Contaminant: Coliform (Tcr)
Violation type: Monitoring, Routine Major (TCR)
Violation start date: 030193
Violation end date: 033193
Violation period (months): 001
Violation awareness date: 033193
Major violator: Yes
Maximum contaminant level: Not Reported
Number of required samples: Not Reported
Number of samples taken: Not Reported
Analysis method: Not Reported
Analysis result: Not Reported

ntly has or had major violation(s) or enforcement: Yes

Violation ID: 9375095
Violation source ID: Not Reported
PWS telephone: Not Reported

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Ecology
Telephone: 360-407-6121

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Wells

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Parametrix, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

Phase I ESA Site Visit Guide

Project: 274.1585.058.AE.06.06

Subject Property Location

Facility/Name	
Address	Columbia Way, Vancouver, WA
Property Description	Construction site - gated - could not access

Site Layout Description

Parcel#/Building Name 502250000 986049314	~~Purpose:~~ 986049315 986049327
Other Structures and Improvements	☐Tanks ☐Railroad tracks/railroad spur ☐Detention/retention pond ☐Storage shed(s) ☐Boneyard/junkyard ☐ Agricultural area ☐ Other: ☐ Other:
Are any areas paved?	If Yes – **Paving Material** — **Location** entire visible locations Asphalt Concrete Gravel

Physical Setting

Topography of subject property	
Are there any bodies of water on property?	Yes

Are there any man-made bodies of water on the property?	/
Are there any wetlands on the property?	/
Are there are any water wells on the property?	/

Utilities (meters, transformers, access covers, etc.)

Electricity	
Natural Gas	
Water	
Sanitary sewer	Septic systems? If yes, where?
Storm sewer	
Are there back-up power supplies?	Emergency generator(s)- how many, location? Fuel type: ☐ Batteries ☐ Diesel ☐ Natural Gas

Heating and Cooling (if observed)

Equipment Type	**Area(s)**	**Equipment Type**
☐ Central HVAC		☐ Chillers
☐ Boilers		☐ Cooling Towers
☐ Electric Heaters		☐ Window A/C Units
☐ Other		☐ Refrigeration

Operations

Operation of Property (commercial, residential, etc.)	Construction Site	
What ancillary (support) operations are performed at the property?	☐ Administration (office) ☐ Building Maintenance ☐ Equipment Maintenance ☐ Vehicle Washing	☐ Supply Water Treatment ☐ Wastewater Treatment ☐ Other: ☐ Other:
Are there any outdoor storage areas?	If Yes -	

Aboveground Storage Tanks

Are any ASTs currently located at the property? ☑ Yes (fill out table below) ☐ No

Location	Contents/Tank Mtl	Size	Secondary Containment
Entrance Gate	Diesel		NO

* Describe any visual evidence of spills or releases around the AST.

Underground Storage Tanks

Are any USTs currently located at the property? ☐ Yes (fill out table below) ☐ No

Location	Size/Contents	Installation Date	Overfill Protection

Any visible evidence that there were USTs previously on the property that had been removed? ☐ Yes ☐ No

Other Material Handling and Storage

Does any equipment on the property contain hydraulic oil? ☐ Yes ☐ No

Type of Equipment	# of Units/Location	Reservoir Size	Any evidence of spills/releases?
Process Equipment			
Hydraulic Lifts			

Elevators			
Trash Compactors			
Balers (i.e., cardboard)			
Other: Crane			
Other:			

Describe other materials handled and store on property. Consider oils, propane, compressed gases including refrigerants, glycol, maintenance chemicals, boiler chemicals, cleaning products, etc.

Material	**Contain Capacity**	**Container Type**	**Material Purpose/Use**	**Storage Location(s)**	**Secondary Containment**	**Evidence of Spills/Releases**
Process Equipment						
Hydraulic Lifts						
Elevators						
Trash Compactors						
Balers (i.e., cardboard)						
Other:						
Other:						

Air Emissions

Are there any sources of air emissions at the property? (e.g., natural gas and oil-fired boilers and ovens, other combustion equipment, welding, coating and painting operations, solvent use)

Source (equipment or process)	**Pollutants**	**Emissions control device(s)**

Hazardous Waste

Does the property generate any hazardous waste? Consider waste products, pharmacy wastes, off-spec chemicals, maintenance chemicals, solvent wastes, and others.

Does the property have an RCRA identification number? ☐ Yes ☐ No

Waste Material	**Generating Process**	**Container Size and Type, Condition**	**Amounts Present**

Does the property accumulate hazardous waste in a central accumulation area (aka 90-day or 180-day accumulation area? ☐ Yes (describe condition of area and containers) ☐ No

Does the property accumulate hazardous wastes in any satellite accumulation areas?
☐ Yes (describe condition of area and containers) ☐ No

Other Regulated Waste

Universal Waste?	☐ Lamps ☐ Batteries ☐ Mercuy-containment equipment ☐ Pesticides ☐ Aerosol cans ☐ Other – _____
Location of Universal Waste	
Does facility generate used oil?	☐ Yes ☐ No Yes – describe type, size, location:

Other Regulated Wastes? (e.g., medical waste, PCB, laboratory, etc.)	☐ Yes ☐ No Yes – describe type, generation process, container sizes, location:

Non-hazardous Wastes

Consider non-hazardous parts washer solvent, oily rags, scrap metal, empty containers, wood, paper and cardboard, and general refuse.

Waste Material	Container Size and Type, Condition	Accumulation Location

Wastewater

Are there any wastewater features such as sumps, pits, ponds, or lagoons on the property? ☐ Yes ☐ No

Are there any oil-water separators, grease traps? ☐ Yes ☐ No

Is there evidence of septic tanks systems or drain fields at the property? ☐ Yes ☐ No

If yes, describe feature, location, wastewater discharged, an destination (if known):

Stormwater

Describe stormwater runoff and where it appears to flow (Consider features such as roof drains, catch basins, storm drains, drainage	

ditches, ponds, containment structures, and dry wells)	
Are any materials stored outside?	☐ Vehicles or trailers ☐ Pallets or packaging ☐ Scrap metal ☐ Uncovered dumpsters ☐ Other: ☐ Other:

Per-and Polyfluoroalkyl Substances (PFAS)

Does the property have a fire suppression systems? What type(s)? Please write down the type of foam or chemicals present in any chemical system, if on a nameplate or sticker on the equipment.	☐ Aqueous Film Forming Foam (AFFF) ☐ Wet sprinkler system (uses water) ☐ Dry pipe system (uses air or nitrogen under pressure) ☐ Dry chemical system (uses dry chemicals under pressure) ☐ Carbon Dioxide (typically in places where people aren't present) ☐ Fire extinguishers ☐ No fire suppression system is present ☐ Unknown

December 27, 2019
Project No. 9085.10.12

Matt Graves, LG
Port of Vancouver USA
3103 Northwest Lower River Road
Vancouver, Washington 98660

Re: Terminal 1 October 2019 Groundwater Monitoring

Dear Mr. Graves:

In October 2019, on behalf of the Port of Vancouver (Port), Maul Foster & Alongi, Inc. (MFA) completed groundwater monitoring at the Terminal 1 property located at 200 Columbia Street in Vancouver, Washington (Terminal 1) (see Figure 1). The purpose of this investigation was to gather supplemental data to assist the Port with planning related to future redevelopment of Terminal 1. MFA collected groundwater samples from six monitoring wells to support evaluation of potential seasonal variability in groundwater quality.

Previous investigations at Terminal 1 include Ecology & Environment, Inc.'s subsurface investigation conducted in November 2008, and Hahn and Associates, Inc.'s (HAI) initial and follow-up soil and groundwater investigations in 2015 and 2016 (E&E, 2009; HAI, 2016). MFA conducted subsurface investigations at Block D in 2017 and 2018 (MFA, 2017d, 2018e); Block B in 2017 and 2018 (MFA, 2017b, 2018b); and Blocks A and C in 2018 (MFA, 2018a,d). HAI collected groundwater samples from monitoring wells MW-1-37 through MW-5-34 in June 2015 and February 2016 (a groundwater analytical data table from these sampling events is included as Attachment A). MFA collected groundwater samples from these wells in November 2016, February 2017, February 2018, and February 2019 (MFA, 2017c, 2018c, 2019). Monitoring well MW-6-30 was installed in Block C in July 2018 and sampled in August 2018 (MFA, 2018d). All groundwater analytical data from MFA's groundwater sampling events to date are included in Table 1, including the August 2018 event at MW-6-30.

One detection of total chromium in a groundwater sample collected by HAI from well MW-2-40 in June 2015 led to the addition of hexavalent chromium analysis during subsequent groundwater sampling events. The Washington State Model Toxics Control Act (MTCA) Method A groundwater cleanup level (CUL) for unrestricted land use for hexavalent chromium is 48 ug/L. Since MFA began sampling in 2016, hexavalent chromium was detected once at a concentration of 5 ug/L. Because of the lack of frequent detections of hexavalent chromium in groundwater at Terminal 1, including a single detection much less than the MTCA CUL, groundwater was not analyzed for hexavalent chromium during the October 2019 sampling event.

FIELD ACTIVITIES

MFA conducted the groundwater monitoring at the six monitoring wells on October 28 and October 29, 2019. The wells were initially opened to allow the water level to equilibrate with the ambient air pressure, followed by measurement of the static water level, using a water level indicator. The water levels were measured from the north side of the casing and were recorded on the water field sampling data sheets, which are included as Attachment B.

Each monitoring well was purged of groundwater before it was sampled. The MW-1-37, MW-3-35, and MW-6-30 well casings were purged using low-flow purging methods with a peristaltic pump and dedicated tubing. Low-flow purging was not implemented at MW-2-40 because the well did not yield sufficient groundwater to permit sustained pumping of groundwater from the well. Instead, a new, disposable plastic bailer was used, and MW-2-40 was purged dry after removal of about 1.3 pore volumes of groundwater. Low flow purging was not implemented at wells MW-4-34 and MW-5-35 because the groundwater levels were below the depth capability of the peristaltic pump. The two wells were purged dry using a new, disposable plastic bailer at each well. Approximately two pore volumes were removed from wells MW-4-34 and MW-5-35.

Water quality parameter measurements were collected during low-flow and bailer purging with a flow-through cell and an in-line, multiprobe meter at approximately three- to five-minute intervals. Water levels were also measured during purging to monitor drawdown. Parameter measurements recorded during purging included purge volume, water level, temperature, specific conductivity, dissolved oxygen, pH, oxygen reduction potential, and turbidity.

Once monitoring parameters had stabilized, sampling was conducted using the peristaltic pump at MW-1-37, MW-3-35, and MW-6-30. At MW-2-40, MW-4-34, and MW-5-35, sampling was conducted with a disposable bailer upon sufficient recharge of groundwater into the well casing.

Laboratory-supplied containers appropriate for the analytical suite were properly filled, labeled, capped, and preserved consistent with method requirements. The sample bottles were then transferred to a chilled cooler for shipment to Apex Laboratories, LLC, in Portland, Oregon, under standard chain-of-custody procedures.

Approximately 10 gallons of purge water and decontamination water were generated during the monitoring event. The waste was disposed of at the Port's aboveground storage tank beneath the West 26th Avenue overpass in Vancouver, Washington.

ANALYTICAL WORK

The groundwater samples were analyzed for the following:

- Diesel- and oil-range total petroleum hydrocarbons (TPH) by method Northwest (NW) TPH-Dx
- Gasoline-range TPH by method NWTPH-Gx
- Priority pollutant 13 total and dissolved metals by U.S. Environmental Protection Agency (USEPA) Method 6020
- Polycyclic aromatic hydrocarbons (PAHs) by USEPA Method 8270D
- Volatile organic compounds by USEPA 8260B

Groundwater analytical laboratory results are included as Attachment C. Results are compared to the Washington State MTCA Method A groundwater CULs for unrestricted land use or, if Method A CULs are not available, to Method B CULs. The data are considered acceptable for their intended use, with the appropriate data qualifiers assigned (see Attachment D for the data validation memorandum).

Consistent with Washington Administrative Code 173-340-708(8), mixtures of carcinogenic PAHs (cPAHs) are considered as single hazardous substances in evaluation of compliance with CULs such that the toxicity of a particular congener is expressed relative to the most toxic congener (benzo(a)pyrene). The toxicity of cPAHs as a group was assessed using a toxic equivalency approach. Each congener in the group is assigned a toxic equivalency factor (TEF) corresponding to the toxicity of that congener relative to the toxicity of benzo(a)pyrene. For example, a congener that is equal in toxicity to benzo(a)pyrene would have a TEF of 1. Similarly, a congener that is half as toxic as benzo(a)pyrene would have a TEF of 0.5, and so on. Multiplying the concentration of a congener by its TEF produces the concentration for that congener that is equivalent in toxicity to the benzo(a)pyrene concentration, known as the toxicity equivalent concentration (TEC). Computing the TEC for each congener (Ci in the equation below) in a sample, followed by summing all TEC values, results in a single cPAH total TEC (i.e., cPAH TTEC) that can be compared to the CUL. The following formula represents the summation approach:

$$\text{cPAH TTEC} = \sum_{i=1}^{k} \text{Ci x TEFi}$$

cPAH TTECs were qualified and calculated as follows:

- Congeners qualified as non-detect and flagged with a "U" are used in the TTEC calculation at one-half the associated value.

- Congeners qualified as estimated and flagged with a "J" are used without modification in the TTEC calculation.
- Typically, if all congeners in a chemical group are undetected, the group sum is reported as undetected; however, based on the limited data set for Terminal 1, this action was not completed.

Naphthalene, 1-methylnaphthalene, and 2-methylnaphthalene were summed to compare to the MTCA Method A CUL for naphthalenes.

Consistent with Ecology Implementation Memorandum No. 4 (Ecology, 2004), the diesel- and oil-range TPH results were summed for a total detection value and were calculated as follows:

- Diesel and oil results qualified as non-detect and flagged with a "U" are used in the total calculation at one-half the associated value.
- Diesel and oil results qualified as estimated and flagged with a "J" are used in the total calculation without modification.

RESULTS

Table 1 provides the analytical results for the sampling events conducted from November 2016 through October 2019. Water level and groundwater elevation data for these events are provided in Table 2.

Groundwater Flow Direction

During the October 2019 sampling event, groundwater was encountered in the monitoring wells at approximately 25 to 29 feet below the top of casing (see Table 2). The groundwater level surface shown on Figure 2 indicates that the dominant groundwater flow direction (as indicated with arrows on the figure) is north-northeast, away from the Columbia River. The groundwater elevation at MW-3-35 is less than at MW-4-34, indicating a slight groundwater flow gradient south toward the Columbia River in the southeast portion of the property. A similar groundwater flow direction was documented during the February 2019 monitoring event.

During the February 2018 sampling event, the groundwater flow direction was south-southeast, toward the Columbia River. During the monitoring events conducted in November 2016 and February 2017, the groundwater flow direction was north-northwest, away from the Columbia River.

This variability in groundwater flow direction may be a function of the Columbia River surface water elevation. At a high river stage, groundwater at Terminal 1 likely is recharged by the

Columbia River and flows north. At low river stage, groundwater at Terminal 1 flows south and discharges to the Columbia River.

Petroleum Hydrocarbons

The following is a summary of the October 2019 results:

- Gasoline-range TPH was detected only at MW-3-35 at a concentration less than the CUL.
- Diesel-range TPH was detected only at MW-3-35 at a concentration greater than the CUL.
- Oil-range TPH was detected only at MW-1-37 at a concentration greater than the CUL.
- The sum of the diesel- and oil-range hydrocarbon concentrations[1] exceeded the CUL at MW-1-37 and MW-3-35.

