an accumulation of waste materials that appears to have resulted in elevated PCBs and metals on the shoreline. Contaminants associated with the shoreline waste materials appear to have resulted in a localized area of contaminated sediment.

NARR Comments: Freshwater bay sediments, and possibly surface water; stormwater and stormwater sediments; surface soils along the bay. Paint dust residues have been documented in gravel at the Schooner Creek Boat Works site. Stressed vegetation was documented along the boat works' fence line. Chemical residues and stressed vegetation were observed on Inland Sea Maritime Group's other lot prior to their acquisition of the site.

NARR Comments: Canoe Bay sediments are owned by the Oregon Division of State Lands.

CANOE BAY - CONTAMINATED SEDIMENT (Continued) **S105807718**

However, boat building and repair activities on an adjoining parcel owned by Inland Sea Maritime LLC may be a source of sediment contamination. Schooner Creek Boat Works leases dock space from the Oregon Division of State Lands.

NARR Comments: A site screening was completed in September 2002. An Expanded Preliminary Assessment of the Schooner Creek Boat Works site is recommended. Further samplings of sediment and upland soils are needed to define the full extent and character of local contaminants. Site owner, Inland Sea Maritime Group, completed sediment and shoreline sampling at the site which is documented in a January 2004 report. (9/8/09, smf) Ecology and Environment, Inc. conducted a federal Site Inspection of Canoe Bay for EPA during October 2008, issuing its report in August 2009. E&E sampled and analyzed: sediments from Canoe Bay and nearby in the Columbia River; stormwater and stormwater sediments from stormwater outfalls emptying into Canoe Bay; and uplands surface soils from along the southwest edge of Canoe Bay.

NARR Comments: Canoe Bay provides seasonal habitat for migratory waterfowl and migratory songbirds, which feed in and around the bay. The bay has been defined as Critical Habitat for Snake R. spring/summer chinook (Threatened species), Snake River fall chinook (Threatened species), and Snake River sockeye salmon (Endangered species) [58 FR 68543, 12/28/93]. A small wetlands area is also located immediately upland from the bay's west shoreline. Metro considers much of Hayden Island west of the BNSF Railroad right-of-way important riparian corridor and wildlife habitat of concern, The City of Portland has a community water supply well less than 1,000 feet SSE of the site.

NARR Comments: Site Assessment recommends a high-priority further investigation to determine the full nature and extent of Canoe Bay sediment contamination near SCBW's dock. Because hazardous substances have been released at the site, and concentrations of these substances in sediment are above threshold risk values for aquatic life, it is further recommended that the site be proposed for addition to DEQ's

CANOE BAY - CONTAMINATED SEDIMENT (Continued) **S105807718**

Confirmed Release List and Inventory. (12/6/02 JMA/VCP) Received Intent to Participate in DEQ's Voluntary Cleanup Program in December 2002. Sediment sampling work plan submitted March 2003. DEQ approved with comments provided May 2003. Response to comments submitted June 2003. DEQ acknowledgement provided July 2003. Sediment sampling conducted October 2003. (3/1/04 JLS/CU&ER) Sediment sampling report submitted January 2004. Meeting/site visit held February 2004. (5/17/04 JLS/VCP) DEQ comments on report provided March 2004. Revised report submitted April 2004. DEQ approval with clarification provided May 2004. (11/12/04 JLS/CU&LW) DEQ coordinating with City of Portland, Division of State Lands (DSL) and ISMG on next steps. (11/7/05 JLS/CU&LW) DEQ preparing memo documenting issues and priorities November 2005. (6/23/09 SAM/SAS)EPA completed a preliminary assessment-March 7,2008- and determined additional site investigation is warranted. (11/22/10 SAM/SAS) In late August 2010, after completing a Site Investigation, EPA determined that the site was a low priority for additional federal action and referred the site back to DEQ for state follow-up. [6/8/11] DEQ prioritized shoreline debris pile cleanup and outfall soil cleanup as primary actions warranted at the site. [6/11/12] In Fall, 2011, ISMG/SCBW proposed conducting shoreline stabilization to maintain stability for upland infrastructure and incorporate capping of the debris pile and immediately adjacent contamination. Additional shoreline data was collected in February 2012 to help assess shoreline options and a feasibility study was drafted in May 2012. FS completed in June 2012. Staff report on proposed shoreline stablization action issued for public comment in July 2012. ROD issued August 2012. Consent Judgement covering DEQ oversight of remedial action and settlement for contamination in Canoe Bay issued for public comment in September 2012. Negotiations with City of Portland for development permit to cover action in the environmental zone adjacent to Canoe Bay completed in Spring 2013. Consent Judgment with DEQ finalized in July 2013. Remedial Design workplan and associated reports submitted in November 2012. Revised documents, based on DEQ comment and modifications to address City permitting requirements, submitted June 2013. Shoreline stabilization and capping, and habitat improvement work completed August through November 2013. Project completion report submitted February 2014 and approved March 6, 2014. O&M to establish vegetation on the bank in progress. Certificate of Completion and NFA letter issued May 2014. (JLS 5/19/14) Annual monitoring reports submitted 2015, 2016, and 2017. (10/9/19 KJD/VCP) A sediment sampling event was performed in 2019 to evaluate the effectiveness of the remedy. Overall, the shoreline stabilization and capping components appear to have been effective in reducing contaminated material entering the bay.