The following is a summary of the complete dataset, including sampling conducted by HAI in June 2015 and February 2016 and sampling conducted by MFA from November 2016 to October 2019:

- At MW-1-37, after a period of non-detections, oil was detected in October 2019.
- At MW-2-40, detections of diesel have been sporadic; diesel was detected in 2015, 2017, and February 2019 but not in 2016, 2018, or October 2019. Oil was detected at a maximum concentration in November 2016, decreased in 2017, and has not been detected since then.
- At MW-3-35, detections of gasoline and diesel have also been sporadic. Gasoline and diesel exceeded the CULs in 2015 and February 2016, were not detected in November 2016, were detected at generally increasing concentrations from February 2017 to February 2019, and decreased in concentration in October 2019. Oil was detected once in February 2018 at a concentration greater than the CUL.
- At MW-4-34, petroleum hydrocarbons have not been detected.
- At MW-5-35, oil was detected once in February 2018 at a concentration greater than the CUL.

[1] Note that oil-range TPH were not actually detected at MW-2-40 and MW-3-35. The sum of the diesel- and oil-range TPH uses half the reporting limit for non-detected results, which was the case for the oil-range TPH in this instance.

- At MW-6-30, oil was detected once in August 2018 at a concentration greater than the CUL.

The sporadic nature of detections and CUL exceedances may be related to the groundwater flow direction relative to contaminated soil that may be acting as a source of groundwater contamination.

- When groundwater beneath Terminal 1 was flowing toward the Columbia River in February 2018, CUL exceedances occurred at the downgradient well MW-3-35 but not at the upgradient well MW-2-40.
- Conversely, when groundwater beneath Terminal 1 was flowing north, away from the Columbia River, CUL exceedances occurred at downgradient well MW-2-40 but not at the upgradient well MW-3-35.

Primary Pollutant Metals

Of the listed 13 priority pollutant metals, only arsenic was detected at a concentration greater than its CUL, at MW-1-37, MW-4-34, and MW-5-35. All other metals either were not detected or were detected below the CULs (Table 1).

The 2016 to 2019 data include total and dissolved arsenic concentration CUL exceedances at MW-1-37 through MW-5-35. This is consistent with the HAI 2015 and 2016 investigations, which included total arsenic CUL exceedances at the same wells (HAI, 2016). At MW-5-35, a slight increase in concentration is apparent. No trend in concentration is apparent at MW-1-37, MW-2-40, MW-3-35, and MW-4-34. To date, total and dissolved arsenic have not been detected at MW-6-30.

Volatile Organic Compounds

Only acetone at MW-2-40 and naphthalene at MW-3-35 were detected at concentrations less than the CULs during the October 2019 sampling event (Table 1). The naphthalene concentration exceeded the CUL at MW-3-35 during the February 2019 sampling event. This CUL exceedance corresponds with the highest gasoline- and oil-range TPH concentrations detected in February 2019 at MW-3-35.

Polycyclic Aromatic Hydrocarbons

PAHs were detected at MW-1-37, MW-3-35 (MW-3-35 and MW-3-35-DUP), MW-4-34, and MW-6-30 during the October 2019 sampling event. The dibenzofuran detection at MW-3-35 exceeded the CUL; the concentration appears to fluctuate consistent with gasoline- and oil-range TPH concentrations at MW-3-35. Prior CUL exceedances include benzo(a)pyrene and the cPAH TTEC in February 2019 at MW-2-40, the cPAH TTEC in February 2018 at MW-3-35, and naphthalenes in February 2019 at MW-3-35.

SUMMARY

CUL exceedances in the October 2019 groundwater samples collected at Terminal 1 are limited to the combined diesel- and oil-range hydrocarbons from MW-1-37 and MW-3-35; arsenic from MW-1-37, MW-4-34, and MW-5-35; and dibenzofuran from MW-3-35. These exceedances were generally consistent with previous monitoring events. The groundwater flow direction beneath Terminal 1 appears to fluctuate from discharging to the Columbia River (February 2018) to flowing away from the Columbia River (November 2016, February 2017, and October 2019). The fluctuations in flow direction may account for the spatial and temporal fluctuations of diesel- and oil-range hydrocarbon CUL exceedances at MW-2-40 and MW-3-35.

Sincerely,

Maul Foster & Alongi, Inc.

MFA. 2018b. Letter (re: Block B soil sampling—Port of Vancouver USA Terminal 1) to M. Graves, Port of Vancouver, from D. Weatherby and C. Schweitzer, Maul Foster & Alongi, Inc., Vancouver, Washington. May 11.

MFA. 2018c. Letter (re: Terminal 1 February 2018 groundwater monitoring) to M. Graves, Port of Vancouver USA, Vancouver, Washington, from D. Weatherby and C. Schweitzer, Maul Foster & Alongi, Inc., Vancouver, Washington. May 24.

MFA. 2018d. Letter (re: Block C phase II environmental assessment—Port of Vancouver USA Terminal 1) to M. Graves, Port of Vancouver USA, Vancouver, Washington, from D. Weatherby and C. Schweitzer, Maul Foster & Alongi, Inc., Vancouver, Washington. November 7.

MFA. 2018e. Letter (re: Block D soil excavation sampling—Port of Vancouver USA Terminal 1) to M. Graves, Port of Vancouver USA, Vancouver, Washington, from D. Weatherby and C. Schweitzer, Maul Foster & Alongi, Inc., Vancouver, Washington. November 21.

MFA. 2019. Letter (re: Terminal 1 February 2019 groundwater monitoring) to M. Graves, Port of Vancouver USA, Vancouver, Washington, from D. Weatherby and E. Hess, Maul Foster & Alongi, Inc., Vancouver, Washington. March 27.

Table 1
Groundwater Analytical Results
Port of Vancouver Terminal 1
Vancouver, Washington

NOTES:
Shading indicates CUL exceedance.
-- = not analyzed.
cPAH = carcinogenic polycyclic aromatic hydrocarbon.
CUL = cleanup level.
ft bgs = feet below ground surface.
J = estimated result.
MTCA = Model Toxics Control Act.
ND = not detected above method reporting limit.
NV = no value.
TTEC = total toxicity equivalent concentration.
U = not detected at or above method reporting limit.
ug/L = micrograms per liter.
UJ = estimated, non-detect.
[a]MTCA A CUL unless no value, then lowest of MTCA B carcinogenic/noncarcinogenic.
[b]MTCA CUL, no detectable benzene.
[c]Diesel + Oil = sum of diesel-range hydrocarbons and oil-range hydrocarbons; half of the reporting limit is used when results are not detected.
[d]Analyte is evaluated against MTCA A CUL as constituent of naphthalenes. MTCA B CUL is not applicable.
[e]Analyte is evaluated against MTCA A CUL as constituent of cPAH TTEC. MTCA B CUL is not applicable.
[f]The sum of naphthalene, 1-methylnaphthalene, and 2-methylnaphthalene, with half the reporting limit value for non-detect results.
[g]The sum of the seven defined cPAHs, with half the reporting limit used for non-detect results.

Table 2
Groundwater Elevations
Port of Vancouver Terminal 1
Vancouver, Washington

Location	TOC Reference Elevation (feet)	Date	Water Level (feet below TOC)	Water Level Elevation (feet)
MW-1-37	29.06	11/28/2016	20.76	8.30
		02/23/2017	16.94	12.12

Notes:

bgs = below ground surface
bold - detected concentration
Color = concentrations exceeding one or more cleanup levels.
EPA = Environmental Protection Agency
J - Estimated value
PAHs = polyaromatic hydrocarbons
TEF = Toxicity Equivalency Factor
U = Not detected
µg/L = micrograms per liter
VOCs = volatile organic compounds

1 = MTCA Cleanup Regulation, Method A Cleanup Levels, Table 720-1 of Section 900 of Chapter 173-340 of the Washington Administrative Code, revised November 2007.
2 = MTCA Cleanup Regulation, Method B Cleanup Levels, Table 720-1 of Section 900 of Chapter 173-340 of the Washington Administrative Code, revised November 2007.
3 = Guidance for Evaluating Soil Vapor Intrusion in Washington State: Investigation and Remedial Action, Review Draft October 2009, updated April 6, 2015.
4 = Ecology and Environment, Inc. November 2008 temporary well point location.
5 = Equipment blank collected upon groundwater sample collection at the MW-5-34 well location, prior to sampling MW-4-34.
6 = TEF values calculated as described in WAC 173-340-708(8); When the individual PAH concentration was reported as non-detected, then the TEF was multiplied by half the Reporting Level
F-13 = The chromatographic pattern does not resemble the fuel standard used for quantitation.
F-17 = No fuel pattern detected. The Diesel result represents carbon range C12 to C24, and the Oil result represents >C24 to C40.
H = Sample was analyzed outside of the recommended hold time.

RE: A9J1033 - POV-Terminal 1 - 9085.10.12

Thank you for using Apex Laboratories. We greatly appreciate your business and strive to provide the highest quality services to the environmental industry.

Enclosed are the results of analyses for work order A9J1033, which was received by the laboratory on 10/29/2019 at 12:45:00PM.

If you have any questions concerning this report or the services we offer, please feel free to contact me by email at: pnerenberg@apex-labs.com, or by phone at 503-718-2323.

Please note: All samples will be disposed of within 30 days of sample receipt, unless prior arrangements have been made.

Cooler Receipt Information

(See Cooler Receipt Form for details)

Cooler #1	0.3 degC	Cooler #2	0.1 degC
Cooler #3	1.9 degC		

This Final Report is the official version of the data results for this sample submission, unless superseded by a subsequent, labeled amended report.
All other deliverables derived from this data, including Electronic Data Deliverables (EDDs), CLP-like forms, client requested summary sheets, and all other products are considered secondary to this report.

Apex Laboratories

QUALIFIER DEFINITIONS

Client Sample and Quality Control (QC) Sample Qualifier Definitions:

Apex Laboratories

F-12	The result for this hydrocarbon range is primarily due to the presence of individual analyte peaks in the quantitation range. No fuel pattern detected.
F-17	No fuel pattern detected. The Diesel result represents carbon range C12 to C24, and the Oil result represents >C24 to C40.
M-05	Estimated results. Peak separation for structural isomers is insufficient for accurate quantification.
Q-01	Spike recovery and/or RPD is outside acceptance limits.
Q-05	Analyses are not controlled on RPD values from sample and duplicate concentrations that are below 5 times the reporting level.
Q-16	Reanalysis of an original Batch QC sample.
Q-19	Blank Spike Duplicate (BSD) sample analyzed in place of Matrix Spike/Duplicate samples due to limited sample amount available for analysis.
Q-42	Matrix Spike and/or Duplicate analysis was performed on this sample. % Recovery or RPD for this analyte is outside laboratory control limits. (Refer to the QC Section of Analytical Report.)
Q-54	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by +11.7%. The results are reported as Estimated Values.
Q-54a	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by +4.3%. The results are reported as Estimated Values.
Q-54b	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by +5.1%. The results are reported as Estimated Values.
Q-54c	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by +6.9%. The results are reported as Estimated Values.
Q-56	Daily CCV/LCS recovery for this analyte was above the +/-20% criteria listed in EPA 8260C
T-02	This Batch QC sample was analyzed outside of the method specified 12 hour tune window. Results are estimated.

Apex Laboratories

Tigard, OR 97223
503-718-2323
EPA ID: OR01039

Maul Foster & Alongi, INC.	Project: **POV-Terminal 1**	
2001 NW 19th Ave, STE 200	Project Number: **9085.10.12**	**Report ID:**
Portland, OR 97209	Project Manager: **David Weatherby**	**A9J1033 - 11 13 19 1613**

REPORTING NOTES AND CONVENTIONS:

Abbreviations:

DET Analyte DETECTED at or above the detection or reporting limit.

ND Analyte NOT DETECTED at or above the detection or reporting limit.

NR Result Not Reported

RPD Relative Percent Difference. RPDs for Matrix Spikes and Matrix Spike Duplicates are based on concentration, not recovery.

Detection Limits: Limit of Detection (LOD)

Limits of Detection (LODs) are normally set at a level of one half the validated Limit of Quantitation (LOQ).
If no value is listed ('-----'), then the data has not been evaluated below the Reporting Limit.

Reporting Limits: Limit of Quantitation (LOQ)

Validated Limits of Quantitation (LOQs) are reported as the Reporting Limits for all analyses where the LOQ, MRL, PQL or CRL are requested. The LOQ represents a level at or above the low point of the calibration curve, that has been validated according to Apex Laboratories' comprehensive LOQ policies and procedures.

Reporting Conventions:

Basis: Results for soil samples are generally reported on a 100% dry weight basis.
The Result Basis is listed following the units as " dry", " wet", or " " (blank) designation.

" dry" Sample results and Reporting Limits are reported on a dry weight basis. (i.e. "ug/kg dry")
See Percent Solids section for details of dry weight analysis.

" wet" Sample results and Reporting Limits for this analysis are normally dry weight corrected, but have not been modified in this case.

" " Results without 'wet' or 'dry' designation are not normally dry weight corrected. These results are considered 'As Received'.

QC Source:

In cases where there is insufficient sample provided for Sample Duplicates and/or Matrix Spikes, a Lab Control Sample Duplicate (LCS Dup) may be analyzed to demonstrate accuracy and precision of the extraction batch.

Non-Client Batch QC Samples (Duplicates and Matrix Spike/Duplicates) may not be included in this report. Please request a Full QC report if this data is required.

Miscellaneous Notes:

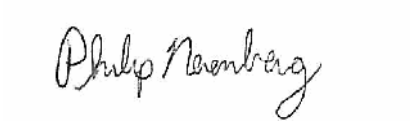
" --- " QC results are not applicable. For example, % Recoveries for Blanks and Duplicates, % RPD for Blanks, Blank Spikes and Matrix Spikes, etc.

" *** " Used to indicate a possible discrepancy with the Sample and Sample Duplicate results when the %RPD is not available. In this case, either the Sample or the Sample Duplicate has a reportable result for this analyte, while the other is Non Detect (ND).

Blanks:

Standard practice is to evaluate the results from Blank QC Samples down to a level equal to ½ the Reporting Limit (RL).
-For Blank hits falling between ½ the RL and the RL (J flagged hits), the associated sample and QC data will receive a 'B-02' qualifier.
-For Blank hits above the RL, the associated sample and QC data will receive a 'B' qualifier, per Apex Laboratories' Blank Policy.
For further details, please request a copy of this document.

Apex Laboratories



Philip Nerenberg, Lab Director

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Apex Laboratories, LLC

6700 S.W. Sandburg Street
Tigard, OR 97223
503-718-2323
EPA ID: OR01039

Maul Foster & Alongi, INC.	Project: **POV-Terminal 1**	
2001 NW 19th Ave, STE 200	Project Number: **9085.10.12**	**Report ID:**
Portland, OR 97209	Project Manager: **David Weatherby**	**A9J1033 - 11 13 19 1613**

REPORTING NOTES AND CONVENTIONS (Cont.):

Blanks (Cont.):

Sample results flagged with a 'B' or 'B-02' qualifier are potentially biased high if the sample results are less than ten times the level found in the blank for inorganic analyses, or less than five times the level found in the blank for organic analyses.

'B' and 'B-02' qualifications are only applied to sample results detected above the Reporting Level.

Preparation Notes:

Mixed Matrix Samples:

Water Samples:

Water samples containing significant amounts of sediment are decanted or separated prior to extraction, and only the water portion analyzed, unless otherwise directed by the client.

Soil and Sediment Samples:

Soil and Sediment samples containing significant amounts of water are decanted prior to extraction, and only the solid portion analyzed, unless otherwise directed by the client.

Sampling and Preservation Notes:

Certain regulatory programs, such as National Pollutant Discharge Elimination System (NPDES), require that activities such as sample filtration (for dissolved metals, orthophosphate, hexavalent chromium, etc.) and testing of short hold analytes (pH, Dissolved Oxygen, etc.) be performed in the field (on-site) within a short time window. In addition, sample matrix spikes are required for some analyses, and sufficient volume must be provided, and billable site specific QC requested, if this is required. All regulatory permits should be reviewed to ensure that these requirements are being met.

Data users should be aware of which regulations pertain to the samples they submit for testing. If related sample collection activities are not approved for a particular regulatory program, results should be considered estimates. Apex Laboratories will qualify these analytes according to the most stringent requirements, however results for samples that are for non-regulatory purposes may be acceptable.

Samples that have been filtered and preserved at Apex Laboratories per client request are listed in the preparation section of the report with the date and time of filtration listed.

Apex Laboratories maintains detailed records on sample receipt, including client label verification, cooler temperature, sample preservation, hold time compliance and field filtration. Data is qualified as necessary, and the lack of qualification indicates compliance with required parameters.

LABORATORY ACCREDITATION INFORMATION

TNI Certification ID: OR100062 (Primary Accreditation) - EPA ID: OR01039

All methods and analytes reported from work performed at Apex Laboratories are included on Apex Laboratories' ORELAP Scope of Certification, with the exception of any analyte(s) listed below:

Apex Laboratories

Matrix	Analysis	TNI_ID	Analyte	TNI_ID	Accreditation

All reported analytes are included in Apex Laboratories' current ORELAP scope.

Secondary Accreditations

Apex Laboratories also maintains reciprocal accreditation with non-TNI states (Washington DOE), as well as other state specific accreditations not listed here.

Subcontract Laboratory Accreditations

Subcontracted data falls outside of Apex Laboratories' Scope of Accreditation.
Please see the Subcontract Laboratory report for full details, or contact your Project Manager for more information.

Field Testing Parameters

Results for Field Tested data are provded by the client or sampler, and fall outside of Apex Laboratories' Scope of Accreditation.

DATA VALIDATION MEMORANDUM

DATA QUALITY ASSURANCE/QUALITY CONTROL REVIEW

PROJECT NO. 9085.10.12 | NOVEMBER 22, 2019 | PORT OF VANCOUVER

Maul Foster & Alongi, Inc. (MFA) conducted an independent review of the quality of analytical results for groundwater samples collected at the Port of Vancouver Terminal 1. The samples were collected on October 28 and 29, 2019.

Apex Laboratories, LLC (Apex) performed the analyses. Apex report A9J1033 was reviewed. The analyses performed and samples analyzed are listed below. Samples submitted on hold are also indicated.

Analysis	Reference
Diesel- and Oil-Range Hydrocarbons	NWTPH-Dx
Gasoline-Range Hydrocarbons	NWTPH-Gx
Polycyclic Aromatic Hydrocarbons	USEPA 8270D-SIM
Total and Dissolved Priority Pollutant Metals	USEPA 6020A
Volatile Organic Compounds	USEPA 8260C

NWTPH = Northwest Total Petroleum Hydrocarbons.
SIM = selected ion monitoring.
USEPA = U.S. Environmental Protection Agency.

Samples Analyzed	
Report A9J1033	
MW-1-37	MW-5-35
MW-2-40	MW-6-30
MW-3-35	MW-3-35-DUP
MW-4-34	Trip Blank (hold)

DATA QUALIFICATIONS

Analytical results were evaluated according to applicable sections of U.S. Environmental Protection Agency (USEPA) procedures (USEPA, 2017a,b) and appropriate laboratory and method-specific guidelines (Apex, 2018; USEPA, 1986).

In report A9J1033, all detected NWTPH-Dx diesel-range hydrocarbon results were flagged by Apex, based on chromatographic patterns that did not resemble the chromatographic patterns of the fuel standards used for quantitation. The results were reported as diesel-range hydrocarbons instead of a specific fuel; thus, qualification was not required.

In report A9J1033, Apex flagged all detected NWTPH-Gx gasoline-range hydrocarbon results, based on the presence of individual analyte peaks within the gasoline hydrocarbon quantitation

range. Apex noted that no fuel pattern had been detected. The results were reported as gasoline-range hydrocarbons instead of a specific fuel; thus, qualification was not required.

In report A9J1033, Apex flagged some USEPA Method 8270D-SIM results as estimated because of insufficient chromatographic peak separation. The results have been qualified by the reviewer with "J" as estimated.

Report	Sample	Component	Original Result (ug/L)	Qualified Result (ug/L)
A9J1033	MW-1-37	Benzo(b)fluoranthene	0.0702	0.0702 J

NOTES:
J = result is estimated.
ug/L = micrograms per liter.

Total and dissolved metals results were compared. Dissolved results greater than associated total results were not qualified if the relative percent difference (RPD) was less than 20 percent. Qualification was required for the following based on dissolved metals results that were greater than the associated total metals results.

Report	Sample	Component	Original Result (ug/L)	Qualified Result (ug/L)
A9J1033	MW-2-40	Total Arsenic	3.01	3.01 J
		Dissolved Arsenic	4.16	4.16 J
		Total Nickel	1.08	1.08 J
		Dissolved Nickel	1.78	1.78 J
		Total Zinc	4.00 U	4.00 UJ
		Dissolved Zinc	9.12	9.12 J
	MW-3-35	Total Zinc	9.08	9.08 J
		Dissolved Zinc	12.7	12.7 J
	MW-3-35-DUP	Total Zinc	9.01	9.0 J
		Dissolved Zinc	16.4	16.4 J
	MW-6-30	Total Zinc	4.00 U	4.00 UJ
		Dissolved Zinc	10.7	10.7 J

NOTES:
J = result is estimated.
U = result is non-detect.
ug/L = micrograms per liter.

Data validation procedures were modified, as appropriate, to accommodate quality-control requirements for methods not specifically addressed by the USEPA procedures (e.g., NWTPH-Dx).

The data are considered acceptable for their intended use, with the appropriate data qualifiers assigned.

HOLDING TIMES, PRESERVATION, AND SAMPLE STORAGE

Holding Times

Extractions and analyses were performed within the recommended holding time criteria.

Preservation and Sample Storage

The samples were preserved and stored appropriately.

BLANKS

Method Blanks

Laboratory method blank analyses were performed at the required frequencies. For purposes of data qualification, the method blanks were associated with all samples prepared in the analytical batch. All laboratory method blanks were non-detect to reporting limits for all target analytes.

Trip Blanks

Report A9J1033 states that a trip blank sample was submitted to Apex on hold. Samples could not be evaluated for trip contamination.

Equipment Rinsate Blanks

Equipment rinsate blanks were not required for this sampling event, as samples were collected with single-use equipment.

SURROGATE RECOVERY RESULTS

The samples were spiked with surrogate compounds to evaluate laboratory performance on individual samples. All surrogate percent recoveries were within acceptance limits.

MATRIX SPIKE/MATRIX SPIKE DUPLICATE RESULTS

Matrix spike/matrix spike duplicate (MS/MSD) results are used to evaluate laboratory precision and accuracy. All MS/MSD samples were extracted and analyzed at the required frequency. Where MS/MSD analyses were not performed because of insufficient sample volume, batch precision and accuracy were evaluated with laboratory control sample (LCS)/laboratory control sample duplicate (LCSD) and/or laboratory duplicate samples.

According to report A9J1033, the USEPA Method 8260C batch 9101746 MS exceeded upper percent recovery acceptance limits for 1,1-dichloropropane and o-xylene, at 126 percent and 123 percent, respectively. The sample used to prepare the MS was non-detect; thus, qualification was not required.

According to report A9J1033, the USEPA Method 8260C batch 9101792 MS exceeded the upper percent recovery acceptance limit of 126 percent for dibromochloromethane at 127 percent. The reviewer confirmed that the MS had been prepared with a sample from an unrelated project; thus, the sample matrix may not represent the project sample matrices reported in A9J1033. No qualification was required.

All remaining MS/MSD results were within acceptance limits for percent recovery and RPDs.

LABORATORY DUPLICATE RESULTS

Duplicate results are used to evaluate laboratory precision. All duplicate samples were extracted and analyzed at the required frequency. Laboratory duplicate results within five times the reporting limit were not evaluated for precision.

In report A9J1033, Apex flagged a NWTPH-Gx and USEPA Method 8260C batch 9101792 laboratory duplicate (9101792-DUP2) because of analysis outside of the recommended 12-hour tune window. The laboratory duplicate was prepared with a sample from an unrelated project and the remaining batch quality control were analyzed within the tune window; thus, qualification was not required.

All remaining laboratory duplicate RPDs were within acceptance limits.

LABORATORY CONTROL SAMPLE/LABORATORY CONTROL SAMPLE DUPLICATE RESULTS

An LCS/LCSD is spiked with target analytes to provide information on laboratory precision and accuracy. The LCS/LCSD samples were extracted and analyzed at the required frequency.

Report A9J1033 states that the USEPA Method 8260C batch 9101746 LCS exceeded upper percent recovery acceptance limits of 120 percent for 2,2-dichloropropane, at 125 percent. The associated sample results were non-detect; thus, qualification was not required.

Report A9J1033 states that the USEPA Method 8260C batch 9101792 LCS exceeded upper percent recovery acceptance limits of 120 percent for bromoform, bromomethane, and dibromochloromethane ranging from 124 percent to 132 percent. The associated sample results were non-detect; thus, qualification was not required.

All remaining LCS/LCSD results were within acceptance limits for percent recovery and RPD.

FIELD DUPLICATE RESULTS

Field duplicate samples measure both field and laboratory precision. According to report A9J1033, one field duplicate (MW-3-35/MW-3-35-DUP) was submitted for analysis. MFA uses acceptance criteria of 100 percent RPD for results that are less than five times the reporting limit, or 50 percent RPD for results that are greater than five times the reporting

limit. Non-detect data are not used in the evaluation of field duplicate results. All field duplicate results met the RPD acceptance criteria.

CONTINUING CALIBRATION VERIFICATION RESULTS

Continuing calibration verification (CCV) results are used to demonstrate instrument precision and accuracy through the end of the sample batch. CCV results were not reported; however, Apex flagged sample results associated with CCV results that did not meet acceptance criteria. The reviewer took no action based on quality-control sample flags for CCV exceedances when quality-control results met acceptance criteria.

REPORTING LIMITS

Apex used routine reporting limits for non-detect results, except for samples requiring dilutions because of high analyte concentrations and/or matrix interferences.

DATA PACKAGE

The data packages were reviewed for transcription errors, omissions, and anomalies.

In report A9J1033, Apex noted on the cooler receipt form that limited sample volume was received in the hydrochloric acid-preserved container received for sample MW-2-40. The associated NWTPH-Dx results were reported with raised reporting limits. No action was required.

According to report A9J1033, a sample collection date, matrix, and the number of containers were not provided on the chain of custody for the trip blank. The sampler was notified. No additional action was required.

No additional issues were found.

Project No. 9085.10.07

Matt Graves, LG
Port of Vancouver
3103 Northwest Lower River Road
Vancouver, Washington 98660

Re: Block A Phase II Environmental Assessment—Port of Vancouver USA Terminal 1

Dear Mr. Graves:

On behalf of the Port of Vancouver USA (Port), Maul Foster & Alongi, Inc. (MFA) completed an investigation to assess soil and groundwater for possible impacts related to historical activities at the Terminal 1 Block A property located at 200 Columbia Street in Vancouver, Washington (Block A; see Figure 1). Previous investigations of Block A conducted in 2009, 2015, and 2016 identified soil and groundwater impacts. A test pit investigation conducted by MFA in 2017 north of Block A identified soil impacts and perched groundwater with a sheen. Since these investigations did not include the area now covered by a road in the northern portion of Block A, environmental conditions in that area were a data gap. The purpose of this investigation was to address this data gap and assess whether impacts to soil and groundwater extend into the northern portion of Block A.

EXECUTIVE SUMMARY

The Block A Phase II environmental assessment included collection and laboratory analysis of seven soil samples from three borings, and one groundwater sample from one boring (see Figure 2). Soil sample depths ranged from 2 to 14 feet below ground surface (bgs), and the groundwater sample was collected from 20 to 30 feet bgs.

Soil samples were analyzed for arsenic, barium, cadmium, chromium, lead, mercury, selenium, and silver; gasoline-, diesel-, and oil-range total petroleum hydrocarbons (TPH); polychlorinated biphenyls (PCBs); and polycyclic aromatic hydrocarbons (PAHs). The groundwater sample was analyzed for the same constituents, except that analysis was not conducted for PCBs but was conducted for volatile organic compounds (VOCs).

No indicators of contamination (e.g., petroleum-hydrocarbon-like odors, staining) were observed in the soil borings. The only Washington State Department of Ecology (Ecology) Model Toxics Control Act (MTCA) Method A cleanup level (CUL) exceedance for soil was the 1,160 milligrams per kilogram (mg/kg) lead concentration at boring GP-1 at 11 feet bgs, which exceeds the MTCA Method A CUL of 250 mg/kg (see Table 1). Because of the sample's potential to exceed the toxicity characteristic leaching procedure (TCLP) for lead, it was

analyzed for TCLP lead. The lead TCLP analysis concentration was 0.654 milligram per liter (mg/L), below the U.S. Environmental Protection Agency (USEPA) hazardous waste regulatory level of 5 mg/L. In addition, soil at boring GP-1 at 7 feet bgs was analyzed for lead, to assess the vertical extent of lead impacts. The lead concentration was 46 mg/kg, indicating that the vertical extent of the elevated lead concentration in GP-1 at 11 feet bgs does not exist at shallower depths.

Analysis of the groundwater constituents did not detect Method A CUL exceedances.

Should future development of Block A require excavation of soil at GP-1 at 11 feet bgs, further assessment of the extent of lead in soil is recommended.

FIELDWORK

A scope of work for this assessment was provided to the Port in June 2017[1] and the fieldwork was performed on January 30, 2018. The investigation conducted was consistent with the scope of work, the requirements put forth in Ecology's Guidance on Sampling and Data Analysis Methods,[2] and Ecology's MTCA (Washington Administrative Code [WAC] 173-340).

Prior to the investigation activities, MFA notified the Underground Utility Notification Center and retained a private underground utility-locating contractor (Applied Professional Services, Inc.) to check the proposed boring locations for underground utilities.

Pacific Soil and Water LLC, from Tualatin, Oregon, conducted the drilling, using a truck-mounted Geoprobe™ 6600 drill rig. Three borings (GP-1 through GP-3) were advanced under the observation of an MFA geologist at the locations shown in Figure 2. These locations were selected to provide representative coverage of the northern portion of Block A. MFA collected soil samples, described soil types, and used a photoionization detector (PID) to assess representative soil samples for organic vapors. Observations and sample collection information were recorded on the boring logs provided in Attachment A.

Borings GP-1 and GP-3 were advanced to 15 feet bgs, and GP-2 was advanced to 30 feet bgs for groundwater sample collection. During borehole advancement, continuous soil core was retrieved in 5-foot-long intervals to assess conditions of the excavation depth anticipated for future development and to assess baseline conditions in soil below the future excavation depth. Three soil samples were collected from each boring for potential laboratory analysis, for a total of nine samples. The soil sample depths were selected as described in the scope of work and

[1] MFA. MFA work order authorization for Terminal I Block A Phase II environmental site assessment. Maul Foster & Alongi, Inc., June 23, 2017.

[2] Ecology. Guidance on sampling and data analysis methods. Publication No. 94-49. Washington State Department of Ecology Toxics Cleanup Program, January 1995.

based on field observations, site history, professional judgment, and ability to provide sample material representative of each soil stratigraphic unit encountered in the boring.

Wood fragments having the appearance of manufactured wood chips were observed at approximately 6.5 to 7 feet bgs and scattered throughout 10.8 to 12.2 bgs at boring GP-3. These had no noticeable odor and the PID reading was 0.0 part per million (ppm). GP-1 was the only boring with a PID reading above 0.0 ppm; at 2 feet bgs, the PID reading was 0.3 ppm. Evidence of contamination (hydrocarbon-like odor and staining) was not observed in the soil recovered from the borings of Block A.

GP-2 was selected for reconnaissance groundwater sample collection because of its central location relative to the three borings in Block A. The drilling rig retrieved additional soil core from the 15- to 25-foot depth interval and then pushed without soil collection to 30 feet bgs. A 10-foot-long, temporary polyvinyl chloride, non-pre-packed well screen was placed at the 20- to 30-foot depth interval to facilitate groundwater sample collection. Groundwater was encountered at approximately 21 feet bgs at GP-2. The temporary well was purged of groundwater, using a peristaltic pump. Readings of the purged water quality were recorded during purging, using a water-quality meter to facilitate collection of a sample representative of groundwater and to reduce turbidity caused by drilling and insertion of the screen into the soil. The water quality readings are provided as Attachment B.