NARR Comments: [Oct. 2019] In May 2014, DEQ made a conditional no further action determination for the site, with the NFA conditioned on maintenance of the engineered cap placed along the shoreline covering the debris pile area and the stormwater outfall discharge area. EPA followed up in February 2015 with its own determination of <quot>no further remedial action planned<quot> at the site. A sediment sampling event was performed in 2019 to evaluate the effectiveness of the remedy. Overall, the shoreline stabilization and capping components appear to have been effective in reducing contaminated material entering the bay.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each

BRAZIER FOREST INDUSTRIES (Continued) **1000443358**

facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 06/22/2023
Date Data Arrived at EDR: 07/06/2023
Date Made Active in Reports: 07/24/2023
Number of Days to Update: 18

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 06/22/2023
Date Data Arrived at EDR: 07/06/2023

Next Scheduled EDR Contact: 10/09/2023
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994
Date Made Active in Reports: 03/30/1994

Data Release Frequency: No Update Planned

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 06/22/2023
Date Data Arrived at EDR: 07/06/2023
Date Made Active in Reports: 07/24/2023

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 03/26/2023
Date Data Arrived at EDR: 03/28/2023
Date Made Active in Reports: 05/30/2023
Number of Days to Update: 63

Next Scheduled EDR Contact: 10/09/2023
Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

State and tribal institutional control / engineering control registries

WA INST CONTROL: Institutional Control Site List

The Environmental Covenants Registry is a list of sites that have implemented institutional controls as part of the remedy. Institutional controls are administrative or legal measures used to prevent activities that may compromise the integrity of a cleanup action. They are meant to prevent exposure to contamination remaining on site. Institutional controls may include environmental covenants (also known as "deed restrictions"), zoning restrictions, public health advisories, or other administrative tools. The most common institutional control is an environmental covenant. Environmental covenants are legal recorded documents that typically limit certain uses of the property, such as: Drilling a water supply well on the property. Disturbing pavement covering contaminated areas. Residential use of the property.

Date of Government Version: 04/10/2023
Date Data Arrived at EDR: 04/12/2023

Data Release Frequency: Quarterly

WA PTAP: PTAP Site Listing

A list of sites accepted into the Petroleum Technical Assistance Program. The Petroleum Technical Assistance Program (PTAP) expands the state's ability to respond to the high customer demand to clean up petroleum contaminated sites. Under the PTAP, the Pollution Liability Insurance Agency (PLIA) may provide informal site-specific technical consultations and issue written opinion letters to persons conducting independent remedial actions at qualifying petroleum cleanup sites. PLIA may provide these services under the authority of RCW 70.149.040(9) and the Model Toxics Control Act (MTCA), Chapter 70.149 RCW and Chapter 173-340 WAC.

Date of Government Version: 01/31/2023

Next Scheduled EDR Contact: 10/23/2023
Data Release Frequency: Quarterly

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS ATSDR: PFAS Contamination Site Location Listing

PFAS contamination site locations from the Department of Health & Human Services, Center for Disease Control & Prevention. ATSDR is involved at a number of PFAS-related sites, either directly or through assisting state and federal partners. As of now, most sites are related to drinking water contamination connected with PFAS production facilities or fire training areas where aqueous film-forming firefighting foam (AFFF) was regularly used.

PFAS WQP: Ambient Environmental Sampling for PFAS

The Water Quality Portal (WQP) is a part of a modernized repository storing ambient sampling data for all environmental media and tissue samples. A wide range of federal, state, tribal and local governments, academic and non-governmental organizations and individuals submit project details and sampling results to this public repository. The information is commonly used for research and assessments of environmental quality.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

COUNTY RECORDS

KING COUNTY:

WA LF KING: Abandoned Landfill Study in King County

The King County Abandoned Landfill Survey was conducted from October through December 1984 by the Health Department's Environmental Health Division at the request of the King County Council. The primary objective of the survey was to determine if any public health problems existed at the predetermined 24 sites.