Investigation-derived waste generated during the assessment activities included approximately 5 gallons of water and 10 gallons of soil. The water was placed in the Port's holding tank for future disposal. The soil was placed in a labeled, steel, 55-gallon drum near the Block A and Block C parcel boundary.

SITE GEOLOGY AND HYDROGEOLOGY

Consistent with previous investigations at Terminal 1, geologic units encountered in the soil borings consisted of gravelly and sandy fill overlying sandy and silty soil units. Typically, gravelly silt and silty gravel fill was observed from the surface to approximately 8 feet bgs. Fill consisting of sand with silt was generally observed from approximately 8 feet bgs to 25 feet bgs, the maximum depth explored. Silt and sandy silt were observed beneath the sandy fill in two borings (GP-2 and GP-3) at approximately 11 feet bgs. These finer-grained silty units were interpreted to be native soil units.

Groundwater was encountered at approximately 21 feet bgs. Based on groundwater monitoring conducted at Terminal 1, groundwater is inferred to flow to the north and northwest, away from the Columbia River, approximately 400 feet southwest of Block A.

ANALYTICAL METHODS

Of the nine soil samples collected for potential laboratory analysis, six were initially selected (two from each boring) to represent the stratigraphic units encountered in the borings at depths that may require excavation (assumed to be 14 feet or less) during future development of Block B. The soil samples, together with the one groundwater sample, were submitted under chain-of-custody protocols to Apex Laboratories, LLC, in Portland, Oregon.

The six soil samples were initially analyzed for the following constituents:

- Diesel- and oil-range TPH by method Northwest Total Petroleum Hydrocarbons (NWTPH)-Dx
- Gasoline-range TPH by method NWTPH-Gx
- Total metals by USEPA Method 6020 for arsenic, barium, cadmium, chromium, lead, mercury, selenium, and silver
- PCBs by USEPA Method 8082A

Initial analysis of two samples (GP-1 at 2 feet and 11 feet bgs) detected diesel- and oil-range TPH in soil. These two samples were subsequently analyzed for PAHs by USEPA Method 8270D.

Initial analysis of sample GP-1 at 11 feet bgs resulted in a lead concentration in exceedance of the MTCA Method A CUL and with the potential to exceed the TCLP criterion for lead. This sample was subsequently analyzed for TCLP lead by USEPA Method 6020. Additionally, a sample from GP-1 at 7 feet bgs was analyzed for total lead by USEPA Method 6020 to assess the vertical extent of the elevated lead concentration found in sample GP-1 at 11 feet bgs.

The groundwater sample was analyzed for the following constituents:

- Diesel- and oil-range TPH by method NWTPH-Dx
- Gasoline-range TPH by method NWTPH-Gx
- Total metals by USEPA Method 6020 for arsenic, barium, cadmium, chromium, lead, mercury, selenium, and silver
- VOCs by USEPA Method 8260B
- PAHs by USEPA Method 8270D

See Attachment C for the laboratory analytical reports and Attachment D for the data validation memorandum. The data are considered acceptable for their intended use, with the appropriate data qualifiers assigned.

Consistent with WAC 173-340-708(8), mixtures of carcinogenic PAHs (cPAHs) are considered as single hazardous substances in the evaluation of compliance with MTCA CULs, such that the toxicity of a particular congener is expressed relative to the most toxic congener (benzo(a)pyrene). The toxicity of cPAHs as a group was assessed using a toxic equivalency approach. Each congener in the group is assigned a toxic equivalency factor (TEF) corresponding to the toxicity of that congener relative to the toxicity of benzo(a)pyrene. For example, a congener that is equal in toxicity to benzo(a)pyrene would have a TEF of 1. Similarly, a congener that is half as toxic as benzo(a)pyrene would have a TEF of 0.5, and so on. Multiplying the concentration of a congener by its TEF produces the concentration for that congener that is equivalent in toxicity to the benzo(a)pyrene concentration, known as the toxicity equivalent concentration (TEC). Computing the TEC for each congener (Ci in the equation below) in a sample, followed by summing all TEC values, results in a single cPAH total TEC (i.e., cPAH TTEC) that can be compared to the MTCA CUL. The following formula represents the summation approach:

$$\text{cPAH TTEC} = \sum_{i=1}^{k} \text{Ci x TEFi}$$

Naphthalene, 1-methylnaphthalene, and 2-methylnaphthalene were summed to compare to the MTCA Method A CUL for naphthalenes. Consistent with Ecology's Implementation Memorandum No. 4,[3] the diesel- and oil-range TPH results were summed for a total detection value and were calculated as follows:

- Diesel and oil results qualified as non-detect and flagged with a "U" are used in the total calculation at one-half the associated value.

RESULTS

The sections below summarize the soil and groundwater analytical results and screening against MTCA CULs presented in Tables 1 and 2. MTCA Method A CULs are for unrestricted land use, as noted on Tables 1 and 2. Results are screened against MTCA Method B CULs only when MTCA Method A CULs are not available.

[3] Ecology. Memorandum (re: determining compliance with Method A cleanup levels for diesel and heavy oil) to file. Implementation memorandum no. 4. Prepared by T. Nord, Washington State Department of Ecology, June 2004.

Soil

The following metals were detected in one or more soil samples: arsenic, barium, cadmium, chromium, lead, mercury, and silver. Of these, only lead in one sample—from GP-1 at 11 feet bgs—exceeded the MTCA Method A CUL of 250 mg/kg, with a concentration of 1,160 mg/kg. The lead TCLP analysis concentration for GP-1 at 11 feet bgs was 0.654 mg/L, below the USEPA hazardous waste regulatory level of 5 mg/L for lead. The concentration for total lead from GP-1 at 7 feet bgs was 46 mg/kg, indicating that the vertical extent of the elevated lead concentration in sample GP-1 at 11 feet bgs does not exist at shallower depths.

Each soil sample was analyzed for PCBs; there were no detections.

Gasoline-range TPH were not detected in any of the samples.

Diesel-range TPH was detected only in sample GP-1 at 11 feet bgs (68 mg/kg). Oil-range TPH was detected only in sample GP-1 at 2 feet bgs (90.6 mg/kg). The individual results and the calculated diesel + oil TPH results for these two samples were below the MTCA Method A CUL of 2,000 mg/kg.

The two soil samples with detections of TPH (GP-1 at 2 feet and 11 feet bgs) were also analyzed for PAHs. Several PAHs were detected in each sample, but these detections did not exceed the MTCA Method A and B CULs, and the cPAH TTEC did not exceed MTCA Method A CULs.

Groundwater

The following total metals were detected in the groundwater sample from GP-2: arsenic, barium, chromium, lead, and selenium. None of these exceeded the MTCA Method A CULs.

Gasoline-range TPH, diesel-range TPH, oil-range TPH, and VOCs were not detected in the groundwater sample.

Multiple PAHs were detected in the groundwater sample, but none of the detections exceeded the MTCA Method A CULs or the Method B CULs used when a Method A CUL was not available.

CONCLUSIONS

The Phase II environmental assessment of Block A resulted in the following conclusions:

- No major indicators of contamination (petroleum hydrocarbon-like odors, staining) were observed in the soil borings. Wood fragments were observed in GP-3, but there were no hydrocarbon-like odors or elevated PID readings associated with the wood.

- The MTCA Method A CUL exceedance for lead in soil sample GP-1 at 11 feet bgs is limited in vertical extent, since lead did not exceed the CUL in the shallower samples at 2 feet and 7 feet bgs. In addition, the lead TCLP analysis concentration for GP-1 at 11 feet bgs was below the USEPA hazardous waste regulatory level.
- Groundwater was present at approximately 21 feet bgs.
- Analysis of the groundwater constituents did not detect Method A CUL exceedances.
- Overall, widespread contamination with the potential to impact future redevelopment was not encountered during the assessment.

RECOMMENDATIONS

The results of the Block A Phase II environmental assessment provide the basis for the following recommendations:

- Further assessment of the extent of lead in soil should future development of Block A require excavation of soil at GP-1 at 11 feet bgs.
- No additional groundwater sampling in Block A.

Sincerely,

Maul Foster & Alongi, Inc.

David Weatherby, LG

NOTES:

Calculated sums use the highest non-detect value when all constituents are non-detect. When detect and non-detect values are summed, one-half the non-detect value is used. Where all results are non-detect, the highest non-detect value is used.

Detected results are indicated by bold font.

Results that exceed cleanup levels are shaded. Non-detect results are not evaluated against cleanup criteria. Results are evaluated against MTCA B cleanup levels only when MTCA A levels are not available.

-- = not analyzed.

cPAH TTEC = carcinogenic PAH total toxic equivalent concentration. Non-detect results treated as one-half according to Washington State Department of Ecology Implementation Memorandum #10 (Evaluating the Human Health Toxicity of Carcinogenic PAHs (cPAHs) Using Toxicity Equivalency Factors (TEFs). April 20, 2015.

ft bgs = feet below ground surface.

J = result is an estimated value.

mg/kg = milligrams per kilogram.

mg/L = milligrams per liter.

MTCA A = Model Toxics Control Act Method A, unrestricted land use.

MTCA B = Model Toxics Control Act Method B, lower of carcinogen or noncarcinogen value.

ND = not detected.

NV = no value.

PAH = polycyclic aromatic hydrocarbon.

PCB = polychlorinated biphenyl.

TCLP = Toxicity Characteristic Leaching Procedure.

TPH = total petroleum hydrocarbons.

U = result is non-detect at the method reporting limit.

[a]TCLP maximum concentration for toxicity characteristic, 40 CFR 261.24.

[b]Value is for chromium III.

[c]The sum of naphthalene, 1-methylnaphthalene, and 2-methylnaphthalene. One half of the method reporting limit used for non-detect results.

[d]MTCA cleanup level is for gasoline-range organics with no detectable benzene present.

[e]Diesel + Oil = sum of diesel-range hydrocarbons and oil-range hydrocarbons; half of the method reporting limit is used when results are not detected.

BORING LOGS

Maul Foster & Alongi, Inc.

Geologic Borehole Log/Well Construction

Project Number	Well Number	Sheet
9085.10.07	**GP-1**	**1 of 1**

Project Name	**Port of Vancouver**	TOC Elevation (feet)	
Project Location	**Block A, Terminal 1, Vancouver, Washington**	Surface Elevation (feet)	
Start/End Date	**1/30/2018 to 1/30/2018**	Northing	
Driller/Equipment	**Pacific Soil and Water; C. Watson/GeoProbe 6600**	Easting	
Geologist/Engineer	**Cody Schweitzer/Emily Hess**	Hole Depth	**12.0-feet**
Sample Method	**Macrocore**	Outer Hole Diam	**2.25-inch**

Depth (feet, BGS)	Well Details	Sample Data: Interval	Percent Recovery	Collection Method	Number	Name (Type)	Blows/6"	Lithologic Column	Soil Description
0									0.0 to 0.5 feet: ASPHALT; black.
1			40	GP		GP1-S-2.0 PID = 0.3 ppm			0.5 to 2.0 feet: GRAVELLY/SILTY SAND (SP); grayish brown; 20% fines; 50% sand, fine to coarse; 30% gravel, fine to coarse; trace rock fragments; moist.
2									@ 1.5 feet: Brick fragment.
									2.0 to 5.0 feet: No recovery.
5			40	GP		GP1-S-7.0 PID = 0.0 ppm			5.0 to 7.0 feet: SILTY/GRAVELLY SAND (SM); brown; 30% fines; 50% sand, fine to coarse; 20% gravel, fine to coarse; trace rock fragments; moist.
									7.0 to 10.0 feet: No recovery.
10			50	GP		GP1-S-11.0 PID = 0.0 ppm			10.0 to 11.0 feet: SANDY GRAVEL WITH SILT (GP); blackish brown; 10% fines; 20% sand; 70% gravel, fine to coarse; wet.
11	▽								11.0 to 12.0 feet: No recovery.
12									@ 12.0 feet: Refusal.

Total Depth = 12.0 feet bgs.

Borehole Details:
0.0 to 12.0 feet bgs: 2.25-inch borehole.

Borehole Abandonment Details:
0.0 to 0.4 feet bgs: Asphalt.
0.4 to 1.0 feet bgs: Pea gravel.
1.0 to 1.5 feet bgs: Concrete.
1.5 to 12.0 feet bgs: Bentonite chips hydrated with potable water.

NOTES: *1. bgs = below ground surface. 2. GP = Geoprobe macro-core sampler. 3. Depths are approximate and relative to feet bgs. 4. ppm = parts per million. 5. PID = photoionization detector, soil head space reading in ppm.*

▽ ***Water level observed at 11 feet bgs at time of drilling.***

Portland, OR 97209

RE: A8A0991 - 9085.10.07

Thank you for using Apex Laboratories. We greatly appreciate your business and strive to provide the highest quality services to the environmental industry.

Enclosed are the results of analyses for work order A8A0991, which was received by the laboratory on 1/31/2018 at 10:37:00AM.

If you have any questions concerning this report or the services we offer, please feel free to contact me by email at: pnerenberg@apex-labs.com, or by phone at 503-718-2323.

This Final Report is the official version of the data results for this sample submission, unless superseded by a subsequent, labeled amended report.

All other deliverables derived from this data, including Electronic Data Deliverables (EDDs), CLP-like forms, client requested summary sheets, and all other products are considered secondary to this report.

Apex Laboratories

AMENDED REPORT

Maul Foster & Alongi, INC.	Project: **POV-Block A**	
2001 NW 19th Ave, STE 200	Project Number: **9085.10.07**	Report ID:
Portland, OR 97209	Project Manager: **David Weatherby**	**A8A0991 - 050818 0340**

QUALIFIER DEFINITIONS

Client Sample and Quality Control (QC) Sample Qualifier Definitions:

A-01	Rerun for MRL.
C-07	Extract has undergone Sulfuric Acid Cleanup by EPA 3665A, Sulfur Cleanup by EPA 3660B, and Florisil Cleanup by EPA 3620B in order to minimize matrix interference.
F-11	The hydrocarbon pattern indicates possible weathered diesel, or a contribution from a related component.
M-05	Estimated results. Peak separation for structural isomers is insufficient for accurate quantification.
P-10	Result estimated due to the presence of multiple PCB Aroclors and/or matrix interference.
Q-03	Spike recovery and/or RPD is outside control limits due to the high concentration of analyte present in the sample.
Q-04	Spike recovery and/or RPD is outside control limits due to a non-homogeneous sample matrix.
Q-05	Analyses are not controlled on RPD values from sample and duplicate concentrations that are below 5 times the reporting level.
Q-16	Reanalysis of an original Batch QC sample.
Q-19	Blank Spike Duplicate (BSD) sample analyzed in place of Matrix Spike/Duplicate samples due to limited sample amount available for analysis.
Q-42	Matrix Spike and/or Duplicate analysis was performed on this sample. % Recovery or RPD for this analyte is outside laboratory control limits. (Refer to the QC Section of Analytical Report.)
Q-54	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by +2%. The results are reported as Estimated Values.
Q-54a	Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by +9%. The results are reported as Estimated Values.
Q-56	Daily CCV/LCS recovery for this analyte was above the +/-20% criteria listed in EPA 8260C
R-02	The Reporting Limit for this analyte has been raised to account for interference from coeluting organic compounds present in the sample.
S-05	Surrogate recovery is estimated due to sample dilution required for high analyte concentration and/or matrix interference.
S-06	Surrogate recovery is outside of established control limits.
TCLP	This batch QC sample was prepared with TCLP or SPLP fluid from preparation batch 8050398.

AMENDED REPORT

Maul Foster & Alongi, INC.	Project: **POV-Block A**	
2001 NW 19th Ave, STE 200	Project Number: **9085.10.07**	Report ID:
Portland, OR 97209	Project Manager: **David Weatherby**	**A8A0991 - 050818 0340**

REPORTING NOTES AND CONVENTIONS:

Abbreviations:

DET Analyte DETECTED at or above the detection or reporting limit.

ND Analyte NOT DETECTED at or above the detection or reporting limit.

NR Result Not Reported

RPD Relative Percent Difference

Detection Limits: Limit of Detection (LOD)

Limits of Detection (LODs) are normally set at a level of one half the validated Limit of Quantitation (LOQ).
If no value is listed ('-----'), then the data has not been evaluated below the Reporting Limit.

Reporting Limits: Limit of Quantitation (LOQ)

Validated Limits of Quantitation (LOQs) are reported as the Reporting Limits for all analyses where the LOQ, MRL, PQL or CRL are requested. The LOQ represents a level at or above the low point of the calibration curve, that has been validated according to Apex Laboratories' comprehensive LOQ policies and procedures.

Reporting Conventions:

Basis: Results for soil samples are generally reported on a 100% dry weight basis.
The Result Basis is listed following the units as " dry", " wet", or " " (blank) designation.

" dry" Sample results and Reporting Limits are reported on a dry weight basis. (i.e. "ug/kg dry")
See Percent Solids section for details of dry weight analysis.

" wet" Sample results and Reporting Limits for this analysis are normally dry weight corrected, but have not been modified in this case.

" " Results without 'wet' or 'dry' designation are not normally dry weight corrected. These results are considered 'As Received'.

QC Source: In cases where there is insufficient sample provided for Sample Duplicates and/or Matrix Spikes, a Lab Control Sample Duplicate (LCS Dup) may be analyzed to demonstrate accuracy and precision of the extraction batch.

Miscellaneous Notes:

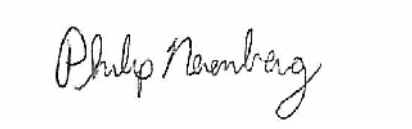
" --- " QC results are not applicable. For example, % Recoveries for Blanks and Duplicates, % RPD for Blanks, Blank Spikes and Matrix Spikes, etc.

" *** " Used to indicate a possible discrepancy with the Sample and Sample Duplicate results when the %RPD is not available. In this case, either the Sample or the Sample Duplicate has a reportable result for this analyte, while the other is Non Detect (ND).

Blanks:

Standard practice is to evaluate the results from Blank QC Samples down to a level equal to ½ the Reporting Limit (RL).
-For Blank hits falling between ½ the RL and the RL (J flagged hits), the associated sample and QC data will receive a 'B-02' qualifier.
-For Blank hits above the RL, the associated sample and QC data will receive a 'B' qualifier, per Apex Laboratories' Blank Policy.
For further details, please request a copy of this document.

Apex Laboratories



Philip Nerenberg, Lab Director

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

AMENDED REPORT

Maul Foster & Alongi, INC.	Project: **POV-Block A**	
2001 NW 19th Ave, STE 200	Project Number: **9085.10.07**	Report ID:
Portland, OR 97209	Project Manager: **David Weatherby**	**A8A0991 - 050818 0340**

REPORTING NOTES AND CONVENTIONS (Cont.):

Blanks (Cont.):

Sample results flagged with a 'B' or 'B-02' qualifier are potentially biased high if the blank results are less than ten times the level found in the blank for inorganic analyses, or less than five times the level found in the blank for organic analyses.

'B' and 'B-02' qualifications are only applied to sample results detected above the Reporting Level.

Preparation Notes:

Mixed Matrix Samples:

Water Samples:

Water samples containing significant amounts of sediment are decanted or separated prior to extraction, and only the water portion analyzed, unless otherwise directed by the client.

Soil and Sediment Samples:

Soil and Sediment samples containing significant amounts of water are decanted prior to extraction, and only the solid portion analyzed, unless otherwise directed by the client.

Sampling and Preservation Notes:

Certain regulatory programs, such as National Pollutant Discharge Elimination System (NPDES), require that activities such as sample filtration (for dissolved metals, orthophosphate, hexavalent chromium, etc.) and testing of short hold analytes (pH, Dissolved Oxygen, etc.) be performed in the field (on-site) within a short time window. In addition, sample matrix spikes are required for some analyses, and sufficient volume must be provided and billable site specific QC requested, if this is required. All regulatory permits should be reviewed to ensure that these requirements are being met. Data users should be aware of which regulations pertain to the samples they submit for testing. If related sample collection activities are not approved for a particular regulatory program, results should be considered estimates. Apex Laboratories will qualify these analytes according to the most stringent requirements, however results for samples that are for non-regulatory purposes may be acceptable.

Samples that have been filtered and preserved at Apex Laboratories per client request are listed in the preparation section of the report with the date and time of filtration listed.

DATA VALIDATION MEMORANDUM

DATA QUALITY ASSURANCE/QUALITY CONTROL REVIEW

PROJECT NO. 9085.10.07 | MAY 11, 2018 | PORT OF VANCOUVER

Maul Foster & Alongi, Inc. (MFA) conducted an independent review of the quality of analytical results for groundwater and soil samples collected at the Port of Vancouver Block A property on January 30, 2018.

Apex Laboratories, LLC (Apex) performed the analyses. Apex report A8A0991, issued on May 8, 2018, was reviewed. The analyses performed and samples analyzed are listed below. Samples submitted on hold are also indicated below.

Analysis	Reference
Diesel- and Oil-Range-Hydrocarbons	NWTPH-Dx
Gasoline-Range Hydrocarbons	NWTPH-Gx
Polychlorinated Biphenyls as Aroclors	USEPA 8082A
Semivolatile Organic Compounds	USEPA 8270D
TCLP Metals	USEPA 1311/6020A
Total Metals	USEPA 6020A
Volatile Organic Compounds	USEPA 8260C

NWTPH = Northwest Total Petroleum Hydrocarbons.
TCLP = toxicity characteristic leaching procedure.
USEPA = U.S. Environmental Protection Agency.

Samples Analyzed	
Report A8A0991	
GP1-S-2.0	GP2-W-26.0
GP1-S-7.0	GP3-S-4.0
GP1-S-11.0	GP3-S-6.5 (hold)
GP2-S-2.5	GP3-S-14.0
GP2-S-8.0 (hold)	Trip Blank (hold)
GP2-S-13.0	-

DATA QUALIFICATIONS

Analytical results were evaluated according to applicable sections of USEPA procedures (USEPA, 2017a,b) and appropriate laboratory and method-specific guidelines (Apex, 2016; USEPA, 1986).

Data validation procedures were modified, as appropriate, to accommodate quality-control requirements for methods not specifically addressed by the USEPA procedures (e.g., NWTPH-Dx).

The NWTPH-Dx diesel-range hydrocarbon result for sample GP1-S-11.0 was flagged by Apex because of a chromatographic pattern that resembled either weathered diesel or contribution from a related component. Qualification was not required.

Apex noted that USEPA Method 8082A samples and associated batch quality control samples had been processed with sulfuric acid cleanup by USEPA Method 3665A, sulfur cleanup by USEPA Method 3660B, and florisil cleanup by USEPA Method 3620B. No action was required.

In report A8A0991, Apex flagged some USEPA Method 8270D results because of insufficient chromatographic peak separation. Results are considered estimated, and have been qualified by the reviewer with "J" in the following table:

Report	Sample	Component	Units	Original Result	Qualified Result
A8A0991	GP1-S-2.0	Benzo(a)anthracene	ug/kg	39.2	39.2 J
		Benzo(b)fluoranthene		53.5	53.5 J
		Chrysene		56.4	56.4 J
	GP1-S-11.0	Benzo(a)anthracene		5.41	5.41 J
		Benzo(b)fluoranthene		8.90	8.90 J
		Chrysene		6.33	6.33 J
	GP2-W-26.0	Benzo(a)anthracene	ug/L	0.0338	0.0338 J
		Benzo(b)fluoranthene		0.0778	0.0778 J
		Benzo(k)fluoranthene		0.0367	0.0367 J
		Chrysene		0.0437	0.0437 J

ug/kg = micrograms per kilogram.
ug/L = micrograms per liter.

The data are considered acceptable for their intended use, with the appropriate data qualifiers assigned.

HOLDING TIMES, PRESERVATION, AND SAMPLE STORAGE

Holding Times

Extractions and analyses were performed within the recommended holding time criteria.

Preservation and Sample Storage

The samples were preserved and stored appropriately.

BLANKS

Method Blanks

Laboratory method blank analyses were performed at the required frequencies. For purposes of data qualification, the method blanks were associated with all samples prepared in the

analytical batch. All laboratory method blank samples were non-detect to method reporting limits (MRLs).

Trip Blanks

A trip blank sample was submitted to Apex on hold. Analysis was not required, as the associated sample, GP2-W-26.0, was analyzed for USEPA Method 8260C and was non-detect for all volatile organic compounds.

Equipment Rinsate Blanks

Equipment rinsate blanks were not submitted for this sampling event.

SURROGATE RECOVERY RESULTS

The samples were spiked with surrogate compounds to evaluate laboratory performance on individual samples. The laboratory appropriately documented and qualified surrogate outliers.

The USEPA Method 8270D percent recovery results for surrogates nitrobenzene-d5 and 2-fluorobiphenyl were below the lower percent recover acceptance limit of 44 percent, at 36 percent and 39 percent, respectively, for sample GP2-W-26.0. The remaining four surrogates had acceptable percent recoveries; thus, no associated sample results were qualified.

All remaining surrogate recoveries were within acceptance limits.

MATRIX SPIKE/MATRIX SPIKE DUPLICATE RESULTS

Matrix spike/matrix spike duplicate (MS/MSD) results are used to evaluate laboratory precision and accuracy. NWTPH-Dx batch 8020338 quality control results were flagged to indicate that batch precision had been evaluated with a laboratory control sample/laboratory control sample duplicate (LCS/LCSD) pair. The remaining MS/MSD samples were extracted and analyzed at the required frequency.

When MS/MSD percent recoveries and relative percent differences (RPDs) were outside acceptance limits because of high concentrations of analyte in the sample, and MS/MSD exceedances were flagged by the laboratory because of high concentrations of analyte or dilutions performed, no qualifications were made by the reviewer.

The USEPA Method 6020A batch 8020624 MS (8020624-MS2) exceeded the upper percent recovery acceptance limit of 125 percent for barium and chromium, at 131 percent and 408 percent, respectively, and exceeded the lower percent recovery acceptance limit of 75 percent for lead, at 60.9 percent. The MS had been prepared with a sample from an unrelated project, and a second MS prepared with project sample GP2-S-13.0 had acceptable percent recoveries; thus, no results were qualified.

All recoveries were within acceptance limits for percent recovery and RPDs.

LABORATORY DUPLICATE RESULTS

Duplicate results are used to evaluate laboratory precision. All duplicate samples were extracted and analyzed at the required frequency. Laboratory duplicate results within five times the MRL were not evaluated for precision.

The USEPA Method 8270D batch 8020650 laboratory duplicate exceeded several RPD control limits of 30 percent. The reviewer confirmed that all laboratory duplicate results were less than five times the MRL; thus, no results were qualified.

All remaining laboratory duplicate RPDs were within acceptance limits.

LABORATORY CONTROL SAMPLE/LABORATORY CONTROL SAMPLE DUPLICATE RESULTS

An LCS/LCSD is spiked with target analytes to provide information on laboratory precision and accuracy. The LCS/LCSD samples were extracted and analyzed at the required frequency.

The USEPA Method 8260C batch 8011218 LCS exceeded the upper percent recovery acceptance limit of 120 percent for bromomethane and carbon tetrachloride, at 129 percent and 122 percent, respectively. The associated sample results were non-detect; thus, no results were qualified.

All remaining LCS/LCSD results were within acceptance limits for percent recovery and RPD.

FIELD DUPLICATE RESULTS

Field duplicate samples measure both field and laboratory precision. Field duplicate samples were not submitted for analysis.

CONTINUING CALIBRATION VERIFICATION RESULTS

Continue calibration verification (CCV) results are used to demonstrate instrument precision and accuracy through the end of the sample batch. CCV results were not reported. Some USEPA Method 8260C batch quality control sample results were flagged because of association with CCV results that exceed the 20 percent drift acceptance criterion. The USEPA Method 8260C states that CCV percent drift acceptance criterion must be met for more than 20 percent of the compounds included in the initial calibration. When at least 80 percent of the compounds have met acceptance criteria, non-detects may be reported for compounds that exceed acceptance limits if the laboratory demonstrates that quantitation limit sensitivity can still be achieved; detected compounds with CCV percent drift exceedances may be reported as estimated values. The reviewer took no action based on quality control sample flags for CCV exceedances when quality control results met acceptance criteria.

REPORTING LIMITS

Apex used routine reporting limits for non-detect results, except for samples requiring dilutions because of high analyte concentrations and/or matrix interferences.

The USEPA Method 8270D dibenzofuran reporting limit was raised for sample GP1-S-11.0 because of matrix interference. No additional action was required.

DATA PACKAGE

The data packages were reviewed for transcription errors, omissions, and anomalies.

A trip blank was submitted with sample delivery group A8A0991; however, the trip blank sample was not recorded on the chain of custody (COC). Instructions for trip blank analysis were recorded in the special instructions section of the COC. The reviewer notified the sampler that all samples should be recorded on the COC; no additional action was required.

Based on NWTPH-Dx detected results, USEPA Method 8270D analysis was added to samples GP1-S-2.0 and GP1-S-11.0 by the MFA project manager after samples were received by Apex. No action was required by the reviewer.

No additional issues were found.

Appendix F. Staff Resumes

Kelly Carini

SCIENTIST

Years of Experience: 10 ■ Years with Parametrix: 6 ■ Education: Bachelor of Arts, Environmental Studies, UNC Chapel Hill, 2009

Kelly is an environmental scientist with the ability to address a broad range of environmental site and subsurface investigation tasks. She is proficient in regulatory compliance and due diligence, with experience conducting Phase I and II ESAs, visual site inspections, and sampling and analysis of subsurface soil and groundwater. She also has experience with climate change analysis, state and federal level permit documentation, and species surveys that support NEPA and Endangered Species Act work.

Select Project Experience

Interstate Bridge Replacement Program | Portland, OR–Vancouver, WA

Oregon/Washington Department of Transportation

Kelly conducted Phase I environmental site assessments in accordance with ASTM E1527-21 and regulatory guidelines. The work required specialized historic research, regulatory database reviews, site reconnaissance, and environmental risk evaluation to identify potentially recognized environmental concerns.

Data Centers | Eastern OR

Confidential Client

Kelly conducted this Phase I environmental site assessment as part of due diligence efforts for large tracts of land being considered for future development. Additionally, she completed soil sampling to assess the presence of pesticides because of historical agricultural activity on the site. The investigation included collecting soil samples using a direct-push probe and hand auguring. Kelly also performed air corrosion testing to assess the amount of corrosive materials in the ambient air onsite.

Southwest Corridor Final EIS Phase 2 | Portland, OR

Metro Regional Government

Kelly performed hazardous materials surveys and contributed to the hazardous materials technical report for the final EIS. She assessed impacts of the project on existing soil and groundwater contamination in the area, as well as the risk of property acquisition, based on historical use of each full or partial property acquisition for the project.

Earthquake Ready Burnside Bridge NEPA | Portland, OR

Multnomah County

Kelly performed hazardous materials surveys for properties in Oregon and contributed to the hazardous materials technical report for the draft EIS. The impacts of the project on existing soil and groundwater contamination in the area and how the impacts differed by alternative were assessed. In addition, Kelly assessed potential climate change impacts of various alternatives and summarized them in a technical report.

TCE Cleanup Project | Vancouver, WA

Port of Vancouver

As a project scientist, Kelly has performed an array of tasks including sampling (soil, groundwater), data collection and analysis, remedial system maintenance, and performance assessment and reporting.

Phase 1 ESA Chevron | Portland, OR

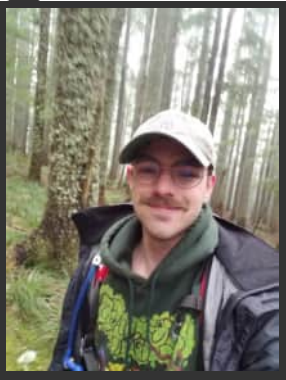
TriMet

Kelly performed a Phase I ESA for completion of due diligence a high-risk developed property for acquisition. Kelly assessed the risk associated with the acquisition of the property based on historical land use, environmental database research, and on-site reconnaissance and developed a plan for subsurface investigation.