Date of Government Version: 04/30/1985
Date Data Arrived at EDR: 11/07/1994
Date Made Active in Reports: N/A

SEATTLE COUNTY:

WA LF SEATTLE CITY: Abandoned Landfill Study in the City of Seattle

The Seattle Abandoned Landfill Survey was conducted in June and July of 1984 by the Health Department's Environmental Health Division at the request of the Mayor's Office. The primary objective of the survey was to determine if any public health problems existed at the predetermined 12 sites.

Date of Government Version: 07/30/1984
Date Data Arrived at EDR: 11/07/1994
Date Made Active in Reports: N/A

TACOMA/PIERCE COUNTY:

WA LF TACOMA/PIERCE: Closed Landfill Survey
Following numerous requests for information about closed dumpsites and landfills in Pierce County, the Tacoma-Pierce County Health Department decided to conduct a study on the matter. The aim of the study was to evaluate public health risks associated with the closed dumpsites and landfills, and to determine the need, if any, for further investigations of a more detailed nature. The sites represent all of the known dumpsites and landfills closed after 1950.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Version Date:	2020

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

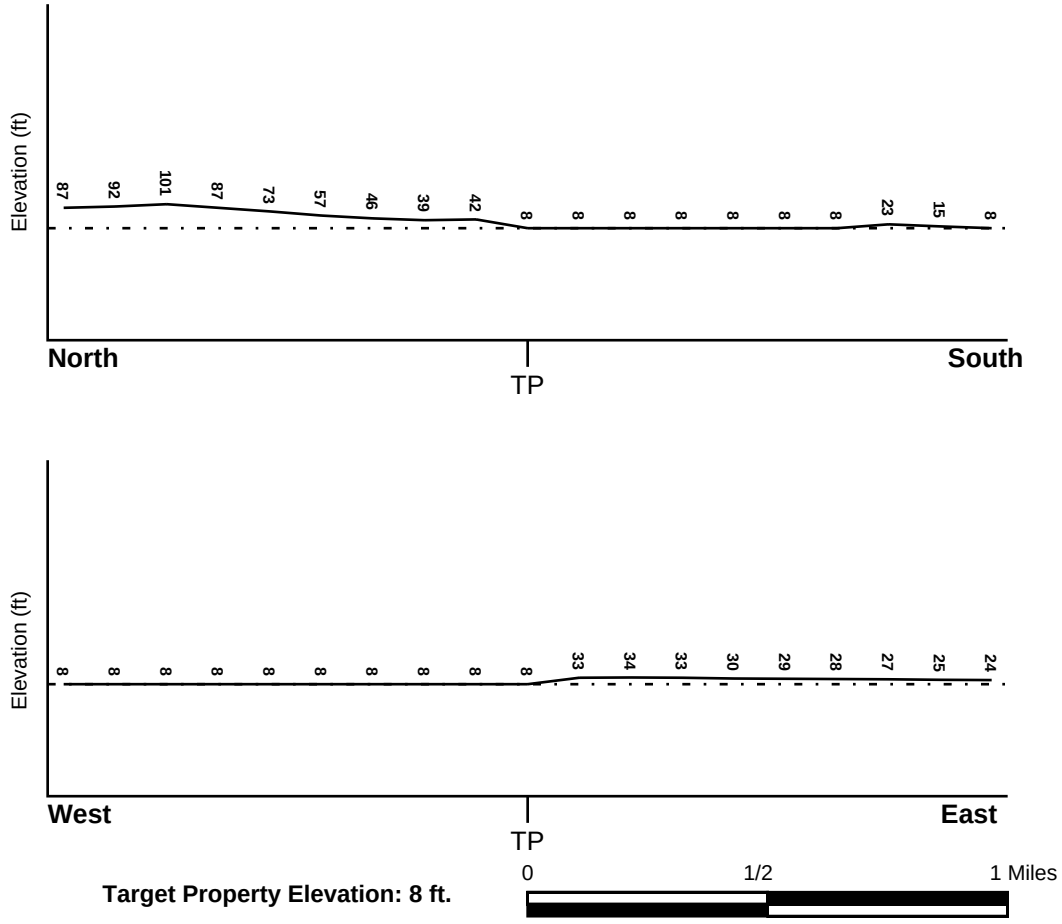
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 8 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
PORTLAND	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Fill land

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches	variable	Not reported	Not reported	Max: Min:	Max: Min:

Soil Map ID: 2

Soil Component Name: Water

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 3

Soil Component Name: Lauren

Soil Surface Texture: gravelly loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches	gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.3 Min: 6.1
2	5 inches	33 inches	very gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.3 Min: 6.1
3	33 inches	44 inches	very gravelly coarse sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.3 Min: 6.1
4	44 inches	59 inches	very gravelly loamy coarse sand	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.3 Min: 6.1

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.