Phase I Environmental Assessments | Covington, WA

City of Covington

Kelly performed Phase I ESAs for completion of due diligence for several tracts of land for future development. Kelly assessed the risk associated with the acquisition of the properties based on historical land use, environmental database research, and on-site reconnaissance.



Kevin Kuester

SCIENTIST I

Years of Experience: 4 ■ Years with Parametrix: 1 ■ Education: BA, Biology, University of Portland, 2021

Kevin is a biologist and wetland scientist with 4 years of experience in environmental sciences. His work has included environmental monitoring of various sites, including manufacturing, distribution, transportation, and mining facilities. He has conducted environmental sampling of both groundwater and air to monitor environmental compliance.

Selected Project Experience

Interstate Bridge Replacement Program | Portland, OR–Vancouver, WA

Oregon/Washington Department of Transportation

Kevin conducted Phase I environmental site assessments in accordance with ASTM E1527-21 and regulatory guidelines. The work required specialized expertise in historic research, regulatory database reviews, site reconnaissance, and environmental risk evaluation to identify potentially recognized environmental concerns.

Wetland Delineation

City of Troutdale, OR

Kevin conducted an on-site wetland delineation to comply with United States Army Corps of Engineers guidelines. He prepared all relevant reports for submittal to state and federal agencies, and prepared similar reports for other clients in Washington and Oregon.

Stormwater Monitoring

Confidential Clients

Kevin conducted on-site stormwater compliance assessments for various sites throughout Oregon. He tested stormwater discharge for environmental compliance, applying his certification as erosion and sedimental control lead for the states of Washington and Oregon.

Emissions Testing

Confidential Clients

Kevin conducted emissions testing to maintain manufacturing air quality standards in the states of Oregon and New Mexico.

Groundwater Monitoring

Various Clients

At various contaminated sites throughout Oregon, Kevin conducted groundwater sampling. He prepared reports with contamination levels for submittal to state and federal agencies.

Biological Surveys

Various Clients

Kevin conducted baseline biological surveys to assess the presence of state and federally listed species in the states of Oregon, Washington, Arizona, and Nevada. He prepared reports for submittal to federal and state agencies.

Marissa Ward

Environmental Planner II

Years of Experience: 5 ■ Years with Parametrix: 1 ■ Education: Environmental Studies, Boise State University, 2019 ■ Licenses and Certifications: 40-Hour HAZWOPER, Basic Wetland Delineation, Highway Traffic Noise: Basic Acoustics - National Highway Institute

Marissa is an experienced NEPA professional. She specializes in compliance regulations, traffic noise analysis, wetland delineations, GIS mapping, GPS operations, technical writing, and conducting field surveys including research, sampling, photography, and documentation. Marissa also coordinates with local, state, and federal agencies. Her project experience includes public infrastructure, including the Washington Department of Transportation Department, Idaho Transportation Department, and local highway districts, as well as private enterprise.

Selected Project Experience

Interstate Bridge Replacement Program | Portland, OR–Vancouver, WA

Oregon/Washington Department of Transportation

Marissa conducted Phase I environmental site assessments in accordance with ASTM E1527-21 and regulatory guidelines. This work required specialized expertise in historic research, regulatory database reviews, site reconnaissance, and environmental risk evaluation to identify potentially recognized environmental concerns.

Airport Way Phase 2-2 | Kitsap County, WA

Port of Bremerton

Marissa completed a categorical exclusion for this new roadway construction project for the Washington Department of Transportation (WSDOT). She oversaw all figures, documented agency coordination, and ensured that technical reports and related materials were well-organized and prepared for submission to WSDOT. Additionally, Marissa conducted a hazardous materials assessment following WSDOT guidelines. This included completing historic and regulatory database reviews and performing an environmental risk evaluation to identify potential recognized environmental concerns.

SH-44 Corridor Preservation Study | Ada County, ID

Idaho Transportation Department

Marissa collaborated with a team to complete a categorical exclusion for improvements along a 5.6-mile corridor. Her responsibilities included managing all figures, documenting coordination with agencies, and ensuring that the technical reports and related materials were organized and ready for submission to the Idaho Transportation Department.

Access to Opportunity | Ada County, ID

Idaho Transportation Department

Collaborating with a team, Marissa completed a categorical exclusion for roadway and pedestrian improvements along 12 roads. Her specific responsibilities included field survey and wetland delineation documentation. She also oversaw all figures, documented coordination with agencies, and ensured that the technical reports and related materials were organized and ready for submission to the Idaho Transportation Department.

Bennett Road Landfill | Elmore County, ID

Elmore County, Idaho

Marissa collaborated with a team to complete a conditional use permit as well as a SEPA checklist reviewing the existing environmental conditions at an expanding landfill within the Elmore County area.

Eastside Arterial Progressive Design-Build Improvements | Deschutes County, OR

City of Redmond, OR

This project is developing alternatives and final design of a new arterial road to increase connectivity and safety for expected future growth. The route traverses an area alongside Redmond's airport. Marissa prepared documentation for a NEPA categorical exclusion that met Federal Aviation Administration requirements.

Ustick; Can ADA to Owyhee Storm | Canyon County, ID

City of Nampa

Marissa completed an environmental scan memo for a document reviewing the National Wetland Inventory, Underground Storage Tank Database, Idaho National Register of Historic Places, and current Threatened and Endangered Species list. A memo will be prepared to document the results of the scan and identify any potential concerns.

Marty Marrs

STAFF ROLE

Years of Experience: 3 ■ Years with Parametrix: 1 ■ Education: BS, Natural Resource, 2022 | AS, Business Administration, 2007 ■ Certifications: Certified Erosion and Sediment Control Lead, 40-Hour HAZWOPER

Marty believes that everyone, regardless of socioeconomic status, should have access to clean water. To live this passion through her work, she pursued a degree in natural resources, choosing a focus on the human dimensions of natural resource management. This includes considering both how socioeconomic factors influence our natural resources, and how our natural resources play a role in the lives of individuals from different backgrounds. Marty's passion for clean water has led to a career focus in stormwater management and permitting. Her superpower is her ability to step back and truly listen to her clients to understand their "why" – how they see the issue at hand – and collaborating with them to develop solutions that empower them. For example, when a client is fined by a governing body, Marty helps the client consider options that are within their control. She helps clients and regulators find common ground and meet in the middle. Another way that Marty applies her passion for balancing the needs of people and nature is by addressing environmental justice during NEPA- and SEPA-related analyses.

Select Project Experience

Interstate Bridge Replacement Program | Portland, OR–Vancouver, WA

Washington State Department of Transportation

This bi-state program will result in a new I-5 bridge across the Columbia River between Washington and Oregon and includes multiple connected transportation facilities. Marty is assisting with writing environmental site assessment phase II reports and public comment coding, which involves replying to comments related to hazardous material concerns.

South Fork Avenue Extension | North Bend, WA

City of North Bend

For this roadway extension project, Parametrix evaluated the potential for the project to encounter hazardous materials during construction. Marty wrote the hazardous materials technical report for this project, summarizing field findings and complying with applicable regulatory requirements.

Tillamook Co Stormwater Compliance

County of Tillamook

The Parametrix team is providing support for the county's stormwater 1200Z permit requirements. Marty communicates directly with the client on stormwater-related issues, assists in sampling coordination events, and ensures project discharge monitoring reports (DMRs) are submitted on time.

Data Center Siting Study | Eastern OR

Confidential Client

The Parametrix team is providing technical due diligence services for a number of data center siting studies across the western US. Marty is working as part of the team that is preparing Phase I environmental site assessments for this client.

Stormwater Management for Shipping Centers | Various OR Locations

Confidential Client

In previous employment, Marty served as the Oregon State stormwater lead for her firm's major confidential shipping client. She communicated directly with the client on stormwater-related issues and ensured the project discharge monitoring reports, or DMRs, complied with Oregon DEQ requirements.

NEPA and FERC Resource Reports | Various North America Locations

Confidential Client

In previous employment, Marty assisted in writing various resource reports for NEPA and FERC clients. Her experience includes resource reporting for both Socioeconomics and Land Use.

Monitoring and Engineering for Closed Landfill | Tillamook, OR

Tillamook County

Parametrix has been providing monitoring and reporting services to the county for more than 10 years to support solid waste and stormwater permits. Since joining Parametrix, Marty has focused on the stormwater permitting aspects of the project, including data management, reporting to the Oregon DEQ, and writing the Scope of Practice, or SOP, for the state's 1200-Z stormwater permit. Marty also helped facilitate communications between the county and DEQ. She met with the DEQ representative to let them know that the county is working with us to meet permit requirements and to find out what DEQ needs to see in upcoming actions and documentation.

Shira DeGrood, RG

PHASE I/PHASE II ENVIRONMENTAL SITE ASSESSMENTS

Years of Experience: 20 ■ Years with Parametrix: 2 ■ Education: BS, Microbiology, MS, Soils and Biogeochemistry ■ Registrations: Registered Geologist, ID, OR ■ Certifications: 40-hour OSHA, Transportation Worker Identification Credential

Shira is experienced in environmental work and project management including due diligence (Phase I and Phase II assessments), contaminated site assessment and remediation. She has provided technical allocation for complex sediment superfund sites and has performed assessment, source control, and remediation of soil, groundwater, and sediment. Shira has diverse experience in project and site management of remedial investigations in soil, groundwater, and sediment, soil vapor characterization, in-situ and ex-situ remediation of soil and groundwater, feasibility studies, storm water/sediment source control evaluations, aquifer flow tests, and NPDES permitting.

Select Project Experience

Interstate Bridge Replacement Program | Portland, OR–Vancouver, WA)

Oregon/Washington Department of Transportation

Shira led a team in performing Phase I environmental site assessments (ESAs) for 136 properties to support the proposed replacement of the I-5 bridge. She performed assessments and delivered reports within 2 months of kick-off. This programmatic effort included development of site-specific templates, standardization of practices between authors, technical review of reports, and consistency review between reports, health and safety planning, and site access planning. Each Phase I ESA included a site visit, review of environmental databases and historical records, assessments of previous site investigation/remediation activities, and owner interviews.

Data Center Technical Due Diligence | Boardman, OR

Confidential Client

Shira provided technical review and oversight of the Phase I ESA for this project. The ESA involved a site visit, a review of environmental databases and historical records, and an owner interview.

Data Center Campus | Hermiston, OR

Kimley-Horn and Associates

Shira provided technical review and oversight of the Phase I ESA for this project. Work included a site visit, review of environmental databases and historical records, historical air quality review and owner interview. Shira also provided additional review and oversight related to adjacent sites with gravel quarries and unknown surface impacts.

Lakeland Hills Pump Station Facility Replacement | Auburn, WA

King County

Shira provided technical oversight of a Phase I ESA for a pump station expansion. The ESA involved a site visit, a review of environmental databases and historical records, and an owner interview.

Remedial System Evaluation and Further Site Investigation at Former Bulk Terminal | McMinnville, OR

Confidential Client

Shira led technical services on this former bulk. As the primary contact with the ODEQ project manager, she implemented a 5-year review to evaluate the current remedial action. Site investigation activities included drilling using MIHPT and UVOST technologies and groundwater monitoring. Shira identified that LNAPL was still present in areas outside of the treatment area and developed a conceptual site model to assess direct contact and vapor intrusion risks to adjacent residential properties. She identified an adjacent site as a source of remaining LNAPL in the western portion of the site.

Reeder Road Culvert Replacement Services | Portland, OR

Multnomah County

Shira performed a clean fill determination and a hazardous material corridor survey for a road reconstruction/culvert replacement project. She reviewed construction documents and coordinated with engineers to develop decision units, a sampling plan, and an analytical program. She collected samples from each unit and coordinated with the laboratory. Shira also assessed laboratory and field data and wrote a memorandum describing methods, results, conclusions, and recommendations.

Source Identification of Sediment Contamination | Portland, OR

Confidential Clients

Shira wrote expert reports to support allocation of cleanup efforts in the Willamette River. The reports assessed potential sources of contamination, such as current and previous site ownership and operations, potential contaminants associated with the site operations, pathways for contaminants to reach river sediments, and mass balance calculations. Also performed fingerprinting of PCBs, dioxins/furans, and co-contaminants using multivariate statistics to provide another line of evidence of contamination sources.

Whitney Withrow, PMP

Senior Planner

Years of Experience: 11 ■ Years with Parametrix: 1 ■ Education: BA, Environmental Biology, William Penn University, 2009 | Military Geological Engineering (Grad Cert), Missouri University of Science and Technology, 2017 ■ Licenses and Certifications: Project Management Professional (PMP), OSHA-30 Construction Safety, 40-Hour HAZWOPER, eRailSafe, DOT/IATA Hazmat Shipping

Whitney is an environmental and project management professional (PMP) with over 11 years of experience in project management, process improvement, and environmental compliance. She possesses a strong background in technical requirement identification, statistical analysis, and interagency coordination, actively maintaining partnerships with local, state, federal, and international organizations. Drawing from her extensive military experience, she offers expertise in operational planning, organizational change management, and strategic development. Her environmental qualifications include in-depth knowledge of the National Environmental Policy Act (NEPA) process, as well as conducting Phase I and Phase II environmental site assessments (ESAs) and environmental assessments (EAs).

Selected Project Experience

Interstate Bridge Replacement Program | Portland, OR–Vancouver, WA)

Oregon/Washington Department of Transportation

Whitney is the task manager responsible for leading and coordinating a technical team through the Phase I ESA process, ensuring compliance with ASTM E1527-21 and relevant regulatory guidelines. She has provided technical review, feedback, and support to maintain quality and consistency throughout the assessment process.

Phase II Site Investigations | Multiple Locations in the U.S.

Private Clients

Whitney managed drilling subcontractors during subsurface investigations using Direct Push Technology (DPT), overseeing the collection and field screening of continuous-core soil samples for volatile organic compounds (VOCs), as well as groundwater and soil-gas sampling. She provided technical guidance and on-site supervision for vapor pin installations and sub-slab assemblies to support TO-15 indoor/ambient air sampling and acrylate (PV2011/PV2026) air and sub-slab sampling. Whitney also conducted senior-level review of a site management plan for a Point of Entry Treatment (POET) system, with an emphasis on PFAS analysis and adherence to regulatory compliance standards.

Incident Response and Recovery Team | Multiple Locations in the U.S.

Private Clients

Whitney contributed to emergency response operations for train derailments, oil spills, and pipeline releases. She documented incident details, coordinated on-site activities, managed contractors, and oversaw first responder operations. Whitney also ensured regulatory compliance through waste tracking and safety oversight. Additional responsibilities included installing monitoring wells and collecting soil and groundwater samples for environmental assessment.

CERCLA Project Coordinator / On-Site Field Operations Manager | Stibnite, ID

Perpetua Resources

Whitney led field operations under the Administrative Settlement Agreement and Order on Consent for TCRA Round 1, overseeing remediation activities at four project sites during the summer of 2023. She managed project submittal schedules to ensure compliance with directives from the U.S. Environmental Protection Agency (EPA) and U.S. Forest Service (USFS). Whitney directed removal actions involving the excavation and on-site disposal of over 350,000 tons of contaminated sediment and mine waste from streambanks and floodplains to reduce environmental risks and restore impacted areas.

FERC Pipeline Relocation | NV

Private Client

As deputy project manager, Whitney oversaw coordination between subcontractors and team leads throughout the FERC Section 7(c) application process. She managed a detailed project schedule and task tracker to ensure timely deliverables. She also served as a key liaison with Naval Air Station Fallon in support of the Fallon Range Training Complex modernization initiative. Finally, Whitney conducted senior-level reviews of resource reports and led stakeholder meetings to align project goals and regulatory requirements.

Community Water Storage Project EA | Ashburn, VA

Private Client

Whitney led a multidisciplinary team of technical experts through the FEMA

NEPA process to obtain a Finding of No Significant Impact (FONSI) for the transformation of a decommissioned rock quarry into a raw water storage reservoir and the construction of a high-capacity pumping station capable of storing over 1 billion gallons of water offline from the Potomac River. She oversaw the update and reissuance of outdated permits through the Joint Permit Application process, ensuring full regulatory compliance and supporting continued project progression.

Sewer Service Area Pump Station EAs | Norfolk, VA

Private Client

Whitney led and coordinated multiple teams through the Virginia Department of Environmental Quality (VDEQ) EA process, including the preparation of EA documentation, Coastal Zone Management Act (CZMA) Consistency Certification, and Endangered Species Act (ESA) consultation. She oversaw public involvement efforts, including organizing outreach activities and managing responses to public comments, ensuring regulatory compliance and effective stakeholder engagement throughout the review process.

EXECUTIVE SUMMARY

Parametrix was retained by the Washington State Department of Transportation (WSDOT) to perform a Phase I Environmental Site Assessment (ESA) on two contiguous commercial properties located to the south of SE Columbia Way, west of the parking lot for 101 SE Columbia Way, and east of the Interstate Bridge in Vancouver, Washington (Figure 1). The subject property consists of the parcels identified as IBR-47590000 and IBR-502280000. The Phase I ESA focused on the partial areas of the properties that may be acquired as part of the Interstate Bridge Replacement (IBR) Program. Based on the findings of this investigation, Parametrix concluded the following:

1. The subject property is located adjacent to the SE Columbia Way and the Interstate Bridge in Vancouver, Washington, and includes Clark County parcels 47590000 and 502280000. Both parcels are owned by Clark Public Utilities. The subject property encompasses an area of 0.28 acres and includes a sewer outfall and spillway located on shoreline portions of the subject property and piles for a former wharf on submerged portions of the subject property. The remainder of shoreline portions of the subject property are undeveloped and vegetated. The vicinity of the subject property includes public walkways and roads, an unused building (former substation), and an abandoned restaurant that is currently undergoing redevelopment.
2. A review of historical aerial photographs and Sanborn Fire Insurance maps indicated that a ferry landing and former wharf were located in the submerged portion of the subject property, and a hotel was present in the upland portion of the subject property by the early 1900s. The ferry and hotel were removed prior to 1928 and the wharf was removed prior to 1975. No other operations were identified on the subject property. No evidence of recognized environmental conditions (RECs) was identified on the subject property during the historical photograph and Sanborn Fire Insurance map review.
3. The upland portion of the subject property currently includes a sewer outfall and spillway and is otherwise undeveloped. Based on the operational use history, the potential that hazardous building materials (asbestos, lead-based paint, or polychlorinated biphenyls) are present at the subject property is low.
4. The subject property is not listed on any regulatory database that would indicate a past or current release or storage of hazardous materials. A review of regulatory information indicated that several nearby sites were identified in the regulatory record databases. However, based on regulatory status and distance from the subject property, none of the sites identified represent a REC to the subject property.
5. No evidence of significant use or storage of hazardous substances and/or petroleum products was noted on or near the subject property. No evidence of distressed vegetation, spills or releases, dry wells, or other indications of environmental concern was identified during the site reconnaissance. No evidence of RECs was identified during the site examination.
6. An interview was not able to be conducted with a property representative to identify any potential environmental conditions and to address information data gaps during the Phase I ESA process. The lack of a property owner or representative interview represents a data gap in accordance with ASTM International Standard E1527-21. However, the information obtained

for the Phase I ESA, including regulatory database and historical documentation, was deemed sufficient to evaluate potential environmental conditions on the partial acquisition areas of the subject property.

Based upon the conclusions of this investigation of the subject property, Parametrix offers the following recommendations:

1. No further assessment of environmental conditions on the subject property, including the partial areas of the parcels that may be acquired as part of the IBR Program, is recommended at this time.

1. INTRODUCTION

Parametrix was retained by the Washington State Department of Transportation (WSDOT) to perform a Phase I Environmental Site Assessment (ESA) on two contiguous parcels located in the shoreline area south of SE Columbia Way, west of the waterfront parking lot for 101 SE Columbia Way, north of the Columbia River, and east of the current Interstate Bridge in Vancouver, Washington (herein referred to as the subject property) (Figure 1). The subject property is located in Clark County, Washington, and comprises two parcels included in the Interstate Bridge Replacement (IBR) Program. The property identifiers for each parcel are listed below, and the configuration of the properties is shown in Figure 2. Addresses have not been assigned for either parcel.

- IBR- 47590000
- IBR- 502280000

It is our understanding that WSDOT may pursue acquisition of a portion of the parcels making up the subject property as part of the IBR Program. The proposed acquisition areas are shown on Figure 2. The Phase I ESA focused primarily on the partial areas of each parcel that may be acquired as part of the IBR Program and assessed the potential for recognized environmental conditions (RECs) on the acquisition areas from the larger property and adjacent or nearby properties.

This Phase I ESA includes a review of available documentation pertaining to the subject property, a site reconnaissance, and a review of pertinent public agency documents. The Phase I ESA consisted of two distinct tasks: (1) a review of documents and of oral information (if available), and (2) a site examination. Conclusions and recommendations within this report are based solely on observed evidence and data collected during the performance of this assessment.

1.1 Purpose

The Phase I ESA was conducted in general accordance with ASTM International(ASTM) Standard E1527-21, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*, which defines the generally accepted industry practices and procedures currently applicable at the time and place of this study (ASTM 2021). The Phase I ESA is intended to permit the user to satisfy the requirements to qualify for the bona fide prospective purchaser limitation under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), and as such constitutes "all appropriate inquiries in the previous ownership and uses of the property consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601 (35)(B).

The purpose of this Phase I ESA is to identify recognized environmental conditions (RECs) on or near the subject property. The term *recognized environmental conditions* is defined in ASTM Standard E1527-21 as:

> "…(1) the presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* due to a *release* to the *environment*; (2) the likely presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* due to a *release* or likely *release* to the *environment*; or (3) the presence of *hazardous substances* or *petroleum products* in, on, or at

> the *subject property* under conditions that pose a *material threat* of a future *release* to the *environment*."

In accordance with ASTM Standard E1527-21, some RECs may be further defined as historical recognized environmental conditions (HRECs) or controlled recognized environmental conditions (CRECs).

An HREC is defined as:

> "…*a past release* of any *hazardous substances* or *petroleum products* that has occurred in connection with the *property* and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the *property* to any required controls."

A CREC is defined as:

> "…*a recognized environmental condition* resulting from a past *release of hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority, with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls."

This Phase I ESA endeavors to identify RECs, HRECs, and/or CRECs at the subject property.

1.2 Significant Assumptions

This assessment was conducted in accordance with generally accepted industry practices and procedures within the scope of work authorized at the time and place of this study. Parametrix's observations are limited to those areas to which it had access on the subject property.

Phase I ESA methodology included viewing accessible areas of the subject property on foot. An interview was not able to be conducted with a property representative to identify any potential environmental conditions during the Phase I ESA process. Unless otherwise stated, no exceptions to the guidelines presented in ASTM E1527-21 were made during completion of this Phase I ESA.

1.3 Limitations

The findings, conclusions, and recommendations presented in this report are based on site conditions and the best available information known or made available by regulators, other consultants, or other sources at the time of the investigation. Parametrix conducted a diligent search and investigation in compliance with prevailing standards of the profession; however, certain adverse conditions may exist at the site not detected at the time of the investigation.

The services provided under this contract, as described in this report, include professional opinions and judgments based on data collected. These services have been provided according to generally accepted engineering practices. The opinions and conclusions contained in this report are typically based on information obtained from the following:

- Observations and measurements made by Parametrix field staff.
- Contacts and discussions with regulatory agencies and others.
- Review of available hazardous substance or solid waste lists.
- Opinions and judgments of Parametrix based on the information available.

In the professional judgment of Parametrix, the services performed pursuant to the scope of services are an adequate basis to collect data for a preliminary evaluation of the site and upon which to draw the conclusions stated in this report.

2. SUBJECT PROPERTY DESCRIPTION

The following sections summarize the location, characteristics, and physical setting of the subject property.

2.1 Location

The subject property includes two contiguous parcels located in the shoreline area south of SE Columbia Way, west of the waterfront parking lot for 101 SE Columbia Way, north of the Columbia River, and east of the current Interstate Bridge in Vancouver, Washington. The Phase I ESA focused on the subject property, which consists of partial areas of two parcels that may be acquired as part of the IBR Program, as detailed in Table 1. The site location is shown on Figure 1, and the boundary of the subject property is shown on Figure 2.

2.2 Site and Vicinity Characteristics

Characteristics of the subject property, including the partial areas of the parcels that may be acquired as part of the IBR Program, are summarized in Table 1.

Table 1. Subject Property Characteristics

IBR ID	Address	Owner	Total Area (acres)	Potential Acquisition Area (square feet)	Current Use (determined through visual observations)
IBR-47590000	None	Clark Public Utilities	0.06	0	Open shoreline, concrete spillway for sewer outfall, and submerged land
IBR-502280000	None	Clark Public Utilities	0.22	330	Open shoreline, concrete spillway for sewer outfall, and submerged land

The subject property is bounded to the north by a Clark Public Utilities facility, Interstate 5 (I-5), and I-5 interchanges. The subject property is bounded to the east by a waterfront parking lot for 101 SE Columbia Way, to the south by the Columbia River, and to the west by the Interstate Bridge (see Figure 2).

2.3 Physical Setting

The subject property is located in the Portland Basin, which marks the northern terminus of the Willamette Lowland in Oregon (DNR 2023). The northern portion of the basin is known for its low

topographic relief, with the subject property at an elevation of approximately 8 feet above mean sea level. The Portland Basin is bound by the Cascade Range to the east and the Coast Range to the west.

Geologic processes in the Portland Basin consist of volcanism, sedimentation, and cataclysmic flood deposits in both fluvial and marine depositional environments. The subject property lies on what is mapped as coarse-grained Missoula flood deposits, cobbly, sandy gravel deposited by the Missoula floods (Wells et al. 2020). Surface soils consist of artificial fill material.

The topography in the vicinity of the subject property is a consistent slope, rising with distance from the Columbia River. The subject property is anticipated to be within the hyporheic zone for the Columbia River and the groundwater elevation is generally equivalent to the Columbia River elevation, approximately 6 feet below ground surface.

2.4 Current Use of the Subject Property

The subject property includes Columbia River riverbank. The subject property is undeveloped except for a concrete spillway for a sewer outfall and former wharf piles present in submerged portions of the subject property.

Kirkland Development has proposed a new development in an area which would include the subject property (Yorke-Payne 2022). Waterfront East is a 3.5-acre site that is being proposed as a mixed-use development. It is currently occupied by one current restaurant (Who Song & Larry's) and demolition debris of a second restaurant (Joe's Crab Shack). The project would be constructed in phases, with 300,000 square feet of residential space and approximately 50,000 square feet of retail, office, and restaurant space (Kirkland Development 2023).

The proposed acquisition area includes the northern boundary of the parcel identified as IBR- 502280000 (see Figure 2).

2.5 Descriptions of Improvements on the Subject Property

A concrete spillway for a sewer outfall is present on the shoreline. Piles for a former wharf are present in submerged portions of the subject property. No buildings or other significant structures are located on the partial areas of the parcels that may be acquired as part of the IBR Program.

2.6 Environmental Liens

An environmental lien is defined by ASTM as a charge, security, or encumbrance upon title to a property to secure the payment of a cost, damage, obligation, or duty arising out of response actions, cleanup, or other remediation of hazardous substances or petroleum products. No evidence of environmental liens was identified during the course of the Phase I ESA process. However, a formal title search was not completed as part of the scope of work.

3. RECORDS REVIEW

The purpose of the records review task was to gather environmental data on the subject property prior to the site examination. The information review consisted of two subtasks: (1) a review of regulatory databases to find sites, including and close to the subject property, listed by federal and State of Washington agencies and (2) a compilation of historical uses of the subject property and site vicinity properties to determine if past operations pose an environmental risk to the subject property.

The Environmental Data Resources (EDR) report (EDR 2023a) is a summary of state and federal database searches for sites of possible environmental concern. The information review enabled Parametrix personnel to characterize the types of activities performed at the site, identify data gaps prior to the site examination, and facilitate recognition of discrepancies between reported and observed data. Data gaps identified during the document review were addressed by interviewing knowledgeable personnel, observations during the site examination, or by additional detailed investigation.

It should be noted that the information supplied by EDR is reported as Parametrix received it. EDR, in turn, reports information as it is provided in various government databases. It is not possible for either Parametrix or EDR to verify the accuracy or completeness of information contained in these databases. However, the use of and reliance on this information is a generally accepted practice in the conduct of environmental due diligence. The following sections present information from the document review.

3.1 Standard Environmental Record Sources

The following section summarizes information collected from records maintained by the U.S. Environmental Protection Agency (EPA) and the Washington State Department of Ecology (Ecology). The information includes details on sites identified in regulatory databases within recommended ASTM search distances. A complete listing of the databases reviewed is included in the EDR Radius Map™ Report (Appendix A).

3.1.1 Review of Washington State Department of Ecology Databases

The following sections summarize the most relevant information obtained from the EDR report regarding sites identified within the ASTM E1527-21 search radii from the following databases. Additional information regarding these sites was reviewed on Ecology's Integrated Site Information System (ISIS) website to supplement data gaps in the EDR report. Relevant database listings from Ecology include the following:

- Underground Storage Tank (UST) List
- Leaking Underground Storage Tank (LUST) List
- Confirmed and Suspected Cleanup Site List (CSCSL)
- Confirmed and Suspected Cleanup Site List – No Further Action (CSCSL-NFA)
- SPILLS

- Voluntary Cleanup Program (VCP)
- Independent Cleanup Report (ICR)
- Landfill and/or Solid Waste Disposal Site Lists (SWF/LF)
- Brownfields

3.1.1.1 Underground Storage Tank List

The Ecology UST List identifies registered USTs, which are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data were obtained from Ecology's UST Site/Tank Report database.

Information contained in the EDR report indicates that the subject property is not listed as a UST site. One UST site is located within 0.25 miles of the subject property.

- The Hannah Motor Company sites (300 Washington and 400 Washington) is located 0.16 miles north of the subject property. The 300 Washington site is also listed on the LUST, CSCSL, and CSCSL-NFA databases. Two USTs, one on each property, were formerly present but have been removed (UST Site IDs 10252 and 9879, Appendix E). The UST at 300 Washington was identified as a LUST but has been identified as cleaned up and in compliance by Ecology.

Unless otherwise noted, the mere presence of a UST near a site does not, in itself, constitute a REC. Where available, other information was reviewed regarding the presence of a UST including the age of the facility, proximity to the subject property, and known releases or spills. UST sites that have had known releases are discussed in Section 3.1.1.2, below.

3.1.1.2 Leaking Underground Storage Tank List

The LUST Incident Report contains an inventory of reported LUST incidents. The data were obtained from Ecology's LUST Database List. The subject property is not listed as a LUST site.

Five LUST sites were identified within 0.5 miles of the subject property. The following LUST sites were located within 0.25 miles of the subject property:

- The Hannah Motor Company site (300 Washington) is located 0.16 miles north of the subject property. This site is also listed on the LUST, CSCSL, and CSCSL-NFA databases and has been assigned Ecology Facility Site ID 12126843. One LUST was formerly present but has been removed. Ecology identifies that this LUST has been cleaned up (Appendix E). Based on the distance from the subject property and the regulatory status of the site, the facility does not represent a potential REC to the subject property.

Based on the distance from the subject property (over 0.25 miles from the subject property), remediation, and regulatory status (No Further Action [NFA] determinations), the remainder of the LUST sites do not represent potential RECs to the subject property, including the partial areas of the parcels that may be acquired as part of the IBR Program.

3.1.1.3 Confirmed and Suspected Contaminated Sites List

The state hazardous waste sites records are the states' equivalent to the Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS). These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data were obtained from Ecology's CSCSL.

Nineteen CSCSL sites were identified within 1 mile of the subject property. Of the 19 sites, two are located within 0.25 miles of the subject property and are discussed below. The remainder of the sites do not represent potential RECs for the subject property based on distance from the subject property, understood extent of contamination, and/or regulatory status of the site.

- The Hannah Motor Company site (300 Washington) is located 0.16 miles north of the subject property. This site is also listed on the UST, LUST, and CSCSL-NFA databases and has been assigned Ecology Facility Site ID 12126843. A site investigation in 2015 identified petroleum contaminated soil (diesel and oil-range) at estimated depths of up to 15 feet below ground surface due to former hydraulic oil releases from vehicle hoists and residual diesel impacts within an on-site drywell. Lead and polychlorinated biphenyls (PCBs) were also detected in soil at concentrations less than the screening levels. Based on these soil data, the site was assigned Facility Site ID Number 12126843 (Cleanup Site IDs 7922 and 13035). Based on the distance, the shallow depth of impacts, and the lack of evidence of a significant hazardous materials release, the facility is not a REC to the subject property.
- The Vancouver Red Lion Hotel site (100 Columbia Street) is located 0.085 miles west of the subject property. This site is also listed on the SPILLS databases. The site has confirmed total petroleum hydrocarbon, metals, and polycyclic aromatic hydrocarbon contamination due to previous industrial activities. Ecology assigned Facility Site ID 15891 to this site. Site remediation is currently underway. Based on the distance and understood groundwater flow direction at the site, the facility is not considered a REC to the subject property.

A subset of the CSCSL is the CSCSL-NFA. The database contains information about sites previously on the CSCSL that have received an NFA determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when cleanup activities are completed. Instead, a No Further Action code is entered based upon the type of NFA determination the site received.

One CSCSL-NFA site (the Hannah Motor Company site, as described above) was identified within 0.25 miles of the subject property and an additional four CSCSL-NFA sites were identified within 0.5 miles of the subject property. Based on the distance from subject property and NFA determinations, none of the identified sites appear to represent RECs to the subject property, including the partial areas of the parcels that may be acquired as part of the IBR Program, unless specifically noted otherwise in another section.

3.1.1.4 SPILLS Database

This database provides a comprehensive list of reported spills. The subject property is not listed as a SPILLS site.

3.1.1.5 Voluntary Cleanup Program

This database provides a listing of sites that have entered either the VCP or its predecessor, the Independent Remedial Action Program.

One VCP site (the Vancouver City Brewery Blocks site, Facility Site #85777985) is reported within approximately 0.5 miles of the subject property. The site has received an NFA determination from Ecology. Based on distance from the subject property and current regulatory status, this VCP site does not represent a REC to the subject property.

3.1.1.6 Independent Cleanup Report

ICRs are remedial action reports that Ecology has received from either the owner or operator of the site. These actions have been conducted without department oversight or approval and are not under an order or decree.

The subject property is not listed as an ICR site. Three ICR sites are reported within approximately 0.5 miles of the subject property and are either discussed above in other sections or do not represent a REC to the subject property based on distance and regulatory status.

3.1.1.7 Solid Waste Facilities/Landfill

The SWF/LF records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data were obtained from Ecology's Solid Waste Facilities Database.

The subject property is not listed as an SWF/LF site. No SWF/LF sites were reported within 0.5 miles of the subject property.

3.1.1.8 Brownfields List

The Brownfields List is a database of sites that Ecology considers brownfields or that have received financial or technical assistance for cleanup. A brownfield is a real property where expansion or redevelopment is complicated by actual or perceived environmental contamination. The subject property is not listed as State Brownfields site. No State Brownfields sites were reported within 0.5 miles of the subject property.

3.1.2 Environmental Protection Agency Databases

The EPA administers several programs designed to protect the environment and monitor the generation, storage, treatment, and disposal of hazardous substances. The following sections summarize the most relevant information obtained from the EDR report regarding sites identified within the ASTM E1527-21 search radii from the following databases:

- National Priorities List (NPL)
- CERCLIS List
- Corrective Action Report (CORRACTS) List
- RCRA
- Resource Conservation and Recovery Act Information (RCRAInfo) List
- Emergency Response Notification System (ERNS) List
- U.S. Brownfields List

3.1.2.1 National Priorities List

The NPL identifies priority hazardous waste sites for remedial actions under the EPA Superfund program. Information contained in the EDR report indicates that the subject property is not listed as an NPL site. No NPL sites are listed within 1 mile of the subject property.

3.1.2.2 CERCLIS List

The EPA's CERCLIS List identifies sites that may potentially pose a threat to the environment or the health of the general public.

Information contained in the EDR report indicates that the subject property is not listed as a CERCLIS site. No CERCLIS sites were identified within 0.5 miles of the subject property.

The EPA also publishes the CERCLIS-NFRAP List that identifies CERCLIS sites that have been designated "no further remedial action planned" (NFRAP) and that have been removed from the CERCLIS List. Information contained in the EDR report indicates that the subject property is not listed as a CERCLIS-NFRAP site. No CERCLIS-NFRAP site were identified within 0.5 miles of the subject property.

3.1.2.3 CORRACTS List

The CORRACTS List identifies hazardous waste handlers with a history of RCRA corrective action activity. This list shows which corrective action events have occurred for every hazardous waste handler that has had corrective action activity due to improper procedures or handling.

Information contained in the EDR report indicates that the subject property is not listed as a CORRACTS site. No CORRACTS sites are listed within 1 mile of the subject property.

3.1.2.4 RCRA Generators List

RCRAInfo is EPA's comprehensive information system, providing access to data supporting RCRA and the Hazardous and Solid Waste Amendments of 1984. The database includes selective information on sites that generate, transport, store, treat and/or dispose of hazardous waste as defined by RCRA.

Conditionally exempt small quantity generators generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Very small quantity generators generate between

100 kg and 1,000 kg of hazardous waste per month. Large quantity generators generate more than 1,000 kg of hazardous waste, or more than 1 kg of acutely hazardous waste per month. Non-generators/no longer regulated (NonGen/NLR) do not presently generate hazardous waste.

Information contained in the EDR report indicates that the subject property is not listed in any RCRA database.

Three RCRA NonGen/NLR sites are listed within 0.25 miles of the subject property. None of these sites are adjacent to the subject property and, based on a review of the regulatory status of these sites, none of these sites represent RECs to the subject property. The Hannah Motor Company and Red Lion sites were listed for compliance violations and are further discussed in Section 3.1.1.3.

EPA also regulates the management of hazardous waste at transportation, storage, and disposal facilities (TSDF). Information contained in the EDR report indicates the subject property is not listed as a TSDF site. No TSDF sites were identified within 0.5 miles of the subject property.

3.1.2.5 Emergency Response Notification System List

The ERNS List is a national database containing information from spill reports made to federal authorities. Information contained in the EDR report indicates that no ERNS sites are listed within 1 mile of the subject property.

3.1.2.6 U.S. Brownfields List

The EPA's U.S. Brownfields List identifies brownfield properties addressed by Cooperative Agreement Recipients or by Targeted Brownfields Assessments. The EDR report indicates the subject property is not listed as a U.S. Brownfields site. Four U.S. Brownfields sites are listed within 0.5 miles of the subject property. Of these sites, two are located within 0.25 miles of the subject property and are discussed below. The remainder of the sites do not represent potential RECs for the subject property based on distance from the subject property, understood extent of contamination, and/or regulatory status of the site (see EPA brownfield summary, Appendix E).

- The South of Railroad site (tax lots 48850000 and 48840000) is located 0.17 miles northwest of the subject property. The property was occupied by an asphalt paving plant from the 1940s through the early 1970s, causing petroleum contaminated soil. Based on the distance and understood groundwater flow direction at the site, the facility is not considered a REC to the subject property.
- The 400 Columbia St and 318 W 4th Street site is located 0.23 miles north of the subject property. No evidence of significant petroleum or hazardous substance releases were observed on site. Based on the distance and understood groundwater flow direction at the site, the facility is not considered a REC to the subject property.

3.1.3 Other Databases

The following sections include other databases identified in the EDR report that may be relevant to assessing potential environmental liability or environmental issues at the subject property.

3.1.3.1 Environmental Data Resources Proprietary Databases

EDR has conducted research on the occurrence of historical business practices that may constitute a REC to properties. The database was developed from data found in historical city directories and contains information on over 100,000 former gas stations, manufactured gas plants, and dry cleaners. Due to the nature of these businesses, the sites have the potential for soil and groundwater contamination to have occurred.

EDR Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. The listings reviewed include, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, and/or service station.

Unless otherwise noted, the mere presence of historical auto stations near a site does not, in itself, constitute a REC.

A review of the EDR Historical Auto Stations list, as provided by, indicated that there are no EDR Historical Auto Stations sites within 0.125 miles of the subject property.

EDR Manufactured Gas List

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800s to 1950s to produce a gas that could be distributed and used as fuel. Many of the by-products of the gas production, such as coal tar (oily waste containing volatile and nonvolatile chemicals), sludges, oils, and other compounds, are potentially hazardous to human health and the environment. The by-products from this process were frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

One former manufactured gas site (the Vancouver Gas Manufacturing Site) is listed 0.7 miles northwest of the subject property. Based on the distance and understood groundwater flow direction at the site, the facility is not considered a REC to the subject property.

EDR Historical Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry-cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to, dry cleaners, cleaners, laundries, laundromats, cleaning/laundry businesses, wash and/or dry businesses.

Unless otherwise noted, the mere presence of a historical dry cleaner near a site does not, in itself, constitute a REC. The identified sites do not appear to represent a REC to the subject property.

A review of the EDR Historical Dry Cleaner list, as provided by EDR, indicated that there are no EDR Historical Dry Cleaner sites within 0.125 miles of the subject property.

3.1.4 Orphan Site List

Orphan sites are those for which mapping information is not detailed enough to plot the location of the site, or for which there is no known responsible party, or the responsible party is unwilling or unable to pay for cleanup. Based on a review of the information for and location of the orphan sites, none appear to represent a potential REC to the subject property.

3.1.5 Vapor Encroachment

ASTM Standard E1527-21 defines vapor migration as "the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface." The recognition of vapor migration as a possible REC may require incorporation of new types of controls and restrictions to address this contamination pathway.

The subject property and adjacent sites were reviewed in an effort to determine if vapor migration has, or has the potential to have, occurred at the site, from adjacent properties. Based on the information reviewed, the subject property is not identified as a potential vapor intrusion site. There is no known presence of USTs, volatile organic compound contamination, or other conditions on the subject property or adjacent properties that would suggest potential vapor intrusion issues on the subject property.

3.2 Historical Use Information

The objective of the historical use information review is to develop a history of the previous uses of the subject property and surrounding area to help identify the likelihood that past uses have led to RECs in connection with the subject property. Parametrix researched the historical land use, occupancy, and ownership of the subject property and adjacent properties to evaluate historical uses that are known to be associated with RECs. Historical records reviewed include the EDR Certified Sanborn® Map Report (EDR 2023b) and the EDR Aerial Photo Decade Package (EDR 2023c).

3.2.1 Certified Sanborn® Map Report

Parametrix requested Sanborn Fire Insurance maps from EDR in an effort to help identify past land uses. Sanborn Fire Insurance map from the years 1884, 1888, 1890, 1892, 1907, 1911, 1928, 1949, and 1966 were examined. A copy of the Certified Sanborn Map Report is included in Appendix B. Observations are listed below.

1884 — No structures are noted in the subject property. A wharf for the Vancouver City Flour Mills is present immediately adjacent to the subject property. The Vancouver City Flour Mills included several machines, four elevators, and a steam pump. Several small structures are located north of 1st Street.

1888–1892	A ferry landing is noted at the subject property. Minor changes in structures are present at properties north of 1st Street.
1907–1911	A planked incline to the ferry and a hotel have been constructed on the shoreline of the subject property. The adjacent flour mill has been removed.
1928	The hotel and ferry landing have been removed. A P.E.P Co. electrical substation and associated structures have been constructed to the north of the subject property. The eastern span of the Interstate Bridge has been constructed to the west of the subject property. A sand and gravel dock for the Minsinger Sand & Gravel Co. is located to the east of the subject property.
1949	No change is evident on the subject property. A road (current SE Columbia Way) has been constructed north of the subject property.
1966	No change is evident on the subject property. A second span of the Interstate Bridge has been constructed and an off-ramp has been constructed. No other changes are evident in adjacent properties.

Based on the Sanborn Fire Insurance maps, the subject property was used as a hotel and ferry landing beginning sometime between 1884 and 1888 until sometime between 1911 and 1928. The subject property was vacant beginning prior to 1928 through the most recent map in 1966. The adjacent eastern property was used for storage and stevedoring beginning prior to 1884. An electrical substation was present to the north of the subject property beginning sometime between 1911 and 1928. No evidence of RECs was identified on the subject property, including the partial areas of the parcels that may be acquired as part of the IBR Program, during the historical Sanborn® Map review.

3.2.2 Historical Aerial Photograph Review

Historical aerial photographs of the subject property area were obtained from EDR in the EDR Aerial Photo Decade Package. Aerial photographs for the years 1936, 1948, 1951, 1960, 1970, 1975, 1981, 1990, 1994, 2000, 2006, 2011, 2017, and 2020 were examined. Copies of the aerial photographs are included in Appendix C. Observations are listed below.

1936	Structures and disturbed soils are present at the subject property. A dock and structures are present on the eastern adjacent property. Additional structures are present on the northern adjacent property (the current Clark Public Utilities Residential Conservation Services building). The Interstate Bridge is present directly west of the subject property.
1948	Current SE Columbia Way has been constructed directly north of the subject property. Barges are present in the Columbia River, overwater and adjacent to the subject property and the adjoining sand and gravel dock. Fill material has been placed at the eastern end of the adjacent eastern property. Piles of material, likely sand and gravel, are present on the adjacent dock and in the barges. No other changes are evident on the subject property.

1951	Barges and a potential wooden structure are present in the Columbia River, within the subject property and the adjoining sand and gravel dock. Piles of material, likely sand and gravel, are present on the adjacent dock and in the barges.
1960	The shoreline has changed, indicating fill material has been placed on the shoreline of the subject property. The potential wooden structure remains present in overwater portions of the subject property. The western span of the Interstate Bridge has been constructed and off-ramps have been constructed north of the subject property.
1970	Barges and the potential wooden structure is present in overwater portions of the subject property. No other changes are evident on the subject property or adjacent parcels.
1975	The barges and the potential wooden structure has been removed from overwater portions of the subject property and the eastern-adjacent property. No other changes are evident on the subject property or adjacent parcels.
1981	Little to no change is evident on the subject property. On the eastern adjacent property, previous structures have been removed and new structures have been constructed.
1990	Little to no change is evident on the subject property or surrounding properties.
1994	Little to no change is evident on the subject property. Apparent sidewalks are now present adjacent to SE Columbia Way.
2000–2020	Little to no change is evident on the subject property or surrounding properties.

Based on the aerial photograph history of the subject property, the upland portion of the subject property was vegetated and vacant, although some fill activity may have occurred circa 1960. Portions of the subject property that are under water were used for storage and potentially loading/unloading of barges. These barges likely contained sand and gravel from the adjacent dock. Overwater releases of sand and gravel may have occurred in overwater parts of the subject property, which are not included in the partial areas of the parcels that may be acquired as part of the IBR Program.

No evidence of RECs was identified on the subject property, including the partial areas of the parcels that may be acquired as part of the IBR Program, during the historical photograph review.

3.2.3 Local Agency Records

Information from local agencies was reviewed for environmental significance as described in the following sections.

3.2.3.1 Clark County

Based on information from the Clark County Tax Assessor's Office, the subject property consists of tax lots 47590000 and 502280000. No address is available for these parcels.

The subject property consists of shoreline adjacent to SE Columbia Way and submerged land within the Columbia River. A review of permits for environmental significance (i.e., septic tank, stormwater, dry wells, aboveground storage tanks (ASTs), and/or USTs) was completed. No permits of environmental significance were identified.

3.3 Additional Environmental Information

The following sections provide a summary of additional environmental information obtained for the site.

3.3.1 Asbestos

The manufacture of most asbestos-containing materials was banned by the EPA by 1979. Prior to this, asbestos was a common constituent of numerous building materials, including floor and ceiling tiles, caulking, pipe insulation, roofing materials, and exterior siding. No buildings are present on the subject property.

3.3.2 Lead-Based Paint
